DEAR SOUTH AFRICA.co.za

PUBLIC PARTICIPATION REPORT: REVISED ELECTRICITY PRICING POLICY (EPP 2026)

28 August — 28 October 2026

https://dearsouthafrica.co.za/electricity-pricing-policy/

DearSouthAfrica.co.za is an online platform designed to facilitate government and encourage the public to participate in unbiased decision-making processes or policy formation at SOE, municipal, provincial and national levels.

Gazette & Notice References:	Government Notice No. 7852 (published in Government Gazette No. 55257 of 28 August 2026), read with Extension Government Notice No. 7948 (published in Government Gazette No. 55436 of 22 September 2026)
Targeted Department & Executive Authority:	Department of Electricity and Energy (DEE) | Minister of Electricity and Energy, Dr Kgosientsho Ramokgopa, MP
Designated Statutory Recipient:	The Director-General, Department of Electricity and Energy (Marked for the Attention of: Mr. Joseph Maraba | EPP.Comments@dee.gov.za)
Compiled by:	Rob Hutchinson, Managing Director, Dear South Africa
Dataset Baseline:	15,172 Verified, Authenticated Individual Civic Submissions
Statutory & Constitutional Mandate:	Formulated pursuant to the executive powers of the Minister under Section 85(2)(b) of the Constitution to develop national policy, guiding subsequent statutory tariff determinations by the National Energy Regulator of South Africa (NERSA) under Section 15 of the Electricity Regulation Act, 2006. Facilitated in accordance with Section 195 of the Constitution (encouraging public participation in policy-making) and the Promotion of Administrative Justice Act (PAJA), Act No. 3 of 2000..

1. Executive Summary

This Public Participation Report consolidates, analyses, and presents the empirical findings from **15,172 individually authenticated statutory representations** submitted by South African citizens, ratepayers, small business owners, prosumers, non-profit organisations, and energy professionals regarding the **Revised Electricity Pricing Policy (EPP 2026)**.

On 28 August 2026, the Minister of Electricity and Energy published the EPP 2026 for public comment. Following formal requests from civil society and industry bodies for additional time to interrogate the 68-page technical framework, the Minister gazetted an extension, moving the statutory closing date to **28 October 2026**.

Replacing the 2008 framework, the EPP 2026 sets out **54 binding Policy Positions** to govern tariff determination across an unbundled electricity market. While stakeholders broadly welcome the policy's commitment to unbundled billing transparency, the prohibition of hidden municipal surcharges, and the exclusion of excessive electricity theft and bad debt from allowable utility revenue, the public consultation exposed profound socio-economic and structural objections.

Specifically, ratepayers and civil society challenged five structural mechanisms:

1. **Macro Revenue & Asset Valuation Inflation (Policy Position 1):** Mandating that NERSA value utility assets at "replacement value" and guarantee revenue levels sufficient to cover full-tenor debt service and investment-grade ratings, thereby baking compounding above-inflation tariff increases into the national base price.
2. **Mandatory Fixed Network & Standby Charges (Policy Positions 11, 15, 27, and 30):** Shifting residential and small commercial tariffs from volumetric consumption to unavoidable monthly fixed capacity and generation standby fees.
3. **Punitive Net-Billing on Rooftop Solar (Policy Position 33):** Forcing grid-tied solar prosumers onto mandatory Time-of-Use (TOU) tariffs, levying network charges on both imported and exported electricity, and prohibiting solar export credits from offsetting fixed monthly network fees.
4. **Elimination of Stepped Inclining Block Tariffs (Policy Position 38):** Abolishing conservation-based stepped tariffs for standard domestic consumers in favour of fixed capacity fees plus flat energy rates.

5. **Cross-Subsidisation of Industrial Concessions (Policy Positions 50–54):** Expanding below-cost Negotiated Pricing Agreements (NPAs) for heavy industrial smelters and expanding Free Basic Electricity (FBE) allocations without ring-fenced National Treasury funding, risking the transfer of multi-billion-rand shortfalls onto captive paying consumers.

The quantitative verdict across the **15,172 verified submissions** is statistically decisive, with **99.29%** of all participating citizens either rejecting the policy outright or demanding material statutory amendments prior to implementation.

2. Legislative Context & The Public Debate

2.1 Summary of the Proposed Policy

The EPP 2026 establishes the overarching regulatory pricing blueprint for NERSA, Eskom's unbundled subsidiaries, municipal distributors, and end-users. Its core shifts include:

- **Asset Valuation & Investment Prudency (Policy Position 1):** Directs NERSA to value assets at replacement value and set revenues to meet debt-service obligations for the full tenor of the debt.
- **Cost-Reflectivity & Unbundled Billing (Policy Positions 2, 3, and 27):** Mandates fully cost-reflective, unbundled tariffs within five years, explicitly itemising wholesale energy, transmission, distribution, and municipal surcharges on invoices.
- **50/50 Transmission Cost Split (Policy Position 19):** Replaces the historical model by apportioning all Transmission Use-of-System (TUoS) costs 50/50 between generators and load customers.
- **Fixed Distribution Network Charges (Policy Position 30):** Reforms distribution tariffs away from volumetric recovery toward unbundled fixed network capacity charges payable by both loads and generators.
- **Strict Prosumer Net-Billing Framework (Policy Position 33):** Permits grid-tied rooftop solar export, but requires payment of standard network charges on both imported and exported energy, explicitly banning the offsetting of fixed network charges with export credits.
- **Disallowance of Theft and Bad Debt (Policy Positions 42 and 43):** Mandates NERSA to establish empirical benchmarks for electricity theft and bad debt; losses exceeding the standard must be removed from the utility's allowable revenue base.

- **Municipal Surcharge Ring-Fencing (Policy Position 47):** Strictly prohibits municipalities from introducing transparent surcharges on top of existing non-transparent, un-ring-fenced electricity "surpluses". Base tariffs must strictly reflect NERSA-approved costs of supply.

2.2 Key Facts / Q&A Reference Guide

To equip laypersons to engage meaningfully with the technical policy during the consultation window, Dear South Africa published an objective Key Facts guide:

- **How will the shift to "unbundled" tariffs change my monthly electricity bill?** Your bill will be broken down into separate, unavoidable monthly line items: actual energy consumed, a wholesale generation standby capacity charge, a fixed monthly distribution network capacity fee, a fixed customer service fee, an itemised municipal surcharge, and an explicit cross-subsidy contribution.
- **Why is the asset valuation formula (Policy Position 1) controversial?** Valuing aging coal power stations at modern replacement cost artificially inflates the Regulated Asset Base (RAB), locking in continuous above-inflation tariff increases to guarantee utility debt servicing.
- **How does Policy Position 33 affect rooftop solar?** Grid-tied solar users must migrate to mandatory Time-of-Use (TOU) tariffs, pay fixed monthly network charges, and pay network fees on both the power they import and the excess clean power they export. Solar export credits cannot be used to offset fixed monthly network service charges.
- **What happens to standard domestic tariffs?** Under Policy Position 38, standard domestic Inclining Block Rate (IBR) tariffs are abolished for non-indigent households. They will be moved onto unbundled tariffs featuring fixed monthly network capacity charges plus a flat energy rate.

2.3 Perspectives: What is the Debate?

Arguments in Favour (What Supporters Say):

- **Ending Network Free-Riding:** Physical electricity networks carry heavy fixed capital and maintenance costs. When affluent households install rooftop solar and reduce volumetric purchases, they shift fixed costs onto poorer, grid-dependent households. Fixed capacity charges ensure every connected user pays fairly for grid readiness.

- **Transparent, Unbundled Billing:** Unbundling invoices allows consumers to see the true cost drivers of their power supply and prevents distributors from concealing administrative bloat behind arbitrary volumetric markups.
- **Eliminating Hidden Municipal Slush Funds:** Policy Position 47 stops local councils from using un-ring-fenced electricity markups to cross-subsidise general municipal deficits.
- **Shielding Compliant Ratepayers:** Excising severe electricity theft and bad debts from the allowable revenue base protects law-abiding consumers from subsidising utility enforcement failures.

Arguments Against (What Opponents Say):

- **A Punitive "Sun Tax":** Shifting billing toward high, uncapped fixed monthly capacity fees acts as an availability penalty that punishes energy conservation, destroys solar payback periods, and locks low-usage families into unaffordable monthly billing floors.
- **Double-Charging Solar Exports:** Charging network fees on both imported and exported power (even though exported power is consumed immediately by neighbouring homes), and barring export credits from offsetting fixed charges, makes grid-tied solar financially unviable.
- **Inflated Asset Valuation:** Valuing Eskom's aging coal fleet at modern replacement cost and guaranteeing full debt-service recovery rewards historical capital misallocation and bakes compounding above-inflation tariff hikes into the regulatory baseline.
- **Scrapping Stepped Tariffs Hurts the Middle Class:** Removing stepped consumption tiers strips pensioners and small households of their primary mechanism to control monthly bills through frugal consumption.
- **Funding Industrial Smelters:** Expanding below-cost industrial Negotiated Pricing Agreements (NPAs) and Free Basic Electricity without dedicated National Treasury funding improperly shifts national industrial and welfare costs onto a shrinking base of paying ratepayers.

3. Context and Methodology (The DearSA Mechanism)

To properly evaluate the legal and evidentiary weight of this report, decision-makers must distinguish the **Dear South Africa (DearSouthAfrica.co.za)** participation architecture from conventional online petitions. Under administrative law, bulk digital petitions are routinely classified by government tribunals as a single collective representation.

Dear South Africa operates on an **individual statutory mandate model**:

- **Authenticated Individual Representations:** Every participant inputs verified personal details, specifies their geographic and socio-economic standing, selects structured policy concern parameters, and lodges an independent qualitative submission.
- **Direct Real-Time Statutory Delivery:** Each of the 15,172 submissions was formatted and transmitted individually in real time to the designated administrative inbox of the Department of Electricity and Energy (EPP.Comments@dee.gov.za).
- **Enforceable Duty under the Constitution:** In terms of Section 195 of the Constitution (basic values governing public administration) and the principle of legality, the executive authority is legally obligated to log, evaluate, and apply its mind to the substantive merits of these representations during policy formulation.
- **Court-Ready Evidentiary Paper Trail:** While executive policy-making is not direct administrative action under PAJA, the policy sets the binding framework for subsequent NERSA tariff determinations (which are subject to PAJA). This timestamped dataset establishes an unassailable evidentiary record for civil society should resulting regulatory decisions prove procedurally flawed or irrational.

4. Definitive Quantitative Stance Analysis

Across the **15,172 verified submissions**, participants declared their primary administrative stance regarding the Revised Electricity Pricing Policy (EPP 2026):

Primary Stance Declared	Total Verified Submissions	Percentage Share (%)	Summary of Administrative & Legal Position
🔴 **No I do not (I Object)**	**14,093**	**92.89%**	Rejects the EPP 2026 in its current form; opposes mandatory fixed grid capacity fees, double network fees on solar exports, replacement-cost asset valuation inflation, and the cross-subsidisation of industrial smelter discounts on retail bills.
🟡 **Not fully (I Amend / Conditional Support)**	**971**	**6.40%**	Supports unbundled billing transparency and the exclusion of power theft from allowed revenue, but demands statutory caps on fixed capacity fees, removal of DUoS charges on solar exports, depreciated historical asset valuation, and full National Treasury funding for industrial subsidies.
🟢 **Yes I do (I Support)**	**108**	**0.71%**	Endorses the transition to unbundled cost-reflective pricing, fixed capacity cost recovery to prevent network free-riding, and ending non-transparent municipal markups. *(Note: A qualitative audit reveals that the majority of respondents in this minor cohort authored substantive objections in their comment text despite selecting the "Support" radio button).*
Total Authenticated Dataset	**15,172**	**100.00%**	**Combined Opposition & Conditional Amendment Mandate: 15,064 Submissions (99.29%)**

5. Granular Analysis of Systemic Concerns (Deep Dive)

To ensure analytical precision, the DearSA portal required participants to identify their primary structural concern. For the **10,077 participants (66.42%)** who initially selected *"All of the above"*, the platform enforced a conditional secondary prompt requiring them to isolate their single highest-priority concern if forced to choose only one.

The table below presents the **Consolidated Primary Concern Index** across the entire dataset ($N = 15,172$):

Policy Concern Category	Consolidated Total Count ($N = 15,172$)	Consolidated Share (%)
1. Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes *(Policy Positions 11, 15, 27, 30)*	**8,312**	**54.79%**
2. Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers *(Policy Positions 42 & 43)*	**3,311**	**21.82%**
3. Municipal Hidden Surcharges & Diverted Electricity Revenues *(Policy Positions 24, 25, 47)*	**1,302**	**8.58%**
4. Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes *(Policy Position 38)*	**936**	**6.17%**
5. Double Network Fees (DUoS) & Export Restrictions on Solar Prosumers *(Policy Position 33)*	**607**	**4.00%**
6. Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs *(Policy Positions 50, 52, 54)*	**555**	**3.66%**
7. Other Specific Representations *(e.g., Macro Asset Valuation, Prepaid Vendors)*	**149**	**0.98%**

Qualitative Synthesis of Dominant Issues:

- **Unavoidable Fixed Network Charges (54.79%):** More than half of all participants identified the shift toward mandatory fixed monthly capacity fees as the most severe threat. Crucially, **75.77%** of all participants are grid-reliant residential ratepayers, proving this is not solely a concern of wealthy solar owners. Shifting revenue recovery to fixed availability fees eliminates ordinary households' ability to manage financial distress by reducing consumption.
- **Refusal to Subsidise Theft and Bad Debt (21.82%):** While citizens strongly endorse the text of Policy Positions 42 and 43, they demand ironclad, audited enforcement so that compliant customers never again pay for cable theft, illegal connections, or municipal payment defaults via inflated tariff approvals.
- **Macro Asset Valuation (Policy Position 1):** Professional participants repeatedly cited the macro risk of valuing redundant coal stations at "replacement value" to guarantee debt service, arguing this formula mathematically guarantees perpetual above-inflation tariff hikes regardless of utility efficiency.

6. Qualitative Evaluation & Verbatim Civic Testimony

Out of the 15,172 verified participants, **5,921 citizens (39.01%)** authored custom qualitative written submissions in their own words. Below is a thematic evaluation featuring verbatim extracts from the official dataset.

Theme 1: Working Household Affordability & Loss of Consumption Control Working families emphasized that shifting tariffs from volumetric consumption to mandatory fixed charges removes their primary budgeting tool:
"One of the ways households currently manage their finances is by reducing electricity consumption when money is limited. If a larger portion of the bill becomes a fixed charge, households may lose the ability to reduce their electricity expenses through responsible consumption... The Department should assess the impact of the proposed tariff structure on households according to household income and number of dependants, rather than assuming that all formally employed households can absorb additional electricity costs."
— **Herold Makoba** *(Northern Cape | Employed Individual | Grid-Reliant Residential Ratepayer)*

Theme 2: Impact on Pensioners and Fixed-Income Households (Policy Position 38)
Retired citizens (who constitute 36.27% of the dataset) provided stark testimony on how the abolition of stepped block tariffs threatens those who do not qualify as municipal indigents:
"As a pensioner, how am I supposed to get by with ever increasing rates, water, now electricity... We use low energy globes. We don't have solar but we cook on gas. Yet electricity costs go up and up and we actually get less and less and we are expected to subsidise the people that steal electricity and nothing gets done about the theft."
— **Cecil Paulsen** *(Brakpan, Ekurhuleni, Gauteng | Retired | Prepaid Meter User)*

Theme 3: Technical & Legal Critique of Asset Valuation and Cross-Subsidies
Professional participants submitted detailed structural critiques demonstrating internal contradictions between the policy's stated principle of cost-reflectivity and its cross-subsidisation models:
"I submit these comments personally, as a Chartered Accountant... Cost-reflectivity must be applied consistently: each customer pays the efficient cost of the service it uses. It cannot justify higher fixed household charges while below-cost industrial tariffs and expanded free allocations are recovered from other customers. Support for indigent households is legitimate, but must be funded transparently from the fiscus, not recovered as a hidden levy on other households' bills."
— **Theuns Henning** *(Alberton, Ekurhuleni, Gauteng | Chartered Accountant | Residential Ratepayer)*

Theme 4: Solar Prosumers and the Risk of Grid Defection (Policy Position 33) Citizens who invested private capital during load shedding strongly objected to double DUoS charges on exported power:
"The mandatory time of use tariffs: this is a seriously flawed measure... My system does not get charged with electricity from Eskom. When the batteries are flat or low, any excess electricity required is drawn from the prepaid system. So I pay for my electricity and exactly what I use. When there is sunshine the next day, the panels will charge the batteries. So why should I be punished with mandatory time of use tariffs when my system is not charged by the grid?"
— **Linette Diederiks** *(Tshwane, Gauteng | Retired | Rooftop Solar / Prosumer)*

7. Participant Demographics & Stakeholder Profiles

Geographic Distribution Submissions were received from all nine provinces, with strong concentration in metropolitan corridors where municipal tariff markups are highly contested:

- **Gauteng:** 6,008 (39.59%)
- **Western Cape:** 4,840 (31.89%)
- **KwaZulu-Natal:** 1,859 (12.25%)
- **Eastern Cape:** 915 (6.03%)

At the municipal level, the top contributing jurisdictions were the City of Cape Town (2,196), City of Johannesburg (1,771), City of Tshwane (1,237), and City of Ekurhuleni (952).

Electricity Value-Chain Profile Participants were permitted to select multiple overlapping roles in the electricity ecosystem:

- **Residential Ratepayer (Grid Reliant):** 11,499 (75.77%)
- **Prepaid Meter User:** 4,902 (32.30%)
- **Rooftop Solar / Prosumer:** 3,874 (25.53%)
- **Small / Medium Business Owner (SMME):** 1,681 (11.08%)

Socio-Economic & Employment Status

- **Retired / Pensioners:** 5,504 (36.27%)
- **Employed Individuals:** 3,744 (24.67%)
- **Self-Employed Professionals:** 1,790 (11.79%)
- **Business Owners:** 1,000 (6.59%)
- **Unemployed Individuals:** 736 (4.85%)

8. Alignment with Media, Civil Society, & Experts

A cross-examination of the 15,172 public submissions against independent energy economics research during the consultation window reveals a striking convergence of evidence:

- **Macro Asset Base Inflation:** Independent energy economists (e.g., Frank Spencer, CEO of sbg.earth) and 971 conditional DearSA submissions align in warning that Policy Position 1—valuing Eskom's aging coal fleet at modern *replacement cost* while guaranteeing debt service recovery—mathematically bakes in double-digit tariff hikes irrespective of actual generation efficiency.
- **Subsidy Funding Contradiction:** Civil society and 555 targeted DearSA submissions agree that while industrial smelter NPAs and Free Basic Electricity are vital, expanding them without National Treasury fiscus funding simply transfers the multi-billion-rand deficit directly onto paying retail consumers.

- **Constructive Fixed-Charge Principle:** Business chambers and the public acknowledge that fixed network fees are theoretically sound to maintain grid infrastructure. However, as demonstrated by the 54.79% primary concern rating, these fees must be statutorily capped and strictly ring-fenced for maintenance, rather than used as a blank cheque to replace lost volumetric revenue.

9. Actionable Recommendations for Government

In terms of Section 195 of the Constitution and the constitutional principles of legality and rationality, executive policy formulation must take meaningful account of public participation. The Department of Electricity and Energy and the regulators at NERSA are under a positive constitutional duty to apply their minds to the empirical evidence and substantive arguments submitted by the **15,172 verified participants** documented in this report.
To ensure the final **Revised Electricity Pricing Policy (EPP 2026)** is constitutionally rational, economically sustainable, and insulated from downstream judicial review, Dear South Africa tables the following **six concrete, actionable policy amendments** derived directly from the public record:

1. **Replace "Replacement Value" Asset Valuation (Amend Policy Position 1):** Delete the requirement that NERSA adopt an asset valuation methodology reflecting the "replacement value" of historical utility assets. Mandate that the Regulated Asset Base (RAB) be valued on depreciated historical cost adjusted for actual plant performance (Energy Availability Factor), ensuring consumers do not pay capital returns on redundant or non-performing assets.
2. **Enforce a Statutory Ceiling on Fixed Monthly Network Charges (Amend Policy Positions 27 and 30):** Insert a binding sub-clause stipulating that for domestic and small power users ($\le 100\text{ kVA}$), combined fixed monthly network capacity and service charges may not exceed a strict statutory cap (e.g., 15% to 20%) of the average monthly utility bill for that customer category.
3. **Eliminate Double DUoS Charges on Solar Exports (Amend Policy Position 33):** Delete the requirement to pay DUoS charges on exported low-voltage solar electricity, as this power is consumed instantaneously by neighbouring loads who already pay network fees. Permit net-billing export credits to offset the customer's total monthly electricity account, including fixed network charges.
4. **Retain a Protected Conservation Block Tier for Vulnerable Households (Amend Policy Position 38):** Retain a Low-Usage Conservation Tariff option (or two-tier IBR with a capped basic charge) for single-phase domestic consumers who sit above the

indigent threshold but require consumption control to survive on fixed incomes (pensioners).

5. **Mandate Full Fiscus Funding for Industrial Concessions and FBE (Amend Policy Positions 52 and 54):** Delete the provision allowing utilities to recover Negotiated Pricing Agreement (NPA) revenue shortfalls through the standard regulatory tariff process. Mandate that below-cost NPAs and any expansion of Free Basic Electricity above 50 kWh be 100% underwritten by direct fiscal transfers from National Treasury, and never cross-subsidised via retail consumer tariffs.
6. **Enforce the Disallowance of Theft and Bad Debts (Retain Policy Positions 42 and 43):** Retain these positions in full, and insert an explicit enforcement clause barring NERSA from allowing licensees to recover disallowed non-technical losses or municipal bulk arrears through basic fees, ancillary charges, or Regulatory Clearing Account (RCA) reopeners.

	2026-09-24 22:15:22	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	I manage my electricy usage diligently to keep costs down and refuse to be forced to pay a 'penalty' for being diligent. If I have the common sense to be frugal it's my right to use it. I don't have solar and refuse to be penalised for being wise. People who did install solar did so at their own cost to keep their homes functioning when supply was sabotaged and 'load shedding' was implemented to the detriment of residents. Private solar installations took the load off the grid at the time and this primer cannot be penalised for being assertive when Govt couldn't / wouldn't stop the corruption. Households who could afford it were forced to go solar at their own cost. It's time for the Govt power play / control tactics and constantly increasing taxation on eveything to stop. Stop deliberately increasing financial pressure on working / paying households. Govt can focus on removing illegal connections and stop free supply to select masses. I will not be penalised with a set cost for controlling my usage costs and refuse to pay for anyone else's usage!	Jen	employed individual

	2026-09-25 06:14:00	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Prepaid Meter User	Dear Director-General,I am writing to formally log my objection to the proposed Draft Revised Electricity Pricing Policy (EPP 2026) currently out for public comment.While I acknowledge the need to modernize South Africa's energy grid and accommodate a changing electricity landscape, the policy in its current form places an unfair financial burden on end-users and households that are already struggling under high inflation and prior compounding tariff hikes.Specifically, I object to the policy on the following grounds:Unfair Fixed-Charge Restructuring: The shift toward higher fixed monthly network and capacity charges unfairly penalises low-income households and those who actively try to conserve energy. Under this model, consumers face high baseline costs simply for being connected to the grid, regardless of how much electricity they actually consume.Disincentivising Renewable Energy: By unbundling tariffs to protect old utility revenue models, the policy discourages middle-class households and small businesses from investing in rooftop solar and energy efficiency. Rather than rewarding citizens for easing pressure on the national grid, it penalises them.Lack of Immediate Price Relief: The policy fails to protect vulnerable consumers from the ongoing upward trajectory of electricity costs. As acknowledged by leadership, this restructuring offers no guarantee of price stability or relief, making it unsustainable for the average South African budget.I urge the Department of Electricity and Energy to pause the implementation of this policy and revise the tariff structures. The framework must protect the consumer's right to affordable energy and incentivise energy efficiency, rather than guaranteeing revenue for inefficient distribution systems.Thank you for considering my submission.	Henry	employed individual

	2026-09-25 07:35:15	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	There are no more words left for how this government is trying to squeeze the last Cent out of law abiding citizens. I am 66 years old, have no pension since I was bringing up my children and having minimum income to survive for those years and am still working just to make ends meet. I can hardly afford to go shopping, not only because of food prices but because of petrol prices, that I cannot afford and am reliant on others to bring some shopping for me, when they do their own shopping. I sit in the evening with one lamp and no other light source to save on electricity where possible. So what do these people still want to squeeze out of people like me. How is it fair to have large industries paying peanuts for the large amount of power they are using and now, not to mention the data centers they want to build? We need to pay for their power usage as well? Their water usage? Just to make the rich richer and the poor poorer. It is an absolute disgrace what burdens this government is putting on their citizens. Open the market, let independent companies take part and our power shortage will be dealt with efficiently with no exorbitant costs to the man and woman in the street. And the biggest scam has to be that people who are producing power from FREE sunlight, have to be penalized for helping out an inefficiently run Escom. Surely we must be the laughing stock of the world.	Ursula	employed individual

	2026-09-25 08:40:29	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Prepaid Meter User	I strongly oppose the Revised Electricity Pricing Policy, 2026, in its present form. I ask the Department of Electricity and Energy to withdraw or substantially revise it before adoption. The Electricity Regulation Act requires tariffs to reflect the costs of an **efficient** licensee, avoid undue discrimination and give consumers proper information about the costs they impose. It does not entitle a utility to recover the same cost twice or transfer the consequences of inefficiency to captive customers. The policy's proposed shift towards fixed capacity, network, service and standby charges risks doing exactly that unless every charge is supported by published, independently tested cost evidence. Policy Positions 15, 27 and 38 could leave households and small businesses paying substantial monthly amounts even when they use little electricity. That would weaken the financial reward for conservation and expose pensioners, low-usage households and businesses that invested in efficiency to higher unavoidable bills. Before approving this approach, the Department must publish bill comparisons for different consumption levels, income groups, connection sizes and customer types. Any fixed charge must reflect an identifiable efficient cost, be tested for affordability, and be phased in with protection against severe bill increases. Policy Position 33 raises a separate concern for people who invested in rooftop solar and batteries. It contemplates network charges associated with both electricity imported from and exported to the grid, while limiting the credit for exported electricity and preventing that credit from offsetting network and retail charges. The Department must demonstrate which network services each charge pays for, whether locally exported power reduces losses or network demand, and how double recovery will be prevented. Solar customers should pay their fair share of proven grid costs; they should also receive fair credit for the value they provide. The policy itself recognises problems with hidden municipal electricity surpluses, theft, losses and bad debt. Its safeguards in Policy Positions 42, 43 and 47 must be enforceable **before** further costs are placed on paying customers. Municipalities should publish their cost-of-supply studies, disclose surcharges separately, and show that inefficient losses and uncollected debt above approved benchmarks have been excluded from tariffs. Finally, Policy Position 50 proposes further subsidies and potentially fixed subsidy charges, yet leaves major questions about who pays, how much they pay and what they receive to a later framework. Consumers cannot meaningfully assess the full impact of this policy without that information. Publish the proposed subsidy framework, affordability analysis and representative bills for public comment before finalising these positions. I request a revised policy that requires transparent cost-of-supply evidence, prevents double recovery, protects affordable basic access, preserves incentives to save and generate electricity, and gives the public a meaningful opportunity to comment on the financial consequences. Until then, I cannot support this draft.	Andre	business owner

Not to even start on the fuel price and the snowball effect that creates on the costs of any food or goods in SA!	Sarel	unemployed individual
	2026-09-25 12:45:47	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	The policy shifts tariff design away from volumetric consumption (c/kWh) toward mandatory fixed network and capacity charges (R/kVA, R/kW, or R/Amp/month). To eliminate “volume risk” for distributors, utilities will bill customers for grid availability and network reservation regardless of whether electricity is consumed. In addition, Policy Position 15 introduces a universal generation standby charge applied at the wholesale level to recover the capital costs of keeping backup dispatchable generation on standby for grid-tied users. The Core Civic / Household Risk: Households and small businesses that invested private savings into rooftop solar, batteries, or energy-efficiency measures to survive load shedding will be hit with steep monthly fixed fees simply for remaining connected to the grid. Frugal, low-volume consumers can no longer lower their utility bills by conserving electricity, as fixed network fees create a high, unavoidable monthly billing floor. What to Demand in Your Public Submission (PAJA-Enforceable Points): Demand that NERSA impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. Insist that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. Require utilities to absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers. Non-technical losses (electricity theft, illegal connections, meter tampering) and bad debt have destabilised Eskom and municipal distributors. Policy Positions 42 and 43 mandate that NERSA establish data-based performance benchmarks for losses and bad debt. Any component of technical losses, non-technical losses, or uncollected debt that exceeds the approved regulatory standard must be deemed unacceptable and excised from the licensee’s allowed revenue base. The Core Civic / Household Risk: Historically, when municipalities fail to enforce bylaws, audit meters, or collect revenue from non-paying areas, they pass the financial deficit onto compliant, paying ratepayers through inflated annual tariff increases. Law-abiding citizens and businesses are effectively forced to pay double: once for their own consumed electricity, and a second time to subsidise utility incompetence, meter bypasses, and uncollected debt. What to Demand in Your Public Submission (PAJA-Enforceable Points): Demand that NERSA immediately enforce Policy Position 43(b) by clawing back and disallowing any tariff requests where municipal distribution losses exceed national regulatory standards (typically 7%–10%). Insist that paying consumers be legally shielded from funding municipal arrears and Eskom debt defaults through local tariff markups or surcharge adjustments. Require licensees to implement strict, automated tamper detection, independent metering audits, and universal prepaid infrastructure in non-paying areas before requesting any tariff increases from compliant ratepayers.	Ashleigh	employed individual
	2026-09-25 12:45:58	No I do not	All of the above	Double Network Fees (DUoS) on Solar Prosumer Exports	Residential Ratepayer (Grid Reliant), Prepaid Meter User	The electricity provider should seek other forms of subsidising its income. 	2026-09-25 12:50:18	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Municipalities and Eskom cannot maintain and offer electricity as they are supposed to and then want to add extra burden onto those that set up solar - just another way of taxing citizens that do the right thing !!!	C	business owner
	2026-09-25 12:50:27	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer, Prepaid Meter User	Obviously this Govt has NO CONCERN for the FACT that our MONEY was STOLEN THROUGH CORRUPTION. Until the Monies have been COLLECTED FROM THOSE RESPONSIBLE FOR THE CORRUPTION, I am individually NOT INTERESTED in ANY TARIFF POLICIES being INFLATED or INCREASED. This Govt is NOT INTERESTED in allowing the ECONOMY TO GROW, NORMALLY, or CREATING OF JOBS , also INCLUDING ENERGY SAVINGS by way of GOD GIVEN FREE SOLAR POWER. The Govt wants to take ALL PROSPERITY AWAY from South Africans, controlling us with their COMMUNIST IDEOLOGY and therefor allowing themselves as ruling Parties, to further prosper THEMSELVES, whilst we CAN'T have a livable life. There are many EXAMPLES of which ONE I am affected by: The Govt Pension Fund (GEPF) and (PIC). It is a CARDINAL SIN to see the SALARIES PAID TO THE BOARD OF DIRECTORS OF THE PIC, and we, the PENSIONERS of the FUND receive SMALL INCREASES TO OUR PENSIONS ANNUALLY, while THE MEMBERS OF THE BOARD live the "HIGH LIFE". The INVESTMENTS HAVE BEEN LOST due to CORRUPTION on VARIOUS LEVELS, amongst others THE TOLL PLAZAS/ROADS. Thank you for the opportunity.	Estella	retired
	2026-09-25 12:51:14	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Prepaid Meter User	Just another desperate attempt by government to pay for their incompetence in governece over the last 30 plus years. Now expect the already burdend taxpayer to pay for their failures.	Keith	retired

	2026-09-25 12:58:55	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form Rejects mandatory fixed grid capacity fees and standby charges on solar and low-usage homes. Punitive double network fees on solar exports,. The elimination of stepped block tariffs for standard households. The risk of retail consumers funding industrial smelter discounts or unfunded social expansions. I WILL DISCONNECT FROM THE GRID AND REFUSE TO PAY ANY FUNDS TO ESKOM AT ALL. ZERO NOTHING. YOU WERE CUTTING YOUR OWN NOSE OFF WITH YOUR CRIMINAL CORRUPT ACTIVITIES. ESKOM IS SOLELY RESPONSABLE THAT PEOPLE WERE FORCED TO MOVE TO SOLAR WITH A HUGE COST TO THE HOUSEHOLDS	Johan	retired

	2026-09-25 12:59:26	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	Born Free but Taxed to death, I cannot stress this enough Eskom is nuts, we pay for what we use not for your lack of effective financial management. What is next a Sunshine fix charge, bunch of idiots!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!	Jakkie	
	2026-09-25 12:59:37	No I do not	All of the above	Double Network Fees (DUoS) on Solar Prosumer Exports	Residential Ratepayer (Grid Reliant)	The primary issue with the current draft published by the Department of Electricity and Energy is that its mandatory "unbundled" fixed baseline capacity and network charges act as a financial penalty for households that invested heavily in private solar infrastructure. Instead of high mandatory monthly fixed charges that penalize solar owners for merely staying connected, the policy should mandate a fair Net-Billing Framework. The Proposal: Reduce fixed baseline fees to a minimal, transparent grid-maintenance cost. Offset remaining grid costs by narrowing the steep gap between what municipalities charge for power versus what they pay to buy back solar-exported units. Why it works: Solar users are incentivized to feed excess energy back into the national grid during the day, effectively transforming household investments into decentralized power stations that support the state. Rather than unbundling bills into complex fixed fees that consumers cannot control, the policy should prioritize nationwide Time-of-Use pricing for residential users. The Proposal: Charge significantly lower rates during midday off-peak hours (when solar generation is abundant) and higher rates during evening peaks. Why it works: Consumers without solar can save money by shifting heavy appliances to cheaper hours. Meanwhile, solar users with battery storage can opt to draw zero power during expensive peak hours, reducing overall strain on Eskom's generation capacity. A primary driver of over-charging is that local municipalities use electricity markups to fund general municipal failures and balance their broader budgets. The Proposal: Force strict regulatory ring-fencing through NERSA. Municipalities should only be allowed to charge a standard, regulated distribution fee that directly funds localized grid maintenance, rather than leveraging high markups to cross-subsidize unrelated administrative deficits. Consumers cannot be billed for corruption, debt servicing, or operational failures. Legislate an absolute cap on what Eskom can recover through tariffs. If Eskom or municipalities experience distribution losses due to poor maintenance, cable theft, or non-payment in unvetted areas, those costs must be treated as internal financial losses rather than passed down to law-abiding, paying customers. 	2026-09-25 13:03:11	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	This basic charges is very unfair on pensioners. We battle to make ends meet as is and try very hard to consume as little as possible electricity. Paying for use already is a big burden. Stop milking a nearly dead goat. Prevent corruption and don't fall into the trap of creating additional resources to be abused. .	Philippus	
	2026-09-25 13:03:40	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Like any pro-active company aiming to be successful you should be seeking to improve efficiency and productivity together with the elimination of all types of theft and corruption. The goal should be to sell more electricity, to be self funding and profitable - not penalising existing consumers who are likely to find ways of no longer being customers. Once increasing numbers of consumers leave the grid the next hurdle will arrive where, on previous performance, more punitive measures will be put in place. This circle of mismanagement is likely to alienate increasing numbers of consumers to the extent that the only ones left will be the poorer residential customers and large businesses at discounted rates.	Steven	retired
	2026-09-25 13:03:55	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	The current charges are way too high and so further increases will make it impossible to survive as a fixed income pensioner.	John	
	2026-09-25 13:04:10	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	The Revised Electricity Pricing Policy as Published does not appear to be ethical, moral or honest for the ordinary consumer and those who have invested in solar panels at their own expense. Chris	retired
	2026-09-25 13:05:46	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	Solar users were forced into buying solar due to the unreliable supply from Eskom. Applainces started to fail and insurances stopped paying out for surge damages as a result. This extra cost was all burdened by taxpayers. The only reason Eskon is able to keep the lights on is due to the number of households that have moved off the grid or do not rely on it as much as before. Now that consumption has dropped, Eskom is looking to make more money as the consumption and paying users have dropped significantly. There is no good reason to increase the free electricity usage as it only creates a further burden on Eskom and the government of People who do not have to work but get more free services. In contradiction, the tax payers have been forced to pay double Rates, water and sewage costs but have not received any improved services.	Sashchern	employed individual

	2026-09-25 13:11:23	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	It is simply unconscionable that Eskom seeks to punish consumers who were able to assist the power utility reduce and eventually eliminate "load shedding" (itself a deceitful and self-serving name for rolling blackouts) by installing private rooftop solar SSEG systems. This punishment, in the form of vastly increased cost overhead, has significantly increased the fixed portion of the power tariff for such users, resulting in net increases in excess of 35%, far above the 12.8% approved by NERSA for 2024/2025. Such users put *LESS* strain on the grid, not *MORE*, and they help reduce demand and also protect the grid, so the whole "Fixed charges" narrative is deceitful. Moreover, Eskom is significantly overstaffed (recent estimates say by around 60%) compared to other similar power utilities around the globe, but instead of earnestly pursuing organisational efficiency, Eskom chooses the easy route, namely squeezing conscientious paying consumers for more money. This approach will likely see an increasing number of such consumers go off grid completely, and Eskom will consequently collect even less revenue, and have increased electricity theft and illegal connections. All in all, the downsides for Eskom of the proposals in question far outweigh the positives they are intended to achieve. The law of unintended consequences will quickly scupper these plans and a radical rethink is therefore required.	Patrick	employed individual
	2026-09-25 13:11:28	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	This is just a bad deal at large. 	2026-09-25 13:33:08	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant)	The level of criminality operating in gov. led operations is astounding by its sher volume that is being revealed systematically as we are aware. Now this is another scam in the thin disguise of gov. thinking they sound like they know what they are proposing. It is a further scam to gather votes for Nov. 4, 2026 and for 2029 - it is also clear that each time loss of money can no longer be concealed/ducked and dived/lied about etc then a new strategy to 'fill ' the money shortfall is thought up - this is like the next criminal heist strategizing their next theft - It is time that a deduction for water and electricity is taken directly off the social grants so to educate people into the concept we all adhere to, use it you will have to pay for. Having been brought up to 'not waste' water/electricity, ie turn off the taps, switch off the lights when not needed. However, over the past decades with the users and abusers directing where their next stash of cash comes from - we can intrinsically 'never catch up' to them and i have not been able to make a dent in the charges with less consumption already for decades. We are made out, as citizens, to be a bunch of loser fools being 'schooled' by this bunch of people who are all one step from deep investigation for various levels of huge fraud - STOP allowing the policies and laws etc to be changed as their last ditch to think they have the power to do whatever they like and think they are 'doing the right thing' This is another level of criminality - why dont they rather go and start clean up in jhb municipality where trillions have been siphoned and more of same countrywide. Their actions have reduced their reality to them and what they can get away with - and us who have no choice but are landed with the bill and outcomes whenever they see their profits dwindling. This is dishonest by its very suggestion by the same people who are not looking beyond whom they can throw the bills at while the free loaders, free load and they make laws that say this is okay. Thank you -	Jennifer	retired
	2026-09-25 13:33:09	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer, Prepaid Meter User	We were one of those households that suffered badly from load shedding and, when we relocated to the Western Cape, we spent our retirement money on installing a solar system to ensure that load shedding no longer was an issue. Now after Eskom "begged" us to get off grid, in order to reduce the power demand when load shedding was at its peak, we are now going to be penalized for spending our money to do just that. That is grossly unfair and totally unacceptable. As a retired couple, we cannot afford any more costs on our already depleted savings.	Geoff	retired

	2026-09-25 13:33:29	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	The entire reason why people have invested in Solar was simply that Eskom and municipalities could not supply power for businesses and residences. The costs of electricity have risen over 1000 % since 1994. Eskom and municipalities have now created a monster. The coal used on power stations and the costs of transporting it have become unaffordable. These contracts require close audit and checks for reasonable costs. Furthermore, Eskom staffing has escalated to unrealistic levels. The numbers of staff have more than doubled since 1990 and less electricity is being generated. The entire costing of electricity should be re-evaluated before the Minister even thinks of simply passing on these escalated costs onto any consumer. We are told to keep budgeting, but that is impossible for businesses when you deal with such high escalations. The consumers cannot afford any further charges.	Charlie	self-employed

Government needs to review its spending priorities, cut wasteful budgets and put more money toward fixing the power deficit and helping households on the ground. Prepaid electricity is becoming unaffordable for many families. When buying more units pushes people into higher tariff blocks, the cost hits hardest at a time when they are already trying to stretch every rand. No one should have to choose between electricity, food and paraffin. It is difficult to justify large bonuses for CEOs and CFOs while ordinary people face these costs. We need fairer electricity pricing, real accountability and relief that reaches the people who need it most.	yusuf	employed individual

	2026-09-25 13:48:07	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	Because of all the corrupted officials and government eskom is a failure. We have to pay if any electrical components gets damaged due to inconsistent electricity. Eskom and government said years ago on a press conference that who can afford to put solar. Now that more and more people is going for solar because electricity prices is through the roof and becoming unaffordable eskom is loosing a lot of income now they want to charge the consumer tired of load shedding etc due to other now they are being penalised. Eskom and government is broke and want to use tax payers and south Africans as cash cows.	Leonard	employed individual
	2026-09-25 13:48:40	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User		Trevor	retired
	2026-09-25 13:48:51	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Small / Medium Business Owner (SMME)	No, no, no. Eskom does not maintain the electricity and as a result there are still power cuts across the country. Does the government propose to reimburse businesses for electricity cuts which directly affect businesses? Citizens are penalized for use /no use of electricity and cannot recoup money lost during power cuts. This is just another way to get FREE MONEY, as all of us citizens know full well that they won't spend money on electricity maintenance. And if these new charges are put in play that means we all will be paying extra on VAT.	DENISE	employed individual

	2026-09-25 13:51:08	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	The draft policy penalises grid-tied embedded generators who inject clean power into the network. Prosumers are forced onto mandatory Time-of-Use tariffs and made to pay standard Distribution Use of System (DUoS) and Transmission (TUoS) charges on both the electricity they import and the electricity they export. Furthermore, prohibiting solar owners from using clean export credits to offset fixed monthly network and retail service charges destroys the financial viability of feeding power back into the grid, actively incentivising frustrated solar owners to defect entirely.	Corrie Andre	
	2026-09-25 13:51:54	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Prepaid Meter User	I do not support any changes that result in Fixed charges . Billing should be calculated on one thing alone and that is WHAT YOU USE!! . I do not pay a petrol station to use their pumps , you pay for what you buy , Electricity should be no different . Solar system users should also not be penalized for their investments , the fact the there are solar users has saved the Grid from collapse . Here is a WARNING ! to Eskom . Thousands of solar users are tired of the constant threats . When all of these users demand disconnection you will lose even more revenue	Grant	employed individual
	2026-09-25 13:52:11	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Charging a standard rate across the board is constitutionally wrong. Why must people pay for electricity they do not use? Why must we subsidise people who use more than others. What about people who live on or below the bread line? If they use minimal electricity in order to survive, who is the minister to say that they must now go without food because he has decided this is a good idea for all? Maybe he should think of the less fortunate instead of thinking only of the people who can afford to not care about anyone else.	Chantelle	employed individual
	2026-09-25 13:52:26	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Prepaid Meter User		Pieter	employed individual
	2026-09-25 13:52:35	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	This draft does not fix South Africa’s electricity crisis. It shifts the bill from usage onto connection. Mandatory fixed capacity and standby charges mean households that saved, conserved, or installed solar still pay a high monthly floor just to stay on the grid. Grid-tied solar is then charged network fees on both imports and exports, while export credits sit at a low avoided-cost rate and cannot offset those fixed charges. That punishes the very investment the country needs. Scrapping inclining block tariffs for ordinary homes removes the last simple way for middle-income families to control their bills. Industrial discounts and any expansion of free basic electricity, if not fully funded from the fiscus and ring-fenced, will land on paying households. Cost-reflective pricing is necessary. Loading fixed charges, double network fees, and unfunded subsidies onto consumers is not. Cap fixed fees, remove export network charges, keep a conservation tier, and fund industry and social support from the budget, not from the retail tariff. Thank you	Jaime	self-employed
	2026-09-25 13:52:47	No I do not	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Residential Ratepayer (Grid Reliant)	Will you be happy when we can't afford food anymore?! Fix your infrastructure instead of pocketing the money!	Cher	unemployed individual

	2026-09-25 14:03:11	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer	Every historic connection to residences has been paid for by taxes, whether SARS taxes or municipal taxes. After having used the taxpayers funds to create the infrastructure, now they have the audacity to apply a fixed charge. By all means do it for new grid connections, but to apply a fixed charge to those where paid for connections by taxes is pure theft. Wish to apply those charges? You better come up up with an agreement that ensures you do annual maintenance inspections that the consumer will sign for. Enforcing a fixed charge is no different to a car owner being forced to pay a fixed charge for petrol `stations even if they don't buy any petrol. Then we have the "Freebies" who's monthly 50kW will be multiplied by 6 for more "Freebies"? Where is my choice to opt in or out? As a consumer being subjected to this theft, they must provide the opt out, i.e. I refuse to pay for something I don't want or need. So disconnect me from the grid, or are we so far down the Marxist road that your choice of providers has been removed? They must add the choice for consumers. Yes, I agree and will pay the extortions, or No, disable my grid connection as I don't need or want your criminal extortion that is being introduced for one purpose only and that is to hand out free electricity for non tax paying parasites who's votes keep this criminal cabal in power. 	2026-09-25 14:04:26	No I do not	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Small / Medium Business Owner (SMME)	The draft policy promises transparency, but in practice, it shifts the financial burden of the energy crisis directly onto households and small businesses: Fixed Fees vs. Savings: High mandatory fixed connection fees reduce consumer control over electricity bills, rendering energy saving measures far less effective. Solar Double-Taxation: Solar adopters face fixed-cost traps and network charges on both energy consumed and energy exported, actively discouraging green transition efforts. Household Subsidies for Industry: Below-cost power deals for industrial smelters risk being funded by regular ratepayers unless backed by treasury grants. FBE Budget Deficit: Expanding Free Basic Electricity without national budgetary support creates an immediate deficit that paying customers will have to cover. We welcome the proposed end to municipal slush funds and bad-debt markups, but the core policy must be revised so that cost-reflectivity does not become consumer over-taxation.	Wanda J	self-employed

	2026-09-25 14:18:42	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Here's a shorter, stronger version that incorporates the punitive aspect and government accountability: Opposition to SA EPP Fixed Monthly Charges I strongly oppose the introduction of fixed monthly electricity charges under the SA EPP framework. These charges are punitive in nature because they force consumers to pay more regardless of how much electricity they use. Households that have invested in energy efficiency, reduced consumption, or installed alternative energy sources are effectively being punished for responsible behaviour. The principle is simple: consumers should primarily pay for what they use. Fixed monthly charges weaken that principle and place an unfair burden on pensioners, low-income households, and people with modest electricity needs. Furthermore, many qualifying households receive free basic electricity, yet paying consumers continue to face increasing charges. While assistance for vulnerable households is important, the cost cannot endlessly be shifted onto the same shrinking base of paying customers. Many South Africans are asking a reasonable question: if others receive free electricity, where is the benefit for those who consistently pay their bills? Most concerning is the message this sends. Government cannot continue extracting more money from citizens to cover revenue shortfalls while failing to address waste, inefficiency, poor financial management, electricity losses, corruption, and theft within the system. Consumers should not be expected to fund the consequences of administrative failures through ever-increasing fixed charges. Before imposing additional mandatory fees, authorities should focus on improving efficiency, reducing losses, and ensuring responsible stewardship of taxpayer and public resources. Fixed monthly charges are unfair, punitive, and should be rejected in favour of a tariff structure based on actual electricity consumption.	Alan	employed individual

	2026-09-25 14:29:02	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	There is no reason why electricity should be this expensive in South Africa. It often feels as though consumers are paying more and more without seeing a corresponding improvement in infrastructure or service delivery. I believe the electricity market should be opened up to greater competition rather than leaving Eskom and municipalities with such dominant control. More competition could encourage efficiency, improve service, and potentially reduce costs for consumers. Unfortunately, it often feels like middle-income households bear the brunt of rising electricity costs. They earn too much to qualify for assistance, yet still feel the full impact of increasing tariffs and living expenses.	Lae	employed individual

	2026-09-25 14:31:12	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	I'm about to install a Solar System with a Battery. It would be in the municipalities interest if I were allowed to push back excess power at particular times and/or to buy power at particular times - i.e. Time (Usage levels) Based operations. This would allow the municipality to technically buy less power from Eskom - yet look good financially. Selling power back should be at Eskoms pricing - lower than what one would pay to receive power - no problem.	Mark	retired
	2026-09-25 14:31:23	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer	Exorbitant mandatory network and connection fees are to me madness. Billing moving away from the amount of electricity consumed towards hefty baseline fees that are not related to your usage appears to be a total disregard of the basic rule of paying for what you are using. During the peak of load shedding the President encouraged the public to install solar. Now those who have it are being effectively fined for trying to get a more stable electrictiy supply than that offered by rubbish Eskom. To add insult, it is not only the exorbitant basline fees that are needing to be paid but also expensive 'time-of-use' tariffs. Eskom has been robbed blind, their customer base is not growing in line with a stagnant economy,care of the ANC, and now we are being made to pay for this. Who is going to pay for the discounted deals the State wants to offer to heavy idustrial users and who is going to pay for the free basic electricity increase to 300kWh? Obviously not the Government as the grant is not increasing to cover this free electricity increase. It will be the paying consumers. I sincerely hope that one of the NGOs will take the Government to task on this bill as it is a flagrant disregard of the rights of paying consumers. .	Elizabeth	business owner
	2026-09-25 14:31:46	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer, Prepaid Meter User	Disgusted that small consumer must now subsidise huge companies like smelters. they should pay normal fees so that Eskom does not lose here, and mark this up to client in normal business model. Normal standard practise is to pay for what you use, and to pay when repairs are undertaken by the supplier if this bill is passed into law then will i be able to request disconnect from the grid to avoid huge new tariff?	Fred	business owner

	2026-09-25 14:32:40	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Prepaid Meter User	The total ineptitude to handle the management of the production, distribution and payment of energy has led to this half-baked idea. This will penalise the honest everyday user of electricity who has already suffered terribly under previous extended shortfall which led to them aiding the system by becoming self reliant with home solar. They will now be penalised by an inappropriate and inefficient tax on the provision of power without payment for usage of electricity which is an attempt to repair the situation which has arisen from the original gross shortcomings. This attempt to penalise the honest ratepayer has a fatal consequence of driving everybody to total independence and where possible, completely off baseload grid provision by ESKOM. Perhaps this is a favour in disguise to get away ever further from ANC disastrous inability to manage anything for the benefit of the normal citizen and ratepayer. It is an unworkable theoretical and impractical solution to a self generated problem.	Don	retired

	2026-09-25 14:33:33	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Prepaid Meter User	I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form (Rejects mandatory fixed grid capacity fees and standby charges on solar and low-usage homes, punitive double network fees on solar exports, the elimination of stepped block tariffs for standard households, and the risk of retail consumers funding industrial smelter discounts or unfunded social expansions). The backdrop of growing alternative power supply and reducing national power outputs is about a misaligned pricing structure that has for decades sought to price in poor management of costs, lack of targeted investments, over-runs on energy plant builds by billions plus Eskom's outrageous salary bill, wasteful expenditure, combined with municipal fees adding additional costs. This provides a clear picture of a lack of accountability and a blunt process of simply passing all these unjustified costs onto hapless consumers. This must never be an acceptable solution. When, and only when Eskom and municipalities can show that they have efficient operations that constrain costs and wasteful and fraudulent expenditure, and ensure accountability from leadership, then we can consider if any increases are due. 	2026-09-25 14:37:57	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Eskom started in 1923 and was one of the most efficient and cheapest suppliers of electricity in the world until 1994. "They" took over and have destroyed the complete process. In order to have electricity, people and business have been forced to find alternative sources, e.g. solar. It is only conceivable that this proposed revision could exist because of the useless, evil government. For the majority, this "new" revision will definitely encourage MORE and MORE sane people to get COMPLETELY off the grid and supply their own electricity, then most of the revision will not apply. The concept of EFF, EVERYTHING FOR FREE, is not a possibility in our society. For me this is just another form of stealing, more taxes and less positive output.	David	retired
	2026-09-25 14:38:01	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	Increasing fixed charges flies in the face of energy efficiency and is simply a method of shifting sunk costs to paying customers. Time-of-use tariffs are not a bad idea but only useful when there is a shortage of power at certain times . Forcing municipalities to stop using electricity to cross-subsidise other costs is a very good idea; however, all it will do is cause them to increase rates and taxes .	David	self-employed

	2026-09-25 14:39:58	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Pay what you use, and if you can effort use the sun. What does the government gain or lose if I use the sun to my own purpose or benefit?	Abraham	
	2026-09-25 14:41:02	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant)		Marius And Wilna	retired
	2026-09-25 14:41:02	No I do not	Double Network Fees (DUoS) on Solar Prosumer Exports		Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	I think that it is grossly unfair that charges will be levied for the use of Solar Power especially if you are putting excess power back into the grid. Solar Power became popular because the ANC Government stole the money that was to be used to upgrade the electricity grid resulting in Load Shedding and people then having to make a plan for an alternative electricity supply.	Owen	business owner
	2026-09-25 14:41:11	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	Government and Eskom requested assistance to reduce load during loadshedding times. Now they want to tax us because Eskom in charging rates that nobody can afford. Then they want to give away electricity to people that don't contribute at all. Stealing of electricity is going to go even higher. I would rather disconnect totally from the grid, than pay for something that I don't use. Privatize Eskom and let tariffs become affordable again, and people will start using electricity again. Government also can not expect private consumers to subsidies companies that is ineffective. Cut labor cost to what is normal in the private sector, and not this fatcat salaries paid to Eskom workers. This will also start a total revolt against Eskom electricity	Johan	retired
	2026-09-25 14:41:55	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	Basically, those that have then been stealing power for so many years through unabated illegal connections and other are now being given MORE FREE electricity that the hard-paying consumer now has to subsidise?!! I believe the top politicians have their hands so deep in the Eskom "cooky jar" that they have no chance in hell of even trying to come up with a more equitable and fair solution! I personally use way less than 300kWh per month, but I must now not just keep on paying, but pay a heck load more because of subsidisation?!	Zane	retired
	2026-09-25 14:42:13	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Well as it says in the Freedom Charter, THERE WILL BE UNAFFORDABLE ELECTRICITY FOR ALL!!!	Barend	

	2026-09-25 14:42:15	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)		Talib	employed individual
	2026-09-25 14:42:16	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	We as South Africans were forced at our own expense to install alternative power because the government and their elected clowns messed up a perfectly good system which was fully operational and profitable and handed to them on a plate. The lawlessness in South Africa made sure that Eskom and the management were powerless to ensure stability of the system due to relentless theft and sabotage. The clowns not want the public to pay again for an infrastructure that has already been amortised, so they can once again swell the coffers and take an even larger amount out for themselves. Restructure and get rid of the parasites that drain the municipalities and put people in place who have the qualifications and the competency. A standard amount that may be acceptable would be R150.00 to be connected to the grid and have the facility available should there be days when solar power is insufficient. Anything more than that is legal theft from the consumers. No free usage under a specified kWh, those who don't pay for electricity should get nothing just like it used to be. This is cost avoidance and not rocket science.	Gerald	retired

Poor performance of state owned and operated entities leading to ongoing loadshedding. 2. Gross negligence on behalf of the municipality for the maintenance of electrical infrastructure leading to MULTIPLE sub station fires with multi week outages. 3. Ongoing theft of electrical infrastructure and the complete lack of effort taken by law enforcement to address this matter.	Philip	business owner
	2026-09-25 14:53:21	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Why should we pay for Mega ANC Cadre corruption and inefficiency? Privatize Escom it not an experiment in sick socialism.	Mikkie Du Toit	
	2026-09-25 14:53:40	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant)	Scrapping Stepped Block Tariffs (IBRs) Hits Middle-Class Families (Policy Position 38): Eliminating Inclining Block Rate (IBR) tariffs for standard domestic customers removes the traditional “pay-less-if-you-conserve” framework. Replacing stepped usage tiers with unbundled capacity fees, monthly service charges, and flat energy rates will trigger immediate bill shocks for low-to-middle-income ratepayers, pensioners on fixed incomes, and large multi-family households sharing a single meter who actively manage their consumption. The Threat of Consumers Funding Industrial Smelter Discounts and Expanded Free Power: Expanding concessional Negotiated Pricing Agreements (NPAs)—granting heavy industrial smelters discounted electricity (historically around 62 c/kWh)—under Policy Position 54 creates a massive revenue gap. At the same time, proposals to expand Free Basic Electricity (FBE) from 50 kWh up to 200–300 kWh per month without an expanded National Treasury grant risk multi-billion-rand deficits. Opponents and energy analysts warn that if these industrial and social shortfalls are not strictly ring-fenced and funded via the national fiscus, the deficit will be loaded onto standard consumer tariffs.	Mark	unemployed individual
	2026-09-25 14:53:51	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Since electricity became so expensive and we had all those power cuts (black outs), we installed a PV system. We had in mind to return unused power to the City but found out we would have to pay for that also, so we opted out of that. Having wanted to help the grid by generating some of our own power, we are now penalised by having to pay nebulous fixed charges. We are still connected to the City and do still pay for some electricity. It is becoming increasingly difficult to assist the City when one is just taxed for everything. It should all focus on supply and demand. We pay for what we use after having paid for installations and upgrades and whatnot. Please do re-consider.	Birgit	employed individual

	2026-09-25 14:57:19	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	First rate payers have to spend thousands on inverters, batteries, gas and solar, due to government and eskom's failures during load shedding, now rate payers have pay penalties for the equipment they had to stall at their own cost because of lack of capacity. This is ridiculous. Then expecting households to potentially fund big business's discounts, even more outrageous. Most outrageous of all is that one of the biggest defaulters in paying Eskom, are our own municipalities. I think it was R120.26 billion owed to Eskom by municipalities. They won't/ can't pay, so instead the rate payers get the raw deal again.	Annette	employed individual
	2026-09-25 14:57:22	No I do not	All of the above	Double Network Fees (DUoS) on Solar Prosumer Exports	Residential Ratepayer (Grid Reliant)	We just cannot afford any changes to electricity bills every month. As it is we dont have enough money for a full month of electricty. This will cripple middle class and lower class households who already cannot afford food, school fees and petrol.	Mary

	2026-09-25 15:00:11	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Prepaid Meter User	The proposed electricity tariff changes penalise households and businesses that invested heavily in solar, inverters and batteries to protect themselves from load shedding and constant power outages. Shifting more of the cost onto fixed network and capacity charges, while restricting the benefits of feeding excess solar power back into the grid, could make these investments less worthwhile and remove incentives to conserve electricity. Scrapping stepped tariffs could also increase costs for households that actively manage their consumption, while discounted electricity for large industrial users and expanded free electricity could leave ordinary consumers, especially the working class, carrying the shortfall if not properly funded by government. At municipal level, reduced electricity surpluses could also result in higher rates and municipalities finding ways to charge residents elsewhere. Overall, the concern is that a move towards more rigid, cost-reflective tariffs could push up household costs, particularly during an already difficult cost-of-living period, and encourage more consumers to leave the grid altogether.	Michelle	employed individual
	2026-09-25 15:00:28	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	To begin with, these fundamentally flawed policies underscore why a change in national leadership is desperately overdue. We are all looking forward to it. Key Objections & Demands: NERSA & Utility Tariffs Halt the "Solar Tax" on Self-Reliance: Citizens spent tens of billions of Rands of private capital on solar and backup power due to state grid failures. Shifting to mandatory fixed monthly capacity charges (Policies 11b, 15, 27, 30) acts as an availability penalty, eroding savings, extending solar payback periods, and punishing energy conservation. Stop Prosumer Double-Charging: Penalizing grid-tied solar generators with DUoS/TUoS charges on both imports and exports, and banning export credits from offsetting fixed charges (Policy 33), destroys incentives and drives total grid defection. Protect the IBR Framework: Eliminating Inclining Block Rates (Policy 38) removes incentives to conserve, triggering bill shocks for middle-class families, pensioners, and multi-family households. Reject Cross-Subsidizing Industrial and Social Shortfalls: Funding industrial smelter discounts (Policy 54) or expanded Free Basic Electricity (up to 300 kWh) via consumer tariffs risks loading massive multi-billion-rand deficits onto standard ratepayers unless strictly ring-fenced and funded by the fiscus. Prevent Municipal Cost-Shifting: Eliminating non-transparent municipal electricity surpluses (Policy 47) without reforming local funding models threatens municipal solvency and risks retaliatory spikes in property rates, water, and refuse tariffs. Reject the "Cost-Reflective" Trap: Imposing rigid mathematical cost-of-supply formulas during a cost-of-living crisis accelerates grid defection, shrinks the revenue base, and worsens energy poverty. Drive Real Accountability: Mass migration to solar was forced by utility incompetence, municipal neglect (substation fires), and theft. Punishing remaining customers to claw back revenue is predatory; the true solution requires market privatization and genuine accountability.	Justin	

	2026-09-25 15:00:31	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Formal Objection to the Revised Electricity Pricing Policy (EPP 2026) in Its Current Form I unequivocally reject the Revised Electricity Pricing Policy (EPP 2026) in its current form. The proposed shift away from consumption-based tariffs toward mandatory fixed network and capacity charges is fundamentally unfair, economically punitive, and contrary to the public interest. It transfers utilities' revenue and operational risk onto captive consumers, including households that have acted responsibly by reducing demand, investing in rooftop solar and batteries, and improving energy efficiency. NERSA must not approve or implement this policy without substantial revision and enforceable consumer protections. The Unacceptable Risk to Households and Small Businesses: Households and small businesses that used their own savings to install rooftop solar, batteries, or energy-efficiency measures in response to load shedding must not now be punished with steep fixed monthly fees merely for remaining connected to the grid. The proposed structure would strip consumers of any meaningful ability to reduce their bills through conservation, impose an unavoidable high billing floor, and penalise precisely the behaviour that the electricity system should encourage. This is regressive, irrational, and unacceptable. Mandatory, PAJA-Enforceable Requirements Before the Policy Can Proceed: • NERSA must impose a binding statutory cap on every fixed network, availability, and capacity charge. Under no circumstances may these fixed charges exceed 15% to 20% of an average domestic electricity bill. Any tariff structure that breaches this threshold must be rejected as unfair, disproportionate, and punitive. • NERSA must expressly shield low-usage, energy-conserving, and lower-middle-income households from fixed capacity charges that erase the financial benefit of using less electricity. No consumer should be penalised for conservation, efficiency, or lawful self-generation. • Utilities must absorb and reduce fixed infrastructure costs through demonstrable operational efficiencies, prudent investment, and transparent cost control. They must not be permitted to shift revenue risk, inefficiency, or poor planning wholesale onto captive consumers through unavoidable fixed fees.	Oreste	retired

	2026-09-25 15:04:22	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	If I am being penalized for having solar. Lets switch it off and see if Eskom kan supply the demand. The reasoning behind this restructuring is because they are loosing money, because I have solar and now I must pay. It is sick. It is discrimination.	Francois	
	2026-09-25 15:04:24	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	Electricity has become a luxury in SA and if we get solar, we get penalized. Municipalities owe billions due to corruption, thieving is rampant and out of control and the few of us who pay, must carry the load. NO! We have had enough.	Ethne	retired
	2026-09-25 15:04:54	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	To just keep pushing the always paying consumer will eventually lead to owners divorcing Eskom for good. Everybody knows what is the real problem: 1. Corruption 2. Ridiculous high salaries for a useless workforce 3. The townships have never paid electricity which is wrong as you now penalize the paying consumer to pay for that shortcoming. 4. Theft 5. Cadre Deployment 6. 30+ years of not doing maintenance on the grid. 7. Kusile and Mudupi corruption that cost more than double their budget price, yet is a bugger up as you gave the contract/s to incompetent fools. 8. Various high electricity users closed business and people installed solar when you couldn't supply. Now you got a surplus, not because you fixed anything, because demand dropped and now you don't get electricity sold anymore, all the result of your own actions. The ANC is NOT capable of fixing anything. To now come and put yet another ridiculous price increase on the cards and punish solar users (private property) is just arrogant and show your desperation to get your hands on more money. The consumer never benefitted from anything you did, service delivery is almost non existent, cables are rotten with regular black outs and power surges. In short, you should not be awarded any more money or power over customers, forced regulations just to collect more money from struggling consumers. Therefore, I object in the strongest possible terms with this proposal. Good service gets awarded, not a failed SOE	matthew	employed individual

	2026-09-25 15:07:15	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer, Prepaid Meter User	If ESKOM was run efficiently there would be no need to unbundle or to raise tariffs other than for inflation. The people who pay via pre-paid meters should not be penalised for those who do not pay. All pensioners should enjoy a "FREE ELECTRICITY" standard and it should not be free to a selected group of the community.	Brian	retired
	2026-09-25 15:07:19	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	The Government states that it is commited to increasing renewable energy, and yet when members of the tax paying public do just that by installing solar panels, thereby in their own small way, reducing the demand on the grid the Government then seek to financially penalise them. This makes no sense whatsover, but should we be suprised? If the Government had not let Eskom get into such a mess, the public would probably be less inclined to install solar, but of course the corruption in this country is simply mind blowing, not least within both local and national Government.	Andrew	retired
	2026-09-25 15:07:52	No I do not	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs		Residential Ratepayer (Grid Reliant), Prepaid Meter User		Catherine	
	2026-09-25 15:07:52	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Rooftop Solar / Prosumer	The tariff policy amounts to shuffling deck chairs on the Titanic. The government is determined to continue abusing the citizenry by maintaining Eskom as a monopoly that can pass on all costs to consumers who are not allowed to souce electricity from any source other than a government monopoly. The duplicity of government is clearly evidenced by the fact that consumers were enticed by tax incentives to install rooftop solar to alleviate Eskom's self-induced supply crisis. Now, like a bait-and-switch con, they intend charging those people who accepted the bait for not using their electricity. History has taught us that Eskom will charge rates that are entirely unrelated to what the costs should be, and determined by what is required to continue operating as a predatory monopoly. Eskom has abused its monopoly by imposing above inflation increases on captive consumers over an extended period. There is zero incentive for this bloated, inefficient, corruption-riddled company to make electricity affordable. The monopoly must be broken up into competitive entities that will not survive unless they supply affordable electricity to South African. A predatory monopoly acting as aa enabler for the mafia state, cannot be reformed.	Les	retired

Nor should ordinary residential consumers be expected to carry the cost of industrial discounts or unfunded policy expansions through increasingly complex and punitive tariffs. Solar consumers lessen the burden on the grid and a std fee for being users at night is reasonable but IF they push electricity back they same compensation rate should be applied to them as when then consume.	Gerrit	employed individual
	2026-09-25 15:32:08	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer	Government and NERSA must take decisive action to ensure that municipal inefficiency, excessive distribution losses, electricity theft, poor revenue collection, or municipal debt do not unfairly burden compliant electricity consumers. NERSA must immediately enforce Policy Position 43(b) by disallowing and clawing back tariff increases where municipal distribution losses exceed national regulatory standards, generally around 7%–10%. Consumers who pay their accounts in full and on time should not be required to finance losses resulting from non-payment, theft, or poor municipal management. Paying consumers must also be legally protected from municipal arrears and Eskom debt defaults being recovered through electricity tariff increases, local mark-ups or surcharge adjustments. Before any further tariff increase is granted, municipalities and licensees should be required to demonstrate that effective measures are in place to control losses and improve revenue collection. These should include automated tamper detection, independent metering audits, accurate account verification, and universal prepaid metering in areas where payment compliance is inadequate. NERSA should automatically reject any municipal electricity tariff application that is not supported by a comprehensive, independently audited and publicly accessible Cost of Supply (CoS) study, as required by Policy Position 25(a). Consumers have a right to understand what they are being charged for and to have confidence that proposed costs are legitimate, reasonable and properly attributable to electricity distribution. All municipal electricity revenue should also be statutorily ring-fenced for electricity-related purposes, including network maintenance, infrastructure renewal and fault response. Municipalities should be prohibited from diverting electricity revenue to unrelated expenditure such as municipal wage bills or general operating deficits. In addition, National Treasury should establish a uniform statutory cap on the Municipal Surcharge on Electricity (MSOE), preventing municipalities from using excessive surcharges to circumvent NERSA's tariff controls. The regulatory framework must also properly recognise the benefits of embedded generation, particularly rooftop solar. In accordance with Policy Position 33(d), DUoS and TUoS network charges should be removed from exported electricity where that electricity reduces local network demand, line losses and daytime substation loading. Solar export credits should be permitted to offset the customer's total monthly municipal electricity bill, including fixed network and customer-service charges. Finally, feed-in credits must be fair and cost-reflective, taking into account the economic value of clean electricity supplied during daytime peak and standard periods, as well as avoided upstream energy costs and reduced network losses. The principle is straightforward: consumers who comply with their obligations should receive transparent, cost-reflective and properly regulated tariffs, while municipalities and distribution licensees must remain accountable for controlling losses, maintaining infrastructure, collecting revenue and managing their financial obligations responsibly.	Eugene

	2026-09-25 15:35:08	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer, Prepaid Meter User	Absolute BS, huge base cost and not based usage? So regardless of how much we consume we will fund Eskom's declining infrastructure. We have regular power outages in Overstrand so rely on solar to keep the lights on as we work remotely! Eskom made a huge profit last year and now they want take more from the people that actually pay so they give more to those who don't pay at all. And we must subsidise industry as well? Totally unacceptable!!!!!	Peter	retired
	2026-09-25 15:35:18	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	I strongly object to the proposed shift towards higher fixed electricity charges, particularly where it penalises households that have invested their own money in rooftop solar. I invested more than R120,000 of my own money in a solar and battery system because I could no longer rely on the grid to provide a reliable electricity supply. At the time, I had young children in the house, and having reliable electricity was a necessity, not a luxury. I am still very much a grid customer. My system is not large enough to take me off-grid, and it has only reduced my grid consumption by approximately 41% in summer, with even lower savings in winter. I continue to purchase substantial amounts of electricity from the grid every month. I therefore strongly oppose any tariff structure that effectively penalises consumers for generating some of their own electricity. We invested our own capital to reduce pressure on a failing electricity system and to protect our households from unreliable supply. We should not now be punished by having the financial benefit of that investment deliberately eroded through excessive fixed charges. Reasonable, cost-reflective network charges are understandable. However, these charges must not become a mechanism for simply recovering lost electricity sales from consumers who have invested in their own generation. Government should be encouraging private investment in electricity generation, not changing the rules after consumers have invested their own money and then undermining the economic benefit of those investments. Before government looks at yet another way of extracting more money from electricity consumers, perhaps Eskom, municipalities and the ANC-led government should first get their own finances and organisations in order. The answer to years of financial mismanagement cannot continually be to make ordinary consumers pay more. Eskom and municipalities need to address the fundamentals: eliminate corruption and wasteful expenditure, improve productivity, hold management and non-performing employees accountable, and ensure that staffing levels, salaries and benefits are justified by actual performance and operational requirements. The Auditor-General's latest reports continue to show serious problems with municipal financial management, accountability, consequence management and financial sustainability. Eskom itself continues to carry substantial employee costs while acknowledging the need to improve workforce productivity and organisational performance. It is hardly reasonable to expect households and businesses to carry an ever-increasing financial burden while state entities and municipalities continue to struggle with poor management, weak accountability and financial inefficiencies. If government wants consumers to contribute more towards maintaining the electricity grid, it should first demonstrate that the money already being collected is being managed efficiently and responsibly. Fix the management, corruption, waste and accountability problems first. Then come back and ask consumers for more money.	Theron	
	2026-09-25 15:36:00	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	I think the government forgot about what happened with the e-toll. 	2026-09-25 15:36:52	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	If this is instituted I will spend the money to upgrade my solar system and go completely off the grid and cut all ties with eskom and city power. At this point the electricity supply is so erratic, this will be the final push to get rid of Eskom and their fleasing the paying customers. They will effectively kill the goose that is laying their golden egg. Besides that would one get a refund when the power is not being supplied (a weekly occurence in Johannesburg, often for a day or two.	Peter	self-employed
	2026-09-25 15:37:47	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	We already paying for past mistakes and municipality corruption, for years we have been told to use less and with not having reliable power provided and the higher and higher prices people found ways to rely less on the grid. But now it is being seen as bad because they are getting less money and are trying to find away to make people pay more and basically saying does not matter how much you use this is the starting point, what are you going to do? Get solar we will charge you for that to, next they going to charge us for being warm under the sun or cooled by the wind, simple greed and trying to make up for mistakes they made and are still making. I am not opposed to a higher free tier but the problem is the way to do it saying just make people pay more it is not a sollution. Annual Public Sector Leakage: Estimated at R27 billion per year by the Public Service Accountability Monitor. SOE Bailouts: Taxpayers spent R521 billion over the past decade to rescue mismanaged and corrupt state-owned enterprises like Eskom and SAA Irregular Municipal Expenditure: Local governments recorded over R116 billion in unrecovered and written-off irregular expenditure over recent cycles Illicit Financial Flows & Trade: Estimates range from R159 billion to R400 billion lost annually through illicit trade, tax evasion, and capital flight. Why must we keep paying for corruption?	J	employed individual

	2026-09-25 15:40:10	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	ESKOM stuffed up the grid and put factories out of business. Stage 6 load shedding destroyed the batteries in my UPS and made it impossible to get any work done from home. You increased the cost of power to home users, and encouraged homeowners to install solar geysers or solar panels. Now that we have done this to stabilise the grid, you are penalising us for doing exactly that. I DON'T THINK SO. Be careful what you wish for. The ANC has destroyed more infrastructure in South Africa since 1994 than it ever managed to do during the struggle. SHAME ON YOU!	Donn	self-employed
	2026-09-25 15:40:14	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Prepaid Meter User	Solar power forced onto consumer by Eskom inefficiency and corruption causing loadshedding etc and after that huge expense the people now need to pay for the privilege too! And the absolute nonsense of just forcing further costs relating to more inefficiency directly on the public is insane! Cut the non paying municipalities out, Eskom deal direct with public and treat everyone the same!! Non payers = no power - actually DO something about the debt rather than push costs down to those who are paying in first place!!	Cheryl	retired
	2026-09-25 15:40:15	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant)		Dave	
	2026-09-25 15:40:17	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	I demand that NERSA impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. I also insist that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. Utilities should absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers.	Rudolf	
	2026-09-25 15:40:22	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User		Hans	retired

	2026-09-25 15:41:25	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	Every time the government cannot make something work. Let’s increase charges to the consumer. They e already destroyed the best electricity company in the world. Less people are buying electricity because of unemployment & going off the grid. Unemployment is a government problem. So let’s make the few consumers left pay for the poor’s electricity. If you move to solar, you must still pay the thieves. It will never end until no one can afford electricity. As a pensioner I use less than 300Kw a month, but get charged high fixed cost already. Now you want to give the poor 300Kw for free. All to try buy votes	Ivor	
	2026-09-25 15:41:33	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)		Joril	
	2026-09-25 15:41:34	No I do not	Other		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	Having been compelled to install solar due to Eskom poor supply with loads shedding as well as increasing price to now force one to pay exhorbitatnt grid connection is wrong. Cross subsidising on the proposed scales is wrong - both cheap to high energy users as well as free -bee increases. If the latter is to go through - every consumer to get that as a rebate to start. For a start ESKOM needs to reduce its overpaid and overstaffed staff complement to reduce prices to all consumers.	Geoffrey	retired

	2026-09-25 15:55:12	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I'm sorry but how did you think this was going to go down? You can't charge every household a fixd connection fee. People that don't need will not pay. It was the same with e-toll. You can't charge people with solar power a punishment fee. They are off the grid. Even if they use pre paid backup, the strain is greatly reduced. Meaning you no longer need to resort to extremes to power the nation! You cannot complain about lost revenue and then suddenly push up free basic electricity 6 fold! Besides, you aren't a for profit company. You should not be acting like one. Free electricity should be payed for by the state. Eskom is a utility company. It shouldn't be complaining about lost users. Less people on the grid means the grid should downsize. Take the opertunity to actually improve things. New powerplants. New equipment. You can't just keep expecting people to oay to support failing infrastructure. Prove to the people that you deserve the fees you charge. If you don't fix the electricity eventually everyone will break away from Eskom. Industrial sector will build their own generation. Private sector will build their own. Homes will power themselves. And when everyone has their own electricity, what reason is there to oay a single cent to eskom? Thank you for your time.	Christiaan	employed individual

	2026-09-25 16:10:01	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	1st..daylight robbery. 2. Due to their incompetence and corruption they want to penalize the man on the street. 3. They expect the few tax payers and working people to subsidise electricity supply for the poorer masses which is not feasable and not sustainable. We're going back to the dark ages. 4. Those who have solar must too be penalized. All the money lost through corruption could have been utilized fixing the power stations correctly or building solar farms to supply the masses with largely free electricity. I say no to any of their attempts to sifon more money from the middle class who are already struggling to keep their heads above water. 5. Privatize eskom. Then things might run efficiently due to competence and no corruption and incompetence will be involved 6 how will the pensioners cope ?	Natalie	retired
	2026-09-25 16:10:03	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	Eskom wants to base its price to the consumer on its own costs. If every business could charge on this basis no company would ever go out of business. It encourages theft and frees up the business to be compensated for incompetence, cade deployment, inefficiencies, middlemen, entrepreneurs, and theft under any other name. Before prices are hiked to keep the ANC in power, Eskom should cut their costs, and cut out all the corruption that has been exposed. We used to have the cheapest electricity in the world and the most stable supply until the ANC were handed Eskom to plunder!	John	retired

	2026-09-25 16:12:51	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer	I oppose blanket mandatory capacity and standby charges on residential solar users and low-consumption households. High unavoidable charges would reduce households' ability to manage their electricity bills through conservation, efficiency and self-generation. Any network contribution must be transparent, proportionate and supported by independently scrutinised cost-of-service evidence. Consumers must have practical options to reduce their contracted capacity and associated charges. Solar ownership alone should not trigger an additional financial penalty, and costs already recovered through other tariff components must not be charged again. Paying electricity customers should not become the default source of funding whenever public allocations are insufficient or poorly administered. The severe corruption needs to be addressed before moving forward. You are stealing	Nathan	self-employed
	2026-09-25 16:14:15	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	Electricity prices have increased by 900% over the past 10 (?) years. This, together with unreliable provision of electricity, has forced people and businesses to go off-grid and provide for themselves. Now the government wants to charge users for using their own power supply. This is unacceptable, no matter how you look at it. Esckpom should trim staff by 30%, stop paying staff and board members unsustainable salaries and benefits, and root out corruption. Only then can the government even consider increasing electricity tariffs.	Jonathan	self-employed
	2026-09-25 16:14:23	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant)	Municipalities must be held accountable for theft and non payment to eskom. They should be regulary audited as the public should have to pay for their theft and mismanagement.	David	retired
	2026-09-25 16:14:26	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Rooftop Solar / Prosumer, Prepaid Meter User	Ever since Eskom/Government implored consumers of electricity to instal Solar with incentives, they then realised this was reducing those who paid their electricity accounts promptly by imposing a fixed monthly fee to compensate their losses of income. Now they want to increase this fixed fee to supplement their promises to the poor to increase their "FREE" electricity as an incentive to vote for the "ANC" at the expense of those loyally paying their account. (STEAL FROM THE RICH TO PAY FOR THE POOR AND CLAIMING THE CREDIT-DISGUSTING POLITIKING, WHICH IS NOTHING LESS THAN PAYING FOR THEIR VOTE TO KEEP THEM IN POWER!!!) GRRRRRRRRRRRRRRRR!!! 	2026-09-25 16:24:31	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Prepaid Meter User	The public can simply to afford to pay for the governing party's greed, corruption, and incompetence anymore. Nor should those choosing to reduce their reliance on the grid be punished for it.	Yvonne	self-employed
	2026-09-25 16:24:54	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Prepaid Meter User	I am a single pensioner and use very little electricity to keep my costs down, so I reject the mandatory fixed grid capacity fees.	Deborah	retired
	2026-09-25 16:25:36	No I do not	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Residential Ratepayer (Grid Reliant), Prepaid Meter User	Yet another punishment for the consumer for mismanagement of the electricity supply for so many years, where bribes were paid, kickbacks received, incompetent/corrupt people were employed, technically competent employees were manipulated to leave ESKOM (to allow full-scale corruption to continue unchecked), purchased poor quality coal that destroyed the power stations (too much ash), awarded contracts at higher prices (BEE tax), employed ANC cadres and so many people who earn high salaries that staff costs are exorbitant, destroyed businesses with "load shedding", drove inflation higher in South Africa with annual tariff increases well above inflation. ESKOM, sort your costs out before enforcing another tax on the few remaining consumers that pay. It is not the consumers' fault that it is cheaper to install solar electricity systems than receive power from ESKOM. Looking forward to an alternative without ESKOM - hopefully Cape Town can get it right.	David	employed individual
	2026-09-25 16:25:42	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	It is beyond time that Eskom realise that they caused a permanent reaction to their poor performance leading to load shedding. They need now to do what every other commercial enterprise does when sales are permanently suppressed and that is to reduce input cost. By increasing prices and penalising customers who reacted to their poor performance by installing solar they are likely to even drive partial users to going off grid permanently.	Johan	
	2026-09-25 16:25:56	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Once again, this policy is couched as something that saves costs for consumers, when it is going to increase costs for most residential users. 	2026-09-25 16:30:36	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I do not support the Revised Electricity Pricing Policy (EPP 2026) because several of its proposed tariff reforms create disproportionate financial burdens for ordinary households, small businesses, and solar adopters. While the policy aims to modernise the electricity market and align tariffs with the unbundled Eskom structure, the practical impact on consumers is deeply concerning. The introduction of mandatory fixed grid capacity and standby charges places an unfair cost burden on low-usage households and solar users. These charges effectively penalise consumers who have invested in reducing their grid reliance, undermining national goals of encouraging rooftop solar and distributed generation. The proposed double network fees and export penalties further discourage prosumers, making it harder for households to contribute clean energy back into the grid. I am also concerned about the removal of inclining block tariffs, which currently protect middle-income households from steep electricity costs. Eliminating this structure risks pushing many families into unaffordable monthly bills. Additionally, the policy opens the door for cross-subsidisation of industrial smelter discounts and unfunded social expansions, which could result in ordinary consumers paying more to support large industrial users. Finally, the policy does not sufficiently safeguard consumers from hidden municipal surpluses, diverted electricity funds, or the passing of theft and non-technical losses onto ratepayers. Without strict ring-fencing and accountability measures, households may continue to shoulder costs that are not of their making. For these reasons, I cannot support the policy in its current form. Any revised electricity pricing framework should prioritise affordability, fairness, transparency, and genuine support for renewable energy adoption—not introduce new charges that make electricity more expensive for the very people who are already struggling. 	2026-09-25 16:40:29	No I do not	Double Network Fees (DUoS) on Solar Prosumer Exports		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer	I strongly object to the proposed double network charges and export penalties on rooftop-solar customers. Charging DUoS and TUoS fees on both imported and exported electricity unfairly penalises households for supplying clean, locally generated power to the grid. Combined with low export credits and additional administration fees, this policy will discourage renewable-energy investment and may drive customers off-grid. I request that Policy Position 33(d) be amended to: - Remove all DUoS and TUoS charges on exported electricity. - Allow export credits to offset the entire municipal utility bill, including fixed network and customer-service charges. - Introduce fair, cost-reflective feed-in rates that recognize the value of clean daytime energy, reduced line losses and lower local network demand. The final policy should support, not punish, households investing their own money in a cleaner, more resilient energy system.	Damian	business owner
	2026-09-25 16:40:44	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Rooftop Solar / Prosumer	A solar rooftop user assist in the governments aim of providing low income earners to avail themselves of cheaper electricity. Unless stern action is taken to criminalize electricity theft with heft fines of R1000 at least per criminal household the government is legitimising criminal scum fro stealing without consequences. Municipalities, especially those with governing political party connections do not publicise the delinquent electricity users. This must become public knowledge of these municipalities want to recover from legitimate ratepayers. Subsidising criminals is a breach of the Constitutional rights of law-abiding SA citizens and the lack of action by recalcitrant municipalites and Escom cannot and should never be tolerated	Karl	retired

	2026-09-25 16:41:08	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Prepaid Meter User	Yes, I'm lost for words. One moment we're told electricity prices are going to go down, that CoT cannot include fixed rate charges etc. and now it's a u-turn proposing all these and more. From what I've read it seems that everything is going to cost even more and I believe the majority of the nation, apart from those who earn high salaries (particularly in Eskom), can withstand that and live. If you are going to pay a Board member millions, perhaps the other 2 are looking for a similar benefit and Eskom staff will also seek increases beyond the COL rate? It's unacceptable.	Mrs L	retired

Why should we pay??????? This is going to start a refusal in payment at all.	Clare	
	2026-09-25 16:48:04	No I do not	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Rooftop Solar / Prosumer	The minister of electricity, in conjunction with Eskom, have seen this as an easy way of recouping monies lost through electricity theft, discounted pricing to heavy consumers (such as smelters) , unfunded free monthly electricity expansions, plus losses attributed to electrical hardware failure and/or theft. These costs are now for the paying customers expense, rather than finding and prosecuting the perpetrators to financially offset such losses. In my opinion, because Eskom is a State Owned Entity, government must make good Eskom's annual losses, fully realizing that financial bailouts for such losses are ultimately borne by the taxpayer. I also think the excessive Eskom workforce and resultant wage plus allowance costs require revising in order to bring them more in line with private sector average wage/allowance scales. In summary EP2026 - Absolute government madness which I think will only lead to paying customer civil disobedience and/or non compliance against municipal bylaws wherever and whenever possible.	Ian	retired

	2026-09-25 17:31:14	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Prepaid Meter User	**I DO NOT AGREE WITH THE PROPOSED REVISED ELECTRICITY PRICING POLICY (EPP 2026).** I strongly oppose the proposed changes to South Africa's electricity pricing structure in their current form. I do not support a system that shifts an increasing portion of electricity costs from actual consumption onto fixed network, capacity and connection charges. This could place an unfair financial burden on households, pensioners, small businesses and consumers who make a genuine effort to reduce their electricity consumption. I am particularly concerned that consumers who invest their own money in rooftop solar and other measures to reduce their reliance on the electricity grid should not be financially penalised through excessive fixed charges, additional network charges or arrangements that substantially reduce the benefit of feeding electricity back into the grid. I also do not support electricity consumers being expected to carry the financial consequences of preferential or below-cost electricity arrangements for large industrial users. If such arrangements are considered necessary for economic or industrial policy reasons, their costs should be transparently accounted for and should not simply be transferred to ordinary households and small businesses. Furthermore, any expansion of free basic electricity must be properly funded. It should not result in additional costs being shifted onto consumers who already struggle with rising electricity and household expenses. Electricity is an essential service. Pricing policy should promote affordability, transparency, efficiency and responsible consumption — not create additional financial penalties for consumers who use less electricity or invest in alternative energy. I therefore **DO NOT SUPPORT THE EPP 2026 in its current form**. I call on the Department of Electricity and Energy to reconsider these proposals, provide full and transparent financial impact assessments, and demonstrate clearly how the proposed tariff structure will affect ordinary households, pensioners, small businesses and residential solar users. **My submission is: NO — I do not agree and I do not support the proposed EPP 2026 in its current form.**	Jan	retired

	2026-09-25 17:49:45	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Why don't you try the novel approach of running Eskom like a business. Your overheads are way too high. Cut down on excess, over paid and underqualified staff and reduce your wage, perks, medical aid bill. If you need to hire the services of "consultants" then you have not employed the right people. Stop the horrific stealing from Eskom. Whether that be overcharged on materials, work to be done, diesel and coal and make meaningful attempts to really reduce the cost of electricity. Your bungling of Eskom from 2008 until now is what has driven people away from using you as a supplier. Now that they have found an alternative solution, out of necessity, you want to sell less electricity and yet keep the same hungry animal alive. So those customers who remain must pay for those who have left. This "logic" is killing the country. People are struggling financially and have less to spend on surviving that ever before. But wait. It doesn't stop there. Soon people will not be able to employ staff and domestic staff, due to declining revenue, so they will let people go. This will create even greater unemployment than there currently is. And we all no government has nothing to offer them.	Bryan

	2026-09-25 18:05:23	No I do not	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs		Residential Ratepayer (Grid Reliant)	I am writing to formally object to the proposed changes to the electricity pricing policy. The draft policies are punitive, economically destructive, and place an unjustifiable burden on standard consumers. My primary objections are as follows: The Punitive "Sun Tax" (Positions 11b, 15, 27, 30, 33): Shifting to fixed capacity charges and double-charging prosumers for grid exports punishes citizens who spent private capital to survive load shedding. Prohibiting the offsetting of fixed charges with export credits destroys the viability of feeding clean power back into the grid and actively encourages grid defection. Scrapping Stepped Tariffs (Position 38): Eliminating Inclining Block Rates (IBRs) removes the "pay-less-if-you-conserve" incentive. This will trigger immediate bill shocks for pensioners, large families, and low-to-middle-income households. Unfair Cross-Subsidization (Position 54): Standard consumers must not be forced to fund discounted electricity for heavy industrial smelters or expanded Free Basic Electricity. These deficits must be strictly ring-fenced and funded by the national fiscus. Retaliatory Municipal Rate Hikes (Position 47): Eliminating municipal electricity surpluses without a viable alternative local funding model will force councils to aggressively hike property, water, and refuse rates to stave off bankruptcy. The "Cost-Reflective" Trap: Imposing rigid formulas during a cost-of-living crisis guarantees compounded, above-inflation tariff hikes. This will only accelerate grid defection among paying customers and deepen energy poverty across the country. I strongly urge the rejection of these proposals. They punish self-reliance, harm vulnerable households, and will ultimately collapse the utility's revenue base.	Garreth	employed individual
	2026-09-25 18:06:46	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Another ANC blunder - they have no idea of fairness nor of economic sanity.	Bruce	retired

Teboho	employed individual
	2026-09-25 18:39:30	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	The new tariffs makes it impossible to cover rates where I support a household who cannot find work despite qualifications.	Shaun	retired
	2026-09-25 18:39:47	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Prepaid Meter User	Government ineptitude during loadshedding era, and government telling the public to get solar is a big problem. Now that electricity is stable they want people to pay for electricity they don't consume. All so they can pay themselves huge bonuses and increases but produce less electricity than 20 years ago.	Craig	

	2026-09-25 18:40:20	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	As a law abiding, rate paying resident, who lives in a home with rooftop solar it is unjust that my family and I be penalised for reducing our demand on the grid that remains under considerable strain. Policy Position 47 strictly forbids municipalities from introducing municipal electricity surcharges (MSOE) on top of existing non-transparent, un-ring-fenced municipal “surpluses”. NERSA is mandated to regulate base tariffs strictly to the audited Cost of Supply (CoS), while any municipal surcharge must be transparently itemised on bills and regulated separately by National Treasury under the Municipal Fiscal Powers and Functions Act. For decades, local councils have used massive, hidden electricity markups (often 15% to 35% above Eskom bulk rates) as an unregulated revenue source to cross-subsidise operational salaries, administrative waste, and deficits in other departments. When councils fail to maintain their local electricity substations, cables, and transformers, power cuts multiply despite ratepayers paying exorbitant, un-ring-fenced tariffs. NERSA must automatically reject any municipal tariff application that is not supported by a fully audited, publicly accessible Cost of Supply (CoS) study (Policy Position 25(a)). This combined with immediate statutory ring-fencing of all municipal electricity revenues into dedicated maintenance accounts, legally prohibiting councils from diverting electricity revenue to fund unrelated municipal wage bills or deficits. Or force us to bear the costs of non-technical losses (such as electricity theft through illegal connections and meter tampering as well as accumulated bad debts that have destabilised Eskom and municipal distributors. In closing I demand that National Treasury set a hard, uniform percentage cap on the Municipal Surcharge on Electricity (MSOE) to prevent local councils from using surcharges to circumvent NERSA tariff controls. We are happy to pay market rates for electricity consumption over and above what our modest solar installation provides but to be charged exhorbitant penalties is unjust and unconstitutional. respectfully Glenn Raynor	Glenn	retired

	2026-09-25 18:59:49	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	**Objection to Proposed Electricity Tariffs** I object to the proposed electricity tariff increases and associated changes to the tariff structure. While I recognise the need for Eskom and municipalities to maintain and improve electricity infrastructure, further significant increases place an unreasonable burden on consumers and businesses, particularly when electricity prices have already increased substantially over recent years. I believe any tariff increases should be demonstrably justified by efficient and prudent expenditure, with greater emphasis on reducing inefficiencies, improving operational performance and strengthening financial accountability before additional costs are passed on to electricity users. I am also concerned about increases in fixed charges, which can disproportionately affect consumers by increasing the cost of electricity regardless of actual consumption. I therefore support OUTA's objection and call for: * Greater transparency and accountability regarding the costs underlying the proposed tariffs; * Meaningful efficiency and cost-reduction measures before further increases are imposed; * Tariffs that remain affordable and proportionate to actual electricity consumption; and * Proper consideration of the economic impact of higher electricity costs on households and businesses. I request that my objection be formally recorded and that the proposed tariffs be reconsidered in light of these concerns.	Andrew	employed individual

	2026-09-25 19:05:42	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Why must solar users be punished for eskom's incompetence! Solar users are always punished by higher tariffs and compulsory tarrifs that must be paid. That raises the question, why only solar users, instead of promoting solar use, it is condemned. All the solar users paid an insane amount of money to put up a solar system. Escom or the municipality does not bring that into account, they are only interested in the money. If you go off grid, the solar user is still railroaded to pay a fix amount just because the grid cable runs past your home, you must pay the grid fees, even when you are totally off the eskom grid! This should be revised and the solar user should be excemted from paying any fees when you go off grid, and if your solar system gives power back to the grid, that units must be credited to that account.	Jacobus	employed individual

We are already struggling to pay our monthly bills and the electricity on top of that is just ridiculous. You are crippling us all. Stop it! Reduce your workforce if you need to cut costs. Stop billing us so much!	Peter	employed individual
	2026-09-25 19:22:02	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Another theft from inefficient SOEs	Anne	retired
	2026-09-25 19:26:04	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Low-usage households and/or those that practice energy conservation should not have those benefits erased through fixed capacity charges. Changes must encourage frugal energy consumption not punish it. NERSA must cap fixed network and capacity charges so that average domestic use is not overburdened. A reasonable limit of increase in an average domestic electricity bill would be no greater than 15-20%. Any changes that add infrastructure costs should not be borne by customers who are on fixed charges. Utilities must perform more efficiently in the first place rather than on coopting consumers to meet their revenue risks. People who have invested in solar systems and contribute to maintaining supply need support, not punitive treatment for what they are doing.	Pam	retired
	2026-09-25 19:26:08	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	This can easily be rectified by proper management of Eskom to get rid of theft, inefficiency and lack of organization and maintenance. 	2026-09-25 20:27:10	No I do not	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes		Residential Ratepayer (Grid Reliant)	It is unfair to charge users a connection fee when this should already be covered by the amount we pay for electricity. Furthermore people should be awarded for using less electricity, people who use more should pay more as with the current structure. Penalising people who use less and making them pay the same amount per unit as people who eventually use more is counterproductive. Most people are already unable to afford electricity and this will just worsen the situation for the most vulnerable households. Electricity should be getting cheaper for low and middle income households. Current Eskom profits show that there is no need for all these increases or additional fees. Providing free electricity should also not be absorbed by paying customers but rather the government as these people who are able to pay for electricity already contribute to personal income tax.	Rodney	employed individual

	2026-09-25 20:35:56	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	We must be the only country in the world that penalises the consumer for taking strain off the grid! The installed solar capacity is a massive reason why we have not had load shedding for quite a while (we should never have been in the position of having it at all!). Other countries reward users for shifting their high demand away from peak hours by giving free power for a preset limited period once a week, or lower tariffs at night. Eskom is locked into the spiral whereby costs go up, so more people go off-grid or hybrid and thereby reducing revenue, so resulting in less cost recovery which then forces the cost to be increased to the consumer. And then there's the non-revenue losses - theft - that the honest consumer is paying for, and the debt-ridden municipalities who owe billions in total to Eskom, thereby reducing working capital and potentially causing Eskom to borrow, the interest on which further increases operating costs. Oh, and what about the multi-million housing project that is sitting empty. And, and, and...	Glyn	retired

	2026-09-25 20:57:36	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	My arguments against the points outlined in the Revised Electricity Pricing Policy (EPP 2026): Mandatory Fixed Charges for All Homes: This structure is fundamentally regressive; it penalizes low-income households and light users who have actively invested in energy efficiency. By shifting costs away from actual usage, the policy removes the primary financial incentive for consumers to conserve electricity. Penalties on Rooftop Solar Exports: Levying network distribution charges on both consumed electricity and exported excess power creates a punitive "double-tax" effect. This actively disincentivizes private investment in renewable energy and contradicts national efforts to reduce grid dependency. Discounted Industrial Deals Paid by Ratepayers: Forcing households and small businesses to cover the revenue shortfalls created by below-cost industrial pricing agreements is inherently unfair. It effectively forces the residential sector to subsidize the profitability of large industrial smelters. Who Pays for Expanded Free Electricity?: Expanding the provision of Free Basic Electricity without a corresponding increase in the national grant budget is an unfunded mandate. This will inevitably result in paying consumers absorbing the total cost through higher tariff increases. An End to Hidden Municipal Surpluses: While transparency is a valid goal, the sudden removal of these markups without a transition plan risks creating immediate financial instability for municipalities. If local governments are not provided with alternative funding mechanisms, this could lead to a rapid decline in basic service delivery. This government is becoming more brainless by the day	Anton	unemployed individual
	2026-09-25 20:57:50	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Rooftop Solar / Prosumer, Prepaid Meter User	Municipalities owe Eskom 450 Billion - go get the money their What company allows debt to accumulate like this - very governance and I wont pay for bloated salaries and inefficiencies so ANC keep voters on their books. Eskom dont own the sun so get knotted you turkeys	Mike	retired
	2026-09-25 20:58:43	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	Simply cannot afford to pay for more electricity than I use. Power is supplied at any time, day or night, dependent on need - which may occur because the grid fails to supply in turn causing loss to a user. This remains the reason for acquiring a solar system. If the suppliers cannot be relied upon to deliver their product they may have compensate and/or lose their customers.	FAEEZ	employed individual

	2026-09-25 21:24:41	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	If Eskom keeps rising the electricity rates they won't have any consumers left to pay off their bad debts, theft that they just write off, corruption they don't bother to investigate and deal with swiftly and CUT OFF those who refuse to pay for their usage. We drive past the MANSIONS who leave their lights on 24 hours a day because they don't havè to pay for their electricity. They get their electricity for free and don't bother to conserve energy. The working class who have to choose between food and electricity make a conscious effort to reduce consumption. Now you are saying that that won't make a difference. We will be paying fixed rates so that we are forced to pay for all of the above. Unacceptable. In most countries, those who have solar are able to sell their excess energy back to the supplier thereby rewarding consumers for reducing the pressure on the grid. Apparently not in SA. Solar users are penalised. Do you know how expensive solar installation is? How long people have to save to eventually beable to afford "off the grid installation ". Years! We definitely need competition in this sector. Eskom has been milking us for far too long. It is time for competitive privatisation, non affiliated to any and all political parties of course. This will go a long way to helping rather than take take take.	Tracy

	2026-09-25 21:35:25	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	Dear Sirs, The electricity being generated today is considerably less than 10 years ago. Yet the number of Escom employees is some 16% more. Escom salaries, on average, are some of the highest in the country. Escom should be 'load shedding' employees such that the number should be falling as the amount of power generated falls. Escom should regard solar power producers as allies rather than as the enemy. The fall in the value of the Rand over many years is largely due to the huge Escom price increases. When I went to the USA in 1984, I received $134 per R100 exchanged. Today I'd get about $6.2 per R100. Escom is collapsing South Africa. Kind Regards Andrew Penwill ?	Andrew	retired
	2026-09-25 21:36:17	No I do not	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Residential Ratepayer (Grid Reliant), Prepaid Meter User	Guiding principle: State-regulated electricity supply and production exists to ensure that electricity is available and affordable to all, regardless of income group. Based on the above guiding principal I have the following objections to the draft legislation. Fixed network and capacity charges * NERSA should impose a strict statutory cap on fixed network and capacity charges. * Low-usage and energy-conserving households must be protected from fixed capacity charges. Non-indigent households that use little electricity would get no Lifeline tariff, yet they would pay full capacity and service charges. * Any universal generation standby charge should be subject to the same cap and fully justified before it is imposed. Residential tariff structure * NERSA should retain an energy-conservation tier, such as a low-usage block, for non-indigent, low-to-middle-income consumers, so that modest use is not penalised by large monthly service fees. Prosumers / embedded generation * DUoS/TUoS charges on exported electricity should be removed entirely, because embedded solar reduces local line losses and daytime substation loading. *Export credits should reflect more than the avoided purchase cost, for example by recognising network and loss benefits. They should also be allowed to offset network and retail charges, with no additional net-billing administration fee. Negotiated pricing, Free Basic Electricity and cross-subsidies * Any revenue shortfall from Negotiated Pricing Agreements with private commercial entities must not be recovered through standard consumer tariffs. * Any expansion of Free Basic Electricity should be funded by National Treasury, not by higher tariffs on paying households and small businesses. * All negotiated pricing discounts and inter-tariff subsidy transfers should be publicly disclosed, reported annually with audits, and shown on consumer invoices. 	2026-09-25 21:46:19	No I do not	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Prepaid Meter User	Die hele elektrsiteit heffing struktuur is belaglik. Besighede al word hul hoe gehef maak nie vir hul saak want hul betaal maar in effek betaal hul kliënte hul tarief, hier dink ek veral aan groot besighede want hul weet kliënt het nerens anders om te gaan nie. Dit is huishoudings wat ESKOM uit sy gemors gehelp het met sonstelsels en nou wil hul daardie verbruiker straf, hoe belaglik kan ESKOM wees. Nee duisend keer nee vie kruissupsidering. As smelterye krag gebruik laat hul betaal op die voorgeskrewe tarief en dit geld vir alle gebruikers. Wat ek nie verstaan nie is hoe kan dit moontlik wees dat meter gebruikers buitesporige tariewe vir krag betaal. Woonstel bewoner met krag meter koop vir R 50 krag en ontvang 2 eenhede. Hoeveel tussen instellings maak wins uit so n transaksie. Daar sal herbesin moet word oor tariewe oor hele spetrum. Een beginse wat ononderhandelbaar behoort te wees is dat roofkrag gestaak moet word, almal moet betaal volgens hul gebruik. Dit het tyd geraak dat ESKOM sy taak ten volle moet lewer , van opwekking tot verspryding. Plaaslike owerhede wil dit doen om geld daaruit te verdien maar dan vorder hul die geld maar betaal ESKOM nie. Dieselfde van nie betaling kan ook van n klomp staats drpartemente en ministers gesê word. As ESKOM al die geld inkry vir krag maandeliks gelewer sonder skeppers tussen hom en verbruiker sal die tariewe aansienlik kan daal. Lae inkomste en middel inkomste groepe kan eenvoudig nie meer lewe met hoë tariewe en belasting op belasting. Dit het lank genoeg aangehou dit is tyd om realisties te raak.	Herman	retired

	2026-09-25 21:47:51	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	I object to the Revised Electricity Pricing Policy (EPP 2026) in its current form. I am a residential ratepayer in Sandton, Gauteng, on a three-phase Eskom Direct connection. I invested in a private rooftop solar and battery system specifically to reduce grid dependence and manage my own electricity costs during load shedding. Two aspects of this policy directly undermine that investment. First, the shift to mandatory fixed grid capacity and standby charges penalises exactly the households who reduced their draw on the grid through private capital. A low-usage, solar-offset home should not face a high unavoidable monthly billing floor simply for staying connected. Second, the mandatory migration of three-phase residential customers to Time-of-Use tariffs removes the flat-rate option that currently makes solar and battery investment viable for households like mine. My usage patterns mean a forced TOU tariff would likely increase my costs rather than reward the demand I've already shifted off the grid through self-generation. This should be a customer choice, not a mandatory conversion. I would also ask that NERSA retain a conservation-friendly tariff option for non-indigent, low-to-middle-income households currently protected by Inclining Block Rates, rather than replacing them outright with flat rates plus substantial fixed charges. I support cost-reflective pricing in principle, but this draft shifts risk onto private investment in resilience and self-generation rather than sharing it fairly across the system. 	2026-09-25 22:08:07	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	What the Draft Policy Proposes: The policy shifts tariff design away from volumetric consumption (c/kWh) toward mandatory fixed network and capacity charges (R/kVA, R/kW, or R/Amp/month). To eliminate “volume risk” for distributors, utilities will bill customers for grid availability and network reservation regardless of whether electricity is consumed. In addition, Policy Position 15 introduces a universal generation standby charge applied at the wholesale level to recover the capital costs of keeping backup dispatchable generation on standby for grid-tied users. The Core Civic / Household Risk: Households and small businesses that invested private savings into rooftop solar, batteries, or energy-efficiency measures to survive load shedding will be hit with steep monthly fixed fees simply for remaining connected to the grid. Frugal, low-volume consumers can no longer lower their utility bills by conserving electricity, as fixed network fees create a high, unavoidable monthly billing floor. My demands for this public submission (PAJA-Enforceable Points). I : Demand that NERSA impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. Insist that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. Require utilities to absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers.	Thinesh	employed individual

	2026-09-25 22:18:55	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	Mandatory Fixed Grid & Capacity Charges: The shift away from variable consumption billing (c/kWh) toward hefty, unavoidable monthly baseline fees penalises citizens who invested their own private capital to insulate themselves from years of state-induced energy insecurity. It strips households of the financial agency to lower their bills through self-generation or conservation. Double Distribution Charges (DUoS) on Solar Exports: Forcing grid-tied solar prosumers onto Time-of-Use tariffs and charging them Distribution Use-of-System (DUoS) fees on the very electricity they export back into the grid is completely unjust. Citizens who feed clean power into a constrained national grid should be incentivised as assets, not taxed as liabilities. Restrictions on Credit Offsetting: Banning solar export credits from offsetting fixed monthly network access fees makes it financially punitive to participate in distributed generation. It creates an artificial floor on utility revenue at the direct expense of the consumer.	Nick	
	2026-09-25 22:20:11	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	Another tax on the population in order to pay for a bloated, inefficient and corrupt Eskom. 						Will credit be applied when the grit is off for whatever reason, for days at a time! And I concur with the comment below as well: I oppose the Revised Electricity Pricing Policy in its current form. My principal concern is that tariff restructuring could shift an excessive financial burden onto households and small businesses while weakening their ability to control electricity costs through reduced consumption and investment in alternative energy. I request the following changes before the policy is finalised: 1. Protect consumers against excessive fixed charges. Any network or capacity charge must be justified by independently scrutinised, publicly available cost-of-supply studies. Moving costs into fixed charges should not become a means of protecting utility revenue regardless of efficiency or service quality. Consumers must have practical, affordable options to reduce their contracted capacity and retain meaningful savings when they use less electricity. The impact on low-consumption households that do not qualify for lifeline tariffs requires particular attention. 2. Ensure fair treatment of rooftop solar and battery investment. I object to the combined burden of import and export network charges, additional administration fees and restrictions on using export credits. Any such charges must reflect demonstrable costs, prevent duplicate recovery and account for measurable benefits supplied to the network. Export compensation should be transparent and independently assessed. Time-of-use arrangements must include understandable pricing, affordable metering and reasonable transition periods. 3. Prevent industrial concessions from becoming an open-ended liability for other consumers. I object to recovering negotiated industrial pricing shortfalls from households and small businesses. Any concession should have a disclosed funding source, a defined duration, measurable employment and economic commitments, and independent review. Where government considers a subsidy necessary, it should be transparently budgeted and justified rather than passed through electricity bills without adequate protection for those paying it. 4. Fund social support transparently and sustainably. Support for vulnerable households must reach its intended beneficiaries. Any expansion should be accompanied by a credible funding plan, clear eligibility rules and audited reporting. Paying consumers should not face an uncapped obligation to fund commitments whose costs and outcomes they cannot scrutinise. 5. Make efficiency and accountability enforceable. The final policy should require measurable improvements in maintenance, billing accuracy, debt collection and the reduction of electricity theft. Consumers must not become the default source of funding for avoidable operational failures. Existing provisions promoting transparency and limiting excessive losses should be retained and rigorously enforced. Before implementation, the Department and NERSA should publish representative household and small-business bill comparisons, disclose the cumulative effect of all charges, and consult on the detailed implementation rules. I request that the policy be revised to make affordability, proportionate charges, fair compensation and enforceable accountability explicit conditions of implementation.

	2026-09-25 23:26:54	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	Through its inability to maintain an excellent infrastructure inherited by Government, plan prospectively and fraudulent transactions, ESCOM now wants to penalize households and private business sector by creating a structure that will again fill its coffers in spite of a lack of service. The dire situation that South Africa experience at this time may be directly attributed to Government and its structures. Load shedding is partially disbanded due to private households and business adopting alternative power generating methods and thus alleviating the pressure on the grid. These entities should not be punished for actually assisting ESCOM. The measures intended by the Minister are draconian in nature and unconstitutional.	Frik	business owner

	2026-09-26 02:03:13	No I do not	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Residential Ratepayer (Grid Reliant)	Our rate is higher than Municipal rate , the repair services is extremely slow and unreliable . Daily service fees is high with no service . Mines (legal and illegal) use an extremely high volume of electricity with huge profits but get a lower rate and a stable grid connection. Eskom does not control the Sun , they do not have the right to charge solar users money. Millions of people gets free electricity and a small amount of users must pay for them. Dont take what you definitely do not deserve eskom.	Petro	retired
	2026-09-26 02:12:02	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I object to the Revised Electricity Pricing Policy in its current form. South Africans are already heavily burdened by electricity tariffs, municipal charges and taxes. Additional fixed charges that increase costs for households using less grid power, including those who invested their own money in solar, would be unfair and discourage energy efficiency. Please revise the policy to keep electricity affordable and ensure any grid charges are transparent and proportionate to the costs they cover.	Dewald	employed individual

	2026-09-26 02:26:21	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	No, I do not support the proposed electricity tariff policy in its current form. I am particularly concerned that shifting more of the cost onto fixed monthly charges could place an unfair burden on households, especially those who make an effort to reduce their electricity consumption. Consumers should not be penalised for using less electricity or for investing in alternatives such as rooftop solar. I am also concerned about the proposed treatment of households with solar systems, the potential costs associated with negotiated pricing arrangements for large industrial users, and how any expansion of Free Basic Electricity would ultimately be funded. Ordinary households are already under significant financial pressure. Electricity pricing needs to be affordable, transparent and fair, while ensuring that consumers who use less electricity are actually able to benefit from doing so. I support measures that address waste, theft, inefficiencies and hidden municipal mark-ups, but the solution should not be to place an even greater financial burden on paying households. There needs to be meaningful public consultation before such significant changes are implemented, and the voices and concerns of ordinary electricity consumers must be taken seriously.	Premy	unemployed individual
	2026-09-26 02:27:02	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Prepaid Meter User	The poor middle class should not be carrying any other users or businesses. Life operates on in. Citizens are held hostage by increases due to mismanagement. Eskom should take ownership of its supply to make it affordable and reliable. No more excuses: Eskom should deliver what we pay a premium price for!	Mariska	employed individual
	2026-09-26 04:03:55	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	The consumers are already over paying on services not received. This bill move additional spent burdens to a part of society that is over taxed, and under serviced. If the government was trust worthy and transparent with a good governance record I would have believed that the additional costs will be allocated where needed. However, this overhaul seems to be to create another area of complete opaque transactions to allow for cadres to get subsidies for industrial deals that will fail. Place the burden with the correct entities - industry, add additional tax there, allow people to put electricity back into the grid to assist subsidies that way instead of flogging a already over burdened and dying horse	Maria	
	2026-09-26 04:06:34	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Stop stealing Stop penalizing people for your incompetence	Venessa	retired

	2026-09-26 04:38:35	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Another new charge that raises some very serious questions about the direction in which our country is heading. The installation of a prepaid electricity meter has already resulted in our electricity costs effectively doubling. It is difficult not to question how these meters are being monitored and whether consumers are receiving the value and transparency they should reasonably expect. Meanwhile, the ratepayer and taxpayer base is shrinking. Increasing numbers of South Africans are leaving the country, driven by concerns about crime, declining services, economic uncertainty and a loss of confidence in the future. Whatever terminology we use for it, the result is the same: productive people, skills, businesses and capital are leaving the country. So what happens when there are fewer and fewer people left to carry the financial burden? Then there is solar. Because of unreliable electricity supply and years of failing infrastructure and poor municipal management, many of us were effectively forced to invest our own capital in solar systems simply to keep our homes and businesses functioning. Now we are being penalised for reducing our dependence on the grid. And all of this is happening against the backdrop of 30 years of corruption, mismanagement, failing state institutions and the steady deterioration of infrastructure and public services. What makes it even more infuriating is the sheer brazenness of some of the corruption. It is no longer something that feels hidden away in the background. So much of it is reported openly and repeatedly that you can be left wondering how this became acceptable. At times, the sheer scale and blatant nature of it is enough to make you want to vomit. Billions have been lost through corruption, waste and maladministration, yet ordinary citizens and businesses continue to face increasing costs. At what point do we have to ask whether this approach is sustainable? Electricity, water, rates, levies and an ever-growing collection of charges are placing an enormous burden on ordinary households and businesses. Call them taxes, tariffs, levies or "service charges" — the economic effect is much the same. Money is being removed from productive households and businesses that could otherwise be spent, invested and used to grow the economy. People don't object to paying for good services. They object to paying more and more for services that have deteriorated dramatically over the past three decades — while simultaneously being expected to spend their own money fixing the failures of the system. We pay for electricity, then have to buy solar because the electricity supply can't be relied upon. We pay for water, yet increasingly have to worry about its reliability and quality. We pay rates and taxes, yet infrastructure continues to deteriorate. And after decades of corruption and mismanagement, the burden continues to fall on those who remain in the formal economy and continue to pay. But there is a fundamental problem with that approach. The productive tax and ratepayer base isn't infinite. Every business that closes, every skilled person who emigrates, every family that leaves and every investor who takes their capital elsewhere reduces the base that has to carry the country's costs. At some point, there simply won't be enough people left who can afford to keep paying. A country cannot tax, tariff and charge its productive citizens into prosperity. Eventually, you run out of people to squeeze.	Frederik	retired

	2026-09-26 05:05:28	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	Consumers who generate their own electricity remain connected to the grid and therefore reasonably contribute towards maintaining the network. However, this does not automatically justify charges that effectively neutralise the financial benefits of investing in private generation. South Africa needs greater private investment in distributed generation, storage and energy efficiency. Tariff structures should therefore avoid creating a disincentive for households and businesses to invest in technologies that can reduce demand for centrally supplied electricity. Any standby or capacity-related charge should be: - transparent and objectively cost-based; - proportionate to the services actually required; - differentiated according to actual demand and network utilisation where technically feasible; and - designed so that it does not unfairly penalise consumers who reduce their grid consumption. 	2026-09-26 05:28:06	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	My Mom is on 24/7 oxygen supply. I had to make an alternative arrangement and install the most powerful solar supply. In our area we have so many outages but are left without electricity more often than not. in our area we already pay over R1000 for service fees. Recently they did a true up of our electrical meter and it turned out the "actual" monthly charges was incorrect and they smacked us with a bill of R35 000 for the December 2025 to July 2026 period. they didn't split it equally over the step 1, step 2 and step 3 rate, they dumped everything in the step 3 rate. It is disgusting to say but when my Mom is no longer around I am cutting myself off completely. I am only connected for rainy days that continue for more than 3 days, then my solar panels don't charge enough for my mom's oxygen machine. To increase this by more I will go off grid for sure. I am not sure how , but then they must come and fetch their meter and cables. Druk dit in jou gat in op.	Erika	employed individual

	2026-09-26 06:28:57	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Policy Summary: Restructuring Electricity TariffsThe proposed regulatory framework fundamentally alters utility billing by shifting from volumetric consumption rates (c/kWh) to mandatory fixed network and capacity charges (measured in R/kVA, R/kW, or R/Amp/month). Designed to shield distributors from "volume risk," this policy ensures utilities can bill consumers for grid availability and network reservation regardless of actual energy use. Furthermore, Policy Position 15 implements a universal generation standby charge at the wholesale level to recover the capital costs required to maintain backup dispatchable generation for grid-tied systems.The Core Impact on Households and Civic RiskThis structural change poses a significant financial threat to proactive and lower-income consumers:Penalising Green Investment: Households and small businesses that spent private capital on rooftop solar, battery storage, or energy-efficiency measures to mitigate load shedding will now face steep, inescapable monthly fees just to remain grid-tied.Eliminating Conservation Incentives: Energy-conscious and low-volume consumers lose the ability to lower their bills through reduced usage, as these fixed capacity charges establish a high, unavoidable monthly billing floor.Key Demands for Public Submissions (PAJA-Enforceable)To protect consumer rights under the Promotion of Administrative Justice Act (PAJA), public objections should explicitly demand that NERSA enforces the following conditions:Implement a Statutory Cap: NERSA must place a strict legal limit on fixed network and capacity charges, ensuring grid availability fees never exceed 15% to 20% of an average domestic electricity bill.Protect Low-Usage Consumers: Low-income, lower-middle-income, and energy-conserving households must be legally exempted or insulated from fixed capacity charges that disproportionately penalise efficient behavior.Enforce Utility Accountability: Utilities must be legally mandated to absorb infrastructure maintenance costs through internal operational efficiencies, rather than entirely transferring their revenue risks onto captive consumers. 	2026-09-26 06:42:34	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Rooftop Solar / Prosumer, Prepaid Meter User	While I recognize that a structural revision of the Electricity Pricing Policy is necessary to adapt to South Africa's changing energy landscape, I am deeply concerned about the practical implementation and the financial burden it places on ordinary consumers. Too often in South Africa, policies that are technically sound and well-thought-out on paper are ultimately used to compensate for systemic failures. This policy appears to shift the financial consequences of widespread mismanagement, institutional corruption, and unchecked electricity theft (at all levels) directly onto the shoulders of law-abiding, paying citizens. A lack of accountability across municipal and national structures should not be subsidized by escalating baseline costs and fixed grid fees for consumers. Before implementing sweeping billing changes that penalize low-usage households, the Department must prioritize strict accountability, the eradication of municipal corruption, and the enforcement of laws against illegal connections. Consumers cannot continue to bear the cost of institutional inefficiencies.	Avi	retired

	2026-09-26 07:06:29	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	I strongly oppose implementing the revised Electricity Pricing Policy in its current form, particularly its impact on households effectively forced to install rooftop solar and batteries at their own expense because Eskom could not provide reliable electricity during load shedding. Imposing substantial unavoidable monthly charges on these customers would penalise them for protecting themselves against supply failures and undermine the savings needed to recover that investment. Free basic electricity must be funded transparently through government budgets, while electricity theft, illegal connections, unpaid accounts and administrative failures must not be passed on to customers who already pay their bills. The policy should not proceed without enforceable limits on fixed charges, protection for rooftop solar investments and explicit safeguards against making paying customers finance failures for which they are not responsible.	Kevin	employed individual

This is a consumption based service. You pay as you use!	Kenneth	self-employed
	2026-09-26 07:29:09	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	A Punitive "Sun Tax" on Private Capital and Self-Reliance: When recurring load shedding crippled businesses and households, citizens invested tens of billions of Rands in private savings to install rooftop solar, inverters, and battery banks. Shifting electricity billing away from consumption (c/kWh) toward mandatory fixed monthly network and standby capacity charges (R/kVA, R/kW, or R/Amp/month) under Policy Positions 11(b), 15, 27, and 30 acts as an availability penalty. It erodes household investment returns, penalises energy conservation, extends solar payback periods by years, and locks low-volume consumers into high monthly billing floors regardless of how little electricity they consume. Punitive Double-Charging and Restrictions on Solar Prosumers (Policy Position 33): The draft policy penalises grid-tied embedded generators who inject clean power into the network. Prosumers are forced onto mandatory Time-of-Use tariffs and made to pay standard Distribution Use of System (DUoS) and Transmission (TUoS) charges on both the electricity they import and the electricity they export. Furthermore, prohibiting solar owners from using clean export credits to offset fixed monthly network and retail service charges destroys the financial viability of feeding power back into the grid, actively incentivising frustrated solar owners to defect entirely. Scrapping Stepped Block Tariffs (IBRs) Hits Middle-Class Families (Policy Position 38): Eliminating Inclining Block Rate (IBR) tariffs for standard domestic customers removes the traditional "pay-less-if-you-conserve" framework. Replacing stepped usage tiers with unbundled capacity fees, monthly service charges, and flat energy rates will trigger immediate bill shocks for low-to-middle-income ratepayers, pensioners on fixed incomes, and large multi-family households sharing a single meter who actively manage their consumption. The Threat of Consumers Funding Industrial Smelter Discounts and Expanded Free Power: Expanding concessional Negotiated Pricing Agreements (NPAs)—granting heavy industrial smelters discounted electricity (historically around 62 c/kWh)—under Policy Position 54 creates a massive revenue gap. At the same time, proposals to expand Free Basic Electricity (FBE) from 50 kWh up to 200–300 kWh per month without an expanded National Treasury grant risk multi-billion-rand deficits. Opponents and energy analysts warn that if these industrial and social shortfalls are not strictly ring-fenced and funded via the national fiscus, the deficit will be loaded onto standard consumer tariffs. Municipal Fiscal Shocks and Retaliatory Rates Hikes (Policy Position 47): Local councils rely on commercial electricity markups (often 15% to 35% above bulk Eskom tariffs) to cross-subsidise indigent households, sanitation, and municipal salaries. Eliminating non-transparent municipal surpluses without an alternative municipal funding model threatens local government solvency. This could prompt municipalities to counter revenue losses by introducing aggressive double-digit hikes on property rates, refuse, and water tariffs. The "Cost-Reflective" Affordability Trap: Historically, the regulatory push toward "cost-reflective tariffs" in South Africa has been administrative shorthand for compounding above-inflation tariff hikes. Imposing rigid mathematical cost-of-supply formulas during a prolonged cost-of-living crisis risks accelerating grid defection among high-paying consumers, shrinking the customer base, and deepening energy poverty across South Africa. 	2026-09-26 07:53:01	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Mandatory fixed grid capacity fees and standby charges on solar and low-usage homes is insane. As a widow with an investment I live off, which is not increasing at the same rate as cost of living, having to pay huge amounts for electricity is already problematic. I cannot afford to fund industrial smelters that are presumably operating at a profit and I certainly cannot afford to pay huge increases due to the under-resourced being given more free electricity. It's simply not feasible and willeventually put me out on the streets. If I could afford solar power, which is the sensible option for any country wanting to solve the energy crisis, I would go that route, but I am firced to instead remain on an ageing grid because the changeover makes zero financial sense. I simply cannot keep up with all the increases government ministers, with their overblown salaries are instituting without a thought to the people whom I inagine are paying for the ministers' unhindered electrical consumption. We try to run off solar every day ... yet our bill is almost R3000 per month. We changed to a gas stove to reduce costs, but it seems just having lights on in the evening is becoming unaffordable. Even as a middle income earner we're struggling to get through the month between the utility bills, school fees, medical bills and food. It's impossible to not keep running into overdraft! The people who really need 300kw won't really get benefit. Give all SA free 300kw units and we all pay above that. Which is fair. All SA suffer financially not just poor. They get SASSA etc and free housing, education etc. We have to pay for everything. You can go to the low income housing and see all the DSTV dishes, new BMW, VW. They just manipulating the system. I can't afford electricity anymore and got solar, cheaper to pay the loan off. Why do us have to suffer for years of corruption and neglect not fair at all. Dont punish those who dont get anything for free, we are done with it! We are fed up! We have incompotend people in positions that can't even do the job correctly. The rich will cut off eskom and the people who can pay, but refuse to will just continue and eskom will make yet again no income. Those low income household manipulating the system that is corrupt. Maybe we should go to the international board and advise them how the rich is getting punished for being law obeyding citenships. Hopefully the sanctions will open the goverments eyes. 	2026-09-26 07:57:49	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	Hallo, There is a lot of corruption withing our goverment. The people who really need 300kw won't really get benefit. Give all SA free 300kw units and we all pay above that. Which is fair. All SA suffer financially not just poor. They get SASSA etc and free housing, education etc. We have to pay for everything. You can go to the low income housing and see all the DSTV dishes, new BMW, VW. They just manipulating the system. I can't afford electricity anymore and got solar, cheaper to pay the loan off. Why do us have to suffer for years of corruption and neglect not fair at all. 	2026-09-26 07:58:21	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	I wish to formally object to the proposed changes to the electricity pricing structure contained in the Revised Electricity Pricing Policy 2026. I am particularly concerned that the proposed move towards higher fixed network and capacity charges could unfairly disadvantage residential consumers, especially households that actively reduce their electricity consumption through energy efficiency, solar generation and battery storage. Consumers who have invested their own money in solar and other energy-saving measures should not subsequently be financially penalised through substantial fixed charges or reduced benefits for electricity exported to the grid. I am also concerned that ordinary paying consumers could ultimately carry the cost of electricity theft, municipal inefficiencies, bad debt or preferential electricity pricing arrangements for certain industries. Any new tariff structure should ensure that consumers pay only their fair share of the genuine cost of providing electricity and should not result in households effectively subsidising inefficiency or other users. Before such significant changes are implemented, government should provide clear examples showing how the proposed tariff structure will affect households with different levels of consumption, including low-income households, pensioners, low-consumption households and households with solar and battery systems. I believe that affordability, fairness and incentives for energy efficiency and private investment in renewable energy must remain central to any new electricity pricing model, and I therefore request that the proposed changes be reconsidered and amended to ensure that residential consumers are adequately protected. 	2026-09-26 08:17:43	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	When Eskom could not provide sufficient electricity to paying customers, consumers had to go without power and were incentivised to invest in alternative solar energy at their own cost. Now that Eskom has been able to stop the rampant corruption that resulted in the destruction of one of the best electricity providers in the world, they boast that they no longer have load shedding, but load reduction, essentially the same thing. Due to consumption dropping (because consumers have installed their own power) and the additional costs Eskom has incurred by undertaking routine maintenance after nearly 30 years, they now want to extort their paying customers with unrealistic increase in tariffs. Why not address the cashflow problem experienced by Eskom due to municipalities stealing electricity collections and poor financial control?	Peter	retired

	2026-09-26 08:38:44	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	Escom is taxing our country with gross inefficiency and excessive operating costs. How many more people would have been pushed into poverty and lost jobs due to loadschedding if south africans did not stand up and say "I can do something about this". As a country we "voted" against corruption and theft, and used our plentifull sunshine to keep our jobs! But now legislators wants to also steal that hope through the grip they have on passing legislation. The legislation MUST provide an easy way to disconnect from the grid. It is unconstitutional to force south africans to pay without choice. Legislation MUST provide for disconnection from the grid without penalties.	teo	business owner

	2026-09-26 08:47:38	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Prepaid Meter User	Enough is enough. People are barely coping with the already hiked diesel/petrol, electricity, taxes etc. costs - how do the government expect people to survive?! They just tax us more instead of making plans that improve our country and work for the paying citizens. Smiling while robbing their citizens instead of doing their jobs!	Samantha	self-employed
	2026-09-26 08:47:43	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)			retired
	2026-09-26 08:47:54	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	The government has been incapable of supplying reliable electricity to its citizens due to years of incompetence and mismanagement. As a result citizens took the problem on themselves and had a huge impact on bailing the government out of its self made disaster. Now you want to charge us for this? This is ridiculous.	Brian	employed individual
	2026-09-26 08:48:23	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Small / Medium Business Owner (SMME)	When Eskom could not provide sufficient electricity to paying customers, consumers had to go without power and were incentivised to invest in alternative solar energy at their own cost. Now that Eskom has been able to stop the rampant corruption that resulted in the destruction of one of the best electricity providers in the world, they boast that they no longer have load shedding, but load reduction, essentially the same thing. Due to consumption dropping (because consumers have installed their own power) and the additional costs Eskom has incurred by undertaking routine maintenance after nearly 30 years, they now want to extort their paying customers with unrealistic increase in tariffs. Why not address the cashflow problem experienced by Eskom due to municipalities stealing electricity collections and poor financial control?	Peter	retired
	2026-09-26 08:48:31	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	For years now electricity charges have been a fiasco.. largely because of Escom's mismanagement. We already pay far too much, and here's scratching for more of our income. Time to stop. Nor do I trust ANY ANC body looking for more cash... a greedy, dishonest and incompetent bunch. Zuma has taught his disciples much. STOP!!	Anthony	retired

	2026-09-26 09:01:32	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	All the laws the state wants to pass, is simply more of the same, greed, control, and lack of ability to manage existing funds, as they shamelessly squeeze the hardworking normal South African for more money. Most laws they pass is simply to get money, with very little being actually used to improve South Africans lives. And then when South Africans become smart and try to sidestep their incompetence and greed, with example solar electricity, they just want more and more for themselves. Its shameless and simply morally inexcusable. And those with the least money will again suffer the most. How long can we put up with this. Leave the private sector alone, and do your job and manage the funds that you already overcharge. How long before we are indistinguishable from a communist state. Nobody is fooled by the fancy language to hide their true motives anymore. But a tree is known by its fruit!	Wikus

	2026-09-26 09:05:03	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	In Cape Town we already pay a base rate for the service of having electricity supplied to our homes independent of how much electricity you actually use. This, I believe, is fair, regardless of if you have solar or not. On top of this we pay for the electricity that we actually use. But to only charge a base rate and availability to the grid regardless of if you are a responsible, frugal user or if you use much electricity is not fair. Those who use less electricity should not pay the same as those who use more. Those who supply electricity to the grid via solar should be compensated fairly, not penalised.	Christa	employed individual

	2026-09-26 09:07:12	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Prepaid Meter User	We were forced to spend our own money to acquire rooftop solar assisting the grid and us and our businesses to survive when the government could not deliver reliable electricity. For more than 10 years we struggled with loadshedding. And now the government wants to penalise consumers who assisted the grid during those times. It downright criminal! There is NO justification for consumers to be held responsible for corrupt administrative issues. We are sick and tired of paying for ANC incompetence, corruption and looting. Time for all those who looted the state coffers to account and pay back into the Grid.	Darth	employed individual
	2026-09-26 09:07:18	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	This economy that hasn't given any household a chance to build and grow, the little that you do, to reduce the ever-increasing cost of everything else Including escalating power charges is added back to you after spending on infrastructure to reduce the cost we end up paying so much more. We were able to run our whole property off a generator during heavy load shedding and with cost rising in petrol we opted for solar = infrastructure cost, not only are we spending 3 x more on consumption due to all these levies, and increasing cost of electricity - we still have the additional cost of servicing the solar and generator and then now all more additional cost - we will not be able to maintain our various hospitality businesses and several of properties have closed, so many more people losing jobs - where is assistance to help us make our country stronger when you penalise us for trying?	Lee	business owner

	2026-09-26 09:28:04	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I just have one question for this "GNU"... Aren't you fat cats ever satisfied? Or is it your desire to drain residents of this country of every cent they own? That's a rhetorical question, of course because we all know you greedy, self serving, overweight feeble excuses for human beings are intent on living the absolute high life whilst stomping the tax paying public into the dirt. You disgust me. All of you.	David	employed individual
	2026-09-26 09:28:16	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	Depending on the fixed fee. Forced charges for solar is a no. It's relieving the grid. Hidden charges is a no. Avoid corruption. I advocate for government to put together a plan that enables all households irrespective of wealth status and all businesses irrespective of wealth status, to get solar energy for water and electricity, in order to resolve the energy crisis that we face now and in the future.	Caren	employed individual

	2026-09-26 09:36:05	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	The changes to the current system seem to be heavily biased and even ludicrous whereby people who have invested heavily at their own cost to install solar systems are now penalized despite this. Thanks to them they increased available power when SA was suffering huge loadshedding due to corruption and are now paying again Secondly the below cost charges to high consumers such as smelters makes absolutely no sense, why should they be subsidized by anyone else? They should pay the same tariff as everyone else. Third point on free kWh. It is great that poor people are able to receive free electricity, but this is flawed and open to corruption as who will monitor this, and who will determine this? How will this be verified and managed? This also excludes pensioners who live in complexes and communal homes. The fact is that many black townships have not paid a single cent for electricity ever! So, this should be scrapped or revised to be limited to pensioners who provide ongoing proof as is the case with Rates accounts. Everyone who has access to power must pay, without exception. Lastly, the municipalities who owe millions to Eskom must be forced to settle their accounts or managers must be criminally charged and assets confiscated from the councils' assets. There should also be a system installed which forces all money paid by residence for power to be solely used for electricity and paid directly to Eskom. or Eskom should take over the entire electrical grid from municipalities including supply and billing directly to all consumers. relieving municipalities from this altogether.	William	retired
	2026-09-26 09:36:08	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer	I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form (Rejects mandatory fixed grid capacity fees and standby charges on solar and low-usage homes, punitive double network fees on solar exports, the elimination of stepped block tariffs for standard households, and the risk of retail consumers funding industrial smelter discounts or unfunded social expansions)	Ettiene	self-employed

He also stopped the Eskom rebate for adopting solar geysers. 20 Years later, that extractive exploitation is still being implemented. But it isn't bringing in the wealth the ANC has been accustomed to getting. They have abused (maybe even rapped) their customer base. Now they need a quick 'shower' and hope it will get rid of the crime they have committed. To get 'their' money back, they increase every other connection fee, license fee, service fee, admin fee, cANCer fee and VAT. Any way possible to keep the extractive system going and support their outdated ideology. The ANC has lost us as a customer. And now they will lose us as a voter.	Richard	business owner

	2026-09-26 09:53:27	No I do not	Other		Residential Ratepayer (Grid Reliant)	ESCOM is NOT dealing fair to the citizens of SA. The various price hikes the last few years, have most families in the dark for most days of a month, as we can simply not afford electricity on top op daily cost of living, which is also getting out of hand. We must choose between starvation or back to the dark ages with no electricity. Who suffers - not the rich and definitely not politicians and the fat cats of ESCOM, but ordinary citizens, of whom a great % are unemployed. It seems the government and definitely not ESCOM has any concern for the people of this country, other than to fill their own pockets. Prepaid meters are adding to the cost of electricity and don't tell me otherwise - we experience it firsthand as pensioners who have only access to warm water and electric stove for 10 days of any month, after which we cannot afford it for the rest of the month. NO FURTHER PRICE HIKES!!!	Monica	retired
	2026-09-26 09:54:02	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Prepaid Meter User		Louis	retired

Many people had to get Solar to keep their businesses running at a hefty price where that money could have been spent elsewhere on their businesses, the country is still trying to play catch up since covid and loadshedding we have lost so much as consumers already. People should only pay for what they use. Full stop.	Vanessa	self-employed

	2026-09-26 10:17:06	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	This new pay policy is a slap in the face of consumers. A few years ago we were told to prepare for power shortages by investing in solar power. So ... I invested in solar power at huge expense. NOW I AM PENALISED for listening to Eskom to take pressure off the grid! And as to the increased costs -- so, again, those who are able will be subsidising the masses. How much more can the middle-income South Africans take?? Something is rotten in the State of South Africa .	Zuretha	retired
	2026-09-26 10:17:09	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	When Eskom had terrific supply problems resulting in load shedding we were encouraged to install solar power so much so I believe it was even subsidized. This was for the benefit of the country and to allow Eskom to get re-organized and re- structured. Now they seem to have things basically under control they want to penalize the very people that helped them out of a dire situation. This is completely unacceptable and should be opposed to the utmost extent!	Ian	retired

	2026-09-26 10:31:15	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Our primary concern is the rising cost of living. Currently we are paying very high prices for fuel. Govt tax (subsidy) is a ripoff. There has been a narrative for sometime that unbundling Eskom into 3 divisions will not only bring costs down but also create a better & efficient service. Further, alternate energy producers need to be a greater contributor. Finally, billions are owed to Eskom by Municipalities. Govt, through the National Treasury should demand that Municipalities consider to settle their respective debt to Eskom. Collection of debt should be more aggressive from Eskom.	Babs	retired
	2026-09-26 10:31:29	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Prepaid Meter User	I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form (Rejects mandatory fixed grid capacity fees and standby charges on solar and low-usage homes, punitive double network fees on solar exports, the elimination of stepped block tariffs for standard households, and the risk of retail consumers funding industrial smelter discounts or unfunded social expansions).	Tiisetso	employed individual
	2026-09-26 10:31:49	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Prepaid Meter User	I am a pensioner, I use about 250kWh of electricity a month. The people who pay are being targeted. The people who steal are laughing. The government ministers who get a massive amount of free electricity do not care. Just how much am I going to be expected to pay per kWh on this new scheme. Eskom fix your mess before you take the easy road by charging paying customers more.	Janette	retired

	2026-09-26 10:36:37	No I do not	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Residential Ratepayer (Grid Reliant)	I am at a loss for words, Our household of 5 has an average monthly bill of between R8000-R10000 for water and lights. We dont do anything differently each month, and yet each month (despite sending in our readings), it feels like an absolute gamble to know what were in for each month. We struggle to budget because often it jumps to an extra R3000 and in this economy most families dont have that extra each month. Solar is very expensive and people are being penalised for making their own plan and I feel, we are at the mercy of Eskom because we dont have any other options. Ill never understand why this sector cant be privatised because at least, when we don't get good service or when we're dissatisfied with exhorbitant pricing, we could look for other alternatives. Households are being stretched beyond their capacity, at lease could we afford water and lights!!!!	Carol	employed individual

	2026-09-26 10:44:22	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer	After years of loadshedding , residents were permitted to install solar as a means to offset any future loadshedding. Which is right as the sun is free to all and SA has good sunshine hours. This Govt benefit has now become a punishment. Now as Eskom is increasing the power costs at way above inflation levels, their sales volumes have been reducing since more residents have installed solar. Solar is not cheap but most users turned to it due to the astronomic Eskom increases and potential loadshedding. Now Eskom, through the Electricity Minister, has decided to charge a fee to all households with Solar connected to the grid, despite the fact it was never there before and Solar users still pay for the power they use from the grid. It is a classic case of a monopolistic SOE seeking rent from captive clients. The Minister of Electricity should be working for the citizens to contain household power costs and not supporting a monopoly system. One questions where his favour sits, it seems certainly not with consumers. Electricity needs to be opened so competitors can offer supply and consumers can select their preferred supplier.	David	retired

Now Eskom, through the Electricity Minister, has decided to charge a fee to all households with Solar connected to the grid, despite the fact it was never there before and Solar users still pay for the power they use from the grid. It is a classic case of a monopolistic SOE seeking rent from captive clients. The Minister of Electricity should be working for the citizens to contain household power costs and not supporting a monopoly system. One questions where his favour sits, it seems certainly not with consumers. Electricity needs to be opened so competitors can offer supply and consumers can select their preferred supplier.	David	retired
	2026-09-26 10:44:49	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	Absolutely unacceptable to make people who have invested in their own solar infrastructure pay a flat fee for a service we replaced.	Grant	employed individual

	2026-09-26 10:45:32	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer	After years of loadshedding , residents were permitted to install solar as a means to offset any future loadshedding. Which is right as the sun is free to all and SA has good sunshine hours. This Govt benefit has now become a punishment. Now as Eskom is increasing the power costs at way above inflation levels, their sales volumes have been reducing since more residents have installed solar. Solar is not cheap but most users turned to it due to the astronomic Eskom increases and potential loadshedding. Now Eskom, through the Electricity Minister, has decided to charge a fee to all households with Solar connected to the grid, despite the fact it was never there before and Solar users still pay for the power they use from the grid. It is a classic case of a monopolistic SOE seeking rent from captive clients. The Minister of Electricity should be working for the citizens to contain household power costs and not supporting a monopoly system. One questions where his favour sits, it seems certainly not with consumers. Electricity needs to be opened so competitors can offer supply and consumers can select their preferred supplier. 	2026-09-26 10:46:44	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	I wish I could claim all the losses I experienced during loadshedding including the installation of a Solar system. None such claims were existing. Now you want to change the rules. It also seems that most loadshedding was man made e.g. sabotaging. By the way, the infrastructure to get the electricity to my house existed long before 1994, why should I pay now for that, maintenance on that is minimal.	Martin	retired

This should be rewarded instead as an incentive to take the pressure off the grid and environment. And we should not be punished for Eskom's misuse of funds in the past	Amy-Lea	
	2026-09-26 10:47:03	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	Totally ridiculous plan: * There are already fixed charges. So they want to increase this. In other words an additional tax for a population already heavily overtaxed. * Solar penalties for people who were forced into investing in solar, because the suppliers could not supply. Short sighted outlook. What about Cape Town who is already buying electricity from residents. * They do not have a holistic view of what they are doing. The same government who managed to break the whole electricity supply situation, also created a no business and a no job situation in the country. Now they want to hand out free electricity so the taxpayer must be taxed some more! What will ESKOM put on the table? How about cutting the their wage bill by 25%. * Municipality system is not sustainable. Municipal ratepayers have seen annual increases way in excess of inflation for many years, while municipalities are struggling to have enough funds for service delivery. Now they want to remove another source of income for the municipality. The objective seems to be to have a country that has no development and everyone is poor.	Arthur	retired

	2026-09-26 10:50:34	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Prepaid Meter User	1. You can't expect everyone connected to the same electrical grid to pay the same fixed maintenance fees... If you have a user that uses a lot more electricity compared to another, the strain and therefore maintenance required on the system would be proportionately more due to that customer compared to another. This includes solar panel customers that does not use a lot of electricity when needed as backup. It is the same prinicple as big users on a water network. Piping and equipment under more pressure and use can't be expected to last as long as piping and equipment that is not under much use. I would split the fixed maintenance cost needed in different areas. If it is in a highly industrial area, more maintenance may be required. 2. Fully reject the idea of time of use pricing structure. This is an attempt to cover the inability of Eskom to provide power during peak periods, instead of ensuring the system is capable to handle power demands OF CLIENTS. If you as a business can't provide a service when needed, how can that business survive? The reality is most households need power in the evenings and mornings as this is when hard working tax payers complete household tasks and are not at work... Electricity are packets of energy with a set value. It should therefore be priced at a set price. This applies to the cost difference proposed for importing and exporting electricity from solar users... 3. Concerned on the prinicple of free basic electricity. Where will the electrical demand cost offset take place? Existing customers...?	Dirk	employed individual

	2026-09-26 11:08:10	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Most people in South Africa are already stretched to the limit fiancially. Many of us are on a fixed income. As an elderly person I rely on family assistance, as do the majority of us who fall just above the catagory quaifying for SASA-assistance. I OBJECT 100% to the revised bill as it represents extra costs for households, and it takes away the ability of consumers to adjust one's usage to make ends meet. Eskom has abused consumers for too long; there is no trust left. There are no guarantees/sufficient oversight that the extra income will not be used for the benefit of the elite in Eskom (directly or indirectly) for whom AFFORDIBILITY is a foreign word!	Nita	unemployed individual

	2026-09-26 11:27:33	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	I do not understand your comments as we are already paying very high service fees. As a solar consumer I pay to Eskom R497.- p.m. FOR CHARGES and R 151.23 for 54 kwhs used plus R 97.26 VAT. Eskom makes more income from extra charges instead of generation, penalizing paying customers, not fighting corruption or replacing incompetent staff nor stealing electricity, unable to collect money from municipalities. Splitting generation from transmission and distribution makes the entire system less transparent and increases additional staff (unproductive staff, only additional admin cost). The government earns additional VAT with higher prices which to me means that there is no intention to improve the energy subject. I do not approve the proposal!	Udo	retired

	2026-09-26 11:30:18	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	I am an Eskom Direct residential customer in Table View, Cape Town, with a rooftop solar system. I do not support the Revised Electricity Pricing Policy as published. My top concern is mandatory fixed grid and standby charges. Eskom already moves solar households onto Homeflex with fixed monthly network, capacity, service and admin charges that are still being phased in and rising each year. The draft policy turns that into a national principle without setting any limit on how large the fixed portion of a household bill may become. A policy that lets fixed charges grow without a cap punishes households that invested in solar to reduce load on a failing grid, and it removes any incentive to save electricity. I ask that the final policy cap fixed and capacity charges as a maximum percentage of a typical residential bill, with NERSA required to publish the cap and justify any change to it. Second, export treatment. The draft imposes network charges on both imported and exported energy and excludes generation capacity costs from export credits, then blocks those credits from offsetting fixed charges. The effect is that a solar household pays the network twice and is credited at a fraction of the rate it is charged. Export credits should be allowed to offset fixed charges, and network charges should apply once per connection, not once per direction. Third, cross-subsidy. Expanding Free Basic Electricity from 50 kWh to up to 300 kWh with no increase to the R21 billion grant, and extending below-cost Negotiated Pricing Agreements to industrial users, both create revenue shortfalls with no funding source named. Eskom Direct households are the first to absorb those shortfalls through tariffs. Both should be funded from the fiscus and shown as separate line items, not recovered through residential tariffs. Fourth, no bill-impact assessment has been published. A policy that restructures every household bill in the country should not be finalised without a modelled, published impact on typical residential, prosumer and small business customers over the five-year transition. I support cost-reflective pricing in principle, and I support the crackdown on municipal markups and the ban on passing theft and bad debt to paying customers. But cost-reflective must apply to the utility as well as the customer. The draft protects utility revenue from falling sales; it does not protect households from an unlimited fixed charge. That balance must be fixed before the policy is adopted.	Zander	self-employed
	2026-09-26 11:30:37	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	I am an Eskom Direct residential customer in Table View, Cape Town, with a rooftop solar system. I do not support the Revised Electricity Pricing Policy as published. My top concern is mandatory fixed grid and standby charges. Eskom already moves solar households onto Homeflex with fixed monthly network, capacity, service and admin charges that are still being phased in and rising each year. The draft policy turns that into a national principle without setting any limit on how large the fixed portion of a household bill may become. A policy that lets fixed charges grow without a cap punishes households that invested in solar to reduce load on a failing grid, and it removes any incentive to save electricity. I ask that the final policy cap fixed and capacity charges as a maximum percentage of a typical residential bill, with NERSA required to publish the cap and justify any change to it. Second, export treatment. The draft imposes network charges on both imported and exported energy and excludes generation capacity costs from export credits, then blocks those credits from offsetting fixed charges. The effect is that a solar household pays the network twice and is credited at a fraction of the rate it is charged. Export credits should be allowed to offset fixed charges, and network charges should apply once per connection, not once per direction. Third, cross-subsidy. Expanding Free Basic Electricity from 50 kWh to up to 300 kWh with no increase to the R21 billion grant, and extending below-cost Negotiated Pricing Agreements to industrial users, both create revenue shortfalls with no funding source named. Eskom Direct households are the first to absorb those shortfalls through tariffs. Both should be funded from the fiscus and shown as separate line items, not recovered through residential tariffs. Fourth, no bill-impact assessment has been published. A policy that restructures every household bill in the country should not be finalised without a modelled, published impact on typical residential, prosumer and small business customers over the five-year transition. I support cost-reflective pricing in principle, and I support the crackdown on municipal markups and the ban on passing theft and bad debt to paying customers. But cost-reflective must apply to the utility as well as the customer. The draft protects utility revenue from falling sales; it does not protect households from an unlimited fixed charge. That balance must be fixed before the policy is adopted.	Zander	self-employed

	2026-09-26 11:54:07	No I do not	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs		Prepaid Meter User	The smelter discounts should not have to be funded by private household. Furthermore, having to pay to bringing excess energy back onto the grid should not be implemented - this is going to happen in the Netherlands as well - I call this corporate greed. In NL home owners with solar now start buying inverters and will store their energy. Why should I have to be punished for low usage of electricity? By not using too much, I assist in alleviating net congestion. In fact, I should be rewarded for this. I use so little, that solar power is not giving me any return on investment, unfortunately. Luckily I have an inverter as in my area Eskom/municipality have electricity problems on end due to aged network and equipment... This however is no longer a uniquely South African problem. The UK and the Netherlands experience the same problems with the Netherlands probably going over to loadshedding as well (not confirmed, but the writing is on the wall...)	Mrs R	self-employed

	2026-09-26 12:01:57	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Most people in South Africa are already stretched to the limit fiancially. Many of us are on a fixed income. As an elderly person I rely on family assistance, as do the majority of us who fall just above the catagory quaifying for SASA-assistance. I OBJECT 100% to the revised bill as it represents extra costs for households, and it takes away the ability of consumers to adjust one's usage to make ends meet. Eskom has abused consumers for too long; there is no trust left. There are no guarantees/sufficient oversight that the extra income will not be used for the benefit of the elite in Eskom (directly or indirectly) for whom AFFORDIBILITY is a foreign word!	Nita	unemployed individual
	2026-09-26 12:02:01	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	No will not pay anything.	Manie	retired
	2026-09-26 12:02:12	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Most people in South Africa are already stretched to the limit fiancially. Many of us are on a fixed income. As an elderly person I rely on family assistance, as do the majority of us who fall just above the catagory quaifying for SASA-assistance. I OBJECT 100% to the revised bill as it represents extra costs for households, and it takes away the ability of consumers to adjust one's usage to make ends meet. Eskom has abused consumers for too long; there is no trust left. There are no guarantees/sufficient oversight that the extra income will not be used for the benefit of the elite in Eskom (directly or indirectly) for whom AFFORDIBILITY is a foreign word! 	2026-09-26 12:16:33	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	It is time to cut down on the number of employees in Eskom. That would save you an immense amount of money. You brought the need for solar on all by yourself as you did not upkeep the electricity plants & networks & thus you could not provide adequate electricity supply - load shedding. Consumers then looked to other sources of supply. You promised free electricity to our cultural people at the elections - this did not happen - & now illegal connections are set up & cabling for supply of power is stolen & used for unsafe connections that have electrocuted children & adults alike. Everytime you run out of money you put up the cost of power to supply to the people who really work hard & actually pay your bills. And another change that would help., would be to reduce the amount of the salaries paid to top level management. Re-evaluate the salaries based of performance!!!! Eskom is known for "never firing anyone . Why should consumers pay via tariffs for suspended employees at home on full pay & for Commissions that drag on forever? IT IS TIME FOR CHANGE. Stand by the consumers that have stood by you all of these years. Thank you.	Elizabeth	employed individual

And another change that would help., would be to reduce the amount of the salaries paid to top level management. Re-evaluate the salaries based of performance!!!! Eskom is known for "never firing anyone . Why should consumers pay via tariffs for suspended employees at home on full pay & for Commissions that drag on forever? IT IS TIME FOR CHANGE. Stand by the consumers that have stood by you all of these years. Thank you.	Elizabeth	employed individual
	2026-09-26 12:21:14	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	It is time to cut down on the number of employees in Eskom. That would save you an immense amount of money. You brought the need for solar on all by yourself as you did not upkeep the electricity plants & networks & thus you could not provide adequate electricity supply - load shedding. Consumers then looked to other sources of supply. You promised free electricity to our cultural people at the elections - this did not happen - & now illegal connections are set up & cabling for supply of power is stolen & used for unsafe connections that have electrocuted children & adults alike. Everytime you run out of money you put up the cost of power to supply to the people who really work hard & actually pay your bills. And another change that would help., would be to reduce the amount of the salaries paid to top level management. Re-evaluate the salaries based of performance!!!! Eskom is known for "never firing anyone . Why should consumers pay via tariffs for suspended employees at home on full pay & for Commissions that drag on forever? IT IS TIME FOR CHANGE. 	2026-09-26 12:46:28	No I do not	All of the above	Double Network Fees (DUoS) on Solar Prosumer Exports	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	It must be remembered that our utility forced rooftop solar on us when they couldn't supply the country with power. Now many of us have taken that investment and now rightly so, Eskom feel the pinch because the people that used to pay are not paying anymore. Basically I say you can carry on, it's like fighting against thunder because what will happen next if you carry on this way is we will just add a little bit more solar power and a little bit more battery and then ask you to disconnect us completely. And then I would like to see how you're going to get anything from us. That is my prediction and that is what's going to happen.	JJ	business owner

	2026-09-26 12:59:54	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	When recurring load shedding crippled businesses and households, citizens invested tens of billions of Rands in private savings to install rooftop solar, inverters, and battery banks. Shifting electricity billing away from consumption (c/kWh) toward mandatory fixed monthly network and standby capacity charges (R/kVA, R/kW, or R/Amp/month) under Policy Positions 11(b), 15, 27, and 30 acts as an availability penalty. It erodes household investment returns, penalises energy conservation, extends solar payback periods by years, and locks low-volume consumers into high monthly billing floors regardless of how little electricity they consume.	Melonie	employed individual

	2026-09-26 14:12:27	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Each year the rates and taxes, the utlities and many other government operated tarriff and taxing schemes take more off the top for citizens of South Africa, in spite of the inflation of so many consumer products and necessity products. Since the apartheid regime has been brought down, I have yet to see tangible improvements for housing development, roads, basic government reliant promises of maintenance and support taking place. The only thing that is consistent is how many creative ways, these policies become to take more from South Africans. I am disgusted at how the political party in charge of improving our country justifies assaulting the pockets of middle class and lower income demographics, if its not water today, its electricity tomorrow, or tolled roads. Put the money back from where you took it and then maybe there will be enough for the actual things that should have been maintained and fixed three decades ago. Side note, I am a person of colour and its laughable at this stage - "you can piss on me, but don't tell me it's rain".	Nunya	self-employed

	2026-09-26 14:18:54	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Prepaid Meter User	I OBJECT to the Revised Electricity Pricing Policy (EPP 2026). The proposal on how to manage energy and electricity sources is outright ridiculous. Actual energy source solutions in design exists. We must take stock of all sources of clean unlimited energy everywhere on Earth, construct the necessary infrastructure, provide these resources as a God-given provision in abundance to all people and useful activities. We The People do not have to pay for any natural resources whatsoever. I can provide a business architecture blueprint for energy and electricity sources that is a given standard for all purposes Earth-wide. I am the provider of solutions on the director's table. You are welcome to contact me in this regard for a consultation. PEACE, LOVE AND JOY TO ALL GOD'S CHILDREN! Nicolas	Nicolas	self-employed

	2026-09-26 14:36:32	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	The mandatory fixed grid capacity fees and standby charges on solar and low-usage homes is purely exploitative. Homeowners (and businesses) have been forced to invest in solar because of the corruption, nepotism, inefficiencies and bad management by Eskom and municipalities, not because they did not want to pay for electricity. With homeowners and businesses now incrementally reducing their dependency on the national grid, and the concomitant loss on income to electricity suppliers, the new pricing policy send a clear message that the intent of the state is to now financially punish these homeowners and businesses for daring to reduce their dependency on Eskom. The fees and charges being proposed in the policy have NO meaningful reference to any actual value-added services that households and businesses will receive by remaining grid-tied. This is iniquitous! If the policy is approved, the obvious outcome is that solar users will then - wherever they can afford to - simply make a small capital investment to completely disconnect themselves from the grid. This is strategically a really dumb strategy for Eskom and the municipalities to be following, but time will tell.	Jay

	2026-09-26 14:38:00	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	The mandatory fixed grid capacity fees and standby charges on solar and low-usage homes is purely exploitative. Homeowners (and businesses) have been forced to invest in solar because of the corruption, nepotism, inefficiencies and bad management by Eskom and municipalities, not because they did not want to pay for electricity. With homeowners and businesses now incrementally reducing their dependency on the national grid, and the concomitant loss on income to electricity suppliers, the new pricing policy send a clear message that the intent of the state is to now financially punish these homeowners and businesses for daring to reduce their dependency on Eskom. The fees and charges being proposed in the policy have NO meaningful reference to any actual value-added services that households and businesses will receive by remaining grid-tied. This is iniquitous! If the policy is approved, the obvious outcome is that solar users will then - wherever they can afford to - simply make a small capital investment to completely disconnect themselves from the grid. This is strategically a really dumb strategy for Eskom and the municipalities to be following, but time will tell.	Jay

	2026-09-26 14:38:14	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Small / Medium Business Owner (SMME)	Each year the rates and taxes, the utlities and many other government operated tarriff and taxing schemes take more off the top for citizens of South Africa, in spite of the inflation of so many consumer products and necessity products. Since the apartheid regime has been brought down, I have yet to see tangible improvements for housing development, roads, basic government reliant promises of maintenance and support taking place. The only thing that is consistent is how many creative ways, these policies become to take more from South Africans. I am disgusted at how the political party in charge of improving our country justifies assaulting the pockets of middle class and lower income demographics, if its not water today, its electricity tomorrow, or tolled roads. Put the money back from where you took it and then maybe there will be enough for the actual things that should have been maintained and fixed three decades ago.	Heather	business owner

	2026-09-26 14:58:14	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	The ANC seems to keep finding new ways to make life more expensive for ordinary South Africans. Now, people who have invested their own hard-earned money into solar and alternative energy are being faced with additional charges simply for choosing to reduce their reliance on the national electricity grid. Let’s be clear: the sun does not belong to the government. ☀️ People have spent thousands of rands installing solar systems because they want greater energy independence, lower electricity costs and some protection from an unreliable electricity supply. In doing so, they are also reducing their demand on the national grid, which should, in principle, help ease pressure on the system. Instead of encouraging people to invest in alternative energy, we are seeing policies that can feel like a punishment for doing exactly that. South Africans are already paying more and more while having to deal with failing infrastructure and unreliable public services. The answer cannot continually be to find new ways to extract more money from the people who are trying to find solutions themselves. People deserve accountability, transparency and competent infrastructure, not endless additional costs. Enough is enough. South Africans deserve better than being treated as an endless source of revenue.	Ashleigh	employed individual

	2026-09-26 15:10:21	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	The policy shifts tariff design away from volumetric consumption (c/kWh) toward mandatory fixed network and capacity charges (R/kVA, R/kW, or R/Amp/month). To eliminate “volume risk” for distributors, utilities will bill customers for grid availability and network reservation regardless of whether electricity is consumed. In addition, Policy Position 15 introduces a universal generation standby charge applied at the wholesale level to recover the capital costs of keeping backup dispatchable generation on standby for grid-tied users.	Don	retired

	2026-09-26 15:49:24	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Eskom should be encouraging solar supplementary solar generation for lots of good reasons, not penalizing the individual householder. Solar generation makes a significant difference to the overall environment. Electricity users should only pay for the amount they use. They should not have to pay for the grid whether they use the grid or not. The grid cost should included in the unit rate. Conversely if not connected to the grid then there should be no fixed charge. Badly managed Eskom should not have resort to supplementary charges to balance their budget.	Patrick	retired
	2026-09-26 15:52:01	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	Restructure the inefficient SOP ESKOM to reduce costs. Salaries are wayout too high.	RICHARD	
	2026-09-26 15:52:49	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer	After totally destroying the producer of the cheapest most consistent electricity in the world the government is wanting me to pick up the bill for their dishonesty and the bills of municipalities and SOE who wont pay their bills. I would rather cutoff total connection and increase my solar to generator and wind.	A	
	2026-09-26 15:54:02	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I am not prepared to pay and subsidize for other abusive consumers and industries, let alone having to be penalized for supplying my own electricity by means other than the national &/ municipal grid. 	2026-09-26 16:10:36	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	We are already over taxed and trying to survive in these current times and having to pay more and more on electricity just seems like the whole economy will suffer . You not solving a problem but creating a severe knock on effect. And on top of all wanting to penalise the ones who helped you survive when you did not have capacity... the solar owners now have to doubly suffer . Most are still paying off on the expense on panels inverters and batteries.	Conrad	retired
	2026-09-26 16:11:00	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	As it currently stands, I have to pay around R1700 per month on fixed charges and VAT. Eskom and the ANC blamed us for the demand. Eskom and the ANC then purposefully sabotaged the network and coal supply in the name of bbbee and to create demand and a fraudulent case for rate increases and justification via nersa. The power stations and mines have been an ongoing money pit due to corruption, mismanagement and bbbbbeeeeee. The development of the 2 major power stations took well over a decade, while countries like Germany built a single station in 3 years at a fraction of the price and capable of output of more than double the power. Now, Eskom and the ANC want to penalise the citizens that have been impoverished and more than just inconvenienced by the ongoing bs. The attemps to tax people for using the sun have failed, so now all people will be unecessarily taxed for the failing essential service because it has been plundered to the point of its deathbed. And what's more, it is going to be split, with the tax payers footing the bill for the trillions of debt moved into the liquidated segments, just so more tenderpreneurs can use the ever changing bbbbbbbbeeeeeee laws to loot the bejeezus out of the tax payers for the essential service even further. Enough is enough. Go free-market. Get rid of bbbee and deliver a good, affordable and honest service.	James	
	2026-09-26 16:11:31	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)		Cheryl	self-employed
	2026-09-26 16:11:54	No I do not	Municipal Hidden Surcharges & Diverted Electricity Revenues		Residential Ratepayer (Grid Reliant)	Do not want to pay more money, especially due to the fact that we subsidise to the majority who do not pay. How is that fair and the service we pay for is abused. Feel that if every South African had to pay, there would be enough money to actually execute their service to every single South African that uses the services; and that is what we should only be paying for.	Michelle	employed individual
	2026-09-26 16:12:27	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	It's time this government stopped fleecing it's paying citizens. Enough is enough.	Hilton	retired

	2026-09-26 16:31:06	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	How much more are ordinary working people expected to carry? We already pay income tax, VAT, rates, electricity and countless other charges, yet the costs keep increasing while many families are struggling just to make ends meet. The middle class is continually expected to absorb higher costs, while concerns about waste, mismanagement and corruption remain. People who work hard and pay their taxes should not simply be treated as an endless source of additional revenue. We need accountability, transparency and responsible management of public money. Electricity is an essential service — it should not become another burden that pushes ordinary households further into financial difficulty. Enough is enough. People deserve to be heard. 	2026-09-26 16:33:57	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	The mandatory fixed grid capacity fees and standby charges on solar and low-usage homes is purely exploitative. Homeowners (and businesses) have been forced to invest in solar because of the corruption, nepotism, inefficiencies and bad management by Eskom and municipalities, not because they did not want to pay for electricity. With homeowners and businesses now incrementally reducing their dependency on the national grid, and the concomitant loss on income to electricity suppliers, the new pricing policy send a clear message that the intent of the state is to now financially punish these homeowners and businesses for daring to reduce their dependency on Eskom. The fees and charges being proposed in the policy have NO meaningful reference to any actual value-added services that households and businesses will receive by remaining grid-tied. This is iniquitous! If the policy is approved, the obvious outcome is that solar users will then - wherever they can afford to - simply make a small capital investment to completely disconnect themselves from the grid. This is strategically a really dumb strategy for Eskom and the municipalities to be following, but time will tell.	Jay	
	2026-09-26 16:34:12	No I do not	All of the above	Double Network Fees (DUoS) on Solar Prosumer Exports	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	It must be remembered that our utility forced rooftop solar on us when they couldn't supply the country with power. Now many of us have taken that investment and now rightly so, Eskom feel the pinch because the people that used to pay are not paying anymore. Basically I say you can carry on, it's like fighting against thunder because what will happen next if you carry on this way is we will just add a little bit more solar power and a little bit more battery and then ask you to disconnect us completely. And then I would like to see how you're going to get anything from us. That is my prediction and that is what's going to happen.	JJ	business owner
	2026-09-26 16:34:35	No I do not	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Residential Ratepayer (Grid Reliant)	While understanding having a fixed base price to cover infrastructure, it is unlikely that Eskom or any municipality has the ability to accurately and fairly apportion this across users. So a flat rate will disadvantage the poorer consumers. There needs to be incentives to accommodate those people who are saving electricity (and our planet as well!!!) by using solar power. Penalizing them makes no sense whatsoever since they will simply leave the grid thereby increasing the infrastructure costs to normal households. Passing industrial incentives is good but again this will just increase the burden on the normal consumers - you and me!!! The same applies for raising the basic free usage - who will pay? You and I again!!!! The model as it stands cannot work !!!!!	dirk	retired

	2026-09-26 17:04:50	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	We spent a lot of money on a solar system to cover Eskom's shortcomings, and because of the exorbitant charges by municipalities and the above-inflation increases in electricity from Eskom year after year. Secondly, we see no reason our electricity charges should be used to subsidise large industrial 'essential' users or basic free electricity grants. Those subsidies should come from a different budget authorize by government and parliament, so that the country can see the true cost of what these programs are costing the country. We already pay excessively high taxes. Thirdly, we see no reason why we should be faced with year after year of above inflation increases to fund the existing power system's inefficiencies, corruption and (highly paid) incompetent employees. We are retired on a fixed income, and facing years and years of ever increasing prices is just beyond our budget.	Anthony	retired

	2026-09-26 17:20:11	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	The Department claims transparency and cost-reflectivity, the proposed framework unfairly penalises ordinary households and small businesses: Mandatory fixed charges undermine consumer choice and efficiency. Even if households reduce consumption or invest in rooftop solar, they remain locked into high baseline fees. This contradicts the principle of incentivising energy savings and punishes responsible consumers. Solar export penalties discourage renewable adoption. By charging for both consumption and exports while disallowing credits against fixed fees, the policy creates a disincentive for clean energy investment, directly undermining national climate commitments. Industrial subsidies at public expense are inequitable. Extending below-cost NPAs to smelters without external funding shifts the burden onto households and small businesses, effectively forcing them to cross-subsidise large corporations. Expanded Free Basic Electricity without budget allocation risks hidden cost-shifting. Without a clear funding mechanism, paying consumers will absorb the shortfall, amounting to a stealth tax on ratepayers. The policy, in its current form, entrenches structural inequities: households and small businesses are asked to bankroll industrial discounts and expanded social grants while losing the ability to manage their own costs through efficiency or renewable investment. 	2026-09-26 17:34:50	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	Formal Public Submission: Objection to Proposed Mandatory Fixed Grid & Standby Charges To: The Minister of Electricity and Energy / Department of Electricity and Energy Subject: Formal Objection to Proposed Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Households 1. Executive Summary: A Total Disconnect from Household Realities I strongly and unequivocally reject the proposed mandatory fixed grid, network, and standby charges targeted at solar and low-usage households. Do government institutions ever take a hard look at the cumulative financial burden of the various policies, taxes, and utility hikes they drive? Day after day, officials push through decisions without summing up the devastating, compounding impact these changes have on households and individuals whose lives are forever altered by them. Families are routinely pushed to the breaking point by life shocks—such as chronic illness, disability, death, theft, or sudden retrenchment, to mention a few. When a household loses its income, these rigid system charges do not pause; instead, they accelerate the destruction of families who are already struggling to afford the bare minimum. 2. Penalizing Citizens for State Failures and Personal Initiative Millions of South Africans were forced to spend their hard-earned savings—often taking on heavy loans—to install rooftop solar and backup battery systems. We did this not as a luxury, but out of absolute necessity because the state and its utilities failed in their fundamental duty to provide stable, reliable electricity. • Punished for Conservation: Citizens answered the government's call to reduce consumption and ease pressure on the national grid. Now, having successfully lowered our demand, we are being penalized with mandatory fixed baseline fees for using less to benefit all the people of South Africa, especially the most vulnerable. • Shifting the Burden: Instead of cutting bloated internal costs, addressing organizational inefficiencies, and stopping massive revenue losses from corruption and non-technical theft, the state is attempting to protect an outdated monopoly business model by squeezing compliant citizens. 3. The Crisis of Human Disempowerment and Economic Exclusion Who speaks and fights for the individual who has been retrenched and can no longer keep up with these endless fees? When a household's entire income is entirely absorbed by basic survival, they lack the resources—and the administrative capacity—to draft complex legal reports or fight bureaucratic institutions. This crisis is compounded by a systemic failure to uplift skills and safeguard local workers. Too many ordinary people find themselves locked out of economic mobility because short-sighted, unaccountable leadership cycles—often lasting a mere five-year political term—leave lasting wreckage behind. Leaders implement short-term fixes, move on to other institutions, and leave vulnerable citizens to shoulder the consequences of a hollowed-out economy. 4. Key Requests 1. Scrap Mandatory Fixed Solar Penalties: Withdraw the proposals to impose punitive fixed grid connection and standby fees on grid-tied solar and low-usage users. Households that reduce their grid dependency through personal investment should be rewarded, not punished. 2. Internal Cost-Cutting over Consumer Squeezing: Eskom and municipalities must focus on aggressive internal cost-containment, structural efficiency, and tackling non-payment/theft rather than balancing their budgets on the backs of the most vulnerable and energy-conscious citizens. 3. Protect the Working Class and Self-Funded Households: Recognize that ordinary families are drowning under the weight of "taxing us to death". Policies must be designed with deep empathy for the lived realities of citizens facing systemic poverty, unemployment, and economic instability. I urge the Minister and the Department to scrap these anti-consumer proposals immediately.	Donovan	employed individual

In the end solar won't be worth having. The already battered consumer can't afford to pay any more for stealing officials and free electricity for the majority and taking forced responsibility for incompetence and lack will of those that should protect the taxpaying citizen of South Africa. There is much more to bitterly complain about.	Babsie	retired

	2026-09-26 18:29:11	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Small / Medium Business Owner (SMME)	When Eskom/council could not supply enough electricity for the residential and commercial, industrial sectors, that caused wide scale of load shedding in 2022, the government encouraged the user to install clean power, like solar power. For commercial properties to install solar facility can even claim the cost of installation as expenses for that financial year. Now that Eskom/council can afford the less consumption of power, they think of a way to make money on the consumers who saved money to pay electricity. Remember, the battery to save electricity for consumption, shelf life is for 3 to 5 years. That means, from 3 years onwards, solar consumers need to buy new batteries. This extra cost already added to the expenses. Now on top of this added extra cost, the Eskom/council want to charge other charges to the solar consumers. This is unfair to the solar consumers.	Hon	self-employed
	2026-09-26 18:29:57	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	It is very clear that Eskom sees the small minority of white citizens as the ones who are to pay for the rest of South Africa. I do not have the funds to go solar. You can be sure that if they continue to abuse us we will somehow get off the grid and then they can just take a hike. The danger of a transformer that is right on top of our house we can do without as well. We are without electricity enough to know we can survive without if we have to.	Ernstine	retired

	2026-09-26 18:34:44	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	A flat fee system will lead to wastage and also penalise users who try to reduce they power usage with eco-friendlier options. Our grid is under strain as it is, makes no sense at all. Instead, I believe the government should subsidise solar power installation to encourage more users to capitalise on South Africa's abounding solar energy, relieve the grid, and therefore make power cheaper for those who really can't afford it. Giving more free electricity to people who already can't afford it, while also making kwh more expensive... this really doesn't add up. Renewable energy as a consumer product is the way. And another thing, stop the corruption and you'll stop the drain where the money is siphoning out!!!	Sharné	employed individual

The proposal on how to manage energy and electricity sources is outright ridiculous. Actual energy source solutions in design exists. We must take stock of all sources of clean unlimited energy everywhere on Earth, construct the necessary infrastructure, provide these resources as a God-given provision in abundance to all people and useful activities. We The People do not have to pay for any natural resources whatsoever. I can provide a business architecture blueprint for energy and electricity sources that is a given standard for all purposes Earth-wide. I am the provider of solutions on the director's table. You are welcome to contact me in this regard for a consultation. PEACE, LOVE AND JOY TO ALL GOD'S CHILDREN! Nicolas	Nicolas	self-employed

They risk penalising households that conserve energy and invest in rooftop solar, while shifting additional costs onto ordinary consumers to support preferential industrial deals and expanded free electricity. Electricity tariffs should be fair, transparent and based on actual consumption—not increasingly burdensome fixed charges and additional costs for those trying to reduce their reliance on the grid. Any policy changes must protect households, small businesses and responsible consumers from carrying costs that should be funded elsewhere. I support stopping municipal electricity markups and preventing consumers from paying for theft and bad debts—but the proposed tariff structure needs much greater scrutiny before it is implemented. 	2026-09-26 20:28:56	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	I have a serious concern that the proposed treatment of rooftop solar and electricity exports could create a situation in which consumers are effectively charged additional network costs while simultaneously receiving limited financial recognition for electricity supplied back into the grid. Consumers who have invested their own capital in solar installations have done so, in many cases, to reduce pressure on the national electricity system and to reduce their own electricity consumption. The tariff structure should therefore not create a financial disincentive for consumers to invest in distributed generation, battery storage and energy efficiency. If electricity exported to the grid attracts network-related charges while export credits cannot be applied against unavoidable fixed charges, the economic benefit of such investments could be substantially diminished. 3. Concern regarding preferential industrial electricity arrangements I also object to any tariff arrangement under which residential consumers and small businesses could ultimately be required to subsidise electricity supplied to large industrial users below the cost of supplying that electricity. If negotiated pricing arrangements are considered necessary for strategic industrial or economic reasons, the associated costs should be transparently identified and appropriately funded. They should not simply be incorporated into the broader electricity tariff structure in a manner that transfers the financial burden onto ordinary residential and small-business consumers without their knowledge or meaningful opportunity to object. 4. Expansion of Free Basic Electricity The proposal to substantially increase Free Basic Electricity without a corresponding increase in the national funding allocated to that programme also raises serious concerns. Any social-support policy of this nature should clearly identify: • the total additional cost; • the source of the funding; • which entity ultimately carries the financial burden; • whether the cost is to be recovered through electricity tariffs; and • what impact this will have on paying residential and business consumers. It would be unacceptable for a policy presented as social assistance to result indirectly in increased charges being imposed on consumers who already pay the full cost of their electricity. 5. Lack of adequate transparency regarding the financial impact Before such a fundamental restructuring of electricity tariffs is implemented, consumers should be provided with clear, understandable and independently verifiable information showing the actual financial consequences for different categories of users. At a minimum, the public should be able to determine how the proposed structure would affect: 1. a low-consumption household; 2. an average residential household; 3. a high-consumption household; 4. a household with rooftop solar; 5. a household with solar and battery storage; 6. a small business; and 7. large industrial consumers benefiting from negotiated pricing arrangements. Without this information, consumers cannot properly assess the consequences of the proposed changes or provide meaningful informed input. Formal objection I therefore formally object to the implementation of any tariff restructuring that: • materially increases unavoidable fixed charges without adequate justification; • disproportionately penalises consumers who reduce their electricity consumption; • creates financial disincentives for rooftop solar, battery storage and energy efficiency; • transfers the cost of preferential industrial electricity arrangements onto ordinary consumers; • increases the cost of social electricity programmes without transparent identification of the funding source; or • is implemented without a clear, transparent and independently verifiable assessment of its financial impact on residential consumers. I further request that the relevant authority provide a detailed explanation of the economic and regulatory justification for each of these proposed changes, together with modelling demonstrating the anticipated impact on consumers across different consumption and generation profiles. Electricity tariff reform should not simply redistribute costs from consumption to fixed charges or from one category of consumer to another without clearly demonstrating that the resulting structure is fair, transparent, proportionate and economically justified. I request that this objection be formally recorded and considered as part of the public consultation process, and that no material changes to the tariff structure be implemented until the concerns raised above have been properly addressed and the financial consequences for affected consumers have been transparently disclosed. David	employed individual
	2026-09-26 20:32:07	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	Instead of this very aggressive attitude, why can we not calmly make this work for all of us. After years of catastrophic management failures by Eskom, many people and businesses have resorted to very expensive solar and battery systems and were initially encouraged to do so and given a tax rebate. Now, instead of making use of the extra clean electricity generated , the attitude is one of punishment to those owners of solar systems. In Europe home solar systems are connected by smart meters to the electricity grid. The extra clean energy put into the grid is bought by the electricity company and sold at a profit. This is costing the authorities nothing so surely this is a win-win situation. With global warming we should be moving towards relying more on solar and wind, which is increasingly cheaper and better for the planet. Most people cannot keep up with these extortionate increases in their utilities, particularly those on a fixed income and pensioners - almost 1000% in 18 years is unsustainable. It would help if you could reduce the overstaffing at Eskom and the inflated salaries - we all need to tighten our belts, not just the end users!	JENNIFER	retired

	2026-09-26 21:18:22	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Prepaid Meter User	Just yet another plan to suck finances out of nothing. This plan is NOT an improvement, instead it is bringing with it so many more future problems. Our great governmental minds are not at all interested in the welfare of this nations' citizens - they have lost touch with the struggling man in the street. And now the homeowner/tenant and those who try to improve their lot in life will be carrying the cost of these corrupt government officials. Those who cannot afford electricity will now be priced even further away from 'normal' power use by impossible extra monthly charges. All while very little progress is made in the permanent 'stamping out' of illegal connections, and the overwhelming debts owed to the failing power entity remain uncollected or written off! Unacceptable.	Lynda

	2026-09-26 22:27:42	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Prepaid Meter User	We have been suffering from a failed electricity grid for many years and have been forced to pay exorbitant tariffs year after year. Many have turned to alternatives like solar, this in turn has led to lightening Eskom's load, ultimately leading to the end of loadshedding. One would expect the government to show gratitude and to possibly incentivise consumers to help in this way, by feeding electricity into the grid, and receiving remuneration for their contribution. THAT would be a logical and fair outcome. Of course, not in the minds of the current government. Instead, they are going out of their way to punish the overstretched consumer. Instead of applauding and even paying those helping the grid, they are to be taxed, and because less elecrticity (from the grid) is being used, they will now employ fixed service charges every month. This is daylight robbery. It is unconscionable to punish those who solved Eskom's problems. It will lead to deep resentment. Pass these new charges, fees, and structure, be warned: there will be a revolt, one way or another.	Willem	business owner

	2026-09-26 22:53:51	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	We live in an electric world where without electricity we would be seriously disadvantaged. So if our governors keep making electricity more and more unaffordable, something will have to give. When we drive in the countryside we quickly see what is happening. Wind farms and solar arrays are spreading like wildfire and people are simply turning their backs on the grid. The more it happens, the more regulations get made and the circle becomes ever more vicious. And all this because of mismanagement and rampant greedy theft on the part of officials. We need to stop regulating and allow private enterprise to take control of the electricity supply.	Neal	retired
	2026-09-26 22:58:36	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	How far can this government keep pushing the consumer. 	2026-09-26 23:22:21	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer, Prepaid Meter User	The paying consumer had carried the cost of 25 years of bad management and corruption at a state institution. This is not the responsibility of consumers but the responsibility of Government to make it right. The middle and lower tiers of homeowners as an only residence are carrying the costs as with them it is easy to enforce payments.	Gail	retired
	2026-09-26 23:23:24	No I do not	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	I'm sick and tired of never being able to budget accurately, there is always a hidden 'surprise' each year. Ifvitvwerentvforvthevhuge investment made by South Africans into solar provision in the paar few years this country would be in a very sad state. Now instead of encouraging public participation like other thinking governments eg Vietnam, the government is charging for massive private investment to save our beautiful land and the actual supplier is God for the wonderful sunshine He gives us. Too absurd. It's time we go back to cost price and not how much we can profit by something as basic as electricity and water.	Linda	retired
	2026-09-26 23:28:03	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	Just because a large majority of users especially in JHB have now converted to rooftop solar we are now being penalised for making sure we are self sufficient and not a burden to the grid. This has allowed for surpluses power but reduced income for municipalities. This is unconstitutional and should be challenged at the highest level I.e. The Constitutional Court. A failed electricity distribution system should not be the responsibility of Jo public.	Paul	self-employed
	2026-09-26 23:28:12	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Living in a rural area, over and above consumption charges we already pay very high line and service charges so should not be subjected to regular hikes above the inflation rate.	John	retired
	2026-09-26 23:35:51	No I do not	Other		Rooftop Solar / Prosumer	Off grid solar users in residential should not be forced or penalized for not using the grid as electricity cost is unreasonably expensive, it should be a choice whether to use or not ,some political party use to campaign saying free electricity for all knowingly that, that is unsustainable and a lie to the mass on the ground, so this if not handled correctly will backfire badly looking at the state of electricity supply and the municipal officials connecting houses illegally only for the households to pay the ultimate price and disconnections .At the end high electricity tariffs =unaffordable =illegal connection =supply disruption =off grid =no revenue for both Eskom and municipality =the desperate measures to penalize	Maripa	unemployed individual
	2026-09-26 23:36:19	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Rooftop Solar / Prosumer	The shear arrogantly proposed fees that overpaid bribe taking low lives could only make. The country has been destroyed by a political party of thieves, liars, bribe takers and mafia supports that is beyond belief and not what I should never have agreed to vote for in 1994.	Ashley	employed individual
	2026-09-26 23:36:24	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User		Ruth	retired
	2026-09-26 23:37:59	No I do not	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes		Residential Ratepayer (Grid Reliant)	The proposed changes are ill-intended and are based on deeply flawed concepts, some of which are not sustainable in the long term. The structure of the proposed policy is neither a viable business model, nor a sound engineering one. It is intended to place a massive financial burden, the origin of which lies in ,massive official bungling, gross mismanagement and wholesale corruption on the shoulders of the "man and woman in the street." The solution to the issue lies not in the cost of electricity. The problem stems from a debilitated Eskom, wracked by mismanagement and corruption over decades and hosts of municipalities which are effectively dysfunctional for the same reasons. If these aspects are not corrected and the rot eradicated no amount of tariff manipulation will provide a solution. Equally, the proposed tariff manipulations are punitive to those that have had the initiative to commit their capital to providing their own power and in so doing alleviating the burden on the State. The very small tax paying portion of the population cannot cover the costs of a burgeoning populace which makes no meaningful contribution to society.	Ian	retired
	2026-09-26 23:38:06	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Until recently Eskom was load shedding. To cope with this residential customers spent large sums to install solar solutions. Instead of working with these customers and offering to purchase excess power as happens in other countries around the world Eskom now wants to penalise these customers because of their past failure that forced residential customers to get power from an alternative source. I find this disgusting and believe that this matter should be fought in the highest courts in the land.	Clive	retired

	2026-09-27 03:22:50	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Prepaid Meter User	The policy shifts tariff design away from volumetric consumption (c/kWh) toward mandatory fixed network and capacity charges (R/kVA, R/kW, or R/Amp/month). To eliminate “volume risk” for distributors, utilities will bill customers for grid availability and network reservation regardless of whether electricity is consumed. In addition, Policy Position 15 introduces a universal generation standby charge applied at the wholesale level to recover the capital costs of keeping backup dispatchable generation on standby for grid-tied users. Households and small businesses that invested private savings into rooftop solar, batteries, or energy-efficiency measures to survive load shedding will be hit with steep monthly fixed fees simply for remaining connected to the grid. Frugal, low-volume consumers can no longer lower their utility bills by conserving electricity, as fixed network fees create a high, unavoidable monthly billing floor. I demand that NERSA impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. I insist that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. I require utilities to absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers.	John	self-employed

	2026-09-27 05:26:21	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	I strongly object to aspects of the Revised Electricity Pricing Policy 2026 because they risk replacing the principle that consumers should pay fairly for the electricity and network services they use with a system in which responsible consumers are required to subsidise costs created elsewhere in the electricity system. I accept that maintaining the national electricity network has unavoidable fixed costs and that households connected to the grid should contribute fairly towards those costs. However, mandatory fixed and capacity charges must be transparent, reasonable and demonstrably related to the actual cost of providing that connection. Consumers who invest their own money in solar generation, batteries and energy efficiency should not effectively be penalised for reducing their electricity consumption. The same principle should apply to electricity exported from rooftop solar. Private citizens who invest their own capital to generate electricity are contributing additional generation capacity. Any network charges imposed on these consumers should reflect the genuine cost of using the network rather than becoming a mechanism for recovering unrelated costs or lost utility revenue. I am particularly concerned about cross-subsidisation. Preferential negotiated electricity prices for large industrial consumers should not result in ordinary households and small businesses paying more to compensate for the discount. Likewise, expanding Free Basic Electricity is a legitimate social-policy question, but its funding should be transparent and appropriately budgeted rather than obscured within the tariffs of other electricity consumers. South Africa desperately needs investment, entrepreneurship and private electricity generation. Pricing rules should encourage those behaviours rather than weaken their financial benefits. I therefore request that government require a transparent household bill-impact assessment, clearly separate network costs from electricity consumption, ensure that all charges reflect demonstrable costs, protect small-scale private generation from punitive charges, and prevent preferential or social tariffs from being indirectly transferred to ordinary paying consumers. A fair electricity system should reward efficiency, investment and responsible consumption—not make those consumers the default funders of inefficiencies and subsidies elsewhere in the system. Electricity generation is no longer solely from the Gauteng - Mpumalanga area. Solar farms and wind farms are located across the country. It is not fair to charge people living a long way from Johannesburg more for electricity. Policy 33. Grid-tied systems supplying power to the grid should receive a credit for the value of the electricity provided and this credit should be applied to any fixed charges, or other time-of-use charges incurred by the customer. It should not be limited to the period that the power was supplied to the grid. Policy 47. Municipalities must ring-fence electricity sales income and not use this to cross-subsidise other activities. Municipalities that do not pay Eskom for their electricity must be cut off, or have the re-sale of electricity to consumers taken away from them. Municipalities owe Eskom billions of Rands and yet still get electricity from Eskom, thereby dragging the whole system down. Policy 52. Free basic electricity should not exceed the current 50kWh per month.	Ken	business owner

South Africans were effectively forced to find alternatives because the public electricity system could not reliably meet their needs. Many households and businesses responded by investing substantial amounts of their own, already-taxed income in solar panels, inverters, batteries and other energy-saving measures. These private investments reduced their dependence on Eskom and municipal electricity and, importantly, were made without government or municipal funding. It is therefore fundamentally unfair to subsequently penalise these same consumers through additional fixed charges simply because they remain connected to the grid. I understand that the electricity network has genuine infrastructure and maintenance costs. Those costs should, however, be allocated transparently, fairly and proportionately — not structured in a way that effectively penalises consumers for reducing their electricity consumption or investing in private renewable generation. Even more concerning is the proposed treatment of electricity exported back into the grid. A household that generates surplus electricity and feeds it into the network is providing electricity to the system. If that household is then charged network-related fees on the electricity it exports while receiving only a limited credit for the electricity supplied, the system risks creating a financial disincentive for exactly the private investment South Africa should be encouraging. Citizens should not be made to pay twice: first to purchase and install their own electricity-generation infrastructure, and then again through punitive charges because that infrastructure reduces their reliance on the traditional electricity supply. If government wants South Africans to invest in renewable energy, energy independence and reduced pressure on the national grid, policy must encourage—not penalise—that behaviour. I therefore call for: • A fair and transparent tariff structure based on actual cost and actual use, rather than punitive fixed charges designed primarily to recover lost revenue from lower electricity consumption. • No network or transmission charges on electricity exported by residential solar users that exceed the genuine incremental cost of accommodating that export. • Fair compensation for electricity supplied to the grid, reflecting its value to the electricity system. • Recognition of the substantial private capital already invested by South African households and businesses in renewable energy. • A proper assessment of the economic impact that these proposed charges will have on households that have invested in solar specifically to reduce their dependence on Eskom and municipalities. South Africans who invested their own money to keep their homes and businesses powered should not now be treated as a problem to be charged for solving part of the country's electricity crisis. We need an electricity pricing policy that rewards efficiency, private investment and reduced demand on the grid — not one that creates a financial penalty for achieving those objectives. 	2026-09-27 06:40:13	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	I cannot believe that Eskom wants to penalise the very people who have spent a great deal to stabilise their own electricity, because Eskom could not provide regular service. As a result of so many supplying back to the grid, it has made up Eskom's shortfall. Now, because we are paying less per month, at our initial cost outset, Eskom is not receiving as much from the individual uses. They need to restructure their own infrastructure and use methods to cut down on their costs, but at the same time employ educated skilled personnel to keep it functional. As for providing more electricity to people for free, when only a small portion of the country's population pay for electricity, is ludicrous. It does not make sense. It will either drive more people to leave South Africa, or to go completely off grid. Then they will be in a worse position than now. Put a stop to this outlandish proposal.	Micheline	retired

	2026-09-27 06:49:59	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant)	I do not support the proposed Electricity Pricing Policy in its current form. South Africans have already had to absorb enormous electricity increases while many households have spent their own money on solar, batteries and energy-efficient equipment because the electricity system could not provide reliable power. I am particularly concerned about moving more of the electricity bill into fixed network and capacity charges. People should still benefit financially when they use less electricity, conserve power or invest in their own generation. A system where substantial charges remain payable regardless of how little electricity is taken from the grid removes much of that incentive and risks penalising the very people who have reduced pressure on the electricity system. Consumers should also not continually be expected to carry the financial consequences of inefficiency, electricity theft, unpaid debt and poor management. Any tariff structure should first place strong pressure on utilities and municipalities to control their own costs and losses before increasing unavoidable charges on paying customers. I therefore do not support the policy in its present form. Electricity pricing should be transparent and fair, but it should also reward responsible consumption and private investment in alternative energy rather than making consumers pay increasingly high fixed charges simply for remaining connected to the grid. 	2026-09-27 06:51:17	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	I do not support the proposed policy in its current form. Electricity has already become unaffordable for many ordinary households, pensioners and families who are trying to manage rising living costs. Before introducing new charges or changing the way consumers are billed, there should be far greater accountability for waste, poor administration, electricity losses and unpaid accounts. Responsible customers should not keep carrying the burden for problems they did not create. Any new pricing system should make electricity more affordable and easier to understand, not add another layer of costs that households have little control over.	Kajal	Non-profit
	2026-09-27 06:51:33	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	I strongly object to any electricity pricing policy that places an ever-increasing financial burden on ordinary households and small businesses. My household has invested a substantial amount of our own money in a solar system and we are completely off-grid. We generate and store our own electricity and do not rely on the electricity network. Consumers who make this investment should not be penalised simply because they have chosen to become energy independent. I am particularly concerned about the continued move towards additional fixed charges, network charges and other fees. If a consumer is genuinely not using the grid, there should be no attempt to recover network costs from that consumer. Where a customer does remain connected to the grid, any fixed charge should be reasonable, transparent and directly related to the actual service and capacity being provided. Ordinary salary earners and small businesses are already under enormous financial pressure. Electricity has become increasingly unaffordable. At my business we use prepaid electricity. Approximately three years ago I was spending around R1,000 per month on electricity. I am now spending approximately R3,000 per month. Consumers are paying significantly more while receiving fewer units for the same amount of money. Government policy should be encouraging households and businesses to invest in solar and reduce pressure on the national grid — not creating additional charges that make people feel they are being punished for investing their own money to solve their electricity problems. There is a limit to how much more ordinary taxpayers, salary earners and small businesses can absorb. Electricity must remain affordable, and new tariff structures should not simply become another mechanism for extracting more revenue from consumers who are already struggling with the rising cost of living and doing everything possible to reduce their dependence on the grid. I therefore request that the final policy protect genuinely off-grid consumers from network-related charges, keep fixed charges reasonable for connected consumers, and ensure that electricity pricing remains affordable, transparent and fair.	Ria	business owner

Eskom COULD N0T supply a service and people pit solar in at their OWN cost, now we must pay for Eskoms tardiness !! We say NO !!!!!!¡	Anne	retired
	2026-09-27 06:57:27	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	While there are positives to the proposed bill, the negatives far out way these and as such the proposed policy bill MUST be rewritten. As a solar PV and grid tied reliant consumer, I see “both sides of the coin”. I have two main issues with this policy: 1. The policy does not promote Solar PV export of clean energy into the grid, where climate change is a real threat we should be moving towards clean entry drivers and not away from it. 2. The increase of free electricity 50kw to 300kw can be viewed as an ANC publicity and marketing stunt to keep the current ANC government in power. If this policy is approved, the ANC will leverage it to promote themselves to the poor to keep themselves in power and continue to loot state coffers.	Stephen	self-employed

	2026-09-27 07:00:48	No I do not	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Residential Ratepayer (Grid Reliant)	It’s tantamount to patrons in a restaurant or shoppers in a supermarket paying the same price regardless of what’s selected off the menu or put into your trolley just because you chose to use their services - a totally unfair practice that will pull down the standard of living even further - pay for what you use is the only fair option	Vanessa	self-employed

	2026-09-27 07:01:06	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	I object to key aspects of the Draft Revised EPP2026 published 28 August 2026. 1. Cost-reflectivity must mean efficiency, not guaranteed revenue: The draft claims to support cost-reflective tariffs [Policy Position 15-17] and states government will prevent consumers being burdened by inefficiency costs. Yet it simultaneously proposes new fixed monthly network capacity charges, TUOS/DUOS charges, and customer service charges for Standard Domestic and embedded generation customers [Policy Positions 19, 20, 38]. This allows inefficient municipalities and distributors to hike fees for solar users to recover lost sales, not actual costs. Eskom and municipal distributors have increased prices by over 900% since 2007 while performance declined. Legislation should not be used to protect that inefficiency. 2. Objection to penalty on solar users: The draft proposes mandatory Time-of-Use tariffs and national net-billing for all embedded generation, with low export value vs high import value. This is a legislative penalty on households who invested to reduce load on the grid. If cost-reflectivity is the principle, a self-generating user who uses less grid energy, at off-peak times, should pay LESS, not more fixed fees. 3. Objection to electricity-funded subsidisation: I object to the proposal that Free Basic Electricity expansion, lifeline tariffs, and Negotiated Pricing Agreements (NPAs) for smelters/distressed industry be funded via cross-subsidies and surcharges on other consumers [Policy Positions 35-40, 50(j)]. Social support and industrial support are legitimate fiscal functions and must be funded by National Treasury / Equitable Share, not by inflating electricity tariffs. Using electricity bills to subsidise others violates the core principle that your cost should reflect your actual use. My demand: a) Any network charge for solar users must be based on actual, audited cost-causation and must exclude inefficiency recovery. b) No mandatory fixed-charge increase targeting embedded generation customers. c) All cross-subsidies for FBE and NPAs must be ring-fenced and funded via the fiscus, with full transparent disclosure on bills as promised in the draft. Cost-reflective should mean you pay for what you use - no more, no less.	Ockert	self-employed

	2026-09-27 07:07:08	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	The price of electricity is already exorbitant, citizens are battling to survive the high cost of living in this country as it is., Pensioners should be given a rebate on usage to assist them with their budgets Even with some solar panels it doesn't seem to drop the cost in any real sense, this is already due to the high cost of being connected to the grid.	Patrick	retired

	2026-09-27 07:07:20	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form (Rejects mandatory fixed grid capacity fees and standby charges on solar and low-usage homes, punitive double network fees on solar exports, the elimination of stepped block tariffs for standard households, and the risk of retail consumers funding industrial smelter discounts or unfunded social expansions). Mandatory Fixed Charges (Policy Positions 11, 27, 30) - Functions as an arbitrary “sun tax” and availability penalty. Punishes energy efficiency and private capital invested to survive load shedding, extending solar payback periods. Prosumer Net-Billing Rules (Policy Position 33) - Highly punitive: charging solar owners DUoS fees to export clean power while refusing to allow export credits to offset network fees creates an unviable investment model. Scrapping Inclining Block Tariffs (Policy Position 38) - Removing IBRs in favour of flat energy rates plus heavy basic monthly connection fees will cause immediate sticker shock for low-to-middle-income ratepayers. Municipal Surcharge Ring-Fencing (Policy Position 47) - Threatens local government fiscal collapse. If municipal electricity profits are stripped, councils will hike property rates or collapse basic community services. Industrial Smelter NPAs (Policy Position 54) - If heavy industry receives electricity at 62 c/kWh (below cost), ordinary retail consumers and small businesses will be forced to shoulder the resulting revenue shortfall.	Zuleka	employed individual

	2026-09-27 07:09:47	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	I OBJECT — EPP 2026 I strongly reject the EPP 2026 in its current form. I invested my own after-tax money in solar, batteries and off-grid capability precisely to reduce my dependence on an unreliable electricity system and reduce strain on the national grid. Government cannot encourage citizens to conserve electricity and invest in self-generation, then change the tariff structure to recover lost consumption revenue through fixed capacity, standby and network charges. Responsible consumers must not be financially penalised for reducing demand and investing in energy resilience. * NO blanket fixed grid-capacity charges on low-usage/self-generating households. * NO punitive standby charges simply because a solar household remains grid-connected. * NO double network charging on electricity imported from and exported to the grid. * NO tariff structure that removes the financial benefit of solar, batteries and reduced consumption. * Prepaid customers deserve simple, transparent and consumption-related pricing. * Every network/capacity charge must reflect a demonstrable, efficient cost actually attributable to that customer. * Social and industrial subsidies must be transparent and separately identified, not hidden in residential tariffs. * Consumers who reduce peak demand and grid dependence should receive the economic benefit of doing so. Cost reflectivity must work both ways. If I impose less demand and cost on the electricity system, my bill must reflect it. Do not make responsible consumers pay for structural failures and inefficiencies they invested their own money to escape. I OBJECT TO EPP 2026 IN ITS CURRENT FORM.	Shaun	employed individual

	2026-09-27 07:20:37	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer, Prepaid Meter User	My concern is a couple of years ago government gave a tax incentive for homes to move to solar to help mitigate load shedding, and now they are punishing the people that moved to help make them look good by adding a connection cost, as they are not getting enough money in to support Eskom's ballooning costs. I also feel that why should big business pay less for electricity that everyone else when they are the chief users thereof, this will mean that households and small businesses will have to offset that. I have a serious reservation about the increase in free electricity, where will the money come from to pay for this, they will just add more taxes to an already strained tax payer to make good on thier promises.	Reaford	employed individual

Prohibiting consumers from using export credits to offset fixed monthly network fees drastically erodes the financial return on private rooftop solar, disincentivising decarbonisation and pushing frustrated solar owners to defect from the grid entirely. Demand the complete removal of DUoS and TUoS network charges on exported electricity (Policy Position 33(d)), recognising that embedded solar reduces local line losses and daytime substation loading.Insist that solar export credits be eligible to offset the total monthly municipal utility bill, including fixed network and customer service charges.Require fair, cost-reflective feed-in credit rates that reflect the true economic value of daytime peak/standard clean power injected into local distribution networks. 	2026-09-27 07:38:05	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	It has taken the Gov 32 years to reduce a once fully-functional State Utility to this sad state. This is due to theft, corruption and maladministration at all levels of governance, be it Central, Provincial or Municipal. Honest and law-abiding citizens are now being required to carry this burden and are effectively being punished for the criminal deeds of others. Those who have installed solar systems as a means of safe-guarding against load-shedding are not being rewarded for their actions, but rather are being penalised for reckless governance by those in charge. It is not the Act that need revising, it is Government that needs to be taken to task for failing the Country and it's Citizens. Is it any wonder that those in power are simply following the example of their leader, who hides foreign currency in his furniture, for God's sake! "Cry the Beloved Country"	Brian	retired

	2026-09-27 07:54:25	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	First we are told to help lighten the load, so a lot of people went and got solar. Now that the load has been lightened, Eskom goes, where are all my paying customers, we need the income. It is unfair to now try and milk the consumers that had spend thousands of Rands to use less electricity toe fork out more. Then the same with making the first 300 kw hours free, who is gonna pay for that? The middle class. Sooner than later there will be no more middle class. We are drowning here, and can not pay for everyone.	Chris

The energy provider should be transparent and must refrain from trying to burden household users with having to fund the shortfall for its prior misuse of funds. It needs to find a way to keep municipalities that do not pay without burdening small households to pay for the shortfall. This is not the way to govern a country that has many poor and struggling households.	Inge	self-employed

	2026-09-27 07:56:25	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer	It is unconstitutional. Allows Escom to squander as much as they like at the expense of the consumer. It is another step towards communism.	Jack	
	2026-09-27 07:56:41	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant)	If you are able to export electricity then you should not be penalised. Pay you the same rate that eskom charges cant build credit that has to be paid out but you can offset every one still benefit as the electricity cost price and selling price still differs this can be tested over a year to see if it in fact benefits eskom / municipalities . Secondly I believe the way Eskom gets paid for prepaid meters is wrong. You know what a unit cost so when something is bought at a store in tje evening when the money is transferred Eskom share should go directly to them and not to the municipality and then they pay eskom this would immediately increase Eskom cash flow and stop a lot of corruption.	Johan	employed individual

	2026-09-27 08:09:05	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Prepaid Meter User	Lang storie kort, dit wil klink asof di minister die 'heuning om di mond' spel speel, en kort voor n verkiesing n voorstel ter tafel lê wat op skrif op sekere punte belowend mag voor kom. In my opinie klink dit meer na n foefie om kruisies te wen en ni na n wel deurdenkte plan in veral di medium en lang termyn ni. As ek my oningelgte opinie mag laat dink ek dat di voorgestelde plan eerder energie-armoede regoor Suid-Afrika gaan verdiep.	Eddie	retired
	2026-09-27 08:09:11	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Sir / Madam, These proposals are simply disgusting. Making consumers pay for what they do not use is legalized robbery of homeowners. It's time to sell these institutions to professional companies who can run these services efficiently. Presently all the mismanagement and theft costs, are being dumped on the consumer. There should be a fixed price per kwh and EVERYONE should pay exactly the same rate. To have varying charges depending on who the customer is, and charging citizens for what they do not use is an unfair practice. We are constantly hearing about democratic and human rights, however there is clearly no real commitment to these democratic principles. This government is clearly moving towards another communist system which has never worked anywhere in the World. The result will be much poorer South African citizens.	Jeffrey

	2026-09-27 08:36:22	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer	I wish to submit the following comments on the Revised Electricity Pricing Policy (EPP 2026), specifically on the proposed changes to fixed charges, the treatment of rooftop solar and net exporters, and the funding of Free Basic Electricity. 1. Mandatory fixed network and capacity charges The proposed shift from consumption-based billing to mandatory fixed monthly charges undermines the principle that customers should pay for what they use. Customers who reduce their consumption, whether through efficiency measures or self-generation, will see little benefit on their bills. I propose that fixed charges be capped or scaled in proportion to actual grid usage. For example, a business that meets 90% of its energy needs through solar and battery storage should not pay 100% of the fixed charges when it draws only a fraction of the grid capacity it previously used. 2. Treatment of rooftop solar exports Rooftop solar played a significant role in reducing demand on the national grid and helping bring load shedding to an end. South African households and businesses made these investments out of necessity, at their own cost, to keep their businesses running and secure a stable supply at home. Imposing network distribution charges on exported power, and preventing export credits from offsetting fixed charges, penalises the customers who helped stabilise the system. I propose that: surplus solar power exported to the grid be compensated at a reduced but fair tariff; export credits be allowed to offset any portion of the customer's account, including fixed network charges; and where a customer's export credits exceed their total charges, they be paid for the balance. 3. Treatment of net exporters Where a customer exports more electricity to the grid than they import over a billing period, they are a net contributor to the system, not a net user of it. Their exported power is sold on to other customers and reduces the need for new generation capacity and costly peak supply. I propose that: the value of a net exporter's surplus power be offset first against their fixed network and capacity charges, so that a customer whose exports cover these charges pays no net fixed fee; any remaining surplus be credited or paid out at a fair export tariff; and credits roll over month to month, so that seasonal variation (higher exports in summer, lower in winter) is balanced over the year. 4. Funding of expanded Free Basic Electricity I do not oppose support for households in need. However, raising Free Basic Electricity from 50 kWh to as much as 300 kWh per month without a corresponding increase in the national grant budget risks shifting the cost onto paying customers, who already face some of the highest electricity costs in the world. I request that the policy clearly state how this expansion will be funded, and that it be funded through the fiscus rather than through tariffs paid by other consumers. 5. Municipal surpluses, theft and bad debt I welcome the proposals to end hidden municipal electricity markups and to prevent utilities from passing the costs of theft and bad debt on to paying customers. These measures should be retained and firmly enforced. Conclusion Electricity pricing should be fair, transparent, and proportional to use, and it should encourage investment in renewable energy rather than discourage it. I urge the Department to revise the proposals above so that the policy works with consumers to deliver a more affordable, sustainable, and reliable electricity supply for all South Africans. Sincerly Luke de Heer	luke	employed individual
	2026-09-27 08:36:35	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	Once again, another socialist, concept! This would have been called 'THEFT" not so long ago. You pay a continued subscription for being on the electrical grid, a fee which has been covered when you paid for the connestion to the grid! This is all creative accounting, make you pay for something over and over again. Re the solar, you bought the panels, payed VAT, paid an installer who paid VAT and import duties. now you want to tax that which is not yours, because it produces electricity, through solar means! So now they want to tax the sun you use! THEFT, nothing more, nothing less.... Stop the theft of cables, and infrastructure, start actually charging people for electricity! Remember the pie, is getting smaller and smaller and the more you penalise those who basically pay for those who do not have, will have consequences!	Colin	unemployed individual

	2026-09-27 08:38:06	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Prepaid Meter User	Due to the corruption in the government circles and the thieves that run around, the public has to pay the price. The general public pay their bills every month but get punished because they are the easy targets. The politicians get free electricity. They earn huge salaries. Between them they could cover the excess electricity tariffs. The general public are suffering but they are forced to pay extra all the time. The public go into the expense of installing solar panels and the government wants to penalize them. If the Government ran the country properly things would be different but they chased away how many qualified people to other countries. They were accepted with open arms and were given good positions. The Government must work on the corruption in the government circles and their affiliates.	Dennis

	2026-09-27 08:49:39	No I do not	Double Network Fees (DUoS) on Solar Prosumer Exports		Residential Ratepayer (Grid Reliant)	The ordinary private homeowner can not absorb any more increases on household expenses. Of course he's going to look for alternatives such as gas and solar. It is ridiculous to charge a household for using solar, a free energy source. Any extra power that a household produces should be allowed to return into the grid and offset against any Eskom power used. We are helping you by selling power back. Eskom lost it's chance to be the sole supplier when it didn't plan enough power plants to meet the demand and had to introduce load shedding. Eskom should be investing in more solar and wind farms. Stop making the man in the street pay for your incompetence .	Wendy	retired
	2026-09-27 08:50:43	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	Households and small businesses that invested private savings into rooftop solar, batteries, or energy-efficiency measures to survive load shedding will be hit with steep monthly fixed fees simply for remaining connected to the grid. Frugal, low-volume consumers can no longer lower their utility bills by conserving electricity, as fixed network fees create a high, unavoidable monthly billing floor. I demand that NERSA impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. I insist that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. I require utilities to absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers. By levying network charges on both energy imported and energy exported, the state effectively taxes private clean energy fed back into local communities. Prohibiting consumers from using export credits to offset fixed monthly network fees drastically erodes the financial return on private rooftop solar, disincentivising decarbonisation and pushing frustrated solar owners to defect from the grid entirely. I demand the complete removal of DUoS and TUoS network charges on exported electricity (Policy Position 33(d)), recognising that embedded solar reduces local line losses and daytime substation loading. Insist that solar export credits be eligible to offset the total monthly municipal utility bill, including fixed network and customer service charges. Require fair, cost-reflective feed-in credit rates that reflect the true economic value of daytime peak/standard clean power injected into local distribution networks.	Pieter

	2026-09-27 08:52:51	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	As a pensioner I restricted electricity usage to save money. Then the City of Cape Town decided that consumers we being too careful with usage, as in reducing it and hence their bills, and introduced a fixed charge to compensate, and which I might add keeps going up. For me this was a real blow as it was a double whammy. Electricity costs rose with any consumption and now there was a levy for not using any at all. Being connected to the grid is an historic event. So to charge just to be connected is ludicrous. It would be better increasing the cost of electricity overall and then we, the consumer, can decide whether to use it or not. You should not be penalised for conserving electricity.	Michael	retired
	2026-09-27 08:52:54	No I do not	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Prepaid Meter User	I am strongly against these proposed electricity tariff changes. South Africans are already struggling with the rising cost of living, and further increases will put even more pressure on households and businesses. Electricity should remain affordable and accessible, not become another financial burden for ordinary people and to feed the greedy and corrupt.	Brenton	employed individual

Roger	employed individual
	2026-09-27 09:16:15	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	South Africans are all struggling to just keep themselves above the poverty line. Even those who are 'well-off' are complaining about the cost of living. What makes us even more angry is the fact that we tax paying citizens have to pay for all the illegal electricity and water connections. Why must that cost be passed onto to us? We pay taxes and top of that we are supporting illegality by paying through our teeth. This is colossally unfair.	Prabhagaran M	retired
	2026-09-27 09:17:17	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer, Prepaid Meter User	This proposal punishes those of us who are energy efficient and invested private capital from our pension to survive load shedding. We had no choice to invest in solar because at a stage load shedding was daily and I use a CPAP machine and stop breathing if I don't use it. So we had to get solar primarily for health reasons. Besides that our sub station regularly blows up, or has some or other kind of problem and has been like that for years. Sometimes there has been no electricity for a week or more because of this. ESKOM's infra-structure for electricity therefore has not been maintained. Electricity has become exceptionally costly especially for the middle income earners and those on pension.	Jo-Ann	retired

	2026-09-27 09:28:23	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	I don't understand: in the rest of the world, the solar generating housholds are provided with bi-directional meters, and they get paid for exporting power, and the payment can be offset from the grid bill. But Eskom wants to penalise this opportunity???	Werner	retired
	2026-09-27 09:28:33	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	I do not support this bill. As one of the millions of victims of the Eskom hierarchy I object to Eskom finding new ways to undermine our country and its citizens. I regularly don't have electricity due to cable theft which directly affects my ability to earn and now Eskom wants to penalize me for criminal neglect on their and the governments' part. I do not accept that on the basis of it not being justified or constitutionally correct to pass the burden of law enforcement onto the citizens they are sworn to protect. In the Western Cape we sat without power for almost a month due to the storms that hit us in May 2026 and Eskom was unable to solve the issue timeously due to lack of resources compounded by an aging infrastructure that was installed in the 70's and since then has not been maintained or upgraded. Again, I do not support Eskom or the government in their attempt to pass the responsibility of maintaining and protecting the electrical infrastructure onto the consumer for their neglect, corruption and ineptitude. Eskom has been run into the ground by the government since it came to power in 1994 and continues to fail in owning up to its faults and responsibility to the people of South Africa. In a blind and useless effort to hang onto its power, they manipulate the citizens with offers of free power. The obvious short sightedness of this clause in the bill of providing free power is the exact reason Eskom and this government are a failed entity. Nothing is free and by placing the burden ono the people who actually do contribute to the country will only weaken this country further. The stupidity of this government is astounding. This bill is just another way this government is running South Africa into the ground, taking from the people to cover its incompetence.	Rob	self-employed

They should be covering their charges from the electricity usage and NOT expecting consumers to have to constantly pay thousands every single month for that! As a solar user I should also not be penalised for generating my own electricity, Eskom should be rewarding customers who contribute electricity back to the grid, as they can then sell that on to other consumers who don't have their own solar - money for which they did not have to do much work for.	ASHLEY	business owner

	2026-09-27 09:35:28	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Dear Minister - I speak from the heart. The government must come to terms with the fact that there is a single question which governs the future of Eskom. Should Eskom be run for the good of the country, or for the good of Eskom? The correct choice is "Eskom should be run for the good of the country". If you are honest with yourself, all of these regulations you are putting on solar etc are about making choices "for the good of Eskom". It's because Eskom, as it is currently structured, is not financially viable if all the middle-class customers go onto solar. So you are trying to stop that. But the answer is simple. Accept that it is in the best interests of the country for us to transition to solar. The interests of the country come second to the interests of Eskom, as a profitable company. You need to understand this. Ten everything becomes simple. Please think it through carefully. The Eskom board, etc will tell you things. But remember - their mandate is to fight FOR ESKOM. Your mandate is to FIGHT FOR THE COUNTRY. Those are different mandates. Yours sincerely Bruce Bartlett	Bruce	employed individual

	2026-09-27 09:37:07	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Good day, my main objection is against mandatory fix charges and Standby charges on Solar and low usage. How can you force a one or 2 person household to pay the same rate because of the residential property the same than a 4 or 5 person household on the same kind of property? It is as if you telling me I need to subsidise other people , what for? The charges must stay related to the usage of the household not fixed for all, it is an unethical and unfair practice.Further I object agains passing the losses of theft further onto the consumer, you need to start managing a state organisation in line of best protection of your citizens that has already paid their bills and not run away from your obligations to protect your equipment against criminal activities, we all need to protect our own homes already ourselves, why do we need to pay for you as well just because you do not take the necassary precautions to protect state property that us as rate and tax payers has already paid on your behalf? Also, why do you keep wanting to punish solar implementers on double fees? You could not run your business and could not provide enough power and now you want to keep punishing people who actually helps you getting out of your dilemma plus you charge electricity users a fortune to use your power facilities, again, clean up you own back yard and stop punishing citizens. Why should residential homes subsidise cross smelters, they can pay their own way , the same we pay our own why to run our homes and businesses, nobody cros subsidise us!!!	Anscha	
	2026-09-27 09:37:50	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	It’s blatant theft, costs of electricity are so that most of the population battle to afford to pay our bills and this is middle income group, increasing free electricity is not going to be free but fall on the consumer and for smelters and businesses that earn money to be subsidized will only fall again on the consumer with electricity becoming even more expensive, also we should not pay the municipalities directly but Eskom so they can’t balance out their theft with increased pricing.	Mary	employed individual

	2026-09-27 09:42:28	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	In view of the wide spread corruption, the money from this will merely go into the pockets of the government. And those who do not pay their bills will continue not to do so.	Rene	
	2026-09-27 09:42:44	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	This is just another way of stealing the public money. Everybody is tired of being billed to death. It does not matter one bit to the government even if people are dying when they need electricity for oxygen consumption. When does the blatant stealing stop !!!! When the ANC steps down, that is when the stealing will stop. They rob people of life. Not just electricity but water and public services. The government has no shame in killing innocent people. In my opinion they are demonic.	Karin	business owner
	2026-09-27 09:42:45	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	This is Eskom's way of punishing the people that went semi-off grid during the stage 6 loadshedding, because they are losing a lot of money from the people not using them as their primary source anymore. Their logic is flawed, in most cases solar users' batteries will run empty in the middle of the night, when demand is lowest, and then resort to using grid power, not necessarily to charge but run what ever every other household will be running at that hour. Would they then rather no one have solar and all of us use grid electricity at the same time? They cannot admit that it was in fact the people that went solar or wind that actually got us out of loadshedding, but now they want to make up the money they lost. Thieves. 						Response to the Revised Electricity Pricing Policy (EPP 2026) The proposed Revised Electricity Pricing Policy must be considered in the context of South Africa's economic realities, the government's own energy policies and the financial burden already placed on electricity consumers. The average South African household is positioned in the upper-middle or more expensive half of households globally, with household spending levels significantly exceeding the broader African average—nearly double the continental average. This is an important consideration when assessing affordability and the capacity of households to contribute towards a sustainable electricity pricing model. 1. Mandatory Fixed Charges for All Homes Electricity infrastructure is expensive to build, maintain and operate. It is therefore reasonable that consumers contribute towards the cost of maintaining the network, regardless of how much electricity they consume. Households that remain connected to the grid must contribute towards its upkeep, even if they generate some of their own electricity. However, fixed charges must be transparent, proportionate and based on the actual costs of providing the service. 2. Charges on Rooftop Solar Exports The government actively encouraged households and businesses to install solar systems to reduce pressure on the national electricity grid and introduced tax incentives to promote investment in renewable energy. It is therefore concerning that the proposed policy would require grid-connected solar users to pay network charges on electricity consumed and electricity exported, while preventing export credits from being used to offset fixed monthly network charges. This represents a significant departure from the approach that encouraged consumers to invest in solar energy in the first place. Consumers who responded to the government's call to reduce demand on the national grid should not now face a tariff structure that undermines the financial benefits of their investment. Solar users should contribute fairly towards maintaining the grid, but the pricing model must recognise the value of the electricity they feed back into the network and avoid penalising consumers for supporting the country's energy supply. 3. Industrial Electricity Agreements Industrial pricing arrangements should be assessed on their economic merits, including their contribution to employment, investment and economic activity. However, preferential pricing must be transparent, and ordinary households and small businesses should not be expected to subsidise industrial consumers without clear justification and disclosure of the financial implications. 4. Free Basic Electricity Expanding access to free basic electricity without providing additional funding raises legitimate concerns about the potential financial burden on paying consumers. Assistance for vulnerable households is necessary, but it must be properly funded and transparently accounted for. The cost should not simply be transferred to other electricity consumers through higher tariffs. 5. Municipal Electricity Surpluses This is a definite improvement. Municipalities have increasingly relied on electricity tariff mark-ups to generate revenue and balance their books, effectively using electricity consumers to subsidise other municipal functions. Greater transparency and cost-reflective tariffs would help address this problem. Municipalities should not be permitted to use electricity charges as an indirect mechanism to cover unrelated financial shortfalls, inefficiencies or poor financial management. Electricity tariffs should reflect the actual cost of supplying electricity and maintaining the network, rather than serving as a convenient revenue stream to compensate for municipal budgetary failures. Conclusion South Africa needs a transparent, cost-reflective and financially sustainable electricity pricing system. Consumers should contribute fairly towards the infrastructure and services they use, while vulnerable households receive properly funded assistance. At the same time, the government must ensure that its electricity pricing policies do not contradict its own efforts to encourage private investment in renewable energy. The fundamental issue is fairness and accountability: consumers who invested in solar energy in response to government incentives should not be disadvantaged by a subsequent pricing structure that undermines those investments, and municipalities should no longer be able to rely on electricity mark-ups to cover unrelated financial shortfalls.

	2026-09-27 09:49:22	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	The current situation at Eskom is not the fault of the consumers, but because of the incompetent leadership appointed by the government. Under their watch, wide scale fraud and corruption were rife. I do not want to mention the bloated staff complement which the leadership is happy to entertain, and the absorbent salaries are hopelessly too high for many incompetent employees. All of this led to constant load shedding, affecting all customers and forcing everyone to invest in solar. Because of the numerous amount of people changing to solar reduced the income to Eskom, and now they want to penalise the consumers. Someone should calculate the damaged done to the country and make Eskom pay for it, which will never happen. The solution is to allow Eskom to complete its own process into a death spiral, and allow the private sector to take charge of a properly run entity to service the electrical needs of the country. 	2026-09-27 09:58:59	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	this government still wants to tax electricity users for the corruption losses of the past whilst never prosecuting the criminals now they want to tax this who installed solar to get away from the incessant blackouts	David	
	2026-09-27 09:59:38	No I do not	Other		Residential Ratepayer (Grid Reliant)	Lies and cover-up for more plundering and benefit for the useless ANC. TIME TO GET ROUGH.	Susan	retired
	2026-09-27 09:59:59	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	A Punitive “Sun Tax” on Private Capital and Self-Reliance: When recurring load shedding crippled businesses and households, citizens invested tens of billions of Rands in private savings to install rooftop solar, inverters, and battery banks. Shifting electricity billing away from consumption (c/kWh) toward mandatory fixed monthly network and standby capacity charges (R/kVA, R/kW, or R/Amp/month) under Policy Positions 11(b), 15, 27, and 30 acts as an availability penalty. It erodes household investment returns, penalises energy conservation, extends solar payback periods by years, and locks low-volume consumers into high monthly billing floors regardless of how little electricity they consume. Punitive Double-Charging and Restrictions on Solar Prosumers (Policy Position 33): The draft policy penalises grid-tied embedded generators who inject clean power into the network. Prosumers are forced onto mandatory Time-of-Use tariffs and made to pay standard Distribution Use of System (DUoS) and Transmission (TUoS) charges on both the electricity they import and the electricity they export. Furthermore, prohibiting solar owners from using clean export credits to offset fixed monthly network and retail service charges destroys the financial viability of feeding power back into the grid, actively incentivising frustrated solar owners to defect entirely. Scrapping Stepped Block Tariffs (IBRs) Hits Middle-Class Families (Policy Position 38): Eliminating Inclining Block Rate (IBR) tariffs for standard domestic customers removes the traditional “pay-less-if-you-conserve” framework. Replacing stepped usage tiers with unbundled capacity fees, monthly service charges, and flat energy rates will trigger immediate bill shocks for low-to-middle-income ratepayers, pensioners on fixed incomes, and large multi-family households sharing a single meter who actively manage their consumption. The Threat of Consumers Funding Industrial Smelter Discounts and Expanded Free Power: Expanding concessional Negotiated Pricing Agreements (NPAs)—granting heavy industrial smelters discounted electricity (historically around 62 c/kWh)—under Policy Position 54 creates a massive revenue gap. At the same time, proposals to expand Free Basic Electricity (FBE) from 50 kWh up to 200–300 kWh per month without an expanded National Treasury grant risk multi-billion-rand deficits. Opponents and energy analysts warn that if these industrial and social shortfalls are not strictly ring-fenced and funded via the national fiscus, the deficit will be loaded onto standard consumer tariffs. Municipal Fiscal Shocks and Retaliatory Rates Hikes (Policy Position 47): Local councils rely on commercial electricity markups (often 15% to 35% above bulk Eskom tariffs) to cross-subsidise indigent households, sanitation, and municipal salaries. Eliminating non-transparent municipal surpluses without an alternative municipal funding model threatens local government solvency. This could prompt municipalities to counter revenue losses by introducing aggressive double-digit hikes on property rates, refuse, and water tariffs. The “Cost-Reflective” Affordability Trap: Historically, the regulatory push toward “cost-reflective tariffs” in South Africa has been administrative shorthand for compounding above-inflation tariff hikes. Imposing rigid mathematical cost-of-supply formulas during a prolonged cost-of-living crisis risks accelerating grid defection among high-paying consumers, shrinking the customer base, and deepening energy poverty across South Africa. 	2026-09-27 10:22:05	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer	The cANCer under the leadership of Zuma decided to exploit Eskom and use it to extract wealth from all South Africans. He also stopped the Eskom rebate for adopting solar geysers. 20 Years later, that extractive exploitation is still being implemented. But it isn't bringing in the wealth the ANC has been accustomed to getting. They have abused (maybe even rapped) their customer base. Now they need a quick 'shower' and hope it will get rid of the crime they have committed. To get 'their' money back, they increase every other connection fee, license fee, service fee, admin fee, cANCer fee and VAT. Any way possible to keep the extractive system going and support their outdated ideology. The ANC has lost us as a customer. And now they will lose us as a voter.	Richard	business owner
	2026-09-27 10:23:03	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Totally unacceptable to have a fixed charge for electricity supply, and power fed back into the grid should receive a credit.	Alan	retired

	2026-09-27 10:26:00	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I am a pensioner and this could become unaffordable for me. I invested in solar years ago to prepare for my pension years and must now face penalties.	Billy	retired
	2026-09-27 10:26:19	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Prepaid Meter User	I strongly OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form. Paying South African households are consistently expected to foot the bill for systemic mismanagement, non-technical losses, municipal diversion, and power theft—all while being penalised for taking responsible steps to survive load shedding. My primary objections and demands for the policy include: Rejection of Mandatory Fixed Grid Fees & Standby Charges: Forcing households and small businesses that invested private funds in rooftop solar and energy efficiency into unavoidable, high monthly network/capacity fees destroys the incentive to conserve power. NERSA must place a strict statutory cap on fixed network charges so they cannot exceed 15%–20% of an average domestic bill, protecting low-to-middle-income families. Stop Penalising Solar Prosumers: Imposing double network charges (DUoS/TUoS) on exported clean energy while crediting power at minimal rates is effectively a tax on self-generation. Network charges on exported electricity must be removed entirely, and export credits should be eligible to offset total monthly municipal electricity accounts. End Cross-Subsidising Special Discounts: Law-paying consumers should not bear the financial burden for Negotiated Pricing Agreements (NPAs) given to commercial smelters or unfunded expansions of Free Basic Electricity. Any industrial discounts or social allocations must be funded directly by National Treasury, not loaded onto residential tariffs. Stop Passing Bad Debts & Theft to Paying Customers: Non-technical losses and uncollected debts must be excluded from allowed utility revenues. Utilities should be forced to improve operational efficiencies rather than treating paying consumers as an endless cash cow. The Department and NERSA must revise this policy to protect law-abiding, paying consumers rather than shifting the financial risk of grid management entirely onto households. The entire premise of this proposed law is absurd. It completely decouples the state's mismanagement from any and all consequences, Socialising Operational Failures while privatising extraction pipelines. Passing bad debt, non-technical losses (theft/illegal connections), and uncollected municipal bills directly into the allowed revenue calculations forces paying ratepayers to underwrite operational failures they have zero control over.	Anton	self-employed

	2026-09-27 10:37:31	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Prepaid Meter User	I wonder if government actually thinks through the policies, laws, amendments, acts et. al before implementing it. Surely, with the failing infrastructure that is Eskom and its constant load shedding, giving incentives to go solar, they would have realised, that this would impact the customer contributing base? Now, they have woken up and realised, that because everyone is becoming self-reliant their role in electricity generation is less relevant? Now, in order to continue to validate their reason to charge us and hold us hostage, they will now implement new laws to make us pay? Make no mistake, we are not a democracy, we are a communist country with the GNU being as useful as used toilet paper. There is no future and there is no hope.	Shane	employed individual

	2026-09-27 10:41:00	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant), Prepaid Meter User	It is high time that the ANC Goverment get the picture and start at themself to stop stealing from the people they pay their salaries for doing nothing for us but gallavanting over the world on holidays paid by us. This Eskom is disfunctional and should be run like a bussiness but will then probably fire more than half the people working there to start with. They are exactly like the Anc government that can only talk and steal and nothing for the people paying them.	Herkie	employed individual
	2026-09-27 10:41:14	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	It is deeply unfair and, in many respects, condemning to take away people's freedom to plan and manage their own finances by forcing fixed costs into their monthly cash flow. What happens when someone's income or cash flow suddenly falls away due to circumstances beyond their control? In a normal situation, people have the ability to adjust their spending according to their financial circumstances. If necessary, they can reduce or temporarily stop using non-essential services, including switching off their own electricity, or reduce water consumption, in order to save money and get through a difficult period. When that choice is taken away and people are forced to carry a fixed monthly cost regardless of their circumstances, it removes an important degree of financial freedom and flexibility. It effectively forces people to maintain an expense even when they can no longer comfortably afford it. People should have the ability to manage their own consumption and make responsible financial decisions according to their individual circumstances, rather than having those choices imposed upon them. 	2026-09-27 10:41:30	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer, Prepaid Meter User	It is ludicrous to expect the very people who have provided a solution for the load shedding crisis (ie the people/businesses who have installed solar) to now be penalised for incompetence and poor management.	Debbie	employed individual
	2026-09-27 10:41:41	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	I believe the EPP 2026 should ensure that tariffs remain fair, transparent and proportionate to actual grid usage. Fixed charges should not undermine the financial benefits of energy efficiency, solar investment and reduced electricity consumption. I request that the proposed policy be reconsidered and that appropriate protections or limits be introduced for households with solar and other distributed-generation systems, particularly where customers have significantly reduced their reliance on grid electricity. South Africa should encourage private investment in renewable energy rather than create tariff structures that discourage households from becoming more energy-independent. South Africa should go green with renewable energy sources and not "punish" private solar users with fixed costs to force them to use coal generated electricity.	Jean-Mare	employed individual

	2026-09-27 10:41:55	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I object heavily to this proposed new tariff scheme. We are already paying a lot for the electricity facilities that are provided by the city which frequently fail. The primary reasons I see for the utilities difficulty in being sustainable is due to poor management and will not be solved by throwing money at it. Fixes to infrastructure are done cutting corners; requiring the same fault to be repaired multiple times instead of fixing the fault once and having it solved. The cost recovery scheme for supplementing basic electricity to low income homes and enterprise is shouldering the burden on the wrong tax stream, our general taxes (income etc) supplement running the country and growing the economy therefore subsidising these items should come from those coffers and not from additional taxes on residents in good standing. This is amounts to tax abuse of captive residents, is unethical and will not improve any situation until the failings of the administration of the utilities are rectified. I thank you for your time in considering this objection.	Gavin	employed individual

						I went through the **actual 2026 Draft Revised Electricity Pricing Policy, the Electricity Regulation Act as amended, the Municipal Systems Act, the National Energy Regulator Act, the Constitution, PAJA and recent court judgments dealing with electricity tariffs and NERSA**. There is a solid legal basis for raising a formal concern, but I would change some of the wording you were given because a few claims go further than the law currently supports. ## First, this is not actually a new “Electricity Bill” The document currently before the public is the **Draft Revised Electricity Pricing Policy 2026**, published in Government Gazette 55257 on 28 August 2026. It is still a draft policy, not an Act of Parliament and not yet an electricity tariff imposed on households. The public-comment deadline has now been extended to **28 October 2026**. ([Government of South Africa][1]) That distinction matters legally. The Minister can establish national electricity-pricing policy, and municipalities are required under section 27(h) of the Electricity Regulation Act to carry out their electricity-reticulation functions in accordance with relevant national energy policies. But actual tariffs still have to pass through the statutory regulatory processes. ([Law Library][2]) The draft itself says NERSA must still develop and consult on the detailed national tariff framework after the policy comes into force. It proposes a 12-month period for that framework and a phased transition of up to five years for distribution-network charges. ([Government of South Africa][1]) So nobody should state that the Minister is already imposing these charges on every household. ## What the draft really does propose Your concern about fixed charges is grounded in the actual document. Policy Position 27 envisages distribution network charges based on capacity, including **R/kVA, R/kW/month or R/Amp/month**, rather than recovering all network costs through electricity consumed in kWh. ([Government of South Africa][1]) The draft then explicitly says: > “Network tariffs need to be reformed to move away from variable based charges (e.g. c/kWh)” and specifically refers to ensuring that customers with **PV self-generation** continue to bear network costs. Policy Position 30 requires a **minimum fixed network capacity charge**, with additional demand or consumption charges where appropriate. It says these principles would apply to small-power tariffs except subsidised lifeline tariffs. ([Government of South Africa][1]) Policy Position 15 separately proposes that the cost of generator standby services for **all customers, including customers with their own generators**, form part of wholesale prices. The document says that this would ultimately be carried through to retail customers. So the underlying concern is real. ## Is a mandatory fixed charge unconstitutional or illegal simply because no electricity is consumed? **No. That argument on its own would probably be too broad.** The Electricity Regulation Act expressly requires NERSA to enable an **efficient licensee** to recover the full cost of its licensed activity and allow a reasonable risk-related return. It also requires NERSA to avoid undue discrimination between customer categories. ([Law Library][2]) Similarly, section 74 of the Municipal Systems Act says consumers should **generally** pay in proportion to their use of a service, but it also says tariffs must reflect costs reasonably associated with providing that service, including capital, maintenance, administration and replacement costs, and must facilitate financial sustainability. ([Acts Online][3]) A recent Western Cape High Court judgment also recognised that a properly authorised fixed charge linked to the **availability of a municipal service and infrastructure** is not automatically unlawful simply because the customer does not consume the service at that moment. ([SAFLII][4]) That means I would **not** base your objection on: **“You cannot charge me if I did not consume electricity.”** The utilities have a legally recognisable counterargument: maintaining wires, substations, transformers, generation reserves and connection capacity costs money even where monthly consumption is low. There is, however, a much more substantial legal issue. ## The charge must represent actual, efficient and demonstrable costs This is where the proposed system becomes legally vulnerable if implemented badly. The Electricity Regulation Act does not say utilities are entitled to recover whatever amount they want. It specifically refers to the costs of an **efficient licensee**. The objects of the Act also require efficiency, protection of customers, universal access, energy efficiency, customer choice and a **fair balance** between consumers, licensees, investors and the public. ([Law Library][2]) The draft itself reinforces this. It says revenue recovery is **not guaranteed**, utilities must pursue operational efficiencies, and tariffs must be connected to the cost of serving customers. ([Government of South Africa][1]) Most importantly, Policy Positions 24, 25, 29 and 30 repeatedly require **Cost of Supply and Cost to Serve studies** and cost-causation principles before tariff structures and levels are determined. ([Government of South Africa][1]) That is not merely theoretical. In **Afriforum NPC v NERSA (2024)**, the High Court held that municipal electricity tariff approvals could not simply be based on generic benchmarks or assumptions. They had to be based on actual Cost of Supply studies. The court declared NERSA's alternative methodology unlawful and prohibited tariff increases that were not properly supported by such studies. ([SAFLII][5]) That gives your concern much sharper legal wording: **A mandatory fixed-capacity charge should not become a mechanism through which inefficient expenditure, excessive staffing, municipal revenue shortfalls, bad debt, electricity theft, under-maintenance, historic financial failures or unrelated municipal expenditure are simply transferred onto compliant customers.** In fact, remarkably, the draft policy itself partly agrees. It says non-technical losses and bad debts exceeding approved standards must be removed from the allowable revenue base rather than passed through into customer tariffs. ([Government of South Africa][1]) That should absolutely be included in your submission. ## The Municipal Systems Act creates another important legal test Section 74 creates several requirements that must exist together. Consumers must be treated equitably. What they pay should generally be proportionate to their use. Tariffs must reasonably reflect the cost of providing the service. Poor households must have access to basic services. Efficient use of resources and appropriate environmental objectives must be encouraged. Differentiation between customer categories cannot amount to unfair discrimination. ([Acts Online][3]) This does not prohibit fixed charges. But it does mean government cannot simply say: **“The network has fixed costs, therefore whatever fixed charge we determine is lawful.”** NERSA and municipalities would need to establish why the particular amount is reasonable, what costs it recovers, how those costs were calculated, why those costs are efficiently incurred, how different capacity categories were determined and why the resulting burden is equitable. The Supreme Court of Appeal has previously emphasised those section 74 principles, including equitable treatment, proportionality to use and reasonable connection between tariffs and actual costs. ([SAFLII][6]) ## The biggest household issue may actually be the group between “indigent” and wealthy The draft already provides some protection for qualifying low-income customers. Policy Position 51 proposes a lifeline tariff with **no fixed charge**, limited to qualifying customers with capacity of not more than 60 amps. ([Government of South Africa][1]) The legal and socioeconomic question is what happens to everybody immediately above that threshold. That includes pensioners who do not qualify as indigent, lower-middle-income families, households that use very little electricity, homeowners who invested in efficiency, and households that installed solar and batteries with their own money. A household consuming 100 kWh per month and another consuming 1,000 kWh could theoretically face the same capacity-related component if they reserve the same grid capacity. That is not automatically unlawful, but it makes **cost causation, affordability, differentiation and proportionality extremely important**. It would therefore be entirely reasonable in a public submission to require a proper affordability-impact assessment across income and consumption categories before NERSA approves such tariffs. The draft itself acknowledges that electricity affordability is a major socioeconomic problem. ([Government of South Africa][1]) ## Rooftop solar creates another legitimate legal question The draft quite deliberately seeks to prevent solar customers from reducing their contribution to fixed network costs simply by purchasing fewer kWh. It also proposes network charges relating to exported electricity and states that DUoS, embedded TUoS and retail charges would remain payable rather than simply being cancelled out by exported-energy credits. ([Government of South Africa][1]) Again, that is not automatically unlawful.		

	2026-09-27 10:45:50	No I do not	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	We cannot afford to live anymore, with these constant increases . Eskom say they have made billions. in profits. Stop the paying of high ranking officials. Its ridiculous what they earn. Our Infrastructure in our Area is always plagued with outages for hours or days at a time. Yet we still have to pay more. Why. Stop and fix the corruption. we don't have street lights that work. Its not on anymore. Please help and assist us your people in SA.	Lyn	retired
	2026-09-27 10:45:52	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	I do not support the Revised Electricity Pricing Policy in its current form. As a prepaid electricity consumer and an NPC providing 24-hour care to children, electricity costs are already placing significant pressure on us. We are considering investing our own money in solar to reduce our dependence on the grid, yet the proposed fixed, standby and network charges raise serious concerns about whether consumers will actually benefit from reducing their electricity consumption. I also question the fairness and transparency of cross-subsidies, discounted industrial tariffs, expanded free-basic-electricity costs and the removal of block tariffs. Who ultimately pays for these costs, and why should households and organisations that already struggle to pay be expected to carry an increasing share of them? If government wants consumers to invest in alternative generation and use electricity more efficiently, the tariff structure should not financially punish them for doing exactly that. I ask that the Department provide clear, transparent cost modelling showing who will pay, how much they will pay, and why these charges are fair.	Lu-Anne	Non-profit
	2026-09-27 10:45:59	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant), Prepaid Meter User	We are 3 retirees living no and .ostly niw below tbe breadline-how are wesupposed to survive healthy?	Joanita	retired

Get the money for your shortfall from the thieves who defrauded you of billions.	Ermi	retired
	2026-09-27 10:55:37	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Prepaid Meter User	I am mostly opposed to any article that sets a mandatory fixed charge per household. It will significantly infringe on the rights of citizens. 1. Those who decided to invest substantially in their own solar systems, will now be required to fund their own investment, as well as the electricity of those who decided to not invest in solar. In effect, such owners will deprived of the benefit (electricity savings) of their property (solar systems). 2. The change will deprive citizens of their freedom of choice. A family who wants to save on electricity to pay for other expenses, are in essence prohibit to do so. 3. On an ethical level, government should not be allowed to decide, for any single family: "You cannot use your electricity budget to buy food." 4. Even if the mandatory fee is somehow connected to income, government cannot possible know the personal circumstances of each family. They cannot know if the "median income"-family has a child with special needs, or 'n single parent who is struggling to make ends meet. The families are in a better position to determine their own needs and how much they are able to spend on electricity. Many of the changes (e.g. penalties on rooftop solar exports, the mandatory fixed charges) are aimed at improving the financial situation of an individual utility company, with the professed benefits to the public only a veil to provide legitimacy. The public should not be held responsible for the financial damages that fraud and corruption and poor management caused to the Power Utility. The rationality of creating this law under the guise of public benefit is questionable.	Johann	employed individual

	2026-09-27 11:03:35	No I do not	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Residential Ratepayer (Grid Reliant)	This new policy is once again putting all the strain onto the middle class consumer who religiously pay their bills, while cutting a huge break for big industrial users and IGNORING the main issue, which is theft of electricity. Multple BILLIONS of rands are owed to Eskom by municipalities who have not collected from their users and paid over to Eskom. According to an article published in Moneyweb on 21 September 2026, a total of R119 billion is owed to Eskom by municipalities. So why now are we facing mandatory electricity tariffs, irrespective of how much we use, when this enormous amount is still outstanding? The article states that this outstanding payment is the biggest threat to Eskom's finances. So, should the emphasis therefore not be on going after these defaulting municipalities instead of stressing the already-overstretched average householder who DOES pay their bills? The price of electricity has increased by over 900% above the rate of inflation since 2007. We CANNOT afford to pay any more! The emphasis needs to be collecting on outstanding debts from delinquent users before the PAYING consumer is once again expected to make up the shortfall.	Mark	
	2026-09-27 11:04:32	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	When Eskom had terrific supply problems resulting in load shedding we were encouraged to install solar power so much so I believe it was even subsidized. This was for the benefit of the country and to allow Eskom to get re-organized and re- structured. Now they seem to have things basically under control they want to penalize the very people that helped them out of a dire situation. This is completely unacceptable and should be opposed to the utmost extent!	IAN	retired

	2026-09-27 11:32:16	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	'Frugal, low-volume consumers can no longer lower their utility bills by conserving electricity, as fixed network fees create a high, unavoidable monthly billing floor.' The spinoff perpetuates at least two things: hopelessness in agency, rubbing shamefully against the right to dignity; and reducing awareness of non-renewable resources, thus promoting wastefulness and perpetuating unhelpful lifestyle habits. The other great disappointment is being forced to pay high costs for services with no after sales service. We demand to know how the infrastructure will be functioning adequately and furthermore we demand accountability by way of refunding, with penalties for inconvenience and loss of revenue caused, when systems are down as they are so often in this crumbling grid where the only consistent power is a pack of human bullies. The perspective of this pricing policy is entirely off. We have previous commitments as a country. These provide a framework for implementing changes desired or required. For example. In 2021 South Africa renewed its Climate Promise to the United Nations and, as all countries had to, recognised and set its own national climate action plan: ours is to reach net zero greenhouse gas emissions by 2050 with various milestones along the way quantified by metric tons of carbon dioxide equivalent (350-420 MtCO2e by 2030). Does the Revised Electricity Pricing Policy of the South African Electricity Supply Industry align with our commitment to reduce emissions? What we see is the discouragement and reduction of the financial capacity to harness and share alternative energy. We see 'what's mine is mine and what's yours is also mine'. The sheer stinking arrogance of no supporting argument for any price increases having any kind of remote correlation to the necessity to move away from burning coal. The NDC Climate Action Plan was created in tune with an even bigger and closer commitment structure: Constitution of the Republic of South Africa, 1996 - Chapter 2: Bill of Rights. Quoted directly from the Bill: 10. Human dignity Everyone has inherent dignity and the right to have their dignity respected and protected. 24. Environment Everyone has the right	Mary-Jane	employed individual

This is a pure management issue, meaning the people in charge do not know how to manage what they are responsible for. Residential ratepayers CANNOT be expected to cover the cost for all indigents without any skills, illegal immigrants that undermine our economy, industry that does not pay taxes or anything the government messes up! This has come too far! Illegal immigrants must be sent home. No BEE nonsense - it does more harm than anything else and keeps racism alive. Municipalities must implement indigent labour categories so indigents can work for what they receive i.e. they must prove "work done" for tokens above 50kwH or any other benefit. Bring back conscription for non studying or non-working individuals, but in a form where conscripts learn a trade first and then start working on public infrastructure under supervision of capable instruction and management. Government's lack of management is unacceptable.	Adrian	employed individual

	2026-09-27 11:37:23	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Prepaid Meter User	This will place a huge burden on the very people who tried to help South Africa by installing solar power (at great personal expense) during load-shedding times. Once this basic charge is implemented, Eskom will almost certainly increase it as another tax to gouge even more from South African ratepayers and taxpayers. It is also highly unfair that ratepayers be made to compensate for those who steal their electricity. Crime must NOT be seen to pay, but should rather be effectively PUNISHED.	Ingrid	self-employed

	2026-09-27 11:40:07	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	Subject: Public Comment on Revised Electricity Pricing Policy (EPP 2026) To Whom It May Concern, I hereby submit my individual comment on the Revised Electricity Pricing Policy (EPP 2026). As a household that has invested in rooftop solar for self-consumption, I do not export electricity back into the grid. My grid connection is used only as backup during rainy periods or when storage is depleted. Under the proposed framework, I will nevertheless be compelled to pay unavoidable fixed monthly capacity and network charges. This undermines the financial viability of my solar investment and penalizes responsible consumers who have reduced their reliance on Eskom. Key concerns: Fixed Charges: Mandatory baseline fees mean households cannot lower their bills in proportion to reduced consumption. This discourages private investment in renewable energy. Industrial Subsidies: Expanding Negotiated Pricing Agreements at below-cost tariffs (e.g., 62 c/kWh) for heavy industry shifts the burden onto ordinary households and small businesses. This is inequitable and unsustainable. Free Basic Electricity Expansion: Increasing allocations from 50 kWh to 300 kWh without expanding the R21bn grant envelope risks transferring billions in social costs onto paying consumers. Transparency: While I welcome the ban on hidden municipal surpluses and the requirement that tariffs reflect actual Cost of Supply, these gains are overshadowed by the punitive fixed charges on solar households. In summary, the policy as drafted will increase my monthly costs despite minimal reliance on Eskom, extend the payback period of my solar investment, and unfairly shift industrial and social subsidies onto ordinary consumers. I urge the Department to reconsider the mandatory fixed charges for solar households who do not export power, and to ensure that cost recovery mechanisms do not disproportionately burden small consumers. Yours faithfully, Willie van Heerden 0823243539	Willie	business owner

	2026-09-27 11:41:46	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	We are tired of paying for corrupt officials mismanagement of Eskom and everything else they touch. Run Eskom like a business, reduce employment costs and bonuses not deserved, ensure cost management and eradicate corruption within Eskom. Seek ways to work with those who have sort renewable energy as an alternative to pure reliance on Eskom instead of seeking ways to penalise them and make a quick buck off of them just because they have lost revenue due to their own greed and mismanagement of Eskom (loadshedding and massive price increases that are not sustainable are reasons people seek alternative solutions). Households are already so stretched and heavily taxed that this change will break the ordinary citizen and these citizens are the ones paying taxes and carrying this country. The government can't keep taking without something breaking.	Kerrin	
	2026-09-27 11:42:01	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	The few households that continue to pay for the entire country cannot sustain this much longer. Why does'nt the government clamp down on all the unpaying customers and illegal connections to the national grid, mostly in the informal settlements. If EVERYONE pays their share for the use of electricity, the tarrifs will be lower and more stable. Also , what about all the houses in the informal settlements that were fitted with solar geysers for free? They are also solar users, using solar to heat their water. And when its overcast and rainy, they also rely on the grid to then heat the water in that same solar geyser. So they are exactly the same as us gird tied solar owners. If the government persists with this ridiculous and downright thieving policy, I and many like myself will just add more batteries and panels and go completely off grid. Then, instead of the government receiving our fair share towards the countries national grid, they will receive ZERO revenue. Its time for SA to wake up. EVERY other country in the world rewards their citizens for going green. Actually paying them for exporting excess solar power back into the grid, lightening the load on the grid. This thieving government of ours, which by the way, I did not vote for, keeps penalising the few taxpayers to benefit the rest of the leeches in the country. 	2026-09-27 12:04:50	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	I am a solar user and pay at present R 571.55 for various charges plus R151.23 for 54 kwhs p. m. used from Eskom. Eskom is already ripping us off by making more money from extra charges and admin fees compared to consumption charges. Splitting generation, transmission and distribution makes it more complicated and costly. Eskom must employ additional staff (administration staff!). Unless Eskom stops corruption, replaces incompetent staff, theft on illegal connections, penalize solar users instead of cooperating and start recovering debit from users like municipalities this matter will never be resolved. The government does profit from higher tariffs by getting more VAT and is obviously not realizing the fact that high energy cost does effect the economy in a negative way.	UDO	retired
	2026-09-27 12:06:05	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Dear Heather If you thought the fight over electricity prices ended when load shedding paused, your monthly utility bill is about to face its biggest structural overhaul in nearly two decades. The Department of Electricity and Energy has officially gazetted the Revised Electricity Pricing Policy (EPP 2026). Following widespread public pressure, Minister Kgosientsho Ramokgopa has officially extended the public comment deadline to Wednesday, 28 October 2026. You must have your say. This policy completely dismantles South Africa's traditional tariff model. While the state claims it will create transparency and cost-reflectivity, the technical rules introduce major financial consequences for your home and business: 1. Mandatory Fixed Charges for All Homes: The policy shifts billing away from the electricity you actually use (c/kWh) toward mandatory monthly network and capacity connection fees. Even if you cut your consumption or install rooftop solar, you will face hefty baseline fees simply for being connected to the grid. 2. Penalties on Rooftop Solar Exports: If you have grid-tied solar, you will be forced onto Time-of-Use tariffs and made to pay network distribution charges on both the electricity you consume and the excess power you export into the grid. Worse, your export credits cannot be used to offset your fixed monthly network charges. 3. Discounted Industrial Deals Paid by Ratepayers: The state plans to expand below-cost Negotiated Pricing Agreements (NPAs) to industrial smelters. Energy experts warn that unless funded externally, paying households and small businesses will be forced to cover the revenue shortfall. 4. Who Pays for Expanded Free Electricity? The Minister wants to raise Free Basic Electricity from 50 kWh to up to 300 kWh per month without increasing the national grant budget—raising fears that paying consumers will absorb the cost directly on their bills. 5. An End to Hidden Municipal Surpluses: On a positive note, the policy cracks down on municipalities that use hidden electricity markups as slush funds and forbids utilities from passing on runaway theft and bad debts to paying consumers. 	2026-09-27 12:25:47	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	This type of legislation is moving SA just closer to the edge of a cliff. The Minister must rather start to pay attention to the townships and informal economy which "is between R1 trillion and R1.125 trillion" according to informal economy expert GG Alcock. How many of these residents/business owners pay for electricity? How many of these residents in informal settlements receive "free" electricity at the expense of law abiding tax payers? And there are examples of some of these business owners making R85k plus per month and still receive social grants and thus free electricity. The whole situation is absurd and speaks of very poor governance. In Zimbabwe every body, rich or poor, must pay for services used why not implementing the same policy here?	Manetta

	2026-09-27 12:37:23	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	I am writing to express my strong objection to the Revised Electricity Pricing Policy (EPP 2026) in its current form. My primary concern lies with the proposed mandatory fixed grid capacity fees, standby charges on solar and low-usage homes, and the punitive double network fees (DUoS) on solar prosumer exports. This policy effectively punishes the very citizens who stepped up to ease the burden on a struggling national grid. For years, Eskom was unable to provide a reliable electricity supply, leading to frequent and disruptive power outages. In response, many South Africans took the initiative to invest their own hard-earned money into solar energy systems. This was not a luxury; it was a necessity to keep our homes and businesses running when the government and the utility provider could not. By installing solar, we reduced our reliance on the grid, helping to alleviate the overall demand and mitigate the severity of load-shedding for everyone. Now, instead of being supported or incentivized for contributing to the solution, we are being penalized with additional fees and charges. It is profoundly unfair to expect citizens to pay for fixed capacity and standby charges when they have already paid out of pocket to secure their own electricity supply due to the state's failure to do so. These proposed fees act as a double tax on those who sought to solve a problem they did not create. The government should be encouraging the adoption of renewable energy at the household level, as it builds a more resilient and decentralized energy network. Instead, this policy discourages investment in solar and places an unjust financial burden on proactive citizens. I urge the Department of Electricity and Energy to reconsider these punitive measures against solar users and to amend the policy to support, rather than penalize, those who are investing in South Africa's energy security.	Johan	employed individual
	2026-09-27 12:37:42	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	I object against double taxing people who spent money on Solar due to Eskom´s inability to provide reliable electricity and manage a business. Responsible tax payers have been milked dry. I do not support any increase in electricity tariffs. Electricity prices must be reduced and there should be no additional charges. These additional charges are the cost of running a business and if you cannot run a business efficiently someone else should be running the business.Consumers should only pay for what they use. Imagine if everyone that provided a service charged you an availability fee even though you never used their service. Those that are not paying should be disconnected until they pay up.	Trevor

	2026-09-27 12:54:27	No I do not	Other		Residential Ratepayer (Grid Reliant)	There is only ONE solution to repairing South Africa's electricity supply: PRIVATISE ESKOM! BBBEE (Broad Based Black Economic Empowerment) being preferred over Merit Based appointments caused the collapse of ESKOM, and is responsible for the creation of the THRIVING AND MASSIVE MAFIA CORRUPTION NETWORK which captured the whole electricity supply chain. The thievery is also furthered by corrupt, incompetent Municipal workers. I also suspect NERSA to be another Bandit on the loose. This set of laws is way to intricate and complicated for the average employee to be applied successfully, even with the help of the computer! Please, hand over the keys so the builders of Eskom can fix it and normalise cost and supply of electricity. Those who broke Eskom, cannot fix it with any law or appointment of yet another body to try manage the electricity supply. There will never be enough money to feed the greed of the corrupt, incompetent BEE appointments, and the price to the consumer will continue to escalate. I am a pensioner. I switch my geyser on twice a week regardless of the season. I can not afford my municipal bill and I do not qualify as an indigent.	Carina	retired

	2026-09-27 13:19:20	No I do not	Double Network Fees (DUoS) on Solar Prosumer Exports		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer	Dear Minister Ramokgopa and Director-General For the attention of Mr Joseph Maraba I hereby submit my formal comments and strong objection to several aspects of the Revised Electricity Pricing Policy 2026. I recognise the need for a financially sustainable, reliable and properly maintained electricity system. However, financial sustainability cannot be achieved by continually transferring additional costs, inefficiencies and policy obligations onto already overburdened households and small businesses. South African consumers have endured years of steep electricity increases, unreliable supply and load shedding. Many households and businesses have responded by reducing consumption, improving energy efficiency and investing their own money in alternative energy and backup solutions. Consumers should not now be penalised through unavoidable fixed charges merely because they have reduced their electricity consumption while remaining connected to the grid. My principal objections and recommendations are as follows: Fixed network and capacity charges I object to compulsory fixed network and capacity charges that could leave consumers with substantial monthly bills regardless of how little electricity they use. Any fixed charge must be reasonable, independently justified by an audited cost-of-supply study and proportionate to the actual connection capacity and service provided. Consumers must be allowed to select a lower-capacity connection at a correspondingly lower charge. There should also be protection for low-consumption households, pensioners and small businesses that may not qualify for indigent or lifeline tariffs but still cannot afford substantial fixed monthly charges. Charges relating to private electricity generation and exports Consumers who generate electricity at their own cost reduce pressure on the national system and contribute to South Africa's energy security. The pricing structure should encourage responsible private generation rather than make it financially unattractive. Charging consumers network fees when they import electricity, further fees when they export surplus electricity, additional administration charges, and preventing export credits from offsetting other account charges could result in an unfair and punitive system. Any export-related charge must reflect the actual and demonstrable cost imposed on the network. Exported electricity must be credited at a fair and transparent rate that recognises its value to the system. Negotiated pricing agreements for large industrial users Ordinary households and small businesses should not be required to subsidise preferential electricity agreements granted to large industrial consumers. Where government considers an industrial subsidy necessary to protect employment or support a strategic industry, that subsidy should be transparently funded through the national budget or an appropriate industrial-support programme. Any agreement must be publicly accountable and must not result in higher tariffs for ordinary paying consumers. Funding of Free Basic Electricity I support properly targeted assistance for genuinely vulnerable and low-income households. However, the cost of this social policy must be funded through transparent government budget allocations, as contemplated in Policy Position 52, and not silently transferred to other electricity consumers through additional fixed charges or tariff increases. Beneficiaries must be properly identified, the programme must be audited, and municipalities must be held accountable for ensuring that the assistance reaches its intended recipients. Inefficiency, electricity theft and bad debt Law-abiding consumers who pay their accounts should not be made responsible for uncontrolled electricity theft, excessive distribution losses, poor municipal administration or bad debt beyond an independently approved and efficient standard. I support the policy principle that excessive losses and bad debt must be excluded from the approved revenue base. This protection must be strictly implemented and enforced, with transparent reporting and independent auditing. Affordability and public accountability Before this policy is finalised, the Department and NERSA should publish a comprehensive affordability assessment showing the likely monthly impact on different categories of households and small businesses. The public should be shown practical examples of expected bills for low-, medium- and high-consumption customers under the proposed tariff structures. No major structural change should be implemented without further meaningful public consultation on the actual tariffs and charges that consumers will be expected to pay. In conclusion, electricity is an essential service and not a luxury. A pricing policy may be technically cost-reflective while still being socially and economically unaffordable. Government must consider the cumulative burden already placed on households and small businesses by rising food, fuel, municipal, insurance and other living costs. I therefore respectfully request that the Department revise the proposed policy to ensure that: Fixed charges are reasonable, proportionate and subject to strong consumer protections. Consumers are not punished for reducing their electricity consumption. Privately funded electricity generation is encouraged rather than penalised. Exported electricity receives fair and transparent compensation. Industrial subsidies are not funded by households and small businesses. Social assistance is transparently funded through the national budget. Theft, inefficiency and excessive bad debt are not passed on to paying consumers. All tariff changes are supported by independent cost and affordability assessments. I request that my objections and recommendations be formally recorded and properly considered before the Revised Electricity Pricing Policy is finalised. Yours faithfully Johan Saunderson Residential consumer and small-business owner	Johan	self-employed

	2026-09-27 13:28:31	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	The South African power grid is only stable because of all the solar power being produced by the citizens of South Africa. it has been proven that if South Africa has to go completely 100 percent reliant on Eskom load shedding would return in a couple of seconds. But instead of trying to assist the South African citizens Escom tries to look for more ways to steal more money. at the end of the day there is no more money for them to steal they need to start fixing up the ridiculous amounts of corruptions that are happening at the facility but they will not do that. 	2026-09-27 13:28:34	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	If restructured, the total monthly electricity charge should not be more than the current monthly total paid for low and middle income homes otherwise this is simply a money making scheme that does not take into account citizens who are struggling to keep up financially.	T	employed individual
	2026-09-27 13:29:21	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I strongly object to a pricing model that continues to place an increasing burden on ordinary paying consumers while failing to address the underlying inefficiencies and structural problems within South Africa's electricity system. For years, consumers have carried the consequences of unreliable supply, escalating electricity prices, inefficiency, poor financial management, electricity theft and governance failures. There are two serious fairness issues. First, consumers who could afford to install solar and batteries have invested their own money to reduce their dependence on the grid and reduce demand on the national electricity system. They have effectively taken some of the burden off the grid. It is fundamentally unfair if they are now penalised through additional charges that undermine the benefit of that investment. Second, the majority of households cannot afford to make that investment. They remain completely dependent on the grid and have no alternative way of protecting themselves from continual electricity price increases. For ordinary households, these increases are becoming an unacceptable cost-of-living burden. Consumers are therefore being squeezed from both sides. Those who reduce their dependence on the grid risk being penalised, while those who cannot afford to reduce their dependence face ever-increasing costs. That cannot be a sustainable or fair electricity policy. Consumers should pay a fair and transparent price for the electricity and network services they receive. They should not be expected to continually absorb the consequences of inefficiency, waste, theft, poor management and historical failures within the electricity system. The solution must be to address those underlying costs, improve efficiency and accountability, and ensure that the burden is not simply transferred to the consumers who continue to pay their bills. The policy should therefore ensure that electricity remains affordable for ordinary households, that consumers who have invested privately in reducing demand are not disproportionately penalised, and that the legitimate costs of maintaining the grid are recovered fairly and transparently. South Africans have carried the burden of the electricity crisis for long enough. The answer cannot simply be to keep increasing the cost to consumers. The electricity system itself must become more efficient, accountable and financially sustainable.	Sharon	retired

	2026-09-27 13:40:15	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Small / Medium Business Owner (SMME)	These proposals are absolutely outrageous, as the intention is clearly to create an income stream for Escom to compensate for lost income due to solar installations. Consumers are now being penalised twice: First through Escom's inability to provide electricity reliably immense losses are suffered. Secondly, due to Escom's incompetence consumers are forced to provide their own electricity at great cost. Now, the state wants consumers who generate their own electricity to keep funding Escom? Whoever thought of this scheme needs to brought before the public protector and removed from public office.	Okkie	self-employed

	2026-09-27 13:47:00	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Prepaid Meter User	I'm honestly so tired of the way taxpayers and ratepayers are treated in this country. At some point, people are either going to push back or simply leave. Wake up! Maybe go back and read the old fable about the goose that laid the golden eggs. If you keep squeezing the same people for more and more, eventually there won't be anything left to squeeze. Be honest. Take responsibility. Stop expecting ordinary taxpayers and ratepayers to continually carry the cost of poor decisions, waste and corruption. We're no longer living like nomads, moving on whenever resources run out and simply looking for the next place to exploit. We've built businesses, homes, communities and lives here. We want to contribute — but there has to be a point where the people who are funding the system are treated with some respect. Keep taking without fixing the underlying problems and eventually it's going to come back to bite you. I'm just not sure whether anyone in charge actually cares enough to see it coming. 	2026-09-27 14:14:05	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer, Prepaid Meter User	By levying network charges on both energy imported and energy exported, the state effectively taxes private clean energy fed back into local communities. Prohibiting consumers from using export credits to offset fixed monthly network fees drastically erodes the financial return on private rooftop solar, disincentivising decarbonisation and pushing frustrated solar owners to defect from the grid entirely Demand the complete removal of DUoS and TUoS network charges on exported electricity (Policy Position 33(d)), recognising that embedded solar reduces local line losses and daytime substation loading. Insist that solar export credits be eligible to offset the total monthly municipal utility bill, including fixed network and customer service charges. Require fair, cost-reflective feed-in credit rates that reflect the true economic value of daytime peak/standard clean power injected into local distribution networks.	Barry	retired

	2026-09-27 14:17:59	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	NO! If they want more money, let them get it from the billions that have been stolen by the cares appearing at the Madlanga Commission, or sell that block of flats they built and which are still standing empty!!! This is directed at white people - I am SICK of the discrimination against white people. And of course the Minister couldn't give a damn because he doesn't pay for electricity! NO! Get your money Elsewhere, NOT from me!!!!	Denise	retired
	2026-09-27 14:19:41	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Prepaid Meter User	(Prepaid Meter User). To expect residents to continue to subsidise irresponsible management by Eskom and municipalities of the power generation and supply chain to consumers is neither moral nor fiscally sustainable. As its stands consumers are footing the bill for the well documented theft, improper tender process, capital wastage, rebuild and maintenance and heavily overpriced supply chain management. Eskom is simply expecting taxpayers to subsidies their multi-decade mismanagement and excessive salaries being paid to an ineffective bloated management scheme. Municipalities use prepaid electricity charges as a flexible credit line to support consumers that do not pay their way, steal electricity, and to cover holes in the municipal budget due to mismanagement. This situation resulted in consumers installing private power generation systems at their businesses and homes to counter the dismal state of both Eskom's inability to maintain consistent power supply as well as failing at municipal level to maintain their local electticy infrastructure. Many municipalities fail to pay over revenues generated via municipal prepaid electrical meters to Eskom which has resulted in power cuts and residents facing mounting electricity tariffs demanded by municipalities to cover Eskom debit and failed infrastructure. Eskom has no legal basis to demand consumers generating their own power have to pay a fee for doing so. Consumers will simply go the next step and separate the private power generation away from Eskom and municipality electrical network. Then Eskom will have zero legal means to demand infrastructure fees as private power generation will not touch their network – so doing Eskom and municipalities will lose out on further tariffs. No state entity can charge fees for private installed and use electricity if their electrical grid network on a national and local level has no connection to such a system. Eskom has a striking client base and simply wants to use its dominant position as the sole state electrical supplier to demand fees for items it has not sold nor maintains. To do so is simply corruption on another level. As it is, municipalities are inflating the cost of electricity to bolster their revenue streams to compensate for their overspending. If these demands continue – al that will happens is that it increases inflation and the cost of living – which will drive more consumers to disconnect from the state electrical grid and supply their own electricity. The poorest consumers will suffer the consequences of higher inflation.	Michael	retired
	2026-09-27 14:20:45	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	This is rediculous. Just another way of discrimination against the middle class and try to increase votes for the ANC in the election. Very well disguised, as usual.!!!	Susan

	2026-09-27 14:32:16	No I do not	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes		Residential Ratepayer (Grid Reliant)	I am absolutely against the new structure being out in place. There is no justification as to why the the price increase and the method in how it will be implemented. A large majority of the country do not pay for electricity or water and we the tax payer have to pick up the deficit. As a low income ratepayer, we carry the burden and will incur huge losses and legal repercussions due to no fault of our own as we bear the brunt to mismanagement. What will happen when the rates get so high and no one can pay? Businesses will close, more job losses and the economy will crash further. Those who are trying to lighten the burden by getting solar power are now being punished yet the are lightening the burden on an already overloaded grid and there are no improvements in sight. This needs to stop.	Karen	employed individual
