	2026-09-27 14:53:48	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant)	The goverment has failed in all espects anything their hands touches fails or colaps . They chased away millions of SA citizens the door is open use it. And now they have driven out big investments big companies and investors are leaving SA shores. So the only thing left to do is to tax your citizens and nothing is managed from within the departments. Corruption is your biggest issue and nothing gets done to those who steal or damage the grid. Cable theft goes without punishment. THis is just another quick fix Mr Minister of energy. I think it is time that the ruling party packup and hand over the country to its rightful SA citizens. You want us to pay for your incompotence to run SA power stations with a group of unskilled electrical engineers yet you charge even more than EU countries for electric power. First the goverment gives free power to some households and now want the rest of us to fund 300KwH to house holds that cant afford electric power. You the goverment have failed the very poor and now your failures you want the ordinary SA citizen to fund your bright ideas. Kindly go back to the drawing board and list everything you as a goverment have done to correct cable theft, those who delibrately break the convoyers and boilers in power stations to get tenders to repais a plant that they damaged themselves to line their pockets. Soon Mr minister of energy nobody will be able to afford keeping the lights on as you are over charging people for connections to the grid. Your big pool of tax payers who left South Africa has made a big dent in your income. And soon those who remain will not be able to afford electricity even if it is just to keep lights on. THose who invested in solar panles are now going to be charged to reconnect to the grid while this was a insentive for people to help the grid now people must be burdened with more bills. SA goverment you will bring South Africa to its knees and you will sing the same song apartheid while we all know it is your incompetance to govern. At the current rate Mr Minister of Engery I give you 3 years to close South Africa to the world. Simple because no lights will be on due to over charging of electricity to your citizens. Just like big companies in mining, vechicle production and smelters who left SA shores and looking for other investing markets in the world so to the ordinary South African citizen will need to relocate and find a country that they can afford basic things in life. South Africa's electricity prices are climbing much faster and higher then the salaries. Can you tell me who will be the pool of people that will be paying your monthly grid fees soon we will all be waiting for our share of 300kwh simple because we can no longer find ways to keep up with your quartly electricity price increases.	Craig	unemployed individual

	2026-09-27 14:55:15	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	There will come a point when government will not be to sustain their taxation on consumers without alienating them and making them thinking long and hard whether it is worth it being off grid or worse still, whether it is worth staying in SA under these conditions. Upper middle and high income earners are the only one really supporting the SA economy, where government should make it more attractive for people to be here and create more jobs. The proposed tariffs are just another insult to one's intelligence. You would have imagined that these lucky enough to have solar panel relieved pressure on Eskom and help with baseload requirements. Instead of being thanked they are penalised. Few of the government's decisions make any financial sense and yet we are asked to pay and pay and pay until we no longer can.	Frederic	self-employed

	2026-09-27 15:32:16	No I do not	All of the above	Double Network Fees (DUoS) on Solar Prosumer Exports	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	Dear Mr Maraba, I am writing as a residential ratepayer to submit comment on the Draft Revised Electricity Pricing Policy (2026) ahead of the extended closing date of 28 October 2026. 1. Mandatory fixed network charges penalise self-sufficiency, not consumption I have invested a significant sum of my own money — not government or Eskom capital — in solar generation and off-grid water infrastructure, specifically because the state has been unable to guarantee reliable supply through years of load-shedding. This was a rational response to a public failure, undertaken at my own cost and risk. The policy's shift toward mandatory monthly network and capacity charges means that households like mine, who have already reduced our draw on the grid, will now be billed a substantial fixed fee regardless of usage. This does not reflect cost-causation; it reflects an attempt to recover Eskom and municipal revenue shortfalls from the very households whose actions eased pressure on the grid during its most difficult years. I ask that any fixed charge be proportionate to actual network capacity used, not a flat penalty for having a grid connection. 2. Time-of-Use tariffs and export charges discourage the exact behaviour the country needs Forcing grid-tied solar households onto Time-of-Use tariffs, and levying network distribution charges on exported power while denying export credits any offset against fixed charges, actively discourages private investment in generation capacity at a time when the national grid still needs it. Households that export surplus power are contributing supply, not just consuming it. Charging for that contribution without any corresponding credit is not cost-reflective pricing — it is a disincentive dressed up as one. I ask that export credits be permitted to offset fixed network charges, and that the methodology for valuing exported power be published and open to scrutiny. 3. Cross-subsidisation of industrial users should not fall on households The proposed expansion of below-cost Negotiated Pricing Agreements to industrial smelters, without a clearly ring-fenced funding source, risks shifting that cost onto paying households and small businesses. I ask that any NPA expansion be funded transparently and separately from residential tariff structures, with the funding mechanism disclosed in the final policy. 4. Free Basic Electricity expansion needs a funded mechanism I support in principle the goal of increasing Free Basic Electricity to indigent households from 50 kWh to up to 300 kWh per month. However, if this is not matched by an increase in the national grant budget, the cost will be absorbed by paying consumers through their tariffs. I ask that the funding source for this expansion be clarified and quantified before the policy is finalised, so that ratepayers are not left to fund it by default. 5. Support for ending hidden municipal surpluses I welcome the provisions that prevent municipalities from using electricity mark-ups as unaccounted-for revenue, and that stop utilities from passing the cost of theft and non-payment on to paying customers. This is a long overdue correction and should be retained and strengthened in the final policy. Conclusion I ask the Department to reconsider the structural elements of this policy that convert self-funded resilience into a liability, and to ensure that every cost-shifting mechanism in the final policy — fixed charges, export tariffs, NPA subsidies, and FBE expansion — is transparently costed and fairly apportioned, rather than defaulted onto the households who have already invested in solving problems the state itself has struggled to solve. 	2026-09-27 16:10:51	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Commercial / Industrial Power User	Fixed grid and admin charges collectively account for more than consumption charges on our residential and commercial accounts. Without stable national power we have been forced to adopt alternatives (solar and generator charges). This is a result of Eskom and Municipality's failing infrastructure, allowance for electricity theft, poor and negligent maintained, and an inability to manage utilities correctly. This lack of planning and mismanagement CANNOT be passed onto consumers. The tax payer is not responsible for Eskom's failure to manage it's infrastructure and demand. The simply truth is that the private sector will simply find alternatives to Eskom and Municipal supply if fixed costs are increased further. Cheaper electricity encourages growth in net consumers and consumption, leading to long term growth. Expensive and unreliable electricity drives consumers away and to seek alternatives.	Lee	business owner

	2026-09-27 16:15:59	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Electricity costs that consumes pay should be based primarily on usage, not mandatory fixed charges. Pay per usage makes consumers more careful about how they use electricity and discourages wasteful usage. High mandatory fixed charges discriminate against users who are careful about their electricity usages. Also, people who invested in solar to ease the burden of load shedding and assist Eskom by reducing demand that it could not meet during the years of load shedding should not now be punished for their investment by having to pay monthly fixed fees.	Andrew	self-employed

	2026-09-27 16:47:43	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	I strongly object to the proposed Revised Electricity Pricing Policy insofar as it may impose unfair, disproportionate or inadequately justified charges on electricity consumers, particularly existing solar owners, low-income households, pensioners and small businesses. For years, South Africans endured load-shedding and unreliable electricity supply. In response, many households and businesses invested substantial personal funds, savings or borrowed money in solar panels, inverters and batteries to secure a reliable electricity supply. These consumers took financial responsibility for protecting their families, livelihoods and businesses. It is fundamentally unfair to penalise consumers for investing their own money to overcome prolonged electricity supply failures. The government should not undermine existing solar investments through disproportionate fixed or network charges that substantially reduce expected savings or extend the time required to recover installation costs. I recognise that maintaining the electricity network involves legitimate costs. However, charges must be transparent, proportionate and supported by evidence of actual costs and services provided. Reduced electricity sales alone should not justify additional charges intended to replace lost revenue. Solar owners who remain connected to the grid should contribute fairly to legitimate network costs, but should not be penalised merely for generating their own electricity. The policy must also protect ordinary consumers from unaffordable electricity bills. Fixed and capacity charges could disproportionately affect pensioners, low-income households and consumers who use little electricity. The Department must consider the combined effect of all charges, retain effective Free Basic Electricity and lifeline tariffs, and ensure that municipal tariffs do not result in unjustified or duplicated charges. Electricity infrastructure costs must be necessary, efficiently incurred, transparently calculated and fairly allocated. Consumers should not automatically bear the cost of inefficiencies, duplicated charges or unexplained expenditure. Before finalising the policy, the Department should publish a comprehensive impact assessment comparing the total electricity bills of solar and non-solar households, pensioners, low-income consumers and small businesses. It should explain the effects on existing solar investments, loan repayments, payback periods and future renewable-energy investment. I further request meaningful public consultation, clear billing information, effective complaint mechanisms and appropriate transitional protections for existing solar installations. Relief requested I call on the Department to: 1. Amend provisions that impose disproportionate or unjustified charges on solar owners. 2. Require evidence-based, transparent and fair allocation of network costs. 3. Protect existing solar investments through appropriate transitional arrangements. 4. Protect vulnerable households through effective lifeline tariffs and Free Basic Electricity. 5. Prevent excessive or duplicated charges by Eskom, municipalities and other distributors. 6. Publish comprehensive impact assessments before implementing material tariff changes. 7. Ensure that the policy encourages renewable-energy investment rather than discouraging consumers from becoming energy-independent. Conclusion: I support a financially sustainable and reliable electricity sector, but not at the expense of affordability, fairness and responsible private investment. Consumers who invested their own money in solar systems because of prolonged electricity supply failures should not now be financially punished for doing so. I therefore object to the proposed policy insofar as it may impose unfair or disproportionate burdens on consumers, and request that the relevant provisions be amended before the policy is finalised. 	2026-09-27 16:50:56	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Small / Medium Business Owner (SMME)	I wish to formally state my objection to the proposed Revised Electricity Pricing Policy 2026. As a small rural business owner, I am extremely concerned that the proposed tariff restructuring could increase fixed, network and other charges, making electricity more expensive even for businesses that actively reduce their consumption. Consumers who invest their own money in solar, batteries and energy efficiency should be rewarded for reducing their reliance on the grid, not effectively penalised through additional charges. Small businesses are already under significant financial pressure. Increasing electricity costs will ultimately affect business sustainability, employment and the cost of goods and services. I therefore request that the Department reconsider the proposed tariff structure and ensure that it does not disproportionately burden households, small businesses and rural enterprises. Consumers should have the freedom to reduce their dependence on the grid and benefit financially from doing so.	Francis	business owner

	2026-09-27 17:00:05	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	Once again, it is pathetic that one has to clarify why disagreeing with such a ludicrous policy needs to be explained. It begs the question as to the competence of those who formulate such policies. The bottom line is, once again, the (ANC led) government is looking for a way to punish the taxpayer in order to cover their blatant incompetence with their administration! Simply put, over the past few decades, it has been the (predominantly white), middle and upper class income groups, who have been able to afford their electricity bills, but who have also seen how they have been ripped off by local municipalities. Hence, they have rather invested in solar energy, borehole water and JoJo tanks. Resultantly, the municipalities have lost a large slice of their actual paying clients. Consequently, the municipalities have been experiencing a loss (which must negatively affect whatever there was for corrupt expenditure) and therefore, instead of attracting positive INVESTMENT into the system as a SOLUTION, they have rather chosen to just choke the lifeblood out of the taxpayers! It doesn't take a rocket scientist to realise that this is a hole in the bucket type of thinking and that the solution is to firstly get the RIGHT PEOPLE into the job and secondly to get PRIVATE INVESTMENT into the system. Unfortunately, he latter won't happen without the former first.	Bruce	self-employed

	2026-09-27 17:55:30	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	During the 14 year load shedding period, many residences and business were forced to invest in power generation capacity, as the monopolistic supplier was not able to meet demand with a shrinking supply. In many cases, this was capital spent out of necessity to stay in business. This has largely contributed to monopolistic supplier to stabilise the supply and operate to match the lower demand. This also has lowered the base of paying customers. Now the utility is seeking legislation as way to increase their revenue base, and find additional revenue streams to cover their financial position resulting from mismanagement and large scale theft. The supplier needs to recover their outstanding debts from government entities and improve financial controls, to improve their balance sheet. They also need to realise that their customers base consists of high percentage of low and non payers and restructure their operations accordingly. I do not seem the supplier taking prudent measures to make their structural adjustments and are resorting to law making. Which is a easy and punative way to try to rectify their past wrong doings. PUBLIC COMMENT: REVISED ELECTRICITY PRICING POLICY 2026

To: The Director-General, Department of Electricity and Energy
Attention: Mr Joseph Maraba
Email: EPP.Comments@dee.gov.za

Subject: Objection to aspects of the Revised Electricity Pricing Policy 2026

Dear Sir/Madam,

I am writing to formally record my objection to aspects of the proposed Revised Electricity Pricing Policy (EPP) 2026, particularly where the proposed tariff structure could place an additional financial burden on ordinary households, small businesses and consumers who are already struggling with the rising cost of living.

I understand that South Africa's electricity sector needs reform and that the Government is seeking greater transparency, cost-reflective tariffs and a financially sustainable electricity system. However, reform must not result in ordinary consumers carrying an unfair proportion of the financial burden created by systemic problems within the electricity sector.

1. Fixed charges must not punish households for reducing electricity consumption

I strongly object to any tariff structure that shifts a substantial portion of electricity costs from consumption-based charges onto mandatory fixed network or capacity charges.

A household that makes an effort to reduce its electricity consumption should see a meaningful financial benefit from doing so.

If consumers are required to pay substantial fixed charges simply because they remain connected to the electricity grid, regardless of how little electricity they consume, this undermines the incentive to conserve electricity.

It also disproportionately affects households with limited and irregular incomes.

The policy should therefore ensure that fixed charges remain reasonable, transparent and proportionate, with appropriate protection for low-consumption households.

2. Rooftop solar consumers should not be financially penalised

South Africa should be encouraging households and businesses to invest in alternative electricity generation where this reduces pressure on the national electricity system.

Consumers who invest their own money in solar installations do so partly to reduce their dependence on the grid and electricity costs.

I therefore object to tariff arrangements that could result in solar consumers being subjected to substantial additional charges merely because they generate electricity themselves or export surplus electricity to the grid.

If a consumer supplies electricity to the grid, the policy should establish a transparent and economically fair mechanism for compensating that consumer while also transparently accounting for legitimate network costs.

Consumers should not effectively be charged twice for participating in a system that can contribute electricity to the grid.

3. Industrial electricity agreements must not result in ordinary consumers subsidising large users

I am concerned about the proposed use of negotiated pricing arrangements for distressed or strategic industries.

Government has stated that negotiated pricing arrangements may be used in support of distressed industries and national industrial objectives.

However, any arrangement that provides electricity below its economically appropriate cost must clearly identify who carries the resulting financial burden.

Ordinary households and small businesses should not unknowingly subsidise preferential electricity arrangements for large industrial consumers through higher tariffs.

If government believes that a particular industry requires financial support for strategic economic reasons, that support should be transparent and subject to proper parliamentary and budgetary scrutiny rather than being hidden within electricity tariffs paid by other consumers.

4. Free Basic Electricity must be funded transparently

I support protecting vulnerable households and ensuring that poor South Africans have access to a basic amount of electricity.

However, increasing the amount of Free Basic Electricity without clearly identifying the funding source creates a serious concern.

The policy should clearly explain:

- who will fund any increase in Free Basic Electricity;
- whether the National Treasury will provide additional funding;
- whether municipalities will receive additional funding;
- whether paying electricity consumers will indirectly finance the increase; and
- what safeguards will prevent the cost from being transferred disproportionately onto households that are already paying their bills.

Social protection is important, but it should not be implemented through an opaque redistribution of costs onto other electricity consumers.

5. Electricity theft and municipal financial mismanagement must not be recovered from compliant consumers

I welcome the stated intention to prevent electricity theft, bad debts and inappropriate municipal mark-ups from simply being passed on to consumers who pay their accounts.

This principle should be strengthened.

Consumers who consistently pay their electricity bills should not be expected to compensate for:

- electricity theft;
- illegal connections;
- poor debt collection;
- municipal mismanagement;
- corruption;
- inefficient administration; or
- uncontrolled technical and commercial losses.

Government and municipalities must take responsibility for recovering losses caused by criminality, negligence and poor financial management.

6. Affordability must carry equal weight with cost recovery

The Government's own explanation of the revised policy recognises affordability and the protection of vulnerable and low-income consumers as policy objectives.

I therefore request that affordability is not treated as a secondary consideration to cost recovery.

Electricity is an essential service. Increases in household electricity costs affect much more than the electricity bill itself. They increase the financial pressure on families and can contribute to higher costs for food, transport, education and other necessities.

A tariff structure can be technically "cost reflective" while still being unaffordable for ordinary South Africans.

The policy must therefore include meaningful affordability protections and not simply assume that consumers can absorb whatever costs arise from restructuring the electricity sector.

7. Greater transparency is essential

Before any new tariff structure is implemented, consumers should be able to understand exactly what they are paying for.

I request that Government publish clear examples showing how the proposed policy would affect:

1. a low-income household;
2. a household using very little electricity;
3. an average residential household;
4. a household with rooftop solar;
5. a household that exports electricity to the grid;
6. a small business; and
7. a large industrial consumer.

These examples should show the total monthly cost under the existing system compared with the proposed system, including all fixed charges, network charges, capacity charges, energy charges, time-of-use charges, export charges and credits.

Without this information, ordinary consumers cannot properly assess the real financial consequences of the proposed policy.

8. Consumers must not be discouraged from becoming more energy efficient

South Africa should be encouraging responsible electricity consumption.

A consumer who installs solar panels, uses energy-efficient appliances, reduces consumption or shifts usage away from peak periods should have a reasonable opportunity to reduce their electricity costs.

Tariff reform should preserve those incentives.

The policy should not create a situation where a household can substantially reduce its electricity consumption but sees little or no corresponding reduction in its total electricity bill because fixed charges have become the dominant component.

Conclusion

I support a reliable, financially sustainable and transparent electricity system for South Africa.

However, I do not support a tariff restructuring that transfers disproportionate costs onto ordinary households and small businesses, particularly those that are already making efforts to conserve electricity, pay their bills and invest in alternative generation.

	2026-09-27 19:20:57	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	These changes will result in many more people going completely off the grid. People who pay their bills are ones who will find the means to off the grid and the end result will be a loss in income not a gain. Increasing the free electricity threshold essentially means that once again people who do pay their bills will be forced to carry those costs. People with solar systems will simply add t their systems and add a back up in case of need rather than be blackmailed by these proposed new tariffs. I personally intend to go completely off the grid. It will also add to the number of people with skills that are wanted internationally leaving the country as they are tired of being penalised for living here. The brain drain will increase considerably. The numbers of non- South Africans who have lived in this country for many years and came because of their skills and the life style returning to their original country's has already increased considerably. 	2026-09-27 19:38:22	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form (Rejects mandatory fixed grid capacity fees and standby charges on solar and low-usage homes, punitive double network fees on solar exports, the elimination of stepped block tariffs for standard households, and the risk of retail consumers funding industrial smelter discounts or unfunded social expansions). Following years of bad operational, financial, and capacity management by the government and Eskom (through government overreach, interference), this policy seeks to recover additional revenue from an already small pool of over-taxed rate payers, who not only aided in Eskom's recovery by lessening the load on the demand through self-funded solar installations, but also lowered the country's carbon footprint by increasing our proportional renewable generation. Solar users are effectively being punished for being part of the solution (at their own cost). Furthermore, apart from the latter, solar users were in most part forced to become self-reliant in the face of years of unreliable electricity supply due to load-shedding. It is not sustainable for the government to continue shifting the burden of their responsibility to the minority of economically active and constructive rate-and tax-payers and private sector businesses. Instead, the government should look inward for recovery solutions and hold officials and SOE's accountable for poor performance and insufficient planning and management, while focussing on cost-savings as opposed to questionable tactics to increase electricity revenue to return Eskom to a viable sovereign power supply platform. 	2026-09-27 19:39:50	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Prepaid Meter User	Firstly, we have a government that has miserably FAILED its people and country - ofiicials who are corrupt, thieves, unscrupulous and morally bankrupt. They do not have the right to be in parliament. After more than 30 years they have been unable to maintain essential basic services, especially uninterrupted electricity supply. They are opening up companies under deflected names and awarding tenders to unskilled, unprofessional and incompetent individuals and/or 'companies', all for SELF-ENRICHMENT. A new law needs to be passed that any member of parliament or anyone who serves the country in a government capacity, and who engages in any form of unscrupulous and corrupt activity/ies must be jailed immediately without any form of salary suspension, but which salary payment must be stopped immediately. These thieves and corrupt officials need to be brought to book. This is what has happened at ESKOM, no wonder the electricity issue is in a crisis situation in this country. Furthermore, there should be NO fixed monthly electricity charge. What for? To fill the coffers of the thieving ministers again! The citizens should pay only for what they are receiving - at an absolutely affordable rate. As a pensioner myself, I am deriving zero benefit from the electricity tariff as well as rates and taxes. South Africa needs a new government who puts the country first before the selfish self! Enough of these unskilled politicians running our country. This includes the DA who are are promoting a different agenda in the Western Cape, to the financial detriment of their people.	Suren	retired

	2026-09-27 19:46:08	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Rooftop Solar / Prosumer	Once again, a new tax to compensate for incompetent ANC government and cadres. The price of electricity is a basic cost function of everything, especially industry, mines and manufacturing. Once again, our Communist government wants to tax the few productive taxpayers in the country in order to supply free services to the country unemployable populace, at the expenses of growth and jobs. They have destroyed SA economy and stolen all the institutions reserves. They are an embarrassment to their families, their communities and SA in general. They are an embarrassment to Africa and are the laughingstock of the world. They should be ashamed and should be pursued, prosecuted and imprisoned, and all forced to repay all the ill-gotten money by liquidating all their assets.	Graham	retired

	2026-09-27 19:50:01	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant)	I strongly object to the proposed Revised Electricity Pricing Policy (EPP 2026) and the introduction of additional fixed network and capacity charges for households. South African consumers are already burdened by some of the highest increases in electricity and municipal service costs seen in recent years. Household budgets have been pushed to their limits, and many families are struggling to cope with the rising cost of living. Continual increases in electricity and water charges have far outpaced wage growth, leaving ordinary citizens with less disposable income and reduced financial security. It is deeply concerning that consumers are being asked to absorb even more costs through mandatory fixed charges, regardless of their actual electricity consumption. This effectively penalises households that have invested in energy-efficiency measures and rooftop solar systems to reduce their dependence on the grid and manage their expenses responsibly. The root causes of financial pressures within the electricity sector should be addressed before additional costs are imposed on consumers. Years of mismanagement, poor planning, infrastructure neglect, electricity theft, and inefficient operations within state-owned entities and municipalities have significantly contributed to the current challenges. Furthermore, concerns remain regarding excessive administrative structures and non-productive positions within many public institutions, the costs of which are ultimately borne by taxpayers and paying customers. Consumers should not be expected to continually fund inefficiencies that are beyond their control. Any pricing policy should prioritise operational efficiency, accountability, and cost reduction within the electricity supply chain before introducing further financial burdens on households and small businesses. I therefore oppose the proposed tariff restructuring and urge the Department to reconsider policies that increase fixed charges on consumers. The focus should instead be on improving efficiency, reducing wasteful expenditure, tackling corruption and mismanagement, and ensuring that electricity remains affordable for ordinary South Africans. 	2026-09-27 20:12:51	No I do not	Other		Prepaid Meter User	A little historical perspective! The pre-ANC Eskom, 1980+- had a project called Agrelek, rolling out a massive electricity network to rural areas! My parents were recipients of this roll-out in KZN. The deal was quite simple, pay for the poles to connect to the Farm House, receive a Transformer on your property + voila - Electricity!, the fine print: You pay only for Electricity Consumed! The ANC Tripartite Alliance in 1996 reneged on this agreement, and started adding massive Administrative fees, Line Usage, Transformer fees, and Pole Usage fees etc. In my case in 2003, the total fees levied on my smallholding rose from R800.00 p/m to three years later approaching R1,500 p/m. And so died my Organic Farming dream, irrigation farm. The last figure (Circa 2022) is that the levy is over R4,500.00 p/m before consumption for anyone with an Eskom Transformer! This is particularly punitive to the farming community, with Agrelek powered bore-holes! A farmer I know cancelled 18 Transformers attached to the Eskom Grid, and reduced his monthly cashflow (outflow) by over R50,000.00 per month, another a dairy farm which produced 40,000 litres per day, stopped production and reverted to beef production! (A total of 40+ employees were made redundant!) This proposal is nothing new, all Min of Electricity and Energy is trying to legitimise "theft", by false pretences, paying for something that rural and farming communities have had to endure for decades! One last thing, NERSA, apparently accepts Eskom financial statements, and if I read their press releases, it does not refer to these ADMIN costs	anton	self-employed

	2026-09-27 20:43:29	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	1. A Punitive “Sun Tax” on Private Capital and Self-Reliance: When recurring load shedding crippled businesses and households, citizens invested tens of billions of Rands in private savings to install rooftop solar, inverters, and battery banks. Shifting electricity billing away from consumption (c/kWh) toward mandatory fixed monthly network and standby capacity charges (R/kVA, R/kW, or R/Amp/month) under Policy Positions 11(b), 15, 27, and 30 acts as an availability penalty. It erodes household investment returns, penalises energy conservation, extends solar payback periods by years, and locks low-volume consumers into high monthly billing floors regardless of how little electricity they consume. 2. Punitive Double-Charging and Restrictions on Solar Prosumers (Policy Position 33): The draft policy penalises grid-tied embedded generators who inject clean power into the network. Prosumers are forced onto mandatory Time-of-Use tariffs and made to pay standard Distribution Use of System (DUoS) and Transmission (TUoS) charges on both the electricity they import and the electricity they export. Furthermore, prohibiting solar owners from using clean export credits to offset fixed monthly network and retail service charges destroys the financial viability of feeding power back into the grid, actively incentivising frustrated solar owners to defect entirely. 3. Scrapping Stepped Block Tariffs (IBRs) Hits Middle-Class Families (Policy Position 38): Eliminating Inclining Block Rate (IBR) tariffs for standard domestic customers removes the traditional “pay-less-if-you-conserve” framework. Replacing stepped usage tiers with unbundled capacity fees, monthly service charges, and flat energy rates will trigger immediate bill shocks for low-to-middle-income ratepayers, pensioners on fixed incomes, and large multi-family households sharing a single meter who actively manage their consumption. 4. The Threat of Consumers Funding Industrial Smelter Discounts and Expanded Free Power: Expanding concessional Negotiated Pricing Agreements (NPAs)—granting heavy industrial smelters discounted electricity (historically around 62 c/kWh)—under Policy Position 54 creates a massive revenue gap. At the same time, proposals to expand Free Basic Electricity (FBE) from 50 kWh up to 200–300 kWh per month without an expanded National Treasury grant risk multi-billion-rand deficits. Opponents and energy analysts warn that if these industrial and social shortfalls are not strictly ring-fenced and funded via the national fiscus, the deficit will be loaded onto standard consumer tariffs. 5. Municipal Fiscal Shocks and Retaliatory Rates Hikes (Policy Position 47): Local councils rely on commercial electricity markups (often 15% to 35% above bulk Eskom tariffs) to cross-subsidise indigent households, sanitation, and municipal salaries. Eliminating non-transparent municipal surpluses without an alternative municipal funding model threatens local government solvency. This could prompt municipalities to counter revenue losses by introducing aggressive double-digit hikes on property rates, refuse, and water tariffs. 6. The “Cost-Reflective” Affordability Trap: Historically, the regulatory push toward “cost-reflective tariffs” in South Africa has been administrative shorthand for compounding above-inflation tariff hikes. Imposing rigid mathematical cost-of-supply formulas during a prolonged cost-of-living crisis risks accelerating grid defection among high-paying consumers, shrinking the customer base, and deepening energy poverty across South Africa. 	2026-09-27 20:51:24	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	The citizens are being punished for government failures in electrical generation and grid maintenance. I do not support paying hefty fees for being simply connected to the grid regardless of usage. Solar owners should be rewarded not penalized. Further provision of FREE basic electricity is being implemented at the expense of other citizens who are carrying the extra cost. This is unconstitutional.	Gerhardt	self-employed
	2026-09-27 20:51:56	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)		Marita	
	2026-09-27 20:52:23	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	I hereby submit a strong objection to the Revised Electricity Pricing Policy (EPP 2026) in its current form and call for its substantial revision before any implementation. The policy places an excessive emphasis on cost recovery from electricity consumers while failing to provide sufficient safeguards against the consequences of increasingly complex fixed, capacity, demand, network and other charges. This approach risks fundamentally undermining the very principles of affordability, transparency, predictability and equitable access that the policy claims to promote. It is particularly concerning that consumers who have invested their own capital in solar generation, batteries, energy efficiency and reduced grid dependence could nevertheless face increased fixed and network-related charges, thereby diminishing the financial benefit of responsible private investment and creating a potential disincentive for further investment in distributed energy resources. The policy itself acknowledges that certain capacity and standby charging structures can create excessive costs for low-load-factor customers, yet continues to provide for mechanisms that could produce precisely such outcomes. Consumers must not be used as the default mechanism for recovering inefficiencies, municipal revenue shortfalls, poor financial management, inadequate revenue collection or historical system costs. Of particular concern is the treatment of municipal electricity revenue, given the policy's own acknowledgement that electricity revenue is currently used by many municipalities to subsidise other municipal services and that hidden or non-transparent surpluses and overstated municipal charges exist. Before imposing additional financial burdens on electricity consumers, government and regulators should demonstrate that all existing costs are properly ring-fenced, transparently accounted for, independently justified and efficiently incurred. A policy that increases the proportion of unavoidable charges on consumers while simultaneously reducing the economic benefit of private generation risks penalising precisely those consumers who have taken steps to reduce their dependence on the electricity grid. The EPP must therefore be reconsidered from the perspective of the consumer as well as the utility and network operator. Any additional charge must be demonstrably necessary, objectively cost-reflective, transparently calculated, proportionate and subject to effective regulatory oversight. Most importantly, the policy must not create a situation in which households and businesses are effectively required to pay ever-increasing charges for a service they have deliberately reduced their reliance upon. I therefore formally call on the Department and NERSA to reject the EPP 2026 in its present form and undertake a substantive revision that places affordability, consumer protection, transparency, accountability, genuine cost efficiency and the continued economic viability of private investment in generation and energy efficiency at the centre of South Africa's electricity pricing framework.	Jean

	2026-09-27 21:05:06	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Small / Medium Business Owner (SMME)	Eskom is not supplying electricity anymore, they are renting out poles and transformers, and penalize/fine the user with other "fixed charges". Maybe all businesses should follow this model. Your grocery bill could be 25% of what you pay at the till, the rest is admin charge, rack and cooling systems, floor cleaning surcharge and a till availability charge. So even if you buy/get nothing, you still pay through your nose. It is amazing that such a large organisation can come up with such an unimaginative self-feeding scheme. Eskom is already one of the main reasons why small businesses battle to grow, battle to employ staff, battle to survive. They are extremely expensive, and this expense increases every year. What will be the outcome? Most likely, an irrelevant behemoth, ridiculed and shunned, that will slowly die as its pyramid scheme collapses. Other technologies and systems will outpace you, families will view you as a parasite, something to get rid off.	Ludwig	business owner
	2026-09-27 21:05:15	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Prepaid Meter User	We already have to subsidise schooling with private schooling to just get an education the rest of the world acknowledges, medical with private medical aid to have peace of mind in emergencies as state hospitals cannot provide that and undergo extra maintenance costs on our vehicles because roads aren't maintained. Business red tape increases costs and yet we are told to save more and be frugal. The state should apply that to their own budgets. They should learn to spend less on themselves and absorb those costs at utility level. You are penalising people for taking strain off a sub-standard network. What happens when alternative solutions become even cheaper and even more people get off the grid to avoid these high fees? Tax the rich, put measures in place to penalise high users not people trying to use less. They will lose even less. It feels like the state is intentionally trying to put a divide between itself and its people instead of working together. A thriving economy is one with a big middle class and our state penalises the middle class.	Kieron	self-employed

As citizens are already struggling as it is. Citizens will cut spending in other places or just not pay their municipal bills. Then what will you have? More people without jobs. As more companies will close their doors. Not smart.	Jackie	
	2026-09-27 21:48:52	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	When ESKOM had trouble supplying power, we installed solar at a cost of R200 000. We are not completely off-grid and still relying on ESKOM. When it suited ESKOM that customers get their own power when they were too incompetend to deliver a service, they were grateful that we saved them from a complete blackout. Now that they can handle the load, they want to punish the people who helped them. I grew up in a household where I was raised to save power. I raised my children in the same fashion. We really save power where we can - from our kettle, geysers, pool pumps, lights, not using tumble dryer, etc. so we really cannot use our electricity more efficient but we keep paying more. We are also annoyed that when we switched from fixed account to pre-paid, our expense increased by 25% without us changing our usage.	W	self-employed

	2026-09-27 22:30:23	No I do not	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Residential Ratepayer (Grid Reliant)	I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form (Rejects mandatory fixed grid capacity fees and standby charges on solar and low-usage homes, punitive double network fees on solar exports, the elimination of stepped block tariffs for standard households, and the risk of retail consumers funding industrial smelter discounts or unfunded social expansions). Local councils rely on commercial electricity markups (often 15% to 35% above bulk Eskom tariffs) to cross-subsidise indigent households, sanitation, and municipal salaries. Eliminating non-transparent municipal surpluses without an alternative municipal funding model threatens local government solvency. This could prompt municipalities to counter revenue losses by introducing aggressive double-digit hikes on property rates, refuse, and water tariffs. The Revised Electricity Pricing Policy (EPP 2026) in its current form compounds the problems of electricity usage and costs. It does not provide a viable solution to the energy crisis, exponential increases in the cost of living and shrinking economy.	SUE	business owner

	2026-09-27 22:35:33	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	I object to the proposed Revised Electricity Pricing Policy in my personal capacity as a residential electricity customer and owner of a compliant rooftop solar installation. While I accept that electricity tariffs must fairly recover the genuine costs of maintaining a reliable national and municipal electricity network, the policy should not disproportionately penalise households that have invested their own capital in solar generation, reduced their demand on the grid and made surplus electricity available for export. Fixed network charges should be transparent, demonstrably cost reflective and proportionate to the actual cost of providing grid access, and solar customers should receive fair value for electricity exported to the network. I also object to residential consumers being required, directly or indirectly, to subsidise preferential electricity arrangements for large industrial users or an expansion of Free Basic Electricity without transparent and appropriately funded mechanisms. Social support for vulnerable households is important, but its funding should be explicit, equitable and subject to proper public scrutiny rather than being obscured within electricity tariffs. I therefore request that the Department reconsider these aspects of the policy and ensure that the final framework encourages rather than discourages private investment in renewable energy, while allocating network and social costs transparently and fairly.	Marius	business owner
	2026-09-27 22:38:52	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	I think electricity charges should be linked to the inflation rate and we cannot be asked to pay for the past incompetence of management and or corruption. Eskom cannot keep relying on us to pay such exhorbitant prices and then still pay extra for God's sunshine to use solar power, which Eskom actually encouraged people to use.	Julie	retired
	2026-09-28 03:55:12	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	Rates and Taxes are artificial capitalist extractive mechanisms of extortion... Persons living in the same house same neighborhood taking care of their own family property for generations are penalized for their part in the stability of an area and the region. Tourism sector is attracted to stable regions and so is business, yet capitalist driven shortsighted employment of taxes for the resident ...not only decreases the spend in the local economy of that resident ...it also reduces the ability of that resident to maintain property that affects the stability and attraction of the region. The more sustainable mechanism of revenue generation would be to impose these taxes on the visitors and businesses benefiting from the stability of the region rather than penalizing the long term residents who are fundamentally creating the attraction to the region. Rates must not be charged, but rather fees based on services received .... availability of a service is not a service... subscription to the service must attract costs... grid tied service for electricity sewage and water must be a choice not an imposition... off grid is also an option... more sustainable for the region or cost centre as those that use it pay for it and maintenance is user driven...that is ...the more users there are, the more maintenance is needed, which is supported by and directly proportional to the revenue received from the users. And visa versa.	Erica	Non-profit

	2026-09-28 05:26:55	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer	We are already struggling with road issues, tourism is declining rapidly, we put solar as we needed for guests and to run a pump when water is cut off, we can’t be punished for that now. Putting back power into the grid is helping Eskom, don’t punish us	Catherine	business owner
	2026-09-28 05:27:27	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	This policy seems to specifically target the people who have spent their own hard-earned money to fix the unreliable Eskom electricity supply by installing their own solar power. I suspect that this is a substantial part of the actual paying customers, which are now paying Eskom much less every month due to their solar power, causing the state to panic. Now they simply want to force us to still pay the state the same as before even though we are largely using our own independent solar power supply. Unacceptable! Now they even have the audacity to also expand their "free" (WE are paying for it) electricity to throw their voter base a bone when they are suffering at the polls. This is complete absurdity! The only way to make this remotely acceptable is to provide a clear process for going off-grid (which they currently simply refuse, I tried) to rid ourselves of these thieving parasites.	Marnus	employed individual
	2026-09-28 05:28:14	No I do not	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Prepaid Meter User		Michael	retired

	2026-09-28 05:44:23	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Our electricity bills as residential households have been sabotaged by political parties for far too long now - example when EFF leader went around in their campaign previously to say that free land belongs to the man of this land - and we see since then that illegal LAND INVASIONS HAS SOARED beyond words throughout the nation and NO PLANS or restrictions were put on ALL land owners to be responsible for paying for their own water and electricity supply! So services are being taken freely from other paying customers through illegal connections which further damages all infrastructure and costs far more to repair and replace over time. A flat rate could and should have been placed and must be done even now, on every land owner, so that the city can recover their money and we can all enjoy our services as citizens of this nation! Owning land without paying for your services in the nation is not being a responsible citizen - unless EFF Leader and his party have to foot the BILL of all arrears in electricity and service delivery across the board for illegal land invasions which were caused by the his and their political campaign!	Jayshree	retired

This has quite clearly created the environment where even the electricity ministry needs to keep it up. Upping the basic FREE electricity means paying customers will pay and those stealing and misssusing the electricity grid without being held liable. There are so many stories of grant and government assistance MISSUSE that goes un punished. Sort this out and make everyone pay thier fair share, STOP STEALING and these kind of regulations won't be necessary. Even the government in the Western Cape, DA, will soon feel the voter pain for what they are busy doing.	Edwin	self-employed

	2026-09-28 06:20:19	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I am deeply concerned that South Africa's financial pressures are falling on an increasingly small group of taxpayers. Approximately 11% to 12% of the population pays personal income tax—around 7 million people out of roughly 63 million. As more people need support and taxpayers leave the country, I worry about how this system can remain sustainable. I do not earn enough to keep absorbing rising costs. The pressure feels overwhelming and unfair, and these concerns need to be taken seriously.	Helen	self-employed
	2026-09-28 06:20:44	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)		Debbie	retired
	2026-09-28 06:20:54	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	I think making people pay extra for solar is incredibly short sighted. Not only does South Africa not have enough electricity to power the whole country but the way we produce electricity is very bad for the environment. Most countries are trying to incentivize solar by buying electricity back from people. Here in South Africa we're actually penalizing people for it!	Cheryl	self-employed
	2026-09-28 06:21:17	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)		Stacey	employed individual

	2026-09-28 06:26:27	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	We are already paying way too much for electricity a month. We cant continue like this and then onky certain people get everything thing for free!	Leana	employed individual
	2026-09-28 06:27:24	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Since load-shedding, electricity prices have increased hugely adding strain on my household. Bizarrely, I am charged a high "admin" fee for a prepaid box when this takes administration AWAY from the electricity provider and onto me. My household takes multiple actions to lower our electricity usage to manage the cost. Now plans are in store to raise these even more just for being attached to the grid? Is it not a basic human right to be attached to the grid in this day and age? Once again, the residents of this country, just trying to make ends meet, are the ones who have to bear the load. Charging those who have solar and can offer electricity to the grid is beyond foolish. I can't believe it needs to be explained. Surely, it is in all our best interests to encourage solar use? Surely, the more who use solar electricity is better for the system that struggles to generate enough, for the users who need more and for the planet in this day of serious global warming concerns? (The UN has recently claimed that we have crossed the line into being able to prevent the dire consequences of global warming and all we can do now is try to mitigate them). Surely, in a country with so many poor and low income households who will suffer the most from these effects, surely we should be doing everything in our power to encourage alternative energy solutions? These changes reek of draining money from already struggling households for nothing. I would like to add the comments below, shared by others, which I fully support and agree on: Mandatory Fixed Charges (Policy Positions 11, 27, 30) Functions as an arbitrary "sun tax" and availability penalty. Punishes energy efficiency and private capital invested to survive load shedding, extending solar payback periods. Prosumer Net-Billing Rules (Policy Position 33) Highly punitive: charging solar owners DUoS fees to export clean power while refusing to allow export credits to offset network fees creates an unviable investment model. Scrapping Inclining Block Tariffs (Policy Position 38) Removing IBRs in favour of flat energy rates plus heavy basic monthly connection fees will cause immediate sticker shock for low-to-middle-income ratepayers. Municipal Surcharge Ring-Fencing (Policy Position 47) Threatens local government fiscal collapse. If municipal electricity profits are stripped, councils will hike property rates or collapse basic community services. Industrial Smelter NPAs (Policy Position 54) If heavy industry receives electricity at 62 c/kWh (below cost), ordinary retail consumers and small businesses will be forced to shoulder the resulting revenue shortfall. Prepaid Vending Caps (Policy Position 45) Imposing tight commission caps without administrative support could cause independent retail vendors to shut down, stranding rural consumers without token access.	Laurine	employed individual

	2026-09-28 06:28:17	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Eskom, like all other SOEs has systematically destroyed itself and the ability to provide basic customer service and a viable product without ultimately always biting the hand that feeds it without remorse and wasting the funds on corruption. This is yet another blatant attempt to extort more money from the already overburdened consumer. If a solar system or any back up system is legal and compliant and can contribute to the grid we should be rewarded not punished after the years of grid failure we still had to pay for. So NO!! 	2026-09-28 06:51:09	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	PUBLIC COMMENT ON THE REVISED ELECTRICITY PRICING POLICY 2026 I am deeply concerned and frankly appalled by several of the proposals contained in the Revised Electricity Pricing Policy 2026. South African households have already endured years of escalating electricity costs, load shedding, unreliable municipal services and the enormous expense of finding alternative ways to keep their homes powered. Many responsible homeowners have invested substantial amounts of their own money in solar systems and batteries precisely to reduce their dependence on the national grid and to take pressure off the electricity system. It is therefore extremely concerning that the proposed tariff structure could penalise consumers who have invested in reducing their electricity consumption. 1. Fixed charges for connected households Introducing substantial fixed network and capacity charges regardless of how much electricity a household actually consumes risks making electricity considerably more expensive for ordinary families. Consumers should not be financially punished for using less electricity. If a household has invested in solar, batteries and energy-efficient appliances and consequently draws very little electricity from the grid, it is difficult to understand why that household should face substantial fixed charges simply because it remains connected. 2. Rooftop solar and electricity exports South Africa should be encouraging private investment in renewable energy, not creating financial disincentives for it. Homeowners who have invested their own money in solar generation are contributing to the country's energy resilience and reducing demand on the grid. Charging network-related costs on exported electricity, while preventing export credits from offsetting fixed charges, could significantly undermine the financial case for rooftop solar. This sends the wrong message to consumers: invest in reducing your reliance on the grid, but expect to be charged increasingly heavily for doing so. 3. Preferential electricity pricing for large industrial users I am also deeply concerned about the proposed expansion of negotiated pricing arrangements for distressed energy-intensive industries. If large industrial consumers receive electricity at preferential or below-cost rates, the public must be given a clear and transparent explanation of who ultimately carries the cost. Ordinary households and small businesses should not effectively subsidise large industrial consumers through higher electricity tariffs. Any such arrangements should be completely transparent, independently justified and demonstrably in the broader public interest. 4. Expansion of Free Basic Electricity I support the principle that vulnerable households should have access to essential electricity. However, expanding Free Basic Electricity substantially without clearly identifying the funding mechanism raises serious concerns about whether the financial burden will ultimately fall on other electricity consumers. The policy must clearly explain how this expansion will be funded and must ensure that the cost is not simply transferred to already hard-pressed households and small businesses through higher tariffs. 5. Accountability and municipal electricity revenue I welcome the proposed measures to improve transparency around municipal electricity tariffs and prevent inefficient municipalities from recovering theft, bad debt and other losses from consumers who pay their accounts. However, these principles should be applied consistently. Consumers who pay their bills, invest in alternative energy and use electricity responsibly should not continually be treated as the easiest source of additional revenue. South Africans need an electricity pricing system that is fair, transparent, predictable and sustainable. The Government's own stated objectives include affordability, transparency, non-discrimination and the protection of vulnerable consumers. (Department of Economic Development	Marika	retired
	2026-09-28 06:51:41	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	As a pensioner every new development in electricity is hitting us in our pockets	Cecil	retired

	2026-09-28 06:52:46	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Municipal Official / Engineer	I object to the EPP 2026 because it unfairly shifts financial burdens onto everyday consumers and those trying to reduce their grid reliance. Introducing mandatory fixed capacity fees and standby charges punishes low-usage households and solar owners. Furthermore, scrapping the stepped tariff system and forcing ordinary ratepayers to cross-subsidize industrial discounts, municipal inefficiencies, and electricity theft is fundamentally unjust. This is especially insulting given the catastrophic instability and systemic failures of the South African grid, which are driven by severe municipal mismanagement rather than consumers. A glaring example is the current infrastructure crisis in Nelson Mandela Bay (Port Elizabeth), which has suffered multiple high-voltage pylon collapses. These failures were not sudden accidents, but the result of severe rust, corrosion, and neglected maintenance. Despite a decade of internal warnings and a damning NERSA audit highlighting the deteriorating infrastructure, the municipality allowed these pylons to physically crumble, which left Port Elizabeth without power and water for over 2 weeks. Expecting ratepayers to pay mandatory "grid availability" and fixed capacity fees for an unstable grid that literally cannot stand up under its own weight due entirely to the government's own failure to maintain it is completely unacceptable. We should not be taxed to fund the ongoing collapse of municipal infrastructure.	Daniel	employed individual

	2026-09-28 07:06:40	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	I do not believe it is necessary to elaborate on the current state of Eskom and many other state-owned entities. The challenges facing these institutions are well known, and their consequences are being felt throughout the country. Electricity is fundamental to almost every aspect of modern life. It enables people to work, businesses to operate, employees to earn an income and families to survive. For many South Africans, the cost of living is already becoming increasingly difficult to manage. Now, we are being asked to absorb further increases in electricity costs to help address problems that are, in large part, the result of years of mismanagement, poor governance and corruption. For small and medium-sized businesses, these additional costs are not simply another line on a balance sheet. They can determine whether a business survives. Higher operating costs put enormous pressure on businesses that are already struggling to remain viable, and some will inevitably be forced to close. The impact is even greater for the thousands of people who operate small businesses from their homes, often earning only enough to support themselves and their families. For them, every additional expense reduces an already limited income. I am aware of numerous small businesses that are struggling or have already closed, with employees consequently losing their jobs because the cost of operating has become unsustainable. And ultimately, who bears the cost? Ordinary South Africans — including the very people who were promised that these problems would be addressed and that their lives would improve. South Africa has enormous potential. We have natural resources, talented people, established industries and an economy capable of producing far more. The fundamental question is whether we can create an environment in which those resources are managed responsibly and businesses are allowed to grow. South Africans should not continually be expected to pay more to compensate for failures in governance. What is needed is decisive action against corruption, waste, mismanagement and the misuse of public resources. If the money that is currently lost through corruption and inefficiency were instead used to strengthen the country and its infrastructure, the economic benefits could be substantial — creating businesses, jobs and a stronger tax base. The consequences of allowing costs to continue rising while businesses struggle are not theoretical. They are visible in businesses closing, jobs disappearing and people finding it increasingly difficult to make ends meet. The question we should be asking is not simply how much more ordinary South Africans can afford to pay. It is how much longer the country can continue transferring the cost of poor governance onto the people and businesses that are trying to keep the economy running. I hear Coke wants to pull out of SA, is that true and ask yourself why?	Steve	self-employed

						I object strongly to several aspects of the proposed Revised Electricity Pricing Policy, particularly the increased reliance on mandatory fixed or base charges for residential electricity customers. For many South Africans, investing in rooftop solar, batteries and other energy-efficiency measures was not simply a lifestyle choice. It was a direct response to years of unreliable electricity supply, load shedding and rapidly increasing electricity prices. Households invested substantial amounts of their own after-tax income to reduce their dependence on the electricity grid because the existing electricity system could not provide the reliability they required. It is therefore fundamentally unfair to restructure tariffs in a way that significantly reduces the financial benefit of those investments. I accept that maintaining an electricity distribution network has a cost and that customers who remain connected to the grid should make a reasonable contribution toward that infrastructure. However, fixed charges should be proportionate, transparent and limited to the genuine cost of maintaining the customer's grid connection. They should not become a mechanism for recovering revenue that utilities lose because consumers have reduced their electricity consumption through solar generation or energy efficiency. Consumers should not effectively be penalised for doing exactly what government encouraged them to do during the electricity crisis: invest their own capital, reduce demand on the national grid and provide part of their own electricity supply. The proposed treatment of rooftop solar exports is also concerning. A household exporting surplus electricity into the grid is supplying energy that can be consumed elsewhere in the network. Any charges applied to such exports should therefore be demonstrably related to the actual cost imposed on the network and should not be structured in a way that discourages private generation. More broadly, electricity tariffs should preserve a meaningful link between consumption and cost. If an increasing proportion of a household's electricity bill consists of unavoidable fixed charges, consumers have progressively less financial incentive to conserve electricity, improve efficiency or invest in renewable generation. I am also concerned about any proposal under which compliant paying households and businesses could indirectly subsidise electricity theft, non-payment, expanded social programmes or preferential electricity arrangements for particular industrial users. Where government chooses to provide social support or strategic industrial subsidies, those costs should be transparent and funded through appropriate fiscal mechanisms rather than being progressively transferred to a shrinking pool of paying electricity customers. South Africa desperately needs additional private investment in electricity generation. Tariff policy should therefore encourage households and businesses to invest their own capital in solar generation, batteries and energy efficiency rather than create uncertainty about whether government or municipalities will subsequently redesign tariffs to recover the savings those consumers achieved. I therefore request that the final Electricity Pricing Policy: 1. Keep residential fixed charges reasonable and directly linked to the demonstrable cost of maintaining the customer's grid connection. 2. Avoid using fixed charges to compensate utilities for reduced electricity sales resulting from rooftop solar or energy efficiency. 3. Ensure that solar exports are compensated fairly and that network charges applied to exports reflect genuine incremental network costs. 4. Preserve meaningful financial incentives for households and businesses to invest in renewable energy, batteries and energy efficiency. 5. Prevent electricity theft, bad debt or unrelated municipal expenditure from being recovered disproportionately from compliant paying customers. 6. Ensure that social subsidies and preferential industrial pricing are transparent and, where they constitute government policy objectives, are appropriately funded rather than simply shifted onto other electricity users. South Africans who used their own after-tax money to reduce pressure on an unreliable electricity system should be regarded as part of the solution, not as a new revenue source to be targeted because they now purchase less electricity from the grid. A fair electricity pricing system should recover genuine network costs while continuing to reward efficiency, investment and responsible consumption.

	2026-09-28 07:13:38	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Small / Medium Business Owner (SMME)	This is so typical of a government used to manipulating the tax payers of this country and giving free services to millions who don't contribute to the economy at all. Once again they punish those who pay their taxes. The fact that we have solar and still pay our rates and taxes should tell them to leave us alone. They still get their income from our taxes.	Gary	self-employed
	2026-09-28 07:13:55	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	How evil can any anyone be, to force even higher tariffs on tax payers and allow Eskom and IPPs to make excessive profits as Eskom ramps down on supply due to it's own mismanagement and excessive increases that forced people to invest in solar. Investors in IPP electricity suppliers must not be allowed to get greedy for profits, and be allowed to fleece the public as much as possible. The working class and pensioners are really struggling to pay their bills, and the economy for the middle class and SMMEs has been crippled through bad government policy. And, for the poorer people this subsidy cannot be funded by extracting more money from those who spent huge amounts of money on trying to assist government and bail out Eskom time and time again, and then still went further to install rooftop solar at the request of government, that government even incentivized. Now government wants to squeeze the last drops of blood out of the middle class entirely to give free electricity to those who are already stealing it, but then force the middle class to pay for it. Enough! All the corruption in the generation industry has to be dealt with by dealing with the corruption, not by making tax payers fund it. Change your disgusting policies and do your job of managing instead of extracting more from the middle class, because you are leaving them no choice but to make plans emigrate rather than work here to support this economy run by evil and greedy people who would rather support corruption than save the tax payer, and thus the country, from destruction. 	2026-09-28 07:20:33	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer, Prepaid Meter User	If you don't buy groceries, you don't pay for it and by logic no one can force you to. When you do not using grid electricity, why do you have to pay for it. There's a monopoly that is keen to force services unto the residents	Pieter	employed individual
	2026-09-28 07:20:37	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	To whom it may concern, On reading EPP 2026 and it's consequences, I: Demand that NERSA impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. Insist that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. Require utilities to absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers. Demand the complete removal of DUoS and TUoS network charges on exported electricity (Policy Position 33(d)), recognising that embedded solar reduces local line losses and daytime substation loading. Insist that solar export credits be eligible to offset the total monthly municipal utility bill, including fixed network and customer service charges. Require fair, cost-reflective feed-in credit rates that reflect the true economic value of daytime peak/standard clean power injected into local distribution networks. Demand that any revenue shortfall arising from Negotiated Pricing Agreements (NPAs) with private commercial smelters be funded exclusively via the fiscus (Department of Trade, Industry and Competition or National Treasury) and legally ring-fenced from standard consumer tariffs. Insist that any expansion of Free Basic Electricity (FBE) above 50 kWh be fully backed by the National Treasury Equitable Share grant before implementation, with an explicit ban on funding social allocations through municipal electricity surcharges. Require full public disclosure and annual audited reporting of all NPA discounts and inter-tariff subsidy transfers on consumer invoices (Policy Position 50(j)). Demand that NERSA retain an energy-conservation tariff tier for non-indigent, low-to-middle-income consumers that does not penalise modest energy usage with large monthly service fees. Insist that the migration from IBRs to unbundled domestic tariffs be phased in gradually over a minimum of five years, with mandatory local affordability impact assessments. Require that smart metering infrastructure and Time-of-Use domestic options be provided without upfront capital cost penalties to the end-user. Demand that NERSA automatically reject any municipal tariff application that is not supported by a fully audited, publicly accessible Cost of Supply (CoS) study (Policy Position 25(a)). Insist on the immediate statutory ring-fencing of all municipal electricity revenues into dedicated maintenance accounts, legally prohibiting councils from diverting electricity revenue to fund unrelated municipal wage bills or deficits. Demand that National Treasury set a hard, uniform percentage cap on the Municipal Surcharge on Electricity (MSOE) to prevent local councils from using surcharges to circumvent NERSA tariff controls. Demand that NERSA immediately enforce Policy Position 43(b) by clawing back and disallowing any tariff requests where municipal distribution losses exceed national regulatory standards (typically 7%–10%). Insist that paying consumers be legally shielded from funding municipal arrears and Eskom debt defaults through local tariff markups or surcharge adjustments. Require licensees to implement strict, automated tamper detection, independent metering audits, and universal prepaid infrastructure in non-paying areas before requesting any tariff increases from compliant ratepayers. 	2026-09-28 07:38:43	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Prepaid Meter User	I wish to formally object to the proposed changes to the electricity pricing structure contained in the Revised Electricity Pricing Policy 2026. I am particularly concerned that the proposed move towards higher fixed network and capacity charges could unfairly disadvantage residential consumers, especially households that actively reduce their electricity consumption through energy efficiency, solar generation and battery storage. Consumers who have invested their own money in solar and other energy-saving measures should not subsequently be financially penalised through substantial fixed charges or reduced benefits for electricity exported to the grid. I am also concerned that ordinary paying consumers could ultimately carry the cost of electricity theft, municipal inefficiencies, bad debt or preferential electricity pricing arrangements for certain industries. Any new tariff structure should ensure that consumers pay only their fair share of the genuine cost of providing electricity and should not result in households effectively subsidising inefficiency or other users. Before such significant changes are implemented, government should provide clear examples showing how the proposed tariff structure will affect households with different levels of consumption, including low-income households, pensioners, low-consumption households and households with solar and battery systems. I believe that affordability, fairness and incentives for energy efficiency and private investment in renewable energy must remain central to any new electricity pricing model	Pandelis	employed individual

	2026-09-28 07:40:08	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	I strongly object to this proposed new tariff structure which is just another new way to extort money for nothing out of ratepayers. Eskoms failings forced us to become self sufficient. Eskoms failings also force it to run extremely inefficiently through using diesel generators. These failings should not be passed on to the small pool of hard working ratepayers. Eskom needs to collect from non paying users	Gary	retired
	2026-09-28 07:40:20	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Living in Joburg, we already have to pay a monthly fee of water and electricity even if we get none. It's bullshit, and it needs to stop. Now sounds like they want to implement this further.	Roxane	
	2026-09-28 07:40:48	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Prepaid Meter User	I wish to lodge a strong objection to the proposed Revised Electricity Pricing Policy 2026. As a residential electricity consumer who pays my account and has made a conscious effort to reduce my electricity consumption, I find the proposed shift towards substantial fixed network and capacity charges deeply concerning and potentially unfair. I should not be penalised financially simply because I remain connected to the electricity grid, particularly if I have invested my own money in solar, batteries, energy-efficient appliances and other measures to reduce my reliance on the grid. It is fundamentally unfair if a household that uses less electricity is still required to carry a disproportionately high fixed cost, while consumers who place greater demands on the electricity system pay relatively less according to their actual consumption. I am also strongly opposed to the possibility that responsible, paying consumers could be required to carry the financial consequences of electricity theft, municipal mismanagement, bad debt or discounted electricity arrangements for large industrial users. These are not costs that should simply be transferred to households that pay their bills. If government wants consumers to invest in renewable energy and reduce pressure on the national grid, it should not introduce a tariff structure that undermines the financial benefit of doing exactly that. Before any changes are implemented, government should clearly demonstrate, with actual household examples, how the proposed tariff will affect different consumers and provide firm safeguards for low-consumption households, pensioners and households that have invested in solar and battery systems. I strongly believe that electricity pricing must be fair, transparent and based on genuine costs, and must not become a mechanism for shifting the financial burden of inefficiency and poor management onto ordinary South African households. I therefore strongly object to the proposed tariff structure in its current form and request that these concerns be properly considered and addressed before the policy is finalised.	Sue	employed individual
	2026-09-28 07:41:38	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	I am submitting this formal objection to the proposed tariff restructuring. A decade ago, no South African would have believed that monthly electricity bills would rival or exceed basic family medical aid contributions—yet that is the reality households face today. Most grid-tied solar owners have not installed systems to act as commercial power traders or make a profit from feed-in tariffs; we simply want to reduce our monthly bills and protect our families from unsustainable price hikes. Penalizing households through high fixed connection baseline charges and distribution fees on exported power punishes ordinary consumers for practicing energy efficiency. Furthermore, requiring bill-paying households to cross-subsidize industrial smelters and absorb unbudgeted social programs will only drive compliant ratepayers into financial distress. I support capping municipal markups and ending cost-passing for electricity theft, but I urge NERSA to reject mandatory fixed capacity fees and punitive solar export tariffs.	Omesh	employed individual

	2026-09-28 07:43:33	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Prepaid Meter User	The proposed tariffs will shift a huge burden on middel to lower income electricity consumers who now have to foot the bill for years of bad management, via fixed fees, and also pay for the extended free electricity grant. Taking from those who have little until there is nothing left. This bill will result in one thing, total collapse. The people with money and means will completely disconnect from the grid. Leaving less and less people to take up the ever increasing costs. Until no one can pay for electricity.	Michael	employed individual
	2026-09-28 07:43:39	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I Object to the Revised Electricity Pricing Policy, Why must I pay a fixed rate, when we are currently paying for what we consume. This is fair and is working well. I also object to any charge on Solar panels, that the consumer has purchased at THEIr EXPENSE, that is not affecting anyone else , Nature provides the energy and its GREED that Government in any form decides they should charge solar panel usage, People are forced to buy panels to avoid the high charges of electricity and now being penalized for it, its a crime! This is unsustainable. The government cannot continue on this trijectory. People who pay taxes and services cannot carry the masses that get it for free. Especially not when those masses increase continuously. The economy WILL crash. Everyone should pay for what they use.	Hannalie	

	2026-09-28 07:51:09	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	NERSA must impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. Insist that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. Require utilities to absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers. Completely remove of DUoS and TUoS network charges on exported electricity (Policy Position 33(d)), recognising that embedded solar reduces local line losses and daytime substation loading. Insist that solar export credits be eligible to offset the total monthly municipal utility bill, including fixed network and customer service charges. Require fair, cost-reflective feed-in credit rates that reflect the true economic value of daytime peak/standard clean power injected into local distribution networks. Demand that any revenue shortfall arising from Negotiated Pricing Agreements (NPAs) with private commercial smelters be funded exclusively via the fiscus (Department of Trade, Industry and Competition or National Treasury) and legally ring-fenced from standard consumer tariffs. Insist that any expansion of Free Basic Electricity (FBE) above 50 kWh be fully backed by the National Treasury Equitable Share grant before implementation, with an explicit ban on funding social allocations through municipal electricity surcharges. Require full public disclosure and annual audited reporting of all NPA discounts and inter-tariff subsidy transfers on consumer invoices (Policy Position 50(j)). Demand that NERSA retain an energy-conservation tariff tier for non-indigent, low-to-middle-income consumers that does not penalise modest energy usage with large monthly service fees. Insist that the migration from IBRs to unbundled domestic tariffs be phased in gradually over a minimum of five years, with mandatory local affordability impact assessments. Require that smart metering infrastructure and Time-of-Use domestic options be provided without upfront capital cost penalties to the end-user. Demand that NERSA automatically reject any municipal tariff application that is not supported by a fully audited, publicly accessible Cost of Supply (CoS) study (Policy Position 25(a)). Insist on the immediate statutory ring-fencing of all municipal electricity revenues into dedicated maintenance accounts, legally prohibiting councils from diverting electricity revenue to fund unrelated municipal wage bills or deficits. Demand that National Treasury set a hard, uniform percentage cap on the Municipal Surcharge on Electricity (MSOE) to prevent local councils from using surcharges to circumvent NERSA tariff controls. Demand that NERSA immediately enforce Policy Position 43(b) by clawing back and disallowing any tariff requests where municipal distribution losses exceed national regulatory standards (typically 7%–10%). Insist that paying consumers be legally shielded from funding municipal arrears and Eskom debt defaults through local tariff markups or surcharge adjustments. Require licensees to implement strict, automated tamper detection, independent metering audits, and universal prepaid infrastructure in non-paying areas before requesting any tariff increases from compliant ratepayers. 	2026-09-28 07:54:07	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	hat the Draft Policy Proposes: The policy shifts tariff design away from volumetric consumption (c/kWh) toward mandatory fixed network and capacity charges (R/kVA, R/kW, or R/Amp/month). To eliminate “volume risk” for distributors, utilities will bill customers for grid availability and network reservation regardless of whether electricity is consumed. In addition, Policy Position 15 introduces a universal generation standby charge applied at the wholesale level to recover the capital costs of keeping backup dispatchable generation on standby for grid-tied users. The Core Civic / Household Risk: Households and small businesses that invested private savings into rooftop solar, batteries, or energy-efficiency measures to survive load shedding will be hit with steep monthly fixed fees simply for remaining connected to the grid. Frugal, low-volume consumers can no longer lower their utility bills by conserving electricity, as fixed network fees create a high, unavoidable monthly billing floor. What to Demand in Your Public Submission (PAJA-Enforceable Points): Demand that NERSA impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. Insist that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. Require utilities to absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers.	Jan	employed individual

Alexander	employed individual
	2026-09-28 08:08:18	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Why This Electricity Pricing Policy Fails South Africa While the Department of Electricity and Energy frames the Revised Electricity Pricing Policy as a necessary modernisation, it prioritises market restructuring over consumer protection—ultimately harming ordinary South Africans. 1. Cost Impacts Will Worsen Household Bills The mandatory 5-year cost-reflectivity transition removes pricing subsidies and introduces new charges (fixed network fees, standby capacity surcharges). For households already burdened by load shedding and economic stagnation, this means higher monthly electricity bills. The policy does little to address why costs are inflated in the first place—systemic inefficiencies at Eskom and municipalities—instead passing these costs directly to consumers. 2. Solar Restrictions Block the Path Forward Policy Position 33's "strict rules for prosumers and rooftop solar" discourages households from investing in renewable energy. Just as South Africans are turning to solar to mitigate unreliable supply, the policy penalises this independence. It entrenches reliance on the grid when consumers should be empowered to generate their own power. 3. Vulnerable Consumers Get Left Behind The policy promises FBE expansion and protection against "bad debts," but doesn't prevent cost increases from hitting the poorest hardest. Unbundled tariffs are more complex and opaque—favouring large consumers and commercial entities who can navigate the new system. Meanwhile, vulnerable households face higher baseline tariffs even as token Free Basic Electricity allowances fail to keep pace with rising costs. Verdict: This policy serves market liberalisation, not people.	Brandon	employed individual

	2026-09-28 08:22:47	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	I oppose the proposed pricing policy, particularly the move towards higher mandatory fixed and network charges regardless of actual electricity consumption. Consumers who reduce their demand, invest in solar and lessen their reliance on the grid should not be penalised with ever-increasing fixed charges simply for remaining connected. This weakens the incentive to conserve electricity and invest in private generation. Electricity pricing should remain strongly linked to actual usage, with any fixed network charges reasonable, transparent and demonstrably based on the genuine cost of providing that connection. Households and small businesses should not be expected to carry an increasing share of costs created elsewhere in the system.	Bradley	self-employed

	2026-09-28 08:23:43	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	Eskom needs to pursue their non-payers - MANY Municipalities (my own Joburg one being probably the biggest) owe Eskom BILLIONS and if these debtors were ruthlessly pursued there would be zero need to further burden their heavily-billed (and regularly-PAYING) residential customers. Eskom must take back control of its debtors' book before tapping its long-suffering end-users for MORE money just because they're paying.	Ian	
	2026-09-28 08:24:00	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Prepaid Meter User	So if we move away from paying what you use i can use more electrcity because i am going to be paying a flat rate for network and capacity connection . They want to punish the solar people for taking pressure off the grid . They want to extort money out of people to line their pockets .i believe they are going to see it is not practical to charge people a flat rate for electric consumption. If we pay a flat rate , then why would we use electricity sparingly . We will be charge a flat rate , so can use as much as we want , not need . As for the solar charges , people will upgrade their solar systems , and then they can cut their line and loose those fees as well. The solar people pay for the power they consume, if they do connect to the grid, it is not like because they have solar the grid power they use is for free.. This plan has not been planned in a practical manner , it is more for maximum income than common sense	DEBBIE	employed individual

	2026-09-28 08:25:58	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I object to the Revised Electricity Pricing Policy in its current form. Electricity is not a luxury. In modern South Africa it is a basic necessity that enables households to cook, study, work, access information, and participate in the economy. While I support a sustainable and reliable electricity network, I do not support policies that appear to place an ever-increasing financial burden on ordinary citizens who are already facing rising costs of living, taxes, rates, fuel costs, and other utility charges. I am particularly concerned about the proposed fixed grid and standby charges for solar users. The sun is a natural resource freely available to all. Citizens who invest their own money in solar systems reduce pressure on the national grid, contribute to energy security, and support national sustainability goals. They should be encouraged, not penalised through additional charges that reduce the benefit of their investment. South Africans are repeatedly asked to carry the cost of inefficiencies, losses, and infrastructure challenges while receiving little relief in return. Consumers who pay their accounts and invest in alternative energy solutions should not be treated as a source of endless revenue. Any pricing policy should prioritise affordability, fairness, transparency, and access to electricity. The right to reliable energy must be balanced against financial sustainability without creating barriers that discourage innovation, self-generation, and responsible energy use. I therefore urge the Department to remove or significantly limit fixed charges on low-usage and solar households, protect consumers from unfair cost transfers, and ensure that electricity remains accessible and affordable for all South Africans.	Mduduzi	employed individual

						I am a law-abiding, rate-paying resident of CoCT. I pay my municipal rates. I pay for the services I receive. I pay my taxes. I have never stolen electricity, bypassed a meter or refused to pay an account. Three years ago, during the era of load-shedding, I made a substantial private investment in solar power. I did not do that because I wanted to become an electricity producer. I did it because I needed electricity. I spent my own money to reduce my dependence on a public electricity system that had become unreliable. I took the financial risk. I paid for the equipment, installation, maintenance and batteries. I accepted the capital cost because I needed a reliable supply and because reducing my consumption was supposed to be exactly what a sensible energy policy encouraged. Now I am being told that reducing my demand for electricity does not necessarily reduce what I will have to pay for electricity. That is a fundamental problem with this policy direction. The argument that the electricity network has fixed costs is perfectly legitimate. The grid does cost money to maintain, and consumers who remain connected should reasonably contribute to the cost of maintaining the network, but there is a very large difference between recovering legitimate network costs transparently and proportionately and creating a tariff structure in which the consumer who has invested thousands of rands of their own money to reduce grid consumption can be financially penalised for doing precisely that. If I consume less electricity because I invested in solar, my electricity bill should reflect that reduced consumption. If I export electricity into the grid, the value of that electricity should be transparently calculated and fairly compensated, and if the grid incurs genuine costs because I remain connected to it, those costs should be demonstrably calculated, transparently disclosed and proportionate to the service actually being provided. What should not happen is that ordinary homeowners are effectively told: You were encouraged to reduce your consumption. You did so at your own expense. Now that you have succeeded, we are changing the pricing structure so that your reduced consumption no longer provides the financial benefit you reasonably expected. That is not a small technical adjustment. It changes the economics of private investment in distributed generation. The Government itself describes the revised policy as being intended to establish transparent, efficient and cost-reflective tariffs, while protecting consumers and strengthening accountability. Then transparency has to work both ways. If households are expected to pay additional fixed network and capacity charges, Government and municipalities should be able to demonstrate precisely (1) what those charges cost to provide, (2) how they are calculated, (3) why the proposed amounts are reasonable, (4) how much of the cost is attributable to actual network usage, (5) how rooftop generation benefits or costs the network, (6) how exported electricity will be valued, and (6) why consumers who have already made substantial private investments should bear additional costs created by the restructuring of the tariff system. The same principle applies to industrial consumers. If Government chooses to subsidise strategically important industries through negotiated electricity pricing, that is a policy decision. But the cost of that decision should be transparent. It should not quietly become another burden carried by households and small businesses that are already struggling with stagnant incomes and rising food, fuel, insurance, municipal and other living costs. Likewise, expanding Free Basic Electricity may be an entirely legitimate social-policy objective, but Government's own policy framework says social support and cross-subsidies should be explicitly authorised and transparent. If the allocation is increased substantially, South Africans deserve to know who is paying for it. If the answer is the national fiscus, then show us the budget allocation. If the answer is electricity consumers, then show us the calculation. Do NOT simply move the cost around until it disappears into somebody else's electricity bill. There is, incidentally, one part of this policy direction that I welcome: municipalities should not be allowed to use opaque electricity mark-ups to subsidise unrelated municipal spending, and consumers should not simply be made responsible for unlimited theft, technical losses and bad debt. Those principles are entirely reasonable, but they should apply consistently. Cost-reflectivity must mean cost-reflectivity. Transparency must mean transparency. Accountability must mean accountability. Protecting vulnerable households cannot mean treating ordinary, compliant, rate-paying residents as an infinitely expandable source of revenue. I have not received a salary increase every time inflation increased. My grocery bill increased. My fuel bill increased. My insurance increased. My municipal costs increased. The cost of maintaining my home increased, to the point where my house has not been painted for the last eight years. Three years ago, I spent my own money on solar because I was trying to make my household more resilient and less dependent on a failing electricity supply. I should not now be financially punished because that investment worked. I am not asking for free electricity. I am asking for a rational, transparent and proportionate pricing system. I am asking that the rules not be changed retrospectively in a way that undermines the investment decisions households have already made, and I am asking Government to remember something rather important: The people paying these bills are not an abstract revenue stream. They are households. They are workers. They are pensioners. They are small-business owners. They are people whose salaries have not necessarily kept pace with the cost of living. We cannot tax our way out of every structural problem, and we certainly should not reach the point where a homeowner looks at the sun shining on their roof and wonders whether Government is going to find another way to charge them for that too. Please understand that I DO NOT oppose helping poor households. I DO NOT oppose maintaining the electricity grid, but a government that asks citizens to invest their own money, take their own risks and behave responsibly CANNOT reasonably punish them when they do exactly that.

	2026-09-28 08:35:27	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	While the policy is framed under the guise of modernization, transparency, and "cost-reflectivity," the technical rules shift a punishing financial burden onto everyday ratepayers to cover the systemic failures, inefficiency, and revenue shortfalls of state energy entities and dysfunctional municipalities. Electricity is an essential social and economic enabler—it must not be reduced to a revenue-generating mechanism to subsidize state management failures. I strongly object to the following specific structural mechanisms within the draft policy: Mandatory Fixed Charges for All Consumers: Decoupling tariffs from actual usage to force mandatory monthly network and connection charges penalizes responsible citizens. Under this model, households that actively conserve electricity or invest in energy efficiency will still face exorbitant baseline fees simply to remain connected. Fixed monthly capacity fees punish low-usage and middle-income households to guarantee utility revenue regardless of performance. Penalizing Private Rooftop Solar Investments: Households and small businesses spent their own capital to install solar systems to protect themselves from continuous load shedding and grid failure. Mandatory Time-of-Use tariffs, distribution fees on exported power, and prohibiting export credits from offsetting fixed network fees actively punish citizens who solved their own energy needs. This constitutes unfair double-taxation on private generation. Ratepayer-Funded Discounted Industrial Deals (NPAs):Expanding below-cost Negotiated Pricing Agreements (NPAs) to industrial smelters and growth sectors without guaranteed, non-ratepayer external funding directly forces paying households and small businesses to cross-subsidize big industry shortfalls. Paying consumers must not be made the financial buffer for corporate discounts. Unfunded Expansion of Free Basic Electricity (FBE):Attempting to increase FBE allocations without a proportional, guaranteed increase in the national grant budget creates an unfunded mandate that local distributors will inevitably pass on to paying consumers. Social safety nets must be fully funded from government revenue, not added as hidden levies on electricity bills. DEMANDS / PROPOSED ACTIONS: Reject Mandatory Fixed Grid Fees: Fixed baseline charges must be capped by law, and volumetric (per-kWh) pricing must remain the primary basis for standard residential tariffs. Fair Treatment for Solar (Prosumers): Allow full, fair bill-offsetting for power fed back into the grid without imposing punitive distribution charges on exports. No Ratepayer Cross-Subsidization for Industrial NPAs: Industrial discounts must be funded entirely from separate economic development budgets, not utility tariffs .Enforce Municipal Accountability First: Strictly prevent utilities from rolling non-technical losses, systemic power theft, bad municipal debts, or inflated municipal markup slush funds into consumer billing. I call on the Department to revise the EPP 2026 to prioritize affordability, fair public treatment, and utility accountability over guaranteed state revenue extraction.	Lorraine	self-employed

	2026-09-28 08:38:49	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	I hereby register my unequivocal objection to the proposed Revised Electricity Pricing Policy (EPP 2026). This policy represents a fundamental departure from the long-established principle that consumers should pay primarily for the electricity they use. Instead, it seeks to shift an ever-increasing portion of electricity costs onto mandatory fixed charges, regardless of actual consumption. Such an approach is neither fair, equitable, nor supportive of responsible energy usage. The proposed policy effectively punishes households and businesses that have invested significant personal capital in energy efficiency measures, rooftop solar installations, battery storage systems, and other initiatives specifically encouraged by government over the past decade. Consumers who have acted responsibly to reduce pressure on the national grid now face the prospect of being charged substantial fixed fees simply for remaining connected to the network. I am particularly concerned about the treatment of grid-tied solar customers. The proposal appears to undermine the very contribution these consumers make to South Africa's energy security. Citizens who generate clean electricity and export surplus energy back into the grid should be recognised as contributors to the national energy solution, not treated as a source of additional revenue extraction through network charges and restrictions on the application of export credits. Furthermore, the proposal creates a disturbing imbalance whereby ordinary households and small businesses may ultimately be required to subsidise below-cost electricity arrangements for selected large industrial users. Such cross-subsidisation raises serious concerns regarding fairness, transparency, and accountability. Paying consumers should not be expected to shoulder the financial consequences of preferential pricing agreements negotiated with major corporate entities. Equally troubling is the proposal to expand Free Basic Electricity allocations without a clearly identified and ring-fenced funding source. If government wishes to broaden social support mechanisms, such programmes should be funded transparently through the national fiscus and parliamentary budget processes, rather than being concealed within electricity tariffs and effectively transferred to paying consumers through higher charges. This policy risks creating a situation where consumers pay more but receive less value, less choice, and fewer incentives to invest in sustainable energy solutions. It undermines energy independence, discourages private investment in renewable infrastructure, and weakens public confidence in the fairness of the electricity pricing framework. At a time when South Africans are already facing escalating living costs, municipal service failures, rising rates and taxes, and ongoing economic pressure, the introduction of additional compulsory electricity charges is both unreasonable and insensitive to the realities faced by citizens and small businesses. I therefore call for: The withdrawal or substantial revision of the proposed EPP 2026. The retention of a tariff structure that primarily reflects actual electricity consumption. The protection and encouragement of rooftop solar and other distributed generation technologies. Full transparency regarding all cross-subsidies within the electricity sector. Any expansion of Free Basic Electricity to be funded through national budget allocations rather than through increased charges imposed on paying consumers. A comprehensive public consultation process with meaningful consideration of consumer objections before implementation. South Africans should not be penalised for reducing their electricity consumption, investing in renewable energy, or taking responsibility for their own energy security. A pricing policy that imposes increasing fixed costs while reducing consumer choice is both economically harmful and fundamentally unfair. I strongly oppose the Revised Electricity Pricing Policy in its current form and urge policymakers to reconsider its provisions before irreversible damage is done to household budgets, small businesses, and investment in alternative energy generation. This policy appears designed not to create fairness, but to guarantee revenue regardless of consumer behaviour. It removes the incentive to save electricity, penalises solar investment, and shifts additional costs onto already overburdened households and businesses. I reject the EPP 2026 in the strongest possible terms and urge its withdrawal.	Frans	employed individual
	2026-09-28 08:39:17	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Prepaid Meter User	A lot of elderly people and poor people, black and white, do not have disposable income and according to the South African constitution basic amenities and services are in the bill of rights. Therefore that means that they need to be affordable for all! Stop finding ways to cover yourselves for the stealing that is taking place. Recoup your outstanding monies from municipalities, businesses and people first.	Lesley	retired

	2026-09-28 08:42:55	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	This is just another way to have responsible citizens pay for the shortcomings of Eskom and the state. We are being punished for generating our own electricity. Which Eskom forced us to do due to not being able to supply our electricity. All that will happen is that people will go completely off grid. In addition, I agree with additional grants for the poor, but not funded by the working class. The pressures on the working class are already way too much. We fund taxes, VAT, high fuel prices, rising food prices, tollgates, water, electricity, etc. The working class is being expected to fund the shortcomings of the state while corruption and exhorbitant expenditure is not rooted out. The result of endless additional weight is that the working class is going to collapse and everyone is going to be poor, and grants will come from nowhere. Or the working class will move to countries where they don't have to pay for a failed state. You cannot keep squeezing more and more and more out of consumers.	A	employed individual

	2026-09-28 08:47:43	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Prepaid Meter User	Electricity is already at an unaffordable rate. Each time electricity goes up our economy suffers. The damage to the grid is not our fault or responsibility as taxpayers. We pay our tariffs pay exorbitant fees for electricity now Eskimo wants more to feed the fat cats at the top.	Buddy	employed individual
	2026-09-28 08:47:52	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant)	This is absolutely unacceptable. Ludicrous concept. Unfair and punishes law abiding and compliant persons for the corruption and inability of the authorities to control people who have illegal connections. The general public are not well-paid politicians who can afford this increase over and above other rising costs. The person who suggested this is obviously out of touch with the increasing financial burden that particularly poor and lower income groups face because of incompetence and corruption.	Frans	employed individual
	2026-09-28 08:47:56	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	You going to chase out your paying base of people if it gets too high	Amanda	
	2026-09-28 08:48:11	No I do not	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Prepaid Meter User	Mandatory Fixed Charges (Policy Positions 11, 27, 30) Functions as an arbitrary “sun tax” and availability penalty. Punishes energy efficiency and private capital invested to survive load shedding, extending solar payback periods. Prosumer Net-Billing Rules (Policy Position 33) Highly punitive: charging solar owners DUoS fees to export clean power while refusing to allow export credits to offset network fees creates an unviable investment model. Scrapping Inclining Block Tariffs (Policy Position 38) Removing IBRs in favour of flat energy rates plus heavy basic monthly connection fees will cause immediate sticker shock for low-to-middle-income ratepayers. Municipal Surcharge Ring-Fencing (Policy Position 47) Threatens local government fiscal collapse. If municipal electricity profits are stripped, councils will hike property rates or collapse basic community services. Industrial Smelter NPAs (Policy Position 54) If heavy industry receives electricity at 62 c/kWh (below cost), ordinary retail consumers and small businesses will be forced to shoulder the resulting revenue shortfall. Prepaid Vending Caps (Policy Position 45) Imposing tight commission caps without administrative support could cause independent retail vendors to shut down, stranding rural consumers without token access. 	2026-09-28 08:50:25	No I do not	Other		Prepaid Meter User	I don't support the electricity price hike, because we are already feeling the recent petrol and diesel hikes, which affects our transport and grocery basket. We cannot afford all this increases.	Obakeng	employed individual
	2026-09-28 08:50:34	No I do not	Other		Residential Ratepayer (Grid Reliant)	I would be the first to agree that Eskom needs to revise their charging policy BUT it is actually extremely simple. Allow low income homes to have a minimum amount of free electricity, HOWEVER, everyone should pay for the amount of electricity that they are using over and above that. Whether you are a household, company, factory etc. It is constitutionally unfair to expect South African citizens to act as buffers between Eskom's unfeasible policy changes and the people who benefit from it. Everyday there are more and more households who just simply cannot keep up with the cost of living in South African. If mention is made that diesel and petrol prices are going up "everything" goes up in price and never comes down when the price of fuel goes down a little. I do not see how households can continue - Now Eskom is eager to stab their customers in the eye with this ridiculous proposal. Why is Government not fighting for their people, why are they not working together to decrease the strain on their people ? The rate of murder, rape, alcoholism, stealing just continues to climb _ WHY I ASK? Could it be the financial burdens placed on South Africans while Government Officials continue to hide behind their desks and not do the task they were called to do - INTERVENE - HELP - NEGOTIATE.....WORK FOR YOUR PEOPLE !!! DON'T ALLOW ESKOM TO GET AWAY WITH THEIR ILL MANAGEMENT AND ALLOW POLICE TO DO SOMETHING ABOUT CABLE THEFT.	Megan	employed individual

Stop the free electricity handouts to some from the government that the middle mass is paying for. You go too far! The metered tarrifs are already outrageously high, keeps going up and the credits are somehow always finished before month end no matter how much you load??? STOP STEALING FROM US!	Mrs	
	2026-09-28 09:04:04	No I do not	All of the above	Double Network Fees (DUoS) on Solar Prosumer Exports	Rooftop Solar / Prosumer	I do not support the proposed Revised Electricity Pricing Policy in its current form. I strongly object to any changes that would increase fixed monthly charges for households and small businesses, regardless of how much electricity they actually use. People are already under severe financial pressure, and any policy that results in higher monthly bills is unacceptable. I am especially opposed to the treatment of rooftop solar users. Many South Africans invested in solar because Eskom and the electricity system failed to provide reliable power. Government also encouraged people to reduce pressure on the grid. It is therefore unfair and unreasonable to now penalise people who made that investment by adding extra charges or limiting the value of the electricity they export. The policy should encourage reduced electricity consumption, private renewable investment, and grid stability, not punish responsible consumers with more fees. I ask that the proposed fixed-charge increases and solar-related penalties be removed or revised.	Kim	employed individual

	2026-09-28 09:11:48	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	This feels completely unfair. People want to use electricity responsibly and try to reduce their electricity usage, and this penalises them. People are trying to become less reliant on coal-based power by going solar, and this penalises them as well. People are trying to survive! And Eskom wants to make the taxpayer pay for it. We're stretched enough as it is. Because the government has failed to create an economy that's conducive to job creation, entrepreneurship, and the only hope for so many people. This bill will kill any small business idea before it's started. Why can't Eskom leave us alone? We can have other power producers besides Eskom. They don't NEED to be the monopoly. They can downsize. People should have their say as to how we use our power. I thought this country was a democracy?	Tawnee	employed individual
	2026-09-28 09:12:20	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	Because of constant load shedding because Eskom was unable to provide consistence power supply, users spend a lot of money installing solar systems. Now they want to penalise consumers, as they are not making enough money, which is unfair.	Dirk	employed individual
	2026-09-28 09:12:27	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	These policies are unfair and should not be the concern of already overburned tax payers. Rather cut Eskom bonuses and make the leadership responsibile for the revenue losses responsible for paying the shortfall.	Claude	employed individual
	2026-09-28 09:13:17	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	As a pensioner who paid taxes for my 40 year working career and continues to pay taxes on my annuity income, I believe that the increased fixed charges being proposed, in order to subsidize smelters and an increased free allowance for unfunded social expansion is an incorrect policy. The minerals industry has has a boom couple of years and so need to start re-investing those profits into paying the same tariff that ordinary householders are doing. I also have solar installed and so charging me even more for assisting Eskom during load shedding, by generating my own power is an insult. Lastly it is widely reported that the average salary for an Esko employee is over R1m and that the headcount is double what it used to be when they were generating more electricity than they do now. In summary, no social expansion of free electricity, engage the mining companies to get them to pay more and stop penalizing people with solar panels.	Roy	retired
	2026-09-28 09:13:31	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)		Ruard	employed individual
	2026-09-28 09:13:44	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	It should be common knowledge that South Africans cannot afford to pay more for electricity. eskom declares a huge profit and expect us to pay more and more for less and less. Us pensioners are SERIOUSLY battling to make ends meet. and we know there are places where the people don't pay at all. TOTALLY DISGUSTING . I PERSONALLY cannot afford another increase.	d	retired

						I strongly object to aspects of the proposed Revised Electricity Pricing Policy, particularly where the new pricing structure places an additional financial burden on households and businesses that have invested their own money in solar generation and energy efficiency. For years, South Africans endured an unreliable electricity supply, load shedding and rapidly increasing electricity costs. During this period, households and businesses invested significant amounts of their own capital in solar panels, inverters and batteries. In doing so, they reduced their dependence on the national grid, relieved pressure on the electricity system and helped keep businesses operating and the economy functioning. These consumers should not now be financially penalised for having taken responsibility when the electricity system could not reliably meet their needs. I understand that maintaining the electricity grid has a cost and that consumers who remain connected should make a fair contribution towards that infrastructure. However, there must be a clear distinction between recovering legitimate, efficiently incurred network costs and using fixed or capacity charges to recover historical inefficiencies and costs from consumers who have actively reduced their reliance on the grid. The proposed treatment of solar and embedded generation is particularly concerning. Private investment in renewable energy should be encouraged, not made progressively less financially viable through additional fixed charges, network charges and restrictions on the value consumers receive for electricity they feed back into the grid. South Africa needs more private investment in electricity generation, not less. Any new pricing model should therefore ensure that: • Fixed and capacity charges are transparent, reasonable and demonstrably linked to the actual efficient cost of providing grid infrastructure. • Households and businesses that invested in solar and battery systems are not unfairly penalised for reducing their electricity consumption. • Electricity exported back into the grid is treated fairly and its value properly recognised. • Consumers are not expected to absorb inefficient or historical costs simply because electricity consumption from the grid is declining. • Energy efficiency, conservation and private renewable generation continue to be financially incentivised. The electricity crisis imposed enormous financial and economic costs on South Africans. Many citizens responded by investing their own money to become part of the solution. It would be deeply unfair and counterproductive for the new pricing framework to now shift additional costs onto those same consumers because they purchase less electricity from the grid. Electricity reform should reward efficiency, investment, innovation and resilience. It should not create a system where consumers who helped alleviate an electricity crisis are subsequently penalised for doing so. I therefore urge the Department to reconsider those elements of the proposed pricing structure that disproportionately affect solar users, low-consumption customers and businesses that have invested private capital in alternative generation.

	2026-09-28 09:17:59	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	I always am surprised that the government thinks that the citizens of this country are stupid. Eskom's monopoly has made the government think that they can get away with forcing the 20% of people who support the country to just keep paying out and paying out. And they also think that consultation must happen overnight and still be considered legitimate. I am so tired of being treated like an imbecile.	JACKIE	self-employed
	2026-09-28 09:18:02	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	South Africans are already burdened by the high cost of living. When Eskom was unreliable we had to make an alternative plan for reliable electricity which cost a lot of money to do, and now we are being penalised because we arent using enough Eskom electricity when this was motivated by an unreliable grid? There are consecquences when a business cant provide a reliable product or service and we should not have to pay for a poor performing companies shortfalls. If there was no Eskom corruption and negligence they would no be in the position they currently are. Stop abusing the tax payers!!!!!!!!!!!!!!!!!!	kyle	employed individual
	2026-09-28 09:18:09	No I do not	Other		Residential Ratepayer (Grid Reliant)	I strongly object to the Revised Electricity Pricing Policy (EPP 2026) in its current form due to its unfair financial burden on standard households, low-usage consumers, and solar prosumers. The introduction of mandatory fixed grid capacity fees, standby charges, and punitive network fees on solar exports actively disincentivises clean energy investments and unfairly penalises those who lower their grid reliance. Furthermore, eliminating stepped block tariffs threatens the affordability of basic electricity for standard households, while the risk of retail consumers cross-subsidising industrial smelter discounts or unfunded social expansions is economically unjust. The policy must be revised to protect vulnerable consumers and support, rather than penalise, renewable energy transition.	Belinda	unemployed individual

	2026-09-28 09:20:25	No I do not	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Residential Ratepayer (Grid Reliant)	It is ridicules that ratepayers and small business should cover the short fall from industrial subsidies. Industry must find ways to to supplement their consumption to reduce their costs without subsidies. The ratepayers and small business have been pushed by unreliable electrical supply to find alternate ways of securing reliable power, now the government wants to load additional charges onto those very same people and businesses because of their own incompetence and theft. Government is supposed to serve the citizens of the country not push the citizen into poverty with their own self-serving greed. Most citizens are grid reliant and when the electricity goes off rely on candles and paraffin lamps. Now you want to make electricity so expensive due to your own incompetence that even the average rate payer will be pushed to steal it or turn to paraffin stoves and fridges. The level of narrow short sighted thinking and incompetence of this government and associated departments never ceases to amaze me.	Steven	employed individual

PUBLIC SUBMISSION ON THE REVISED ELECTRICITY PRICING POLICY, 2026

Submitted through Dear South Africa public participation process

I welcome the opportunity to comment on the Revised Electricity Pricing Policy (EPP) 2026.

I recognise that South Africa's electricity sector has changed substantially since the existing 2008 Electricity Pricing Policy was adopted. The growth of private generation, rooftop solar, electricity trading, wheeling and an increasingly unbundled electricity market makes a review of the pricing framework necessary.

However, the new policy must ensure that the cost of restructuring the electricity sector is not transferred unfairly to ordinary households, small businesses and consumers who have already invested their own money in reducing their dependence on the national grid.

My submission is therefore based on the principle that electricity pricing must be transparent, cost-reflective, fair, affordable and directly connected to the actual costs and services incurred by the consumer.

1. Fixed and capacity charges

I am concerned about the increasing emphasis on fixed, capacity and network charges.

A consumer who reduces electricity consumption through energy efficiency or invests in solar should not be financially penalised simply because they remain connected to the grid.

I accept that maintaining the electricity network has real costs and that consumers who remain connected should make a reasonable contribution to those costs. However, fixed charges must:

- be transparently calculated;
- reflect efficient and prudent actual network costs;
- be independently scrutinised by NERSA;
- be proportionate to the service and capacity actually required;
- not become a mechanism for recovering inefficient expenditure or historical losses; and
- not undermine incentives for energy efficiency, private generation and responsible electricity consumption.

The policy should require a clear affordability and household bill-impact assessment before substantial new fixed or capacity charges are implemented.

2. Rooftop solar and private generation

South Africans who invested their own money in rooftop solar have helped reduce demand on the national electricity system and have assumed the financial risk of that investment themselves.

The pricing framework should therefore encourage, rather than discourage, responsible private generation.

Where a customer exports electricity to the grid, charges should reflect the actual incremental cost imposed on the network by that export.

I support transparent network charges where there is a demonstrable cost of providing and maintaining network access. However, consumers should not effectively be charged twice for the same service, nor should export arrangements make private generation economically irrational.

Export credits should be transparent, predictable and based on a defensible methodology reflecting the value and system cost of the electricity supplied.

The policy should also ensure that consumers who generate electricity for their own use are not subjected to charges that amount to a penalty for reducing their dependence on purchased electricity.

3. Negotiated Pricing Agreements

I recognise that government may need mechanisms to protect strategically important industries, employment and economic activity.

However, negotiated electricity pricing agreements must not become a mechanism through which ordinary electricity consumers indirectly subsidise selected large industrial users.

Any negotiated pricing agreement should therefore be:

- publicly disclosed;
- subject to clearly defined eligibility criteria;
- independently assessed;
- limited in duration;
- subject to regular review;
- demonstrably beneficial to the public interest; and
- accompanied by a transparent explanation of who carries any resulting revenue shortfall.

Where a discounted tariff is justified for broader economic reasons, the associated subsidy should be transparently identified rather than hidden within the electricity tariff structure.

The principle should be simple:

A policy decision to subsidise an industry should be funded transparently through the appropriate public mechanism, rather than quietly transferred to other electricity consumers.

4. Free Basic Electricity

I support appropriate protection for vulnerable households and recognise the importance of Free Basic Electricity.

However, expanding the allocation substantially without clearly identifying the funding source creates a serious affordability question.

The policy should clearly establish:

1. who qualifies;
2. how much electricity is provided;
3. who funds the programme;
4. how the funding is distributed to municipalities and utilities;
5. how the programme will be audited; and
6. whether any shortfall can legally or practically be recovered from paying consumers.

If Free Basic Electricity is a national social policy, its funding should be transparently provided through the national budget and not become an undisclosed additional burden on households and businesses that already pay for their electricity.

5. Municipal electricity surpluses

I support greater transparency around municipal electricity charges.

Electricity tariffs should not be used as an opaque source of revenue to finance unrelated municipal expenditure.

Consumers should be able to see clearly on their bills:

- the cost of electricity;
- network charges;
- service charges;
- municipal surcharges;
- applicable taxes and levies; and
- any other amount being recovered.

Any surcharge should have a clearly identified legal basis, be transparently disclosed and be subject to appropriate regulatory oversight.

6. Electricity theft, technical losses and bad debt

Paying consumers should not indefinitely carry the cost of electricity theft, illegal connections, uncontrolled technical losses or excessive bad debt.

Where losses exceed reasonable and independently determined benchmarks, the responsible utility or municipality should be required to demonstrate what corrective action has been taken.

The policy should reinforce the principle that inefficiency must not automatically become an allowable cost passed on to compliant consumers.

Consumers should not be placed in the position of having to pay progressively higher tariffs because other consumers steal electricity or because utilities fail to collect legitimate debts.

7. Transparency and accountability

The new electricity pricing environment will be considerably more complex than the historical model.

For ordinary consumers to participate meaningfully, tariff structures must therefore become easier—not harder—to understand.

I recommend that the policy require a standardised consumer electricity bill showing, in plain language:

- energy consumed;
- energy generated/exported where applicable;
- network costs;
- capacity charges;
- fixed charges;
- municipal charges;
- subsidies or cross-subsidies;
- taxes and levies; and
- the total cost attributable to each component.

Consumers should be able to understand why their bill is what it is without requiring specialist knowledge of electricity regulation.

8. Protection against unintended consequences

The policy should be subjected to a proper impact assessment before implementation.

Catalina	self-employed
	2026-09-28 09:47:13	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	Eskom and the electricity supply in this country is controlled by an electricity mafia, covering all aspects of the supply, for the benefit of the mafia's, and not for the country's economy and its people as a whole.	Gerrit	self-employed
	2026-09-28 09:48:06	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	To Whom It May Concern, I wish to formally object to the proposed Revised Electricity Pricing Policy (EPP 2026) as a residential electricity consumer. I am deeply concerned that the new tariff structure will place an additional financial burden on ordinary households that are already struggling with rising living costs. Any increase in fixed charges, regardless of actual electricity consumption, will disproportionately affect responsible consumers who have invested in energy-saving measures and actively work to reduce their electricity usage. The proposed changes may also discourage households from adopting solar energy, energy-efficient appliances, and other measures that help reduce pressure on South Africa's electricity grid. Consumers who use less electricity should be rewarded for reducing demand, not penalised through higher fixed fees. Furthermore, the increased complexity of the tariff structure may make it more difficult for consumers to understand and manage their electricity costs, reducing transparency and making household budgeting more challenging. I respectfully request that the Department reconsider aspects of the policy that increase fixed charges or shift costs onto residential consumers, and instead adopt a pricing model that remains fair, transparent, and encourages energy efficiency. Yours faithfully, Andrew Crighton Residential Electricity Consumer	Andrew	employed individual
	2026-09-28 09:48:15	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	Eskom failed to supply us with reliable electricity for years and years due to load shedding. We were forced to go to solar to survive. Now, Eskom wants to apply heavy charges for being connected to the grid , trying to make up for the lower consumption of users like myself who now have solar. This is immoral and criminal behaviour by Eskom.	Dave	employed individual

	2026-09-28 09:53:42	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	It is extremely unfair to charge a fixed amount and not receive actual measurable value for it. I can understand that the supply infrastructure needs to be maintained and there is a base cost of providing the service, however in many areas, the lack of proper maintenance schedules and quality repairs will now move the cost of incompetence and bad administration to the consumer. Especially the consumers who spent huge amounts of money just to replace what used to be a reliable cost-effective service from Eskom and the Municipalities. A more fair plan would be to set a mandatory limit of electricity purchase per supply point, irrespective of the fact that there is solar beyond the supply point, BUT allow the account holder to TRANSFER purchased credit to ANY other account in the same Municipal area. This will ensure electricity is still purchased and used while the Solar "users' is still protected from connecting to an unreliable grid. If a repurchase agreement is in place to buy electricity from residential solar plants it must form a separate agreement where a fair price is paid for that electricity. The Municipality can decide whether they want to import it or not to offset their Eskom account. Solar is NOT FREE, in fact it is actually prepaid electricity for 15 years, paid in advance, to keep the economy running and to cover for an unreliable service for which the consumer cannot be blamed. Running your own Solar plant harder to provide cheap electricity to assist a public entity failing their mandate is actually counter productive.	Bernie	business owner

	2026-09-28 10:13:25	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	1) Why should the consumer pay more to fund backup generation reserves, while exuberent bonuses are paid to Eskom top management? 2) 50Kwh - 300Kwh? Why should this be increased and only be available to indigent households? We are all struggeling to keep head above water, and increasing this will only make the lazy loafers of this country more lazy. Or is this the first step to giving them all the free things that were promised? 3) Solar charges? Why? Eskom could not provide stable reliable electricity to the consumers, now you want to punish the people that heeded Ramaphosa's call to install solar if they could, to help the grid. Just more proof that the people in charge do not think further than their noses are long. It was a given that if people install solar that Eskoms income would drop. Eskom is only stable now because of all these people and because of all the street lights and traffic lights that are not working. 4) Retail is already expensive and electricity higher than usual, now you want us to subsidise the mega companies as well? We have to fight for ourselves, why dont they follow suit? 5) The municipalities cant even handle the theft and illegal connections now due to the lawlesness in this country and being afraid. How will a restructuring combat that?	JC	business owner

	2026-09-28 10:15:11	No I do not	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs		Residential Ratepayer (Grid Reliant)	Too many people are stealing electricity with illegal connections and many get away with it. Why must I pay for illegal connections that is quite rampant and municipalitities that cannot pay their bills.	Norman	self-employed
	2026-09-28 10:15:25	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User		Kirk	employed individual
	2026-09-28 10:15:26	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Applying a mandatory fixed grid charge defeats the individuals efforts to try and save on power consumption. And passing Eskom's inefficiencies on to the consumer is totally unacceptable in any form.	Paul	
	2026-09-28 10:15:44	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	I reject the Revised Electricity Pricing Policy (EPP 2026) as published. As a City of Cape Town prepaid customer, I invested my own savings in rooftop solar and a battery. I did this to get through load shedding and to reduce the load on a strained grid. The mandatory fixed capacity and availability charges (Policy Positions 11, 27, 30) and the standby charge (PP 15) would penalise exactly that investment. They would also take away my ability to lower my bill by using less electricity. Scrapping inclining block tariffs (PP 38) would make the few units I buy from the grid more expensive and shift costs onto low- and middle-income homes. [Optional, if you export: Charging DUoS fees on exported solar while not letting export credits offset network fees (PP 33) makes small-scale generation unviable.] I ask the Minister to: - Cap fixed charges at 15–20% of an average domestic bill. - Retain block tariffs for households. Punishes energy efficiency and private capital invested to survive load shedding, extending solar payback periods.	Riaan	business owner
	2026-09-28 10:16:29	No I do not	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs		Prepaid Meter User	Subject: Comment on Draft Revised Electricity Pricing Policy 2026 - Indigent Household To: Department of Electricity and Energy I am a resident of Cape Town and I am registered as an indigent household receiving Free Basic Electricity (FBE). I stand a lot at work and my income is low. I have read the Draft Revised Electricity Pricing Policy 2026 that was gazetted on 28 August 2026. I do not oppose reform and I support ending the single-buyer monopoly if it will improve supply and stop passing theft and losses to consumers. However I am concerned for the poorest: 1. Please keep Free Basic Electricity of 50kWh and increase it if possible. Please make it clear that fixed monthly charges for indigent households must be zero. 2. Please ensure FBE is funded by National Treasury and not only by municipalities, so municipalities do not remove it. 3. Please conduct a targeted study on how cost-reflective tariffs and new fixed charges will affect low-income and poor households before making the policy final, as Minister Ramokgopa confirmed no such study was done. 4. Please protect lifeline tariffs for those who use less than 350kWh per month. I ask that the final policy balances sustainability of the grid with affordability for the poorest. Thank you.	Tanara	employed individual

Greg	business owner
	2026-09-28 10:42:57	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	? I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form (Rejects mandatory fixed grid capacity fees and standby charges on solar and low-usage homes, punitive double network fees on solar exports, the elimination of stepped block tariffs for standard households, and the risk of retail consumers funding industrial smelter discounts or unfunded social expansions). How dare you make us pay for your shortcomings when we have invested so much already to make things work in a broken system. Why are you punishing the people who have been helping the system by providing their own Solar.	Yvonne	employed individual
	2026-09-28 10:43:02	No I do not	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Residential Ratepayer (Grid Reliant), Prepaid Meter User	I disagree with increasing the subsidy of 50 to 200 or 300 while paying clients are paying exorbitant charges for electricity and everything else just to survive. We might not all officially fall under the so called "Poor" group but right now most of us are very poor having to pay inflated prices on everything. The poor does not have to worry about paying rates and tax, school fees, home loans etc and all other living expenses. We just cannot afford all the increases on all other living expenses just to survive. You need to think of helping not only the poor but the middle class as well as we are all battling.	Yvonne	employed individual
	2026-09-28 10:43:38	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Prepaid Meter User		Moonyean	
	2026-09-28 10:43:59	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	In Port Alfred my rates bill has 6 lines allocated to electricity usage!!. This is very confusing, especially as my meter is in a locked box outside my property. There is NO transparency in Ndlambe's billing system.	Robyn	retired
	2026-09-28 10:43:59	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)		Jacqui	
	2026-09-28 10:44:34	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form (Rejects mandatory fixed grid capacity fees and standby charges on solar and low-usage homes, punitive double network fees on solar exports, the elimination of stepped block tariffs for standard households, and the risk of retail consumers funding industrial smelter discounts or unfunded social expansions). Please consider struggling pensioners.	Aldridge	unemployed individual
	2026-09-28 10:48:06	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant)	Please enforce the laws and don't exact more pressure on the paying customers.	MZWANDILE	employed individual
	2026-09-28 10:48:11	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	Once again the general public is required to pay for the mistakes of government and the SOE's. No planning, money wastage result in load shedding. Consumers are forced to employ alternatives (e.g. solar) and then they get penalised for using the alternative solution. To be honest, if we haven't had the shocking stage 6 load shedding, I would still be using Eskom only. After paying for solar, why should I be further penalised for government's mistakes?	Bruwer	business owner
	2026-09-28 10:48:24	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I object to, and reject completely, the Revised Electricity Pricing Policy in its current form. Households and small businesses must not face substantial fixed charges regardless of how little electricity they use. The policy must also avoid penalizing people who invested their own money in rooftop solar to reduce pressure on the grid, generating household electricity that corrupt Eskom is unable to provide. Higher charges must not become a way to continue to conceal electricity theft, anc and Eskom corruption, waste and excessive executive spending on bloated Eskom fat cats and company-wide inefficiency while consumers and taxpayers foot the bill. Before this policy proceeds, government must publish clear examples showing its effect on typical monthly bills and explain who will fund discounted industrial tariffs and any expansion of Free Basic Electricity. Those costs must not be quietly shifted onto other paying customers. Withdraw the current proposal and revise it to protect affordability, reward reduced consumption and solar generation, and make every subsidy and charge transparent.	Ricardo	business owner

	2026-09-28 11:17:00	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User		Stu	employed individual
	2026-09-28 11:17:13	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	I agree that there should be a nominal fee for being connected to the grid, but this should be small and ultimately the cost of electricity should be based on consumption. Increasing connection charges is only going to make the situation worse - by forcing those with larger incomes to go off-grid, meaning that the users who remain connected are those who are least able to afford electricity in the first place. The government should instead be encouraging those with solar installs to remain connected and incentivising them to export their stored battery power into the grid during peak hours, not chasing them away. Recent advances in inverter control such as https://www.intelligrid.co.za mean that solar power users can very effectively control their systems and become part of the solution to the country's electricity challenges.	Carl	business owner
	2026-09-28 11:17:40	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	? I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form (Rejects mandatory fixed grid capacity fees and standby charges on solar and low-usage homes, punitive double network fees on solar exports, the elimination of stepped block tariffs for standard households, and the risk of retail consumers funding industrial smelter discounts or unfunded social expansions). 	2026-09-28 11:22:40	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Prepaid Meter User	In 1994 Eskom were able to generate nearly 55000Mwatt of power with +-10 000 people now 3 decades later we can barely generate 25 000 MWatt with +30 000 staff. How is it possible? Reduce the workforce to be in line with what is generated. So +- 5000 people getting salaries based on what they are capable and leave us the tax paying rate paying client out of funding the useless mass just having a work but not doing what they suppose to be paid for. The aim of the current Goverment is to have the few elite fat cats having billions in the bank while the mass is starving, working people is the lowest in the world, more than half of the population and the so call middle class is decreasing every second and still be held responsible to pay for every one in South Africa. More and more of the so call middle class is becoming low income class and dependable on the state funds that is decreasing every second any case. The fat cats get special treatment not paying what they suppose to pay and leave that to the decreasing middle class. Cut off the middle class and this country dies and what happen with the fat cats they take there billions and leave and blame it on the Apartheid as usual. With no middle class more will be low class no work no food no people no country and mass poverty in South Africa, who is to blame????? Once a great growing country is now dying faster than ever, why because the once struggle mass is now showing the rest how good they can steal. No law no Transnet, no Eskom, no Post Office, No SAL, no Army no Airforce, no Industies (Iscor, Denel, Mine closing, Sasol once providing all our needs reduce to a joke making use dependable on imports, Nissan moving out and other struggling, Nestle closing and many to follow.) Now lets squeeze the decreasing tax payer more because there are nothing to steel anymore, bull sitting millions day by day. The fat cats get richer and blame it on the previous regime and the mass believe them after 30 years. Look at the cities once proud places is now abandon. The poor dismantling building to stay alive but our country have more billion nears than the rest of the world in comparison. Just look who they are. All sate entities died and the one left Eskom is milking the so call cow. It is dying for years. Stop bulshitting the people of this country and let us alone to try and rebuilt it to it previous state. It is going to take all of the Low and Middle class very hard work to fix what the ANC broked. Fire every partelement member they are any case just stealing money getting salaries that is way to much for what they actually doing every day. I say no to any more funding to a stealing goverment.....	Rudolf	self-employed
	2026-09-28 11:23:37	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Prepaid Meter User	I am concerened about the economic impact on all households.	Mike	Non-profit
	2026-09-28 11:24:05	No I do not	Other		Residential Ratepayer (Grid Reliant)	My view is that the principle of all electricity users having to pay for fixed costs is sound. Applying this is not so simple. However, this burden needs to be carried by ALL connected electricity users in an equal way. If some industries need reduced electricity costs to stay in business, Eskom should not foot that bill by providing electricity at reduced cost. It should be for Government to deal with that. My concern is that these and othe changes are directed to keep Eskom going at all cost and that requires funding. South Africa should completely privatise electricity supply.	Carl

	2026-09-28 11:35:53	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	The following are my concerns. There is no clear track record of fair and proper administration by the authorities; it turns into another feeding trough for the connected. The policy shifts tariff design away from volumetric consumption (c/kWh) toward mandatory fixed network and capacity charges (R/kVA, R/kW, or R/Amp/month). To eliminate “volume risk” for distributors, utilities will bill customers for grid availability and network reservation regardless of whether electricity is consumed. In addition, Policy Position 15 introduces a universal generation standby charge applied at the wholesale level to recover the capital costs of keeping backup dispatchable generation on standby for grid-tied users. Households and small businesses that invested private savings into rooftop solar, batteries, or energy-efficiency measures to survive load shedding will be hit with steep monthly fixed fees simply for remaining connected to the grid. Frugal, low-volume consumers can no longer lower their utility bills by conserving electricity, as fixed network fees create a high, unavoidable monthly billing floor. I Demand the following: 1 . NERSA impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. 2. Insist that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. 3. Require utilities to absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers.	Mark	self-employed

	2026-09-28 11:39:55	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	ESKOM has to date been a verry unreliable supplier of electricity. To that end, clients have to a significant extent installed inverter and solar systems to mitigate ESKOM's inefficiencies. The result has been a reduced ESKOM offtake and lower revenues. Now, in order to address ESKOM's losses, consumers are expected to make up this shortfall through increased tariffs and fixed monthly fees in order to remain connected to the distribution network. Not only is this a disingenuous proposal for ESKOM to recover costs largely due to its own efficiencies, but also is tantamount to theft.	Derek	retired
	2026-09-28 11:40:32	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	The current fixed charges are already too high. Coupling this with a penalty charge for having solar and subsidising the non-paying users will create even greater hardship for the middle income users. Escom is producing less power now than 30 years ago but has a highly paid staff compliment 50% higher than then. Fix this and the cost will come down drastically and Escom will once again be a great company	Athol	retired
	2026-09-28 11:41:47	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	We should pay for the amount we use. Families installed solar options during loadshedding as Eskom could not deliver. This should not be financially penalised. In other countries households are subsidised for installing solar! This is just greed (again!) and a back to front way!	A	self-employed

	2026-09-28 11:57:49	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer	We have spent a lot of money on a solar solution for both our home and workplace (a school) so that we could live, work and make sure the school ran without the help of Eskom. We did this because we had no choice. The persistent electricity issues (blackouts, cable theft and old infrastructure issues) that Eskom were not capable of fixing due to rampant corruption and mismanagement had a significant negative impact on our daily lives at home and our ability to keep our school running. We bore the cost of solving how Eskom affected our home and business and now Eskom wants to penalise for not using their service. It was because we were paying for NO SERVICE that we made private alternative arrangements. Eskom forced us into this position and now wants to punish us for not using them a supplier. This is not how democratic nation that uses a capitalist economy works. In a democratic system private individuals should have the right to chose where our electricity supply comes from without being forced to use an SOE, and without being financially penalised for doing so.	Jacqueline	business owner

	2026-09-28 11:59:15	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	Lets start at the beginning; Fact: Eskom does not have sufficient generation so serve SA,, Result: Energy consumers found Solar, Wind, BESS, and eveb generators at their own cost to negate the power shortages, blackouts, and load shedding. Government results: Now consumers find solutions not dependand on ESKOM, obviously, now the revenue from a haphazard supply environment will disappear to a great extend. This now causes a revenue shortage. So instead of partisipating in the renewable and alternative energy options, that support a better SA economy, The Government now seeks ways to fund their own shortcommings, Instead of assisting the solar users with a stanby power source, instead; they now want to force a fee on people who made a plan at their own cost because they neglected a growth forecast, and chased away critical large indystries from SA with a BBBEE policy. Further reduction in Taxes and user portfolio. So now if we restructure lets look at the bigger picture, Motivate investors, manufacturers and power usage investors to SA. How do we do it?, simple,.. Scrap BBBEE, and land reform policies. and Bingo!! Investors will create the jobs, and use the now exxess power, so that in saying thankyou to the locals that relieved the ESKOM load with with Solar etc.. rathe subsidise the standby power to their establishments, and impliment a system where power theft is totally stopped. I said my say, ans I sure hope the 50 years of experience in this industry, shared wisdom will reach a honest ear in Government, if ther are such a thing over there.	Johan	business owner

	2026-09-28 12:05:27	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Small / Medium Business Owner (SMME)	As a farmer and direct user of Eskom we have already had an 8.7% increase. Two thirds of our eskom bill is made up of fixed charges. Why should we foot the bill for the incompetency of municpalities to collect monies due. Eskom has a monopally . Make all electricity uses prepaid and police their use. No payment no supply.	Gordon	self-employed
	2026-09-28 12:05:32	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Commercial / Industrial Power User, Rooftop Solar / Prosumer, Prepaid Meter User	What a joke!!! Forcing uers to convert to Solar during loadshedding and then, when billions of rands have been invested by private individuals to help the eskom loadshedding crisis, penalize them!!!	Michael	business owner
	2026-09-28 12:06:17	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Prepaid Meter User	The policy shifts tariff design away from volumetric consumption (c/kWh) toward mandatory fixed network and capacity charges (R/kVA, R/kW, or R/Amp/month). To eliminate “volume risk” for distributors, utilities will bill customers for grid availability and network reservation regardless of whether electricity is consumed. In addition, Policy Position 15 introduces a universal generation standby charge applied at the wholesale level to recover the capital costs of keeping backup dispatch-able generation on standby for grid-tied users. Households and small businesses that invested private savings into rooftop solar, batteries, or energy-efficiency measures to survive load shedding will be hit with steep monthly fixed fees simply for remaining connected to the grid. Frugal, low-volume consumers can no longer lower their utility bills by conserving electricity, as fixed network fees create a high, unavoidable monthly billing floor. I suggest that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalize lower-middle-income families.	Daniel	self-employed

	2026-09-28 12:20:59	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	I was forced to install a backup power system as Eskom was no longer able to deliver a dependable energy supply. The only way I have of recovering this very big expense is to switch over to solar derived power as much as I can - and then use those savings to pay off the cost of my installation. The SA Government is now trying hard to make the citizens pay for the government's criminal negligence and its corrupted system. This is very foolish, because if you keep increasing the cost of a service, you eventually cross a threshold where the service will be more expensive than alternatives (very close now). When that happens NOBODY will use the state controlled energy supplier. The people WILL generate their own power, for less cost, and vastly improved reliability. NOBODY will want to suffer an unreliable, overpriced and shamelessly corrupt supplier. Paradoxically - the only sane solution is to charge LESS, stop supplying power to those who don't pay - and get your house in order. The old Eskom demonstrated what was possible. It works when you run a tight ship, and only deliver to those who pay. Eskom was the envy of the world - it could be once more - but only if it is run as a sound and competitive business - by dedicated engineers who take pride in their work.	John	employed individual
	2026-09-28 12:21:53	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)		Keegan	self-employed
	2026-09-28 12:22:26	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer	As a family that installed a solar system in order to reduce our monthly electricity expenses, the proposed mandatory fixed charges would be detrimental to our lives. We, like many residents, already struggle with the rising costs of literally everything, and our solar setup is the one thing that we feel helps us to survive month-to-month. The introduction of fixed charges would cripple us. Why should we not be allowed to use solar energy without having to pay extra for it? All houses/business that have installed solar are trying to REDUCE their expenses, and to be kinder to the planet by using a renewable resource.	Raquel	employed individual

Faiza	
	2026-09-28 12:31:41	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Prepaid Meter User	Only reason why Eskom is looking good is because so many households have opted for solar installations to circumvent the loadshedding inconvenience. Eskom is hopelessly overstaffed, should get rid of half its people and should stop paying these massive, and I mean massive bonuses to employees for just doing their jobs. Now the taxpayers must fund their lack of planning for infrastructure maintenance and staff overheads. And to add insult to injury, free electricity is given to the masses that do not work, which must be funded by the small % of tax paying citizens, including pensioners! The government should fix the underlying problems of crime and BBBEE, so that the economy can recover,	Erls	retired

	2026-09-28 12:40:16	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Any change to the charges for electricity that do not result in lower tariffs for the man in the street are simply unacceptable. The new proposed tariff structure is hidden in reams and reams of words, and not once has it been explained simply and easily to the public, yet we are expected to simply pay increasing charges every year. If unbundling does not result in lower charges to the public, there is absolutely no point. And if Eskom is struggling with excessive debt, then it's simply a case of billing each household individually, excluding the respective municipality, so that the public can pay their bill directly to Eskom, cut out the municipality who is stealing and/or wasting the public's money, and with more funds coming in, there will be no need for raising tariffs by these excessive increments.	Evelyn

	2026-09-28 12:55:54	No I do not	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Residential Ratepayer (Grid Reliant)	Electricity is very unreliable in our country with all the power cuts and lack of maintenance. I am not off the grid yet I strive to save electricity as much as I can being a pensioner and all and now u want to increase us even if we are low usage clients. I object to your new rules and regulations and pricing increases. People get solar because of the unreliability of electricity and now u want to charge them. This is crockery.	Virginia	retired

	2026-09-28 12:56:02	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	While i agree that the current policy is long overdue for an overhaul. The proposed policy does not provide a greater degree of transparency, nor does it provide any vote of confidence in the administrators of the Dept. of Electricity and Energy. The current policy is arbitrarily administered, and the grid fails consistently without warning. Consistent mandatory maintenance of the grid does not take place as it should, and when maintenance becomes a major element of continued energy production and provision, the entire grid must be shut down. Furthermore, passing theft and bad debt recoupments onto paying customers is a gross mismanagement of the department. As no colaberation is engaged with other departments of government and municipalities the problem of theft continues to go unchallenged. How is it the consumers problem when the systems in place do not protect the process of repair and maintenance. You have a team that comes out to dig a trench for the next team to work on the line, and then the team that is supposed to work on the line does not keep to the schedule nor communicate delays that have arisen, the team that is schedule to close up the trench arrives before the team that is supposed to work on the line for maintenance and closes up the trench. In the meantime the trench and line is left unprotected and unsupervised, exposing the line to theft and some how this now must be setted by the consumer due to incompetence and lack of followthrough with teams and team leaders. The proposed policy attempts to promote collaboration, yet the internal systems of government does not collaborate with the varying departments along the line.	Ryan	employed individual

They're killing the goose that lays the eggs. What happens to those who genuinely can't pay the increased costs of the connection levy and higher tariffs?	Marion	retired
	2026-09-28 12:59:17	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Residents are already under severe strain from high electricity costs, and the new bill will worsen this: Fixed monthly charges mean households pay large fees even if they use less power or install solar. Solar penalties reduce the value of investing in renewables, discouraging residents from cutting costs. Industrial subsidies shift the burden onto ordinary ratepayers, forcing households to cover discounts for big business. Expanded free electricity without extra funding means paying consumers will absorb the cost directly. In short, the policy increases bills, removes incentives to save, and unfairly shifts costs onto households who can least afford it.	Delaille	employed individual

	2026-09-28 13:04:45	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer, Prepaid Meter User	I object to the Revised Electricity Pricing Policy in its current form. South Africans were asked to install rooftop solar to reduce pressure on Eskom during years of load-shedding. We invested private capital to do so. This draft now formalises a model where our exports are credited at ~R1.53/kWh while we repurchase the same power at R4.14-R4.94/kWh, and where a fixed charge of over R5,000 per year cannot be offset by own generation. You cannot have it both ways — urging self-generation and then penalising the households who delivered it. If network charges are to be cost-reflective, they must reflect reduced use of the network, not punish self-consumption.	Angela	self-employed
	2026-09-28 13:05:37	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	For years ratepayers have been subsiding municipalities via surcharges and 'estimated usage'. We have been paying for services not rendered - loadshedding, sabotage by subcontractors, theft of material by subcontractors, and general downtime of the network thanks to incompetence and a lack of maintenance and poor governance/incompetence etc., to mention a few - while also having to prop up failing municipalities run by corrupt and incompetent politically appointed officials. The secret to success is competence, appointment based on merit and qualification, and commitment to service delivery. Government, however, blissfully continues to believe that they can simply keep adding to the burden borne by law abiding, hard working citizens. There is only so much to be had. There is only so much patience to test. As usual government seeks to punish and extort decent citizens, instead of addressing the fundamental issues ,incompetence, theft, fraud, corruption, sabotage, infrastructure collapse and so on. They want us to believe that their attempt to hide the scale of their failure is in fact a 'necessary step'. Instead of 'unbundling' themselves from their responsibilities, they should get to work and fix things, instead of simply hoping that forcing ratepayers to bear greater fees and costs will fill the insatiable bottomless pit that sits at the heart of the South African government. This is but another attempt to shift more costs to consumers, and hide the deficit created by their culture of theft and corruption.	Brian	self-employed

	2026-09-28 13:11:18	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Rooftop Solar / Prosumer	Eskom was once efficient and we boosted the cheapest and most reliable power supply worldwide. The ANC should be ashamed as to how they have allowed the power supply to become what it currently is. Why must the tax paying public foot the bill for both the massive corruption and a total failure of the once reliable power system. The fact that many households have needed to become involved in a very expensive alternate power production should be applauded and certainly not punished. One can only imagine that out bloated government must be on some strange potion to even think of such an absurd scheme. Do your job and SERVE the public that voted you into government to make this a wonderful country for all.	Glen	retired
	2026-09-28 13:11:32	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Prepaid Meter User		Tobeka	employed individual
	2026-09-28 13:12:25	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Government and Eskom caused the problem through loadshedding and corruption at eskom. Now that they lost alot of income due to their incompetence they want to amend the rules to put further charges and pressure on citizens who try to keep their lights on.	Kobus	retired
	2026-09-28 13:12:46	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	There is lunacy in terms of governance and destruction of trust in these proposals. Basically, Eskom is washing its hands of its self-created problems, past, present and future, and assuming that its monopoly position is sufficient justification to continually bleed vulnerable middle class people. The build up of E-vehicles is going to just exacerbate the situation, as electricity demand escalates - and increasing cost of electricity will reduce the trend of moving from carbon-based vehicles. Where in the world has such ridiculous legislation been supported, or even considered? No government party that supports this kind of blatant extortion can expect to stay in power	Claude	retired
	2026-09-28 13:12:47	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Prepaid Meter User	It seems as if the consumer will lose no matter what! Our electricity supply is unreliable due to lack of maintanance of infrastructure, cable theft, illegal connections, trees not trimmed - whatever the cause, the consumer must pay the consequences and the extra costs involved eg. food losses, fuel costs for generators.	MIchele	self-employed

	2026-09-28 13:20:05	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant)	Residents are already under severe strain from high electricity costs, and the new bill will worsen this: Fixed monthly charges mean households pay large fees even if they use less power or install solar. Solar penalties reduce the value of investing in renewables, discouraging residents from cutting costs. Industrial subsidies shift the burden onto ordinary ratepayers, forcing households to cover discounts for big business. Expanded free electricity without extra funding means paying consumers will absorb the cost directly. In short, the policy increases bills, removes incentives to save, and unfairly shifts costs onto households who can least afford it.	Morne	employed individual
	2026-09-28 13:20:10	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	This policy functions as an arbitrary “sun tax” and availability penalty. It punishes energy efficiency and private capital invested to survive load shedding, extending solar payback periods. Most of these taxes were tried but failed in other countries. Find another fairer model.	Sean	employed individual

	2026-09-28 13:46:05	No I do not	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Residential Ratepayer (Grid Reliant)	To be sustainable on the long run the tariffs charged on electricity must reduce drastically. This apply to all classes of electricity, ie on products manufactured mainly for the export market right down to a small houshold trying to balance its houshold buget. We wiil have to go back to the days of the late 1980's - early 1990's when South Africa had and enjoyed the lowest 10% category cost of producing electricity in the world. This gave SA the opportunity to build two large alluminum plants at Richards Bay and Mozambicque. If we cannot reduce the current production cost of electricity all smelter related plants will have to close down or will be unable to reopen. Similiary small households will import houshold goods at cheaper prices than locally produced items. Local factories producing these items will then be forced to close down as well. Currently the REPP is a lose lose road for the whole of South Africa.	Wouter	retired
	2026-09-28 13:46:26	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User		Kim	employed individual
	2026-09-28 13:47:03	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Government now wants us to fund the faltering infrastructure and having to protect our homes and businesses through solar systems. Rather than enabling additional energy to go back into the grid and help the strain on usage, solar owners are penalised because they are not free riding of the grid like a lot of informal settlements. Rather than enabling privatising the energy sector it is only looking to take more from the already suppressed income earning individuals. This cannot be supported.	Dujon	employed individual

	2026-09-28 13:48:34	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	The government has mismanaged Eskom to the extent that consumers were forced to invest huge amounts in solar and similar methods of relieving the pressure on the national grid. Instead of rewarding these consumers, they are being punished to further subsidise the gross inefficiencies and mismanagement of Eskom. Again, the taxpayer foots the bill for government corruption and the deployment of incompetent cadres.	Bruce	retired
	2026-09-28 13:48:37	No I do not	Other		Residential Ratepayer (Grid Reliant)	First of all, reclaim all the lost and stolen electricity. Start by claiming back all the stolen money by the state and hold those responsible for this problem. Set regulations for municipalities not to add excessive markup. When any payment is made to the city, it must be paid directly to ESKOM instead of the CITY. The fixed rental tariff must be paid in a separate account to the municipality, and this money must be used only for maintenance and development purposes. So, in other words: The electrical consumption price must be paid directly to ESKOM. The connection fee must be paid to the city, and this account may not be used for anything else but maintenance and development. IF you want to bill the customer more for solar panels, then they must have the right to send a bill back to ESKOM for feeding back electricity. They must have a right to claim back electricity installation costs and maintenance on their systems.	Frikkie	employed individual

	2026-09-28 13:49:58	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Removing IBRs in favour of flat energy rates plus heavy basic monthly connection fees will cause immediate sticker shock for low-to-middle-income ratepayers.	Sue	retired
	2026-09-28 13:50:16	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Shame on this government!! They are forcing the hand of willing taxpayers, already carrying +90% of the non taxed population, to leave this country they love. This is financial short-sightedness at its finest.	Samantha	self-employed
	2026-09-28 13:51:13	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer, Prepaid Meter User	It seems that the state, yet again, want to unfairly increase the burden on ordinary households, particularly those that have invested in solar or reduced their electricity consumption due to the failure of the state to provide continuous power supply. Residential consumers should not be required to subsidize and cover the costs of preferential discount arrangements or broader policy objectives - those should be funded separately. Any revised pricing model should be transparent and equitable and reward energy efficiency, rather than punishing those who use scarce resources sparingly. Furthermore, free electricity should not be expanded, unless it is given to everyone - the average user already struggles to with a heavy burden of other taxes and their money is not unlimited, neither is their capacity of giving towards the needy. Increase in electricity tariffs for the past 5 years already caused a 50% jump in electricity charges to the average household. Rather educate people to use electricity smarter and reduce the fat bonuses handed out to unproductive workers.	Liandra	employed individual

	2026-09-28 13:56:35	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	Absolutely NO!!! Eskom need to restructure by cleaning up their own mess, stop squandering the taxpayers money and employ people that know how to sort the mess out. Stop illegal connections, collect the outstanding bills. Cut the ministers, managers, and departmental head's salaries. Increase the low rates some companies and bordering countries are paying for our electricity. We the people are not running Eskom. We the people are not responsible for Eskom's shortcomings. We the people are stretched to the limit. The government is out of touch to twe the people's plight.	Althea	employed individual
	2026-09-28 13:57:06	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User		Lourette	
	2026-09-28 13:57:41	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Commercial / Industrial Power User, Rooftop Solar / Prosumer	They drove us to use solar through their own incompetence and corruption - yet now want to punish us for saving their arses by reducing demand. Now we wont see the savings we invested our capital for - it's a joke. Honestly, if they force all this through - there is no more incentive to maintain a municipal grid connection - one may as well just go all in on off-grid altogether. The sad part is that then they will have no-one to pay for the subsidization of the free supplies they want to provide and to cover for townships where people are just not paying or not able to pay.	Paul	business owner
	2026-09-28 13:58:06	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	I do NOT CONSENT to the Revised Electricity Pricing Policy.	Aneza	unemployed individual

	2026-09-28 13:58:55	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer	900% increase in electricity tariff since 2018? Almost complete collapse of the power grid for close to 15 years FORCING people to look for alternatives, and after people invest hundreds of thousands of their savings and hard earned money into solar etc, we now have to pay for NOT using Eskom's electricity which was not available to start off with? Eskom and government are KILLING households in this country. People should refuse to pay just like they refused to pay e-tolls. If everyone stops paying - there is nothing they can do and will be forced to concede to the will of the people.	Anthony	employed individual
	2026-09-28 13:59:27	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	So when Eskom could not provide the service, they forced allot of us to look into ways of keeping the lights on by ourselves. This has obviously made the load on the eskom requirement lighter making them look like they are keeping the lights on, but in reality the grid got relieved by users installing solar. with the solar installs obviously they are loosing the "Good paying customers" they had and had to keep happy which they didn't. Now they are not getting money in to provide the free electricity to the "Not so good paying customers" and trying to recover it in other means. if Eskom decides to implement any form of a set monthly grid connected fee I will terminate my grid connection completely and just expand my solar to cater for the 3 units I need to buy in a day(heck I might even do this before they think of charging a huge disconnection fee), then they will also loose this "Good paying customer" completely. no one will force me to pay a fine for using natural resources or keep supporting a corrupt entity. Rather let the solar client push additional generation into the grid to give the rest of the clients a better tariff and a better support structure to really try keeping the lights on without running generators and costing the taxpayers even more money.	Pieter	employed individual

	2026-09-28 14:08:24	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	NERSA must impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. Low-usage and energy-conserving households must be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. I require utilities to absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers. NERSA must immediately enforce Policy Position 43(b) by clawing back and disallowing any tariff requests where municipal distribution losses exceed national regulatory standards (typically 7%–10%). Paying consumers must be legally shielded from funding municipal arrears and Eskom debt defaults through local tariff markups or surcharge adjustments. Licensees are required to implement strict, automated tamper detection, independent metering audits, and universal prepaid infrastructure in non-paying areas before requesting any tariff increases from compliant ratepayers.	Charmaine	unemployed individual
	2026-09-28 14:08:49	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Commercial / Industrial Power User, Rooftop Solar / Prosumer	Due to Escom inefficiencies and corruption, Escom created this situation. Few people would have invested R300 000 - R700 000 investment of solar if Escom was competant and gave good service at good rates. This "stunt" legaslation will just lead to people going off grid , this type of management led to Escom current situation. Be like any proper company and slash your salary structures, reform from within, become efficient. Passing bad decisions on to the end consumer will lead to a total collapse of Escom.	Jaco	business owner

	2026-09-28 14:11:11	No I do not	Other		Residential Ratepayer (Grid Reliant)	We are tired as South African citizens, of our government fleecing us constantly, and doing so by slipping nasty regulations and conditions into our laws. SA Govt, if you penalise solar users as you propose then you are shooting South Africa in the foot - you are biting the hand that feeds you, AGAIN STOP! Do SIMPLE BASICS! Source coal locally. Burn coal for power not Diesel. We have huuuuge coal reserves and you as govt. own all mining rights - for God's sake manage the rights, procure the coal, and employ people to transmit the energy. Simple. Stop conflating issues, stop pulling the wool over your OWN PEOPLE'S EYEYS, stop punishing law abiding patriotic South Africans with more opportunity for corruption. We are sick of your Oberholzers lying to us and forcing loadshedding on us, when all you had to do was to procure the coal. Many citizens are not fooled by your constant money-grabbing and many know that the situation can be saved if all the government people concerned started caring about their children, their grandchildren and all South Africans, instead of desperately trying to get money and hide it in the sofa for themselves. You have made yourselves a laughing stock, but you can still redeem the situation as has been done by stopping punitive and treasonous load shedding (for which we are eternally grateful). Do the right thing, you know deep down you can. Sincerely Steve G	Steve G	employed individual
	2026-09-28 14:11:42	No I do not	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Residential Ratepayer (Grid Reliant)	The average middle income household CANNOT continue to subsidise outrageous freebies for those worse off. You are making middle income earners poorer and definitely are not make the poor better off, just more reliant on freebies from people who cannot afford it!!! It's becoming ludicrous. In a country where the poor are in the minority, sure let's subsidse then, but not when it's the majority. They already have an allocation which they can learn to utilise and not expect an entire average household's utilisation for free.	Carianne	employed individual

	2026-09-28 14:35:01	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Consumers facing increased cost pressure cannot be penalised for the utilities fixed costs and lack of proper management. Consumers are required to carefully manage consumption to limit costs, install solar to ensure uninterrupted supply and generally shoulder a disproportionately large part of what should be the responsibility of the utility and will now be penalised for doing so- surely this cannot be correct. There needs to be a fixed charge for network connections and the utility should shoulder the burden of infrastructure costs whilst properly addressing efficiencies, there is way too much wastage in lack of adherence to performance standards, service delivery standards and work standards which cost money.	janice	employed individual

	2026-09-28 14:50:13	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Small / Medium Business Owner (SMME)	Though having to select a specific concern when stating all of the above, my concern is indeed all of the above, aside from the passing "Passing Theft.." choice. Eskom has increased its prices so many times above inflation over the years to make up for corruption and mismanagement and paying customers are always the ones left paying for it from their own pockets. Because of laziness or pure reluctance by two landlords to assist with prepaid system installation, relating to my small business, i have had to constantly pay a "wire & service charge" of about R4000 monthly for electrical use that cost no more than R400 -R500, per month. Now you expect me and others like me, to pay completely made up charges so Eskom can make up it loses while still paying major annual bonuses and increases to its higher management. On top of that penalizing those, who by installing solar systems, have helped lightened grid load. When Eskom had no right to do so. Going so far as to want to charge for putting electricity back in the grid is not just obviously greedy but plain evil. And still expect general paying customers to flip the bill for industrial smelter discounts, no to mention bill for planned expanded free electricity. Eskom just stop your greed and utter lack of morals. Its about time that a competitor is allowed in SA, as Eskom cares nothing for its customers or citizens of SA and continues to monopolize the economy six feet into the ground. How many business [big & small] closed due to covid, how many actually managed to survive till now. I know i was lucky just managing to keep my head above water, but Eskom and government don't care, to spite causing many large business and investors to leave the country, with BBBEE also adding to that. Its Eskom's only moto is " Bleed the customers dry." I hate to think of seriously ill people who require electrical medical equipment to live and the obvious accrued costs increases by hospitals should these Eskom increases be allowed. Likely to see a major population drop and immigration to other countries. Likely also increases in homeless, crimes and probably also suicide by people who were already struggling to cope. But hay, more money for Eskom to spite it being Eskom's fault to begin with.	Sheldon	business owner

	2026-09-28 14:53:07	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant)	Why is Eskom continuing to impose above-inflation tariff hikes on a strained public? Everyday citizens should not be held financially accountable for years of institutional theft, mismanagement, and systemic corruption that ultimately caused the load-shedding crisis. Consumers are effectively being forced to subsidise the utility's fiscal deficits. Furthermore, households that invested heavily in private solar infrastructure to maintain their own power supply are now being penalised with revised tariff structures designed to offset Eskom's falling sales. The state has failed in its primary duty to manage public infrastructure effectively, driving up the cost of living and shifting the burden of its operational shortfalls entirely onto paying customers.	Chester	self-employed
	2026-09-28 14:53:25	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Totally disagree!	Sharon	self-employed
	2026-09-28 14:53:52	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	We should be encouraged to be self sufficient and put up solar panels-it has been done successfully in Australia where it was assisted by government loans at reduced rates and payback of power fed back to the grid. This would assist Eskom in their production of power and people would feel that they are part of the solution, not the problem. The current government cannot do anything without ripping off the public and using the money for their own nefarious schemes. I cannot imagine how desperate our struggling communities must feel when faced with massive increases. So much for "Working for the people".	Mary

	2026-09-28 15:14:21	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Most rooftop solar installations are performed as a result of shortcomings of Eskom/Municipal power suppliers, consumers should not further penalised by having to pay additional fee when taking proactive steps on their own account to have a reliable and cost effective electricity supply. Power exports provide additional power sources to grid providers without the need for those providers having to make any additional capital investments. They also receive the income from selling the generated power to other consumers. As such, it is unacceptable that the grid providers want to charge additional fees to consumers who export this power. The credit consumers receive for exporting power should also to be used to offset any of thier municipal costs related to electricity.	Iain	employed individual

	2026-09-28 15:34:56	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	These plans are absurd. 1) billing those that pay so those that don't can get it for free is wrong. With this thinking, rate payers will be forced to leave, creating an even larger gap. 2) Solar users should not be paying more, using less. If the same concept is applied to other forms of energy like petrol the economy would just collapse. What out of tough idiots do we have making decisions?	Nic	
	2026-09-28 15:35:08	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Rooftop Solar / Prosumer	It seems like the cost of vandalism, theft, etc is to be countered by adding the cost of non-paying consumers, illegal connections, cable theft, etc. to the bill of the law abiding consumers, living in suburbs. By increasing free electricity to low income groups, is the same as trying to cure an addiction by making drugs freely available. The cost structure should be based on pay for consumption on a sliding scale. The cost of consumption over the basic free electricity of 50kWh should be charged for, which is the same principle for anything else in life where things are consumed. Payment for things teaches respect, appreciation and provides money for the maintenance of the network and all who use the product should contribute to this cost, not just a select few. The cost of a rooftop system provides free electricity, but the cost of the installation off-sets this in terms of interest paid if the money is borrowed or interest lost, if the money came from investment funds. The reason for solar on roof tops became a necessity due to poor service delivery, power outages, power surges, load shedding, etc. which was a hoax pulled off by government. Now that cash cows are off the grid, you want to punish them by introducing taxes and charges. There is a difference between tax and theft. Tax is paid so that the payee can have a benefit. Theft is when money is charged for no service rendered.	Deon	self-employed
	2026-09-28 15:35:21	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	Its time to end electricity theft and subsidising non paying customers and municipalities. Stop treating compliant paying customers like cash cows. Start cutting off and prosecuting non paying customers including municipalities. The only reason there is no loadshedding right now is because of the people who installed solar. Now you want to tax us using high fixed monthly fees just to have a connection. We saved the country by spending our own money. You co tinue to give away free energy to non paying customers and do nothing when their bills go unpaid month kver month and now you want to come take even more from the people wjo do pay to give to the people who dont. This is unacceptable. Cut your wage bill. Prosecute corruption. Prosecute theft. Prosecute non payment. Doing all this will mean you could halve the cost of power instead of this continual increase. Trevor	self-employed
	2026-09-28 15:39:53	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I think this is just another way for the government to get more charges (fixed fees) from paying customers. There should always be a payable component of actual usage from the grid. Domestic customers were "forced" to get solar panels because of the suppliers' complete inability to guarantee continuous supply. The wide-spread installation of domestic solar panels, which actually assisted in stabilizing the grid and avoided on-going load-shedding came at a huge capital cost to home owners and now we have to endure further excessive high fixed charges. This is complete injustice . This whole sector should be privatised. This government is in-effective in everything they touch, they lack any skills and moral code to execute such a critical service for the proper functioning of a a city and its citizens and businesses.	Sandra Muller	retired
	2026-09-28 15:41:22	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	I spent tons of money investing in solar because you couldn't keep up with the demand on electricity. Why do I now have to pay again for your non-service and bad service? Why am I being targeted when you forced me and others to solve the problem with an expensive solar solution? This is not right and I won't stand for it.	Katie	Non-profit
	2026-09-28 15:41:58	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer		frikkie	employed individual
	2026-09-28 15:42:02	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Prepaid Meter User	Totally unacceptable to penalise solar users who were forced into going this route due to Eskoms inability to provide consistent reliable electricity. Until Eskom reduces their huge labour force and totally eliminates all fraud and unexplained costs the rates should be unchanged as they are already exorbitant for pensioners and other householders . Wealthy people will merely go off grid completely and eskom will be left with people who cannot afford their tariffs and people who use illegal connections and dont pay anything towards Eskom . A recipe for disaster if implemented.	Alan	retired
	2026-09-28 15:42:07	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	I feel that the local and national Government is penalising paying ratepayers. In addition the additional costs are not sustainable as the majority of South African are struggling to pay their bills especially with the increased global pressure on fuel prices and local economic unemployment. Proper budgeting and spending should be monitored by the municipalities and competent individuals should be at the helm of these key posts.	Monique	employed individual
	2026-09-28 15:42:27	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	This is the worst form of abuse of power by the state and its partners, making people pay for services they do not need is absurd. I want to install solar because I do not want to be abused by Eskom and the municipality, so learning about the proposed mandatory fixed tariffs is disturbing.	Thabile	employed individual

	2026-09-28 16:04:43	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Small / Medium Business Owner (SMME)	This document carries little weight in reality. NERSA and the forces of economic necessity are what actually dictate this cost matrix—not Eskom. Eskom is in a contortion of pain, losing its profitable business while pretending to control electricity supply in South Africa. The once-reasonable minister is now politically captured, driving the country into an energy death spiral to cover up past mistakes, lack of realistic economic solutions and corruption. This covert attempt to legislate redundant, outdated policies of centralized state utilities has already cost them a large share of their paying "most valued customers." They are now attempting to push these measures through without facing economic reality. What sums up this absurd reaction to the government's own commitment to renewable energy and emission reductions is Eskom's attempt to prevent progress with ridiculous "rules and charges." They now want to tax the renewable energy that private individuals pay for simply because Eskom cannot deliver reliable, clean, non-fossil fuel energy at affordable prices - as per their own international energy policy commitments. These actions will drive citizens toward conscientious objection and force more industry, commercial entities, and paying households off the grid. As a result, Eskom will become even more expensive, less reliable, and ultimately face full collapse—a trend ANC government lackeys deny in their self-delusion and plundering theft feaver before they also collapse. The entire proposal is illegal, counter-intuitive, and punishes paying customers to subsidize a failed doctrine and utility service company (its unconstitutional to toll for no service or product and is called extortion). 	2026-09-28 16:11:19	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	What the Draft Policy Proposes: The policy shifts tariff design away from volumetric consumption (c/kWh) toward mandatory fixed network and capacity charges (R/kVA, R/kW, or R/Amp/month). To eliminate “volume risk” for distributors, utilities will bill customers for grid availability and network reservation regardless of whether electricity is consumed. In addition, Policy Position 15 introduces a universal generation standby charge applied at the wholesale level to recover the capital costs of keeping backup dispatchable generation on standby for grid-tied users. The Core Civic / Household Risk: Households and small businesses that invested private savings into rooftop solar, batteries, or energy-efficiency measures to survive load shedding will be hit with steep monthly fixed fees simply for remaining connected to the grid. Frugal, low-volume consumers can no longer lower their utility bills by conserving electricity, as fixed network fees create a high, unavoidable monthly billing floor.	t	retired

	2026-09-28 16:28:23	No I do not	Other	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Prepaid Meter User	I do not agree with the majority of changes that will be introduced with the bill. The fact that people will be penalised for using Solar is a huge issue because I do want to get off the grid. I also don't like the fact that I have to be penalised for people who don't pay for their electricity or for theft or non-technical losses , there has to be a different approach taken on these customers. The problem is that we created a precedent to give electricity away for free and now things have changed.	Ursula	self-employed

	2026-09-28 16:29:21	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	This proposal is ridiculous. Eskom must stop wasting money, do their jobs and cut unnecessary spending and plan ahead, then you do not have to bleed the customers dry. You can not penalise people who use natural resources, obtained at great cost because of Eskom's inability to provide a basic service. Stop selling power to neighbouring countries for less than you charge your own citizens. Stop illegal power usage.	Natasha	self-employed
	2026-09-28 16:30:22	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Prepaid Meter User	Once again, "home owners" must pay the price for incompetence. Those who live in "rural areas" do not pay any of these charges and do not pay municipal fees for services and do not pay any rates and taxes. All for free. They even pay less per unit for electricity. But yet, once again, the "home owner" who is burdened enough as is,must pay. Fix charge for all home owners,.....When is it time to let those who get everything for free, pay? We simply cannot support them anymore as is. So we buy less electricity so we have food. The cash cow is drying up and very soon something is going to give inn.	Johan	
	2026-09-28 16:31:29	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)		Gerhard	
	2026-09-28 16:32:13	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	I Object to having to pay for fixed baseline fees and standby charges on solar and low-usage homes, punitive double network fees on solar exports, the elimination of stepped block tariffs for standard households, and the risk of retail consumers funding industrial smelter discounts or unfunded social expansions). In the early 2000's Eskom was a renowned power utility until corruption under the ANC's watch crippled the SOE. Collect outstanding fees from all overdue municipalities and see the coffers swell . Loadshedding forced customers/consumers to go the route of solar, which has largely improved electricity supply and now the ANC is wanting to punish the consumer with additional penalties.	Eric	retired

	2026-09-28 17:10:23	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I object to increasing fixed charges. Whilst I understand that there are costs associated with maintaining capacity for back up power for grid-tied solar installations, the fixed charges have increased over the years. It is unreasonable to keep increasing them. The installation of an off grid solar system was a huge upfront cost and by for our system it will take approximately 20 years to pay itself off. Imposing increasing fixed charges reduces this payback period making this a poor investment and disincentivising others from doing so in future. Fixed charges should be capped at 15% of average usage. There needs to be a fairer way of recovering costs and subsidising free basic electricity. The national fiscus needs to subsidise those who can't pay. It is enraging to read daily about rampant corruption and be expected to pay ongoing escalating costs in the face of this. South Africans are fed up.	Catherine	employed individual

	2026-09-28 17:29:19	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer, Prepaid Meter User	When ESKOM could not supply me with electricity, i had to make alternative arrangements to protect my property and safety/security that goes with that. Having no source of electricity allows criminals to take advantage of those who dont, alarm systems dont work, security lights dont work and so i can go on. I had to ensure that my home and property worked as if it had ESKOM electricity which came at a cost. A cost that no one assisted me with.....now you want to charge me for taking initiative to ensure i have my own electricity. Why should i and others who have taken this route be punished because there is less electricity used by people like us and revenue is less than it was to ESKOM and municipalities? Does this by any means seem fair? Maybe less "fat cats" should earn and i emphasize the word earn because they dont deserve or should earn these types of salaries if they cant keep the lights on. I am one of those that should you enforce this bill ill ensure that ill go totally go offgrid and you can cut the line to my home as im only semi dependant on ESKOM in winter. Ill ensure that ill have more than enough means to have electricity daily 365 days a year....your bill sats if we connected...well i wont be connected.	Quinton	employed individual
	2026-09-28 17:30:57	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	This bill is completely undemocratic and ill considered. It contains no incentive to consumers to reduce energy use and CO2 emissions and thus goes directly against South Africa's international obligation to reduce CO2 emissions under the International COP Treaty 1 . It shifts billing away from the electricity you actually consume (c/kWh) toward mandatory monthly network and capacity connection fees 2 For those with grid-tied solar, consumers are forced onto Time-of-Use tariffs and made to pay network distribution charges on both the electricity consumed and the excess power exported into the grid. Export credits cannot be used to offset ixed monthly network charges. 3 below-cost Negotiated Pricing Agreements (NPAs) to industrial smelters. Energy experts warn that unless funded externally, paying households and small businesses will be forced to cover the revenue shortfall. 4 Without increasing the national grant budget consumers will be forced to absorb Free Basic Electricity directly on those paying their bills, regardless of household income.	Graham

	2026-09-28 18:01:15	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	I am extremely opposed to this. The people who dropped capital on solar didn't do this to be difficult, they did this to deal with domestic or commercial challenges brought a out through the mismanagement and corruption of the state electricity supplier. We didn't voluntarily choose to spend all this money, it could have been better spent elsewhere, bit we were forced into a corner and it hit is in the pocket. However by doing this, our sacrifices bought Eskom and others time to recover, and yet the government now wants to punish us again for investing our hard earned money into their disastrous infrastructure services. I can tell you outright what is going to happen here. If this is passed, many of us are going to take ourselves completely off the grid, and the impact of this on the lower income houses is going to be disastrous as the rates will go up, and similarly, commercial enterprises being discounted will end up having to foot the brunt of the costs because they will not be able to recover sufficient fees from the former group. So it will backfire drastically. I appreciate that Eskom and others have a weight around their necks Ito the capital sunk (criminally) into infrastructure and they have financial obligations to meet which can only be recovered in certain manners, but you are sucking the middle class dry and this is literally a critical part of our market economy, and when they stop being able to operate in the markets because greedy and vpiroc public sector policy is so short sighted as not to see this, the country will collapse. You should be partnering with these people to bring more power onto the grid, and then exporting the surplus across borders,.or encouraging manufacturing to come back to South Africa to use this excess power, and making a profit, and sharing this with the domestic houses who are giving you this gift, rather than punishing them. 	2026-09-28 18:11:06	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form. The proposed approach to cost-reflective tariffs will place an unreasonable additional financial burden on households and consumers already facing high electricity and living costs. Electricity is an essential service. Any revised pricing framework should prioritise affordability, transparency and meaningful protection for ordinary households, while ensuring that inefficiencies, historical debt and systemic failures are not simply transferred to paying consumers through higher fixed charges or tariffs. The EPP 2026 should NOT be adopted in its current form and should be revised following meaningful consideration of its affordability and socioeconomic impact on South African consumers. 	2026-09-28 18:42:44	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I OBJECT to the Revised Electricity Pricing Policy (EPP 2026). I reject mandatory fixed grid capacity fees and standby charges on solar and low-usage homes. The notion of punishing those that use electric sparingly and those that look to alternatives is unacceptable. I reject punitive double network fees on solar exports and the elimination of stepped block tariffs for standard households. I reject the risk of retail consumers having to fund industrial smelter discounts or unfunded social expansions. This kind of approach to tariffs will add an unreasonable financial burden on households and consumers who are already over-extended by high electricity costs and soaring costs of living. Electricity is an essential service that should prioritise affordability, transparency and ordinary households should be protected from escalating costs, failures, incompetence, theft and corruption currently at the order of the day within every state-owned entity. I reject the current tendency of burdening consumers with inefficiencies, historical debt and systemic failures. The EPP 2026 should NOT be adopted as it is exploitative and completely ignorant of the impact it will have on paying consumers. I reject the fact that paying consumers have to continuously compensate for governmental failure to be honourable and upstanding and to provide affordable, reliable electricity to citizens.	Marne

	2026-09-28 18:56:05	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	Mandatory Fixed charges - This is a farce to cover up the lack of energy generation from Eskom and punishes energy efficient consumers and private capital invested to survive load shedding. This will have a massive impact on extending solar payback periods. Green energy should be rewarded not punished for something that has been required for most home owners who have the means. The rest have had to suffer through and pay more every year. Prosumer Net-Billing Rules (Policy Position 33) Highly punitive: charging solar owners double fees to export clean power while refusing to allow export credits to offset network fees creates an unviable investment model. This has been embraced in international markets and would do good for South Africa. Scrapping Inclining Block Tariffs (Policy Position 38) Removing IBRs in favour of flat energy rates plus heavy basic monthly connection fees will cause immediate sticker shock for low-to-middle-income ratepayers. This will also discourage any potential solar users in future as there is no cost benefit. This is a tax on a tax and should not be considered. Municipal Surcharge Ring-Fencing (Policy Position 47) Threatens local government fiscal collapse. If municipal electricity profits are stripped, councils will hike property rates or collapse basic community services. The municipalities can barely keep up with their mandate as is. How is this going to assist. Industrial Smelter NPAs (Policy Position 54) If heavy industry receives electricity at 62 c/kWh (below cost), ordinary retail consumers and small businesses will be forced to shoulder the resulting revenue shortfall. Government should be focusing on helping small business to grow. Large organization should be invested in electricity generation and pro-solar policies will assist with this. This is protecting big business while the small to medium Ailine enterprises are expected to pay more.	Daniel	employed individual

	2026-09-28 19:02:21	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	The Impact NERSA & ESKOM's 900% electricity rates since 2007 has on South African Citizens 1. Severe Household Affordability Crisis Because municipal electricity hikes typically exceed direct Eskom hikes to account for local distribution costs (e.g., municipal bulk buyers face higher increments), ordinary households bear the brunt. With wages stagnating and unemployment rising, citizens are forced to make trade-offs, often sacrificing nutrition, education, or healthcare simply to keep the lights on. [1, 2, 3] 2. The Failure of Social Safety Nets The Free Basic Electricity (FBE) policy is intended to protect indigent households by providing a baseline allocation of free power. However, structural faults mean it fails to safeguard the vulnerable: [1] • Only about 16% of eligible households actually receive the benefit. • Out of 2.5 million households that qualify, only about 400,000 receive it because municipalities frequently redirect the national funding into their general budgets. [1] 3. Job Losses and Stifled Economic Growth High electricity tariffs act as a regressive tax on businesses. According to economic assessments from NERSA, trying to recover historical financial balances directly from consumers over a multi-year window threatens to cut household incomes by R9.6 billion and liquidate over 45,000 jobs across the broader economy as businesses scale back or close down. [1] 4. Acceleration Towards Grid Defection Affluent households and functional businesses are rapidly defection from municipal grids by investing in private solar PV installations and battery storage. This leaves a shrinking pool of paying consumers on the national grid, forcing NERSA to raise tariffs even higher on those who cannot afford solar, aggravating the financial burden on lower-income citizens. [1, 2, 3] Long years of incapacity to deliver and massive loadshedding bankrupted many businesses which added to the hardships of citizens through countless job losses. During this time Eskom was rewarded the best employer reward and millions was paid in bonusses to those at the helm of it. Encouraging and rewarding the households and businesses who can afford solar energy to contribute to the grid - rather than implimenting the short sighted measurement of penalizing them for breaking away from the noose around their necks - will allow for cheaper supply to all. It may also just increase the dismal 16% of households who actually benefit to include more Competition is good. Other electricity suppliers , competitive rates, Tesla technology, greener solutions, etc will go a long way in saving South Africa from collapse. Consumers are simply not able to sustain continious state blunders and monopolies. The pressure is compounded by high fuel costs and transport services ever increasing the price of whatever is loaded on a truck - be it a loaf of bread or a smart TV It is time for South Africa to embrace new solutions - start something fresh - not to try and save outdated historical dogma	Anna	employed individual

	2026-09-28 19:22:37	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	The proposed changes do not prevent the ongoing freeloading by non-paying municipalities who, do not or will not continue to contribute in any way. Simply put, I have reduced my consumption to an absolute minimum. I have recently become unemployed and it is becomming increasingly unviable to consume electricity from the grid in any form whatsoever. In network fees alone, I now average 52% of the electricity bill. The real outcome that this incompetent group of individuals will be faced with, is an ever increase of people unable to pay at all, defaulting on payments in a consistent manner. Now that these bills are integrated with Water, Rates and Taxes, Sewage (a rate that represents literal theft by the municipality) and Garbage collection, payment of these other services are bound to fall short as well. This is not considering the interest burden the COJ weighs on defaulters and the general lack of service and competence in COJ''s walk-in centres. This is not a solution but a rope that is getting ever tighter.	Tony	unemployed individual

Ratepayers had to fork out money, that they did not have to purchase solar systems ,just to keep their households going, because of the failures of ESKOM and now you want to get theses same ratepayers to pay mandatory connections fees! You should be discounting these ratepayers, as they are the ones that "kept the lights on" so that the grid did not collapse, by installing alternative power sources. You should be encouraging them to put their unused power back into the grid (to decrease the price of electricity) and pay them for this - not steal from them!. Ratepayers are not there to be "milked" by policies to discount industrial deals or subsidize free electricity to 300kWH. You are killing the ratepayers in South Africa with all these ideology policies.	Karen	self-employed
	2026-09-28 19:45:28	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Rooftop Solar / Prosumer, Prepaid Meter User	We have allowed thieves to rob us for too long. I still use about 200kw on prepaid, but will extend my battery capacity to allow me an extra 10kw - 15kw and cut the cord from the grid completely. There is no such thing as a basic right to free electricity. If you want something you must pay for it. I encourage everyone that can to go solar leave these criminals to fail miserably and then the private sector can come and take control.	Daniel	employed individual
	2026-09-28 19:45:46	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I understand their challenges but it can't be it that every time they can't collect then the paying clients have to foot the bill. 1. Let them clamp on illegal connections that happening right in front of their eyes 2. Let them decisively deal with non-paying municipalities whom they left for long not paying until the matter was out of control simply because of camaraderie. 3. We had load-shedding for the longest time eve without solution and we had to device means for our families through expensive solar solutions and now they want to penalise us agin for something they caused. Whether we are using or not using power eskom will generate power because they have no means of storing it, so why does it seem like it is a new thing and put it on grid infrastructure. Brian resolved this without an issue of raising costs unnecessarily.	3l1@5

H	employed individual
	2026-09-28 20:06:12	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	The new pricing structure effectively penalizes citizens for services they do not use. The reason given is flimsy at best -- CourierGuy doesn't charge citizens in its service area for the _availability_ of their services. Airports don't charge all citizens in a town for the _availability_ of flights. The government doesn't charge a household rate to citizens for the _availability_ of the post office in an area. Even Cape Town tried to do this for water to charge citizens more fixed charges for water and it was found unconstitutional. Charge for services must be primarily based on the USAGE of that service, as with every other service that operates in the private sector. This seems to be a pure abuse of the fact that Eskom is a state monopoly and can lobby the government for customer capture. Charging people high fixed rates for zero usage is immoral and will likely fail any constitutionality test. Effectively the bill penalizes responsible citizens who reduce their burden on the states resources, and penalizes self-sufficient communities trying to uplift themselves. I emplore the mandatory fixed charged to be fully scrapped, and any and all standby charges on solar to be scrapped.	Nigel	self-employed
	2026-09-28 20:07:30	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer	We support our extended family as SASSA does not cover their expenses. We also try to run a guesthouse to bring in extra income. These electricity expenses. added to our own electricity costs is becoming a nightmare. We are at breaking point.	Roz

	2026-09-28 20:55:02	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Prepaid Meter User	I feel that Eskom is trying to rob the paying population of more money. Electricity is already far too expensive. It is not fair to penalize those who are trying to not drown in debt because of something as simple as electricity. Eskom should turn their focus to alternative forms of electricity generation through solar and wind turbines instead of using a finite resource like coal to make electricity. It cannot go on like this. When will it end? When no one can pay anymore?	Abigail	student

	2026-09-28 21:04:35	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Commercial / Industrial Power User	Eskom has for the longest time ignored non paying regions and punished law abiding, paying residents. This trend has not been reversed and has in fact been emphasized. Eskom seeks to impoverish middle income residents by extorting them for fees that have nothing to do with them. Cross subsidizing is ridiculous, since Eskom is a fundamentally mismanaged company. If we cannot produce cheap electricity, then it does not make sense to punish grid tied residents while paying for network capacity from power that is derived from expensive diesel generators. That these suggestions are even being put forward shows the utter incompetence and corrupt nature of this organisation. Eskom is nothing but a badly run, extortion based company. It should have zero mandate for exclusivity and residents and companies alike should be allowed to source their power from whatever source they can. Especially since electricity in South Africa is a critical need and companies need it to operate. Mismanagement of Eskom as per these suggestions is going to lead to massive job losses and the collapse of the economy. The network standby fees as well as the various other fees are nothing but a desperate attempt to charge consumers for non usage related fees. The exact same thing applies to the various other fees that are being proposed. The electrical grid should be open to whomever can provide the cheapest power. And that is not going to be from Eskom. I do not support any of these proposals.	Sascha	self-employed

	2026-09-28 21:18:53	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Prepaid Meter User	What the Draft Policy Proposes: The policy shifts tariff design away from volumetric consumption (c/kWh) toward mandatory fixed network and capacity charges (R/kVA, R/kW, or R/Amp/month). To eliminate “volume risk” for distributors, utilities will bill customers for grid availability and network reservation regardless of whether electricity is consumed. In addition, Policy Position 15 introduces a universal generation standby charge applied at the wholesale level to recover the capital costs of keeping backup dispatchable generation on standby for grid-tied users. The Core Civic / Household Risk: Households and small businesses that invested private savings into rooftop solar, batteries, or energy-efficiency measures to survive load shedding will be hit with steep monthly fixed fees simply for remaining connected to the grid. Frugal, low-volume consumers can no longer lower their utility bills by conserving electricity, as fixed network fees create a high, unavoidable monthly billing floor. What to Demand in Your Public Submission (PAJA-Enforceable Points): Demand that NERSA impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. Insist that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. Require utilities to absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers.	Marion	unemployed individual
	2026-09-28 21:18:58	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer, Prepaid Meter User	It is absolutely ludacris to propose that responsible, proactive citizens who have spent their well-earned money to install rooftop solar power should then be PENALIZED for helping the government out of its hopeless power struggles. The only reason that loadshedding has largely stopped is because the middle and uppoer class have again saved the government from its failing infrastructure by finding their own means to generate power and reduce the load on the crumbling, oversubscribed, grid. Instead of being punished, Eskom should look at buying power from these households. They would save on coal and fuel costs. They would do less actual work, could employ less people, could save more money and still meet the electricity needs of the country. In a greener way. It's so obvious and yet so unclear to those at Eskom.	Shavaughn	employed individual

	2026-09-28 21:43:16	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Prepaid Meter User	My wife and myself are both pensioners and use our electricity sparingly due to the high cost. During load shedding we were forced to invest in a small solar power system for security and medical reasons as we needed to have electricity. I remember at one stage the government offered incentives for the public to install solar systems as the grid could not cope now the government want to penalise the very same people. I must note that I did not make use of the incentive system. Eskom now boasts that it now has excess power however had it not been for private business and households installing solar they would not be in this position today. The government is to blame for Eskom being in this mess now they want ratepayers to bail them out while trying to score political points. If Eskom want to save money, they need to look at their staff budget as they have always been overpaid when looking at the private sector. They also need to look at their tender processes and contracts. Privatising is the only way to go for as long as we are a state-owned company political interference will always be a telling factor. Basically, we the public just cannot afford to pay any more than we currently are, the badly run municipalities and government need to start appointing competent, honest people only then will Eskom start to be paid. If Eskom forces this through it will force paying people to have to disconnect from the grid which will compound Eskoms problem	Frederick Michael	retired

	2026-09-28 22:04:20	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	I am deeply concerned about these proposed changes. They risk placing a greater financial burden on ordinary households, particularly those who actively reduce their electricity consumption or invest in rooftop solar. It is unfair for responsible consumers to face higher fixed charges and additional costs for feeding power back into the grid, while households may also end up subsidising discounted industrial electricity and expanded free electricity without clear funding. We need an electricity pricing system that is fair, transparent and sustainable—not one that increasingly shifts the costs onto paying households and small businesses.	Ashleigh	
	2026-09-28 22:07:17	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Prepaid Meter User	If the mandatory grid fees cone in, electricity usage is going to increase as people try to use the free portion since it is already paid for. The incentive to use power sparingly will be removed. This is also probably going to be too much for the average person or small business to afford.	Trevor	business owner

	2026-09-28 23:53:04	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant)	? **I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form.** Households that invest their own money in rooftop solar should be encouraged and rewarded for reducing pressure on the electricity system, not penalised through excessive fixed, capacity or standby charges. There should be a **minimal and reasonable standing charge for maintaining a grid connection**, with a greater proportion of electricity costs recovered through actual usage. This would allow households to contribute towards the network while still rewarding those who reduce their demand. A simple example shows why this matters. Cooking one basic evening meal each day may require only around **25–45 kWh per month**. A solar-equipped household can generate this amount itself many times over. Imposing a large unavoidable monthly charge regardless of how little electricity that household imports removes much of the financial benefit of reducing consumption. Solar households can also provide electricity back to the grid. Exported electricity contributes additional distributed generation to the system and should receive a fair credit or payment. Supplying useful electricity to the network should be recognised as a benefit, not treated as another opportunity to impose charges. There is also a wider risk. If staying connected to the grid becomes disproportionately expensive, households and businesses that can afford batteries and additional generation may choose to disconnect completely. That would reduce the number of customers contributing towards the shared network and could leave a greater proportion of transmission, distribution and maintenance costs to households that cannot afford to leave the grid. This could create a damaging cycle of higher charges, further grid defection and an increasingly difficult funding burden for the electricity network. The better approach is therefore: - a **small, transparent standing charge** for remaining connected; - slightly higher usage-based charges where necessary; - fair payment or credit for electricity exported to the grid; - no punitive standby or duplicate network charges simply because a household owns solar; - tariffs that encourage customers to remain connected and participate in the electricity system. South Africa needs more generation capacity and a financially sustainable electricity network. Households investing their own capital in generation can contribute to both objectives. The tariff structure should encourage them to remain connected, consume efficiently and supply surplus electricity to the grid rather than giving them a financial incentive to disconnect altogether. 	2026-09-29 04:24:00	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Prepaid Meter User	Eskom is a business enterprise that needs to change its business model and strategy to reflect the environment in which it operates. Eskom was created as a non-profit public utility under 1922 legislation and for the next 50+ years functioned as a de facto monopoly - albeit a relatively benign monopoly. Since then, Eskom has mutated into an entity that seems more concerned with dominating the electrical supply than with serving the South African economy. Eskom's revised policy forces a shrinking pool of paying customers to cross-subsidise its inefficient business practices. This penalises the economy, driving electrical costs far beyond inflation. Eskom must be run purely as a public SOE serving citizens, not a corporate entity prioritising profits over national economic survival.	Quentin	retired

	2026-09-29 05:24:17	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form. My objection is based primarily on the unfair financial burden that the proposed changes could place on ordinary residential electricity consumers, particularly lower- and middle-income households that have already endured substantial increases in electricity costs. For many years, ordinary South Africans have been loyal customers of Eskom and have paid for the electricity supplied to their homes. Consumers should not now be expected to carry an ever-increasing financial burden because of historical problems within the electricity system, including poor maintenance, operational inefficiencies, losses and other costs that consumers have little or no control over. Consumers should not be made responsible for correcting the consequences of failures that they did not cause. What concerns me particularly is that a household that has tried to reduce its dependence on Eskom by investing its own money in solar panels, batteries or other alternative electricity solutions could potentially be penalised through additional fixed grid-capacity charges, standby charges or other network charges. This creates an extremely unfair situation. If electricity supplied by Eskom becomes increasingly unaffordable, consumers are naturally going to look for ways to reduce their consumption and protect their household finances. A consumer who invests their own money to reduce demand on the electricity grid should not then be financially penalised for doing exactly that. I therefore strongly object to: Mandatory fixed grid-capacity fees that could disproportionately affect households with low electricity consumption. Standby charges imposed on households that have invested in alternative generation or battery systems. Additional or punitive network charges associated with electricity generated by consumers themselves and exported to the grid. The removal or reduction of stepped/block tariffs where this could increase the burden on ordinary residential consumers. Any tariff structure that results in residential consumers effectively subsidising preferential electricity arrangements or discounts provided to large industrial users without a transparent and equitable justification. Any expansion of costs to residential consumers where the underlying expenditure, losses or efficiency problems have not been adequately addressed. There must also be a clear principle of accountability before cost recovery. Before asking ordinary consumers to pay more, Eskom and the relevant authorities should demonstrate that every reasonable measure has been taken to reduce unnecessary expenditure, improve maintenance, eliminate waste, improve operational efficiency, address electricity losses and ensure that consumers receive value for the money they are already paying. It is not reasonable to continually increase the financial burden on consumers while expecting them to simply absorb the consequences of systemic problems. There is also an important social and economic issue here. Electricity is an essential service. For a household already struggling with food, housing, transport, education and other living costs, another increase in the fixed cost of electricity can have a significant impact even when that household uses very little electricity. A low-usage household should not automatically be treated as a problem for the electricity system simply because it has reduced its consumption. Similarly, a household that has invested its own money in solar generation or battery storage should not be treated as though it is avoiding its responsibilities. In many cases, such investment reduces the household's demand on Eskom and can contribute to reducing pressure on the electricity system. Consumers cannot reasonably be expected to pay twice: once for an increasingly expensive electricity supply, and again when they invest their own money to reduce their dependence on that supply. I therefore call on NERSA and the relevant authorities to ensure that any revised electricity pricing structure: Protects vulnerable residential consumers from disproportionate increases in fixed and network charges. Does not unfairly penalise households that reduce their electricity consumption. Does not discourage investment in rooftop solar, batteries and other alternative energy technologies. Provides clear and transparent evidence for every proposed charge and demonstrates the actual cost it is intended to recover. Ensures that residential consumers are not unfairly required to subsidise preferential arrangements for other customer categories. Places greater emphasis on operational efficiency, maintenance, accountability and reduction of losses before additional costs are transferred to consumers. Maintains a fair and transparent tariff structure that recognises the ability of households to pay. Ensures that the transition to a changing electricity system does not disproportionately burden ordinary South African households. I fully recognise that Eskom requires sufficient revenue to operate, maintain and improve the electricity system. However, revenue recovery cannot come at any cost and cannot simply be transferred to consumers without adequate consideration of affordability, efficiency, fairness and accountability. Consumers who have faithfully paid their electricity accounts for years should not be treated as the solution to problems they did not create. And consumers who have taken responsibility for reducing their electricity consumption should not be punished for doing so. For these reasons, I formally object to the Revised Electricity Pricing Policy (EPP 2026) in its current form and request that the proposed changes be reconsidered to ensure that the final policy is fair, affordable, transparent and sustainable for ordinary residential electricity consumers. 	2026-09-29 07:14:31	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	I hereby submit my objection to the proposed Revised Electricity Pricing Policy, 2026. While I support a reliable, financially sustainable and transparent electricity market, I am concerned that several aspects of the proposed policy risk moving South Africa away from market based principles, private investment and consumer choice. In particular, I object to measures that could impose substantial fixed network and capacity charges on consumers regardless of their actual electricity consumption. Consumers who invest their own capital in energy efficiency, solar generation and battery storage should be encouraged—not financially penalised—for reducing their dependence on the electricity grid I am also concerned that excessive charges on distributed generation and electricity exports could discourage further private investment in renewable energy. South Africa should be creating incentives for households and businesses to invest in generation capacity, rather than introducing tariff structures that make such investment less attractive Furthermore, any preferential or below-cost electricity arrangements for selected industries should be transparently funded and independently justified. The costs of industrial policy should not simply be transferred to households, small businesses and other electricity consumers through higher tariffs Similarly, any expansion of subsidised or free electricity must have a clearly identified and sustainable funding mechanism. Social support is an important policy objective, but it should not result in an undisclosed cross subsidy imposed disproportionately on productive consumers South Africa urgently needs **more generation, more private investment, greater competition, lower regulatory barriers and greater consumer choice**. Electricity pricing policy should support these objectives rather than discourage investment in alternative generation and energy efficiency I therefore request that the Department: 1. Reconsider mandatory fixed charges that disproportionately penalise low consumption and self generating consumers 2. Ensure that rooftop solar and distributed generation are not subjected to punitive or discriminatory tariff structures 3. Require full transparency regarding the costs and beneficiaries of negotiated electricity pricing arrangements. 4. Ensure that social electricity subsidies have an identifiable and sustainable source of funding 5. Conduct a comprehensive regulatory and economic impact assessment of the proposed tariff changes on households, small businesses and private energy investment 6. Ensure that the final policy promotes competition, private investment, innovation, energy independence and economic growth South Africa should be moving towards a more competitive and investment-friendly electricity market, not creating additional financial barriers for consumers who invest their own money to reduce pressure on the national grid I respectfully request that this submission be taken into consideration before the Revised Electricity Pricing Policy is finalised	Simon	employed individual

	2026-09-29 07:22:14	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer	Forcing payment for non use of the system is illegal Smelters can be subsidized down to actual cost but not below cost Shortfalls and subsidies must be paid by taxes raised not by cross subsidization	John	
	2026-09-29 07:22:23	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Use your budgets better to offset the cost for electricity. Rate payers/middle income earners should not have to fit the bill for free loaders. Setup solar power systems for the under-privileged instead of making rate payers pay.	Candice	employed individual
	2026-09-29 07:22:44	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Prepaid Meter User	Demand that NERSA impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. Insist that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. Require utilities to absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers. Demand that NERSA automatically reject any municipal tariff application that is not supported by a fully audited, publicly accessible Cost of Supply (CoS) study (Policy Position 25(a)). Insist on the immediate statutory ring-fencing of all municipal electricity revenues into dedicated maintenance accounts, legally prohibiting councils from diverting electricity revenue to fund unrelated municipal wage bills or deficits. Demand that National Treasury set a hard, uniform percentage cap on the Municipal Surcharge on Electricity (MSOE) to prevent local councils from using surcharges to circumvent NERSA tariff controls. Demand the complete removal of DUoS and TUoS network charges on exported electricity (Policy Position 33(d)), recognising that embedded solar reduces local line losses and daytime substation loading.	Deon	self-employed
	2026-09-29 07:24:31	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Prepaid Meter User	The SA consumer is already under extreme pressure, with rising costs all over. This will be bad for the economy and for escom itself. When escom could not deliver enough power, consumers installed solar to survive. This back-fired on escom's finances in the end. Forcing consumers to be penalised for being connected to the grid, will lead to the next step, where we go off-grid completely. Forcing consumers to pay fixed fees instead of pay as you use, is a sign of bad management and now the consumers have to pay for your lack of management skills. Get a model where you pay for what you use. That includes every consumer, including smelters and mines.	Gilbert	business owner

	2026-09-29 07:32:48	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Commercial / Industrial Power User, Rooftop Solar / Prosumer, Prepaid Meter User	I strongly object to the proposed Revised Electricity Pricing Policy (EPP2026), particularly its proposed shift from usage-based electricity pricing towards mandatory fixed network and capacity charges. The policy risks fundamentally undermining the principle that consumers should be rewarded—not penalised—for reducing their demand on an already-constrained electricity system. Households and businesses that invested substantial capital in rooftop solar, batteries and energy-efficiency measures did so largely because failures in the electricity system made reliable supply increasingly unaffordable and uncertain. It is deeply inequitable to now impose additional network charges on these consumers, including charges associated with electricity they export back into the grid, while preventing export credits from offsetting fixed charges. This amounts to penalising precisely the investment that government should be encouraging. There are also serious concerns regarding the proposed expansion of below-cost Negotiated Pricing Agreements with energy-intensive industries. Any resulting revenue shortfall must not simply be transferred to ordinary households and small businesses through higher tariffs. Likewise, expanding Free Basic Electricity substantially without corresponding additional funding risks shifting the burden onto the shrinking pool of paying consumers. The electricity crisis was not created by households installing solar. It was created by years of inadequate investment, governance failures, corruption, poor maintenance and policy decisions that undermined the sustainability of the electricity system. Consumers responded rationally by investing their own money to protect their homes, businesses, employees and livelihoods. Government should not now seek to recover lost revenue by effectively charging these consumers twice. Of particular concern is the impact on small and medium-sized businesses and manufacturers. Rising electricity costs, combined with fixed charges and increased regulatory burdens, directly erode competitiveness. This risks making South African manufacturing increasingly unviable and accelerating the outsourcing of production to lower-cost countries such as China—deepening unemployment and weakening the domestic industrial base. I support measures that eliminate unjustified municipal electricity mark-ups and prevent efficient consumers from subsidising theft, corruption and non-payment. However, EPP2026 must not replace one broken funding model with another. The policy should be reconsidered to ensure that electricity pricing rewards efficiency, encourages private investment in generation, protects productive businesses and places the cost of systemic failures where it belongs—not disproportionately on those who continue to pay. Furthermore, we as consumers should not have to pay more so that big polluting industries get a lower rate. The government needs to start phasing out coal and start implementing green energy (solar, wind, and hydropower).	Neleha	self-employed
	2026-09-29 08:06:13	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	Most if not all of these proposed changes will once again fall onto the upper-lower and middle class to fund - explicitly and implicitly. Throwing more money at a problem is not the solution especially where fraud and corruption is so deeply entrenched in the SOE's - especially Eskom. Root out the corruption, remove the guilty parties, improve your processes, become more efficient. Only then can we start talking about ways to increase funding.	Johan	
	2026-09-29 08:06:18	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	Dear Sir/Madam, I hereby wish to formally record my objection to aspects of the proposed Revised Electricity Pricing Policy 2026, particularly the principle of increasing fixed network or capacity-related charges for residential consumers who have invested in their own solar generation. I am a South African homeowner who has invested a substantial amount of my own after-tax money in a solar system. I did so partly because of years of load shedding, escalating electricity costs and uncertainty regarding the reliability of electricity supply. My investment reduced my dependence on the national electricity system, reduced my consumption from the grid and contributed private capital towards South Africa's transition to alternative energy. I therefore find it extremely difficult to accept a tariff structure under which consumers who have deliberately reduced their electricity consumption may increasingly be required to pay unavoidable fixed charges simply because they retain a grid connection. I accept that maintaining an electricity distribution network has legitimate fixed costs and that a consumer who remains connected should make a reasonable and demonstrably cost-reflective contribution towards those costs. However, there is an important difference between recovering the genuine cost of maintaining a connection and designing tariffs that effectively penalise consumers for reducing their electricity consumption or investing in solar generation. Any proposed fixed charge should therefore be transparent and supported by independently verifiable cost-of-supply calculations. It should not become a mechanism through which declining electricity sales are simply recovered from those consumers who have invested their own capital in becoming more energy independent. I am particularly concerned about the following principle: A household that consumes less electricity should still receive a meaningful financial benefit from doing so. If an increasing portion of the electricity account becomes unavoidable fixed charges, the economic incentive to conserve electricity and invest in renewable generation is progressively undermined. This creates a serious policy contradiction. South Africans were encouraged to reduce pressure on the electricity system and invest in alternative generation during an unprecedented electricity crisis. Many households responded by spending hundreds of thousands of rand of their own money. Those same households should not subsequently find that the tariff structure has been redesigned specifically to recover the revenue that utilities have lost because consumers followed precisely that course of action. I therefore request that the final policy provide clear safeguards requiring that: 1. Fixed network charges must reflect the actual reasonable cost of providing and maintaining the connection, rather than compensate utilities for lost electricity sales. 2. Solar and other self-generating households must not be subjected to punitive or discriminatory charges merely because they generate their own electricity. 3. The methodology used to calculate fixed and capacity charges must be transparent and subject to appropriate regulatory scrutiny. 4. Consumers must retain a meaningful financial incentive to reduce consumption and invest in renewable energy. 5. The overall effect on ordinary residential consumers and small businesses must be properly assessed before implementation. I support a sustainable electricity network and accept that its legitimate costs must be funded. What I strongly oppose is a system that transfers an ever-increasing proportion of those costs to fixed charges and thereby diminishes the benefit of responsible private investment in solar generation. South Africans who invested their own capital to reduce pressure on the electricity system should be regarded as part of the solution—not treated as a convenient source from which lost electricity revenue can simply be recovered. I respectfully request that my objection be taken into account before the Revised Electricity Pricing Policy is finalised. Yours faithfully, Sias Truter	Sias	business owner

	2026-09-29 08:45:05	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	This bill disempowers users to be able to control their spending on electricity. It very much looks like the punishment of people that are deceasing their electricity demands from the grid. Not only punishing them but demanding payment from them to fund the mismanagement of the grid as well as fund the un-calculateable amounts of stolen KWh in the ever expanding shack cities. This is NOT serving the tax paying citizens of the country but loading burdens on them for being thrifty.	Frederik	retired
	2026-09-29 08:47:01	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant)		Yusuf	
	2026-09-29 08:47:06	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	We've seen this before, heard the rumours, and now it rears its ugly head again. Eskom asked for our help, asked us to use less, we did that, and we invested in rooftop solar to help ease the problem. Now we are to be penalised for this and the incentive to install new, or improve existing solar installations disappears. If only I had more north-facing roof space, I would just fit more panels, more batteries and disconnect from the grid, rather than fund this dysfunctional government entity that now wants to bite the hand that feeds it. If they are approved, these fixed charges will just keep on increasing to fund the monster that is Eskom, all the while tugging at the pockets of those who stepped up to help out when the country was plunged into darkness just a few years ago.	Trevor	retired

	2026-09-29 08:47:35	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	Because of the inability of Eskom to adequately supply electricity, I had to invest in costly solar power. Now I'm being penalized. Yet again I am paying for the inefficiency and utter criminal activity of Eskom and it's cronies.	Michela	retired
	2026-09-29 08:47:40	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	I hereby submit my objection to the Revised Electricity Pricing Policy (EPP 2026) in its current form. I recognise the need for South Africa to modernise its electricity pricing framework and to ensure that the electricity supply industry is financially sustainable. I also recognise that electricity networks involve significant fixed costs that must be recovered even when individual consumers reduce their electricity consumption. However, I am concerned that the proposed pricing framework could place a disproportionate financial burden on ordinary residential consumers, particularly households that have invested their own money in solar photovoltaic systems, batteries, energy efficiency and other measures to reduce their dependence on the electricity grid.	CAROLINE	employed individual

	2026-09-29 08:49:06	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	I reject the Revised Electricity Pricing Policy as published. I ask that it be withdrawn and redrafted, and that this objection be recorded and considered under the Promotion of Administrative Justice Act. 1. Mandatory fixed charges punish citizens for solving a crisis the state created South Africa's electricity crisis was not caused by consumers. It was caused by years of mismanagement, political interference and corruption at Eskom. The State Capture Commission recorded this in detail, including irregular contracts and recommended criminal investigations of senior Eskom executives. It also criticised cadre deployment, which put people in positions they were not qualified for. Citizens then endured years of load shedding. To protect their homes, livelihoods and businesses, they were forced to spend their own money, often hundreds of thousands of rands, on solar panels, inverters and batteries. That private investment rescued the grid. Rooftop solar now exceeds 8.3 GW, about three times the operational capacity of the government's own REIPPPP and RMIPPPP programmes combined. Households and businesses did this without a cent of state funding. Eskom and the state should be thanking these citizens. Instead, EPP 2026 imposes hefty fixed network and capacity charges that apply whatever a household uses. This removes the saving that justified the investment, and it punishes people for being responsible. I object in the strongest terms. 2. Charging solar exporters twice is unjust Forcing solar prosumers onto Time-of-Use tariffs is unfair. So is charging them network fees on both the power they consume and the power they export, while barring export credits from offsetting fixed charges. Prosumers supply clean power into the grid at peak demand, with no capital cost to the utility. Penalising that contribution is perverse. It will discourage exactly the private investment the country needs. Export credits must be allowed to offset all charges on the bill, and exported energy must not carry network fees. 3. Households must not subsidise below-cost deals for profitable smelters Expanding below-cost Negotiated Pricing Agreements for industrial smelters, such as the 62c/kWh ferrochrome deal, shifts the cost onto households and small businesses. Since 2007, Eskom tariffs have risen about 1,172%, against inflation of about 174%. Ordinary consumers have already been squeezed beyond reason. If government wants to support strategic industries, that support must be funded openly from the fiscus, capped, time-limited and published. It must never be hidden in the tariffs of paying customers. 4. Free Basic Electricity must be funded honestly, not loaded onto paying consumers I support help for poor households. But the proposal to raise Free Basic Electricity from 50 kWh to as much as 300 kWh a month, while keeping the national grant at the same level, will almost certainly land on the bills of paying customers. A shrinking base of paying ratepayers cannot keep funding the consequences of wasteful spending, failed job creation and corruption. The real answer to energy poverty is economic growth and jobs, so that people can afford power and sustain themselves. Any FBE expansion must be fully and transparently funded through the national budget. 5. The crackdown on municipal surcharges must be enforced, not just announced I support the provisions banning municipal electricity surcharges and stopping theft, non-technical losses and bad debt from being passed on to paying consumers. However, municipalities already owe Eskom more than R120 billion, and the Minister has warned this could reach R358 billion by 2031. Much of that failure comes from mismanagement and corruption. Paying ratepayers have covered it for years. These provisions need binding enforcement, independent Cost of Supply audits, published results, and personal consequences for officials who misuse electricity revenue. Without that, they are empty promises. Conclusion EPP 2026 asks the honest, paying, tax-compliant citizen to pay once again for failures that were not theirs. This is neither fair nor sustainable, for anyone. I call on the Minister to: withdraw the mandatory fixed charges for residential and solar customers; drop network charges on prosumer exports and let credits offset the full bill; fund any industrial support and FBE expansion openly from the fiscus, not through tariffs; keep and enforce the municipal surcharge and bad-debt protections. Silence is not consent. I do not consent.	Michael	self-employed

	2026-09-29 09:14:46	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Prepaid Meter User	Minister Ramagokba has for the longest time been an opponent of renewable energy and this policy reeks of another ANC led government grab at the consumer end of energy policy. Instead of implementing green energy initiatives that the government has received grants for over the recent years, the Ministry has repeatedly refused to move into the 21st century and wants to subsidise the masses by overcharging paying customers. The City Of Cape Town already charges a fixed fee for electricity and this government fee will lead to the same. Instead of improving infrastructure, this policy aims to charge the consumer to further subsidise a growing burden on the economy and infrastructure. Improving the energy grid with renewables, opening up the grid to private contributors via private enterprise and through renewable energy sources is a better solution but seems to be another redirect of scarce resources from a small minority of ratepayers into the coffers of an ever increasing socialist state that bears no fruit and even less accountability when these financial resources are squandered. When we allow private enterprise to assist the State Owned Enterprise (SOE) to generate and distribute energy to consumers, the need for government to "tax" the consumer by increasing rates and introducing fixed tariffs will be dramatically reduced as well as add more jobs to the economy where income tax can increase the treasury's purse better. This is a short sighted quick fix rather than a long term plan to improve and increase the energy generation and distribution sectors of the economy. I am completely opposed and hope my fellow South Africans will be wise and stand up against this practice countrywide	Garron	employed individual

So kindly consider the elderly, the frail, the unemployed and the disabled, people are suffering, just to put food on the table.	Jaden	unemployed individual
	2026-09-29 09:40:49	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	At the trough again!	Peter	retired
	2026-09-29 09:43:54	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	The Government can not put EVERYTHING in a melting pot for every South African Citizen to carry the load. This is unethical. It is like forcing one person to pay someone else's account! The 'free loader' will obviously love that while others will be burdened even beyond ability. Those who are already 'adding' to the countries GDP will be stunted and the poor will become even poorer. The Government should 'compensate' those who 'lifted' the burden off the electricity grid that did not cost them a cent instead of penilising them! This is clearly just another 'opportunity' to make it impossible to 'follow the money' that can be syphered 'anywhere' (Again). The ANC did not built more electricity plants when they were supposed to now they continue to make everyone 'pay the price'. How about they fix infrastructure first before adding another burden to South Africans!	Trevor & Christel	employed individual

	2026-09-29 09:45:43	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	I am totally lost for words. How on earth can the government keep passing the cost of their incompetent management on to the public, but continue to steal what they are given. I purchased a prepaid meter so that I could control my costs during my retirement. 20 years later I am paying through the nose and getting next to nothing for it. Currently a 726% increase since I retired in 2006 and now I have a standing charge and restricted amperage on top of that. When is this daylight robbery going to stop?	Rhett	retired
	2026-09-29 09:46:23	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Prepaid Meter User		Christos	retired
	2026-09-29 09:47:12	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	I object to the Revised Electricity Pricing Policy (EPP 2026) in its current form (Rejects mandatory fixed grid capacity fees and standby charges on solar and low-usage homes, punitive double network fees on solar exports, the elimination of stepped block tariffs for standard households, and the risk of retail consumers funding industrial smelter discounts or unfunded social expansions). The ruling party encouraged South Africans to install solar during the devastating load shedding and even gave South Africans a once off tax credit. Eskom with the Department of Energy installed thousands of solar geysers across the country. I see no clear reason why consumers have to pay because Eskom failed to read their markets either incorrectly or not at all.	Pieter	retired

	2026-09-29 09:56:56	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	This is ridiculous, I don't agree with any of this. How can you expect paying people to pay double (a fixed fee and if you have solar) but then give "free electricity" to others? A lot of people will not be able to pay the fixed amount. Now the ones who are using their electricity sparingly their bill will probably double while the comrades pay nothing! Everyone must pay! The industrial industry and farmers should have a subsidised tariff, but not at the expense of those who do pay. More and more people will get off of the grid if you continue this, then what are you idiots going to do then? Which I think is a great idea, getting off Eskom completely. Then the ANC can try keep Eskom going.	Van

	2026-09-29 10:09:09	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	Eskom created their own mess by all the loadshedding, where is the accountability? Government encourage citizens to install solar solutions and so we did at great expense. Many of us financed these solutions on our home loans. We are still paying the banks. Now government realized the mistake they made - all the electricity paying consumers left and are now mostly self-reliant. The way government is treating citizens is dismal. This is not acceptable. Citizens made sums based on current pricing models, we had to establish that the sums worked before we installed solar. Now governments pulls out the rug under the feet of citizens. Totally not acceptable. The economy is in recession with no light at the end of the tunnel, we are in the middle of a cost-of-living crises. In fact, is this legislation gets approved, it will make financial sense to upgrade my solar and other electricity generating capabilities further, with the aim of disconnecting from the grid completely, something government cannot refuse. Why does government insist on being an enemy of the people? I thought government was there to serve the nation?	Jacques	employed individual

Other countries subsidise the cost of putting in solar, and then PAY the solar power user for any extra power their solar set-up creates and they feed that extra power back into the system to increase the country's overall power supply. Eskom has always been a bunch of crooks. There is no way anyone should have to pay for electricity they don't use and if we're helping increase the power supply by using solar there should payment BY Eskom for that power. We have SO MUCH SUN that solar power on every home should be mandatory. And we shouldn't be charged for the power it produces. This would completely solve the problem of the poor or disadvantaged being without power. Eskom's proposal is nothing more than greed and another money making scheme - not to run Eskom properly, which they've never done, but to pocket all the funds for themselves - which they've always done. They need to stop thinking like a 3rd world country or like looters, and start thinking like first world countries that use both solar, wind, and convert garbage into power as well! But that would mean Eskom stops being run by crooks!	Elaine	self-employed

	2026-09-29 10:36:48	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Prepaid Meter User	In an economy already stretched to the hilt, this will just add exceedingly more pressure to the average household, let alone all of the SASSA grant recipients. It is a little late to complain about loss of revenue, cost of grid maintenance and more when government should have been worrying about cleaner energy alternatives 30 years ago? Why now suddenly is it an issue when multi-million-rand solar systems HAD to be installed due to lack of power during the load shedding crisis, and the number of businesses that had to shut down and jobs lost? Were those people compensated by Government? Most certainly not, it was a case of - oh dear just too bad, get over it and move on? And even more sadly this in what is deemed not be a Developed economy? I think not. The fact cats in government must keep their dirty little paws off of the fiscus and responsible, educated and honest officials should be left to get on with fixing what has been destroyed, however with an eagle eye watching over all expenditure. The problem is that the ANC government allowed all infrastructure to go to total rack and ruin over their last 32-year honeymoon and now are just looking for another means of grabbing money. What more do they want from us. We need to stand against this professionalized CORRUPTION at all costs. Find the problem by following the money. My electricity spend is now 32,46% of my rent and 5,63% of my take home salary, and I do not benefit from the free 50kwhrs as it is a private prepaid meter system? That after I have converted to a gas geyser and gas stove for cooking and this deduction after a 60% cost saving as a result of the gas route. I use an open fireplace for heat in the winter as electricity is unaffordable for this, so where is it going to end. Plus, every other day we are without electricity as we cannot afford solar installations and this electricity shortage due to a collapsed infrastructure that just cannot cope anymore, due to a lack of planned maintenance.	Malcolm	employed individual
	2026-09-29 10:37:03	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	All consumers have had to lower and manage the electricity consumption in their homes carefully. The earnings per capita in this country has been on a downward trajectory since the ANC regime started. Adding to the constantly increasing cost of living is the ANC way of financing the theft and corruption that is synonymous with their name. The future for citizens is scary as we can never relax for a moment. There is always another scheme brooding to extort from the public to compensate for their incompetence and theft. 	2026-09-29 11:06:06	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	Just another way for the government to drain the consumer of money that they do not have under the guise of transparency. Show me one transparent department in this government where corruption does not exist. How did south africa go from 20 years of reserves to no coal and depleted infrastructure? It's all theft and corruption! This government is drying up the economy to a point of no return. At the end of this all, the middle class who is carrying the full burden of this corruption is falling away into poverty and the only ones who ever benefit from all these new ideas of ways to steal from its people is the government! So No!!!!	Christy	employed individual
	2026-09-29 11:07:50	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	The Core Civic / Household Risk: Households that were forced to invest private savings into rooftop solar, batteries, or energy-efficiency measures to survive the past LLLOOONNNGGG load shedding- Eskom not being able to supply but still demanding payment- will be hit with steep monthly fixed fees simply for remaining connected to the grid. It is like being forced to still pay (Shop A) for unreliable coffee, THAT I DON'T BUY @ ANYMORE because I'm now buying it @ (Shop B). I'm still responsible for paying my taxes for using/crossing the street/infrasructure, BUT where I BUY my coffee is my free choice. Forcing me to still pay you because you are angry at me for helping myself to an out-of-pocket alternative, because you could not render a paid service. You are a bully and a thief, and this is a problem you have created, aiming to this point to capture capital unfairly. THE PURPOSE OF SOLAR WAS FOR RELIABILITY AND COST SAVINGS IN MY POCKET AND NOT TO FILL YOUR POCKETS. The masses are getting free electricity with the expectation of a promised vote on the ballot paper, and we have to pay for that free electricity they get for that promise. Frugal, low-volume consumers can no longer lower their utility bills by conserving electricity, as fixed network fees create a high, unavoidable monthly billing floor. Out of proportion fixed costs is just another form of tax, mostly punishing tax payers who funded roof top solar from income that was already taxed. Taxpayers should not be required to pay for the failure of Eskom & government to deliver on their duty of providing a reliable basic service. NERSA must impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. Payment for a service should be primarily determined by usage of the service. Revering this to billing for availability, removes the ability to control spend by usage. Low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. Utilities requested consumers to reduce usage and they complied. It was known in advance that this will lead to reduced revenue from sales. Thus utilities must absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers.	Vincent	employed individual

	2026-09-29 11:45:49	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer	This appears to be a sinking ships' (Eskom) attempt whilst they still monopolize the industry to remain profitable whilst the need for their services are reducing year on year by those that could purchase their services if the price was right. Whilst using this over charging to increase free electricity. They just declared a profit ??? No Government SOE entity should remain with that profit, that should be redistributed back to pay for the years of bailouts. We should, as many other countries do, totally privatize the industry, bring in multiple different Companies to offer Electricity to the consumer and we can choose which one provides the best solution. As we all being forced to move to 'power self sufficiency', It's going to end up being yet another Government Service that we as TAX and municipal payers all pay for, but get nothing from. Just like Education, Security, Roads, Transportation, Water and others. The motivation to become 'power self sufficient' and just disconnect from the Grid, just gets greater day by day.	Simon	business owner
	2026-09-29 11:47:46	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	1. Constitutional Responsibility and Basic Energy Rights Providing a stable and reliable electricity supply is a fundamental function of government, comparable to maintaining public infrastructure, transport networks, and public safety. Universal access to energy is a basic necessity for socio-economic stability, not a privilege or government handout. 2. Infrastructure Management and System Governance While the state committed to universal electrification, it failed to invest adequately in infrastructure maintenance or expand generation capacity in line with growing demand. Furthermore, systemic governance failures—specifically tender manipulation, illicit cartel activity, and a lack of executive accountability—have severely compromised the national energy grid. Despite this mismanagement, the burden of systemic inefficiencies continues to be shifted onto consumers through above-inflation tariff hikes, while executive leadership has historically received substantial remuneration and performance incentives without accountability. 3. Specific Policy Objections • Mandatory Fixed Charges for All Households: Fixed baseline charges should be firmly rejected. Pricing structures must adhere to the principle of "pay-for-use," supported by robust consumer protection frameworks. • Penalties on Household Rooftop Solar Exports: Imposing penalties or levies on residential solar installations lacks regulatory justification. Households invest private capital in alternative energy systems without state assistance and the lack of supplying reliable state functions. Furthermore, utility oversight cannot legally or logically extend beyond the primary point of supply to off-grid or privately funded domestic infrastructure. • Industrial Subsidisation via Residential Tariffs: Residential ratepayers should not cross-subsidise industrial energy consumption or absorb the costs of industrial decline driven by broader policy failures. 4. Pricing Transparency and Regulatory Oversight Existing pricing structures already contain multiple distinct line items, some of which have experienced rate increases between 60% and 250%. Consumers have a right to transparent, fair pricing and protection against forced cross-subsidisation across disparate consumer classes.	Thys	employed individual

	2026-09-29 11:53:23	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	I support the objective of creating a financially sustainable, transparent and competitive electricity sector. I am, however, concerned that excessive fixed, capacity or network charges could produce consequences that run directly contrary to those objectives. South Africa has already begun moving away from an electricity system dependent on a single vertically integrated supplier. The Electricity Regulation Amendment Act, 2024 provides for an open electricity market and competitive electricity trading, while Government's own Electricity Sector Market Transformation proposals recognise the importance of reducing reliance on a single electricity supplier and increasing participation by private generators and other market participants. Electricity pricing policy should reinforce that transition rather than inadvertently discourage it. Risk of driving customers off-grid Households and businesses have invested significant private capital in solar generation, batteries and other alternative electricity systems, often in response to high electricity prices, supply constraints and historical reliability concerns. Many of these customers nevertheless remain connected to the national or municipal grid because the grid continues to provide value as backup supply and because interconnected electricity systems are generally more efficient than thousands of completely isolated systems. There is consequently a balance that must be maintained. I accept that a customer with solar generation still makes use of electricity infrastructure and should make a reasonable contribution towards the cost of maintaining that infrastructure. However, if unavoidable fixed and capacity charges become excessive, the economic incentive changes. At some point, a household or business with existing solar generation may determine that additional battery capacity or generation is cheaper than continually paying substantial fixed charges merely for the option of remaining connected. The result could therefore be unintended grid defection. This presents a serious long-term revenue risk. The customers most capable of becoming electricity-independent are also frequently commercial, industrial and higher-consumption residential customers who currently make substantial contributions to electricity revenue. If those customers leave the grid completely, the infrastructure costs they previously helped support do not disappear. Those costs must then be recovered from a progressively smaller customer base. Higher charges may then encourage further customers to reduce their dependence on or disconnect from the grid, creating a negative feedback cycle. Electricity pricing policy should therefore consider not only how much revenue can be recovered from a grid-connected customer today, but also what level and structure of charges will make remaining connected economically rational over the long term. Energy efficiency should remain financially worthwhile I am similarly concerned about weakening the incentive to conserve electricity. Consumers have repeatedly been encouraged to reduce electricity consumption, invest in efficient appliances, install solar water heating and photovoltaic generation, and manage demand responsibly. If a progressively larger proportion of an electricity account becomes unavoidable regardless of consumption, the financial reward for these behaviours diminishes. Pricing should therefore continue to provide consumers with a meaningful ability to reduce their electricity expenditure by reducing the burden they place on the electricity system. Distributed generation should be treated as an electricity-system resource South Africa has already demonstrated the potential value of locally generated electricity. The experience in Frankfort in the Free State is instructive. Private investment in the local distribution network and locally generated solar electricity demonstrated that distributed generation could supplement electricity supplied through the broader system and reduce the impact of electricity shortages on a community. While that particular matter involved regulatory and load-shedding disputes, the broader lesson remains important: privately funded generation can add capacity to an electricity-constrained system. Policy should make it easier, not unnecessarily difficult, for municipalities, communities, businesses, farms and private generators to invest in generation and participate in the electricity market, subject to appropriate technical and safety standards. Encourage private participation and open access I therefore support accelerating the development of an electricity market in which Eskom is one important participant rather than the only practical source of electricity for most consumers. Transmission and distribution infrastructure should increasingly function as neutral infrastructure through which electricity can be traded between generators and consumers, with transparent and reasonable use-of-system charges. Private electricity generators should be able to compete to supply consumers, including through wheeling and electricity trading arrangements, while grid operators recover reasonable costs for transporting electricity and maintaining network capacity. Competition in generation does not require abandoning public electricity infrastructure. On the contrary, a reliable and fairly priced national transmission and distribution network becomes even more valuable in a competitive electricity market. Proposed safeguards I respectfully request that the final Electricity Pricing Policy incorporate the following principles: Fixed and capacity charges should reflect demonstrable network costs and should not simply be used to recover revenue lost because customers reduce electricity consumption. Customers should be offered appropriately priced connection-capacity options so that a household requiring only a small backup grid connection is not charged as though it requires substantially greater network capacity. Tariffs should preserve a meaningful financial incentive for electricity efficiency and demand reduction. Solar and other distributed-generation customers should receive transparent and fair treatment for electricity exported to the system. Network and wheeling charges should be transparent, non-discriminatory and structured to encourage rather than obstruct competition between electricity generators. Regulatory barriers to community, municipal, agricultural and private generation projects should be reduced wherever these projects meet appropriate technical, environmental and safety requirements. The financial effect of proposed tariffs should be modelled not only on current grid-connected customers, but also against the realistic alternative available to customers who can become partially or completely energy independent. NERSA should specifically assess the risk that tariff structures could encourage high-value customers to disconnect from the grid and should publish this analysis when approving tariff methodologies. Any transition toward higher fixed charges should be gradual and subject to periodic review of customer behaviour, grid defection, distributed-generation investment and electricity affordability. The policy should explicitly seek to make continued grid participation attractive to customers with their own generation, because an interconnected electricity market is more valuable when consumers, generators and prosumers remain participants in it. Conclusion The electricity system should not treat private generation and reduced grid consumption merely as a loss of revenue to be recovered elsewhere. They are also an opportunity. South Africans have already invested substantial private capital in electricity generation, storage and energy efficiency. Properly integrated, this investment can reduce pressure on public generation capacity, improve resilience and contribute additional electricity to a competitive national market. The appropriate policy response is therefore not to make self-generating customers indifferent to efficiency or encourage them to disconnect completely. It is to establish a fair price for using shared electricity infrastructure while ensuring that participation in that infrastructure remains economically attractive. South Africa has an opportunity to move toward an electricity system in which public and private investment complement one another, consumers have greater choice, generators compete to supply electricity, and the national grid acts as the infrastructure connecting those participants. The revised Electricity Pricing Policy should actively support that outcome.	Catherine	self-employed

	2026-09-29 12:02:12	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	I am being penalised for investing in my own solar source of power because Eskom failed to provide the power required for an extended period of time. A number of my appliances were also damaged by the load shedding process. I simply do not trust Eskom as a reliable power supplier, as I was forced into investing into an alternative source of supply. My distrust in Eskom has been reinforced by Eskom's proposal to victimise me because I invested in an alternative source of supply.	Desmond	retired

	2026-09-29 12:19:08	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	I object to the mandatory fixed grid capacity and standby charges proposed in the Revised Electricity Pricing Policy (EPP 2026). It is unfair to require consumers to pay for electricity and capacity they do not use. Households and businesses that reduce consumption, invest in efficiency or install their own solar are penalised for acting responsibly, while the fixed charge removes any incentive to save. Charges should remain usage-based. If a fixed component is retained, it must be capped in statute, kept to a small share of the bill, and justified by the actual cost of the connection, not used to recover revenue lost through theft, bad debt or inefficiency. I ask the Department to withdraw the mandatory fixed charges in their current form.	Pieter	employed individual
	2026-09-29 12:19:28	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	Being employed and paying taxes in South Africa you get punished, no rewards or relief but the governments keeps on taking from tax payers to cover up and fund corruption. When is it going to end for mismanagement, corruption, bailing out failures and borrowing money for everything that cost tax payers to pay back.	Lorraine	
	2026-09-29 12:19:28	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	When Eskom was in trouble our cleaver government ask the people to help Even the so called president beged use to help he even raised the kW capacity allowable for home owners And now he's memory has left him because he just allows every body to say and do as they wish Shame on you	Johan	retired

	2026-09-29 12:28:18	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	There can be absolutely no justification to apply fixed monthly charges above and beyond metered usage to already cash-strapped consumers. The draft policy further penalises users who inject clean power into the network expected to pay for the electricity used as well as electricity exported into the network. It effectively eliminates IBR tariffs for standard domestic customers who utilised the pay-less when conserving use which in turn will trigger bill shocks for specifically pensioners and low-to-middle income ratepayers. Granting industrial smelters discounted cross-subsided rates at the cost of private users is grossly unfair and criminal!! The culture of non-payment by users and poorly run municipalities further acerbates the huge problem and should be addressed as a matter of urgency by exacting accountability and punitive measures to those responsible.	Jaco	retired
	2026-09-29 12:30:42	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant)	It 's ridiculous to keep on increasing tariffs for issues that the government should have given attention to long ago. 	2026-09-29 12:39:25	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Prepaid Meter User	Most South Africans can not keep head above water, as it is. We are already directly and indirectly taxed to the hilt, with approximately 70% of our earning being funneled back to government through various channels. We had to find solutions for ourselves, as the government has failed miserably at doing their job. Now, that we have found some solutions, we are again penalized. As a consumer, we are forced to pay for millions and millions of stolen money from Eskom, and instead of taking responsibility and fixing the problem, the cost is passed on to us as consumers. We funded our own solutions, but we have to pay because we implemented our own solution.	Cara	self-employed
	2026-09-29 12:39:37	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	Although I have rooftop solar installed, I only installed it to have a relatively consistent supply of power, thereby maintaining a "normal way of life". It was a grudge purchase (power insurance) as Eskom was not reliable. I accept that a "reasonable" connection fee to the grid makes sense, but not an excessive amount. If Eskom is prepared to re-imburse me the cost of my solar installation, and guarantee first world grid stability, I will remove my solar. What they don't seem to realise is that it is ONLY due to private rooftop solar that load shedding is not an issue. Rooftop solar is also allowing municipalities to get away with under-maintained electrical infrastructure. In Pretoria where I stay, when we have wet or significantly cloudy weather, the rooftop solar users draw from the grid and what frequently happens is substation burnouts and power failures. WHY? Because the municipal grid cannot handle the load to all the consumers.	Derek	employed individual

	2026-09-29 13:25:50	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Prepaid Meter User	Mandatory Fixed Charges (Policy Positions 11, 27, 30): -Demand that NERSA impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. -Insist that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. -Require utilities to absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers. Prosumer Net-Billing Rules (Policy Position 33): -Demand the complete removal of DUoS and TUoS network charges on exported electricity (Policy Position 33(d)), recognising that embedded solar reduces local line losses and daytime substation loading. -Insist that solar export credits be eligible to offset the total monthly municipal utility bill, including fixed network and customer service charges. -Require fair, cost-reflective feed-in credit rates that reflect the true economic value of daytime peak/standard clean power injected into local distribution networks. Scrapping Inclining Block Tariffs (Policy Position 38): -Demand that NERSA retain an energy-conservation tariff tier for non-indigent, low-to-middle-income consumers that does not penalise modest energy usage with large monthly service fees. -Insist that the migration from IBRs to unbundled domestic tariffs be phased in gradually over a minimum of five years, with mandatory local affordability impact assessments. -Require that smart metering infrastructure and Time-of-Use domestic options be provided without upfront capital cost penalties to the end-user. Municipal Surcharge Ring-Fencing (Policy Position 47): -Demand that NERSA automatically reject any municipal tariff application that is not supported by a fully audited, publicly accessible Cost of Supply (CoS) study (Policy Position 25(a)). -Insist on the immediate statutory ring-fencing of all municipal electricity revenues into dedicated maintenance accounts, legally prohibiting councils from diverting electricity revenue to fund unrelated municipal wage bills or deficits. -Demand that National Treasury set a hard, uniform percentage cap on the Municipal Surcharge on Electricity (MSOE) to prevent local councils from using surcharges to circumvent NERSA tariff controls. Industrial Smelter NPAs (Policy Position 54): -Demand that any revenue shortfall arising from Negotiated Pricing Agreements (NPAs) with private commercial smelters be funded exclusively via the fiscus (Department of Trade, Industry and Competition or National -Treasury) and legally ring-fenced from standard consumer tariffs. -Insist that any expansion of Free Basic Electricity (FBE) above 50 kWh be fully backed by the National Treasury Equitable Share grant before implementation, with an explicit ban on funding social allocations through municipal electricity surcharges. -Require full public disclosure and annual audited reporting of all NPA discounts and inter-tariff subsidy transfers on consumer invoices (Policy Position 50(j)). Non-technical losses (electricity theft, illegal connections, meter tampering) and bad debt, Policy Positions 42 and 43: -Demand that NERSA immediately enforce Policy Position 43(b) by clawing back and disallowing any tariff requests where municipal distribution losses exceed national regulatory standards (typically 7%–10%). -Insist that paying consumers be legally shielded from funding municipal arrears and Eskom debt defaults through local tariff markups or surcharge adjustments. -Require licensees to implement strict, automated tamper detection, independent metering audits, and universal prepaid infrastructure in non-paying areas before requesting any tariff increases from compliant ratepayers. Prepaid Vending Caps (Policy Position 45): Protects vulnerable and low-income prepaid consumers from price-gouging, hidden commissions, and predatory third-party vendors.	Almar	employed individual

	2026-09-29 13:47:43	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Commercial / Industrial Power User, Rooftop Solar / Prosumer, Prepaid Meter User	When can we have options from whom we buy our electricity? This 'one man show' of Eskom is killing us! Everyday Eskom has new ideas as to how to 'screw us over'! Why should we pay an amount if we have made the effort to save on electricity. Eskom must sort out their corruption and overpaid salaries for staff not worthy of these enormous salaries and not ask users to foot their bills that they cannot control! Charging solar owners fees to export clean power while refusing to allow export credits to offset network fees creates an unviable investment model! We as the paying consumers, cannot continue to carry these heavy tariffs! With Load Shedding, we were forced to install solar systems where this money could have been used for other maintenance projects to our homes and business properties!!! Now we are being punished for your short comings!!! Electricity fees keep going up and crime keeps on increasing! We are paying dearly for vandalism, theft, corruption within Eskom, municipalities who owe huge amounts despite customers paying their bills, illegal electrical connections. And now they also want us to cover the costs of poorer households!? Top ranking Eskom employees are earning way more than I ever did and we have to keep on giving them increases. Why must the people who bought into solar (because of Eskom's poor performance!), have to pay Eskom a mandatory fee?! Not from Me! I will not buy into this 'Scheme'!!!!!!	James

	2026-09-29 14:27:07	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	It would be a good idea if Eskom addressed their own current problems with their staff and in the field (hundred thousands illegal grid connection) before approaching the public! How dare you increase staff salaries when your system has been so inefficient. We were asked to "do our bit" during dark times and now we're having to pay for this - its entrapment! Yet another way to screw the middle-class homeowners who are paying their electricity bill each month. This is a way to off-set the governments inefficiency to control, or recove,r the funds that are lost due to the illegal grid connection and theft. Eskom managers are not worthy of these enormous salaries - don't ask users to foot YOUR bad decisions Eskom!	Jules	unemployed individual
	2026-09-29 14:28:04	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant), Prepaid Meter User	I head a Single Income Household and I am compelled to continue generating income at the age of 63 because Democratic South Africa has become a cunning and corrupt government that wants people who have worked for four decades to end up struggling to survive and to make ends meet. I am still attempting to generate income as I have to pay my Rand West City Municipal Account of R3500 p.m. plus I am purchasing electricity for my prepaid metre of approximately R3000 p.m. I am born and bred in Gauteng (the old Tvl) and I speak a vinacular that is unique to South Africa. I have worked very hard and I have enabled four children to graduate with university degrees. Yet, my country, RSA, and the governing party, which I patriotically support considers me as an substandard South African female that has no right to retire and receive some relief and support from my government. I am 63 years of age and I have done amazing work as a contract-worker where I spent 15 years in a political office working for an Executive Mayor. Where am I today? Melinda deserves zero gratitude for all the years I diligently worked and contributed generously to the state and the three spheres of government. The government is disrespecting me and even though I qualify for a South African Social Security Agency (SASSA) pension I am not receiving a pension from the state. I have decided to rather continue to hustle and try to generate income. How disappointing is the conduct of the South African Government. How can ESKOM apply for another tariff price hike? Corruption is constantly exposed at the Madlanga Commission yet, government is still hunting for more potential by revising the electricity pricing policy and system and to enforce more stringent rules, laws and regulations on the South African population. We are flabbergasted and defeated. The democratic RSA has become an autocratic state after three decades under the ANC as the majority party. ESKOM and The Minister of Electricity and Energy is destroying people's lives and pricing senior citizens out of their homes. Government is ruthless and greedy and reckless under President Ramaphosa? 	2026-09-29 14:36:56	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Small / Medium Business Owner (SMME), Prepaid Meter User	Mandatory Fixed Charges (Policy Positions 11, 27, 30) Functions as an arbitrary "sun tax" and availability penalty. Punishes energy efficiency and private capital invested to survive load shedding, extending solar payback periods. Prosumer Net-Billing Rules (Policy Position 33) Highly punitive: charging solar owners DUoS fees to export clean power while refusing to allow export credits to offset network fees creates an unviable investment model. Scrapping Inclining Block Tariffs (Policy Position 38) Removing IBRs in favour of flat energy rates plus heavy basic monthly connection fees will cause immediate sticker shock for low-to-middle-income ratepayers. Municipal Surcharge Ring-Fencing (Policy Position 47) Threatens local government fiscal collapse. If municipal electricity profits are stripped, councils will hike property rates or collapse basic community services. Industrial Smelter NPAs (Policy Position 54) If heavy industry receives electricity at 62 c/kWh (below cost), ordinary retail consumers and small businesses will be forced to shoulder the resulting revenue shortfall. Prepaid Vending Caps (Policy Position 45) Imposing tight commission caps without administrative support could cause independent retail vendors to shut down, stranding rural consumers without token access. 	2026-09-29 14:52:53	No I do not	Double Network Fees (DUoS) on Solar Prosumer Exports		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer	I object to the following : Mandatory fixed grid capacity fees and standby charges on solar, double network fees on solar exports, the elimination of stepped block tariffs for standard households, and the risk of retail consumers funding industrial smelter discounts or unfunded social expansions This policy penalises grid-tied generators who are able to sell clean power back into the grid. Being charged both DUoS and TUoS - for the electricity they buy and the electricity they generate and sell. This defeats the point of being tied to the grid. Best to leave the grid completely. Also if solar generators produce electricity more than they consume, they should be able to benefit from this position and use that export credit as they see fit – even if that means offsetting fixed monthly network and retail service charges. Otherwise this makes the financial viability of feeding power back into the grid obsolete. Also it seems ridiculous that the Free Basic Electricity (FBE) would be increased from 50 kWh to 200–300 kWh per month without a budget. As are NPA offering discounted industrial rates to supposed "growth sectors" paid for by the general public.	nihl	self-employed

	2026-09-29 15:08:39	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	I strongly object to the following provisions in the draft policy: • Mandatory Fixed Charges for Residential Consumers: Shifting the billing model toward high, mandatory monthly network and capacity connection fees undermines energy conservation. It unfairly penalizes households that actively reduce their grid consumption or invest in energy-efficient measures, forcing them to pay hefty baseline fees regardless of actual usage. • Penalties on Rooftop Solar Exports: Forcing grid-tied solar users onto Time-of-Use tariffs and charging them distribution fees on exported power is counterproductive. Denying users the ability to offset fixed monthly network charges with their export credits actively discourages private investment in renewable energy, which South Africa desperately needs to secure grid stability. • Cross-Subsidization of Industrial Deals: Expanding below-cost Negotiated Pricing Agreements (NPAs) for heavy industrial smelters without explicit, ring-fenced external funding will inevitably force ordinary ratepayers to subsidize large corporations. Regular households and small businesses cannot bear the burden of revenue shortfalls. • Unfunded Expansion of Free Basic Electricity (FBE): Increasing FBE allocations up to 300 kWh per month without a corresponding increase in the national grant budget is unsustainable. Without clear external funding mechanisms, this expansion will inevitably result in higher tariff rates for the shrinking pool of paying consumers. The proposed policy disproportionately burdens middle-income households and small businesses that are already struggling under high living costs. I urge the Department to revise these mechanisms to protect paying consumers and incentivize, rather than penalize, private renewable energy generation.	Rixie	retired

	2026-09-29 15:34:40	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Prepaid Meter User	No, I do not support the Revised Electricity Pricing Policy (EPP 2026). I formally object to the gazetted Revised Electricity Pricing Policy and urge the Minister and Department of Electricity and Energy to reject or substantially revise it before it is finalised. Key reasons for my opposition: 1. Mandatory fixed network and capacity charges Shifting the tariff structure away from consumption-based charges (c/kWh) toward high mandatory monthly fixed fees will penalise households that reduce usage or invest in energy efficiency and rooftop solar. Being forced to pay substantial baseline charges simply for remaining connected to the grid is unfair and discourages conservation. 2. Penalties and barriers for rooftop solar Forcing grid-tied solar customers onto Time-of-Use tariffs and charging network distribution fees on both imported and exported electricity, while prohibiting export credits from offsetting fixed network charges, actively undermines private investment in renewable energy. This approach works against energy security and the need to diversify generation. 3. Subsidies for industry at the expense of households and small businesses Expanding below-cost Negotiated Pricing Agreements for industrial users (such as smelters) without clear external funding will shift the revenue shortfall onto ordinary ratepayers. Paying households and SMMEs should not be required to cross-subsidise large industrial consumers. 4. Expansion of Free Basic Electricity without adequate funding Increasing Free Basic Electricity from 50 kWh to as much as 300 kWh per month without a corresponding increase in the national grant budget risks transferring the extra cost directly onto the bills of paying customers. Any expansion of free electricity must be properly and transparently funded by the fiscus, not by higher tariffs on other users. While the intention to improve transparency, limit municipal mark-ups used as “slush funds,” and prevent the automatic recovery of theft and bad debt from paying customers is welcome, these limited positives do not outweigh the structural flaws listed above. The policy as currently drafted will raise the fixed cost of electricity for ordinary South Africans, discourage private solar investment, and place an unfair burden on residential and small-business customers. I therefore vote No and call for the policy to be withdrawn or fundamentally rewritten after genuine, transparent consultation that prioritises affordable, cost-reflective electricity for households and small businesses.	Elizabeth	
	2026-09-29 15:35:36	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	Grants and free electricity are purely this government buying votes and keeping as much people as possible reliant on the government. There is no pride for the people in this. Come up with ideas to create jobs for all. Then people can afford their own electricity. Nothing makes a person more proud than to say; "I did this". Also, we know how "efficient" government is with corruption. This looks like another way to steal from all of us.	Christie	employed individual

	2026-09-29 16:12:10	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Objection to the Revised Electricity Pricing Policy (EPP 2026) Submission to the Department of Electricity and Energy Principal objection We strongly object to any tariff design under the EPP 2026 that penalises households and small businesses for reducing their dependence on the grid through privately funded rooftop solar, batteries or other embedded generation. For years, consumers were repeatedly told that the electricity system was under severe supply and capacity pressure. In response, many South Africans used their own after-tax income—often incurring substantial debt—to secure their homes and businesses, reduce demand during constrained periods, and lessen the burden on the national system. It would be fundamentally unfair, economically irrational and contrary to a just energy transition to respond now by imposing disproportionate fixed charges, reduced export compensation, punitive time-of-use structures or other levies that erode the value of those investments. Grounds for objection 1. Consumers acted in reliance on the State's own message. Rooftop-solar owners did not create the electricity crisis. They responded to persistent load shedding; tariff increases and repeated public appeals to reduce demand. Their investments supplied resilience that the public system could not reliably provide. A new pricing framework should recognise that contribution rather than retrospectively shifting added costs onto those who acted responsibly. 2. Cost-reflectivity must follow cost causation, not revenue preservation. We accept that every grid user should pay a fair, demonstrable share of the efficient costs of services actually used. However, "cost-reflective" pricing must not become a mechanism for protecting historic revenue or transferring the cost of past inefficiency, poor maintenance, excess procurement, electricity theft, non-payment or municipal losses to compliant customers. Any fixed or capacity charge must be supported by independently verified cost-of-service data and must exclude costs already recovered through other tariff components, taxes or public funding. 3. Customer-owned generation creates measurable system value. Distributed generation can reduce daytime demand, network losses, peak stress and the need for emergency supply, while batteries and demand-response capability can provide further flexibility. Those benefits must be valued transparently and credited against any network costs attributed to these customers. Charging for gross installed capacity, rather than measured import, export and coincident peak use, would ignore how customers actually use the network and would discourage technologies the reformed electricity market is intended to attract. 4. Retrospective rule changes undermine trust and investment. Many systems were installed on the reasonable expectation that self-generation would lower exposure to escalating electricity costs over the life of the equipment. Materially changing that economic basis after consumers have committed capital would damage regulatory certainty, deter future private investment and slow the addition of generation capacity. Existing compliant installations therefore require grandfathering or a long, predictable transition period. 5. The policy must not create a regressive two-tier burden. A poorly designed shift from usage-based charges to high fixed charges would weaken the incentive to conserve electricity and would disproportionately affect pensioners, low-consumption households and small enterprises. At the same time, punitive treatment of embedded generation would reserve energy resilience for wealthier consumers who can disconnect or oversize storage, leaving ordinary grid-connected customers to bear a growing burden. The fair response is transparent pricing, targeted social support and charges linked to measurable use—not a blanket penalty on self-generation. 6. Social support must not be funded through an opaque surcharge on compliant customers. We support properly targeted Free Basic Electricity for qualifying poor and vulnerable households. However, any expansion of that benefit must be transparently costed and funded through a fair, accountable mechanism. It is unreasonable to expect the shrinking pool of households and small businesses that pay their accounts in full—many of whom have already financed their own alternative generation—to absorb an undefined added cross-subsidy through higher tariffs or fixed charges. Social welfare is a legitimate public responsibility and should be supported primarily through transparent fiscal appropriations and properly administered indigent programmes, rather than concealed in electricity prices. At a minimum, every bill and tariff application should show the value, purpose, beneficiaries and funding basis of each cross-subsidy, together with safeguards against ineligible claims, municipal non-payment and diversion of funds. Requested amendments and safeguards • Prohibit punitive or discriminatory charges based solely on owning or installing rooftop solar, batteries or embedded generation. • Require every fixed, capacity, network and standby charge to be based on an independently audited cost-of-service study, published in full and tested through meaningful public participation. • Apply cost causation consistently: charges should reflect measured connection capacity, coincident peak demand and actual network services used, not an assumed loss of sales revenue. • Prevent double recovery by requiring clear unbundling of generation, transmission, distribution, retail and policy-related costs on every bill. • Introduce a transparent, technology-neutral method for valuing exported electricity and the avoided energy, losses, capacity and system-support benefits provided by customer-owned resources. • Protect existing legally installed and compliant systems from retrospective tariff changes or provide a sufficiently long and predictable transition period so that consumers can recover investments made under the earlier rules. • Preserve fair net-billing, wheeling and market-access arrangements, with simple and affordable registration and metering requirements for small-scale generators. • Require affordability and distributional-impact assessments before approval of any tariff restructuring, with explicit protection for low-income and low-consumption customers. • Require any increase in Free Basic Electricity or other social-support allocation to be transparently costed, eligibility-controlled and funded through a fair combination of public-budget appropriations and expressly authorised cross-subsidies; prohibit its automatic or disproportionate recovery from compliant residential and small-business customers. • Create an accessible review and appeal mechanism so customers may challenge incorrect classifications, capacity assumptions and network charges. Conclusion The EPP 2026 should modernise electricity pricing without punishing the very consumers who helped keep households, businesses and essential economic activity functioning when the grid could not provide reliable supply. We therefore ask that the Department revise the policy to make fair cost causation, recognition of distributed-energy benefits, protection against double recovery, and transitional protection for existing investments express requirements binding on NERSA, Eskom, the transmission system operator, municipalities and all licensed distributors. Until those safeguards are incorporated, we object to the policy in its present form.	Sue	unemployed individual

	2026-09-29 16:37:18	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Thank you for highlighting these critical updates on the Revised Electricity Pricing Policy (EPP 2026). The extension of the public comment deadline to 28 October 2026 provides a vital window to engage on a structural overhaul that will fundamentally shape South Africa's economic landscape for years to come. While measures to curb hidden municipal markups and prevent bad debt write-offs from hitting paying consumers are welcome, the proposed billing model introduces major systemic risks. In preparing formal submissions, our pushback must focus squarely on three non-negotiable priorities: 1. Fair Compensation and Unpenalized Grid Export for Solar Producers Households and small businesses invested heavily in private rooftop solar to maintain productivity and support grid stability during peak crisis periods. • Charging distribution fees on exported power while disallowing solar credits to offset fixed connection fees actively penalizes clean energy investment. • The policy must guarantee fair, cost-reflective feed-in tariffs and ensure export credits can fully offset fixed baseline grid fees to preserve the economic viability of rooftop solar. 2. Safeguards Against Cost-Shifting from Industrial Deals Expanding Negotiated Pricing Agreements (NPAs) to grant discounted electricity rates to heavy industrial smelters must not come at the expense of ordinary ratepayers. • Unless industrial discounts are funded transparently through the national fiscus, paying households and small enterprises will inevitably end up subsidizing corporate balance sheets. • The public submission must demand strict guardrails that prohibit utilities from passing shortfalls from industrial deals onto general consumer tariffs. 3. Realistic and Phased Timelines for Fixed Charge Rollouts A sudden shift from usage-based billing (c/kWh) to high, mandatory fixed monthly charges creates an immediate visual and financial shock for cash-strapped consumers. • Any transition to network and capacity connection fees must be gradual, predictable, and strictly capped during the initial adoption phase. • Consumers need adequate time and clear regulatory guidelines to adapt their usage, energy strategies, and budgeting without facing abrupt monthly bill spikes. Next Steps Given that public submissions close on Wednesday, 28 October 2026, raising these specific points with the Department of Electricity and Energy is essential to securing a balanced tariff framework. Sincerely, Maluka	August	employed individual

	2026-09-29 16:53:45	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	I object to the Revised Electricity Pricing Policy in its current form. I am a homeowner considering investing my own money in rooftop solar and batteries. I expect to pay for the grid services I actually use, but the policy should not make it uneconomical to reduce my reliance on grid electricity. The proposed fixed network and service charges could leave households paying substantial monthly amounts even when they use very little grid electricity. The policy provides no clear limit on those charges or evidence of what they would mean for a typical household's bill. Before approving them, NERSA should publish worked examples for households with and without solar, including low-usage households. Charges should be tied to the efficient cost of the capacity a household actually needs, and customers should have a practical way to reduce their connection capacity and the corresponding charge. I also object to the proposed treatment of solar exports. Charging a household for exporting electricity while refusing to let the value of that electricity offset network and retail charges risks making exports financially pointless. Any export charge should be justified by the actual cost imposed on the network, taking account of where and when the electricity is used. The proposed export credit and every related charge should be shown together in clear household examples. The policy would also place grid-tied solar customers on time-of-use tariffs. Please explain how this would apply to a household that uses its solar power on site and does not export. Any required meter changes and their costs should be disclosed before homeowners invest. I ask that these provisions be revised before the policy is finalised. Households need to know the full cost of remaining connected to the grid, the value of any electricity they export, and how the rules will affect the return on a solar installation. Those figures should be published for public comment, rather than left to be determined after the policy is adopted.	Adrienne

	2026-09-29 17:30:49	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant)	We have a government that has miserably FAILED its people and country. Officials who are corrupt, thieves, unscrupulous and morally bankrupt. They do not have the right to be in parliament. After more than 30 years they have been unable to maintain essential basic swrvices, especially uninterrupted electricity supply. They are opening companies under deflected names and awarding tenders to unskilled unprofessional and incompetent individuals and/or companies, all for SELF ENRICHMENT. A new law needs to be passed that the capacity who engages in any form of unscrupulous and corrupt activity/ies. I object to the Revised Electricity Pricing in its current form.	Marinda	retired
	2026-09-29 17:40:21	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	This government cannot continue punishing consumers for its corruption, criminality and ineptitude.	Chris	retired
	2026-09-29 17:47:06	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Functions as an arbitrary “sun tax” and availability penalty. Punishes energy efficiency and private capital invested to survive load shedding, extending solar payback periods.	Daniele	unemployed individual
	2026-09-29 17:47:56	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	It seems yet another way to make it impossible to protect yourself against governmental theft. The fleecing of Eskom has come to a point where the cant make repairs to the grid. Water is the same. and now they want to charge penalties. The money will undoubtably be stolen and we will be stuck with higher prices for services that they can't deliver. This is unbelievable. A person should have the right to use solar to drop their expenses on the exorbitant prices for basic services. this would not have been necessary if the Government had been good Stuarts of the infrastructure. Why don't they focus on fixing the grids first. Provide services as is thee mandate instead punishing people who are payig for their bad management of services with heavy fees.	Bryan	employed individual

	2026-09-29 17:50:32	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	I wish to register my strong objection to several aspects of the proposed Revised Electricity Pricing Policy 2026, particularly those that could affect ordinary residential consumers who are considering investing in rooftop solar and battery storage. I am not opposed to paying a reasonable and transparent grid connection or network fee. If a household remains connected to the electricity network and expects that network to be available when required, I accept that there is a legitimate cost involved in maintaining that infrastructure. What I strongly object to, however, is the possibility of fixed, capacity and network charges becoming a means of recovering revenue simply because consumers have reduced the amount of electricity they purchase from the grid. Like many South African households, we are seriously considering investing a substantial amount of our own money in solar generation and battery storage. The main reasons are very simple: The ever-increasing cost of electricity and the long history of unreliable electricity supply. Consumers should not be criticised or financially penalised for looking for alternatives when the electricity supplied through the national and municipal systems has repeatedly proved expensive and unreliable. If a household spends its own after-tax money installing solar panels, inverters and batteries, thereby reducing its dependence on the electricity grid, government policy should encourage that investment rather than create new charges designed to claw back the savings. I am particularly concerned about proposals that would place solar customers onto different tariff structures and potentially impose network-related charges on electricity both consumed from and exported into the grid. If a household produces surplus electricity and allows that electricity to flow back into the network for the benefit of the wider electricity system, it seems unreasonable that the household could then be charged for providing that electricity to the grid while receiving limited benefit in return. Any charge connected with residential solar exports should therefore be fully transparent and supported by clear evidence showing the actual cost that those exports impose on the electricity network. There is also a much larger issue which policymakers should consider. If staying connected to the electricity grid becomes excessively expensive regardless of how little electricity a household actually buys, consumers who can afford to do so may simply decide that remaining connected is no longer worthwhile. In our own case, if the proposed tariff structure ultimately makes grid-connected solar financially unattractive, we would seriously consider investing instead in a much larger battery-storage system together with generator backup and becoming completely independent of the electricity grid. At that point the electricity provider would receive no monthly connection fee, no network fee and no electricity revenue from our household at all. I suspect we would not be the only household to reach that conclusion. A pricing system intended to protect electricity-network revenue could therefore have exactly the opposite effect by encouraging more financially capable customers to leave the grid completely. Government should be encouraging consumers who generate their own electricity to remain connected, contribute surplus electricity where practical and retain the grid as backup. That requires a pricing structure that is fair enough to make remaining connected worthwhile. I am also concerned about any arrangement under which ordinary residential consumers and small businesses could ultimately bear the cost of preferential electricity pricing granted to selected large industrial users. If government considers financial assistance to a particular industry necessary for employment, investment or industrial-policy reasons, that assistance should be transparent and separately funded. It should not result in unrelated electricity customers having to pay higher tariffs. The same principle should apply to social assistance. I fully accept that genuinely indigent households require assistance with basic electricity. However, social welfare programmes should be properly targeted and transparently funded through the appropriate government budget. Electricity tariffs should not become an alternative taxation system through which paying consumers are expected to finance unrelated government obligations. For many years responsible, paying South African consumers have already had to cope with enormous electricity-price increases, unreliable supply, infrastructure problems, electricity theft, non-payment and poor financial management within parts of the electricity sector. There must eventually be a limit to how much additional cost can simply be transferred onto customers who actually pay their accounts. The principle should be straightforward: A responsible electricity consumer should pay the genuine and efficient cost of the electricity and network services that consumer uses. They should not be expected to carry the cost of inefficiency, historical mismanagement, unpaid accounts, preferential arrangements granted to other users or unrelated government expenditure. I therefore request that the final Electricity Pricing Policy: Allows a reasonable and independently determined connection or network charge, but requires that charge to reflect the genuine efficient cost of maintaining the customer's connection. Prevents fixed charges from simply becoming a mechanism for replacing revenue lost when consumers reduce their electricity consumption. Ensures that residential solar investment remains financially worthwhile and is encouraged rather than penalised. Reconsiders charges imposed on residential electricity exported into the grid and requires any such charges to be demonstrably cost-reflective. Provides fair and transparent compensation for electricity supplied by residential customers into the electricity system. Prevents the costs of preferential industrial electricity agreements from being transferred to ordinary households and small businesses. Requires social subsidies to be transparently identified, properly targeted and appropriately funded. Protects paying consumers from being expected to fund excessive electricity losses, theft, bad debt and inefficient expenditure. South African households have repeatedly been told to conserve electricity, reduce pressure on the electricity system and consider alternative sources of energy. It makes little sense to encourage people to spend hundreds of thousands of rand of their own money becoming more energy independent and then restructure electricity tariffs in a manner that removes much of the financial benefit of doing so. If remaining connected to the grid becomes unreasonable, consumers who are able to do so will eventually look at the figures and ask a very simple question: Why remain connected at all? That would be a poor outcome for both consumers and the electricity system. I therefore urge the Department to ensure that the final policy strikes a fair balance between recovering the genuine cost of maintaining the electricity network and allowing households to protect themselves from rising electricity prices and unreliable supply through private investment in solar generation and battery storage. comments individually delivered to the Minister, so far
No I do not support the policy 9248
Not fully 640
Yes I do 55
The Department of Electricity and Energy has gazetted the Revised Electricity Pricing Policy (EPP 2026), initiating the first complete structural overhaul of South Africa's electricity tariff architecture since 2008.
Formulated to operationalise the Electricity Regulation Amendment Act, 2024 (ERAA), this policy marks the formal end of South Africa's vertically integrated, single-buyer electricity monopoly. As Eskom unbundles into separate generation, transmission, and distribution entities, the state is introducing an open wholesale power market, multi-party trading, and competitive procurement.

To align with this evolving industry, the draft policy outlines 54 binding Policy Positions that overhaul how electricity tariffs are calculated, unbundled, and billed to every consumer in the country.

While the policy seeks to achieve transparent, cost-reflective pricing and long-term financial sustainability for grid infrastructure, it introduces significant financial shifts for households, small businesses, and private renewable energy investors.

Where Do You Stand?
? I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form (Rejects mandatory fixed grid capacity fees and standby charges on solar and low-usage homes, punitive double network fees on solar exports, the elimination of stepped block tariffs for standard households, and the risk of retail consumers funding industrial smelter discounts or unfunded social expansions).

? I AMEND / NOT FULLY (Supports unbundled billing transparency, banning hidden municipal surpluses, capping prepaid vendor fees, and excluding power theft from allowed utility revenue, but demands statutory caps on fixed capacity fees, the removal of DUoS charges on solar exports, full bill offsetting for prosumers, and strict ring-fencing of industrial concessions from consumer tariffs).

? I SUPPORT the Revised Electricity Pricing Policy (EPP 2026) as published (Backs the transition to cost-reflective unbundled pricing, fair 50/50 transmission cost-sharing between generators and consumers, fixed capacity cost recovery to maintain grid stability and prevent free-riding, ending non-transparent municipal markups, and holding utilities to strict loss benchmarks).

Have your say – shape the policy.
Do you support the Revised Electricity Pricing Policy as published?

No I do not

What is your concern? (scroll down for an explanation of each)

All of the above

As you've chosen "all of the above", if you had to settle on one top concern, what would it be?

Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes

I am participating as a: (for our internal reporting only)
Residential Ratepayer (Grid Reliant)
Small / Medium Business Owner (SMME)
Commercial / Industrial Power User
Rooftop Solar / Prosumer
Prepaid Meter User
Municipal Official / Engineer

Top concerns
Mandatory Fixed Capacity & Grid Availability Charges

Double Network Fees & Export Penalties on Rooftop Solar (Prosumers)

What the Draft Policy Proposes:
Grid-tied customers who generate and export renewable energy into the grid (prosumers) will be subjected to a highly restrictive net-billing framework:

Mandatory Time-of-Use (TOU) tariffs.
Prosumers must pay full Distribution Use of System (DUoS) and Transmission (TUoS) network charges on all imported energy and must also pay separate DUoS/TUoS charges on all energy exported into the grid.
Exported power is credited only at the utility's low "avoided purchase cost".
Network and retail charges cannot be credited or offset by exported energy credits, and an extra retail administration fee will be billed to handle net-billing meters.
The Core Civic / Household Risk:
By levying network charges on both energy imported and energy exported, the state effectively taxes private clean energy fed back into local communities. Prohibiting consumers from using export credits to offset fixed monthly network fees drastically erodes the financial return on private rooftop solar, disincentivising decarbonisation and pushing frustrated solar owners to defect from the grid entirely.

What to Demand in Your Public Submission (PAJA-Enforceable Points):
Demand the complete removal of DUoS and TUoS network charges on exported electricity (Policy Position 33(d)), recognising that embedded solar reduces local line losses and daytime substation loading.
Insist that solar export credits be eligible to offset the total monthly municipal utility bill, including fixed network and customer service charges.
Require fair, cost-reflective feed-in credit rates that reflect the true economic value of daytime peak/standard clean power injected into local distribution networks.
Cross-Subsidising Smelter Discounts (NPAs) & Free Basic Power

Scrapping Inclining Block Tariffs (IBRs) for Middle-Income Homes

Hidden Municipal Surpluses & Diverted Electricity Funds

Passing Theft, Non-Technical Losses & Bad Debts onto Consumers

Perspectives: What is the debate?
? What Supporters Say

? What Opponents Say

Mandatory Fixed Charges (Policy Positions 11, 27, 30)
Functions as an arbitrary "sun tax" and availability penalty. Punishes energy efficiency and private capital invested to survive load shedding, extending solar payback periods.
Prosumer Net-Billing Rules (Policy Position 33)
Highly punitive: charging solar owners DUoS fees to export clean power while refusing to allow export credits to offset network fees creates an unviable investment model.
Scrapping Inclining Block Tariffs (Policy Position 38)
Removing IBRs in favour of flat energy rates plus heavy basic monthly connection fees will cause immediate sticker shock for low-to-middle-income ratepayers.
Municipal Surcharge Ring-Fencing (Policy Position 47)
Threatens local government fiscal collapse. If municipal electricity profits are stripped, councils will hike property rates or collapse basic community services.

	2026-09-29 19:22:05	No I do not	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Residential Ratepayer (Grid Reliant)	The present system is already causing unhappiness as tariffs are far to high already. Businesses will disappear and households will collapse and emigrate if service bills increase further. Over last 10 years the increases have doubled and even tripled the inflation rate. This is not acceptable. People and businesses will leave permanently.	Kevin	retired

	2026-09-30 05:48:55	No I do not	Municipal Hidden Surcharges & Diverted Electricity Revenues		Residential Ratepayer (Grid Reliant)	What the Draft Policy Proposes: The policy shifts tariff design away from volumetric consumption (c/kWh) toward mandatory fixed network and capacity charges (R/kVA, R/kW, or R/Amp/month). To eliminate "volume risk" for distributors, utilities will bill customers for grid availability and network reservation regardless of whether electricity is consumed. In addition, Policy Position 15 introduces a universal generation standby charge applied at the wholesale level to recover the capital costs of keeping backup dispatchable generation on standby for grid-tied users. The Core Civic / Household Risk: Households and small businesses that invested private savings into rooftop solar, batteries, or energy-efficiency measures to survive load shedding will be hit with steep monthly fixed fees simply for remaining connected to the grid. Frugal, low-volume consumers can no longer lower their utility bills by conserving electricity, as fixed network fees create a high, unavoidable monthly billing floor. What to Demand in Your Public Submission (PAJA-Enforceable Points): Demand that NERSA impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. Insist that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. Require utilities to absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive	Heidi	employed individual
	2026-09-30 05:57:52	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer	This policy of Eskom to effectively punish solar users, is going to drive many consumers off grid, causing them more losses. Management is seemingly running Eskom as a mafia organization: use our services or else!	Justin	self-employed

	2026-09-30 08:14:41	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Totally ridiculous. I had a solar system installed at high cost to me, as ESCOM could not supply us with continuous electricity. We had to throw away, frozen and refrigerated food, sit in the dark and could not coke a meal. Instead of being charged more ESCOM should refund us for our losses and contribute to our the installation cost of the solar system.	Herman	retired
	2026-09-30 08:14:43	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Prepaid Meter User	Our electricity bills are already too high. So if I chose and I pay for an alternative why should I pay these fat cats to get fatter. Why don't they reduce the cost of electricity so we don't have to find alternatives.	Brian	employed individual
	2026-09-30 08:15:09	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	In the last two decades, electricity prices shot up by 1,172%, compared with 174% inflation. In 2025 alone, tariffs rose by 12.74%, while inflation was 3.79%. Electricity sales fell by 6.2% in 2026. Eskom said this was because of "weak industrial demand and the effects of embedded self-generation". THIS IS A TOTAL OWN GOAL AND YET WE CONTINUE TO BE HELD TO RANSOM BY AN OVERWEIGHT ESKOM THAT REFUSES TO RESTRUCTURE AND DOWNSIZE IT's BLOATED WORKFORCE, and that CONTINUES TO PAY EXCESSIVE ABOVE-INFLATION SALARY INCREASES. Eskom turned a profit of more than R30 billion (about US$1.88 billion). Eskom achieved this growth even though it was owed billions by municipalities. SO Eskom IS FUNDING PROFITABILITY BY INCREASING IT'S PRICES INSTEAD OF DOWNSIZING A BLOATED WORKFORCE, STREAMLINING OPERATIONS AND EMPLOYING QUALIFIED PEOPLE TO RESCUE IT. MASSIVE CORRUPTION AND CADRE DEPLOYMENT CONTINUE .... HOW DARE YOU CONTINUE TO DESTROY THE WEALTH OF ALL CITIZENS OF THIS COUNTRY AND OF OUR NATIONAL ECONOMY BY JUST RAMPING UP YOUR TARIFFS TO PAY FOR YOUR INCOMPETENCE!!!!!!!!!!!!!!!!!!!! CLEAN YOUR HOUSE PROPERLY AND TRANSPARENTLY BEFORE YOU COME TO US WITH MORE TAXES AND FEES AND TARIFFS AND HIDDEN SUBSIDIES TO BE PAID BY A CITIZENRY ALREADY AT ITS ABSOLUTE FINANCIAL LIMITS!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!	Glenton	business owner

	2026-09-30 09:56:19	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Rooftop Solar / Prosumer	Increases cause inflation, so if Eskom has above inflation increases by how much does that increase inflation. Eskom should be thanking rooftop solar as they have reduced usage to the point that there isn't load-shedding. If the media articles are correct the total electricity production by Eskom has been steadily reducing. And at the same time Eskom is giving discounted rates to very large users and effectively penalising small scale users. Maybe all smaller users need to seriously look at disconnecting from the grid and leave Eskom to then sort its own mess out - between discounted users and non-paying users I wonder how long Eskom would then be able to survive. Unfortunately Eskom is the only electricity supplier so using its monopolistic situation to create excessive profits for itself, and stuff the honest paying small users.	Trevor	retired

	2026-09-30 10:08:26	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	I object to the proposed restructuring of electricity tariffs, particularly the increased reliance on fixed network and capacity charges and the treatment of rooftop solar customers. While Eskom and government need to recover the legitimate costs of maintaining the electricity grid, the tariff structure should not discourage households and businesses from reducing their electricity consumption or investing in alternative generation. A consumer who invests in solar, reduces demand from the grid and supplies surplus electricity back into the network is helping to reduce pressure on the national electricity system. It is therefore counterproductive to impose higher unavoidable fixed charges and additional network charges on these consumers while providing limited recognition for the benefits their investment provides to the grid. The proposed approach risks shifting electricity costs away from actual consumption and towards unavoidable connection charges. This could disproportionately affect households and small businesses that have invested in energy efficiency and solar precisely to reduce their reliance on Eskom. There is also a fundamental fairness issue with allowing preferential or below-cost electricity arrangements for certain large industrial users while recovering the resulting costs elsewhere in the system. Any subsidy or concession should be transparently funded and should not simply be transferred to ordinary residential and small-business consumers through their electricity bills. If government wants South Africans to invest in rooftop solar, batteries and energy efficiency, tariff policy should reward reduced grid dependence rather than penalise it. Cost-reflective tariffs are reasonable, but they must be genuinely cost-reflective, transparent and applied fairly across all categories of consumers. I therefore support greater transparency and accountability in electricity pricing, but oppose a tariff structure that makes consumers increasingly responsible for fixed costs while reducing the financial benefit of generating their own electricity.	candice	employed individual

						To: The Director-General Department of Electricity and Energy Attention: Mr Joseph Maraba Dear Sir/Madam, I wish to formally record my objection to certain aspects of the Revised Electricity Pricing Policy (EPP 2026). While I support electricity-pricing reform, greater transparency and stronger municipal accountability, I am concerned that some of the proposed changes could place an unfair financial burden on already over-stretched households and small businesses. My key concerns are: Higher fixed charges: Consumers who reduce their electricity usage should benefit from lower bills. Excessive fixed network and capacity charges could penalise households that conserve electricity or invest in alternative energy. Rooftop solar: South Africans who have invested their own money in solar and battery systems should be encouraged, not financially penalised. Network charges and export arrangements must be fair and should not undermine the benefits of private generation. Industrial subsidies: Ordinary households and small businesses should not be expected to carry the cost of preferential electricity agreements granted to large industries. Any such support should be transparent and separately funded. Free Basic Electricity: I support assistance for vulnerable households, but any expansion must have a sustainable and transparent funding mechanism rather than simply shifting the additional cost onto paying consumers. Municipal accountability: Electricity tariffs should reflect legitimate and efficiently incurred electricity costs. Responsible consumers should not continually be expected to absorb the consequences of electricity theft, bad debt, poor revenue collection, inefficiency or municipal mismanagement. South Africans are already facing severe cost-of-living pressures. Electricity reform should therefore focus on affordability, fairness, efficiency and accountability, rather than creating new unavoidable charges for consumers. I respectfully request that the final policy protect households and small businesses, reward consumers who reduce electricity consumption, encourage private solar investment, and prevent compliant ratepayers from becoming the automatic source of funding for inefficiencies and shortfalls elsewhere in the electricity system. Consumers should pay a fair price for the electricity and infrastructure they use, not carry an ever-increasing burden simply because they are responsible enough to pay their accounts. I respectfully request that my objections be considered before the policy is finalised.

	2026-09-30 11:09:29	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer	It is abundantly clear what the reasons for the suggested amendments are. We all know why we are in this situation. Instead of fixing the underlying causes of Eskoms near catastrophic failings the dwindling number of paying electricity users are asked to foot the ever expanding bill of Eskoms non-performance while at the same time increasing the number of non-paying customers by means of free access and limits. This is unworkable. It completely ignores the consumers dire struggle with rising costs and income that cannot keep up. We all know that the suggested measures are intended to INCREASE revenue to Eskom. Nothing else. This would not even be a discussion if this would not be the case. The solution is easy: Government and Eskom: Fix your failed system, don't ask for yet another bailout.	Rainier	self-employed
	2026-09-30 11:14:39	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	Money, money, honey, this is all that this anc government wants. How much do these morons want from the hard working citizens. Money from the fiscus has been syphoned off . The last I read one trillion lost to long black fingers who loot ,steal etc etc. And that is a estimate it is probably double by now. No consequences etc. We are sick of this.. Hopefully the anc gets their maching orders after the general elections.	Steve	business owner

	2026-09-30 11:59:28	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Prepaid Meter User	It's common sense. Load shedding is not over, its been branded now as load reduction. Bottom line, if it's load shedding or load reduction, when it happens, NO electricity can be sold, Eskom gets NO income. With the new system, you, the broken down over taxed honest rate paying citizen, gets slammed once again. Now you further pay for nothing. The same where all our taxes and rates go to. The ELITE politicians back pockets. Don't think you're going to get a better service. No go, as we've seen, everything they touch goes down the tubes and ends up in a disaster which we, the over burdened tax payer then once again has to bail out so that the ELITE politicians can once again steel from. Take David Mabuza, for how long was he in the government etc, with an ESTATE of R44 million. Did he pay tax on that?	Nico	retired
	2026-09-30 12:01:01	No I do not	Double Network Fees (DUoS) on Solar Prosumer Exports		Residential Ratepayer (Grid Reliant)	This is another attempt to force law abiding consumers to pay for theft, gross incompetence and poor administration by Eskom employees. Totally unacceptable!	Stephanie	
	2026-09-30 12:02:48	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer	This proposed law does not treat all South African's fairly. Stop thinking like a revolutionist - we can all see what that has done to South Africa, and start thinking like a government that wants South Africa to prosper and thrive.	Nicolette	employed individual
	2026-09-30 12:04:15	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Once more the paying minority are being forced to pay more even after of having the expense of installing solar systems just tp keep our households going and the theft and bad management just carries on!!!!!! 	2026-09-30 13:54:34	No I do not	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Residential Ratepayer (Grid Reliant)	This is just another ploy by Eskom to milk the poor. They just recorded a profit of 30billion for the financial year of 2026. This is just a cash grab scheme for them, to record more revenue and line their pockets up. I live in an area where Load reduction had became a friend, people installed solars so they can be able to have lights on and also to deal with the Loadshedding the country had a few years ago. Yet Eskom wants to force people to pay hefty fines while the electricity people used to pay they couldn't get it anymore because of load reductions and Loadshedding. Fuck the mandatory fixed charges, already these kWh we are paying for we are getting overcharged for the electricity we pay for and get to use less KWH's. They don't care about us, they care about milking the citizens of this country while they misuse the funds. Let me guess after the elections the low income townships will be subjected to Load reduction again.	Sandile	unemployed individual
	2026-09-30 13:55:01	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	I installed rooftop solar through an approved contractor with money inherited from my deceased brother. The system was duly commissioned as a hybrid system allowing for municipal electricity on days when solar generation is not possible through a prepaid electricity meter. I pay R326.91 purely for the connection to the grid to the Municipality every month whether I use municipal electricity or not. This is a fixed charge which has gone up over the years. Roof solar was strongly promoted by the Electricity Entity ESKOM when power cuts (due to insufficient generating capacity by ESKOM) were common. I even received a rebate on my taxes from SARS for doing my part in supporting power grid stability. Imposing further arbitrary fixed charges on me as a pensioner and taxpayer purely for using power disregarding whether I generate the bulk of the power myself (legally), will be an additional burden on me and my family to survive. Such charges will not only be irrational and untenable for me, but I strongly oppose them. Taxes are not good sources of revenue, but decent citizens such as me tolerate and pay them when understood to be intended for promoting the greater good. (Even when, in practice, some of these funds are misappropriated) When, however, draconian and grossly irrational taxes are proposed for introduction, I will oppose them with as a concerned citizen. I oppose EPP2026 in its totality.	Harris	retired
	2026-09-30 13:56:32	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	It is unacceptable the those people that assisted the incompetent Eskom to reduce load on the grid by installing rooftop solar at massive personal expense are now going to effectively be punished for it. Add onto that the amount of waste, the illegal connections and theft and so on and so forth to the mix, and all this is is an easy way for Eskom to collect from those few who have been doing things correctly instead of fixing the problem.	Shane

	2026-09-30 16:18:00	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant), Municipal Official / Engineer	The list of things detrimental to the country and its people that the ANC has done and is still doing or attempting to do is very long - and still growing. This is one more example of 'buying votes', to be paid for as always by hard working and law-abiding people, as well as stifling economic growth. South Africa have had more than enough of ANC mis-management, corruption, cadre deployment, theft, neglect and virtual destruction of infrastructure in local and national government as well as SOE's, criminals and cartel bosses being appointed in senior and very senior positions, etc. The ANC must stop acting against the interest of the country and community - they must go.	Sarel	retired
	2026-09-30 16:20:38	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	How much longer must we stand by and accept the failures of Eskom? Consumers are stretched to their limit financially mainly because a large chunk of their earnings go to the Government. Vat, fuel tax, Paye and Provisional tax, property tax, capital gains tax, and over and above all that high water and electricity charges to pay for bad planning, sabotage, corruption all leading to failing infrastructure. Don't get me started on the Solar. Our government encouraged solar even offering a tax benefit (based on R15000 on a system costing R190 to 250 000 whoop de doo). They now want to penalise people for drawing power from the Sun! Enough is enough	Jane	self-employed
	2026-09-30 16:20:50	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	Disgusting Government liars thief’s criminals How cab a Country be ruled by people that were sitting in jail. Nearly all of them didn’t passed matric. 30 Years of disgusting service.	Gavin	retired
	2026-09-30 16:23:55	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I demand that NERSA impose a strict statuatory cap on fixed network and capacity charges, esuring fixed availability fees cannot exceed 15-20% of an average domestic electricity bill. I insist that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle income families. Utilities should absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers.	Regina	retired

	2026-09-30 16:41:51	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Prepaid Meter User	This is typical South African Government……Deliberately trying to destroy the only function economic sector of South Africa so that they can bring their desired solution of communism that will leave th controllers rich and the rest in poverty dependent on the government. Shame on you!! I hope that the masses will wake up !!	Gina	self-employed
	2026-09-30 16:43:36	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Prepaid Meter User	This proposed system is going to force people into paying for services not used and is punishing people that have managed to bring their consumption down to what they find workable as a family into serious abuse by ESKOM! PLEASE do not make the public pay for your incompetent to provide and punish them for trying to survive! Already people are under HUGE pressure with petrol prices and cost of living that's through the roof - especially pensioners under a fixed income! You expect people to align themselves to enable you to keep on not providing a proper service instead of fixing the real problem that lies with ESKOM ! No Government that cares for the people they are to protect and serve should even consider this as an answer !	Ina(Francina)	retired
	2026-09-30 16:45:16	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant)		Quesnay	employed individual
	2026-09-30 16:53:51	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Prepaid Meter User	Eskom is a service provider to South Africans, not a law-making body who can dictate to consumers who and how they must source their electricity. After decades of mismanagement we now get punished for making our own plan and be forced to use an entity that is incompetent and wants to monopolize all electricity provisions. This is simply corrupt and unethical. If I do not need Eskom after years of paying for services I did not receive from Eskom I refuse to pay for any service under duress and being forced by the corrupt and incompetent government to do so simply shows their unethical and greedy propensity.	Jim	employed individual
	2026-09-30 16:59:24	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	Eskom have to be privatized and get it out of the hands of people that enrich themselves. The government cannot make rules to drain and keep the middle class down and make socialistic /communistic rules just to enrich caders.	FRANCOIS	
	2026-09-30 17:02:43	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Prepaid Meter User	No I do not support the Revised Electricity Pricing Policy (EPP 2026) published as Government Notice No. 7852 (Gazette No. 55257), read with Extension Notice No. 7948 (Gazette No. 55436). My concern is All of the above, Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers No, I do not support the Revised Electricity Pricing Policy (EPP 2026). I formally object to the gazetted Revised Electricity Pricing Policy and urge the Minister and Department of Electricity and Energy to reject or substantially revise it before it is finalised. Key reasons for my opposition: 1. Mandatory fixed network and capacity charges Shifting the tariff structure away from consumption-based charges (c/kWh) toward high mandatory monthly fixed fees will penalise households that reduce usage or invest in energy efficiency and rooftop solar. Being forced to pay substantial baseline charges simply for remaining connected to the grid is unfair and discourages conservation. 2. Penalties and barriers for rooftop solar Forcing grid-tied solar customers onto Time-of-Use tariffs and charging network distribution fees on both imported and exported electricity, while prohibiting export credits from offsetting fixed network charges, actively undermines private investment in renewable energy. This approach works against energy security and the need to diversify generation. 3. Subsidies for industry at the expense of households and small businesses Expanding below-cost Negotiated Pricing Agreements for industrial users (such as smelters) without clear external funding will shift the revenue shortfall onto ordinary ratepayers. Paying households and SMMEs should not be required to cross-subsidise large industrial consumers. 4. Expansion of Free Basic Electricity without adequate funding Increasing Free Basic Electricity from 50 kWh to as much as 300 kWh per month without a corresponding increase in the national grant budget risks transferring the extra cost directly onto the bills of paying customers. Any expansion of free electricity must be properly and transparently funded by the fiscus, not by higher tariffs on other users. While the intention to improve transparency, limit municipal mark-ups used as “slush funds,” and prevent the automatic recovery of theft and bad debt from paying customers is welcome, these limited positives do not outweigh the structural flaws listed above. The policy as currently drafted will raise the fixed cost of electricity for ordinary South Africans, discourage private solar investment, and place an unfair burden on residential and small-business customers. I therefore vote No and call for the policy to be withdrawn or fundamentally rewritten after genuine, transparent consultation that prioritises affordable, cost-reflective electricity for households and small businesses.	John

	2026-09-30 17:28:08	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	Why should the consumer pay for the mismanagement of munciple spending and now be expected to fund the shortfall. The people in power must be held accountable and not simply expect the consumer to pick up the bills for miscalculations and mismanagement.	Monja	employed individual
	2026-09-30 17:31:11	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Prepaid Meter User	I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form (Rejects mandatory fixed grid capacity fees and standby charges on solar and low-usage homes, punitive double network fees on solar exports, the elimination of stepped block tariffs for standard households, and the risk of retail consumers funding industrial smelter discounts or unfunded social expansions). Minister of Electricity, have you planned this in the time of order or discource since you have no idea the full effects of the fuel levy increases on top of this. Eskom must claim back its money from the muncipalities sorry. Us tax payers support functioning muncipalities not outsourced policies that solve nothing. Governement needs change and that in turn means solvent muncipalities that are not stealing utility taxes for start. Let my town of Middelburg buy Komati powerstation and fix it up for our smelters and the town. I am sure it would run better that way.	Wayne	business owner
	2026-09-30 17:32:17	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	The ongoing and systematic increases to basic utilities is causing huge financial stress on low and medium income households. I am particularly affected as a sole breadwinner who is finding it increasing difficult to cope on a limited monthly budget.	Anne	self-employed

	2026-09-30 17:38:06	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	I object to larger basic cost of electricity, you should only pay for what you use. We installed Solar at a large cost [for a pensioner] because of load shedding, we helped indirectly to reduce load shedding and for Eskom to cope with the electricity demand. Now they want to penalise us for helping them. The cost of electricity is prohibitive because of bad management, too many employees and excessive use of diesel. Why must we pay for their mistakes.	Emil	retired
	2026-09-30 18:02:46	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Prepaid Meter User	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes is not constitutional. It's a form of double taxation for the inefficient Eskom State run monopoly. After load shedding business and private users we forced to privately invest in roof top power and battery storage options to mitigate ever increasing tariffs from the State owned enterprise and the Municipalities, which by far exceed the annual inflation. Furthermore the inability of Eskom to recover consumption charges from badly run municipalities, forces the SOE to try and recover operating costs from the home owner. The tariifs would be more palatable if the SOE would demonstrate publicly that they are trying to reduce their operating costs by purchasing more power from independent power producers instead of coal fired and diesel generation, Reducing their bloated staff compliment by 50 % and allowing private power producers to access the grid to wheel their own electricity to sell that privately below the Eskom tariff. The fixed user charge is in comprehensible. and should be abolished.	Ron	retired

	2026-09-30 18:23:36	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I am an Eskom Direct residential customer in Table View, Cape Town, with a rooftop solar system. I do not support the Revised Electricity Pricing Policy as published. My top concern is mandatory fixed grid and standby charges. Eskom already moves solar households onto Homeflex with fixed monthly network, capacity, service and admin charges that are still being phased in and rising each year. The draft policy turns that into a national principle without setting any limit on how large the fixed portion of a household bill may become. A policy that lets fixed charges grow without a cap punishes households that invested in solar to reduce load on a failing grid, and it removes any incentive to save electricity. I ask that the final policy cap fixed and capacity charges as a maximum percentage of a typical residential bill, with NERSA required to publish the cap and justify any change to it. Second, export treatment. The draft imposes network charges on both imported and exported energy and excludes generation capacity costs from export credits, then blocks those credits from offsetting fixed charges. The effect is that a solar household pays the network twice and is credited at a fraction of the rate it is charged. Export credits should be allowed to offset fixed charges, and network charges should apply once per connection, not once per direction. Third, cross-subsidy. Expanding Free Basic Electricity from 50 kWh to up to 300 kWh with no increase to the R21 billion grant, and extending below-cost Negotiated Pricing Agreements to industrial users, both create revenue shortfalls with no funding source named. Eskom Direct households are the first to absorb those shortfalls through tariffs. Both should be funded from the fiscus and shown as separate line items, not recovered through residential tariffs. Fourth, no bill-impact assessment has been published. A policy that restructures every household bill in the country should not be finalised without a modelled, published impact on typical residential, prosumer and small business customers over the five-year transition. I support cost-reflective pricing in principle, and I support the crackdown on municipal markups and the ban on passing theft and bad debt to paying customers. But cost-reflective must apply to the utility as well as the customer. The draft protects utility revenue from falling sales; it does not protect households from an unlimited fixed charge. That balance must be fixed before the policy is adopted. Separate from this submission: the registration requirement is real and applies whether or not you export. Worth sorting at some point, on your own timeline. Eskom was waiving the fee and smart meter cost for residential systems up to 50 kVA until 31 March 2026; I haven't checked whether that was extended.	Z	self-employed
	2026-09-30 18:25:09	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Prepaid Meter User	The objective is to force consumers into making payments determined by a vindictive, autocratic and incompetent municipal and government network of moneygrubbers who are incapable of honest, fruitful and necessary expenditures and encompasses the present regime's lust for totalitarian control with complete disregard for moral and ethical issues of good and efficient governance free of cadre benefits and self enrichment	John	retired

	2026-09-30 18:31:53	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Prepaid Meter User	My husband and I are pensioners. Electricity is rapidly becoming unaffordable and, frankly, we are very angry about, once again, having to cope without power because the ANC cadres allocated to manage ESKOM couldn't OR wouldn't do their jobs On my own account I object to this proposal with every fibre of my being. On behalf of my countrymen, I also object. In fact, I think ESKOM management has the most COLOSSAL CHEEK to penalise South Africans who were forced to install solar panels and batteries, precisely because ESKOM couldn't provide electricity. I wonder you have the audacity even to distribute a demand for payment for use of the grid. You don't seem to understand that the current situation is entirely Eskom's fault. We, the citizens, are the victims of Eskom's dishonesty and ineptitude and in NO way are we responsible for the measures that had to be taken to survive load shedding. I am pretty sure an enormous amount of money can be saved at Eskom, so that you can make up your losses by you, yourselves economising. It will no doubt come as a horrid shock to you all, to have to go without a few luxuries but it will give you insight into what it is to live in the real South Africa as we do, where you have to help yourself because the government certainly couldn't care less what happens to you. 	2026-10-01 06:57:00	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	My concern is not simply about paying more for electricity. It is the fundamental shift in the way electricity is being priced. I understand the argument for cost-reflective tariffs and for ensuring that the electricity network remains financially sustainable. But shifting a substantially greater proportion of the cost onto fixed charges and network/capacity charges risks disconnecting the cost of electricity from actual consumption. It also potentially penalises households and businesses that have invested in energy efficiency, solar and other measures specifically to reduce their dependence on the grid. I am particularly concerned that the policy could undermine the incentive to invest in rooftop solar and energy efficiency. If consumers reduce their consumption but remain liable for substantial fixed network charges, the economic benefit of becoming more energy efficient is diminished. I also think there needs to be far greater clarity about the distributional consequences of the proposed tariff structure — specifically who will pay more, who will pay less, and how the changes will affect households, small businesses and consumers who have invested their own money in alternative energy. There is a legitimate need to reform electricity pricing. But reform should not simply shift the financial burden from one group of consumers to another, nor should it create disincentives for consumers to reduce their demand on the national grid. For me, the answer is not to preserve the existing system unchanged. It is to design a pricing model that is transparent, genuinely cost-reflective, protects vulnerable consumers, rewards efficiency and investment in alternative energy, and does not make responsible consumers carry costs arising from inefficiencies elsewhere in the system. 	2026-10-01 09:39:23	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	We monitor our amount of electricity to the point of turning all lights not needed off, and not leaving the geyser on, etc. We literally do everything in our capacity to save on electricity as living costs increase. The stress that this puts on the average household in South Africa is unnerving. You cannot keep increasing all prices, from food to petrol to electricity, when we have so many outages and roads that do not work, we are taxed on everything and honestly just making it through each month causes so much fatigue. If there is any care for your citizens you would reconsider this. Along with the poor citizens who have tried to help themselves with solar, and now get penalised because you couldn't keep up with the need of electricity with your power plants, and now they need to pay doubly so that you can give free electricity to non-paying citizens. The more one thinks about this, the more ridiculous these concepts sound, yet this is our reality.	Michelle	employed individual

	2026-10-01 11:27:53	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	Government 'law/ policy' should encourage the behaviour you want and expect from citizens. The 'law/policy' should ultimately build up the community for the common good. The first step in revising any existing policy is to understand where it is failing , and where it can be improved. This new policy discourages users from being tied to the grid and from generating power by solar. We are a country blessed by abundant sunshine, we have already got acres of solar in place, the use of solar must be encouraged . The fundamental that we must pay for the electricity we consume must stay. Secondly I agreed with the steped increased cost with greater use. There is a truth is we respect what we have to pay for. There is a need for an 'industrial' electrical charge BUT it must be mandated that industry has a proportional solar installation , and its surplus must go back to the grid, at a discounted rate. this new policy must encourage the use of electricity to grow the economy, this policy must aim for decentralization of power generation , improved equitable distribution of power and better infrastructure support. Conversely there must be increased penelties for :- 1. illegal connections - and those that use, allow & make such connections 2. fraudulent and illegal manipulations of the electrical billing 3. ANY public official found guilty of ANY illegal activity is to be barred from EVER holding a public office of any nature again. 4. updated tracking of electrical consumption	derek joustra	retired
	2026-10-01 11:33:11	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Small / Medium Business Owner (SMME)	No I do not support the Revised Electricity Pricing Policy (EPP 2026) published as Government Notice No. 7852 (Gazette No. 55257), read with Extension Notice No. 7948 (Gazette No. 55436). My concern is All of the above, Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers No I do not support the Revised Electricity Pricing Policy (EPP 2026) published as Government Notice No. 7852 (Gazette No. 55257), read with Extension Notice No. 7948 (Gazette No. 55436). My concern is All of the above, Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers No, I do not support the Revised Electricity Pricing Policy (EPP 2026). I formally object to the gazetted Revised Electricity Pricing Policy and urge the Minister and Department of Electricity and Energy to reject or substantially revise it before it is finalised. Key reasons for my opposition: 1. Mandatory fixed network and capacity charges Shifting the tariff structure away from consumption-based charges (c/kWh) toward high mandatory monthly fixed fees will penalise households that reduce usage or invest in energy efficiency and rooftop solar. Being forced to pay substantial baseline charges simply for remaining connected to the grid is unfair and discourages conservation. 2. Penalties and barriers for rooftop solar Forcing grid-tied solar customers onto Time-of-Use tariffs and charging network distribution fees on both imported and exported electricity, while prohibiting export credits from offsetting fixed network charges, actively undermines private investment in renewable energy. This approach works against energy security and the need to diversify generation. 3. Subsidies for industry at the expense of households and small businesses Expanding below-cost Negotiated Pricing Agreements for industrial users (such as smelters) without clear external funding will shift the revenue shortfall onto ordinary ratepayers. Paying households and SMMEs should not be required to cross-subsidise large industrial consumers. 4. Expansion of Free Basic Electricity without adequate funding Increasing Free Basic Electricity from 50 kWh to as much as 300 kWh per month without a corresponding increase in the national grant budget risks transferring the extra cost directly onto the bills of paying customers. Any expansion of free electricity must be properly and transparently funded by the fiscus, not by higher tariffs on other users. While the intention to improve transparency, limit municipal mark-ups used as “slush funds,” and prevent the automatic recovery of theft and bad debt from paying customers is welcome, these limited positives do not outweigh the structural flaws listed above. The policy as currently drafted will raise the fixed cost of electricity for ordinary South Africans, discourage private solar investment, and place an unfair burden on residential and small-business customers. I therefore vote No and call for the policy to be withdrawn or fundamentally rewritten after genuine, transparent consultation that prioritises affordable, cost-reflective electricity for households and small businesses. 	2026-10-01 11:52:11	No I do not	Double Network Fees (DUoS) on Solar Prosumer Exports		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	1. The multiple users who installed solar power have, in the past, saved general users from more severe load shedding. Now they are to be punished. 2. Having a solar supply is still required to offset various power outages due to unreliable supply and to counter the now exorbitant costs of power from the grid. 3. Forcing the general users who pay for power to pay for the new high free base supply is wrong. This must be done by means of an open and accountable subsidy arrangement and not in a way that promotes a further way to possibly fleece the public. 4. A double base load charge for solar users is criminal, as they generally avoid peak load times with their installed and available battery backup.	Volkmar	retired

	2026-10-01 15:31:45	No I do not	Double Network Fees (DUoS) on Solar Prosumer Exports		Residential Ratepayer (Grid Reliant)	When recurring load shedding crippled businesses and households, citizens invested tens of billions of Rands in private savings to install rooftop solar, inverters, and battery banks. Shifting electricity billing away from consumption (c/kWh) toward mandatory fixed monthly network and standby capacity charges (R/kVA, R/kW, or R/Amp/month) under Policy Positions 11(b), 15, 27, and 30 acts as an availability penalty. It erodes household investment returns, penalises energy conservation, extends solar payback periods by years, and locks low-volume consumers into high monthly billing floors regardless of how little electricity they consume.	Sid	employed individual
	2026-10-01 15:32:02	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant)	It is clear that Eskom and the government have absolutely no compassion with or concern for the well-being of the citizens of South Africa, as they have done for the past 32 years. It is clear that politicians don't care to stand up for the general citizen, as these higher electricity rates don not affect them, because they don't pay for electricity. The man in the street is not aware of these ridiculous laws that just make their lives more difficult.	Johan	employed individual

	2026-10-01 15:33:25	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	The anc govt is making it impossoble to sustain a reasonable life style. The once middle class is now no longer . Rating = poor class. This combined with petrol price increases and food price increases are making it VERY difficult to survive.	BERNHARDT	retired
	2026-10-01 15:33:34	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	The proposed chages and new fees are not acceptable. They impose a burden of fees that are simply not affordable for the majority of South Africans and for all retired people. it is simply unaffordable and will drive more people below the living line. This cannot be and residential consumers cannot be subsidising huge businesses. CANNOT. As for the new solar regulations, ESKOM forced so many to go and get solar systems because they simply could not keep the lights on and many many many people lost money, business, food, stock etc due to ESKOM. So now they want to punish people tice for their inmcompetnce? NO, simply no. Someone with 10 or 20Kw of solar should not be punished as they are helping the national policies regarding the envronment and pollution. Eskom should be rewarding thos who have solar, not punishing them. The quantity of people now on solar helps the grid to supply the energy to big indeustrial consumers. Why punish the little guy. What this will do is push people who have invested in Solar to get more batteries and disconnect from ESKOM completely ! Stupidity	Philippe	business owner
	2026-10-01 15:35:42	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	Eskom could not supply me with a product, so I solved my problem myself with a rooftop system. Now because of their own ineptitude, they want to write into law that I must pay them irrespective? EXAMPLE : I want to buy a car. Dealer A says they don't have what I'm looking for, so I buy what I want from Dealer B. Dealer A says I must pay them for said car, just because they can supply me with the service. Moronic.	Briers	retired

	2026-10-01 15:38:30	No I do not	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	I object very much to the proposal of free electricity to the "less privileged". If you get something for free you will not use it sparingly. If you pay for it you will not waste it. Although electricity is seen as a basic need it is actually a luxury that needs to be paid for as you use it, just like a pay-as-you-go cell phone for instance. The block tarrifs should also stay because it acts as a reward for the people who look after their electricity usage. The grid will also not get overloaded if every household looks after their usage. 	2026-10-01 15:45:18	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	We installed solar panels at a huge cost because of loadshedding. We run a layer chicken business on a smallholding and had thousands of rands worth of losses because of chick mortalities during loadshedding. These losses were because of Eskom being totally useless in maintaining the grid so why should we be penalized now! As it is we pay an exorbitant line fee of R3000 before we even begin using power from the Eskom grid and we only kept our line in case of many consecutive rain days when the solar does not charge to it's full capacity. We also share a pole with our next door neighbour and yet Eskom charges both our properties the full amount instead of splitting the line fee in half. There they are already committing fraud and we have been complaining and wading our way through red tape, to no avail, for years. This is just another way for the current government to maintain their grip on the country's finances and line their own pockets. They extort money in any way they can and do not care about the ordinary citizens of SA who are already buckling under all the immense costs of just trying to feed their families and keeping a roof over their heads. SA has been pillaged and ruined and we are the laughing stock of the world. How immensely sad!	Michelle	self-employed
	2026-10-01 15:45:54	No I do not	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Residential Ratepayer (Grid Reliant)	My electricity bill has jumped from R1500 ave pm to 2250 ave pm in 2026, for 2 pensioners. It is ridiculous	Salomon	retired

	2026-10-01 16:06:58	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	Fixed charges are the best way for the poor people to finance the rich/billionaires, such as in VAT: whether you rich of poor you pay 15% to make the rich richer. Abolish FIXED CHARGES. All gov/municipal charges must be as PAYE. This gov gave us a good tax rebate on any installed solar systems some 2 or 3 years ago. Now the idiots want us to pay extra because we covered for their incompetence when they inserted the so called LOAD SHEDDING	Tony	retired
	2026-10-01 16:07:35	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	NOUGH IS ENOUGH! Eskom could not reliably supply us with electricity, so ordinary South Africans had to spend our own hard-earned money installing solar systems just to keep the lights on. The sun is free. We paid for the panels, batteries, installation and maintenance ourselves — yet now we are expected to pay even more because Eskom and the electricity system cannot operate efficiently? How is it fair to charge consumers for inefficiency, mismanagement and failures that are not of our making? We should not be punished for investing in our own energy independence. These charges are unacceptable. South Africans deserve fair, transparent electricity pricing — not additional costs for a system that has repeatedly failed us. ENOUGH. We must object and make our voices heard.	Tracey	employed individual

	2026-10-01 16:10:00	No I do not	Other		Residential Ratepayer (Grid Reliant)	UNAFFORDABILITY	Peter	retired

	2026-10-01 16:13:10	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Why do we get punished for investing in solar power to subsidise inept Excom inefficiencies. We helped Excom during load shedding and now is the price to pay	Happy	retired
	2026-10-01 16:13:10	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Municipal Official / Engineer	Utility chargers are already in some.intance equal or higher than rental income. The search for cheaper energy should be the goal without any extra institution claim. The council systems and methods are inadequate to insure correct consumption and change to the supply. To insure correct billing .and pinpoint supply point. Are non existing. Which creates extreme loss and major theft. The reconciliation of faulty billing is extremely costly and time-consuming. Beter systems and cheaper energy is definitely a must. Consumers are battling to stay on par. Energy is nesssary to live a good life and should be a pleasure and not a burden.it is now becoming a burden to users in a big way .leaders give them shelf a relief. And should seek the same for there voters	Leslie	
	2026-10-01 16:14:16	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant), Commercial / Industrial Power User, Rooftop Solar / Prosumer	The proven incapability and lack of all understanding of civilised systems management has led to the extreme cannibalising of a once internationally renowned successful energy company (ESCOM). The lack of management capacities, honesty and personal loyalties had not only undermined the structural integrities of ESCOM, but also the future efficiency and potential thereof. ESCO has been stripped (robbed), abused and drained of it's integrity to exist to enrich gangsters who not only stole, but indeed destroyed all critical infrastructure required for it to reasonably exist functionally. And here is the rub, who now has to pay for this? Who is now held responsible.? The ever available and diligent consumer. Socialism has a prover record of failures - here is another one!	WP

They will continue to rip off the paying public because we are easy targets. They will not go after the electricity thieves, because that takes effort. They incentivised people to go solar, and now that they have lost so much revenue , they want to punish us. They are criminals, laziest of the laziest, boast big manipulated profits, so they can steal massive bonuses. They are all over paid, and do very little to earn their salaries. Well, Eskom, big news for you. implement what you want to do, and you can come take your cable and your meter and shove it where the sun does not shine. I will buy a generator to help me on the few cloudy days that my solar does not charge my batteries, and go completely offgrid. Go find your money from the electrical thieves, and keep promising these lazy non working consumers free electricity, I will not pay for it. Eskom, you will collapse, it is simply matter of time, all you will end up with is non paying consumers, and thieves.. Generator here we come .	Michael	self-employed

	2026-10-01 17:31:09	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Households that invested private savings into rooftop solar, batteries, or energy-efficiency measures to survive load shedding will be hit with steep monthly fixed fees simply for remaining connected to the grid. However, without the investments of households and businesses in alternative energy sources, Eskom has failed to supply a basic human rights need. Frugal, low-volume consumers can no longer lower their utility bills by conserving electricity, as fixed network fees create a high, unavoidable monthly billing floor. The demands are that : NERSA impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. Low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. Utilities absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers.	Shann	retired

	2026-10-01 17:44:41	No I do not	Double Network Fees (DUoS) on Solar Prosumer Exports		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	I object to the following proposals in the draft policy: 1. Policy Position 38: Scrapping stepped (inclining block) tariffs in favour of fixed monthly connection charges plus a flat energy rate. This penalises households that conserve electricity and hits low- and middle-income families hardest. 2. Policy Position 54: Expanding discounted Negotiated Pricing Agreements for industrial users. Captive households and small businesses should not carry the shortfall through retail tariffs. 3. Policy Position 52: Expanding Free Basic Electricity without dedicated National Treasury funding. The cost will fall on paying consumers. 4. Policy Position 33 and network charges: Mandatory Time-of-Use tariffs, double network (DUoS) charges on both imports and exports, and the ban on offsetting fixed charges with export credits. Together these discourage people from reducing pressure on the grid. I ask that these proposals be withdrawn or revised to protect ordinary consumers and ensure that any new costs are properly funded rather than passed on to ratepayers.	Karl	employed individual

	2026-10-01 17:45:38	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Why do we keep feeding this wolf? You cannot, ever, keep increasing costs to stay in business. Get your money back from municipalities that are not paying, cut back on high expenditure costs, over inflated workforce, paying inflated bonuses when performance is bad. Eskom has to start operating like a private company, not being fat and lazy, living the rich life while the rest of us suffer. Down with this nonsense! The buck stops here!	Roy	retired
	2026-10-01 17:46:56	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant)	Stealing electricity is the reason why honest, paying consumers gets so frustrated when substations catch fire. Cables are regularly stolen, plunging suburbs in darkness. The municipality doesn't make a plan to secure the new cables against theft. In the township one has to be careful when encouraging non-payers to rather buy electricity, because the non-paying residents get angry. They say that they haven't got any money or jobs, electricity should be free. Also, the people who bypass the system, don't bother about their usage. In winter, they will use 3 heaters, leaving them on for the whole day. And now the minister wants to increase the amount that they get for free? We are all struggling to keep the lights on. The government has had 30 years worth of opportunities to uplift people, but I'm sorry to say that they failed miserably on all levels.	Leonora	retired

	2026-10-01 17:56:56	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	I hereby submit my strong objection to those provisions of the proposed Revised Electricity Pricing Policy, 2026, which would place an additional financial burden on ordinary electricity consumers and, in particular, households that have invested their own money in solar generation and battery storage. South Africans have already paid an enormous price for years of unreliable electricity supply. Load-shedding and inadequate electricity generation forced households and businesses to make substantial private investments in solar panels, batteries, inverters and other backup systems simply to maintain a basic level of electricity security. Government itself encouraged citizens who could afford to do so to invest in rooftop solar as part of the national response to the electricity crisis. The Department now proposes tariff structures which risk penalizing precisely those consumers who responded to that encouragement and invested their own money to reduce their dependence on the national grid. That is neither fair nor reasonable. The Government cannot, on the one hand, encourage citizens to invest privately in electricity generation because the national system cannot reliably meet demand and, on the other hand, introduce tariff structures that progressively undermine the financial benefit of those investments. I strongly object to: 1. Excessive fixed and network charges for residential consumers Consumers who deliberately reduce their electricity consumption should not be punished with increasingly unavoidable charges simply because they remain connected to the electricity network. A household that uses less electricity places less demand on the generation system. It is fundamentally unreasonable to create a tariff structure under which reducing consumption provides progressively less financial benefit. 2. Charges that undermine private solar generation The proposed treatment of distributed generation and network charges risks making residential solar substantially less economically attractive. Consumers who invested tens or hundreds of thousands of rand of their own money in solar did so partly because Government encouraged private generation and because the public electricity supply was unreliable. Those consumers should not now be treated as a convenient source of additional revenue. If Government wants South Africans to continue investing in private generation, battery storage and energy efficiency, tariff policy must provide a stable and credible financial incentive to do so. 3. Unfair treatment of electricity exported to the grid Where a household generates electricity and supplies surplus power to the grid, that household is providing an economic benefit to the electricity system. It is unreasonable to impose charges associated with both electricity consumed and electricity exported in a manner that substantially diminishes the value of that contribution. The policy should encourage additional private generation—not create financial disincentives for it. 4. The fundamental question of value for money Before imposing additional charges on consumers, Government and electricity distributors should first demonstrate that consumers are receiving an electricity service commensurate with the prices being charged. South Africans have experienced years of load-shedding and supply uncertainty. Many households have consequently had to purchase their own alternative generation and storage systems simply to maintain continuity of supply. It is therefore unacceptable for consumers to be effectively told: Pay for the national electricity system; pay increasingly more to remain connected to it; and, when that system fails to provide reliable electricity, pay again to install your own solar and battery system. The policy must not create precisely this outcome. 5. Consumers must not carry the consequences of inefficiency I support the principle that excessive technical and non-technical losses, electricity theft and bad debt beyond approved regulatory standards should not simply be passed on to consumers who pay their accounts. The Department should go considerably further in ensuring that inefficiency, theft, maladministration and poor revenue collection are dealt with at their source rather than routinely recovered from compliant consumers through higher tariffs. Similarly, any social electricity support must be transparently funded. Assistance to vulnerable households is an important social objective, but it should not become an opaque additional charge imposed disproportionately on consumers who already pay their accounts in full. 6. A fundamental reconsideration is required The Department states that the revised policy is intended to support affordability, transparency, non-discrimination and secure and reliable electricity services. Those principles must be reflected in the actual tariff consequences for ordinary consumers. A policy cannot reasonably be described as consumer-focused if a household which conserves electricity, invests in solar and reduces its dependence on the national grid can nevertheless face substantially higher unavoidable charges. I therefore call upon the Department to withdraw or substantially amend those provisions that: impose excessive unavoidable fixed or network charges on residential consumers; penalize households for reducing their electricity consumption; diminish the economic benefit of private solar generation; unfairly reduce the value of electricity exported by residential generators; transfer the cost of inefficiency, theft and excessive losses to compliant consumers; or otherwise discourage the private investment in generation and storage that Government has itself encouraged. The electricity crisis was not created by households installing solar. Households installed solar because of the electricity crisis. It would be deeply unjust to now make those households financially worse off for having invested their own money to protect themselves from an unreliable electricity supply—and, in many cases, to reduce the burden placed on the national grid. South African consumers deserve reliable electricity, transparent tariffs and fair treatment. They should not be expected to continually pay more for a service they increasingly have to supplement at their own expense. I therefore strongly urge the Department to reconsider these proposals before the Revised Electricity Pricing Policy is finalized and to ensure that the final policy rewards conservation, encourages private generation and protects paying consumers rather than penalizing them. 	2026-10-01 18:04:58	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	I do not support the Revised Electricity Pricing Policy in its current form. 1. Fixed and standby charges. Moving households from usage-based tariffs to large fixed monthly network and standby charges punishes people who save electricity. Households that installed solar, inverters and geysers at their own cost during load-shedding took pressure off a failing grid. They should not now be charged as if they were "free riders". Any fixed charge must be based on an audited, published cost of supply for each municipality, phased in over several years, and capped. 2. Double network fees on exports. Charging network fees on both imported and exported energy, and refusing to let export credits offset fixed charges, removes any reason to feed clean power into the grid. Export credits must be allowed to offset all charges on the bill. 3. Inclining block tariffs. Scrapping inclining block rates for ordinary households in favour of flat rates plus service fees shifts cost from heavy users onto small and middle-income users. Keep the inclining block structure for residential customers. 4. Smelter discounts. Negotiated pricing agreements for heavy industry must not be funded by households. Every discount and cross-subsidy should be published on consumer invoices and audited annually, with a fixed end date. I support the positions that ban hidden municipal electricity surcharges, require transparent cost-of-supply studies, and make utilities carry non-technical losses and bad debt above the regulatory benchmark. These should be strengthened: paying customers must not carry the cost of theft, non-payment and poor management. Electricity is already one of the largest costs for South African families and small businesses. Pricing policy should reward saving and self-generation, not penalise it.	ockert	employed individual

	2026-10-01 20:07:36	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	Thanks for the opportunity to have an discussion on this matter, however, it seems that since we as taxpayers and consumer's previous comments and concerns did not serve the real purpose and that the ANC movement did not understand or do not care about the financial implications of unwise decisions taken by a government' or politicians that must serve us and not control or abuse us as taxpayers and consumer's! In other words do not underestimate our intelligence as well qualified, educated and experienced Engineers and businesses! The ANC movement never developed anything in our country and this includes ESKOM, it was developed pre 1992 and well maintained by Professional educated Engineers, Technicians and artisans as with all other infrastructure services in South Africa! The difference between the previous teams and them under ANC management is competency, education and serving the people of South Africa, it was initially meant for the industries and was later extended to the citizens! The blackouts we faced, wether true or false because there are no trust in the ANC movement anymore, was deliberately done as with all other infrastructure services country wide because no maintenance was done or poorly done and mainly due to affirmative action which are costing our country dearly while consumers must pay for crime, lawlessness and corruption within the current evil regime, the criminals named in John chapter 8, the Word of God! Apparently, to a report received from a news platform, the ANC paid one billion rand to Cuba promoting terrorism while the elderly in our country must survive on a R 2400.00 per month pension who are battling with the high fuel and food prices! Even if they are getting free electricity or pay less, the crime, corruption and lawlessness adds up to the excessive fuel and food prices because every business just add their losses to their prices which consumers must pay including the elderly. This proves the additional taxes to be added which became an evil spiral in our economy, including the salaries of ESKOM employees and of cause the CEO! It was the investment of private sector and citizens who prevented a total black out, wether human made or not, from happening and many businesses had to close, crime escalated and many people lost their job's! Who paid the price of this tragedy allowed by poor management, businesses, taxpayer's and consumers!!!!!!! Again ESKOM tries their luck by doing some wicked changes not withstanding our rejections of their previous attempt's to tax private sector for their investment, just like taxes on almost everything in our country in accordance with the book they worship, called religion in their Constitution! The ANC terrorists movement harmed our credibility so much which prevents global investments because of their stupid ideology and wicked politicians controlling even the SAPS as we are witnessing everyday! What is so amazing is that their supporters are not stupid fool's any more because you can fool people up to a point and then the fire will start. As Nelson Mandela once spoke true words, if a room are filled with darkness, one crack will allow the Light to move in, the people of our country are the point of fighting this evil regime because we need wise leaders, Matthew chapter 25 and not fool's to take our country forward, the correct seed as declared in Matthew chapter 13, the Word of God! No to any additional charges or taxes or levies or corruption within ESKOM which we created, not the ANC apartheids movement which could not even maintain our infrastructure services, all of them, not ESKOM only! Concluding this comment's, if anyone feels offended by this comment's, phone me and let us having an open discussion because I am like others very privileged to spend half of my life pre 1992 and half post 1992, ESKOM cannot fool us with their lies! 	2026-10-01 20:53:32	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	As part of the current municipal electricity bill for my dwelling, I am paying a "network charge" of nearly 50% of the monthly combined electricity bill. In order to provide sustainability to the electrical supply for the dwelling and to try and hedge against the spiralling unit costs of power; I am considering installing a solar supply, and this would become uneconomical if the "fixed" network charges and the cost of the power were to increase exponentially so that the municipalities can recover the uncontrolled costs of an inefficient producer (ESCOM), which is passing their inefficiencies directly to their customers, the uncontrolled theft of power and the power infrastructure (mainly cables), and the continual renewal and maintenance (as opposed to the current lack thereof) of the aging infrastructure. The solution to the billing problem, in my opinion, lies in controlling what can be controlled, i.e. the theft of power and meter tampering, additional protection, detection, and prosecution of perpetrators of the damage and theft of the power infrastructure, and sufficient budgeting and implementation of programmes to upgrade and repair of the electrical municipal electrical distribution infrastructure, and not simply "passing on" these costs to the consumer. 	2026-10-01 21:08:00	No I do not	All of the above	Double Network Fees (DUoS) on Solar Prosumer Exports	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	The government should privitise Eskom instead of creating legislation that penalises citizens who spent money to be less dependent on a failing system.	L	
	2026-10-01 21:11:03	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Prepaid Meter User	The government has lost customers because of loadshedding which forced consumers that could afford solar to switch. Consumers should not be penalized for government failure to provide electricity. I do agree that now that excess electricity is available that ALL indigent SOUTH AFRICAN households (AND those with household incomes below the income tax threshold)) should qualify for more free electricity than 60kwh p.m. although perhaps it should be increased to 250kwh p.m. for South Africans only instead of 300kwh p.m. Any excess electricity could be SOLD to neighbouring countries (instead of the additional expense of creating storage facilities for it here) to fund the building of an impenetrable barrier on all our borders to prevent illegal immigration as it appears that our useless government, army, the police and BM cannot stop it. I am opposed to any additional flat fees on water or electricity. The rates portion of our bills should be used to pay for infrastructure maintenance and for new infrastructure in the ward where it is collected. Problem is, it is not ! Its time for government to disclose to the public and account for every rates cent collected ! Instead many people that have qualified for free RDP housing have rented or sold those houses and gone to live in the shacks while the money is used to build a house in the Eastern Cape or their village elsewhere - so we are paying for their accommodation twice! Also now to provide electricity to those illegal shack dwellers at our expense! Amahambe! We must be billed for water and electricity according to consumption only. The current billing system is fine. but I do agree that all SOUTH AFRICAN sassa grant recipients ONLY should receive 250kwh of free electricity per month. However you must implement systems to prevent illegal connections. And you must stop supplying municipalities that do not pay their electricity bills. All owing for longer than 60 days must be cut off and not reconnected until it has all been paid back. Electricity is already unaffordable and to increase it again now deprives us of it - which is unconstitutional - you are OBLIGED to supply us with water and electricity.	Colleen	retired
	2026-10-01 21:12:33	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	Of my electricity bill every month R1450 is service, network and VAT charges. My total bill before use is R2445. I am a pensioner with a fixed income. Politicians don't suffer from no electricity, no water, no refuse collection. Yet I must pay these ridiculous prices while they steal. Fed up	Desiree	unemployed individual
	2026-10-01 21:12:54	No I do not	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Residential Ratepayer (Grid Reliant)	Demand that NERSA impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. Insist that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. Require utilities to absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers. Demand the complete removal of DUoS and TUoS network charges on exported electricity (Policy Position 33(d)), recognising that embedded solar reduces local line losses and daytime substation loading. Insist that solar export credits be eligible to offset the total monthly municipal utility bill, including fixed network and customer service charges. Require fair, cost-reflective feed-in credit rates that reflect the true economic value of daytime peak/standard clean power injected into local distribution networks. Demand that NERSA retain an energy-conservation tariff tier for non-indigent, low-to-middle-income consumers that does not penalise modest energy usage with large monthly service fees. Insist that the migration from IBRs to unbundled domestic tariffs be phased in gradually over a minimum of five years, with mandatory local affordability impact assessments. Require that smart metering infrastructure and Time-of-Use domestic options be provided without upfront capital cost penalties to the end-user. Demand that NERSA automatically reject any municipal tariff application that is not supported by a fully audited, publicly accessible Cost of Supply (CoS) study (Policy Position 25(a)). Insist on the immediate statutory ring-fencing of all municipal electricity revenues into dedicated maintenance accounts, legally prohibiting councils from diverting electricity revenue to fund unrelated municipal wage bills or deficits. Demand that National Treasury set a hard, uniform percentage cap on the Municipal Surcharge on Electricity (MSOE) to prevent local councils from using surcharges to circumvent NERSA tariff controls. Demand that NERSA immediately enforce Policy Position 43(b) by clawing back and disallowing any tariff requests where municipal distribution losses exceed national regulatory standards (typically 7%–10%). Insist that paying consumers be legally shielded from funding municipal arrears and Eskom debt defaults through local tariff markups or surcharge adjustments. Require licensees to implement strict, automated tamper detection, independent metering audits, and universal prepaid infrastructure in non-paying areas before requesting any tariff increases from compliant ratepayers. 	2026-10-02 02:59:29	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	I urge NERSA not to approve the Revised Electricity Pricing Policy as it stands. People who install rooftop solar and batteries should still pay fairly for the grid capacity and services they rely on. But the pricing rules should not undermine the financial case for generating and using their own electricity. The proposed monthly network and service fees could remain high even for homes that draw very little power from the grid. The policy does not set out a clear ceiling for these fees or show how they would affect different households. NERSA should publish realistic bill examples before making a decision, including examples for low-use homes and homes with solar. The fees should reflect the efficient cost of the connection capacity each customer requires, and customers should be able to choose a lower-capacity connection and pay the related lower fee. The rules for electricity sent back to the grid also need reconsideration. If households are charged for exports but cannot use the value of those exports to reduce network or retail fees, sending power to the grid may have little or no financial benefit. Any export fee should be based on the actual network costs caused by that export, including its location and timing. NERSA should show the export payment alongside every related fee in clear examples. The policy also proposes time-of-use tariffs for grid-connected solar customers. It should explain how those tariffs would affect a household that consumes its solar generation at home and sends no power to the grid. Any meter replacement or upgrade requirements, and the costs to homeowners, should be made clear before people invest. Please revise these proposals before finalising the policy. Before the rules are adopted, publish the expected connection costs, export values and likely effect on the financial return from a solar installation, and allow the public to comment on them. Nives	retired
	2026-10-02 04:57:15	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	Government needs to FULLY COMMIT to the just energy transition. It needs to CLOSE older coal fired power stations and BUILD solar generation and storage , wind, hydro sources of energy. Government should INCENTIVIZE roof top solar for low income households through SAVINGS on the transmission infrastructure. ESCOM and municipalities that are not bankrupt need to invest massively in solar which is now multiples cheaper than coal. Roof top solar saved Escom from collapse. I would support a reasonable grid connection fee for hybrid users - dont make the same mistake as e-tolls. If they fee is set at a level to compensate for electricity and cable theft, unpayable municipal debt to Escom, cross usbsidising smelters etc - THEN GOVERNMENT WILL FACE LEGAL CHALLENGES AND A REVOLT as it saw with e-tolls. THIS IS INEVITABLE. You dont need AI to figure that out. --- ✅ South Africa's concessional financing under the $11.8 billion Just Energy Transition Partnership (JETP) has disbursed only about $583 million, facing delays, a $1.5 billion US funding withdrawal in March 2025, **and extended coal plant lifespans**. THIS IS A POLICY MISTAKE DRIVEN BY SHORT TERM POLITICAL CONSIDERATIONS. COMPENSATE THE MPHUMALANGA COAL MINERS. ? Current Status of Financing and Pledges • Pledged Funds: Originally promised $8.5 billion, later scaled to $11.8 billion from international partners (UK, Germany, France, EU, US). • Disbursed/Allocated: Roughly $583 million is actively deployed into initial focus areas. • Setbacks: The United States withdrew $1.5 billion of its pledge in March 2025, tightening available concessional room. • Specific Projects: The World Bank approved $497 million specifically to decommission and repurpose the Komati coal plant. ? Key Roadblocks and Delays • Grid Constraints: Transmission bottlenecks limit large-scale renewable integration. THE INVESTMENTS ARE BEING MADE BUT WAY TO SLOWLY. MAKE AN EFFORT!!! • Socioeconomic Pressures: High regional dependency on coal jobs in Mpumalanga slows rapid decommissioning without heavy safety-net	Jack	self-employed

	2026-10-02 05:10:50	No I do not	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Residential Ratepayer (Grid Reliant)	I don't support the way that this is handled, it's the middle income earners squeezed into massive debt to fund bills that aren't theirs which is disgusting. Simply saying fixed rate and not giving any number indication decimates any trust factor. Fuel prive increases, then yearly outrageous increases on electricity, we paying over 550% more for electricity since 2010 era that pathetic and greedy. If they were actually transparent about the pricing, for instance each home will be charged R400 good connection fee and flat rate of R500 so total R900 and no more then people will have an understanding but we don't see that happening. 	2026-10-02 05:28:38	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer	Taxpayers in SA have long been beating the hidden costs of subsidizing the indigent, through means of 162 taxes, most of which are unavoidable. The implementation of the fixed line charges, together with the scrapping of scaled usage tariffs, as well as duplicate line charges for solar prosumers, are all tantamount to more hidden taxes on an already-burdened household or small business owner. Eskom's declared intention behind the redrafting of policy is to open the market to competitors and other contributors to the national grid sounds great, in theory, but I'm practice, it is going to enforce a hefty price tag into consumers who at this stage don't have any alternative, as there's no competitor on the market currently, and having solar or another alternative power supply will result in cost penalties. There are no good options for the consumers or prosumers in Eskom's policy redraft, albeit some token efforts towards transparency are promised, as a sort of compensation. Besides bearing the ever-increasing burden of non-payers, users will have to pick up the tab for bulk power consumers. This isn't sustainable. There are hidden cost-bearing consequences to Eskom's decisions to their policy redraft, which their customers will have to bear unfairly.	Grant	business owner

Huge investments were made based on savings on electricity going forward and these have not yet paid back the value of the initial investment. Many of us did not claim back or off taxes as the requirements were too onerous and used parties that were accredited by Eskom that charged exorbitant prices. Charging higher prices during peak periods is understandable but flat rates and availability fees. The more affluent areas are already subsidizing poorer areas in the current rates applied. Eskom and the authorities need to work on taking those with illegal connections to book as it is not sustainable that those who do pay for electricity subsidise those who don't.	Philippa	employed individual
	2026-10-02 05:31:56	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Once again we see how an corrupt anc is trying to steal peoples hard earned money to pay outstanding fees from councils (this is because of corrupt anc officials in councils). On top of it eskom can not supply electricity without load sheading or whatever they call it today, people made a plan to keep the lights on, now this corrupt entity wants to bill people for using solar, really. Nothing is done about theft of electricity, eventually this will lead to everyone going to steal electricity just to keep the lights on and avoid paying eskom (seems as crime pays in this country).... eskom is run by administrators who have no clue on to run the business.....	kevin	employed individual

	2026-10-02 06:06:23	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Small / Medium Business Owner (SMME)	Eskom has to realise the damage it has done to the economy in South Africa from loadshedding to astronomical rates for the service it provides. The time has come for eskom to release the monopoly stronghold it has over the energy sector and allow competition to enter. Eskom has been complicit in keeping the econonic growth rates below 1% pa for years now. It's time eskom bows to the demands of business and the citizenry and learns how to produce affordable electricity instead of continually holding SA to ransom	Chris	
	2026-10-02 06:06:31	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Ons is afhanklik van elektrisiteit en kan ongelukkig nie daarsonder nie. Ek probeer om elektrisiteit te bespaar, maar as hierdie wetgewing deurgaan word ons verplig om 'n basiese fooi te betaal, bo en behalwe die per maand se aankoop, wat alreeds astronomies is. Niemand kan byhou by alle verhogings nie. Ek verstaan ook nie hoekom diegene wat na hulself omsien deur sonkrag te gebruik moet beboet word nie. Die lewe is nie regverdig nie, maar dis verregaande dat diegene wat ten duurste sonpanele laat installeer het, nou vir Eskom .n fooi moet betaal.	Coenraad	retired

	2026-10-02 06:23:08	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	Mandatory Fixed Charges (Policy Positions 11, 27, 30) Functions as an arbitrary “sun tax” and availability penalty. Punishes energy efficiency and private capital invested to survive load shedding, extending solar payback periods. Prosumer Net-Billing Rules (Policy Position 33) Highly punitive: charging solar owners DUoS fees to export clean power while refusing to allow export credits to offset network fees creates an unviable investment model. Scrapping Inclining Block Tariffs (Policy Position 38) Removing IBRs in favour of flat energy rates plus heavy basic monthly connection fees will cause immediate sticker shock for low-to-middle-income ratepayers. Municipal Surcharge Ring-Fencing (Policy Position 47) Threatens local government fiscal collapse. If municipal electricity profits are stripped, councils will hike property rates or collapse basic community services. Industrial Smelter NPAs (Policy Position 54) If heavy industry receives electricity at 62 c/kWh (below cost), ordinary retail consumers and small businesses will be forced to shoulder the resulting revenue shortfall. Prepaid Vending Caps (Policy Position 45) Imposing tight commission caps without administrative support could cause independent retail vendors to shut down, stranding rural consumers without token access. 	2026-10-02 06:57:11	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	I strongly object to the Revised Electricity Pricing Policy in its current form. South African households and small businesses are already under enormous financial pressure. The cost of electricity, fuel, food, municipal services, rates, taxes and virtually every other basic expense continues to increase, while disposable income simply does not keep pace. My greatest concern is the continued introduction of fixed and unavoidable charges. Consumers should have some ability to control their electricity costs by reducing consumption, becoming more energy efficient or investing their own money in solar and battery systems. Introducing additional fixed grid, capacity or standby charges means that people can be charged significant amounts regardless of how responsibly or efficiently they use electricity. Many South Africans invested in solar and alternative energy precisely because electricity became expensive and unreliable. It would be deeply unfair if those same consumers are now financially penalised simply for remaining connected to the national or municipal grid. As a small-business owner, I see first-hand how increasingly difficult it is to absorb one additional cost after another. Every new tariff, levy, fixed charge and administrative cost eventually affects the viability of businesses, employment and the prices consumers have to pay. South Africans cannot continually be expected to solve structural and financial problems in the electricity sector simply through higher and more complicated charges. I support transparency, an efficient electricity market and a financially sustainable electricity system. However, reform should not mean transferring an ever-increasing financial burden to ordinary households and small businesses. I therefore object to the policy in its current form and specifically call for strong protection against excessive fixed charges, capacity charges and standby charges. Consumers who reduce their electricity consumption or invest in their own generation should benefit financially from doing so, rather than being penalised through unavoidable monthly charges. There has to be a limit to how much additional financial pressure ordinary South Africans are expected to absorb. Many households and businesses are already struggling simply to keep their heads above water.	Jaco	self-employed

	2026-10-02 08:10:39	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Rooftop Solar / Prosumer	I demand that NERSA immediately enforce Policy Position 43(b) by clawing back and disallowing any tariff requests where municipal distribution losses exceed national regulatory standards (typically 7%–10%). I insist that paying consumers be legally shielded from funding municipal arrears and Eskom debt defaults through local tariff markups or surcharge adjustments. Require licensees to implement strict, automated tamper detection, independent metering audits, and universal prepaid infrastructure in non-paying areas before requesting any tariff increases from compliant ratepayers. I also demand the complete removal of DUoS and TUoS network charges on exported electricity (Policy Position 33(d)), recognising that embedded solar reduces local line losses and daytime substation loading. Insist that solar export credits be eligible to offset the total monthly municipal utility bill, including fixed network and customer service charges. Require fair, cost-reflective feed-in credit rates that reflect the true economic value of daytime peak/standard clean power injected into local distribution networks.	Fleur	employed individual

	2026-10-02 08:21:57	No I do not	Municipal Hidden Surcharges & Diverted Electricity Revenues		Small / Medium Business Owner (SMME)	The reason that we purchase solar was the frequency of load shedding and the outages that we continue to experience. Without electricity we experience the following:- 1. The farm only has borehole water (no municipal water). Without water our crops will die and this made it necessary to structure ourselves to always have water if we have no electricity from Eskom. The solar ensures that we will always be able to pump water from our boreholes. 2. The electric fence around the farm switches off after the batteries have run flat. The electric fence has been linked to our solar so that the electric fence remains on even though there is no ESKOM power. Security is paramount in our area as it has been designated a "hot Spot" area for crime. 3. The stealing of cables and transformers in our area is serious. At times we have been without ESKOM power for 14 days. We cannot survive without electricity - hence the need for solar. We had to go to incredible expense to install a solar system for the above reasons (and not that we wanted to but out of necessity we were "forced" to install a solar system) and for Eskom to now penalize us with charges because we have solar is totally unacceptable. We are partially solar users for critical areas on our farm; we still utilize ESKOM power for our geysers and cooking and non-critical areas.	Vernon	retired
	2026-10-02 08:22:56	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	If heavy industry receives electricity at 62 c/kWh (below cost), ordinary retail consumers and small businesses will be forced to shoulder the resulting revenue shortfall. Added to this, we the consumer pay for corruption, exorbitant salaries and malpractice.	Jenni

	2026-10-02 08:36:29	No I do not	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Residential Ratepayer (Grid Reliant)	Eskom continues to protect its monopoly over electricity supply in South Africa, limiting the choices available to households and businesses in how they power their lives. Over many years, Eskom's tariff increases have far outpaced the growth in its customers' incomes. Electricity is now unaffordable for a growing share of South Africans. These increases are not driven by efficiency or investment. They reflect years of corruption and the misuse of Eskom's assets, as documented by the State Capture Commission, and an organisation that has no real incentive to control its costs. Coal procurement shows the problem clearly. A significant share of Eskom's coal is bought under cost-plus contracts, which give suppliers no reason to keep their costs down. Those costs pass straight through to Eskom, and from Eskom to the end user. Offering large power users heavily discounted or below-cost tariffs makes this worse. Every rand of discount for a few large consumers is carried by small businesses and ordinary households, who are the least able to absorb it. Eskom must be held accountable for managing its costs, from coal contracts to executive pay, so that it can offer every customer a fair price for electricity. If it cannot do so, the market should be opened fully to private investment and competition, so that South Africans are no longer bound to a single, inefficient supplier.	Emma	employed individual
	2026-10-02 08:36:33	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	The Cost of bloated Eskom’s executives must Not be passed onto the Consumers	Tony	retired

	2026-10-02 08:41:28	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I am not well versed in the duplicity of governments and seemingly at times big corporations and entities with power, but feel the effects harshly in my diminishing purchasing power with no ability economically to rid myself of a control I seemingly have no say in in a democracy where the voice of the people should be paramount. This government , sorry to say, has never really measured up to promises and expectations and will not ever do so. This is just one of the latest actions to do a stupid thing to hide their total incompetence at governing but their astoundingly competence at grift and stealing from a ever diminishing pool of productive people.	Jakobus P H	retired
	2026-10-02 08:41:51	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Prepaid Meter User	The people responsible for running Eskom have had years to address its problems. Instead, ordinary paying citizens continue to carry the cost of failures, inefficiency and alleged corruption. Eskom’s improved performance over the past year should have been an opportunity to strengthen the utility, reduce the burden on consumers and restore financial stability. Instead, the payment of bonuses raises a very reasonable question: what exactly are these bonuses rewarding, and why should struggling customers be expected to keep paying more? If Eskom is genuinely turning around, then the benefits of that improvement should ultimately be felt by the people who fund it—not simply reflected in larger payouts to executives and officials. South Africans have been asked to accept higher costs, repeated increases and years of disruption while being told that Eskom is being fixed. At some point, there must be accountability for how public money is managed. We should not be expected to continually pay more to compensate for failures we did not cause.	C	employed individual

	2026-10-02 08:43:05	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Prepaid Meter User	Eskom has for years offered a deteriorating and unreliable source of power and it is not coming right eg in the Overberg area. As residents we cannot pay for huge salaries, bonuses and general mismanagement of funds and lack of experience to resolve problems. Our huge paye tax payments must fund any Eskom requirements via the national budget. These funds are available if attention is paid to the huge wastage of a bloated government. Whilst I do not have a problem in principle in subsidising the poor…. The lack of transparency in this regard has created suspicion as to actual usage/ subsidies. We can no longer afford electricity escalating prices: Solar power installed by individuals should be encouraged at no penalty costs but rather subsidised by Eskom, Eskom should investigate its own clean energy fields in the Karoo	Niel	retired
	2026-10-02 08:43:56	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Prepaid Meter User	Removing IBRs in favour of flat energy rates plus heavy basic monthly connection fees will cause immediate sticker shock for low-to-middle-income ratepayers.	Pat	
	2026-10-02 08:44:05	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Small / Medium Business Owner (SMME), Prepaid Meter User	Simply another way to steal money from an already cash strapped base. I don't think the government will be happy until each household simply can't afford anything. If you really want us to pay for services, why don't you provide services that actually work? Any reasonable business would be tanked if it was run the way the government is running this country. Yet we 'need' to just accept this. No to this!	Lee	self-employed

	2026-10-02 08:55:52	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer	Look at the historical situation : - "Load shedding" (which is simply power failure) due to Eksdoms' and the municipalities' corruption, maladministration, cadre deployment, etc. - Result : nationwide electricity shortages coupled to high prices. - Largely helped by the population who could afford it by going solar, wind, etc, thus relieving the shortages. Those who managed to relieve the "grid shortfalls" have spent a very large amount, with very long (possibly never) payback periods, severely affecting their financial situations. - So now Eksdoms' and the municipalities' incomes are reduced. - So now they have to "invent" other ways of extracting money to make up their shortfall. - So maybe it wasn't in our (self electricity generating consumers) interests to have dragged Eksdom and the municipalities out of their shit, only to be extorted into continuing to fund their gravy train. 	2026-10-02 09:31:21	No I do not	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Residential Ratepayer (Grid Reliant)	Consumers should be charged only for what they actually use, not pay hidden municipal charges, subsidising heavy industry users or having Eskom or the municipality include the recovery of losses, whether theft or unpaid accounts or to pay excessive salaries and above inflation increases. Perhaps the minister and the municipalities need to educate themselves about the Laffer Curve. There is no point in charging more than consumers can afford, as fewer will be able to pay, resulting in an increase in unrecoverable amounts. Salary increases in the private sector and for the self-employed have not kept pace with the inflation of electricity prices over the last 20 odd years. In fact, in my business, I see more individuals struggling and SME's closing up shop as they are unable to manage increased expenses (many well above the inflation rate), with reduced income/salaries due to the economic climate. As overall costs increase, and income has decreased, I use as little electricity as possible, sitting in the dark at night, to reduce my electricity bill, which has affected my earning capacity as I cannot see to work. For those of us who live in flats, there is also the hidden cost of Body Corporate electricity, and other utilities, which is split proportionately between all units. So effectively, you pay for your usage and your portion of electricity used in the complex. Regarding National Treasury providing a financial injection to enable large industries to only pay 62c/kwh - this money comes from taxes, so effectively it is paid by everyone who pays any form of tax, even the poor (eg VAT). a person can therefore be paying your usage, the usage by a Body Corporate and then via tax, subsidising the reduced rate difference for heavy industry. National Treasury is only distributing money collected from taxes. As for Eskom, the municipalities and government departments, it is obviously easier to spend other people's money than to curtail costs and expenses or prevent fraud, theft and corruption.	Natalie	self-employed
	2026-10-02 09:31:56	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	Why must we pay for solar usage, the sun is for free, we installed our solar system at our own cost because electricity rates are unaffordable, supply is unreliable due to collapsing infrastructure. The misappropriation of funds have led to infrastructure that can not be maintained or repaired and because of illegal connections it causes strain on the already fragile grids causing fires, power outages	Luz	unemployed individual
	2026-10-02 09:32:03	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer	These policies cause unhappy distance and discord between government and society rather than a service for the public good. With massive unemployment concerns, south africans are at greater risk of getting into debt and resorting to criminal activity because they are forced to pay something they cannot afford while it funds and favours government who are never delivering the level and value of service that this country and its people need.	Michael	employed individual
	2026-10-02 09:32:04	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	We consumers are being squeezed from all sides and cannot tolerate yet higher electricity costs, which would lead to impoverishing everyone and damage the economy, leading to more job losses.	Reginald	retired
	2026-10-02 09:33:35	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	I object to the Revised Electricity Pricing Policy (EPP 2026) in its current form. My primary concern is mandatory fixed grid capacity and standby charges that could make electricity unaffordable for low-usage households and undermine the financial benefits of conserving electricity or investing in solar. I recognize that maintaining a reliable electricity network has legitimate costs. However, any fixed charges must be independently justified, proportionate to the capacity required, transparently calculated and subject to enforceable affordability protections. Households must retain a meaningful ability to reduce their total electricity bill by reducing consumption. I also oppose removing stepped household tariffs without demonstrating that the replacement will protect low- and middle-income consumers. Solar import and export charges must reflect demonstrable network costs, avoid double recovery and fairly recognize the value of electricity supplied to the grid. Industrial discounts must not create hidden shortfalls recovered from household and small-business tariffs. I support assistance for indigent households, but any expansion must have adequate, transparent funding. The final policy must retain strong protections against hidden municipal markups and the recovery of excessive losses, theft and bad debt from compliant consumers. Before adoption, the Department should publish independently scrutinized household bill comparisons across income levels, consumption patterns and solar ownership. Electricity reform must deliver affordability, accountability and reliable supply while preserving incentives for energy efficiency.	Raffaello	employed individual
	2026-10-02 09:34:12	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I would be fine with mandatory fixed charges but they are extremely inflated in my opinion. You cannot tell me that 2 houses sharing the same 50 meters of road (1 house of each side of the road) should be paying thousands of rands MONTHLY for upkeep. I want transparency on how they come to the fixed monthly amount. Quick napkin math. Bryanston is 25km2 2011 Census - There was approximately 12000 homes. 12000 homes x ~R1150 (Utilties connection cost, Single Phase) = R13 800 000 per month You telling me that it costs R552 000 to maintain and deliver electricity to 1km2 ? EVERY MONTH, before any of those homes use a single electron. Absolutely bull. And now they want to increase that... Why is there no media coverage of people taking on Eskom and the Municipalities to explain how they get these ridiculous numbers.	Jarrod	

	2026-10-02 09:34:22	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form	timmy	
	2026-10-02 09:36:50	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	I think it should be illegal for the government to have any right to penalise us for using solar energy. First they promoted it in order to stop overloading the grid and now they want to penalise us! Solar installations have been put in at our own expense and should have nothing to do with ESKOM. We have both solar and Eskomas a backup - I am already paying for just the convenience of having a connection in case the solar fails - that should be adequate recompense.	Dianne	retired
	2026-10-02 09:37:08	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Eskom wishes to unfairly take advantage of the slogan 'Desperate times call for desperate measures.' It is unacceptable to expect the public, and more particularly a large majority, who are battling to come out on their monthly expenses ,to fit the bill of outstanding debt, owed to it by all those municipalities and companies and members of the public who are indebted to Eskom. This is another unfair and unacceptable means of extortion from those that are regularly paying, and is totally unacceptable, leaving as well a hidden agenda going forward to continue to increase costs and even more legislation. Enough is ENOUGH!	Kevin	retired

The misappropriation of funds has led to infrastructure that cannot be maintained or repaired and because of illegal connections it causes strain on the already fragile grids causing fires, power outage. Eskom and the Government have basically stolen the money. etc. They are giving large wage increases etc.AT one stage that even gave us rebate and now we must pay for their bad management. Eskom and the Government has basically lied to the public. Eskom has spent Millions on building which has gone to ruin. The Government even owes Avis millions of rands. They all should be held responsible. Pensioners should be paying much less for it. They have given their whole life to the country and now must pay even more .It's a Joke	Patrick	retired
	2026-10-02 09:50:06	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant)	Such a back handed minster, should be fired for deceiving the people. Election are coming the are hitting pause button until after election then full steam ahead with there plans. 	2026-10-02 09:56:23	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	In an attempt to provide electricity for my family during the period where Eskom were incapable of providing reliable electricity, I installed solar power at my home. Now that I am a pensioner my solar powered system provides me with free electricity during sunny periods which assists me with my monthly budget. As my pension is very little this is a great help and prevents me from having to choose between food and electricity. Burdening me with a mandatory monthly fee is equivalent to taxing the sunlight that I use. I find this totally unacceptable and I will totally disconnect from the grid if this is enforced. I would rather spend money on extending the capacity of my solar power system than paying Eskom a fee for which I receive nothing in return.	Howard	retired

	2026-10-02 10:09:56	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	We need to draft a policy so that it benefits all. Producers, Suppliers and Consumers Builds up the community for the common good. the producers to keep on generating power as this employs people and improves the standard of industry and daily living the suppliers to supply the electricity and maintain the infrastructure functional by being paid a reasonable rate by the users of the electricity for what they have used . Outages no electricity no payment no service fee due to failed infrastructure and maintenance. the consumers The fundamental that we must pay for the electricity we consume must stay we respect what we have to pay for and all . Secondly I agreed with stepped increased cost with greater use. Consumers will happily pay a reasonable rate if they can trust the supply and not necessarily seek alternatives which deplete the income for the producer and the supplier. Few people can afford the alternative solar. Solar owners should not be punished for exporting more power but encouraged to produce more to help others and take the strain off the grid. This new policy discourages consumers from being tied to the grid. If the electricity is reasonable and regular it will not be necessary to seek alternatives and will be a benefit to everyone. The needy who cannot genuinely afford it. The basic free 50 kW should remain and not be increased as it will be abused. This new policy must encourage the use of electricity to grow the economy, this policy must aim for decentralization of power generation , improved equitable distribution of power and better infrastructure support. .. Not be used as a punishment Conversely there must be increased penalties for :- 1. illegal connections - and those that use, allow & make such connections 2. fraudulent and illegal manipulations of the electrical billing 3. ANY public official found guilty of ANY illegal activity is to be barred from EVER holding a public office of any nature again. 4. updated tracking of electrical consumption	Penelope	retired

	2026-10-02 10:12:23	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	It is diabolical to charge people, effectively penalizing them, for being patriotic: they are the ones who saved every cent to "go solar" in order to save the national grid in its time of need.	Andrea	retired
	2026-10-02 10:12:54	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	What the Draft Policy Proposes: The policy shifts tariff design away from volumetric consumption (c/kWh) toward mandatory fixed network and capacity charges (R/kVA, R/kW, or R/Amp/month). To eliminate “volume risk” for distributors, utilities will bill customers for grid availability and network reservation regardless of whether electricity is consumed. In addition, Policy Position 15 introduces a universal generation standby charge applied at the wholesale level to recover the capital costs of keeping backup dispatchable generation on standby for grid-tied users. The Core Civic / Household Risk: Households and small businesses that invested private savings into rooftop solar, batteries, or energy-efficiency measures to survive load shedding will be hit with steep monthly fixed fees simply for remaining connected to the grid. Frugal, low-volume consumers can no longer lower their utility bills by conserving electricity, as fixed network fees create a high, unavoidable monthly billing floor.	Lesley	employed individual
	2026-10-02 10:13:50	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	I had to install solar because Escom could not provide me with electricity. this means that their network is not working. if it was, I wouldn't have to use some of my retirement money to install solar. So now Escom wants to fine me for providing for myself whilst they could or won't do it. il feels like they did this on purpose to sell a lot of solar and now they realize what it is doing to their income and now you have to pay double. I think this is unfair.	Lorette	retired

	2026-10-02 10:29:06	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Attention: The Director-General, Department of Electricity and Energy Regarding: Public Comment on the Revised Electricity Pricing Policy (EPP 2026) – Government Gazette No. 55257 To Whom It May Concern, I am writing as a post-paid residential electricity consumer to formally register my complete and unconditional objection to the Revised Electricity Pricing Policy (EPP 2026). I do not support this policy as published. Under the Promotion of Administrative Justice Act (PAJA), I reject the proposed framework based on the following severe impacts on compliant, paying ratepayers: 1. Total Rejection of Fixed Billing Floors (Policy Positions 11, 27, 30): I completely object to shifting tariff designs away from volumetric consumption toward mandatory fixed network and capacity charges. Forcing post-paid consumers to pay an unavoidable baseline monthly fee regardless of actual power usage destroys the incentive to conserve electricity and punishes household energy-efficiency efforts. 2. Total Rejection of Scrapping Inclining Block Tariffs (Policy Position 38): I outright reject the elimination of stepped usage brackets for standard domestic customers. Replacing the protecting tiers of Inclining Block Tariffs with flat energy rates and high monthly connection fees forces an unjustifiable financial shock onto standard households, middle-income families, and pensioners. 3. Refusal to Fund Inefficiencies and Theft (Policy Positions 42, 43): I reject any attempt to pass the financial burden of utility debt defaults, non-technical losses, and electricity theft onto law-abiding ratepayers. It is legally and administratively unfair to inflate retail tariffs for compliant post-paid consumers to compensate for municipal failures to enforce bylaws and secure local infrastructure. 4. Opposition to Inter-Tariff Cross-Subsidisation (Policy Position 50, 54): I strongly object to standard residential consumers subsidising deeply discounted Negotiated Pricing Agreements (NPAs) for heavy industrial smelters. Any industrial support or expanded social allocations must be funded entirely by the national fiscus, not extracted from standard household electricity bills. Consequently, I demand that NERSA and the Department scrap these proposed positions entirely and protect consumers from an exploitative billing architecture. Sincerely	Carel	employed individual
	2026-10-02 10:30:29	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer, Prepaid Meter User	Dont understand how those who are not only producing their own electricity at considerable cost in order to reduce the load now get punished by extra charges that are only stolen to line the pockets of those in power. 	2026-10-02 10:33:41	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	I demand that NERSA impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. I demand that NESRA takes an incentive-based view to motivate responsible usage as well as incentives to put energy back into the grid. This will benefit the whole, rather than choke the nation financially to death. Insist that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. Again, take service-providing attitude rather than penalty-based extortion. Require utilities to absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers. For this, employ COMPETENT personnel!	Helga

	2026-10-02 10:48:45	No I do not	Double Network Fees (DUoS) on Solar Prosumer Exports		Rooftop Solar / Prosumer	I am a retail consumer who was grid tied via my local municipality for over ten years. Suddenly, they changed the rules and it is no longer worthwhile being grid tied (ie feeding surplus power back into the grid), because of red tape and national regulations (at least, that is their excuse) and a derisory feed in tariff being paid. Being forced as I was onto TOU billing is actually a good thing. With battery back up it is possible to pay for power at peak rates at most times. This saves a lot.	Terry	retired
	2026-10-02 10:50:37	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant)	1) I am a widow in her late 70s on a low budget. Existing electricity tariffs are already unaffordable for me as Msunduzi Municipality (Pmb) already automatically increase their tariffs annually. It has got to the stage I may have to permanently turn off my geyser due to high electricity tariffs. 2) Msunduzi have never scrapped their high MCB basic charge. I am in a small flat and my MCB charge is R795 p.m., which is owed before I even use one unit of electricity. This makes for a very high monthly bill. Other municipalities do not levy this hidden cost. This is a lot of money for a poor person or pensioner. Eskom should not allow this hidden cost to consumers as any additional tariff increases would make the bill unaffordable. 3) consumers who go completely off-grid, I.e. do not use Eskom or feed excess solar generated units back into the grid, should not be liable to Eskom for any fees whatsoever as they do not use their services. It is immoral a d illegal to charge for a service one does not supply. 4) consumers should not be charged for services or costs nor related to their own consumption, or which are generated by inefficiency or costs generated by other sectors. Each sector should be billed for its own costs	Jennifer	retired

	2026-10-02 10:57:37	No I do not	All of the above	Double Network Fees (DUoS) on Solar Prosumer Exports	Residential Ratepayer (Grid Reliant)	I installed solar due to load shedding, caused by incompetence. I spent a reasonable sum of money to a) make my life comfortable and b). to assist Eskom by reducing the load on the system. Now they want more???	Ian	retired
	2026-10-02 10:58:00	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant)	NERSA should immediately enforce Policy Position 43(b) by clawing back and disallowing any tariff requests where municipal distribution losses exceed national regulatory standards. Paying consumers should be legally shielded from funding municipal arrears and Eskom debt defaults through local tariff markups or surcharge adjustments.	Vasi	employed individual
	2026-10-02 10:59:55	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	This is all just thievery. Corruption and ignorance has caused the crisis and now they want the consumer to pay for that and then even more. If it wasn't for the power outages we would not have had to raid our pension fund to fund some solar. Now I believe that these small savings on power by many people have come together to save Eskom because that power can now go to users who do not have solar. We are not getting "free" electricity as we have had to fund all this and the equal sign will only show up a few years down the line. Eskom needs to look at itself and deal by itself with the state that they caused and find themselves in instead of trying to fleece us even further. And management can all afford to take massive pay cuts and stop all bonuses. Bonuses are meant to be paid when performance has been five star. Eskom is minus five star at the moment.	Gail	retired

	2026-10-02 11:29:06	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Small / Medium Business Owner (SMME)	My main concerns regarding the Revised Electricity Pricing Policy (EPP 2026) center on the complexity and fairness of the new tariff structure. The unbundling of costs into generation, transmission, distribution, and retail layers risks creating a system that is difficult for households and small businesses to understand or forecast, undermining transparency. While the policy aims for cost-reflective pricing, there is a danger that stranded costs and legacy system expenses will be unfairly passed on to vulnerable consumers, eroding affordability. The introduction of an open wholesale market may also favor large industrial players, leaving smaller businesses and private renewable investors at a disadvantage in terms of access and participation. Furthermore, the new wheeling charges and administrative requirements could make grid access for embedded generation unnecessarily restrictive or costly, discouraging renewable adoption. The sheer volume of binding policy positions adds an administrative burden that smaller participants may struggle to meet, and the lack of clear incentives for household-scale solar or micro-generation risks slowing down private renewable investment. In short, while the policy seeks financial sustainability and transparency, it could unintentionally create disproportionate burdens for households, small enterprises, and private renewable investors unless safeguards, simplification, and targeted incentives are built into its implementation. 	2026-10-02 11:41:15	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	The corruption, gross mismanagement and cadre incompetent employment over a 15 year period has wasted precious funds that would have enabled Eskom to service its massive debt more efficiently. In turn this would have enabled Eskom to maintain its equipment and keep its costs down. Many have had to install alternate power at their own cost and now Eskom/Government are desperate to make up for the resulting lost income. This is disgraceful. They should rather reduce their bloated costs by assessing the competence and number of people employed, or even setting up a public/private arrangement. The result of what is now suggested will make matters worse as more and more organisations and individuals go completely off grid thus reducing Eskom's income even further.	Michael	retired
	2026-10-02 11:41:28	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	As always the poor pensioners and taxpayers must pay for all the corrupt municipalities and their managers. In our city the management is in arrears for paying their monthly bills. (plus minus R26000000) There are only, maybe 40%, that pay their bills every month. We won't discuss the service delivery because that don't excits.	Louis	retired

	2026-10-02 11:43:12	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	I spent a lot of money installing Solar to my home, and getting it CoC'd for insurance and safety. All of this came from my pocket, so assist when Eskom could not keep the lights on. My system has a lifespan of 10-15 years before I need to go over this again, so why should I be charged even more for something I do not use! This is daylight robbery! The government do not own the SUN, or the WIND or what ever method nature allows us to generate electricity. I do so for my own home, and do not export to the grid. I generate only for self use. I believe that this is just another way to get funds in to keep the corruption and looting going at Eskom, instead of looking at the real problem, and getting rid of corrupt officials and there families and friends bleeding Eskom and South Africa dry with illegal and fraudulant contracts of Billions of Rands. If it gets to the point where I can cut Eskom and simply go on my own, I will do so. No way you can charge me for a connection that I don't even have, or will they find a way...! I can spend another 100K and be completely self providing, if the prices keep going up, more people will realise this and Eskom will lose their paying clients!	Ryno	employed individual

	2026-10-02 11:50:54	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	If Eskom is unable to provide affordable power, why penalise households? Electricity prices are skyrocketing and have become unaffordable for lower-income households. Making law-abiding ratepayers pay for stolen electricity is unsustainable. The South African economy is already buckling under the high cost of living; higher electricity costs and registration fees for solar power serve no purpose but to place more strain on households, small businesses and impoverish the population.	Esme	self-employed

	2026-10-02 11:58:33	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	The cost of electricity has increased significantly over the past years, and consumers had to pick up the burden to finance the corruption that has not been addressed in Eskom and Municipalities. When we installed solar PV-system we looked at how we could have a constant electricity supply during load-shedding and extended outages. This enabled the municipalities to buy in less electricity, but now plan to increase free electricity 6 times. Many people claim to be indigenous (and not paying at all), but stay in luxury houses - how could they afford these houses? Surely this needs to be addressed. Then we (rooftop solar households) are burdened further to prop up their lifestyle at the expense of others. This is not equitable.	LJ	retired

	2026-10-02 12:17:41	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Prepaid Meter User	First, loadshedding is still alive and kicking in black areas, it has just been christened and given a new name:" load reduction," 5 hours of sheer hell experienced only by the poor and downtrodden. Chicken runs are lit 24/7, while poor blacks stumble 15 hours of darkness every week! As for transparency, it's a foreign language to the ANC govt. they are not even transparent unto themselves! The president and his fatcats cronies are hellbent to privatize everything because they themselves have a big stake in it! The fatcats at Nersa are in their pockets, so it's a done deal, Eskom will get what Eskom wants come what may! They are pushed and influenced by greediness, cold heartedness, profits, and the love of money . In the end, if they bulldoze this through cabinet as they are used to, know that the poor Blackman will forever be pushed back to the middle ages: back to wooden open fires outside the home, candles and paraffin! The constitution works for them, the poor are not included in the constitution that's why are never consulted even when they decide to integrate into our communities rejects from other countries! Dictation is used against blacks. Lastly, don't ever believe anything that comes out of the mouths of the ANC president and minister of electricity, they are charmers, smooth talkers who can charm a deadly snake out of its lair! 	2026-10-02 12:37:15	No I do not	All of the above	Double Network Fees (DUoS) on Solar Prosumer Exports	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	**Objection to the proposed treatment of residential solar households** I object to the proposed household tariff restructuring insofar as it permits disproportionate fixed charges or additional charges for solar households without a transparent demonstration of the efficient costs attributable to those customers. As a household that has invested in solar generation, we have reduced our electricity purchases from the distributor. We currently have no opportunity to export surplus electricity to the grid and receive compensation. Any additional tariff burden must therefore distinguish between ordinary access to backup supply and export or net-billing services that are actually available and used. Section 15(1)(a), (aA) and (d) of the Electricity Regulation Act 4 of 2006, as amended, requires efficient cost recovery, a reasonable return proportionate to risk, and the avoidance of undue discrimination between customer categories. The installation of solar equipment alone does not establish that a household imposes additional network costs. Such costs must be demonstrated through an appropriate cost-of-supply and cost-to-serve assessment. Where electricity is supplied by a municipality, section 74(2)(a), (b), (d) and (h) of the Municipal Systems Act 32 of 2000 additionally requires equitable treatment, payments generally proportionate to service use, tariffs reflecting reasonably associated costs, and encouragement of efficient resource use and environmental objectives. I accordingly request that the final policy: 1. Require a published cost justification for fixed, capacity, solar-related and administrative charges, with safeguards against recovering the same costs more than once. 2. Distinguish households that do not export electricity from customers receiving export and net-billing services. 3. Provide practical lower-capacity connection options, allowing households to reduce their reserved grid capacity and associated charges. 4. Require accessible export application procedures, reasonable processing periods, and written technical reasons where export cannot be accommodated. 5. Require household impact assessments and transitional protection before substantial tariff restructuring is implemented. 6. Reconsider the blanket prohibition on applying export credits against other account charges, with any restriction supported by a clear cost and regulatory justification. I accept a reasonable contribution towards efficiently maintained grid availability. My objection concerns charges that are inadequately substantiated, disproportionate, discriminatory, or imposed for services that are unavailable to my household. Before approving implementing tariffs, NERSA should publish the supporting evidence and reasons and provide affected consumers with a meaningful opportunity to comment, as required by section 10 of the National Energy Regulator Act 40 of 2004. 	2026-10-02 13:03:07	No I do not	All of the above	Double Network Fees (DUoS) on Solar Prosumer Exports	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	During Load Shedding a lot of private users resorted to backup renewable power to survive and improve there living conditions. This a activity was not only allowed but encouraged. Now it has become apparent that Solar users are seen as cash cows to be harvested. I understand the need for safety and the need to keep the grid maintained but the way the funding is calculated are discriminating towards the persons that have tried to assist during the national crisis. I have no problem with a fixed connection fee and pay-per-use. but the feed in and usage fees need to be equalised. Saying that solar users cause damage to infrastructure is a lie perpetuated by electricity companies. All the research on the effect of renewable resources on power grids shows it actually reduced the cost of maintenance if distributed implementation is encouraged. This bill is a blatant attempt at forcing citizens to pay for things they do not want or need in ways they do not want. Make it simple: One monthly connection fee for grid maintenance based on the type of connection (Private connection 30A, 60A, 80A; Commercial connection 2 phase, 3 phase and more) Usage cost based on units used (higher cost for Higher level users) Scaling according to peck hours is a trap since nobody can change the peak times since we all work in the day and sleep at night. Remember e-tolls?	Franscois	employed individual

	2026-10-02 13:20:29	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	We have been trying to use as little as possible to keep costs down, this became almost pointless as there is no inclining block tariff making a difference. We try and use as little as possible only to be screwed by fixed fees. Government employees should earn the average South African salary with no perks and try and afford all these expenses. It's utterly disgraceful! These constant increases to try and steal every cent from us needs to stop!	Telara	employed individual
	2026-10-02 13:23:32	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	I object to the Revised Electricity Pricing Policy (EPP 2026) in its current form. I support the goals of tariff transparency and a sustainable electricity supply industry. However, several Policy Positions would place an unfair and disproportionate burden on ordinary households, especially those who have invested in rooftop solar or who use electricity sparingly. 1. Mandatory fixed grid capacity fees and standby charges (Policy Positions 11, 15, 27, 30, 33) I reject mandatory fixed network, capacity and standby charges on solar and low-usage homes. Fixed charges penalise households that save energy, and they weaken any reason to use electricity efficiently. Homeowners invested in solar largely because of years of load shedding. They should not now be charged for a grid that failed to supply them reliably. Fixed charges should be capped, linked to the capacity actually used, and must not apply to low-consumption households. 2. Double network fees on solar exports (Policy Position 33) I reject any arrangement that charges prosumers a network fee on electricity they import and again on surplus power they export. Exported solar power supports the grid, reduces losses and adds generation capacity at no capital cost to the state. Charging for it twice is punitive and will discourage private investment in distributed generation just when the country needs it most. Export credits should be fair and cost-reflective, without duplicated network charges. 3. Elimination of stepped block tariffs (Policy Position 38) I object to scrapping the Inclining Block Rate (IBR) structure for standard households. Stepped tariffs protect low-usage households and reward conservation. Removing them, while also moving to a five-year cost-reflectivity transition (Policy Positions 2, 24, 30), will move costs from high-use to low-use consumers. Middle- and lower-income households will bear the brunt. A form of block or lifeline pricing should be kept for standard residential customers. 4. Retail consumers funding industrial discounts and unfunded social expansions (Policy Positions 19, 50–54) I object to any mechanism through which residential and small business customers cross-subsidise discounted pricing for energy-intensive industrial users, including smelters under Negotiated Pricing Agreements. I also object to them funding an expansion of Free Basic Electricity and other social support that has no dedicated funding. Industrial support and social relief are national policy choices. They should be funded transparently through the fiscus, not hidden in household tariffs. All cross-subsidies should be published, quantified and approved by NERSA, with a firm cap on how much falls on retail consumers. Requests I ask that the Department of Electricity and Energy: Remove or cap mandatory fixed and standby charges for solar and low-usage households Remove double network charges on prosumer exports Keep stepped or lifeline tariffs for standard residential customers Fund industrial discounts and social expansions through the fiscus, with full disclosure of any remaining cross-subsidy Publish a household tariff impact assessment for different usage and solar profiles before the policy is finalised. 	2026-10-02 13:37:25	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	While paying out massive packages to the C-suite executives as well as constantly negotiating above inflation increases for their staff while performance and reliability were at their worst, consumers are now still expected to suffer the burden of their incompetence and mismanagement by paying out higher & higher electricity fees. Through no fault of the consumer, we are now being held liable for the SOA's failure to self-govern as well as the government's failure to contain the issue. At what point are the consequences of their actions held to their account and not to the end consumer! Now on top of that, the very reason we have managed to escape loadshedding; being due to private investment in generation capacity, is now being targeted as a threat to their operations and again are seeking to have consumers foot the bill for their failure to deliver their own monopolized service. No reasonable citizen should stand for the companies that have failed in their mandate to recoup their costs through their consumers. The failure and collapse of these enterprises is a direct result of their own (in)actions and supporting them further would serve only to diminish the rapidly draining fiscus to prop up what should reasonably be considered "failed" businesses. Any further attempts by these agencies to mitigate their losses through the consumer should be met with the utmost resistance, lest the country slide into anarchy as basic services become unaffordable to the general populace. My opinion: They had their chance and failed. Wind them all down and transition to a fully private sector. At least the private sector can be held accountable.	Sean	employed individual

	2026-10-02 14:27:21	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Prepaid Meter User	I believe that everyone should solve their own problems. And not pass on the cost to others and relax. The municipalities with their cable theft, and work that should be redone should be sorted out by themselves. And the people not paying, should have their electricity cut. Eskom that negotiated low tariffs, should sort it out between them and the smelters. Rooftop solar users, should not be penalized for using electricity, or trying to sell it back into the network. If it is a problem of them using electricity only during peak hours at night, and selling at low usage times, then they should get the correct meter to handle that correction. We cannot keep on handing out more electricity to people that don't pay. And expect others to pay for it. The grants paid by South Africa is already too much. Jobless people should be motivated to start working, and contributing. They should sort out their problem. The more comfortable government makes it for them, the less motivated they will be to improve their skills and start working. The whole ANC government are trying to move towards socialism. It have not worked anywhere in the world. It only has the effect of making life worse for everyone in the end. As can be clearly seen after 32 years of trying it.	Jan	self-employed

	2026-10-02 14:29:23	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Prohibiting solar owners from using clean export credits to offset fixed monthly network and retail service charges destroys the financial viability of feeding power back into the grid, actively incentivising frustrated solar owners to defect entirely.	Mark	
	2026-10-02 14:29:39	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form (Rejects mandatory fixed grid capacity fees and standby charges on solar and low-usage homes, punitive double network fees on solar exports, the elimination of stepped block tariffs for standard households, and the risk of retail consumers funding industrial smelter discounts or unfunded social expansions). 1. Scrapping the "Pay-Less-If-You-Conserve" Stepped Tariffs (Policy Position 38): For years, lower- and middle-income families could manage their monthly budget by conserving power to stay in cheaper tariff tiers (Inclining Block Rates). The new policy scraps this for standard domestic users, replacing it with mandatory fixed monthly connection charges plus a flat energy rate. As SA residents we refuse that our bill will still jump for paying an unavoidable fee just for having a wire connected to our wall. 2. Cross-Subsidising Industrial Smelter Discounts (Policy Position 54): The government plans to expand deeply discounted Negotiated Pricing Agreements (NPAs)—handing heavy industrial smelters electricity at rates as low as 62 c/kWh. If big industry pays below cost, who carries the multi-billion-rand deficit? Captive households and small businesses will be forced to shoulder the shortfall through retail tariffs. I reject this notion! 3. Who Funds the Expanded "Free" Power? (Policy Position 52): The Minister has proposed tripling Free Basic Electricity (FBE) from 50 kWh up to 200–300 kWh per month for indigent households. While social support is vital, doing so without an equivalent multi-billion-rand grant injection from National Treasury means municipal distributors will load that cost directly onto paying consumers' bills. I reject this notion! 4. Excluding Stolen Power from Your Bill (Policy Positions 42 & 43): The policy introduces a crucial rule: Eskom and municipalities must absorb runaway distribution losses (cable theft and meter tampering) and bad debt beyond strict regulatory benchmarks, rather than passing them on to compliant, paying customers. We demand that this remains locked in. And w.r.t. those of us with Solar power: The draft policy enshrines into national law what Eskom tried to push through the backdoor: 1. Mandatory Time-of-Use tariffs forcing us onto peak-rate structures (Policy Position 33). I reject this! 2. Double network charges (DUoS): To be billed network fees on the power we draw and the power we export into the grid – I reject it! 3. A complete ban on using solar export credits to offset our monthly fixed connection fees – I reject it!	Gert	retired

I am a pensioner and am very careful with what electricity I Use so that I can pay for it. I deserve being rewarded for doing so. How about a incentive for paying regularly.	Veronica	retired
	2026-10-02 15:23:51	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	It is wrong that Eskom runs a bloated and inefficient enterprise with little check on its expenditure, while passing the bill increasingly to the smallest consumers. Further, its business model is increasingly outdated. I recently travelled to through the Middelburg / Secunda area and was horrified to see the extent of the environmental damage caused by coal mining operations that serve Eskom. The immediate and longer-term costs of this destructive approach to energy generation are almost entirely externalized. We need a just transition - and that includes a fair deal for small scale consumers who try to walk more lightly on the earth by using solar power. I am willing to pay a time of use tariff, in order to shape discretionary demand. I think it is grossly unfair to levy such a high fixed component of the tariff.	Kathy	self-employed
	2026-10-02 15:24:15	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Prepaid Meter User	First of all there have been a lot of increases to the consumer with no benefits, the Infrastructure and supply is not adressed, only personal gain an salaries. When all these issues are addressed satisfactorily they can think about legislation changes and increases etc. To date they do nothing! Only reactive fixing of issues.	Andrew	retired

	2026-10-02 15:56:16	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Objection to Draft Electricity Pricing Policy (EPP 2026) This objection rejects the current EPP 2026 draft on four primary grounds: Penalizing Efficiency & Solar: Mandatory fixed grid fees and standby charges unfairly penalize low-usage households and households using solar energy. Double-Charging Solar Exports: Levying network fees on exported solar power artificially depresses feed-in tariffs by charging both the generator and the local end-user for the same wire. Loss of Consumer Protections: Removing Increasing Block Tariffs (IBTs) eliminates critical safety nets for low-to-middle-income families and reduces incentives for energy conservation. Unfair Cross-Subsidies: Captive residential consumers must not fund industrial smelter discounts or unfinanced social expansion programs through inflated retail tariffs. Key Demand: NERSA and the Department must remove fixed standby fees for residential solar, establish fair feed-in rates without double charges, retain protective tariff blocks for households, and ring-fence industrial and social subsidies.	Wilma	retired
	2026-10-02 15:58:20	No I do not	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Residential Ratepayer (Grid Reliant)	Our pensions are already stretched to the limit. As a pensioner we do not have the means to earn extra income in these trying times or are unable to do so due to health issues or BEE requirements. What is Eskom going to do when people can no longer afford to buy electricity? It is a shame that an ill-managed Eskom wants to put the costs back onto the consumers. Where will it end. How many indigents are not here legally but yet they get free electricity and how many people use the indigent scenario using granny's / older peoples details to qualify while they are earning fat incomes. Those that get free electricity do they manage their usage? It seems the honest Joe's are the ones who always suffer. We are already incurring additional costs due to municipalities that are failing - plumbing problems due to maintenance not done on main sewerage lines, damages to cars from potholes, living in towns that look embarrassing and where communities ask for donations to do the work themselves. Like I said before where will it end.	Jackie	retired

	2026-10-02 16:05:44	No I do not	Double Network Fees (DUoS) on Solar Prosumer Exports		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	I will write this in plain language. Eskom did not keep the lights on. Businesses went under, and people lost their jobs. South Africans are resilient. If the government doesn't provide services, they make a plan. They've made the plans to survive, and now the same government that couldn't produce the energy in the first place, want to punish the people who could make plans to survive and kept the country running from their own pockets. If the government had produced the energy that would keep the country running, nobody would have bothered with solar. The solar is not enough when it rains, and we haven't had power now for four days now, since the explosion at the Njala substation!	Helene	self-employed

	2026-10-02 17:13:23	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Prepaid Meter User	Mandatory Fixed Charges (Policy Positions 11, 27, 30) Functions as an arbitrary “sun tax” and availability penalty. Punishes energy efficiency and private capital invested to survive load shedding, extending solar payback periods. Prosumer Net-Billing Rules (Policy Position 33) Highly punitive: charging solar owners DUoS fees to export clean power while refusing to allow export credits to offset network fees creates an unviable investment model. Scrapping Inclining Block Tariffs (Policy Position 38) Removing IBRs in favour of flat energy rates and higher basic monthly connection fees will cause immediate sticker shock for low- to middle-income ratepayers. Municipal Surcharge Ring-Fencing (Policy Position 47) Threatens local government fiscal collapse. If municipal electricity profits are stripped away, councils will hike property rates or see basic community services collapse. Industrial Smelter NPAs (Policy Position 54) If heavy industry receives electricity at 62 c/kWh (below cost), ordinary retail consumers and small businesses will be forced to shoulder the resulting revenue shortfall. Prepaid Vending Caps (Policy Position 45) Imposing tight commission caps without administrative support could cause independent retail vendors to shut down, stranding rural consumers without token access.	Jody-lee	self-employed

	2026-10-02 17:25:31	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	As consumers we are fackng a situation of double jeopardy. Because of the frequent outages & Eskoms inability to supply reliable elictricity, we were forced at enormous expense to invest in solar technology. This, in fact, alleviated the demand on Eskom greatly. Any excess power generated by solar users & fed back into the grid is a bonus for Eskom as it once more hells to relieve pressure on Eskom. In fact, we should be paid for any excess electricity that is being fed back into the grid. We are made to pay twice for Eskoms inefficiency. This is outrageous. The whole system should be privatised & allow market forces to dictate prices, by allowing for fair competition. At the moment it is a total monopoly.	AatmarM	retired

	2026-10-02 18:57:44	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	These electricity tariffs are unaffordable both for the indigent and for middle class South Africans. There will be more and more non payment as these increased tariffs increase way past the rate of inflation. The economy is not growing fast enough and people's incomes are not increasing far enough to justify these hugely inflated increases year upon year. Eskom must cut the bonuses of all its staff since their projects have gone way over the amount ringfenced for them, further, they need to cut costs by managing wages inside their structure and employing only the best technical staff to deal with electrical matters and security at the highest and not the lowest level. If these increases are made mandatory, there will be more resentment and fewer payments - debt to Eskom will spiral. In fact, Eskom should be giving us a reduced fee to compensate us for the R240,000.00 it has cost households to put up their solar panels and infrastructure, thereby allowing Eskom to prevent loadshedding due to less demand on the electrical network. We should be receiving rebates rather than additional fixed fees. This is completely the wrong way to manage South African citizens.	Gillian	retired

	2026-10-02 20:55:54	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	There is no need nor reason to charge taxpayers and rate payers more. We work and honestly pay while Government steals. Anyone who uses solar or uses less electricity should get a reward, a tax break. NOT MORE BURDENS. There is no need to charge fixed fees per month for connections that have already been paid for. Stop looking for ways to oppress the poor who need government out of their way with less regulations so they can start their own businesses and allow for foreign investment without BEE so that people can get employment. No need for any of these tarrifs, fees and taxes, just get out of our way so that we can be successful. BEE is the reason we have no stable power. Give up on foolishness, after 32 years we know you can't run this country. Give it back to the people who can. Everyone, especially the poor, will be happier. Government could cut all government officials salaries by 50% . Then the ministers and deputy ministers need a salary of the average middle class earner (R30k per month sounds fair) without benefits at all and they pay all the sane progressive income taxes. That saved money can pay for their useless expenditures like subsidised smelters. If the ministers get less and less, they will understand better what we go through. Let them pay instead of the people.	Cyrilene

	2026-10-02 22:00:03	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Small / Medium Business Owner (SMME)	Removing IBRs in favour of flat energy rates plus heavy basic monthly connection fees will cause immediate sticker shock for low-to-middle-income ratepayers. Municipal Surcharge Ring-Fencing (Policy Position 47) Prosumer Net-Billing Rules (Policy Position 33) Threatens local government fiscal collapse. If municipal electricity profits are stripped, councils will hike property rates or collapse basic community services. Industrial Smelter NPAs (Policy Position 54) If heavy industry receives electricity at 62 c/kWh (below cost), ordinary retail consumers and small businesses will be forced to shoulder the resulting revenue shortfall. Prepaid Vending Caps (Policy Position 45) Imposing tight commission caps without administrative support could cause independent retail vendors to shut down, stranding rural consumers without token access.	Cilla	business owner

	2026-10-02 22:51:25	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	LIke any business, Eskom must manage its fixed and operating costs internally through efficiency and expertise, and structure its pricing of the product it sells to the consumer. This will encourage competitiveness in the industry and discourage inefficiency and simply passing on the costs of inefficiency and waste onto a captive paying consumer in the form of fixed network fees in addition to charging for the product it sell, via electricity. Their should be only one charge to a consumer customer - electricity consumed at a price determined by Eskom but in competition with other independent power producers of course.	Martin	retired
	2026-10-02 22:55:17	No I do not	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Small / Medium Business Owner (SMME)	Giving electricity to any entity below cost or at cost is a crime against the citizens of South Africa. It is steeling resources owned by the nation and not by government, in my opinion. And who owns these industries? and why are only they entitled to get a reduced tarrif? It sounds more like a "looking after personal interests" situation to me. Energy affordability is at the very root of progress, if the government does not follow what the citizens want then it is time for new individuals/persons in these positions to placed by public vote, who will follow what is best for the country.	Raymond	business owner

	2026-10-03 05:16:11	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	I don’t agree with these new policies. People are already struggling financially. These new policies put unreasonable financial pressure on honest hardworking citizens. Mandatory Fixed Charges (Policy Positions 11, 27, 30) Functions as an arbitrary “sun tax” and availability penalty. Punishes energy efficiency and private capital invested to survive load shedding, extending solar payback periods. The Core Civic / Household Risk: Households and small businesses that invested private savings into rooftop solar, batteries, or energy-efficiency measures to survive load shedding will be hit with steep monthly fixed fees simply for remaining connected to the grid. Frugal, low-volume consumers can no longer lower their utility bills by conserving electricity, as fixed network fees create a high, unavoidable monthly billing floor. I demand that NERSA impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. I insist that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. I require utilities to absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers. Cross-Subsidising Smelter Discounts (NPAs) & Free Basic Power What the Draft Policy Proposes: The policy expands Negotiated Pricing Agreements (NPAs), allowing energy-intensive industrial consumers (such as ferrochrome smelters) to purchase electricity at deeply discounted, concessional rates to protect industrial competitiveness. Simultaneously, the Department is pursuing an expansion of Free Basic Electricity (FBE) from 50 kWh up to 200–300 kWh per month for indigent households. Under Policy Position 50, all network-connected users must contribute proportionately to tariff subsidies. The Core Civic / Household Risk: While industrial jobs and indigent support are vital, offering heavy industry discounted power (historically around 62 c/kWh) and expanding free power without an equivalent multi-billion-rand budget injection from National Treasury threatens paying consumers. If Eskom and municipal distributors suffer revenue shortfalls from these programmes, the deficit will inevitably be recovered through higher retail tariff charges on paying households and small businesses. I demand that any revenue shortfall arising from Negotiated Pricing Agreements (NPAs) with private commercial smelters be funded exclusively via the fiscus (Department of Trade, Industry and Competition or National Treasury) and legally ring-fenced from standard consumer tariffs. Insist that any expansion of Free Basic Electricity (FBE) above 50 kWh be fully backed by the National Treasury Equitable Share grant before implementation, with an explicit ban on funding social allocations through municipal electricity surcharges. I require full public disclosure and annual audited reporting of all NPA discounts and inter-tariff subsidy transfers on consumer invoices (Policy Position 50	Lynette	employed individual

	2026-10-03 05:39:18	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant)	I am genuinely tired and deeply frustrated by the ever-increasing electricity bills from Eskom and what appears to be a serious double standard in how electricity accounts are managed by the Municipality. It is extremely concerning when residents who consistently pay their bills on time feel as though they are being penalised for doing the right thing, while those who do not pay appear to receive preferential treatment. If there are instances of corruption, bribery, or improper interference to keep electricity connected for non-paying consumers, those allegations must be investigated thoroughly and dealt with transparently. Honest, paying residents should not be expected to carry the financial burden created by unpaid accounts, poor administration, or alleged corruption. We deserve accountability, transparency, fair treatment, and responsible management of public services. Enough is enough. Residents who pay their bills deserve to know where their money is going and why the cost continues to rise. It is time for meaningful accountability and real change.	A	unemployed individual

	2026-10-03 06:11:26	No I do not	Municipal Hidden Surcharges & Diverted Electricity Revenues		Small / Medium Business Owner (SMME)	This is absolutely crazy. Electricity is an essential service, and decisions that can significantly increase the cost of electricity for ordinary households, pensioners and small businesses should not simply be pushed through without meaningful public participation. If government wants to change the way electricity is priced and charged, the public deserves a real say — not just a policy document that most people will never even know exists. I also believe we need to ask some very basic questions: Why should responsible consumers carry the cost of inefficiencies, losses and poor municipal management? Why should people who conserve electricity be penalised with additional fixed charges? And why should households and small businesses be expected to carry costs that they have no control over? This is not about being against government or against Eskom. It is about fairness, accountability and meaningful public participation. If these changes affect every household and business in the country, then every household and business should have a voice in how those changes are made. South Africans need to speak up before the decisions are made — not complain after the bill arrives.	Joseph	business owner

	2026-10-03 06:17:30	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	Due to the poor unreliable supply of electricity to all consumers. Consumers, big and small has moved to Solar as a reliable source of electricity. The result of the move to Solar reduced Escom's income dramatically and their plan to supply more free electricity to poor households especially in the rural areas, and the voters the ANC cannot afford to loose has become a major thread, to both, Escom and the ANC. Instead of letting go of the ANC's communist ideology and allow major investors like Starlink to do business in South Africa to grow our economy, to be able to create sustainable jobs for all and thereby increase the demand for electricity and the profits of both Escom and the government, they will rather kill the goose that lay the golden eggs through stupidity.	Joachim	retired

	2026-10-03 07:11:49	No I do not	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes		Residential Ratepayer (Grid Reliant)	I find it incredibly hard to accept these increasing stealth charges which Eskom are continuously imposing on me as a single occupier low usage resident. In other countries there are just two charges on bills - a much lower standing (availability) charge and the consumption charge . How many extra charges do Eskom levy on us here? It's already pure daylight robbery and forecast to worsen - shameful!	Rod	retired
	2026-10-03 07:12:19	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Rooftop Solar / Prosumer	As with most governance of state or parastatal institutions, the absolute disregard for clear and transparent management is astounding. As with any business, if a customer buys a product, they pay for it, otherwise they don't receive it! Why is it, that the supplier in this case, is not held liable for his losses? In any business, an under performing division would be closed down, or a complete personnel overhaul would be conducted. This is not witch hunting, its the way business works. Under performers are removed and replaced with performance. If Eskom supplies a municipality with "x" kWhrs, then they get paid for that. The problem with cutting off the power for non payment, is that Eskom and municipalities have allowed their "chommies" to be connected illegally and hide behind lies of their deceipt as to poor payment. Funding the usual corruption through levying paying members of society and shifting their inefficiencies to blame games, tribunals and state implemented bodies like Nersa to fund their corruption. Only once the corruption is eradicated will there be hope for the public.	Graeme	unemployed individual
