	2026-10-03 07:38:57	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	We cannot continue with electricity policies that place an increasing financial burden on households and small businesses. Electricity costs are already becoming unaffordable. Consumers are being charged not only for the electricity they actually use, but increasingly for access to capacity and infrastructure through fixed and capacity charges. For households that deliberately reduce consumption, invest in energy efficiency, or try to become partially self-sufficient through solar and other alternatives, these charges can undermine the financial benefit of reducing grid consumption. The proposed electricity-pricing reforms must not result in ordinary households and small businesses carrying an ever-increasing share of the cost of maintaining the electricity system while their ability to reduce their own consumption is effectively penalised. Government should prioritise affordable and reliable electricity, economic growth, job creation and the ability of households and businesses to remain financially sustainable. We call for: transparent and affordable electricity tariffs; protection against excessive fixed and capacity charges; meaningful benefits for consumers who reduce their electricity consumption; fair treatment of households and businesses investing in their own generation; protection for small businesses from electricity costs that make them uncompetitive; and proper public consultation before major changes to the electricity-pricing structure are implemented. South Africans should not be placed in a position where reducing consumption, becoming more energy-efficient or investing in alternative energy leaves them financially worse off. Electricity policy should support economic participation and household sustainability, not make it progressively harder for people to afford to live and operate businesses.	Shirley	self-employed

	2026-10-03 08:00:15	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	As a compliant, registered solar user, I strongly object to the punitive tariffs, double network charges, and the ban on export credit offsets proposed for SSEG users. Taxing self-funded resilience penalises citizens who have actively reduced the burden on the national grid using their own post-tax capital. Enforcing these fixed fees will not increase municipal revenue; it will simply force households to invest in additional batteries and disconnect from the grid entirely, leaving a shrinking base of standard ratepayers to carry the infrastructure costs. I do, however, fully support Policy Positions 42 and 43, which rightfully protect compliant consumers from funding municipal distribution losses and stolen power.	Daniel

	2026-10-03 08:05:05	No I do not	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Residential Ratepayer (Grid Reliant)	Demand that NERSA retain an energy-conservation tariff tier for non-indigent, low-to-middle-income consumers that does not penalise modest energy usage with large monthly service fees. Insist that the migration from IBRs to unbundled domestic tariffs be phased in gradually over a minimum of five years, with mandatory local affordability impact assessments. Require that smart metering infrastructure and Time-of-Use domestic options be provided without upfront capital cost penalties to the end-user.	Tasneem	
	2026-10-03 08:06:16	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	What the Draft Policy Proposes: The policy shifts tariff design away from volumetric consumption (c/kWh) toward mandatory fixed network and capacity charges (R/kVA, R/kW, or R/Amp/month). To eliminate “volume risk” for distributors, utilities will bill customers for grid availability and network reservation regardless of whether electricity is consumed. In addition, Policy Position 15 introduces a universal generation standby charge applied at the wholesale level to recover the capital costs of keeping backup dispatchable generation on standby for grid-tied users. The Core Civic / Household Risk: Households and small businesses that invested private savings into rooftop solar, batteries, or energy-efficiency measures to survive load shedding will be hit with steep monthly fixed fees simply for remaining connected to the grid. Frugal, low-volume consumers can no longer lower their utility bills by conserving electricity, as fixed network fees create a high, unavoidable monthly billing floor. What to Demand in Your Public Submission (PAJA-Enforceable Points): Demand that NERSA impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. Insist that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. Require utilities to absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers.	Chris	unemployed individual

	2026-10-03 08:20:03	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	Objection to the Revised Electricity Pricing Policy 2026 I object to the Revised Electricity Pricing Policy 2026 in its present form. My principal concern is that paying, law-abiding electricity consumers are increasingly being required to carry costs arising elsewhere in the electricity system. Consumers have already endured extraordinary tariff increases: Parliament recorded an approximately 937% increase in Eskom tariffs between 2008 and 2024. Yet substantial non-payment and losses remain. The Auditor-General reported R21.63 billion in electricity losses and R62.12 billion in unpaid municipal debt written off during 2024/25. The scale of the problem is illustrated by Johannesburg: Eskom reported that City of Johannesburg/City Power had accumulated R5.255 billion in overdue electricity debt in May 2026, while Eskom's 2023 accounts recorded R2.3 billion in invoiced arrear Soweto debt, with an average payment level of only 20.2%. The Johannesburg debt was subsequently settled in full in August 2026, but the episode demonstrates the scale of the arrears problem. Against this background, I object particularly to: mandatory fixed grid-capacity and standby charges that may disproportionately burden low-usage and solar households; network charges on both electricity consumed and exported by solar users without sufficient demonstration that these charges reflect actual and proportionate network costs; removing conventional inclining-block tariffs without adequately assessing the effect on ordinary households; and any mechanism through which ordinary consumers may ultimately fund non-payment, avoidable losses, industrial concessions or inadequately funded social obligations. Cost-reflective pricing is legitimate; failure-reflective pricing is not. Social assistance and legitimate industrial policy should be transparently identified, quantified and appropriately funded rather than hidden in tariffs paid by consumers who meet their obligations. Efficiency must precede extraction. The paying consumer should not become the electricity system's default guarantor. I therefore request that the EPP 2026 be amended to ensure that all new fixed, capacity, standby and network charges are transparent, proportionate, demonstrably cost-based and do not transfer avoidable system failures onto compliant consumers. 	2026-10-03 08:45:53	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Although I am a residential rate payer, I run a small home-based business and have been forced to get solar panels due to the extremely high cost of electricity. To conserve electricity we limit geyser use, don't use major appliances during peak hours etc. This new law will make any effort at conserving electricity usage futile considering the fixed costs. I will be back at square one again after having to invest in solar to sustain my business. My business is still paying off the solar system; I question whether I will continue with this business even though it supports 3 other households. We also tried to register our system 2 years ago and despite follow ups it has never been registered even though Eskom is sitting with all documentation. This is frustrating, we are being threatened on one hand, but Eskom clearly does not have the capability of managing these registrations.	Patricia Anne	business owner
	2026-10-03 08:46:02	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer		Jane	retired
	2026-10-03 08:47:03	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Small / Medium Business Owner (SMME)	My concern is that due to mismanagement and absurd corruption within Eskom, we are forced in to all of this. The problem was never Eskom and the paying customer, it is because of completely corrupt and incompetent government	Dupie	
	2026-10-03 08:48:39	No I do not	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Residential Ratepayer (Grid Reliant)	The system being used is unfair towards the consumer and therefore rejected.	Jerry	employed individual

	2026-10-03 08:58:10	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	The govt is continuously finding ways to make home owners pay more into this or that fund or that scheme. It's time to stop appeasing the unions. Privatize the electricity supply. I'm a pensioner, I just can't afford this government's money making plots any more. I pay plenty of tax. That should be adequate. My savings are dwindling its all going into some high upside pockets.	Elizabeth	retired
	2026-10-03 08:58:57	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)		Gayathree	retired
	2026-10-03 08:59:21	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Historically, the regulatory push toward "cost-reflective tariffs" in South Africa has been administrative shorthand for compounding above-inflation tariff hikes. Imposing rigid mathematical cost-of-supply formulas during a prolonged cost-of-living crisis risks accelerating grid defection among high-paying consumers, shrinking the customer base, and deepening energy poverty across South Africa. Eskom is a State Owned Company (SOC) and usually follows policies of the State. I think it is time to free Eskom from these constraints. Eskom should follow what is best for South Africa and not the dictates of the political party in charge. Eskom seems to think that South Africans have unlimited capacity to pay the outrageous increases levied by the SOC. I object to the constant and unaffordable increases in electricity. Eskom must reconsider these increases. The Goose that lays the Golden Eggs is dying.	Bruce	retired

	2026-10-03 10:21:19	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Small / Medium Business Owner (SMME)	Eskom and the government of South Africa have failed to supply the citizens of South Africa with basic services, including electricity. The incompetence and corruption resulted in load shedding. In order to overcome this, many businesses and households have been forced to introduce solar energy at different levels in order to be able to sustain what Eskom and the government cannot supply. These are generally the client base who were paying their electricity bills, but were not being supplied with product that was needed to run their businesses/ households. The solar was introduced at a cost to those installing it. Now, Eskom is able to keep the electricity on due to a reduced demand. The clients that remain are those unable to afford to install solar. How can Eskom expect the nation to pay for these inefficiencies by trying to force those who have installed solar at their own cost to be penalised or by those that are still using the grid to have to pay exorbitant electricity bills. The government and management of Eskom need to find a way of ensuring that they are able to supply the citizens of South Africa with electricity at a reasonable rate and leave those that have introduced solar in order to stop the inability of Eskom to supply a regular source of electricity. The alternative is to privatise the supply of electricity, an area (much like most government instutions), where the goverment has failed dismally.	David	business owner
	2026-10-03 10:23:43	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer		SAMUEL de MESQUITA	business owner
	2026-10-03 10:24:17	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Eskom Must Not be given the Authority to determine the National policy. The markets/consumers must be allowed to choose for themselves as to sources and costs they can afford. Dishing out free power is a vote catcher only. Why doesn't the government give free air time and free petrol too? To everyone? Open up the market and let competition determine the tariffs.	chris	retired

Sané	self-employed
	2026-10-03 13:02:00	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	If you want less fee paying South Africans connected to the grid then this is a great way to do it. Simply put South African taxpayers are sick and tired of years of looting of SOEs under 30 years of ANC rule and won't be forced to keep them around by paying down the debt simply so that the criminals sucking them dry can continue to do so. Instead the criminals need to be put in jail, the GNU needs to implement radical cost cutting and replace racially based BBEE policies with a meritocracy that incentivizes skills accumulation and retention. Of course this won't happen as it's not politically beneficial.	John	employed individual

	2026-10-03 14:00:48	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Rooftop Solar / Prosumer	There are so many issues with this proposed Policy. ESKOM is (and has been) heavily subsidised by South African taxpayers, thus we are ALL carrying some of the cost of generation and transmission. ESKOM needs to understand that their environment is changing, a great many of the negative changes being self-inflicted due to their unreliability and inflated charges. The transmission network carries their product to consumers - it needs to be adapted to reflect the reality of changing demand. Remember that we all used to have cabled TELKOM telephone landlines? What has happened to that infrastructure? It has virtually disappeared without the few remaining landline users being required to carry the cost of maintaining the entire magnitude of that network. ESKOM needs to understand that their network supplies consumers, not every household or property. The principle of "user pays" needs to be applied here. It is also notable that the cost of maintaining the network is not high when seen as part of the "big picture" - the most significant costs incurred are certainly related to criminal activity. Those of us who have invested heavily in creating our own (reliable and clean) supply of electricity should not have to subsidise an incredibly inefficient and unreliable ESKOM too. We already do through the heavy taxes that we pay.	Michael	retired

	2026-10-03 14:58:34	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Whatever the fixed charge begins with, it will escalate dramatically as the state seeks ever more money. How can you hope to fill the bottomless pit that Eskom has created when the policy does not force ALL municipal authorities and ALL state Departments to pay their outstanding Eskom account, and how do you expect to collect sufficient money without having a runaway fixed charge, while raising free electricity from R 50 to R 300, let alone cross subsidizing certain (BEE businesses and start ups) industries ? Once this fixed charge method is established, why not extend it to all other parastatals like SA Airways, Railways, etc., in order to balance their books, all the while the same sources of looting deplete whatever money is collected? What is proposed is sheer madness and will create strife, conflict and total collapse very quickly. The Americans could hardly think of a better method to create a colour revolution to overthrow Black Majority rule in SA.	Allan	retired

	2026-10-03 15:19:15	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Prepaid Meter User	This is highly punitive on the general public and making us pay for all the government's sins and omissions with Eskom over 35 years. It affects the whole community and is completely unfair for us to pay for the gross negligence and corruption which has taken place in basically stealing our taxes to fund incompetence in the electricity supply to this country. Solar installations at our own expense were welcomed to ease loadshedding, and now we are being held to account! No way! I demand that NERSA impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. I insist that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. We require utilities to absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers.	James	retired

Every day Eskom and Municipalities pillage from the lower and middle income classes with no logic or sense in any of Eskom's operations. Loadshedding may have come to an end but that was because consumers realised we couldn't rely on your feeble infrastructure to power our homes and businesses cheaply and reliably. Every Eskom employee should feel ashamed for their idiocy - a cancer on this country you all are.	Darren	employed individual
	2026-10-03 15:54:07	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	Because electricity reading are not done on a set day of the month, electricity accounts vary all the time and therefore one cannot even budget for your monthly account. Our rates are just increasing out of all proportion all the time! Pensioners over 70 should get much lower tariffs, irrespective of their monthly income. Electricity generation & supply should be privatized WITHOUT Eskom imposing unfair restrictions on competitive concerns. These "free market" enterprises should directly agree with Eskom on a distribution charge on the Eskom network and incorporate it in their quoted price. A municipality should then be able to choose the most suitable electricity provider for their city or town. There should be strict control over what markup the municipality is then allowed to add on to the supplied price of electricity. No huge markups on this very basic commodity!!! We as ratepayers are sick and tired of being financially ripped off for the most elementary services in order to feed the looting pigs at the trough.	Marietjie	retired
	2026-10-03 15:56:51	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Removing IBRs in favour of flat energy rates plus heavy basic monthly connection fees will cause immediate sticker shock for low-to-middle-income ratepayers. 	2026-10-03 17:22:43	No I do not	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes		Residential Ratepayer (Grid Reliant), Prepaid Meter User	I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form I Reject mandatory fixed grid capacity fees and standby charges on solar and low-usage homes, punitive double network fees on solar exports, the elimination of stepped block tariffs for standard households, and the risk of retail consumers funding industrial smelter discounts or unfunded social expansions. I also object to funding the bloated Eskom workforce who are paid exorbitantly generous pay and perks for providing less and less electricity. Eskom must cut the inflated salary bill and stop inflicting annual increases on consumers that are way above CPI.	Linda	retired
	2026-10-03 17:24:12	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)		Irene	
	2026-10-03 17:28:24	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant), Prepaid Meter User	As a pensioner, I have to live on limited income, and paying much more than the general inflation rate for electricity every year means I have to cut down on its usage, or cut down essential expenses like on food and health. For Eskom's unit costs and recovery charges to have soared from cheapest in the world to among the most expensive, it is obvious that Eskom must be being either incompetently or corruptly managed, or both. Eskom must cut its employee and board expenses, and also the inflated prices it pays for coal and diesel. It must do more to prevent theft by illegal connections, and non-payment by municipalities and bulk distributors, before simpoly extorting more from honest, paying consumers of its product. It must also accede immdiately and help implement the policy to split generation and distribution into separate entities independent of each other, and stop penalising electricity users for protecting themselves from Eskom's extortionate charges by resorting to and investing in alternate sources of supply for their electric power needs. Get out of the way, Eskom, and stop behaving like an extorting, bullying monopoly.	Derryck	retired
	2026-10-03 17:37:10	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)		Pamela	self-employed
	2026-10-03 17:42:05	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	As I could not afford a solar/inverter system of my own, I was forced to rent an entry level solar/inverter system which costs me more per month than my monthly average gas and electricity bill. I had no choice as I work from home and at the time of installation, the electricity and telecoms in my region was down more than it was up so it was a matter of survival. This would not have been necessary if we had stable and reliable supply of electricity in the area. I am now held hostage by two organisations for the rest of life. Eskom must go. Before I die, I want to see Eskom shut their doors and Jacob Zuma, the three Gupta brothers, Brian Molefe, Matshela Koko, Anoj Singh et al tied to the last few standing pylons, and the whole lot set on fire.	Nicolette	self-employed

	2026-10-03 18:06:14	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Prepaid Meter User	I reject the Revised Electricity Pricing Policy (EPP 2026) in its entirety. The headlines celebrating Eskom's supposed "backdown" on solar registration fees are nothing more than a distraction. The real danger lies in this policy, which rewrites how electricity is priced and billed for every household, tenant, pensioner, and small business in South Africa. I specifically reject the following: Policy Position 38: Scrapping stepped tariffs and replacing them with unavoidable fixed monthly charges. This punishes frugal families who conserve power and destroys the principle of "pay less if you use less." Policy Position 54: Expanding industrial smelter discounts through NPAs, forcing ordinary households and small businesses to cross-subsidise electricity sold below cost. Policy Position 52: Tripling Free Basic Electricity without Treasury funding, loading the cost directly onto paying consumers. Policy Position 33 & DUoS charges: Forcing solar households onto punitive time-of-use tariffs, double network charges, and banning export credits from offsetting fixed fees. While I welcome protections such as outlawing hidden municipal markups (Policy Position 47) and excluding stolen power losses from compliant customers' bills (Policy Positions 42 & 43), these gains will be meaningless if drowned out by the destructive measures above. This policy is not reform—it is a direct attack on household budgets. It penalises conservation, subsidises heavy industry at the expense of ordinary citizens, and entrenches punitive charges for solar investors. I therefore demand that the Department of Electricity and Energy: Withdraw the Revised Electricity Pricing Policy in its current form. Retain stepped tariffs that reward conservation. Prevent households from being forced to subsidise industrial discounts and unfunded social promises. Protect solar investors from punitive double charges and restrictions on export credits. This bill is not about fairness or sustainability—it is about a corrupt government seeking new ways to steal more money from law-abiding contributors to the economy. It is designed to strip citizens of free will, impose authoritarian control, and funnel resources into the hands of the state at the expense of ordinary households and small businesses. Enough is enough. We do not need you, and we do not want you. Your schemes to penalise conservation, subsidise heavy industry, and punish solar investors are nothing more than theft dressed up as policy. I demand that this bill be withdrawn in its entirety. 	2026-10-03 18:44:29	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant), Prepaid Meter User	FORMAL OBJECTION TO ESKOM ELECTRICITY TARIFF INCREASES AND PENALISING HOUSEHOLDS THAT INVEST IN SOLAR ENERGY To whom it may concern, I wish to formally object to continued increases in electricity tariffs and to any proposal or policy that would impose additional taxes, charges or penalties on households that have invested in solar energy. South African households should not be expected to continually carry the financial burden resulting from the failures and inefficiencies of the country's electricity system. For many years, Eskom has struggled to provide South Africans with a reliable and affordable electricity supply. Consumers have experienced load shedding, deteriorating infrastructure, increasing costs and ongoing uncertainty regarding the reliability of the national electricity supply. Many households have therefore invested their own money in solar panels, batteries, inverters and other alternative energy systems. They have done so not because they want to avoid contributing to the electricity system, but because they need a reliable source of electricity and because they are trying to reduce their dependence on an increasingly unreliable and expensive grid. It is therefore unreasonable to penalise these households by imposing additional taxes, charges or excessive tariffs on their solar installations. Consumers who have invested their own money to reduce their electricity consumption from the grid should not be treated as a convenient source of additional revenue simply because Eskom and the broader electricity system have failed to provide an efficient and reliable service. Before asking ordinary South Africans to pay more, there should be full accountability for: • Eskom's financial management; • wasteful and inefficient expenditure; • infrastructure failures; • procurement irregularities; • losses and mismanagement; • the financial consequences of corruption and maladministration; and • the substantial costs that have already been imposed on consumers through years of tariff increases. The public should not be expected to continually pay more to compensate for problems that consumers did not create. I therefore call for: 1. An end to unjustified electricity tariff increases that place an unreasonable burden on households. 2. No punitive tax or excessive additional charge on privately owned solar systems, particularly systems installed by households to provide their own electricity and reduce their reliance on Eskom. 3. Full transparency regarding Eskom's finances, including clear disclosure of expenditure, losses, procurement costs and measures taken to recover money lost through irregular or unlawful conduct. 4. Meaningful accountability for financial misconduct and mismanagement, rather than simply recovering additional money from ordinary electricity consumers. 5. Recognition of household solar investment as part of the solution, rather than treating it as a problem or a source of additional taxation. 6. A fair and transparent electricity pricing structure that reflects the actual cost of providing electricity while protecting households from excessive increases. South Africans cannot reasonably be expected to continually pay higher prices for a service that has, for many years, failed to meet the reliability and efficiency that consumers should be entitled to expect. People who have invested their own money in solar energy should not be punished for trying to protect their families, businesses and homes from an unreliable electricity supply. The solution to Eskom's financial and operational problems should be greater efficiency, accountability, transparency and responsible management, rather than continually increasing the financial burden placed on ordinary consumers. I respectfully request that this objection be formally recorded and that any proposed tariff increases or additional charges relating to privately owned solar systems be reconsidered in light of the substantial financial burden already carried by South African electricity consumers.	Rose	retired
	2026-10-03 18:46:22	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant)	I simply cannot afford what I am being charged. 	2026-10-03 20:42:26	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	1. I object the fixed amount of surcharge every month. It’s more than my electricity consumption. 2. Unemployment is a serious problem and only a small number of people can pay. It puts an extreme pressure on the people who continue to pay more and more because the majority are unemployed and can’t pay for electricity and the fixed surcharge. 3. The money we pay is not used for improvements and development and the problems of electricity supply have never been solved. 4. The economy at the moment is not improving: food prices are high, medical aid, school expenses,etc are very high and we are struggling to finish the month. We can’t pay more for electricity and the increase of prices that will follow the increase. Pensioners can’t pay the electricity increases. From the above I strongly object any increase that are suggested by Eskom.	Tzipora	retired

	2026-10-03 21:03:57	No I do not	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Prepaid Meter User	Dear Sir/Madam, FORMAL PUBLIC OBJECTION: REVISED ELECTRICITY PRICING POLICY (EPP) 2026 Government Gazette No. 55257 I am writing to formally object to aspects of the proposed Revised Electricity Pricing Policy 2026 that could significantly increase the financial burden on ordinary electricity consumers. I understand the need for a financially sustainable electricity sector and support responsible reform. However, electricity is an essential service, and affordability for ordinary households and small businesses must remain a central consideration. My concerns are as follows: 1. Electricity consumers must not be penalised for conserving. The proposed restructuring of domestic tariffs under Policy Position 38 moves toward more cost-reflective tariffs and may introduce or increase fixed, capacity and network-related charges. Consumers who deliberately reduce their electricity consumption should not find that their bills remain high because an increasing portion of the cost is unavoidable. I request that the Department publish clear examples showing how the proposed tariff structures would affect low-, medium- and high-consumption households before implementation. 2. Vulnerable households need genuine protection. Pensioners, low-income families, single-income households, tenants and prepaid electricity users often have very limited room in their monthly budgets. Any tariff restructuring must include specific affordability protections and must not make basic electricity progressively less affordable for those who use relatively little electricity. 3. Social electricity support must be funded transparently. I support Free Basic Electricity and assistance for households in need. However, the cost of expanding such support must be transparently funded and should not simply become an additional, poorly understood burden on consumers who already pay their electricity accounts. 4. Ordinary consumers must not unknowingly subsidise preferential industrial pricing. I recognise the economic importance of supporting industry and employment. However, Negotiated Pricing Agreements must be transparent, independently assessed and structured so that the cost is not unfairly transferred to residential consumers and small businesses. 5. Paying consumers should not carry the cost of electricity theft and excessive losses. I strongly support the provisions dealing with excessive non-technical losses and bad debt under Policy Positions 42 and 43. Consumers who pay their electricity bills should not continually be required to absorb the financial consequences of electricity theft, meter tampering, excessive losses or bad debt beyond approved regulatory benchmarks. These protections must remain in the final policy. 6. Electricity pricing must be transparent. Consumers should be able to understand exactly what they are paying for. Electricity bills should clearly distinguish the cost of electricity, network charges, service charges, municipal surcharges and any other applicable charges. Hidden or inadequately explained costs undermine public confidence and make it impossible for consumers to properly manage their household budgets. My request Before the Revised Electricity Pricing Policy is finalised, I respectfully request that the Department: publish clear household bill examples under the proposed tariff structures; assess the impact on pensioners, low-income households, tenants and prepaid consumers; assess the impact on small businesses; ensure that conservation is not financially penalised; ensure that social electricity programmes have transparent funding; ensure that industrial pricing arrangements do not create undisclosed cross-subsidies; retain strong protection for paying consumers against excessive electricity losses and bad debt; and provide full transparency regarding every component of the electricity price. South Africans should not have to choose between keeping the lights on and meeting other basic household needs. I therefore request that these concerns be formally recorded as part of the public consultation process and that the affordability impact on ordinary consumers be fully considered before the policy is adopted. 	2026-10-03 21:23:20	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Concern: Scrapping Inclining Block Rates (IBR) in favor of mandatory unbundled fixed monthly connection charges creates an unavoidable financial burden on low- and middle-income households. This structure removes the incentive and financial benefit of energy conservation for frugal consumers, as fixed costs remain payable regardless of reduced consumption. Proposed Amendment: Request that NERSA retain an option for a single energy-only rate (without mandatory fixed connection fees) for standard, non-indigent domestic users who consume below moderate threshold levels.	Hulunn	employed individual
	2026-10-03 21:24:17	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	We are done being treated as an endless ATM for a system that refuses to fix itself. It is insulting that ordinary middle-class households and businesses—who are already stretched to absolute financial collapse just to survive normal months—are once again expected to foot the bill. We had to scrape together every cent we had to install solar just to keep our heads above water during load shedding and out-of-control tariff hikes. Now, instead of rewarding that self-reliance or fixing their own broken books, the authorities want to penalize us with extra grid fees and capacity charges just because we aren't pulling as much power from the grid anymore. It feels like a direct punishment for trying to survive. Meanwhile, Eskom reports multi-billion-rand profits, massive industrial players get special discounts, and cash-strapped municipalities continue to bleed money through sheer administrative waste, corruption, and an inability to deal with illegal connections and non-payment. Why is the burden always dumped on the exact same group of compliant taxpayers and small businesses? We can't take another round of this. If the government actually wants to see the economy grow, stop trying to squeeze blood from a stone. Drop the punitive fees on solar users, clean up the massive internal waste, and give us a rate cut so businesses can actually breathe, grow, and create jobs. Enough is enough.	Melinda

You can't suddenly make people pay a huge fee for something that was always there and always paid for (connection fees) and directly fund a campaign promise of more free electricity from the people who are paying already. We are not stupid, we know where the money will come from. And giving huge smelting industries below cost electricity is not how you save industry and production in the country, not when the government has done everything in its power to destroy local manufacturing. This feels like a sneaky deal that the small consumer will have to pay for...again. Not to mention Eskom was actively encouraging people to get solar because they couldn't provide the country with enough power due to mismanagement, corruption, and incompetency, and now they want to penalize those who did? He also stopped the Eskom rebate for adopting solar geysers. 20 Years later, that extractive exploitation is still being implemented. But it isn't bringing in the wealth the cANCer has been accustomed to getting. They have abused (maybe even rapped) their customer base. Now they need a quick 'shower' and hope it will get rid of the crime they have committed. To get 'their' money back, they increase every other connection fee, license fee, service fee, admin fee, cANCer fee and VAT. Any way possible to keep the extractive system going and support their outdated ideology. The ANC has lost us as a customer. And now they will lose us as a voter.	Richard	business owner

Blackmailing the consumer by blackout has shifted to a strategy of blackmailing by hidden fees and costs. At municipal level - the practice of which has filtered down from above - especially prepaid tariffs have been inflated by 100% or even more with no transparency. Massive salaries are paid to municipal employees, which is partially funded by these exorbitant tariffs. The blatant thieving of taxpayers funds by clandestine tariffs will eventually lead to collapse. Wage earners simply cannot afford electricity anymore. It should be abundantly obvious that the corrupt practices of national government has reached down to lower levels and is rife. Unfortunately these practices have resulted in zero confidence in any legislation proposed. Perhaps the coming local elections will show this non confidence.	Nico

	2026-10-04 08:04:36	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant)	I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form. It is criminal of the government. To enforce mandatory fixed grid capacity fees and standby charges on solar and low-usage homes, punitive double network fees on solar exports. Data centres that put strain on the grid should be ruled outright. I think a major overhaul of segregation of authority and responsibility is now needed in South Africa, as the Government has demonstrated again and again their incompetence and neglect across majority of sectors including the integrity and rights for citizens of this beautiful country. We need change, for the good of the people, for the good of the environment and to restore a sense of hope that South Africa can be a peaceful, respected country that is worthy of investment and positive growth.	Courtney	self-employed

	2026-10-04 08:08:41	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Formal Objection to the Draft Electricity Pricing Policy and Proposed Eskom Tariff Increases I am writing to formally lodge my strong objection to the proposed Eskom electricity tariff increases and the structural changes outlined in the draft policy's 54 binding Policy Positions. South African consumers already pay some of the highest electricity tariffs in the world relative to the quality, reliability, and consistency of the service provided. For years, households have endured the dual burden of standard-of-living constraints and rolling blackouts. To demand that citizens now pay even more to cover the financial shortfalls and infrastructure mismanagement of the utility is entirely unreasonable. While I acknowledge the policy's stated goals of achieving transparent, cost-reflective pricing and long-term financial sustainability for the grid, the reality is that these changes introduce severe and unsustainable financial shifts for ordinary households. The unbundling and restructuring of tariffs will disproportionately penalize domestic consumers who are already struggling under the weight of high inflation, rising living costs, and low economic growth. Electricity is a basic necessity, not a luxury. Forcing consumers to absorb further cost escalations to finance grid infrastructure overhauls—while historical inefficiencies remain unaddressed—is an unfair transfer of financial failure onto the public. I urge the policy makers and regulators to reject these aggressive tariff hikes and reconsider the implementation of the 54 Policy Positions. The focus must shift toward optimizing internal operational efficiencies, curbing corruption, and finding alternative state-level funding mechanisms rather than continuously treating South African households as a bottomless financial reserve. Please register my formal dissent on this matter. I request that these comments be included in the public record and actively considered during the revision process.	Coenraad	self-employed

	2026-10-04 08:45:47	No I do not	Other		Residential Ratepayer (Grid Reliant)	The increase of free power from 50 to 200+Kwh is completely unreasonable. As a conscious and deliberate home owner, I often manage to go a month without spending as much (without a solar installation). This increase will incentivize wasteful power usage by non-paying residents whilst paying residents work to lower their impact on the grid. I am in favour of a smaller increase. The fixed mandatory monthly fee is unreasonable and peanalises home owners who use electricity conservatively. The incentives are misaligned from the goals of protecting our grid and preventing runaway power consumption from harming our environment.	Edward	self-employed

	2026-10-04 09:00:53	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	In 2022 President Cyril Ramaphosa asked South African businesses and households to invest in rooftop solar then followed up with tax incentives in 2023, as good citizens trying to fix what the ANC government has broken, we listened! Those of us that can afford solar will now go out to increase our solar capacity to totally disconnect from the grid, this will have a knock-on effect as Eskom will retrieve less funds pushing the burden onto the already struggling poorer community. Eskom is generating less electricity but have employed more employees, cadre employment! Eskom per employee costs have skyrocketed since 1990!	Larry	employed individual
	2026-10-04 09:02:47	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Prepaid Meter User	No I do not support the Revised Electricity Pricing Policy (EPP 2026) published as Government Notice No. 7852 (Gazette No. 55257), read with Extension Notice No. 7948 (Gazette No. 55436). My concern is All of the above, Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers No, I do not support the Revised Electricity Pricing Policy (EPP 2026). I formally object to the gazetted Revised Electricity Pricing Policy and urge the Minister and Department of Electricity and Energy to reject or substantially revise it before it is finalised. Key reasons for my opposition: 1. Mandatory fixed network and capacity charges Shifting the tariff structure away from consumption-based charges (c/kWh) toward high mandatory monthly fixed fees will penalise households that reduce usage or invest in energy efficiency and rooftop solar. Being forced to pay substantial baseline charges simply for remaining connected to the grid is unfair and discourages conservation. 2. Penalties and barriers for rooftop solar Forcing grid-tied solar customers onto Time-of-Use tariffs and charging network distribution fees on both imported and exported electricity, while prohibiting export credits from offsetting fixed network charges, actively undermines private investment in renewable energy. This approach works against energy security and the need to diversify generation. 3. Subsidies for industry at the expense of households and small businesses Expanding below-cost Negotiated Pricing Agreements for industrial users (such as smelters) without clear external funding will shift the revenue shortfall onto ordinary ratepayers. Paying households and SMMEs should not be required to cross-subsidise large industrial consumers. 4. Expansion of Free Basic Electricity without adequate funding Increasing Free Basic Electricity from 50 kWh to as much as 300 kWh per month without a corresponding increase in the national grant budget risks transferring the extra cost directly onto the bills of paying customers. Any expansion of free electricity must be properly and transparently funded by the fiscus, not by higher tariffs on other users. While the intention to improve transparency, limit municipal mark-ups used as “slush funds,” and prevent the automatic recovery of theft and bad debt from paying customers is welcome, these limited positives do not outweigh the structural flaws listed above. The policy as currently drafted will raise the fixed cost of electricity for ordinary South Africans, discourage private solar investment, and place an unfair burden on residential and small-business customers. I therefore vote No and call for the policy to be withdrawn or fundamentally rewritten after genuine, transparent consultation that prioritises affordable, cost-reflective electricity for households and small businesses.	Eloise	
	2026-10-04 09:04:14	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	They scrap the idea of a solar user being paid for the energy exported so that they keep the ESKOM monopoly. Also they charge a fixed fee for network usage: does it mean that during load shedding they will pay as back the time that we don't have any need of a network? I vote 100% to get this minister fired for corruption, incompetence	Tony	retired

	2026-10-04 10:55:20	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	How can Eskom charge you for something that is not supplied by them to you but by God. This is really unfair from Eskom to try to steal more money from consumers who already overloaded with very high electricity bills. Consumers with solar panels are just trying to cut costs and save money. Why do they have to pay Eskom for electricity that Eskom did not provide? All is a scam to make money and let drain consumers dry, because of corruption and mismanagement.	Nico	retired

	2026-10-04 11:13:00	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	A breadwinner is not able to work and only one working person in a household of 4, struggling with a government salary that when increments are given for pay raises doesn't even cover the cost of living % that goes up. What is R85 per month more when food, petrol, cost of living is getting higher and higher. Where will we end up if they raise or force increases on the electrical bills which we are also paying a % of, to Atteridgeville Community which is also not a fair trade as they steal electricity from government, and we the hard working poorly paid class must just scrape through with 32 years of service and a measly pay? Where were the days when you worked and got a better position due to diligent work and years of service. Did you know that the 20 years service people get a monetary amount of plus minus R24 000 once off for giving their all to a government company for so long enduring the changes and discrepancies and BBE happening on a daily basis? I think government officials should be scrutinised by years of service not by grades, diplomas or degrees earned. Many people buy a degree without even attempting to earn it themselves. Ths is why we sit with the problem of not even being able to afford this increase of electrical bills that is awaiting each and every homeowner, we have already changed our geyser and stove to gas but still my account has not even dropped 1% over the period of 2 years. Why do they charge the same rates even with the changes done, our water bill is also non-changing even when we bath in the same water and not refilling the bath for every member. We use borehole water to wet the garden. I am fed-up that even when we try to save on water and electricity our bills just keep going higher and higher in payments never seizing to get some relief! 	2026-10-04 12:33:36	No I do not	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Residential Ratepayer (Grid Reliant)	Unacceptable that the "captive" homeowner, small businesses and the like, are expected to carry the burden of everything that continues to go wrong at Eskom. Equally unacceptable is that smelting companies should pay ridiculously low rates/be subsidised. They make massive profits at the expense of said 'captive market'. Why are government buildings, government ministers etc permitted to owe Eskom/Municipalities thousands of rands when the ordinary citizen is disconnected very smartly when they don't pay the bills? When will government ministers living in the government owned homes pay their own utilities account? If the correct people were targeted for disconnection, and large organisations were not subsidised that would go a long way towards balancing the shortfalls.	Natascha	retired

						PUBLIC SUBMISSION ON THE REVISED ELECTRICITY PRICING POLICY, 2026 Government Gazette No. 55257, Government Notice No. 7852 To: The Director-General, Department of Electricity and Energy For attention: Mr Joseph Maraba I submit the following comments as a South African electricity consumer and taxpayer. I support a financially sustainable and reliable electricity sector. However, the principle of "cost-reflective" electricity pricing must not become a mechanism through which compliant consumers continually absorb costs arising from theft, excessive losses, bad debt, inefficiency, poor maintenance, municipal financial practices or policy decisions that should properly be funded through the fiscus. 1. ACCOUNTABILITY FOR CONSUMER MONEY Policy Positions 1, 2, 3, 24, 25 and 50 place emphasis on cost-reflective tariffs, transparency and Cost of Supply studies. Before consumers are required to pay additional fixed, capacity, network or other charges, government and electricity distributors should clearly disclose where existing electricity revenue is being spent and demonstrate that proposed costs are necessary, efficient and prudently incurred. Consumers should be able to identify energy, transmission, distribution, network, service charges, subsidies, surcharges and municipal charges on their bills. 2. THEFT, LOSSES AND BAD DEBT Policy Positions 41–43 recognise technical losses, non-technical losses and bad debt. Electricity theft, illegal connections, meter tampering and excessive bad debt should not automatically become costs for compliant consumers. Losses exceeding approved regulatory benchmarks should not be recoverable from consumers. Distributors should be required to demonstrate what measures they have taken to prevent, recover and reduce these losses before such costs are considered for tariff recovery. 3. MAINTENANCE BACKLOGS Policy Position 41 recognises significant maintenance and refurbishment backlogs. Consumers should not automatically be required to fund historical failures or repeatedly pay for infrastructure where maintenance expenditure was previously included in tariffs. Additional expenditure should be subject to proper prudency, efficiency and accountability assessments. 4. MUNICIPAL ELECTRICITY CHARGES Policy Position 47 must prevent electricity tariffs from becoming an opaque source of municipal revenue for unrelated expenditure. All municipal electricity surcharges, markups and surpluses should be clearly identified, justified and regulated. Consumers should know which portion of their payment actually relates to electricity supply. 5. FREE BASIC ELECTRICITY AND TAXPAYER FUNDING I support assistance to vulnerable households. However, Policy Position 52 contemplates government funding and inclusion of Free Basic Electricity within the MTEF budget allocation. The final policy should clearly distinguish between taxpayer-funded social assistance and costs recovered from paying electricity consumers. Social assistance should not be hidden within ordinary electricity charges. 6. INDUSTRIAL NEGOTIATED PRICING Policy Position 54 permits Negotiated Pricing Agreements. Such agreements must be transparent. The public should be able to establish the ordinary tariff, negotiated tariff, duration, cost-of-supply basis and financial impact. Any subsidy or shortfall associated with preferential industrial pricing should be explicitly identified rather than being concealed within ordinary household and small-business tariffs. 7. SOLAR AND SELF-GENERATION Policy Positions 15, 30, 33, 36 and 38 have significant implications for consumers who have invested privately in solar and other generation. I accept that grid-connected consumers should contribute fairly towards legitimate network costs. However, charges must be proportionate and evidence-based and should not effectively penalise consumers for reducing their reliance on the grid. The methodology for export charges and credits under Policy Position 33 must clearly demonstrate the actual cost and benefit to the network. Consumers should not be charged disproportionately for exporting electricity while receiving an inadequate value for the electricity supplied to the grid. 8. FIXED AND CAPACITY CHARGES The proposed movement towards greater fixed and capacity-related charges must not remove the financial benefit of conservation and energy efficiency. A household that substantially reduces consumption should still experience a meaningful reduction in its total electricity cost. 9. PREPAID ELECTRICITY Policy Position 45 recognises the need to regulate electricity vending fees and commissions. Consumers should be protected against excessive vending fees, commissions and margins, with the total cost clearly disclosed before electricity is purchased. 10. NO DOUBLE RECOVERY The final policy should expressly prevent consumers from paying more than once for the same infrastructure, service or cost through different tariff components. CONCLUSION Electricity consumers already contribute substantial amounts through electricity tariffs, municipal charges, rates, taxes and other government revenue. The answer to financial pressure within the electricity sector cannot simply be to require compliant consumers to pay more. I therefore request that the final policy establish enforceable safeguards ensuring that consumers are not required to fund excessive theft, illegal connections, bad debt, avoidable losses, inefficient expenditure, historical failures, opaque municipal revenue or undisclosed subsidies. If additional revenue is required, the Department should demonstrate precisely why it is required, where the existing revenue has gone, who benefits, who pays and why the proposed cost should properly be borne by consumers. Consumers should pay for legitimate, necessary and efficiently incurred electricity costs. They should not become the automatic financial backstop for failures elsewhere in the system. I request that this submission be formally recorded and considered as part of the public consultation process.		
	2026-10-04 13:14:36	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Commercial / Industrial Power User, Rooftop Solar / Prosumer, Prepaid Meter User, Municipal Official / Engineer		Angela	employed individual
	2026-10-04 13:15:05	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User, Municipal Official / Engineer	By now there are hundreds of thousands of households and businesses which have solar panels installed because of the unsustainable electricity provision as well as its very common price hikes - some of these are tried to the electricity system and provide this utility to the wider communities they are part of, so to charge them for improving the electricity supply is simply shortsighted - yes they might pay less, but the electricity provided by them is used widely. This contributes to the 'green energy' production of SA and minimises, hopefully, the use of coal powered stations. The consumer should not be charged for power theft or mismanagement - this is something which Eskom needs to do on their own - they have allowed this and therefore are responsible to fix it; the consumer and tax payer should be given a break for paying for the above, after all it is not their fault! The prepaid system .... simply still charges the consumer unfairly, even now.	Violetka	employed individual

	2026-10-04 14:27:03	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	The revised pricing policy needs to be totally reworked so that it is balanced and fair to all parties. I foresee that those that can will move from being occasionally users of grid power to total independence/non-consumers./not connected. This will further reduce revenues The use of pricing mechanisms to support high demand inefficient industry utilizing power that is largely derived from coal fired power stations is simply not sensible and cannot be subsidised by other consumers. I think the free basic electricity should apply to all connected users and those wanting or using more power can pay for what they need over and above that basic allowance. this removes burden and complication of administering who is indigent or not - an unproductive cost burden to supplier. The pricing policy should consider rewarding those that have spent their private (non government) funds installing power generation/solar/wind to effectively reduce power demand on unreliable government utility - they should certainly NOT BE PUNISHED.	Neil	retired
	2026-10-04 14:27:23	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	As an elderly person. 70 years old with low income . 	2026-10-04 14:58:28	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant)	My spouse and I are pensioners with no formal pension fund. We rely entirely on the monthly interest generated from our life savings to survive. As bank savings rates have dropped over the past couple of years, our monthly income has significantly declined. We have absolutely no flexibility to increase our income to absorb escalating living costs. Honest, paying consumers are continuously treated as an open chequebook to cover the costs of rampant electricity theft and municipal non-technical losses. Ratepayers should not be financially penalized for the state's inability to secure its infrastructure or enforce the law. Electricity is a basic human need, not a luxury. Forcing these tariff hikes and fixed service fees onto elderly citizens who are living on dwindling fixed interest returns will inevitably push us into severe financial distress, forcing us to choose between keeping the lights on, buying food, or paying for medical care.	Mimmie	retired
	2026-10-04 15:02:16	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	All users of electricity, irrespective of of their social standing, should pay the same prices for electricity. There are multitudes of people playing the government for a fool by pretending to be impoverished because they choose to live in areas that appear to indicate that they are poor, yet they have high paying jobs or run businesses that draw in large sums of money. Where you live and what you earn should not give you a free ride. If you want a service then you pay the same as everyone else. I am totally against any person that has access to the same services being except from paying the same rates as I do. I am against preferential rates for any business or countries, they should pay the same as every citizen does. I am against Eskom's charge's for a connection to the network when they have done their very best to not maintain it, but yet as citizens we must absorb costs that never translate in to meaningful changes to the infrastructure or the maintenance thereof. While Eskom's employees do their best to siphon off all the funds or have dodgy dealings to defraud the company, or even better, they intentionally damage the infrastructure or steal it, the rest or us have to just keep sucking it up.	Basil	employed individual

	2026-10-04 15:23:10	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Prepaid Meter User	Eskom loses the most potential revenue through electricity theft and unpaid municipal debt, totaling about R45 billion a year in uncollected cash. Where the Revenue Leaks • Electricity Theft (Illegal Connections): • Loss: Around R29 billion per year. • Cause: Bypassed meters and illegal wire hooks. • Unpaid Municipal Bills: • Loss: Around R15.8 billion in unrecognised income. • Cause: Local towns failing to pay their bulk accounts, pushing total municipal debt past R111 billion. • Industrial Sales Slump & Self-Generation: • Loss: Estimated R44 billion to R52 billion in lost sales potential. • Cause: Factories closing or switching to private rooftop solar and independent power producers to escape high tariffs.	Richard	retired
	2026-10-04 15:24:00	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	It is absurd to raise the limit of free basic electricity based on the indigent definition whilst expecting others to pay an amount in excess of R500 before any consumption takes place. Additionally persons who pay for services "take ownership" and respect the supply. They are less likely to damage or sabotage the service. Government must also find a way for Municipalities to repay their huge debts to Eskom. Eskom borrows money to fund the gap and has to fund that from the paying consumer. Government taking over the Municipal debts would immediately put Eskom in a completely different position. Government grants to Municipalities could be reduced by a portion to reduce the debt and ring fence a portion for monthly payment to Eskom for current consumption.	Paul	retired
	2026-10-04 15:29:27	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I think it is crazy. We were forced to pay for solar due to Eskom incompetence, load shedding, theft etc. Eskom actually encouraged people to fend for themselves as they could guarantee power supply . This included solar. At the time I put in a top of the range inverter and received a coc. We had our daughter and 2 children living with us. What did they expect us to do. Now the want to punish us. Madness	Pierre	retired

	2026-10-04 16:50:33	No I do not	All of the above	Double Network Fees (DUoS) on Solar Prosumer Exports	Rooftop Solar / Prosumer	I hereby submit my objection to aspects of the proposed Revised Electricity Pricing Policy (EPP) 2026 that may materially and unfairly increase the cost of electricity for ordinary households. In particular, I object to: 1. The introduction or expansion of fixed household charges that increase the cost of maintaining an electricity connection regardless of actual consumption. Such charges disproportionately affect households that actively conserve electricity. 2. The proposed treatment of residential electricity tariffs, where the removal or reduction of consumption-based tariff benefits may reduce the financial incentive for households to conserve electricity. 3. The proposed charges applicable to residential customers with rooftop solar and other embedded generation. Network and other charges on exported electricity, together with restrictions on the use of export credits, could substantially reduce the financial benefit of investing in renewable energy and energy efficiency. 4. The recovery of costs arising from inefficiencies, excessive losses and other systemic problems from compliant electricity consumers. Consumers who pay their accounts and use electricity responsibly should not be required to carry costs beyond reasonable and properly regulated benchmarks. 5. The protection of household affordability. Electricity pricing policy should ensure that essential electricity remains affordable for ordinary households, while maintaining transparent and cost-reflective tariffs and appropriate incentives for conservation and private investment in generation. I therefore request that the Department carefully reconsider these provisions and ensure that any final policy protects residential consumers from disproportionate cost increases, preserves meaningful incentives to conserve electricity, and does not unnecessarily penalise households that invest in renewable energy and reduce their reliance on the electricity grid. I request that this submission be formally considered and included in the administrative record relating to the finalisation of the Revised Electricity Pricing Policy 2026.	Simon	employed individual

Prevents grid-tied solar households from “free-riding” on wires maintained by non-solar and low-income users. Prosumer Net-Billing Rules (Policy Position 33) Treats the grid as an engineered machine requiring compensation for handling bi-directional energy flows and local voltage balancing. Scrapping Inclining Block Tariffs (Policy Position 38) IBRs send poor economic signals, do not reflect real capacity costs, and penalise large multi-family households that share a single connection Municipal Surcharge Ring-Fencing (Policy Position 47) Eliminates hidden municipal electricity markups, forcing councils to run efficient departments and ring-fence grid maintenance budgets. Industrial Smelter NPAs (Policy Position 54) Preserves strategic heavy industry (smelters, mining), prevents catastrophic de-industrialisation, and protects hundreds of thousands of jobs. Prepaid Vending Caps (Policy Position 45) Protects vulnerable and low-income prepaid consumers from price-gouging, hidden commissions, and predatory third-party vendors.	Shaun	business owner

The mere fact that the proposed legislation seeks to squeeze funds from those who have relieved the grid of the supply pressure which played such a big role in load shedding makes it clear that its intention is political rather than related to grid efficiency. Until Government withholds funds it normally provides to delinquent municipalities until their Eskom debt is cleared it is impossible to see this proposed legislation as anything but a form of taxation imposed of the economically active population	Michael	self-employed

	2026-10-04 21:19:11	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	Why is it necessary to charge extra in the first place? Prices have increased by over 1,000%. Even before the ANC took office, electricity tariffs already covered the costs of maintaining infrastructure and equipment. Furthermore, municipalities purchase electricity in bulk and resell it to consumers at retail rates, generating a substantial profit margin specifically intended for that purpose. You already know where the money went and who is failing to pay; aggressively recovering funds from non-paying customers would likely yield far more revenue. At this point, it is becoming cheaper to buy a generator and solar system to go entirely off-grid. It almost seems like the goal is to chase everyone off the grid completely.	Andre

	2026-10-05 07:08:06	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form. I oppose mandatory fixed grid and capacity charges, punitive network charges on rooftop solar exports, the removal of equitable stepped tariffs for households, and any policy that shifts the cost of subsidising industrial consumers or expanding free electricity onto paying households and businesses. Tariffs should be fair, transparent and based on actual consumption and cost of service.	Renier	employed individual
	2026-10-05 07:10:03	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	For years us tax payers has been footing the bill for the 90% black communities that steal electricity or get it for free. Maybe they should start doing better policing in these areas to prevent such theft & everybody should pay their fair share on electricity. 90% of white people always pay their bills & taxes, why must we be the only ones that will suffer from these changes. I am not willing to pay more for electricity than what I use. they should be glad that there are people switching to solar as it gives relief to the grid seeing that everyday a sub station tripps, blow up or something else goes wrong. They do not think of the years that we were forced on load shedding. The biggest culprits are their own nation stealing electricity & cause all these problems. If the Municipalities start paying their Eskom bill instead of stealing the money then we would not be in this situation.	Marlie	employed individual

	2026-10-05 07:17:23	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Prepaid Meter User	Getting through a month is something many are struggling to do. For many South Africans, any additional increases, whether for utilities, food, fuel, general living expenses will see more homelessness, increased anxiety/depression/suicide & an increase in crime as people try to survive!	DelRay	
	2026-10-05 07:18:26	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User		Louis	retired
	2026-10-05 07:18:41	No I do not	Other		Residential Ratepayer (Grid Reliant)	Electricity was never a problem, instead i was a employee at Eskom when we mothballed some power stations and units due to to much capacity. With this so called democracy and the freedom with the "new" constitution that give all the right to whatever they want, including crossing the borders and erect zinc townships as if it is competing with a mushroom plant, while illegal and free electricity was handed out to buy face for the ANC, the problem evolved into a crisis which the older and law abiding taxpayers have to subsidies for the incompetency of the ruling parties. They are throwing all their schemes and tricks to get the taxpayers to hide their faults and incompetence's. Time and time again they get what is coming their way. WHEN WILL THEY LEARN? Privatize the electricity and set it free from the corrupt system that is governing it. They should rather be thankful and grateful towards private owners who helped themself and in the same process aided the electricity network by relieving a massive burden and allowed more spare capacity to serve others. INSTEAD THEUY WANT MORE FOR FREE .	Piet	employed individual
	2026-10-05 07:18:47	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer	I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form (Rejects mandatory fixed grid capacity fees and standby charges on solar and low-usage homes, punitive double network fees on solar exports, the elimination of stepped block tariffs for standard households, and the risk of retail consumers funding industrial smelter discounts or unfunded social expansions). The proposed amendment is punitive towards those who invested in technologies that would alleviate loadshedding, which benefitted the nation as a whole. Now as a result of this investment, it seems that we are being punished. Not fair and not just, at all.	Wade	employed individual

	2026-10-05 08:01:23	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	Mandatory Fixed Charges (Policy Positions 11, 27, 30) Functions as an arbitrary “sun tax” and availability penalty. Punishes energy efficiency and private capital invested to survive load shedding, extending solar payback periods. Prosumer Net-Billing Rules (Policy Position 33) Highly punitive: charging solar owners DUoS fees to export clean power while refusing to allow export credits to offset network fees creates an unviable investment model.	Thamathama	business owner
	2026-10-05 08:01:41	No I do not	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	SA cost of living is very high, and I am not in favor of us being pushed beyond our earning capacity. We have a right to these basic needs and to manage our household to reduce our expenses. The government is always looking for loop hoes to nail the consumer.	Perla	employed individual
	2026-10-05 08:01:59	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)		Sean	business owner
	2026-10-05 08:03:59	No I do not	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Residential Ratepayer (Grid Reliant)	Eskom’s chronic lack of planning and foresight over the past three decades has resulted in severe financial hardship for everyday residential consumers. Ordinary citizens are now expected to pay escalating tariffs for electricity services that are frequently unreliable, while simultaneously bearing the burden of cross-subsidising large commercial enterprises. Shifting these costs places an unfair burden on households and small consumers to protect corporate profit margins. To even consider such a pricing mechanism demonstrates a fundamental disconnect from the economic realities under which ordinary South Africans live. These proposals are entirely unfair, discriminatory against domestic users, and unjustified. For regulatory bodies and the government to entertain this course of action is an insult to the tax-paying citizens and voters who fund the national grid. These tariff proposals must be rejected in their entirety.	Charles

Removing the Inclining Block Rate effectively penalises households that have deliberately worked to reduce and manage their electricity consumption. Replacing it with capacity charges, fixed monthly fees and flat energy rates means people can use less electricity and still face significantly higher bills. That makes no sense. I am also deeply concerned that ordinary consumers could ultimately be expected to carry the cost of discounted electricity agreements for large industrial users, while simultaneously funding an expansion of Free Basic Electricity. If government chooses to subsidise either, that funding should come transparently from the national fiscus, not be quietly transferred onto paying households. Municipalities are another concern. If they lose electricity revenue without an alternative funding model, households could simply end up paying more through property rates, water and refuse charges. South Africans are already under enormous financial pressure. We cannot continually solve structural problems by extracting more money from the same group of paying consumers. Make electricity pricing transparent and fair. Reward responsible consumption. And stop treating ordinary paying households as an endless source of additional revenue.	Ivana	business owner

	2026-10-05 08:53:14	No I do not	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs		Residential Ratepayer (Grid Reliant)	I am a middle-income homeowner. Who is protecting families who earn too much for subsidies but cannot keep absorbing these increases? Fixed/ capacity network charges mean I can reduce consumption and still pay more. Solar owners can still face network charges after investing their own money to reduce grid demand, and TOU pricing makes basic household electricity more complicated and potentially more expensive. I am also deeply concerned that ordinary customers can end up cross-subsidising preferential electricity prices negotiated with large energy-intensive industries such as smelters. Why should a working household paying the standard tariff carry any revenue shortfall created by discounted industrial electricity? Please publish actual before-and-after monthly bills for households using 500, 750, 1,000 and 1,500 kWh, and disclose exactly how much residential customers are expected to contribute towards cross-subsidies and negotiated industrial pricing. I have one household budget. I cannot keep absorbing another charge every time the electricity system needs more money. How am I supposed to afford this?	Ray	employed individual

	2026-10-05 09:07:54	No I do not	Double Network Fees (DUoS) on Solar Prosumer Exports		Residential Ratepayer (Grid Reliant)	I reject the proposed EPP 2026 in its current form, particularly the increased reliance on fixed/network charges that could penalise residential consumers who actively reduce their electricity consumption through solar and battery investment. Consumers should not be charged based on their installed solar or inverter capacity, but on their actual use of the electricity network. If fixed/ network charges are imposed, residential consumers must have the ability to feed excess electricity back into the grid and receive a fair credit based on the avoided cost of generation. The policy should also incentivise households that invest their own money in reducing demand, rather than financially penalising them for becoming less dependent on the grid. I therefore reject the current proposal and support a revised approach that protects residential consumers, rewards energy efficiency and enables fair grid feed-in compensation. 	2026-10-05 09:14:55	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	The practice of extorting in various forms the ever increasing amounts from paying customers to cross subsidise non paying, indigent and other nefarious electricity consumers is just totally unfair. The route cause of the excessive electricity pricing is solely contained in the entire value chain of electricity generation. Issues such as BEE, secret price negotiations with large customers and free power to various consumers (by way of unpaid write offs) must stop and the price of electricity must be reduced. This will avoid the slew of "laws" that force a captive consumer into funding State/Escom inefficiency.	Warren	
	2026-10-05 09:17:04	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	In a 24 hour period I must be using about 4 hours of electricity and a little more when the maids come 2 days a week. I am at work the rest of the time. My electricity bill is still so high , anyway. And I am 73 years old. I am still working to pay the municipal bills. God help us	PRAVIN	self-employed

	2026-10-05 09:37:52	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	Eskom passe all its failures onto the paying consumers whilst allowing others to get away with non-payment. They want the paying consumer to keep paying ever increasing prices and also want to punish those who paid a lot of money for Solar due to Eskom's failures. They think that the paying consumer has endless resources which can be milked indefinitely. Instead of rewarding paying customers, Eskom punishes them and now they want Solar users to be punished even more. Eskom is being very generous by allowing others not to pay at the expense of those paying.	Blane	employed individual

	2026-10-05 10:07:34	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer, Prepaid Meter User	The below is my concern and I am totally against the implementation 1. Scrapping the "Pay-Less-If-You-Conserve" Stepped Tariffs (Policy Position 38): For years, lower- and middle-income families could manage their monthly budget by conserving power to stay in cheaper tariff tiers (Inclining Block Rates). The new policy scraps this for standard domestic users, replacing it with mandatory fixed monthly connection charges plus a flat energy rate. If you are frugal, your bill will still jump because you will be paying an unavoidable fee just for having a wire connected to your wall. 2. Cross-Subsidising Industrial Smelter Discounts (Policy Position 54): The government plans to expand deeply discounted Negotiated Pricing Agreements (NPAs)—handing heavy industrial smelters electricity at rates as low as 62 c/kWh. If big industry pays below cost, who carries the multi-billion-rand deficit? Captive households and small businesses will be forced to shoulder the shortfall through retail tariffs. 3. Who Funds the Expanded "Free" Power? (Policy Position 52): The Minister has proposed tripling Free Basic Electricity (FBE) from 50 kWh up to 200–300 kWh per month for indigent households. While social support is vital, doing so without an equivalent multi-billion-rand grant injection from National Treasury means municipal distributors will load that cost directly onto paying consumers' bills. 4. Ending Hidden Municipal "Slush Funds" (Policy Position 47): On a positive note, the draft policy explicitly outlaws the practice of municipalities adding hidden, un-ringfenced 15% to 35% markups to Eskom power to fund unrelated municipal wage bills and deficits. But local councils are fighting fiercely to protect this revenue stream—and without loud public backing, this vital ratepayer protection could be watered down. 5. Excluding Stolen Power from Your Bill (Policy Positions 42 & 43): The policy introduces a crucial rule: Eskom and municipalities must absorb runaway distribution losses (cable theft and meter tampering) and bad debt beyond strict regulatory benchmarks, rather than passing them on to compliant, paying customers. We must demand this remains locked in. And If You DO Have Solar? The draft policy enshrines into national law what Eskom tried to push through the backdoor: 1. Mandatory Time-of-Use tariffs forcing you onto peak-rate structures (Policy Position 33). 2. Double network charges (DUoS): You will be billed network fees on the power you draw and the power you export into the grid. 3. A complete ban on using solar export credits to offset your monthly fixed connection fees.	Petra	employed individual
	2026-10-05 10:08:25	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	Why should a residential user fund nonpaying users, cross subsidising users getting low tariffs, paying for incompetency AND still pay taxes	T	retired

	2026-10-05 10:09:11	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Rooftop Solar / Prosumer, Prepaid Meter User	I reject the policy in its entirety this government must stop oppression us! What should be looked at is:- A) Fix the non-payment and theft of electricity. B) Fix the Escom incompetence and poor management. C) Fix Gpvernment salaries that are far, far, far, too high. Solar owners are being penalised for helping with the energy crisis. SA Ratepayers must not carry any unfair and hidden costs for ESKOM’s failure to manage and deal with issues that have been identified. MANY YEARS AGO! The average SA Ratepayer is already struggling under economic strain! Only once corruption is eradicated will there be hope for the public. So Sort out the corruption before passing on charges to ordinary citizens. ESKOM was the best in africa. And in 32 years of this administration has brought South Africa to its knees. THEN our blood sucking municipalities and Eskom have the AUDACITY to want us to pay for their mismanagement and mistakes. ENOUGH IS ENOUGH	Ken	retired
	2026-10-05 10:09:21	No I do not	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Residential Ratepayer (Grid Reliant)	**Eskom must be held accountable.** Eskom’s fundamental responsibility is to provide South Africans with reliable, affordable and accessible electricity. Electricity is not a luxury, it is an essential service that families depend on every single day. Yet ordinary South Africans continue to face rising electricity costs while being expected to accept the financial consequences. The burden is falling heavily on working and middle-class households who are already struggling with the rising cost of living. It is **inhumane** that children and elderly people should have to endure cold winter conditions because families cannot afford to switch on the heating. It is equally unacceptable when households are forced to avoid using their ovens because the cost of electricity has become too high. People should not have to choose between heating their homes, cooking a meal and paying their bills. Eskom must be transparent about its costs, spending, efficiency, management and tariff increases. There must be meaningful accountability for how decisions are made and how those decisions affect the people who ultimately pay the bills. South Africans deserve an electricity provider that puts **reliable service, affordability and the public interest at the centre of its mandate.** **Enough is enough. Eskom must be held accountable, and ordinary families must stop being treated as an endless source of revenue.**	Véronique	retired

	2026-10-05 13:46:44	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Prepaid Meter User	**I STRONGLY OBJECT TO THIS PROPOSED ELECTRICITY PRICING POLICY. NO — I DO NOT ACCEPT A SYSTEM THAT PENALISES ORDINARY SOUTH AFRICANS FOR USING LESS ELECTRICITY, WHILE PROTECTING OR SUBSIDISING LARGE INDUSTRIAL USERS AND ALLOWING MUNICIPALITIES TO SHIFT THEIR FINANCIAL PROBLEMS ONTO ALREADY STRUGGLING RATEPAYERS.** I reject the introduction of unavoidable fixed charges that make electricity more expensive even when households conserve. I reject any attempt to recover the cost of discounted electricity for large industrial users from ordinary households and small businesses. I reject any increase in Free Basic Electricity that is not properly funded by National Treasury and instead becomes another burden placed on paying consumers. Most importantly, **I demand that electricity theft, illegal connections, meter tampering, corruption, municipal mismanagement and excessive distribution losses must NOT be loaded onto the bills of honest consumers who pay their accounts.** I also strongly oppose policies that unfairly penalise households that have invested their own money in solar power. Consumers who generate electricity should not be punished with excessive network charges, punitive time-of-use structures or rules preventing legitimate solar credits from reducing their electricity costs. South Africans should be encouraged to reduce pressure on the national grid, not financially punished for doing exactly that. **My position is therefore unequivocally NO.** Electricity is an essential service, not a mechanism for transferring the consequences of government, municipal or industrial-sector failures onto ordinary citizens. Any new electricity pricing structure must be transparent, affordable and fair. It must reward conservation, protect responsible consumers, prevent cross-subsidisation that unfairly burdens households, and ensure that theft, corruption, waste and mismanagement are dealt with at their source rather than being recovered from innocent ratepayers. **I call on the Minister and the Department to reject these unfair provisions and to put the interests of ordinary electricity consumers first. I want my objection formally recorded and considered as part of the official public consultation process.**	JAN	retired

	2026-10-05 15:26:57	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	I oppose the introduction of mandatory fixed grid capacity charges and standby fees for solar users and low-consumption households, as well as the imposition of additional network charges on electricity exported to the grid. I also object to the removal of stepped block tariffs for ordinary residential consumers and to the possibility that retail electricity consumers may ultimately bear the cost of subsidising preferential tariffs for energy-intensive industries or financing unfunded social programmes. Rather than penalising households and businesses that have invested in solar and other alternative energy solutions, these private initiatives should be recognised and encouraged. By reducing their reliance on the national grid an contributing to overall grid stability, such consumers are effectively assisting in addressing the country's energy challenges. Government should therefore consider incentivising and supporting these investments, rather than imposing punitive charges or measures that discourage further private investment in alternative energy	Marise	employed individual

	2026-10-05 20:06:36	No I do not	Other		Residential Ratepayer (Grid Reliant)	1. POLICY POSITION 38 - Scrapping "inclining block rates" needs to be scrapped as there would be very little incentive for people and industry to save electricity if they pay the same rate no matter what they use!! All Fixed Cost systems need to be scrapped as they are totally unfair to lower end users, eg, all the fixed costs, i.e. network charges, service charges etc, currently add up to more than double what my actual usage cost of electricity is, which is ludicrous. This fixed cost is killing the low usage user and is giving a dis-incentive to save electricity, besides being totally unfair! Anyone using less that 200 Kwh/month should NOT be paying any FIXED Costs. 2. POLICY POSITION 54 - This is again ludicrous, why should the taxpayer or domestic user subsidize electricity being used by a corporate industrial giant who is raking in billions of rands in profit???? Every Rand of discounted electricity to these industrial users has to be passed onto the domestic user which pushes up the cost of electricity to the current domestic user making it unaffordable to the average man in the street, and if the loss in revenue can't be pushed over to the domestic user, the taxpayer then ends up paying Eskom huge bail out packages. Totally ridiculous and totally unfair. Just like Eskom, if these industrial giants can't make a profit without being subsidized by the domestic user or taxpayer then they shouldn't be in business. POLICY POSITION 52 - Yes, social support is vital, however increasing the free electricity quota from 50Kwh to 200-300 Kwh is totally ridiculous and again the cost of this bright idea will have to be paid by the increased cost of electricity to the domestic market which is again totally unfair and un-acceptable!!! The taxpayer is already forking out hundreds of billions of Rands in grants for the poor, so yes increase it by 50% to 75Kwh of free electricity but to 200-300 Kwh?????????? Ludicrous, why not 1000 Kwh??? POLICY POSITION 33 - This section must be scrapped in its entirety!!! the domestic solar owners have actually bailed out Eskom for the past 5-10 years and without these owners spending huge amounts of money on solar systems, the demand on Eskom would have been far higher and loadshedding would probably have been twice as bad!! So, after helping this government to reduce loadshedding, this same idiotic government now wants to discriminate against solar owners and punish them for having bought solar systems?????? Punishing Solar owners with higher network fees and pushing them into peak-rate structures is not only totally unfair and ridiculous, but downright CRIMINAL and TOTALY DISCRIMINATORY.	R	retired
	2026-10-05 20:12:30	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	The instability of supplied power, both Eskom and municipalities, has forced us to go solar, and at an additional cost so that we can maintain home and business. Eskom has been looted and salaries and benefits are exhorbitant with annual bonuses, laughable. Much of power now generated is being consumed by non-paying consumers so where else would Eskom and municipalities get their gravy, but from those who used to carry the rest but are now in the fortunate position to be self-sufficient	Eric	business owner

	2026-10-05 20:31:27	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	I am a residential ratepayer in Johannesburg. I submit that the Revised Electricity Pricing Policy (EPP 2026) should not be adopted as published in respect of mandatory fixed network, capacity and standby charges (Policy Positions 11, 15, 27 and 30). I accept that grid infrastructure must be paid for. But shifting most cost recovery into fixed R/kVA, R/kW or R/Amp charges removes the one lever households have to manage their bills: using less. Families who spent their own savings on solar, batteries and efficiency measures did so to cope with load shedding, a failure of supply they did not cause. Billing them a high fixed floor simply for staying connected is unfair, punishes conservation, and risks pushing people off the grid entirely, shrinking the very revenue base this policy aims to protect. I request that: 1. NERSA set a binding cap so that fixed network and capacity charges cannot exceed 15–20% of an average domestic bill. 2. Low-usage and energy-conserving households, particularly lower- and middle-income families, be protected from fixed capacity charges. 3. The generation standby charge under Policy Position 15 not be passed through to residential customers until its cost basis is published and independently reviewed. 4. Utilities be required to recover fixed costs first through operational efficiencies and loss reduction, rather than shifting volume risk onto captive customers. 5. Any move towards fixed charges be phased in gradually, supported by a published household affordability impact assessment. As administrative action affecting the public, this decision must be procedurally fair and rationally connected to evidence, as required by PAJA. I ask that the Department publish the modelling behind these charges and respond to the points raised in this submission. Siobhan Zurnamer	Siobhan	self-employed

	2026-10-05 20:59:37	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Prepaid Meter User	I object to aspects of the proposed Revised Electricity Pricing Policy, particularly those that may place an increasing financial burden on households and businesses that already pay their electricity accounts consistently and comply with the rules. I understand that South Africa’s electricity sector faces serious financial and infrastructure challenges. However, I do not believe that these challenges should be resolved by continuously increasing the financial burden on consumers who are already paying for the services they receive. My concerns are as follows: 1. Protect paying consumers from excessive fixed and network charges Consumers who consistently pay their electricity accounts should not be expected to carry an ever-increasing proportion of the cost of repairing or maintaining the electricity system. Moving towards significant fixed, network or capacity charges could mean that households that deliberately reduce their electricity consumption receive substantially less financial benefit from doing so. Consumers should continue to have a meaningful financial incentive to conserve electricity and invest in energy-efficient appliances and technologies. 2. Do not penalise households for reducing electricity consumption South Africans are constantly encouraged to reduce electricity consumption and to invest in alternatives such as solar, gas, heat pumps and energy-efficient appliances. It would be contradictory to encourage consumers to become more energy efficient while simultaneously introducing charges that reduce the financial benefit of consuming less electricity. Households that make an effort to reduce their demand on the national grid should not be financially disadvantaged for doing so. 3. Require complete transparency from municipalities and electricity distributors Consumers have the right to know exactly how the money collected through electricity tariffs is being used. Municipalities and electricity distributors should be required to provide transparent, independently audited information showing: * electricity purchasing costs; * distribution and infrastructure costs; * maintenance expenditure; * electricity losses; * illegal connections; * outstanding municipal debt; * collection rates; * surcharges and other charges imposed on consumers; and * the actual cost of supplying electricity to consumers. Electricity revenue should not become an opaque source of funding for unrelated municipal expenditure. 4. Hold utilities accountable for theft, illegal connections and non-payment Consumers who pay their electricity accounts should not automatically be expected to compensate for electricity theft, illegal connections, meter tampering, corruption, poor debt collection or excessive municipal losses. There must be meaningful accountability for these problems. Where losses exceed reasonable and regulated levels, the responsible utility or municipality should be required to demonstrate what corrective action has been taken before those losses are recovered through higher tariffs from compliant consumers. 5. Strengthen financial controls and independent auditing before imposing additional charges Before consumers are asked to pay more, there should be clear evidence that existing revenue is being managed efficiently and responsibly. I therefore believe that any significant increase in electricity-related charges should be accompanied by independently verified financial information and proper accountability mechanisms. Consumers should not be expected to provide additional funding to a system without being given sufficient assurance that the additional revenue will actually be used for its stated purpose. 6. Make subsidies transparent and ensure that government funds them appropriately I support assistance for genuinely vulnerable households that cannot afford basic electricity. However, subsidies should be transparent and properly funded. The cost of providing subsidised or free electricity should not simply be hidden within the tariffs paid by households and businesses that already meet their financial obligations. There should be a clear distinction between social assistance funded through government policy and the cost of supplying electricity. 7. Protect households and small businesses from disproportionate tariff increases South African households and small businesses are already under considerable financial pressure. Electricity pricing policy should take into account the effect that additional fixed charges, network charges and tariff restructuring will have on ordinary consumers and small businesses. Small businesses in particular should not be placed at a competitive disadvantage through electricity pricing structures that favour larger entities or transfer additional costs onto smaller consumers. Any new tariff structure should be subjected to a proper economic impact assessment before implementation. 8. Ensure meaningful public consultation before major changes are implemented Electricity pricing affects every household and virtually every business in South Africa. Consumers should therefore be given a genuine opportunity to understand, scrutinise and comment on proposed changes before they are implemented. Public participation should not simply be a procedural requirement. Substantive objections and alternative proposals must be properly considered, and government should clearly explain how public submissions influenced the final policy. Conclusion I recognise that South Africa’s electricity sector faces significant challenges and that the electricity grid requires investment, maintenance and long-term planning. However, consumers who pay their electricity accounts should not be treated as an unlimited source of additional revenue. The solution to South Africa’s electricity challenges must include financial discipline, transparency, accountability, effective collection of outstanding debt, decisive action against electricity theft and illegal connections, responsible infrastructure investment and proper management of existing revenue. I therefore respectfully request that the proposed pricing changes be reconsidered with the interests of compliant consumers and small businesses firmly in mind. I further request that any future electricity pricing structure: * remains fair and affordable; * rewards rather than penalises responsible consumption; * provides complete financial transparency; * holds utilities and municipalities accountable for losses and mismanagement; * protects consumers from disproportionate fixed charges; and * ensures that social subsidies are transparently funded rather than hidden in electricity tariffs. South Africans who pay their bills and comply with the law should not be made to feel that their reward for being responsible is simply to be charged more. I therefore do not support the proposed electricity pricing changes in their current form and request that my objection be formally recorded as part of the public consultation process. 	2026-10-06 08:17:45	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	This whole debacle is the result of Eskom's own mismanagement and allowing an once Pristine enterprise to be looted and degraded to the point it affected the whole economy and every citizen of this country.. Pushing our economy downwards with big businesses unable to do business. This all at the expense of normal hardworking citizens with extremely limited income. Eskom forced and encouraged every Citizen to use less power and provide electricity to themselves via rooftop Solar etc. Which company in their right mind encourages people to use LESS of their product?? And now yet again they want the general public to fork the bill for their incompetence. This is just criminal and an injustice!! They should make electricity cheaper and cheaper in such a way that it makes sense to buy more from Eskom and it's not worth moving to Solar.. Fix all the illegal connections.. ANy one person with an illegal connection use unlimited electricity and dont even try to be frugal, while the rest of the public need to sposor this behaviour. Do things the right way and the public might also follow suit.. Eventually every citizen will start revolting and looting.. Because what is the point if you are getting looted the whole time.. hoping for a better future. At some point we will all just start to loot back!!! Please Eskom, get your house in order.. 	2026-10-06 08:27:27	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	What the Draft Policy Proposes: Grid-tied customers who generate and export renewable energy into the grid (prosumers) will be subjected to a highly restrictive net-billing framework: Mandatory Time-of-Use (TOU) tariffs. Prosumers must pay full Distribution Use of System (DUoS) and Transmission (TUoS) network charges on all imported energy and must also pay separate DUoS/TUoS charges on all energy exported into the grid. Exported power is credited only at the utility's low "avoided purchase cost". Network and retail charges cannot be credited or offset by exported energy credits, and an extra retail administration fee will be billed to handle net-billing meters. The Core Civic / Household Risk: By levying network charges on both energy imported and energy exported, the state effectively taxes private clean energy fed back into local communities. Prohibiting consumers from using export credits to offset fixed monthly network fees drastically erodes the financial return on private rooftop solar, disincentivising decarbonisation and pushing frustrated solar owners to defect from the grid entirely. What to Demand in Your Public Submission (PAJA-Enforceable Points): Demand the complete removal of DUoS and TUoS network charges on exported electricity (Policy Position 33(d)), recognising that embedded solar reduces local line losses and daytime substation loading. Insist that solar export credits be eligible to offset the total monthly municipal utility bill, including fixed network and customer service charges. Require fair, cost-reflective feed-in credit rates that reflect the true economic value of daytime peak/standard clean power injected into local distribution networks.	Moshe	business owner

	2026-10-06 08:34:14	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	Mandatory Fixed Charges (Policy Positions 11, 27, 30) Ensures fair cost-recovery for grid maintenance and spinning reserves. Prevents grid-tied solar households from "free-riding" on wires maintained by non-solar and low-income users. Prosumer Net-Billing Rules (Policy Position 33) Treats the grid as an engineered machine requiring compensation for handling bi-directional energy flows and local voltage balancing. Scrapping Inclining Block Tariffs (Policy Position 38) IBRs send poor economic signals, do not reflect real capacity costs, and penalise large multi-family households that share a single connection Municipal Surcharge Ring-Fencing (Policy Position 47) Eliminates hidden municipal electricity markups, forcing councils to run efficient departments and ring-fence grid maintenance budgets. Industrial Smelter NPAs (Policy Position 54) Preserves strategic heavy industry (smelters, mining), prevents catastrophic de-industrialisation, and protects hundreds of thousands of jobs. Prepaid Vending Caps (Policy Position 45) Protects vulnerable and low-income prepaid consumers from price-gouging, hidden commissions, and predatory third-party vendors.	Gerard	employed individual

Eskom and municipalities must be responsble for Efficiency in electricity generation by stamping out corrupt practices at head office and powerstations. Currently these practices are maintained and funded by increased electricity tariffs over several years. The consumer must benefit by paying lower when less power is used as this encourages responsible use. Municipalities must pay their accounts to Eskom or loose their license to distribute There must be a claw back clause against Eskom if they cannot deliver electricity. This will protect municipalities and force Eskom to become more efficient. Electricity income must be ribg fenced and paid to Eskom. Managers in personal capacity must be held accountable for nonpayment and mismanagement of funds. Stop curroption so that our country can survive.	Lasea	business owner

	2026-10-06 11:07:06	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	1. When I see things like reasonable margin, it is meaningless, be more specific like 15 or 20%. How much of margin must go to capital for infrastructure. Revenue requirement is meaningless if the cost of supply does not specify what can be included and what not. For example electricity purchases must not exceed 70% of costs. Plans to manage demand. 2.Residential solar customers(prosumers) make your supply look good. If you attack these customers, it shows there is no understanding of electricity pricing and management. 3. Residential customers cannot be used to subsidise bad decisions and bad supply conditions. You look at the wrong place, look at medium and large consumers. 4. It is understandable to have a network avaiability charge, but it must be paid by all residential customers and not onlu solar customers. 5.You get renewable elctricity at standard times, but I see no provision for batteries to store the oversupply for the evening peak. 6. Sort out the management, control, shortage of skills, corruption before you prepare a pricing policy. At this stage electricity is so over priced for bad management, maintenance, theft etc that you have to go back to activity and zero based cost and then apply a pricing policy	Koot	retired
	2026-10-06 11:09:28	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	Absolutely do not agree with charges of any nature when it comes to solar, also I do not want to be subsidising businesses as I cannot cope financially to pay electricity bills as the cost per kWh is exorbitant in South Africa. You are killing the people of this country by making them pay for all the illegal connections and free electricity they have in the locations. Why should I be penalized for working hard to support my family and then you expect me to support someone else who does not pay, I will also do same and not pay.	Desigan	employed individual

Bringing down the price of electricity should be the focus! Cut those exorbitant salaries. And rental of costly premises. Select the most skillful servant hearted employees who have the country's best interest at heart. Electricity supply should be viewed as one of the most basic needs of the SA economy and its people, not as a money making entity in itself.	PAULINE	retired

	2026-10-06 12:37:49	No I do not	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant)	All of the above are important - not just selecting one main concern.	Ian	self-employed

	2026-10-06 13:15:52	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant)	I agree to Inflation linked increases. ESKOM are Double Dipping with Taxpayers Money ie Bailouts and above Inflation Increases. Decrease the Number of Executives running ESKOM. Decrease the Salaries and Bonuses of the Executives . Fire NON Performing Executives and Staff. Salary Increases must be Inflation linked. Cut off All NON Paying Customers. Cut off All Illegal Connections. We are Sick and Tired of being Sick and Tired with All Government Ministers Who Receive Free Electricity Free Water and Free Rates. We the Taxpayers are going to stop paying Our Taxes. We are Prepared To Go To Prison.	Dhanpal	retired
	2026-10-06 13:16:45	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	I oppose a tariff structure that protects large industrial users while shifting more costs onto ordinary households and small businesses. If discounted electricity for major industries and expanded free electricity for vulnerable households are policy choices, the cost should be transparently funded by government and not quietly recovered through higher tariffs from ordinary consumers. The same principle must apply to solar users. People who have invested their own money in solar should not be penalised with excessive network charges or prevented from using legitimate export credits to reduce their electricity costs. The policy should encourage investment in cheaper, cleaner electricity—not make consumers pay more for reducing their reliance on Eskom. Electricity pricing must be transparent, cost-reflective and fair to the consumer—not structured so that those with the least ability to avoid the grid carry an increasing share of the cost.	candice	employed individual

	2026-10-06 15:35:59	No I do not	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Residential Ratepayer (Grid Reliant)	I appreciate the effort to improve the existing situation, especially in terms of transparency/accountability, indigent households and protecting ordinary residents from bearing the cost of unchecked criminality. However, policy must incentivise energy efficiency at all levels - residential and industrial - as well as cleaner energy sources. This policy does not incentivise energy saving and perpetuates an economy that accommodates dirty industry through predominantly coal-fired power. We used to have "cheap" electricity because we had externalised the environmental cost - now we want to keep it "cheap" by passing the expense onto residents.	Stacey	employed individual

	2026-10-06 16:32:30	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Commercial / Industrial Power User, Rooftop Solar / Prosumer, Prepaid Meter User	I do not support the Revised Electricity Pricing Policy in its current form. I do, however, support several of its stated objectives, particularly greater tariff transparency, cost-of-supply regulation, electricity-market unbundling, restrictions on hidden municipal electricity surpluses, improved regulation of prepaid vending fees, and measures to prevent excessive theft, losses and bad debt from simply being transferred to compliant consumers. I particularly do not support the introduction or expansion of additional fixed charges. As an industrial electricity consumer, we already experience the effect of charges that are not directly linked to the number of kilowatt-hours consumed. On our existing industrial tariff, maximum-demand and time-of-use related charges account for more than half of our electricity bill before the ordinary kWh consumption charge is even considered. This means that even when a business invests in energy efficiency, reduces electricity consumption or generates a significant portion of its own electricity, a large part of the electricity account remains unavoidable. Increasing fixed or capacity-based charges further would weaken the financial incentive for businesses to invest in efficiency, solar generation, batteries and other measures that reduce pressure on the national grid. I accept that consumers should contribute fairly toward the network infrastructure and capacity that they genuinely require. However, the existing industrial tariff structure already provides mechanisms such as maximum-demand and time-of-use pricing through which businesses contribute toward grid capacity and the cost they impose on the system. Any proposal for additional fixed charges must therefore demonstrate why the existing mechanisms are insufficient and must not result in consumers effectively paying repeatedly for the same network capacity. A utility should also not be guaranteed the same level of revenue irrespective of whether its customers become more efficient or less dependent on electricity purchased from the grid. Doing so shifts the utility's commercial and operational risk onto consumers and risks penalizing precisely the investments South Africa has encouraged businesses to make. South Africa needs a financially sustainable electricity network, but cost reflectivity must mean the cost of an efficient electricity system, not a mechanism for transferring historical inefficiencies, excessive losses and future revenue risk onto captive consumers. I therefore do not support the policy as currently drafted and believe substantial amendments and stronger protections against excessive fixed and capacity charges are required before implementation.	Tijmen	business owner
	2026-10-06 16:32:48	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	I do Not support Mandatory fixed grid capacity fees and standby charges on solar and low-usage homes, Punitive double network fees on solar exports, The elimination of stepped block tariffs for standard households, The risk of retail consumers funding industrial smelter discounts or unfunded social expansions and Passing Theft, non-technical losses & bad debts onto paying consumers. It is unacceptable allowing 1. Eskom to punish customers that do pay accounts and use electricity wisely, 2. The consumer to subsidise the poor 3. The state to fail it's responsibilities including enabling business growth and job creation, 4. These amendments to discourage new small business, job creation and place high burdens on consumers.	M	
	2026-10-06 16:42:36	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	Dear Mr Ramakgopa I always had SO MUCH confidence in your super effectiveness, and you have never proven me wrong, UNTIL NOW. Mr Ramagkopa, how can you get it over your heart and conscience to punish us low income PAYING customers with this law?? We are already staggering under trying to make ends meet. Please Sir, with all due respect, we CANNOT afford that Escom is putting more weight on the people who pay their accounts with the little money we have, and let you gain advantages for state departments and people with lots of money. I you want to punish people, please punish people and state departrments who DO NOT pay, but STEAL from municipalities and the state. I thought the government is proclaiming getting rid of corruption. This law will DEFINITELY NOT HELP!!!!!!! Please Sir, we pray that you will not let this terrible law pass! Please think about the millions of citizens that are honest, but cannot afford more tariffs going up...	Elmine	self-employed

	2026-10-06 18:17:50	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer	I do not support the Revised Electricity Pricing Policy as published. South Africa needs cheaper, more reliable electricity and a regulatory environment that encourages investment, business growth and private generation, not one that continually increases costs and complexity. Law-abiding consumers and businesses should not be required to carry the cost of electricity theft, non-technical losses and bad debts. These costs should be identified, contained and recovered from those responsible rather than being spread across paying customers. I am particularly concerned that fixed grid and standby charges, additional network charges and other regulated costs could discourage rooftop solar and private investment in electricity generation. Consumers who have invested their own money to reduce their dependence on an unreliable grid should not be penalised for doing so. The policy should promote competition, private investment, consumer choice and lower electricity costs. Government should reduce unnecessary regulation and allow market forces to determine the most efficient solutions wherever possible, while focusing its resources on enforcing existing laws and preventing theft, fraud and non-payment. At a time of high unemployment and weak economic growth, every additional cost imposed on households and businesses matters. South Africa needs fewer barriers to investment and entrepreneurship, not more.	Basson

	2026-10-07 12:03:54	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer	I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form. I reject mandatory fixed grid capacity fees and standby charges on solar and low-usage homes, punitive double network fees on solar exports, the elimination of stepped block tariffs for standard households, and I oppose the risk of retail consumers funding industrial smelter discounts or unfunded social expansions. I demand the complete removal of DUoS and TUoS network charges on exported electricity (Policy Position 33(d)), recognising that embedded solar reduces local line losses and daytime substation loading. I insist that solar export credits be eligible to offset the total monthly municipal utility bill, including fixed network and customer service charges. I require fair, cost-reflective feed-in credit rates that reflect the true economic value of daytime peak/standard clean power injected into local distribution networks.	Myroslava	
	2026-10-07 12:06:21	No I do not	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer		F	retired

	2026-10-07 15:31:55	No I do not	Municipal Hidden Surcharges & Diverted Electricity Revenues		Prepaid Meter User	Electricity is not a luxury, it's a necessity for every household, the fortunate or the unfortunate, however there is fine line when it comes to affordability. Every time a decision is taken, the burden becomes ours, the pensioners, the poorest of the poor and we have no say. Higher consumption does not mean i am wealthy, it means i have extended family in the eyes of unemployment and those on the waiting list for their own housing and responsibility. (it's your family, you can't put them into the street) has anyone ever wondered that higher consumption might mean economic hardship? High property values do not necessarily mean high income. Where is Equality in all this	Louisa	retired
	2026-10-07 15:36:46	No I do not	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Residential Ratepayer (Grid Reliant)	1. The citizen/ratepayer, if he can lawfully reduce his energy bill, he should not be punished/ taxed for it. 2. The middle-income earner should never be the cash-cow who has to meet the shortfalls that occur in other sectors particularly when it arises from government or municipal incompetence. 3. The middle-income earner, whilst the rates he pays does fund the municipal wage bill, if the wage bill is prejudiced through loss of other sources of income by the municipality, we should not have to meet the shortfall in circumstances in which municipalities are entitled to fix the incomes of not only their employees, but their mega-income officials. Government and municipal officials, and M.P's incomes should be fixed by an independent statutory body on which representatives of all sectors of society should be represented, and who should rotate, in manner prescribed.	MICHAEL ERIC	retired

	2026-10-08 14:08:36	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	I have voiced my concern on many an occasion on this platform and still we keep on paying more. It seems that we, the general resident/ratepayer and consumer will never win against this corrupt and evil government. My suggestion is that all the consumers must stop paying the municipalities and eskom for a month or two until the government changes it's criminal activities. They are stealing our money in order to compensate for their mismanagement and incompetent practices. Therefore the criminal government must pay by either being incarcerated or removed from governance. Why must we be forced to pay to these criminals and other criminals and illegal criminal activities & syndicates. We cannot keep on wasting our breath. It is time for constructive action.	manny	retired

	2026-10-08 16:41:55	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer	As a rooftop solar user connected to Eskom postpaid, I am already being charged Service and Admin Charge @ R5.74 per day Network Capacity Charge @ R9.08 per day Generation Capacity Charge @ R0.71 per day Ancillary Service Charge 177 kWh @ R0.0045 /kWh Network Demand Charge 177 kWh @ R0.2868 /kWh , over and above the Energy consumption charge. My Eskom bill has almost doubled since I installed solar panels 3 years ago while my consumption is minimal... dropped from 600- 700 kWh to under 200kWh. They are penalizing me for using the sun! Literally daylight robbery!	Debra	self-employed

	2026-10-08 16:59:28	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	I object to the Revised Electricity Pricing Policy in its current form, particularly the proposed restructuring of domestic electricity tariffs away from consumption-based pricing and towards mandatory fixed network, capacity and service charges. I accept that maintaining an electricity network has fixed costs and that some reasonable connection charge may therefore be justifiable. However, electricity pricing should remain substantially linked to the amount of electricity a household actually consumes. Consumers who use less electricity should pay less. Moving a greater portion of the electricity bill into unavoidable fixed charges fundamentally weakens that principle. It reduces the financial benefit of conserving electricity and disproportionately penalises low-consumption households, pensioners, smaller households and consumers who have invested their own money in energy efficiency, batteries and rooftop solar. This also sends the wrong policy signal. South Africans have repeatedly been encouraged to reduce demand, become more energy efficient and invest in alternative generation, particularly during years in which the national electricity system was unable to provide reliable supply. Consumers who responded to that need should not now be financially penalised because their electricity consumption has fallen. Internationally, fixed or standing network charges do exist, but they generally operate alongside meaningful consumption-based tariffs. In countries such as the United Kingdom, Australia, New Zealand and Germany, consumers continue to pay a substantial variable charge according to the electricity they actually use. South Africa should similarly ensure that conservation continues to result in a meaningful reduction in a household's total electricity bill. I therefore oppose the removal of Inclining Block Tariffs for standard domestic consumers unless an alternative structure can demonstrate that low-usage consumers will remain appropriately protected. I also object to any tariff structure under which ordinary residential customers and small businesses effectively subsidise preferential electricity pricing granted to large industrial users. Any Negotiated Pricing Agreement granted for broader economic or industrial-policy reasons should be transparently funded and ring-fenced rather than recovered from other electricity consumers. Similarly, any expansion of Free Basic Electricity is a social-policy decision which should be adequately funded by the national fiscus. I support assistance for genuinely indigent households, but the cost should not simply be shifted onto an ever-smaller pool of compliant electricity consumers through higher tariffs and fixed charges. With respect to rooftop solar, network charges should be reasonable, transparent and demonstrably related to the actual cost imposed on the grid. Charging customers for importing electricity while also imposing network charges on electricity they export to the grid risks discouraging private renewable generation rather than supporting it. I do, however, support provisions that improve transparency, prevent municipalities from using hidden electricity mark-ups to fund unrelated expenditure, regulate prepaid electricity charges, and prevent excessive electricity theft, distribution losses and bad debt from automatically being passed on to paying customers. I therefore request that the revised policy: • retain a strong relationship between electricity consumption and the total amount a household pays; • protect low-consumption households from disproportionate fixed charges; • preserve a meaningful financial incentive to conserve electricity; • place strict limits on fixed network, capacity and service charges; • ensure solar households are charged only reasonable, cost-reflective network costs; • prevent ordinary consumers from subsidising preferential industrial electricity agreements; • require expanded social electricity subsidies to be properly funded by government; and • retain the proposed protections preventing excessive theft, losses and bad debt from being transferred to compliant customers. Electricity is an essential service. A fair pricing system should therefore reward responsible consumption, efficiency and private investment rather than making an increasing portion of every household's electricity bill unavoidable regardless of how little electricity that household actually uses. 	2026-10-09 13:07:03	No I do not	Other		Rooftop Solar / Prosumer, Prepaid Meter User	There should be no mandatory fixed charge for homes. Even now this is happening to some properties in Cape Town. Consumers should only be charged according to the amount of electricity they use. This is fair practice. Industry should not receive a lowered electricity rate. They must pay the normal rate. Industry can easily incorporate the cost of electricity into their pricing. Giving industry reduced rates will shift the burden of maintaining the electricity grid viable to homes. Homes do not make any profit from the use of electricity, but would be made to pay the cost of industry, which is profiteering. This is unrighteous. There should be a single rate for all users. It is generally a concern that electricity is being privatised. The motivation of the suppliers will only be profit and not service, on account of which the citizen suffers.	Volker

	2026-10-10 15:13:18	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Mandatory fixed charges are unacceptable. The people of South Africa are already struggling to keep the lights on as a result of the tariffs that have relentlessly increased year by year (and which increases have done nothing to improve Eskom's performance whatsoever). Most people nowadays are doing their best to conserve electricity precisely because they are unable to afford the costs even as they stand at the moment. A fixed charge on top of what they are already required to pay would mean that many, many households would have to disconnect from the grid and return to paraffin and candles. The use of solar power is also an attempt by people to keep their electricity usage within budget. What is proposed is a plan to penalise those who have solar, even if they export excess power back to the grid! This is counterproductive and unacceptable. Furthermore, it is clear that the additional costs resulting from discounted industrial deals, as also the shortfall that would be created by raising the Free Basic Electricity from 50 kWh to 300 kWh, would end up on the backs of paying consumers. With the exception of the proposal to crack down on Municipalities that use hidden electricity markups as slush funds or that would forbid utilities from passing on runaway theft and bad debts to paying consumers, I reject all other proposals in the Revised Electricity Pricing Policy as published. It would simply be theft on a grand scale and would truly return South Africa to the Dark Ages in more ways than one!	LYNN	retired

	2026-10-11 14:24:46	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Prepaid Meter User	When Electricity in individual homes became the 'fashion', it became a mandatory LAW that every household was to have clean heating ie electricity in the home. Now it would seem that this Government/Escom wish to revert back to the "Stone Ages" & we all live in caves, or mud huts, build fires, hunt and wear animal skins. And they say this is the 21st Century AD!!! - not 1000 years BC!! With Escom's shoddy management and our 'Load Shedding' days, because business either failed or was reduced to its bones, many bright entrepreneurs got together and resolved this problem with solar, generators, etc. Now it is turned around that these entrepreneurs are naughty 'boys'! It is because of them that we are not completely bankrupt & poverty induced. It is due to them that we still can produce food and other items for the people of South Africa. Why there is still employment to be had, cars on the road and homes being built. This Bill is a danger to the poor, pensioners and the South African voting individual.	Erica

Johann	employed individual
	2026-10-11 19:13:36	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	Half our monthly bill is now "tariffs". We pay a service and administration charge a network capacity charge a network demand charge an ancillary service charge and finally and 2 energy charges We paid over R25000 3 7 odd years ago to install our line in a rural area. (it was al ot of money then !) We are frequently without electricity due to line failures , storms etc - mainly due in our opinion to lack of proper maintenance and qualified staff ! Being without power compromises our safely and often costs us in lost foodstuffs. We are fortunate to be able to afford to go onto solar which , although costs have reduced , is still expensive . We have very little good news to share about our Eskom in a rural area in KZn although there is a large Eskom depot in our local town - 15 minutes away.	Carolann	self-employed

	2026-10-11 19:34:28	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	This entire bill appears to shift the financial burden from Eskom and municipalities onto the consumer. Fixed charges already exist at municipal level, yet the proposals effectively penalise households that used their hard-earned savings to install solar and reduce their reliance on the grid. Only a few years ago South Africa endured devastating load shedding, which continues in certain areas today. Mandatory standby charges on solar installations and users are unfair and will become unsustainable for low- and middle-income households. There is no meaningful safety net in this proposed policy, and electricity risks becoming a luxury rather than a basic service. NERSA should cap network and capacity charges at 5–10 % of a typical bill. Low-energy households and those who have invested in solar deserve protection: they are actively relieving pressure on a grid that Eskom itself admitted it could not keep fully supplied. Internal operational improvements and efficiency measures must be exhausted before additional costs are imposed on consumers. Section 33(d) needs to be reworked entirely. Consumers who feed power back into the grid should not be taxed twice — once on import and again on export. Credits must offset all applicable charges, not merely the kWh energy component, and the system must remain fair. Without this, there is no rational incentive to export surplus electricity. Negotiated price agreements with large industrial users (including smelters) must be funded by the fiscus and not cross-subsidised by ordinary consumers in any form. Free basic electricity should be strictly capped in light of the scale of illegal connections still operating. In fact, far stronger policy and enforcement measures are required to address illegal connections, because the current proposals disproportionately target lawful, paying users while leaving non-paying and illegal users largely unaffected. Scrapping inclining block tariffs is indefensible. Block tariffs help households manage costs by rewarding lower consumption and encouraging conservation. Removing them while adding extra fixed charges forces households — particularly lower- and middle-income ones — to absorb higher costs even when they use little electricity. The policy shifts the incentive from saving power to simply absorbing higher bills. I support Policy Positions 47, 42 and 43. In addition: NERSA should automatically reject any municipal tariff application that is not supported by a fully audited, publicly accessible Cost of Supply (CoS) study (Policy Position 25(a)). All municipal electricity revenues must be immediately and statutorily ring-fenced into dedicated maintenance and network accounts, with a legal prohibition on councils diverting electricity revenue to fund unrelated municipal wage bills or deficits. National Treasury should set a hard, uniform percentage cap on the Municipal Surcharge on Electricity (MSOE) to stop local councils using surcharges to circumvent NERSA's tariff controls. Municipalities already add substantial mark-ups that are frequently used for general municipal operations rather than electricity infrastructure. There are numerous examples of infrastructure decay precisely because these funds have been misused. NERSA should immediately enforce Policy Position 43(b) by clawing back and disallowing any tariff requests where municipal distribution losses exceed national regulatory standards (currently around 7–10 %). The standard should be made stricter to prevent abuse. Paying consumers must be legally shielded from funding municipal arrears and Eskom debt defaults through local tariff mark-ups or surcharge adjustments. Licensees should be required to implement strict, automated tamper detection, independent metering audits, and universal prepaid infrastructure in non-paying areas before they are permitted to request any tariff increases from compliant ratepayers.	Dean

	2026-10-13 16:37:50	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form (Rejects mandatory fixed grid capacity fees and standby charges on solar and low-usage homes, punitive double network fees on solar exports, the elimination of stepped block tariffs for standard households, and the risk of retail consumers funding industrial smelter discounts or unfunded social expansions).	Erna	retired

						The policy shifts tariff design away from volumetric consumption (c/kWh) toward mandatory fixed network and capacity charges (R/kVA, R/kW, or R/Amp/month) are completely unacceptable, its a clever theft tactic. We : Demand the complete removal of DUoS and TUoS network charges on exported electricity (Policy Position 33(d)), recognising that embedded solar reduces local line losses and daytime substation loading. Insist that solar export credits be eligible to offset the total monthly municipal utility bill, including fixed network and customer service charges. Require fair, cost-reflective feed-in credit rates that reflect the true economic value of daytime peak/standard clean power injected into local distribution networks. Regarding Cross- Subsiding Smelter Discounts We Demand that any revenue shortfall arising from Negotiated Pricing Agreements (NPAs) with private commercial smelters be funded exclusively via the fiscus (Department of Trade, Industry and Competition or National Treasury) and legally ring-fenced from standard consumer tariffs. Insist that any expansion of Free Basic Electricity (FBE) above 50 kWh be fully backed by the National Treasury Equitable Share grant before implementation, with an explicit ban on funding social allocations through municipal electricity surcharges. Require full public disclosure and annual audited reporting of all NPA discounts and inter-tariff subsidy transfers on consumer invoices (Policy Position 50(j)). Inclining Block Tarives for Middle Income Homes We Demand that NERSA retain an energy-conservation tariff tier for non-indigent, low-to-middle-income consumers that does not penalise modest energy usage with large monthly service fees. Insist that the migration from IBRs to unbundled domestic tariffs be phased in gradually over a minimum of five years, with mandatory local affordability impact assessments. Require that smart metering infrastructure and Time-of-Use domestic options be provided without upfront capital cost penalties to the end-user. Regarding Hidden Hidden Municipal & Diverted Electricity Funds We Demand that NERSA automatically reject any municipal tariff application that is not supported by a fully audited, publicly accessible Cost of Supply (CoS) study (Policy Position 25(a)). Insist on the immediate statutory ring-fencing of all municipal electricity revenues into dedicated maintenance accounts, legally prohibiting councils from diverting electricity revenue to fund unrelated municipal wage bills or deficits. Demand that National Treasury set a hard, uniform percentage cap on the Municipal Surcharge on Electricity (MSOE) to prevent local councils from using surcharges to circumvent NERSA tariff controls. Regarding the Theft, Non Technical Losses & Bad Dept onto consumers We Demand that NERSA immediately enforce Policy Position 43(b) by clawing back and disallowing any tariff requests where municipal distribution losses exceed national regulatory standards (typically 7%–10%). Insist that paying consumers be legally shielded from funding municipal arrears and Eskom debt defaults through local tariff markups or surcharge adjustments. Require licensees to implement strict, automated tamper detection, independent metering audits, and universal prepaid infrastructure in non-paying areas before requesting any tariff increases from compliant ratepayers.

	2026-10-13 17:19:17	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Prepaid Meter User	I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form (Rejects mandatory fixed grid capacity fees and standby charges on solar and low-usage homes, punitive double network fees on solar exports, the elimination of stepped block tariffs for standard households, and the risk of retail consumers funding industrial smelter discounts or unfunded social expansions).	David	retired
	2026-10-13 17:27:40	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Prepaid Meter User	Scrapping the "Pay-Less-If-You-Conserve" Stepped Tariffs (Policy Position 38): For years, lower- and middle-income families could manage their monthly budget by conserving power to stay in cheaper tariff tiers (Inclining Block Rates). The new policy scraps this for standard domestic users, replacing it with mandatory fixed monthly connection charges plus a flat energy rate. If you are frugal, your bill will still jump because you will be paying an unavoidable fee just for having a wire connected to your wall. Cross-Subsidising Industrial Smelter Discounts (Policy Position 54): If big industry pays below cost, who carries the multi-billion-rand deficit? Captive households and small businesses will be forced to shoulder the shortfall through retail tariffs. Who Funds the Expanded "Free" Power? (Policy Position 52): The Minister has proposed tripling Free Basic Electricity (FBE) from 50 kWh up to 200–300 kWh per month for indigent households. While social support is vital, doing so without an equivalent multi-billion-rand grant injection from National Treasury means municipal distributors will load that cost directly onto paying consumers' bills. Ending Hidden Municipal "Slush Funds" (Policy Position 47): On a positive note, the draft policy explicitly outlaws the practice of municipalities adding hidden, un-ringfenced 15% to 35% markups to Eskom power to fund unrelated municipal wage bills and deficits. But local councils are fighting fiercely to protect this revenue stream—and without loud public backing, this vital ratepayer protection could be watered down. Excluding Stolen Power from Your Bill (Policy Positions 42 & 43): The policy introduces a crucial rule: Eskom and municipalities must absorb runaway distribution losses (cable theft and meter tampering) and bad debt beyond strict regulatory benchmarks, rather than passing them on to compliant, paying customers. We must demand this remains locked in.	David	retired

Taking from those who pay, and giving more to those who do not pay. (Simply to garner more votes for the ANC.) There is only one way to get rid of Eskom's monopoly: install more solar power.	Jag	
	2026-10-15 10:26:11	No I do not	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs		Residential Ratepayer (Grid Reliant)	I don't believe I should have to pay off other people's/municipalities debts for them. I have worked hard to try and be one debt free and I don't believe it is fair to cripple that because I have to take on other people's costs.	Amanda	
	2026-10-15 11:23:14	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	Mandatory Fixed Charges (Policy Positions 11, 27, 30) Functions as an arbitrary "sun tax" and availability penalty. Punishes energy efficiency and private capital invested to survive load shedding, extending solar payback periods. Prosumer Net-Billing Rules (Policy Position 33) Highly punitive: charging solar owners DUoS fees to export clean power while refusing to allow export credits to offset network fees creates an unviable investment model. Scrapping Inclining Block Tariffs (Policy Position 38) Removing IBRs in favour of flat energy rates plus heavy basic monthly connection fees will cause immediate sticker shock for low-to-middle-income ratepayers. Municipal Surcharge Ring-Fencing (Policy Position 47) Threatens local government fiscal collapse. If municipal electricity profits are stripped, councils will hike property rates or collapse basic community services. Industrial Smelter NPAs (Policy Position 54) If heavy industry receives electricity at 62 c/kWh (below cost), ordinary retail consumers and small businesses will be forced to shoulder the resulting revenue shortfall. Prepaid Vending Caps (Policy Position 45) Imposing tight commission caps without administrative support could cause independent retail vendors to shut down, stranding rural consumers without token access. 	2026-10-15 14:39:37	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Commercial / Industrial Power User, Prepaid Meter User	I support the objectives of greater transparency, cost-reflective pricing, improved accountability for municipal electricity revenues, limits on excessive losses and bad debt, and clearer separation of energy, network and service charges. However, I do not support the Revised Electricity Pricing Policy in its current form. My main concern is that the proposed structure may place an unfair and disproportionate burden on ordinary residential consumers, particularly low-usage households and households that have invested their own money in rooftop solar, battery storage and energy efficiency. I accept that maintaining the electricity grid has fixed costs and that customers who remain connected should contribute fairly toward those costs. However, fixed capacity and standby charges must be reasonable, transparent, independently justified and subject to clear limits. They should not become a mechanism for recovering lost electricity sales from customers who have reduced their dependence on the grid. I am particularly concerned about the treatment of rooftop solar customers. Charging network-related fees on exported electricity while also limiting the extent to which export credits can offset a customer's total bill risks creating a punitive system for prosumers. Distributed generation provides value to the electricity system by reducing demand, improving resilience and contributing additional generation capacity. The tariff framework should recognise that value rather than discourage further private investment. Solar customers should receive fair compensation for electricity exported to the grid, and export credits should be allowed to offset a reasonable portion of the overall electricity bill. Any network charges applied to exports should be supported by a transparent cost-of-supply methodology demonstrating that those charges reflect genuine additional network costs. The policy must also protect low-income and low-consumption households from excessive fixed charges. A tariff system that significantly increases unavoidable monthly costs can undermine affordability even where households use very little electricity. I also strongly support strict ring-fencing of negotiated industrial electricity concessions. Residential and small-business consumers should not be required to subsidise discounted electricity supplied to large industrial users. Any negotiated pricing agreement should be transparent, independently regulated and structured so that any resulting revenue shortfall is not transferred to ordinary consumers. I therefore support the positive transparency and accountability reforms contained in the EPP, but request substantial amendments before implementation. These should include clear limits and regulatory safeguards for fixed charges, fair treatment of rooftop solar exports, meaningful bill offsetting for prosumers, affordability protections for low-usage households, and strict protection of residential consumers from the costs of industrial pricing concessions. The electricity pricing framework should ensure that consumers pay fairly for the services they use while also encouraging energy efficiency, private generation and investment in South Africa's future electricity supply. 	2026-10-16 07:09:06	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	# Objection to the Draft Electricity Pricing Policy (EPP 2026) I formally object to aspects of the proposed Electricity Pricing Policy 2026 that risk placing an unfair financial burden on ordinary households and small businesses. While I support improving electricity infrastructure, promoting competition and ensuring financial sustainability, these objectives must not come at the expense of affordability, fairness and accountability. My main objections are: 1. **Excessive fixed charges:** Fixed network and capacity fees could penalise households that conserve electricity, use less power or invest in solar and batteries. Fixed charges must be capped at affordable levels. 2. **Unfair solar tariffs:** Consumers who invest privately in renewable energy should not face unjustified charges for exporting electricity. Export credits should fairly reflect the value of electricity supplied to the grid. 3. **Affordable household tariffs:** Removing inclining block tariffs without adequate safeguards could increase costs for low- and middle-income households. Affordable options and a gradual transition must be retained. 4. **Unfair cross-subsidisation:** Industrial electricity discounts and expanded free basic electricity must have transparent, sustainable funding arrangements rather than placing hidden costs on paying consumers. 5. **Municipal accountability:** Electricity revenue must be transparently accounted for and used responsibly. Municipalities must demonstrate that tariffs reflect legitimate costs and that infrastructure is properly maintained. 6. **Electricity theft and bad debt:** Compliant consumers must not be forced to subsidise avoidable electricity losses, illegal connections or ineffective revenue collection. I request that the Department and the relevant regulators reconsider these provisions, conduct proper affordability assessments and introduce enforceable consumer protections before implementation. **Electricity tariff reform must ensure a sustainable power system without unfairly penalising responsible consumers or allowing inefficiency and poor management to be passed on to the public.**	Jon	employed individual

	2026-10-16 08:57:39	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Mandatory Fixed Charges (Policy Positions 11, 27, 30) Functions as an arbitrary “sun tax” and availability penalty. Punishes energy efficiency and private capital invested to survive load shedding, extending solar payback periods. Prosumer Net-Billing Rules (Policy Position 33) Highly punitive: charging solar owners DUoS fees to export clean power while refusing to allow export credits to offset network fees creates an unviable investment model. Scrapping Inclining Block Tariffs (Policy Position 38) Removing IBRs in favour of flat energy rates plus heavy basic monthly connection fees will cause immediate sticker shock for low-to-middle-income ratepayers. Municipal Surcharge Ring-Fencing (Policy Position 47) Threatens local government fiscal collapse. If municipal electricity profits are stripped, councils will hike property rates or collapse basic community services. Industrial Smelter NPAs (Policy Position 54) If heavy industry receives electricity at 62 c/kWh (below cost), ordinary retail consumers and small businesses will be forced to shoulder the resulting revenue shortfall. Prepaid Vending Caps (Policy Position 45) Imposing tight commission caps without administrative support could cause independent retail vendors to shut down, stranding rural consumers without token access.	Clyde	business owner

	2026-10-16 09:45:55	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Prepaid Meter User	I strongly object to any electricity pricing policy that places an even greater financial burden on ordinary South Africans without first addressing inefficiency, wasteful expenditure, poor financial management, and a lack of accountability within the public sector. South Africans are already battling rising living costs, unemployment, high municipal charges, and stagnant incomes. Electricity is not a luxury. It is an essential service. Every additional fixed charge, tariff increase, or unfair cost allocation takes money away from food, transport, education, healthcare, and other basic necessities. I am particularly concerned about the proposed fixed monthly connection charges, the removal of inclining block tariffs for standard domestic users, and the potential consequences of negotiated electricity pricing agreements for energy-intensive industries. Households that use less electricity must not be unfairly penalised through fixed charges, and ordinary consumers must not be expected to subsidise preferential electricity rates for large corporations without full transparency and compelling public-interest justification. I also support firm, enforceable limits on the costs that municipalities and electricity distributors may pass on to paying consumers. Law-abiding customers should not automatically be held financially responsible for electricity theft, meter tampering, excessive distribution losses, bad debt, or municipal financial mismanagement. Those responsible must be held accountable, and any permitted recovery of costs must be transparent, independently regulated, and fair. I further call for: 1. A comprehensive affordability assessment demonstrating how the proposed policy will affect low- and middle-income households, pensioners, prepaid electricity users, tenants, and small businesses. 2. Protection for low-consumption households, so that fixed charges do not disproportionately penalise people who conserve electricity or simply cannot afford to use more. 3. Full transparency on industrial electricity discounts and cross-subsidies, including who benefits, the financial implications, and who ultimately pays. 4. A clear funding plan for expanded Free Basic Electricity, so that essential support for indigent households is properly funded rather than creating hidden or disproportionate costs for other struggling consumers. 5. Fair treatment of rooftop solar and other small-scale electricity generators, with transparent, cost-reflective network charges that do not unfairly penalise households investing in alternative energy or exporting electricity to the grid. 6. Independent regulatory oversight and public accountability, with clear reasons and published evidence supporting the final policy decisions. The purpose of electricity pricing reform should be to create a financially sustainable, transparent, and equitable electricity system — not to make an already unaffordable essential service even more expensive for ordinary people. I therefore call on the Minister and the Department of Electricity and Energy to reconsider any provisions that unfairly shift costs onto ordinary consumers, publish a transparent assessment of the policy's financial and social consequences, and explain how each proposed change will protect affordability and economic opportunity. South Africans should not have to choose between keeping the lights on and meeting their families' basic needs. Electricity reform must serve the public, not make the public pay for failures they did not cause. I request that these objections and recommendations be considered substantively and that the reasons for accepting or rejecting them be reflected in the final policy record.	Zanel	employed individual

	2026-10-19 10:15:43	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer, Prepaid Meter User	Public Comment: Revised Electricity Pricing Policy 2026 I am a South African homeowner who has invested personal savings in a residential solar electricity system. During years of load-shedding, households were encouraged to become more self-sufficient and reduce pressure on the national electricity supply. I recognise that maintaining electricity infrastructure carries legitimate costs, and I do not object to reasonable, properly justified network charges. However, I strongly object to any pricing structure that financially disadvantages households for investing in solar energy or allows municipalities to recover declining electricity sales revenue through excessive fixed charges. I request that the revised policy: 1. Require independently verified, transparent and cost-reflective network and capacity charges. 2. Protect residential solar owners against discriminatory or disproportionate fixed charges. 3. Ensure fair compensation for surplus electricity exported to the grid, without unjustified additional charges. 4. Clearly distinguish between households that remain grid-connected and those that are completely disconnected. 5. Require electricity suppliers to publish the financial impact of proposed tariffs on low-consumption and solar-equipped households. South Africans who invested in solar energy at their own expense should not be financially penalised for reducing demand on the electricity network. I urge the Department to revise the policy to protect consumers, encourage private investment in renewable energy and ensure that all electricity charges are transparent, fair and independently justified. 	2026-10-26 13:19:48	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	The current cost of living crisis, with many households already suffering with high fuel costs, food costs, etc, etc, does not warrant having higher electricity bills added to it, especially with regards to Eskom, where we, the consumer, already pay exorbitant prices, for decades of mismanagement & corruption!!!!!	Jean-Pierre	unemployed individual
	2026-10-26 14:26:47	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	To Whom It May Concern, I write to express my disagreement with the conclusions presented in your recent communication regarding the Revised Electricity Pricing Policy (EPP 2026). While I support public participation and believe South Africans should engage with policy proposals that affect them, I am concerned that the message presents a largely one-sided and alarmist interpretation of the draft policy. It appears to assume the worst possible outcomes while giving insufficient consideration to the challenges facing the electricity sector and the legitimate policy objectives government is attempting to address. Firstly, the assertion that ordinary households will inevitably face severe financial harm overlooks the reality that South Africa's electricity infrastructure requires substantial investment and maintenance. The national grid must remain available to all users, regardless of how much electricity they consume. As more consumers reduce their grid consumption through energy efficiency measures or rooftop solar installations, the fixed costs of maintaining transmission and distribution networks do not disappear. It is therefore not unreasonable for policymakers to consider tariff structures that recover these unavoidable network costs more transparensively. Secondly, while the communication criticises the removal of certain stepped tariff structures, it does not acknowledge that such tariffs can create distortions and may not always accurately reflect the actual costs of providing electricity services. A simplified billing approach, including fixed charges and energy charges, may in some circumstances provide greater transparency and financial sustainability for both distributors and consumers. Thirdly, the criticism of support for energy-intensive industries ignores the broader economic context. Large industrial users contribute significantly to employment, exports, economic growth, and tax revenue. While any pricing agreements should be carefully scrutinised to ensure fairness, it is simplistic to portray all industrial pricing arrangements as subsidies imposed on households. Competitive electricity pricing for strategic industries can have wider economic benefits that ultimately support jobs and national development. The communication also questions the expansion of Free Basic Electricity for indigent households. However, South Africa remains one of the most unequal societies in the world. Ensuring that vulnerable households have access to basic electricity is a legitimate social objective. Rather than opposing support for poorer citizens, the debate should focus on how such programmes are funded efficiently and sustainably. Furthermore, the message suggests that certain outcomes are already predetermined, particularly regarding solar customers. Draft policies are, by definition, proposals that are subject to consultation, revision, and amendment. Public participation should encourage constructive engagement rather than create fear that policy decisions have already been finalised. I am also concerned by the implication that only submissions made through a specific platform carry meaningful legal weight. South Africans can participate through numerous legitimate channels provided by government, and no single organisation should present itself as the exclusive or primary gateway to effective public participation. Lastly, while I welcome provisions aimed at reducing municipal markups and preventing compliant consumers from carrying the burden of excessive theft and non-payment, these positive aspects demonstrate that the draft policy is more nuanced than the communication suggests. A balanced discussion should acknowledge both the potential benefits and potential drawbacks of the proposed reforms. In conclusion, I believe South Africans should engage with the draft policy directly, review the source documents themselves, and make informed submissions based on a balanced assessment of the facts. Public participation is most effective when it is driven by careful consideration rather than fear-based messaging or selective interpretation.	Ashish	

	2026-10-26 14:41:48	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Municipal Official / Engineer	I understand that municipalities are strapped for cash; but they should amend their own financial management practices, and not impose penalties on customers. Utilities should absorb fixed infrastructure costs through internal operational efficiencies rather consumers who have already paid their fees. Fixed fees for households in the form of connection fees are already exorbitant, and cannot be increased. There is no explanation for the current exorbitant fees. I demand they be reduced and capped. Because of loadshedding, solar was used. How on earth can you penalise people who freed up electricity for others to use? This is Unethical and unconstitutional. No solar user wants to be registered with municipalities. The response times mean solar suppliers would be out of business because of the length of time taken for their query to be attended to. Solar registration with municipalities must be scrapped. Those households that have low electricity usage must be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. I advocate complete removal of DUoS and TUoS network charges on exported electricity (Policy Position 33(d)), as embedded solar reduces local line losses and daytime substation loading. Consumers must be protected from any revenue shortfall arising from Negotiated Pricing Agreements (NPAs) with private commercial smelters . NPA's shoul be funded exclusively via the fiscus (Department of Trade, Industry and Competition or National Treasury) NOT FROM CONSUMERS Any expansion of Free Basic Electricity (FBE) above 50 kWh should be fully backed by the National Treasury Equitable Share grant before implementation. There must be a ban on funding social allocations through municipal electricity surcharges. Consumers are already paying quite enough. All this should be audited and made public. Ring-fence all municipal electricity revenues into dedicated maintenance accounts, legally prohibiting councils from diverting electricity revenue to fund unrelated municipal wage bills or deficits.	Carol	retired

	2026-10-27 11:09:49	No I do not	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant)	I object to mandatory fixed networkd and capacity fees. high flat rates regardless of use make no sense. i also object to standby charges. People using solar are helping eskom reduce strain on grid and are being punished for it. Locking these disputed local fees into permanent national legislation undermines ongoing civil society court challenges and strips us of local accountability. The Department must publish a full, audited impact assessment before pushing ahead with a rigid blanket policy that threatens household budgets and small businesses.	kayden	employed individual

	2026-10-27 14:32:23	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	It is one thing to charge residents for all consumables in a realistic manner. Government and municipalities have been on a revenue collection drive focus without taking into account the state of the economy, economies of scale, transparency and a clear indication of what we're paying for. A one size fits all approach is totally unjust and not acceptable. Rooftop panels and stored solar power is no longer a luxury but a need for homes to have uninterrupted power supply in the face of grid instability, cable theft, etc. Why should a 2 adult household be charged the same as a bigger household when our usage is not the same. We only have 1 unstable income that falls short of covering our basic monthly needs. Rates statements are written in a manner that an ordinary man in the street cannot make sense of. We're being penalised for a government that is inefficient and municipalities that squander our money on wasteful expenditure. Put citizens first and stop feathering your own pockets!	Manana	unemployed individual
	2026-10-27 14:37:40	No I do not	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form (Rejects mandatory fixed grid capacity fees and standby charges on solar and low-usage homes, punitive double network fees on solar exports, the elimination of stepped block tariffs for standard households, and the risk of retail consumers funding industrial smelter discounts or unfunded social expansions).	Milton	employed individual

	2026-10-27 15:20:30	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	No matter what way you look at this, Removing IBRs in favour of flat energy rates plus heavy basic monthly connection fees will cause immediate shock for low-to-middle-income ratepayers.	Carla	self-employed
	2026-10-27 15:26:59	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer	I have objections and to all listed related and documented. Fact of the matter is that with the persistent abusive of unneccesary loadshedding/load reduction/ & condoned cable theft by Eskom and the government, these have directly driven the associated need and requirement for using alternate power sources solar etc. (The last time I checked solar energy is free to use.) During prior dispensation and years before corruption and cadre capture, the associated Bullshyte extortion would not have tolerated or been accommodated in anyway or form!!!!!!??? "Enough is enough, proposed additional levies, extortive increases in tariffs and criminally allocated exorbitant bailouts to cover bonuses all need to be stopped." First focus on implimenting an effective method of dealing with cable theft, non paying and or illegally connected communities. Serious consideration needs to be taken..... Like China ..... Eskom definitely need a refocus on coal as THE PREDOMINANT source of power generation and associated supply. (without a repeat of Modupi and Kusele incomplete debacles.)	Martin	retired

	2026-10-27 16:29:25	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	How on earth can you charge rate payers for grid availability and network reservation regardless whether electricity is consumed. Stop penalizing households and small businesses that invested private savings in solar and batteries to survive load shedding with monthly fixed fees simply for remaining connected to the grid. Scrapping the pay less if you conserve, for middle income families and replace it with mandatory fixed monthly connection charges plus a flat rate energy rate will make electricity unaffordable. Time to deal with cable theft and non paying or illegally connected consumers, do not penalize the ordinary rate payers. Scrap the Revised Electricity Pricing Policy.	Hettie

	2026-10-28 17:49:30	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	You will make electricity unaffordable with the new unbundled tariff change. How can you charge consumers for grid availability and network reservation regardless whether electricity is consumed. Households and small businesses that invested in solar and batteries to survive load shedding will be penalized by monthly fixed fees simply for remaining connected to the grid. Low volume consumers will no longer be able to lower their utility bill by conserving electricity it make electricity unaffordable for pensioners and middle households. Scrap the Revised Electricity Pricing Policy, use the old Pricing System. Tackle fraud and corruption in Eskom. Deal with cable theft and illegal connected users then you will be able to make electricity cheaper.	Riaan	
	2026-10-28 20:31:19	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	The introduction of high fixed monthly charges with no ability to mitigate at least some of this cost is not equitable or sustainable. It unduly punishes those who have invested in PV and those low-income households that do not qualify for the indigent free electricity subsidy. It is a valid point that solar users who consume mainly during peak hours may not be contributing enough toward grid maintenance with the current billing system. The answer, however, is not to penalise everyone. And there should still be an opportunity to set off your fixed charges against electricity you provide to the grid for use by the municipality. Also, create a tariff that has a very high consumption charge during peak hours (e.g. double the current highest rates) and make it mandatory for PV users, if grid maintenance costs are the concern. This will have the effect of either compensating for network use or shifting any usage to standard and off-peak times when the grid has spare capacity.	Philipp	employed individual

	2026-10-28 23:35:34	No I do not	Double Network Fees (DUoS) on Solar Prosumer Exports		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	Export electricity from rooftop solar users would be an excellent source of electricity for large industrial consumers (e.g. smelters, since they operate twenty-four hours a day) and for boosting the kWhs available for the expanded free energy (power available during off-peak hours for heating geysers). Instead of exploiting this as an opportunity, government appears to be bitter about the loss of revenue from those citizens who have been forced by Eskom's incompetence to make their own plan and are now determined to punish them with a double tariff. This is odious in the extreme. By all means charge a network connection fee to maintain the infrastructure, but penalising rooftop solar users who are willing to export is a low blow.	Tamsin	unemployed individual
	2026-10-28 23:37:18	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	Punishes energy efficiency and private capital invested to survive load shedding, extending solar payback periods. By installing solar panels owners relieved pressure on the grid enabling the cessation of loadshedding.	Pauline	retired

	2026-10-29 15:54:18	No I do not	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer	In a time of crisis we the rate payers installed solar and helped the country, now they want to "punish" those people? Sell the excess to other countries if necessary, stop passing all the corruption and poor management costs onto ratepayers. Rate payers pay for all municipal services and are now expected to finance previous failures. Paying consumers are already financing free electricity benefits to others. At some stage Eskom needs to take responsibility for its own bad management and change the way it does business, not just pass on the costs to us the consumers.	Carey	business owner
	2026-10-29 15:55:26	No I do not	All of the above	Double Network Fees (DUoS) on Solar Prosumer Exports	Rooftop Solar / Prosumer	I adamantly and completely object to: 1. Mandatory Time-of-Use tariffs forcing solar power users onto peak-rate structures (Policy Position 33). 2. Double network charges (DUoS): Being billed network fees on the power I draw and the power I export into the grid. This makes absolutely no sense whatsoever. 3. A complete ban on using solar export credits to offset your monthly fixed connection fees.	Hilary	
	2026-10-29 17:05:55	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Punitive Double-Charging and Restrictions on Solar Prosumers (Policy Position 33): The draft policy penalises grid-tied embedded generators who inject clean power into the network. Prosumers are forced onto mandatory Time-of-Use tariffs and made to pay standard Distribution Use of System (DUoS) and Transmission (TUoS) charges on both the electricity they import and the electricity they export. Furthermore, prohibiting solar owners from using clean export credits to offset fixed monthly network and retail service charges destroys the financial viability of feeding power back into the grid, actively incentivising frustrated solar owners to defect entirely. Scrapping Stepped Block Tariffs (IBRs) Hits Middle-Class Families (Policy Position 38): Eliminating Inclining Block Rate (IBR) tariffs for standard domestic customers removes the traditional "pay-less-if-you-conserve" framework. Replacing stepped usage tiers with unbundled capacity fees, monthly service charges, and flat energy rates will trigger immediate bill shocks for low-to-middle-income ratepayers, pensioners on fixed incomes, and large multi-family households sharing a single meter who actively manage their consumption. Municipal Fiscal Shocks and Retaliatory Rates Hikes (Policy Position 47): Local councils rely on commercial electricity markups (often 15% to 35% above bulk Eskom tariffs) to cross-subsidise indigent households, sanitation, and municipal salaries. Eliminating non-transparent municipal surpluses without an alternative municipal funding model threatens local government solvency. This could prompt municipalities to counter revenue losses by introducing aggressive double-digit hikes on property rates, refuse, and water tariffs. The Threat of Consumers Funding Industrial Smelter Discounts and Expanded Free Power: Expanding concessional Negotiated Pricing Agreements (NPAs)—granting heavy industrial smelters discounted electricity (historically around 62 c/kWh)—under Policy Position 54 creates a massive revenue gap. At the same time, proposals to expand Free Basic Electricity (FBE) from 50 kWh up to 200–300 kWh per month without an expanded National Treasury grant risk multi-billion-rand deficits. Opponents and energy analysts warn that if these industrial and social shortfalls are not strictly ring-fenced and funded via the national fiscus, the deficit will be loaded onto standard consumer tariffs.	G	
	2026-10-30 10:54:17	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	I have previously commented on the electricity before load shedding. I said that escom had no idea of where they were heading when they reduced consumption, and it would lead to the current problems where they would not get enough income from the users. Their corruption and theft is the main cause for the situation and now they want to punish the consumer for it. I previously used up to 600 Kwh then reduced it to 350 Kwh. I paid R500 pm, but now pay R1200 pm and getting even less Kwh for my money. This will force me to investigate getting off the grid totally, as will most other users. Escom will not see the fall comming so fast when they will sit with the most of the current non paying users and have absolutely no paying consumers anymore. This is their final warning. Take heed!!!!!!	Clark	retired
	2026-10-30 11:55:58	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer, Prepaid Meter User	The fact that any user of electricity should be subjected to these new mandatory charges is unacceptable. We use very little electricity in order to relieve pressure on the grid and to save costs as electricity costs are already high. We manage our use and now that won't matter as we will be penalised anyway. The measures are not designed in any way to protect the infrastructure but are punitive at best. Corruption and theft should be dealt with at the level it is taking place, not punishing users who are already severely cash-strapped in this economy. Flat energy rates and removal of the block rate tariffs make no sense to those trying to conserve electricity usage and limit their expenditure. Users using less should be rewarded not punished. What will happen to people on fixed incomes and pensioners? They will be hit hard and will not be able to afford these ludicrous tariffs. I have two households for which I am paying electricity (mine and that of my pensioner mother) and I cannot envision how I am going to be able to afford this new tariff structure. Both these households are on prepaid systems and work very well as electricity usage can now be managed. But with these new measures, this will all be for nothing. The mandatory time of use tariffs: this is a seriously flawed measure. We specifically limit our usage during peak hours but we will be charged anyway? Seriously? And so what if solar users use Eskom electricity during peak hours? It's not as if they are getting it for free. They are still paying for the electricity they use. Why should they be targeted? What about the relief they have provided, and still do, to the electricity infrastructure? The solar users I know make every effort to put as little strain as possible on the system during peak hours by not making use of equipment that uses a lot of electricity or switching it off or using alternatives such as gas. My system does not get charged with electricity from Eskom. When the batteries are flat or low, any excess electricity required is drawn from the prepaid system. So I pay for my electricity and exactly what I use. When there is sunshine the next day, the panels will charge the batteries. So why should I be punished with mandatory time of use tariffs when my system is not charged by the grid? If Eskom has excess electricity, sell it to other countries and make some money. Don't continue to abuse citizens for your failures. Eskom is losing money because people have taken measures to protect themselves due to Eskom's inefficiency. Now those same people will be punished for Eskom's failure. Fix your own house first, Eskom, and stop your witch hunt.	Linette	retired
	2026-10-31 20:41:45	No I do not	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	its Ridiculous to keep on expecting the citizens of the country to pay more in increases than what their salary does, who's salary has increased that much in just the last 5 years, the ANC is stuffing up ESKOM like they have everything else, for them it another milking cow, why must we pay more so that the board members can get such nice increases because i don't think any citizen would complain about going from 12 million a month salary to 24 million a month when we have people earning R5 000.00 a month and you want to find more things for them to pay, we have Eskom telling us not to use power but then we have the municipality telling us we are not using enough, and giving us tempering fines because we should be using more power. Eskom gave us loadsheading but we all know it was so Ramaposa could line his own back pockets, the same reason he doesn't care about the petrol prices because he is making money from it. all the people who had the money and got sick of not having power got solar now Eskom is upset that they dont have so many customers any more, well thats what happens when you dont supply what you are being paid for, now they want to put up the prices so they can make money maybe they should have thought about that before they stopped giving people power but i know its part of the new world order agenda that Ramaposa is following but eskom is going to go bankrupt like the other SOEs because you cant expect people to just pay more and more all the time especially when the increases are more than what their money increased. something has to give. people need to eat also. so stop trying to find ways to bankrupt people and make the parliament people start paying for their own power. why must the public pay for everything while they live like kings and there are so many people who dont have homes or food. while they spend money like there is no tomorrow	Heather

	2026-09-24 19:16:20	Not fully	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Residential Ratepayer (Grid Reliant)	While I support modernizing South Africa’s energy market, I object to key mechanisms in EPP 2026. Replacing volumetric billing with mandatory unbundled fixed charges severely penalizes residential solar and battery owners who stepped in to stabilize power demand. Fixed capacity charges must be tied strictly to audited peak grid draw, and export credits earned from feeding solar energy back into the grid should be allowed to offset fixed connection fees. Furthermore, Negotiated Pricing Agreements (NPAs) for heavy industrial users must not be cross-subsidized by shifting costs onto residential consumers. NERSA must strictly cap municipal markups to ensure local councils do not use unbundled fees as a hidden tax on paying households.	Dylan	employed individual

	2026-09-25 13:04:42	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	I do not support the Revised Electricity Pricing Policy as published, with the exception of the proposed measures to prevent electricity theft, non-technical losses and bad debts from being passed on to paying consumers. I am particularly concerned about mandatory fixed grid and standby charges on households that have invested their own money in solar, batteries and energy efficiency; additional network charges on electricity exported by solar users; the removal of inclining block tariffs; and the potential for ordinary residential consumers to carry costs associated with subsidised electricity arrangements and municipal financial shortfalls. Households that have invested significant personal funds to reduce their electricity consumption and dependence on the grid should not be financially penalised for doing so. If the grid remains essential infrastructure, its costs should be recovered transparently and fairly, rather than disproportionately shifting costs onto households that consume less electricity. I also support the principle that electricity theft, illegal connections, meter tampering and excessive bad debt should not simply be recovered from compliant consumers. Regulatory standards should be enforced so that consumers who pay their accounts are not effectively required to subsidise losses that could reasonably be prevented or recovered. Electricity pricing reform should encourage efficiency, private investment in generation and responsible consumption while ensuring that the costs of maintaining the grid are transparent, properly justified and fairly allocated. 	2026-09-25 13:10:23	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer	I do NOT support the Pricing Policy, EXCEPT for the ending of hidden electricity surpluses by municipalities. I am NOT a "free-rider". I am completely non-reliant on Eskom / Municipal power supply and find it iniquitous that I will be forced to pay for sunlight. Other countries have tries this and failed dismally. Can the ANC not learn from others instead of embarrassing themselves when their plans ultimately fail ? My household is off-grid for the simple reasons that the supply is erratic / unreliable and the costs have gone through the roof. I believe that it is unconstitutional for the government to penalise people for having made alternative arrangements when the government fails to deliver or delivers a second-rate product. Until I went off-grid, I paid my share for electricity. It's NOT my fault if other consumers (legal or not) don't pay their bills or the municipality steals the money owed to Eskom and therefore I don't see why I have to subsidise theft, poor payment or municipal ineptitude / theft.	Gwilym	business owner
	2026-09-25 13:15:31	Not fully	All of the above	Double Network Fees (DUoS) on Solar Prosumer Exports	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	Eskom produces most of the pollution, air and river, in South Africa - even for its most recently build power stations. Solar is clean, and, unless there is an actual output to your solar solution, does not effect the grid in any way - but is being demonised for not using enough electricity and or recharging at night when electricity is cheaper ... neither of these statements is correct. NERSA should be in charge of these decissions, not Eskom. Eskom is also being unbundled, so most of this is merely posturing to keep a monopoly even after free market competitors join the grid. You keep pumping paying customers for more cash - the municipalities steal your money - but you go after the end users. soon, there will be no one left to force to pay your exorbitant and incorrect projections - if you run at a loss, that is your business, not mine. If I decide to ride a bicycle I don't see PETROSA running after me, trying to tarriff me for not using petrol, or JRA Imposing a toll system for cyclists ... no, because that would be stupid and a waste of time and resources. Get your house in order before you come knocking at mine!	Liam

	2026-09-25 13:40:56	Not fully	Other		Prepaid Meter User	IN BRIEF: My concern is that the transition to cost-reflective electricity pricing should not become an opportunity for hidden cross-subsidisation, protection of incumbent interests, or excessive regulatory intervention. Costs, subsidies and network charges should be transparent, objectively justified and applied equally, while competition, consumer choice and private investment in generation and storage should be encouraged. PUBLIC COMMENT ON THE REVISED ELECTRICITY PRICING POLICY 2026 I welcome the opportunity to comment on the Revised Electricity Pricing Policy (EPP 2026). My comments are informed by the principles of individual economic freedom, competitive markets, transparent government, equal treatment before the law, and limited but effective regulation. The proposed transition toward an unbundled and increasingly competitive electricity market is significant. The EPP recognises that South Africa's electricity sector is changing from a predominantly vertically integrated Eskom model toward greater participation by independent generators, municipalities and other market participants. I support the principle that consumers should ultimately have greater freedom to choose how and from whom they obtain electricity, subject to legitimate network and system requirements. However, this requires exceptional transparency in pricing. The EPP proposes that tariffs become substantially cost-reflective and that bills should disclose the separate costs of energy, transmission, distribution, retail services, subsidies and surcharges. This principle should be applied rigorously. Consumers should be able to identify precisely which portion of their bill represents the cost of providing electricity and which portion represents a deliberate government or regulatory policy objective. Cross-subsidisation deserves particular scrutiny. Social assistance for households that cannot afford electricity is a legitimate policy objective, but such assistance should be explicit, targeted and transparent rather than concealed within electricity tariffs. The proposed national subsidy framework should therefore clearly identify who contributes, who receives assistance, the size of the subsidy and its duration. Government should also make the fiscal cost of social electricity programmes explicit rather than allowing these costs to become indistinguishable from the underlying cost of electricity. The treatment of independent generation and rooftop solar also requires careful consideration. The EPP appropriately recognises that customers who use the electricity network must contribute toward the costs of maintaining that network. At the same time, charges should be based on the actual costs imposed by network use and should not become a mechanism for protecting incumbent suppliers from competition. Net-billing arrangements should therefore remain transparent, predictable and sufficiently attractive to allow consumers to invest in generation and storage where this is economically efficient. Similarly, negotiated electricity prices for particular industries should be subject to strict transparency. If preferential pricing is granted for economic-development purposes, the policy should clearly disclose who bears the cost and why the arrangement is expected to produce a wider public benefit. Costs should not simply be transferred invisibly to unrelated consumers. Finally, tariff reform should avoid unnecessary complexity. A competitive electricity market can only function effectively when consumers can understand prices and respond to them. Regulation should therefore establish clear rules and prevent abuse of market power, while avoiding unnecessary barriers to entry and investment. The objective should be an electricity system in which prices increasingly reflect genuine costs, subsidies are explicit and targeted, competition is permitted to operate, consumers can make informed choices, and government intervention is transparent and accountable. I therefore encourage the Department and NERSA to ensure that implementation of the EPP preserves these principles throughout the detailed tariff-setting process.	Marius	self-employed

	2026-09-25 13:54:25	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	The costs that they want to save. Will be added on other expenses on your municipal account. Which is going to affect the lower class income earners more. There must be a better way to get more revenue that doesn't place the people in a worse financial position.	Lorinda	employed individual
	2026-09-25 13:56:11	Not fully	Double Network Fees (DUoS) on Solar Prosumer Exports		Small / Medium Business Owner (SMME)	I do not support crediting exported energy at "avoided cost" while still charging full network fees on that same exported energy. Export credits should reflect a fair market/wholesale rate, not a rate set unilaterally by the party also collecting the network fee. Variable/volumetric rates are reasonable where genuine capacity planning isn't possible, but they shouldn't be the default tool for recovering costs from predictable residential loads once fixed charges exist. Residents who installed solar and registered for grid export in good faith, at the municipality's own encouragement, should not have that investment devalued retroactively. A transitional rebate or grandfathering period for existing registered prosumers would protect an investment that already benefits the grid by reducing peak demand.	Andre	
	2026-09-25 14:01:11	Not fully	Other		Rooftop Solar / Prosumer, Prepaid Meter User	While precise figures are lacking it would seem that all but the lowest income families are going to face increased electricity charges. I would just make the point that price/cost-to-consumer increases do not take place in a vacuum, but in the context of real household incomes. Purely cost-based calculations must be ameliorated by taking social realities into account.	Brian	retired
	2026-09-25 14:05:16	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	The idea behind a government monopoly is supposed to be to help provide cheaper services to citizens. Not more expensive ones. Government needs to get out of the way and let the private sector show them how it is done. Taxed to death and overcharged for everything. It has to stop.	Andrew

	2026-09-25 14:39:07	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I'm a residential electricity consumer in Centurion. I support the ban on hidden municipal electricity surpluses. I also support the requirement that municipal surcharges be itemized on bills and regulated by National Treasury. That section should be kept and firmly enforced. I object to the rest of the policy, for these reasons: Fixed capacity charges and the standby fee punish households that save electricity. They hurt low- and middle-income users the most. Scrapping inclining block tariffs removes one of the few protections for modest users. Compulsory time-of-use for three-phase homes is unfair. Many homes have three-phase supply for practical reasons, not because they use a lot of electricity. Time-of-use should stay optional. The net-billing rules for rooftop solar charge network fees twice and make grid-tied solar close to worthless. They will push people off the grid. Cost-reflectivity within five years will pass inefficiency and mismanagement on to consumers unless it's tied to audited efficiency targets. The loss and bad-debt benchmarks make a "normal" level of theft and non-payment acceptable to charge to paying customers. The 12-month delay on capping prepaid vendor fees is too long. An interim cap should apply now. The 50/50 zonal transmission method needs a published impact assessment on residential tariffs first. Expanding Free Basic Electricity without new funding amounts to a hidden tax on paying households. Extending discounted industrial deals (NPAs) to vague "strategic growth sectors" risks households paying for them. The 10% cross-subsidy cap needs clear rules on who pays and who benefits. In short: apart from the municipal transparency section, this policy shifts cost and risk onto ordinary households. It penalizes people for saving electricity and for investing in solar. I ask that these sections be withdrawn and redrafted, with a published affordability impact assessment for residential consumers.	Yolande	employed individual

	2026-09-25 15:04:18	Not fully	Double Network Fees (DUoS) on Solar Prosumer Exports		Residential Ratepayer (Grid Reliant)	By levying network charges on both energy imported and energy exported, the state effectively taxes private clean energy fed back into local communities. Prohibiting consumers from using export credits to offset fixed monthly network fees drastically erodes the financial return on private rooftop solar, disincentivising decarbonisation and pushing frustrated solar owners to defect from the grid entirely.	Margaret	retired
	2026-09-25 15:12:29	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)		Petrus	
	2026-09-25 15:12:57	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	I support the modernisation of South Africa's electricity-pricing system and recognise that maintaining a reliable national grid has real costs. However, those costs must not become a mechanism for transferring the consequences of years of poor management, inefficiency, electricity theft, non-payment and policy failures onto consumers who pay their bills. I have invested in solar power and believe private generation should be encouraged. Consumers who reduce their dependence on the grid should not be penalised through excessive fixed charges, export charges or tariff structures that make investment in solar progressively less worthwhile. At the same time, I accept that remaining connected to the grid has a cost and that consumers should make a fair contribution to maintaining the network. The critical issue is **how those costs are allocated**. South Africa has millions of people living close to, or on, the breadline. Electricity pricing cannot be considered in isolation from household affordability. We must not create a system in which those who can least afford it carry an increasing burden because the electricity sector has failed to control its costs. I therefore believe the revised policy should be based on the following principles: - **Full transparency:** Every component of the electricity tariff must have a clearly identifiable purpose and cost. - **Accountability:** Inefficiency, theft, corruption, poor management and municipal non-payment must not simply be recovered from compliant consumers through higher tariffs. - **Fair treatment of solar users:** Rooftop solar and battery storage reduce demand on the electricity system and should not be discouraged by punitive or excessive charges. - **Transparent industrial subsidies:** If strategically important industries receive electricity below its economic cost, the subsidy and its funding must be explicitly identified rather than hidden in tariffs paid by households and small businesses. - **Sustainable social support:** Increased free electricity for poorer households is an important social objective, but its full cost and source of funding must be transparent. It should not simply become another hidden charge on other consumers. - **Affordability:** Electricity must remain affordable for households and competitive for South African businesses. The rest of the world is moving towards more distributed generation, renewable energy, batteries, competition and smarter electricity networks. South Africa should embrace these developments rather than create a tariff structure that protects an inefficient legacy system by making consumers pay more. The dangerous path would be to continually increase electricity prices to compensate for inefficiency while simultaneously discouraging consumers from reducing their electricity consumption or investing in alternative generation. **We need an electricity system that rewards efficiency, investment and responsible consumption — not one that makes consumers pay for failure.** The ultimate objective should be simple: **reliable electricity at the lowest economically sustainable cost, with transparent pricing, proper accountability and protection for those who genuinely cannot afford more.** This is not simply an argument about my electricity bill or the economics of rooftop solar. It is about whether South Africa creates an electricity system that supports investment, employment and economic growth — or one that adds another structural burden to an already struggling economy. 	2026-09-25 15:14:43	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Small / Medium Business Owner (SMME)	Many citizens put their hands up and installed solar to help Eskom solve the load shedding crisis destroying our economy. Now that production has increased and load shedding is over (for now) it is wrong for Eskom to now target these citizens with all these extra charges. Solar is environmentally friendly and should form part of our transition to green energy. Eskom should see solar energy produced at a local level as part of the product mix, and should find innovative ways to further encourage solar. Eskom should apply their minds to find workable solutions to including local solar as part of the product mix and not default into the convenient approach of just exploiting the producers of solar as easy targets to get more money. We need to see long term second level thinking from Eskom ..... please.	Ian	business owner

	2026-09-25 15:46:57	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Iniquitous! The government itself encouraged going solar, with promised tax rebates. Eskom could not provide an uninterrupted electricity supply which is essential our livelihoods. So we took the opportunity of using new technology - AT OUR OWN EXPENSE - and are now penalized for doing so? Consider: sunshine is free. Also consider: often sunshine is not there. So we must pay for using something that is free, but also for not using it on those cloudy days. There is no logic here - unless it is realized that to gain more money, it is a very logical move on the part of Eskom.	Joan	retired
	2026-09-25 15:51:57	Not fully	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Residential Ratepayer (Grid Reliant), Prepaid Meter User	I support assistance for genuinely indigent households. My concern is not the principle of providing assistance, but how expanded subsidies and preferential electricity pricing will be funded, and whether the costs could ultimately be transferred to ordinary residential consumers. I am a residential prepaid electricity user and a SASSA pensioner, and I already pay a relatively high cost per unit. I therefore believe that any expansion of subsidies or preferential pricing should not simply result in additional costs being transferred to ordinary households that are already struggling to afford their own electricity. I support greater transparency in electricity pricing and would like the final policy to provide clear, understandable information about who pays for each subsidy and why. The same transparency should apply to negotiated pricing arrangements for large electricity-intensive industries such as smelters. If preferential electricity pricing creates a subsidy, consumers should be able to see clearly who funds that subsidy and how the cost is allocated.	Sophia	retired

	2026-09-25 17:37:51	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Prepaid Meter User	I support transparent, itemised electricity bills, the removal of hidden municipal surpluses, regulation of prepaid vending fees, and stronger protection for paying customers against electricity theft and bad debt. I do not support the revised policy as published and request the following amendments: 1. Set binding, enforceable caps on fixed network, capacity and standby charges, with protection for low-usage households and small businesses. These charges must be justified by independently assessed costs. 2. Remove DUoS and TUoS charges on electricity exported by rooftop solar customers. Allow the monetary value of exports to offset the customer's full electricity bill, including fixed and retail charges, with any remaining credit carried forward. 3. Exclude electricity theft and illegal connections from utilities' allowed revenue, rather than permitting these losses up to a benchmark. 4. Legally ring-fence any shortfall from discounted industrial electricity agreements so it cannot be recovered through ordinary household or small-business tariffs. Any public subsidy should be separately funded and disclosed. Please amend the relevant policy positions and require NERSA to publish the supporting cost calculations and consumer impact assessments before approving the resulting tariffs.	Philip	self-employed

	2026-09-25 17:44:51	Not fully	Other		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	Government begged and pleaded for people to install solar and even gave tax concessions on solar purchases, and now they are punishing the people who actually took on the cost and risk of installing solar. The fixed rate even if you don't use the power is absolute daylight robbery. Eskom and the government should be doing everything possible to make it as easy and cheap to get the solar owners to feed back into the grid, as they then get to sell that free power on to other consumers. They should be treating solar owners as producers that can allow them to save diesel and coal during the day, and the producers should be able to receive a reduction in cost for power drawn at night, because they produced power that Eskom did not need to produce during the day. The double fees for producing power is also ridiculous, instead of treating the solar producers antagonistically, offer to install reverse cycling meters for free, make it cheap/free to feed back into the grid, and actually encourage people to install solar so that Eskom can become the distributor of a fleet of solar that they do not need to expend capital to install, nor do they need to pay maintenance on the repair, Eksom should be offering buy back deals where they offer to buy and install the solar capacity on people's homes that the users then pay monthly fees on and pay off over time, all the while agreeing to feeding their excess into the grid during the day. The OCGT can be used to supply the shortfall on cloudy days and at night, with the big coal stations providing the base load that ramp up for night production.	Logan	self-employed

	2026-09-25 18:25:09	Not fully	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	• Mandatory Fixed Charges for All Homes All households will face expensive monthly connection fees regardless of how much electricity they use. Even if you reduce your power consumption or install rooftop solar, you cannot avoid these baseline charges. • Penalties on Rooftop Solar Exports Grid-tied solar owners will be forced onto Time-of-Use tariffs. You will have to pay network distribution fees on both the power you pull from the grid and the excess energy you send back to it. Additionally, you cannot use your solar export credits to lower your fixed monthly connection fees. • Subsidizing Discounts for Big Industry The government plans to offer industrial smelters special electricity discounts. Experts warn that regular households and small businesses will likely see their rates increase to cover the financial shortfall. • Higher Bills to Fund Free Electricity The Minister intends to increase Free Basic Electricity from 50 kWh to 300 kWh per month for qualifying households. Because there is no extra government budget for this, paying consumers will likely fund the expansion through higher rates.	Andre	retired
	2026-09-25 18:29:23	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer	I installed rooftop solar because Eskom couldn't guarantee stable power 24/7, as did many others. So now the most reliable paying customers are using less of Eskom's power which translated to less income for Eskom. And whose fault is that? Eskom only has themselves to blame! But no, they want to penalise us for taking matters into our own hands and looking after our own interests. This is pure spite.	Michael	retired
	2026-09-25 18:35:38	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Charge transparency is required and needed. Why are supposed to punish those who use solar by making them pay for a service they're not using? It's the same as making a road user pay toll fees even though they're not using the road. If you want to stop users from using solar, you're welcome to block the energy generated by the sun. Sooner or later we're going to start paying for breathing.	Phuti	employed individual

	2026-09-25 21:30:42	Not fully	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes		Residential Ratepayer (Grid Reliant)	This is ridiculous. When we had load shedding the government officials were the ones saying we must help by installing solar. So, some at great sacrifice, installed systems. Now they dare to penalise because they messed up. If they had just maintained the Eskom infrastructure and systems, If people were all expect to pay something for what they received and If they stopped sponsoring the free loaders we wouldn't be in the mess. The government must first cut their salaries. They are not doing the work. They are messing up. I don't have a problem that big smelters get a break, they can bring income to the country, but they must stop penalising the middle class. WE can hardly afford the cost of food because they tax us half our salaries. 15% vat, Petrol and paraffin, both essentials in feeding ourselves. One for transport and the other for cooking. We cant afford to use electricity to cook as it is already to expensive. IF they are going to charge such a large connection fee then the units should be reduced in price. It is time we, as country stood up against our corrupt useless government. They must stop employing cadres who get a salary to do nothing. Eskom and energy workers should not be political but qualified specialists. Energy ministers should be fired if they mess up and not redeployed. Our country is almost on the verge of a collapse and a revolution because the government cant do their jobs. THE DA, ANC, MK and EFF are relics of the past serving themselves and a fantasy that doesn't exist. They should just disband and make space for something better. (your selection doesn't fully include our description. It is basically punishing the people of SA for the governments incompetence.	Robin	Non-profit

	2026-09-25 22:47:08	Not fully	Other		Residential Ratepayer (Grid Reliant)	I oppose the Revised Electricity Pricing Policy in its current form. My principal concern is that tariff restructuring could shift an excessive financial burden onto households and small businesses while weakening their ability to control electricity costs through reduced consumption and investment in alternative energy. I request the following changes before the policy is finalised: 1. Protect consumers against excessive fixed charges. Any network or capacity charge must be justified by independently scrutinised, publicly available cost-of-supply studies. Moving costs into fixed charges should not become a means of protecting utility revenue regardless of efficiency or service quality. Consumers must have practical, affordable options to reduce their contracted capacity and retain meaningful savings when they use less electricity. The impact on low-consumption households that do not qualify for lifeline tariffs requires particular attention. 2. Ensure fair treatment of rooftop solar and battery investment. I object to the combined burden of import and export network charges, additional administration fees and restrictions on using export credits. Any such charges must reflect demonstrable costs, prevent duplicate recovery and account for measurable benefits supplied to the network. Export compensation should be transparent and independently assessed. Time-of-use arrangements must include understandable pricing, affordable metering and reasonable transition periods. 3. Prevent industrial concessions from becoming an open-ended liability for other consumers. I object to recovering negotiated industrial pricing shortfalls from households and small businesses. Any concession should have a disclosed funding source, a defined duration, measurable employment and economic commitments, and independent review. Where government considers a subsidy necessary, it should be transparently budgeted and justified rather than passed through electricity bills without adequate protection for those paying it. 4. Fund social support transparently and sustainably. Support for vulnerable households must reach its intended beneficiaries. Any expansion should be accompanied by a credible funding plan, clear eligibility rules and audited reporting. Paying consumers should not face an uncapped obligation to fund commitments whose costs and outcomes they cannot scrutinise. 5. Make efficiency and accountability enforceable. The final policy should require measurable improvements in maintenance, billing accuracy, debt collection and the reduction of electricity theft. Consumers must not become the default source of funding for avoidable operational failures. Existing provisions promoting transparency and limiting excessive losses should be retained and rigorously enforced. Before implementation, the Department and NERSA should publish representative household and small-business bill comparisons, disclose the cumulative effect of all charges, and consult on the detailed implementation rules. I request that the policy be revised to make affordability, proportionate charges, fair compensation and enforceable accountability explicit conditions of implementation.	Martin	employed individual

	2026-09-26 05:21:18	Not fully	Double Network Fees (DUoS) on Solar Prosumer Exports		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	I am a residential ratepayer in Johannesburg with a grid-tied rooftop solar system, and I object to the Revised Electricity Pricing Policy in its current form. 1. The policy reverses a position government encouraged two years ago. In the 2023/24 tax year, National Treasury introduced a rebate under Section 6C of the Income Tax Act to encourage households to install rooftop solar. Households like mine invested private savings on the strength of that signal. The proposed policy now penalises that same investment through fixed capacity charges, a generation standby charge (Policy Position 15) and network charges on exported energy. Government cannot credibly incentivise an investment and then introduce charges that erode its value. This undermines trust in future government policies and initiatives. Especially in a time where government claims that public/private partnerships are key to turning the corner in this country. 2. Network charges on exported energy are unjustified. Under Policy Position 33, prosumers would pay distribution and transmission charges on energy imported and again on energy exported. Embedded solar is consumed close to where it is generated, which reduces line losses and daytime network loading. Charging for that export amounts to billing twice for a single connection. I ask that network charges on exports be removed. 3. Export credits should offset my full bill, capped at my consumption. I am not asking to profit from the grid. I ask that exported energy be credited at a fair rate and be allowed to offset my total bill, including fixed charges, up to the level of my own consumption. This is a balanced model that recognises the value of what I contribute without requiring other consumers to subsidise me. 4. Fixed charges must be capped and cost-justified. I accept that I should contribute to maintaining the grid I remain connected to. That contribution should be reasonable. 5. The policy risks accelerating grid defection. As currently drafted, the combination of high fixed charges and poor export terms makes disconnection financially rational for solar households. I am actively considering this, and I do not believe I am alone. Every household that disconnects removes a paying customer and its contribution to network costs, which then falls on those who remain, many of whom cannot afford solar. A policy intended to secure grid revenue may reduce it.	Derryn	self-employed

	2026-09-26 06:20:46	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	I totally oppose exorbitant, unfair tariffs designed to perpetuate an out of date electricity supply policy and a bloated utility where costs have spiraled out of control. in particular I object to the massive Eskom workforce which is much larger than worldwide standards and grossly overpaid. Government must accept that past policy on Eskom has resulted in a massive and continuing loss of Eskom's traditional customer base and that Eskom's continuing operations cannot be financed by arbitrary price increases and levies on households who have been forced to arrange their own alternative power solutions. I am also tired of band aid solutions by an incompetent administration for problems of its own making. The time has come for a thorough shake-up. The electorate will pass judgment.	Alan	self-employed

	2026-09-26 07:19:34	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	We have relied on the principle of Re-use, Reduce, Recycle. We have taught our children this principle and rewarded them with their contribution. Our reward? Being able to reduce our footprint in using less electricity. Now because of the inadequacies of the Government since 1994... and Eskom in allowing illegal connections and non-collection of amounts owed by individuals and municipalities ... we have to effectively pay more. NO!	Graham	retired
	2026-09-26 07:22:21	Not fully	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant)	Die stelsel van n baseline fee was altyd daar en dus niu vreemd dat die staat dit nou gaan toepas as n nuwe stelsel. Iemand moet betaal vir die krag tot by jou huis so daarmee atem ek saam. Hoeveel is n ander saak. Die land se krag probleme is hoofsaaklik toe te skryf aan diefstal van kabels en toerusting, korrupsie by munisipaliteite en nie betalers en kragstelers. Ek kan nie sien dat dit iewers in die wetgewing as prioriteit hanteer wird nie. Miskien is die vrot nou so ver laat gaan dat dit maar op die belastingbetaler se rekening gevoeg moet word. Bose kringloop wat nie sonder groot pyn verander kan word nie.	Jack	unemployed individual

	2026-09-26 10:05:51	Not fully	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Rooftop Solar / Prosumer	Eskom should not be allowed to pass on the costs of fraud, corruption, inefficiency, theft of electricity and non/payment for electricity to paying consumers. Cost of electricity should be calculated based on what an efficiently operated private company could achieve. The portion of capital cost of the existing infrastructure funded from taxpayers and electricity users. should excluded from this calculation, as should capital costs wasted on fraud, corruption and BEE premiums. Fixed connection and standby charges are fair but should be statutorily limited to a fair quantum. Consumers who generate and sell electricity back to the supplier should receive full payment at the charge rate applicable to themself at that time of day, until they have only the fixed connection and standby charge left. From that point they should be paid at a rate equal to the cost price (to their supplier) of all the additional electricity they supply. There are no valid grounds to penalise them for supplying electricity. In addition they should not be liable for additional SSEG charges after the initial cost of evaluating and certifying their installation. The costs of variable renewable energy supply should be priced into a spot price system for electricity applicable to all energy generators. Certification and approval costs for SSEG installations should be limited to an amount that reflects the actual technical cost incurred by the approving authority. For installations by certified installers using standard pre-approved components this should be a nominal fee to offset the data capture costs only.	Chris	business owner

	2026-09-26 10:43:47	Not fully	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs		Residential Ratepayer (Grid Reliant)	This may have been the practice in the past, but it is absolutely out of the question that large electricity consumers are grid access and electricity consumption are cross-subsidised by households and small businesses. No more discounts to large electricity consumers!!!! Let large business use the high grid access costs and electricity prices as an incentive to amend their operations in such a way as to reduce electricity and go off-grid them selves. It is vital that these large businesses are paying their fair share, or better more than their fair share on grid access as the country (after more than 32 years of ANC mismanagement) is in urgent need of an expansion of the grid to accommodate the new solar and wind powered electricity.		retired

	2026-09-26 11:52:56	Not fully	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs		Prepaid Meter User	The smelter discounts should not have to be funded by private household. Furthermore, having to pay to bringing excess energy back onto the grid should not be implemented - this is going to happen in the Netherlands as well - I call this corporate greed. In NL home owners with solar now start buying inverters and will store their energy. Why should I have to be punished for low usage of electricity? By not using too much, I assist in alleviating net congestion. In fact, I should be rewarded for this. I use so little, that solar power is not giving me any return on investment, unfortunately. Luckily I have an inverter as in my area Eskom/municipality have electricity problems on end due to aged network and equipment... This however is no longer a uniquely South African problem. The UK and the Netherlands experience the same problems with the Netherlands probably going over to loadshedding as well (not confirmed, but the writing is on the wall...)	Mrs R	self-employed

	2026-09-26 15:10:30	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Prepaid Meter User	I object to many aspects of the Revised Electricity Pricing Policy (EPP 2026) in its current form, namely: * the risk of retail consumers funding industrial smelter discounts or unfunded social expansions); * punitive double network fees on solar exports; * mandatory fixed grid capacity fees and standby charges on solar and low-usage homes; * the elimination of stepped block tariffs for standard households. I support a handful of aspects, namely: + capping prepaid vendor fees; + unbundled billing transparency; + banning hidden municipal surpluses. This policy seems unjust and poorly thought through. This is no “serving of the public” but smacks of protectionism. It should be withdrawn and the process started from scratch, by competent and conscientious people.	Marian	self-employed

	2026-09-26 16:52:26	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Commercial / Industrial Power User, Rooftop Solar / Prosumer	I fully support fair, transparent and cost-reflective electricity pricing, but households should not be penalised for reducing their electricity consumption or investing in rooftop solar. Mandatory fixed charges and additional costs on solar exports risk punishing the very consumers who have invested their own money to reduce pressure on the grid. Any subsidies, free electricity or special industrial pricing should be transparently funded and not simply shifted onto already heavily burdened households and small businesses.	Glenda	business owner
	2026-09-26 17:06:45	Not fully	All of the above	Double Network Fees (DUoS) on Solar Prosumer Exports	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	The draft policy penalises grid-tied embedded generators who inject clean power into the network. Prosumers are forced onto mandatory Time-of-Use tariffs and made to pay standard Distribution Use of System (DUoS) and Transmission (TUoS) charges on both the electricity they import and the electricity they export. Furthermore, prohibiting solar owners from using clean export credits to offset fixed monthly network and retail service charges destroys the financial viability of feeding power back into the grid, actively incentivising frustrated solar owners to defect entirely.	Glenn	business owner
	2026-09-26 17:14:24	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Small / Medium Business Owner (SMME)		Trevor	
	2026-09-26 17:16:38	Not fully	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Rooftop Solar / Prosumer	While I understand the reasoning and the logic behind the restructuring of the tariff system (e.g. the introduction of fixed network charges), my major concern is that there is nothing to suggest that Eskom (or the network operator) will be forced to improve their efficieny and lower their costs. We have seen the workforce at Eskom exploding in the recent path and yet, there is nothing being done to force them to reduce costs and improve efficiencies. The new proposals seem to be just another way of recovering costs....	Jan

	2026-09-26 17:34:10	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	While greater transparency surrounding municipal surcharges is welcomed, replacing stepped rates with flat energy rates plus substantial fixed monthly network fees will trigger immediate billing shocks for lower-to-middle-income consumers, and low-volume consumers can no longer lower their utility bills by conserving electricity, as fixed network fees create a high, unavoidable monthly billing floor. NERSA must retain an energy-conservation tariff tier for non-indigent, low-to-middle-income consumers that does not penalise modest energy usage with large monthly service fees. Smart metering infrastructure and Time-of-Use domestic options should be provided without upfront capital cost penalties to the end-user. NERSA must impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. Low-usage and energy-conserving households must be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. Utilities must absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers.	Ilka	employed individual

	2026-09-27 07:09:05	Not fully	Double Network Fees (DUoS) on Solar Prosumer Exports		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	My solar system was a significant capital expense which was not subsidised in any form. The installation was meant to reduce the residence dependence on the grid and also export for the purpose of helping the grid with capacity for other end users. At present excess energy exports are credited at less than a third of the energy consumption charge, which in most cases is not enough to offset any of the consumption charges. If fixed rates are to continue as planned, the export rates should be increased to be more competitive in order to be at least energy neutral and facilitate more competitive energy arbitrage for residence with rooftop solar and export capacity. As this was the purpose of the investment but also aligning with green energy objectives.	Darell	unemployed individual
	2026-09-27 07:14:26	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	Since the government's interference into Eskom's expansion, customers were forced to fend for themselves. Now this is being punished, even though the resulting increase in national (self) generating capacity relieves pressure on Eskom. If the government wants to subsidise specific employers they should fund it without once again employing Eskom's finances to pass the cost to paying customers. Why can the tax-paying public not also demand more free basic electricity and that local municipality maintains its infrastrucutre (paid for in basic tariff)?	Lodewyk	employed individual

Kent	self-employed
	2026-09-27 08:09:00	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I do not fully support the Revised Electricity Pricing Policy in its present form. I recognise the need to reform South Africa's electricity pricing framework, improve transparency, properly separate energy, network and retail costs, protect vulnerable households and ensure that electricity distributors can maintain reliable networks. However, several provisions require stronger consumer safeguards before the policy is finalised. My first concern relates to Policy Position 30, particularly the proposed minimum fixed network-capacity charge. The policy requires DUoS charges to be unbundled, including a minimum fixed network-capacity charge, and provides for these principles to apply to small-power tariffs other than subsidised lifeline tariffs. NERSA is then expected to transition towards cost-reflective distribution charges over five years. I accept that electricity networks have fixed costs that must be recovered, but cost-reflectivity should not become a justification for transferring an excessive portion of a household's electricity account from actual consumption to unavoidable fixed charges. A household that invests its own money in energy efficiency, solar panels, batteries or simply reduces consumption should retain a meaningful financial benefit from doing so. I therefore propose that any fixed or capacity charge must be based on a published and independently verifiable cost-of-supply and cost-to-serve methodology, subject to affordability assessments, reasonable limits and gradual implementation. The policy itself envisages domestic tariffs containing separately itemised network, customer-service and energy charges, while preserving a lifeline tariff without a basic charge. Those protections should be developed further for low- and moderate-consumption households who may not qualify for the indigent/ lifeline category. I am also concerned about the treatment of small-scale embedded generation and rooftop solar under Policy Position 33. The proposed policy requires net-billing customers to be placed, at minimum, on time-of-use tariffs, to pay applicable DUoS/TUoS charges associated with consumption; and also to pay applicable network charges associated with electricity exported to the grid. Exported electricity is credited at avoided purchase cost, while DUoS, embedded TUoS and retail charges remain payable and cannot be offset against the export credit. I do not object in principle to a customer paying a reasonable amount for infrastructure that the customer genuinely uses. My concern is double recovery and proportionality. NERSA should be required to demonstrate transparently what network costs are actually caused by importing electricity and what additional costs are caused by exporting electricity. Consumers should not be charged merely because a charging category can be created. Where embedded generation provides measurable benefits to the system, including ancillary services, reduced peak demand or avoided energy purchases, those benefits should also be recognised when tariffs and export credits are calculated. The policy itself acknowledges that customers may provide ancillary services for which they may be compensated. I further have reservations regarding Negotiated Pricing Agreements. I recognise the economic objective of protecting employment and businesses facing closure. However, the policy expressly provides that where an incentive-price NPA creates a revenue shortfall for the electricity licensee, that shortfall may be recovered through the applicable regulatory process. That provision requires a much stronger safeguard. Ordinary households and small businesses should not automatically become the funding mechanism for electricity discounts granted in pursuit of national industrial policy. Any proposed recovery of an NPA shortfall from other electricity customers should be separately disclosed, quantified, subjected to public scrutiny and expressly approved by NERSA. Where the subsidy primarily serves a broader industrial-policy objective, consideration should be given to funding it transparently through the fiscus rather than concealing it in ordinary electricity tariffs. On Free Basic Electricity, I support measures aimed at ensuring that genuinely vulnerable households have access to essential electricity. However, expansion of social assistance must be properly funded. Policy Position 52 appropriately states that DEE, COGTA and National Treasury must determine annually what level of FBE can be funded through government transfers and that its cost must be included in the MTEF budget allocation. That principle should be retained explicitly. Any future increase in FBE should therefore be accompanied by identifiable and adequate government funding rather than becoming an unfunded obligation that is indirectly shifted onto other electricity customers. There are also provisions of the policy that I support. In particular, I support the principle that excessive technical and non-technical losses and bad debt above NERSA-approved standards should be excluded from the approved revenue base rather than simply passed through to paying customers. I similarly support Policy Position 47's prohibition against introducing a new Municipal Surcharge on Electricity on top of existing non-transparent and un-ring-fenced municipal electricity surpluses. Paying electricity customers should not be used as an unrestricted source of revenue to compensate for inefficiency, poor collection, electricity theft or unrelated municipal expenditure. In conclusion, I support the objective of creating a transparent, financially sustainable and cost-reflective electricity system, but I do not support the EPP 2026 in its present form without stronger protections against excessive fixed charges, disproportionate charges on self-generating customers, the socialisation of industrial pricing discounts, and inadequately funded subsidy obligations. Cost-reflectivity must work both ways: consumers should pay the efficient costs they actually cause, but they should not be required to carry costs that arise from inefficiency, unrelated policy objectives or services from which they receive no corresponding benefit. I therefore request that these aspects be reconsidered and strengthened before the policy is finalised.	Brain	employed individual
	2026-09-27 08:10:04	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer	This is a very unfair practice, whereby the user is in effect paying twice because of government incompetence.	Sue

	2026-09-27 08:37:09	Not fully	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Rooftop Solar / Prosumer, Prepaid Meter User	Core Civic / Household Risk It is unfair for compliant households and businesses to bear the financial burden of municipal failures to enforce bylaws, prevent illegal electricity use, maintain meters, and recover outstanding debt. Ratepayers who pay for their own consumption should not effectively pay twice—once for their services and again to compensate for non-payment, illegal consumption and revenue-collection failures. Tariff increases should not become a substitute for effective enforcement and revenue management. Compliant ratepayers should not be penalised for the non-compliance of others or for municipal inefficiencies.	Nkele	employed individual
	2026-09-27 08:37:26	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	I support transparent electricity bills and paying a fair share of the genuine cost of maintaining the grid. However, I do not support the revised policy as published without stronger safeguards for residential customers facing fixed network and capacity charges. I support clear, itemised bills and a fair contribution to maintaining the grid. I object to compulsory fixed charges that could make a household’s bill rise substantially even when it uses less grid electricity. I ask that the policy be amended to: 1. Preserve an affordable residential tariff option under which reducing grid electricity use continues to meaningfully reduce the total bill, including for households with solar. 2. Base any fixed network charge on the grid connection capacity a household reserves, not on the size of its solar panels or inverter. Do not impose an additional charge merely because a household has solar. 3. Prevent separate network, capacity and standby charges from recovering the same cost more than once. 4. Give households a practical, affordable way to reduce their contracted grid capacity and the associated fixed charge. 5. Require NERSA to approve fixed charges only where the amount is supported by an independently reviewed cost-of-supply study. 6. Make clear that the export and net-billing provisions in Policy Position 33 do not apply to solar households that do not export electricity.	Bronwynn	employed individual

	2026-09-27 09:03:11	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	I support greater transparency and cost-reflectivity in electricity pricing, but urge the Department and NERSA to ensure that the new tariff structure does not disproportionately penalise households that use less electricity. I request that: Fixed charges be capped so that network, capacity and availability charges for domestic consumers do not exceed 15–20% of an average household electricity bill. Low-usage and energy-efficient households be protected from fixed charges that could disproportionately increase their electricity costs and undermine the incentive to conserve energy or invest in alternatives such as rooftop solar. Utilities be required to pursue operational efficiencies first, rather than transferring the full burden of infrastructure and revenue risks to captive consumers through increasingly large fixed charges. Cost-reflective tariffs should reflect the efficient cost of supplying electricity while preserving meaningful incentives for consumers to reduce consumption. I respectfully request that these protections be incorporated into the final EPP 2026 and subsequent NERSA tariff determinations.	Clive	self-employed
	2026-09-27 09:25:12	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer		HA	business owner
	2026-09-27 09:32:18	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	I do not support, nor understand the extra charge for being connected to the electricity grid. Is this not why we pay to use power? If extra charges for grid connection in now needed, how was it compensated fot 20 or 30 years ago? I csn tell you, it was included in the tariffs and applied in the correct manner. These charges are making the citizens pay for failures of the institutions. It simply is not feasible and will sink the middle class citizens to even more financial pressure.	Stephan	
	2026-09-27 09:36:16	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	My main concern is that this will raise the monthly cost of households who are already struggling to keep up with payments.	Floris	retired
	2026-09-27 09:36:25	Not fully	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Residential Ratepayer (Grid Reliant)	We need to pay for what we use. Block fees are unfair. Threshold for receiving free basic electricity needs increase to include more households that are struggling. Commercial and industrial users must pay full price. Solar uses should not be penalised, you need to find a middle ground, what is proposed is not fair. Eskom is using their position of single supplier to squash the "competition" of solar power users. Remember Eskom brought this upon themselves when they could not supply. Why must we hinder greener energy. It's for the better of the country and the world. The proposal leans towards being anti competitive. Please kindly take note and reconsider your proposals to be fair and just for all users of electricity.	Yanita	employed individual

						SUBMISSION ON THE DRAFT REVISED ELECTRICITY PRICING POLICY 2026 I support the modernisation of South Africa's electricity market, greater competition, transparent electricity pricing and the principle that efficient costs associated with maintaining electricity infrastructure should be recovered fairly from those who use it. I do not, however, support a tariff architecture which converts declining electricity consumption into unavoidable fixed charges, or which financially disadvantages households that have invested their own capital in reducing their dependence on the electricity system. Cost-reflectivity must mean cost-reflectivity in both directions. If a consumer causes a demonstrable network cost, it is reasonable for that consumer to contribute towards that cost. Equally, where a consumer reduces peak demand, reduces network losses, supplies electricity locally, avoids wholesale energy purchases, provides storage or flexibility, or delays the need for additional network investment, those benefits must also be recognised. A system which recognises costs imposed by consumers while disregarding costs avoided by those same consumers is not genuinely cost-reflective. Fixed charges I object to any mandatory domestic fixed network or capacity charge that is imposed merely because a household remains connected to the electricity network. Before approving such a charge, NERSA should require the relevant distributor to demonstrate through a published Cost of Supply and Cost to Serve study: 1. the specific efficient costs being recovered; 2. the causal relationship between those costs and the affected customer category; 3. the methodology used to calculate the charge; 4. the extent to which the charge contains historic inefficiency, maintenance backlogs, excess capacity, bad debt or non-technical losses; 5. the effect of a customer's actual maximum demand and contribution to system peak; 6. the network value created by embedded generation, batteries and demand-side management; and 7. why the proposed fixed charge is preferable to a capacity, demand or time-sensitive mechanism that more accurately reflects the customer's actual use of the network. Consumers should not be converted into guaranteed revenue streams merely because electricity distributors face declining volumetric sales. Revenue certainty for a utility is not itself evidence of cost causation. Embedded generation and rooftop solar I strongly object to Policy Position 33 in its present form. South African households and businesses that have invested their own capital in rooftop solar and battery storage have reduced demand on the national electricity system without requiring the State, Eskom or municipalities to finance those generating assets. It is therefore unreasonable to recognise every cost allegedly imposed by these consumers while failing equally to quantify the benefits they provide. In particular, the proposal that a prosumer may pay network charges when importing electricity, network charges when exporting electricity, additional retail charges associated with net billing, while receiving only avoided purchase cost for exported energy, requires substantially stronger economic justification. NERSA should be required to undertake a transparent Value of Distributed Energy study before such a framework is implemented. That assessment should quantify, amongst other things: • avoided generation costs; • avoided transmission costs; • avoided distribution losses; • avoided or deferred network investment; • contribution to local system capacity; • reduction in system peak where applicable; • ancillary and flexibility services; • storage and dispatchability; • environmental benefits; and • any demonstrable additional network costs created by bidirectional electricity flows. Only the net efficient cost attributable to the prosumer should inform the tariff. A household should not be financially penalised merely for generating its own electricity. Efficiency before recovery The Electricity Regulation Amendment Act permits recovery of the costs of an **efficient** licensee. That qualification is fundamental. Consumers should not be required to finance inefficiency simply because that inefficiency exists within the historical cost base of a utility. I therefore strongly support Policy Positions 42 and 43 insofar as they prevent excessive technical losses, non-technical losses and bad debt from automatically being transferred to compliant consumers. I submit that the same principle should apply throughout the Policy. Before additional network revenue may be recovered from consumers, the relevant licensee should demonstrate that its expenditure, staffing, procurement, maintenance, capital programme, losses and debt collection meet objectively determined efficiency benchmarks. The electricity consumer must not remain the payer of last resort for institutional failure. Municipal electricity revenue I support the intention of Policy Position 47 to separate legitimate electricity costs from municipal surcharges and to prevent municipalities from maintaining hidden electricity surpluses while simultaneously introducing additional surcharges. This principle should be strengthened. Every municipal electricity bill should separately disclose: • electricity purchased; • transmission charges; • distribution charges; • retail and administrative charges; • approved cross-subsidies; • municipal electricity surcharge; • taxes and levies; and • any other charge. No amount collected for electricity infrastructure, maintenance or refurbishment should be capable of being diverted to unrelated municipal expenditure. If consumers are required to pay explicitly for maintaining the electricity network, those funds should be legally and financially ring-fenced for that purpose. Consumer choice The transition to an open electricity market should increase consumer choice, not merely introduce competition upstream while preserving compulsory revenue recovery downstream. Where technically feasible, consumers should ultimately have meaningful choices concerning: • electricity suppliers; • network capacity; • time-of-use products; • demand-responsive tariffs; • export arrangements; • battery participation; • aggregation; and • the level of grid backup capacity they wish to reserve.

	2026-09-27 11:24:43	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Prepaid Meter User	I wish to formally object to aspects of the proposed Revised Electricity Pricing Policy (EPP 2026), particularly where the proposed changes risk transferring additional costs onto law-abiding households and small businesses. 1. Fixed charges penalise consumers who reduce consumption The proposed move towards mandatory fixed network and capacity charges means consumers could face substantial costs simply for remaining connected to the grid, regardless of how little electricity they consume. This undermines the incentive for households to conserve electricity, improve efficiency and invest in solar and battery systems. Consumers who use less electricity should not be financially penalised for doing so. 2. Rooftop solar customers must not be unfairly penalised The proposed treatment of grid-connected solar customers, including Time-of-Use tariffs and network charges associated with exported electricity, requires serious reconsideration. South Africans who invest their own money in solar reduce their dependence on Eskom and can contribute electricity back to the grid. They should not be subjected to charges that effectively remove the financial benefit of reducing their electricity consumption. Any charges on solar generation or exports must be demonstrably based on actual costs imposed on the network, while exported electricity must receive a fair and transparent credit. 3. Industrial subsidies must not be paid for by ordinary consumers If large industrial customers receive preferential electricity pricing through Negotiated Pricing Agreements, any resulting revenue shortfall must not simply be recovered from residential consumers and small businesses. If government considers such subsidies to be in the national interest, they should be transparently funded through government, rather than hidden within electricity tariffs. 4. Free Basic Electricity must be properly funded I support assistance to genuinely indigent households. However, expanding Free Basic Electricity without securing the necessary government funding risks shifting the cost onto consumers who already pay their electricity accounts. Social assistance should be funded transparently through the national budget, not disguised as additional electricity charges. 5. Stop electricity theft before charging paying consumers more Government and electricity distributors must first address the enormous losses caused by illegal connections, electricity theft, meter tampering and non-payment. Eskom reported approximately R7.068 billion in estimated non-technical energy losses in 2025, while only approximately R324 million was recovered. It is unacceptable to continually increase the financial burden on consumers who pay their accounts while billions of rand in electricity revenue is lost through illegal consumption. Government must make the elimination of illegal connections, meter tampering and organised electricity theft a measurable priority, with meaningful enforcement and recovery targets. Conclusion Electricity reform is necessary, but paying consumers cannot continually be treated as the solution to every financial shortfall in the electricity sector. Before imposing additional fixed charges, solar charges or other costs on households and small businesses, government should: recover revenue lost through electricity theft and illegal connections; reduce non-technical losses; properly fund social electricity subsidies; transparently account for industrial pricing concessions; and ensure that consumers who invest in solar and reduce their consumption are not financially punished. The principle should be simple: recover legitimate costs, eliminate theft and waste, properly fund subsidies, and protect the consumers who pay their bills. I therefore respectfully request that these provisions of EPP 2026 be reconsidered before implementation and that the financial impact on ordinary electricity consumers be transparently demonstrated.	Duncan	retired
	2026-09-27 11:27:12	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	This will put a huge burden on the very people who tried to assist South Africa by installing solar power during load shedding time. Once they get this basic charge implemented they will carry on increasing it as another tax to steal even more from the people of South Africa. As long as there is provision made for disconnecting from Eskom that we can do our own thing and not have to fund an inefficient dead horse like Eskom.	Bill	retired
	2026-09-27 11:32:22	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	We already pay so much for electricity, and we make a point of using it sparingly. We should not have to pay a set fee just to be connected, even if we continue to use less. I also don't agree with solar users being penalised for wanting not to be reliant on the grid - Eskom has shown that it is unreliable in terms of supply. This is all just another way to milk consumers. Also, what will happen to prices of other commodities, then?	Paulette	self-employed

	2026-09-27 16:41:37	Not fully	Double Network Fees (DUoS) on Solar Prosumer Exports		Residential Ratepayer (Grid Reliant)	Private residents that provide energy to the grid should not be punished, but rather encouraged to allow a more sustainable and stable energy supply to citizens. Tax payers pay for public infrastructure, so the government should be responsible for funding and maintaining it, and residents can pay for solar panels and provide more energy within the infrastructure, decreasing reliance on entities like Escom, which would also decrease the corruption rampant under the dependence the public has on monopolised energy provision.	Jan	
	2026-09-27 16:51:10	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer	The Department of Electricity and Energy's Revised Electricity Pricing Policy (EPP 2026) presents a complex restructuring of South Africa's grid economics. While there is merit in unbundling costs to ensure the long-term viability of the network, the proposed mechanisms for recovering those costs—particularly regarding solar integration and industrial subsidization—require significant revision to avoid penalizing efficiency and self-reliance.Here is an analysis of the proposed policy changes:Necessary Structural CorrectionsThe move toward cost-reflective tariffs and transparent municipal billing is a necessary step for grid stability.Fixed Network Charges: Implementing a reasonable fixed base charge for grid connection is standard international practice. The grid provides value as a "battery" and backup system, and the infrastructure costs to maintain transmission lines and transformers remain constant regardless of the volume of electricity flowing through them.Municipal Accountability: Cracking down on municipalities using electricity tariffs as hidden slush funds is a massive win for transparency. Preventing utilities from passing the costs of runaway theft and bad debt onto paying consumers forces operational efficiency rather than relying on tariff hikes to cover systemic failures. South African National Transmission Network. Source: Wikipedia / National Transmission Company of South Africa - Wikipedia Eskom Electrical Substation Infrastructure. Source: Eskom / Project to rebuild the vandalised Gravett substation is underway ... Flawed Implementation and DisincentivesHowever, the policy contains critical flaws that punish consumers for investing in solutions that alleviate the national energy crisis.Penalizing Rooftop Solar: Forcing grid-tied solar users to pay network distribution charges on exported power is counterproductive. Rooftop solar has been a major contributor to stabilizing the grid. Penalizing households and businesses that have invested their own capital into green energy generation—making the country more self-sufficient—is a regressive policy that disincentivizes further private investment in renewables.Industrial Subsidies via Ratepayers: Expanding below-cost Negotiated Pricing Agreements (NPAs) for industrial smelters artificially protects inefficient businesses at the expense of ordinary ratepayers. If the state wishes to subsidize heavy industry to preserve jobs, that funding should come from the national fiscus, not by forcing paying households and SMEs to cover the revenue shortfall.A Balanced Path Forward: Time-of-Use TariffsThe proposed shift to Time-of-Use (TOU) tariffs could be highly effective if implemented fairly.Rather than punitive fixed charges on exports, TOU tariffs provide a market-driven incentive. By charging more during peak evening hours and less during the day, TOU tariffs encourage solar users to invest in battery storage. Users can charge their batteries (or run heavy appliances) using solar during the day, and discharge that stored power during peak periods. This actively helps flatten the national demand curve and reduces the need for expensive peaking power plants.The EPP 2026 must be adjusted to incentivize generation and storage rather than attempting to recover lost revenue by taxing efficiency.	Luke	
	2026-09-27 16:56:42	Not fully	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)		Hasan	
	2026-09-27 16:59:41	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Prepaid Meter User	The policy shifts accountability onto consumers. The tariff design away from volumetric consumption (c/kWh) toward mandatory fixed network and capacity charges (R/kVA, R/kW, or R/Amp/month) will punish those who have been harmed most by neglect and poor governance, which would be a gross failure by government if it's allowed.	Jeremy	self-employed
	2026-09-27 17:08:48	Not fully	Double Network Fees (DUoS) on Solar Prosumer Exports		Rooftop Solar / Prosumer		Hendrik	retired
	2026-09-27 17:09:44	Not fully	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs		Rooftop Solar / Prosumer	I do believe that a connection fee covering the maintenance and improvement of the transmission and distribution networks is fair and should be implemented. This fee should be a fixed monthly charge irrespective of consumption but must not be a new charge that is added onto the present electricity cost. The present electricity cost should be broken down into Generation, Distribution and marketing and the generation cost would then drop significantly as it is now separated from the overall cost. The present transmission and distribution infrastructure serving me in Bettys Bay is in a shocking condition and results in regular power interruptions. Residential consumers should not pay for reduced electricity costs to smelters and other industrial users. If those industries are in need of support, the Government should support them directly through tariffs on imports or subsidies to those industries. Cross subsidizing poorer communities through free electricity paid for by regular customers is unethical. If the Government wants to add electricity as a portion of the SASSA grants or other support mechanisms, it should come from Treasury so that it is clear how the mechanisms work. Municipalities must not be allowed to use electricity income to cross-subsidize other Municipal financial needs. The electricity income must be ring-fenced and used only to ensure reliable electricity supply to Municipal customers.	Ian	retired

	2026-09-27 18:39:07	Not fully	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Prepaid Meter User	The middle man cannot be squeezed any further. We should NOT be expected to subsidize big business smelters. If we fund installation of solar then we should benefit from savings NOT be double burdened with solar installations costs AND fixed charges for having installed solar. That's plain highway robbery. Bad debt should be sorted out and dealt with. A triple cost whammy is inappropriate.	Angela	employed individual
	2026-09-27 18:46:36	Not fully	Other		Rooftop Solar / Prosumer	Despite having rooftop solar, independence from an electricity grid connection is not realistic (Dunkelflaute), so a fixed basic charge is sensible and fair (similar to having insurance, for this or that, but one actually benefits from it) Time of Use tariffs have been available to significant power consumers in SA, and it is widely available to residential consumers the world over. Effective application of ToU tariffs shifts electricity demand from peak periods to off-peak periods, which consumers and electricity generation facilities can benefit from. Increasing free electricity above 50kWh per month is acceptable, provided that illegal connections are being detected and rooted out, using technology, smart metering, algorithms, and law enforcement. If large-employer-high-electricity-consuming companies require an electricity subsidy to survive, then contracting on a fixed electricity tariff for long periods, is probably not the best strategy based on past Eskom experience, so consult with the best economists instead.	Dirk	retired
	2026-09-27 19:25:38	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I reject mandatory fixed grid capacity fees and standby charges on solar and low-usage homes. This did not work for Tellom, it won't work for Eskom. In addition I reject punitive double network fees on solar exports, the elimination of stepped block tariffs for standard households, and the risk of retail consumers cross-funding industrial smelter discounts or unfunded social expansions. I support unbundled billing transparency, banning hidden municipal surpluses, capping prepaid vendor fees, and excluding power theft and bad debt from allowed utility revenue. 	2026-09-28 06:41:00	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Prepaid Meter User	Unfair Cost-Shifting: I strongly oppose the shift to mandatory fixed "connection fees." This structure penalizes efficient, lower-consumption households and locks us into rising costs regardless of our actual usage, effectively removing our ability to manage our own bills. Industrial Subsidies: It is unacceptable to force residential ratepayers to cross-subsidize industrial smelters. If the state wants to provide below-cost energy to these industries to protect jobs, it must be funded through national industrial policy and tax revenue, not by squeezing struggling households. Destruction of Efficiency Incentives: By making the majority of our bill a fixed cost, this policy kills the financial incentive for citizens to be "smart" about electricity usage. This will ultimately increase, not decrease, the burden on our grid. Meaningless Transparency: The claim of "transparency" is empty if it is simply used to hide systemic inefficiencies and state failures. Without price caps or affordability thresholds, this policy feels like a mechanism to offload the costs of municipal mismanagement, theft, and bad debt onto paying customers who have no way to opt-out. 	2026-09-28 07:17:13	Not fully	Other		Residential Ratepayer (Grid Reliant)	1. Eskom made 6 billion rand in profit. That means that they have made money off of us, and yet, they want more? 2. Eskom is a monopoly and this is why they feel they have the audacity to just decide what can/should be their profit. 3. Electricity is a basic need, and should never ever be for profit. All that profit should come back to us, either in discounted electricity or in actual investment in non-fossil fuel solutions. Eskom is our only power supplier at the moment and now that South Africans had to find their own solutions (because of Eskom's ineptitude and absolute disgraceful mismanagement), they want to a) penalise users for moving away from their failing and broken system and b) pass on THEIR mismanagement and lack of foresight onto customers. I agree with : 1. The removal of all hidden costs by local municipalities, 2. the increase in free units to our low income folks. 3. Lower rates on our industries (keeping jobs is important to me) We cannot afford more increases. We have bailed out Eskom financailly for years now - and they have had WAY ABOVE inflation increases YoY since their mismanagement began. Let them dig into their own profits. We as a people no longer want to bail out Eskom.	Antoinette	self-employed

	2026-09-28 07:37:33	Not fully	Double Network Fees (DUoS) on Solar Prosumer Exports		Residential Ratepayer (Grid Reliant)	Subject to: Draft Policy on Grid-Tied Renewable Energy Net-Billing Framework I am writing to formally express my strong objection to the proposed net-billing framework for grid-tied renewable energy generation. Rather than supporting South Africa's transition to clean energy, this draft policy unfairly penalizes households that have invested their own capital to assist the national grid. My rejection of the proposed legislation is based on the following critical points: Unfair Double Taxation on Energy: Charging full Distribution Use of System (DUoS) and Transmission (TUoS) network fees on both the energy I import and the energy I export back into the grid effectively taxes private clean energy fed into my local community. This double-charge is economically indefensible. Severe Financial Disincentive: Forclosing the ability to offset fixed monthly network and retail administrative fees with export credits, combined with crediting exported power at low "avoided cost" rates, severely erodes the financial viability of private rooftop solar. Risk of Grid Defection: By dismantling the business case for embedded solar, this policy disincentivizes household decarbonization and actively drives frustrated solar owners to disconnect from the municipal grid entirely—ultimately worsening the utility's long-term revenue base and stability. To ensure a lawful, rational, and administrative-justice-compliant framework, I demand the following modifications in the final policy: Eliminate Network Charges on Exports: Completely remove DUoS and TUoS charges levied on exported electricity (Policy Position 33(d)), acknowledging that local embedded solar reduces line losses and relieves daytime substation loading. Allow Full Bill Offsetting: Permit solar export credits to offset the entire monthly municipal utility bill, including fixed network, customer service, and administrative charges. Establish Fair Feed-In Rates: Implement cost-reflective feed-in credit rates that accurately mirror the true economic value of daytime clean power injected directly into local distribution networks. I urge the department to reconsider these highly restrictive measures and align the final policy with the national goal of sustainable, accessible, and fair energy transition.	Clinton	self-employed

	2026-09-28 08:00:31	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I welcome the opportunity to comment on the proposed changes to electricity pricing and tariff structures. I support the principle that electricity tariffs should be transparent and that consumers should contribute fairly to the costs of maintaining the electricity network. However, I am concerned that the proposed tariff structure could disproportionately disadvantage households that have invested their own money in rooftop solar and battery systems. Thousands of South African households have invested substantial private savings in solar generation and storage, often because the electricity system was unable to provide a reliable supply. These investments reduce household electricity consumption from the grid and can also contribute electricity back into the grid. The tariff framework should therefore encourage rather than penalise consumers who invest in reducing their dependence on the electricity system. 1. Fixed charges should not undermine energy efficiency I understand that electricity distributors have substantial fixed costs that cannot be recovered solely through a per-kWh charge. However, a significant shift towards mandatory fixed charges would reduce the financial benefit of using less electricity. A household that invests in energy efficiency, solar generation and batteries should see a meaningful reduction in its electricity bill. I therefore request that fixed network and connection charges remain proportionate to the actual costs of providing the connection and do not become a mechanism for recovering lost electricity sales from households that have reduced their consumption. 2. Rooftop solar users should not be penalised for exporting electricity I am particularly concerned about proposals that would require grid-connected solar users to pay network/distribution charges on electricity that they export to the grid. Where a household exports electricity, the tariff should reflect the actual costs and benefits of that electricity flow. It should not simply be assumed that every exported kWh creates an equivalent cost to the network. Consumers already pay for their solar systems, batteries, maintenance and financing themselves. They should not subsequently be penalised through charges that make the investment significantly less viable. If exported electricity provides value to the electricity system, consumers should receive a fair credit for that value. I therefore request that: charges on exported electricity be based on demonstrable incremental network costs; export compensation reflect the actual value of electricity supplied to the grid; export credits be allowed to offset a reasonable portion of the consumer's total electricity account, rather than being excluded from fixed network charges altogether; and the methodology used to calculate both export charges and export credits be made publicly available. 3. Protect the incentive for private investment South Africa urgently needs additional electricity generation, storage and demand reduction. Residential consumers are already contributing to this through private investment in rooftop solar and batteries. The policy framework should not create a situation in which the more successfully a household reduces its electricity consumption, the less financially attractive that investment becomes. A consumer who generates some of their own electricity should still contribute fairly towards the network they use. However, the tariff should not effectively treat that consumer as a problem simply because they purchase less electricity from the grid. Private investment in electricity generation should be recognised as part of the solution to South Africa's electricity challenges, not treated primarily as a threat to electricity-sector revenue. 4. Electricity costs should not be hidden in tariffs I also support the proposed greater transparency around municipal electricity surpluses, electricity theft and bad debt. Consumers who pay their electricity accounts should not be expected to compensate indefinitely for inefficient municipal administration, electricity theft or excessive losses through higher electricity tariffs. Similarly, if government chooses to expand Free Basic Electricity or provide preferential electricity prices to strategically important industries, the cost of those policy decisions should be transparently funded rather than being hidden within tariffs paid by ordinary consumers. Conclusion I support a financially sustainable electricity system and recognise that all grid-connected consumers should contribute fairly to legitimate network costs. However, the new tariff structure should preserve strong incentives for households to: reduce electricity consumption; invest in energy efficiency; install rooftop solar; install battery storage; and supply surplus electricity to the grid. Households that have invested their own capital to reduce their reliance on the electricity grid should not be financially penalised for doing so. I therefore request that the final tariff framework ensure that fixed charges, solar export charges and export credits are transparent, proportionate and genuinely cost-reflective, while preserving the economic incentive for residential consumers to invest in private generation and energy efficiency. South Africa should be encouraging more households to invest in electricity generation and storage—not making those investments progressively less attractive through tariff structures. 	2026-09-28 08:27:45	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	We get taxed on income, taxed on investment, taxed on death, taxed on VAT, taxed on everything !!!! The state should have enough money, why are we taxed on already taxed income. So I get my salary, got taxed, I use the remaining money to pay my bond, I get taxed, and some of that money I use to pay services, which I get taxed UPON again with these new mandatory fixed charges? NO. The answer is no. Do better South Africa.	Luis	
	2026-09-28 08:33:55	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer	The policy is structured to deal with current inefficiencies due to theft, incompetence but does have some merit in helping to transition SA to a new Electrical Industry with Generation, transmission and distribution components. The biggest challenge is that most municipalities rely on electricity as a source of income for the largest part of their budget (typically 50 to 65%) and if not recovered via electrical tariffs it will be found in outer sources of income so the consumer pays irrespective. The secret is to ramp us in line with the economy in an affordable manner. The current need for cash by municipal entities outstrips the economies ability to deliver income for households so you essentially make everyone poorer in the process. Eventually that all collapses and creates a cicil unrest opportunity. Not ideal.	Robert	self-employed
	2026-09-28 08:39:31	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	- affordability study and framework to come first, with a binding affordability test before any phased increase. - a fiscal or levy-funded mechanism so grid-dependent households and businesses do not carry the subsidy burden alone. - annual caps or tariff smoothing tied to the five-year price path, plus public disclosure of the affordability analysis. - public consultation on the replacement-cost valuation, with prudency tests and safeguards against pass-through of inefficiency. - itemised disclosure and periodic review of what legacy PPAs add to bills. - ring-fencing and an audit of hidden surpluses before any surcharge is approved. - indexed allocations, clearer targeting, ring-fenced funding and better monitoring. On fixed charges, ask that lifeline and low-consumption customers stay exempt. support for low-income solar or alternative energy (10.3), time-of-use options and demand response that lower bills. 	2026-09-28 09:26:46	Not fully	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Prepaid Meter User	Reading briefly through the material, I can see incurring a cost to users connected to the grid whilst having a solar system at your home is suggested. The grid serves as an energy infrastructure and incurs costs to maintain it. Those of us participating in said infrastructure should pay for it. The Mandatory fixed charges for all homes makes sense as it will bring a form of stability to the supply of energy and the financials behind it. My only concern remains that the customers of energy usage should not pay the penalty of inefficient supply, or theft. If the suggested changes remedies this, then I am all for it, if not, then other solutions should be considered. So to make my position clear, if the aim is to make energy affordable in South Africa, changes that contribute to this aim I will be in agreement with.	Chris	employed individual

	2026-09-28 09:28:42	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer	I am a middle-income residential electricity consumer who has invested private funds in a grid-tied rooftop solar system. I support transparent, financially sustainable and genuinely cost-reflective electricity pricing, but I am concerned that parts of the Revised Electricity Pricing Policy may place an unfair burden on ordinary households, particularly those who have invested in solar, batteries and energy efficiency. My main concern is that fixed, network and capacity charges must reflect the actual efficient cost of providing electricity services, and must not simply be used to replace revenue lost because consumers are buying less electricity from the grid. Cost-reflectivity should be based on proper cost-of-supply and cost-to-serve studies, with full transparency as to what consumers are being charged for. The proposed treatment of grid-tied solar also requires careful reconsideration. Solar consumers should pay a fair share of genuine network costs, but they should also receive fair recognition for the value they provide through reduced demand, local generation, lower losses in some circumstances, battery storage and peak-demand reduction. Network charges on exported electricity should only be imposed where the actual network cost caused by that export can be demonstrated, and the tariff system must prevent the same network cost being recovered twice. Time-of-use tariffs should operate fairly in both directions. If electricity imported during expensive periods attracts a higher charge, electricity exported during periods of high system value should receive an appropriate credit. Export credits should be calculated transparently and should reflect the real avoided cost and system value of embedded generation. I am also concerned about the cumulative burden of cross-subsidies on middle-income consumers. Social support for indigent households is important, but subsidies should be transparent, properly funded and clearly disclosed. The same applies to any industrial Negotiated Pricing Agreements: ordinary residential consumers should not unknowingly fund discounted electricity for large industrial users. The final policy should also protect consumers from being required to fund inefficient utility costs, excessive losses, bad debts, poor administration or other avoidable inefficiencies. Existing solar owners should receive reasonable transitional protection. Many households made significant long-term investments based on the tariff structures and policy signals prevailing at the time. Abrupt increases in fixed charges, export charges or network fees could retrospectively undermine those investments and discourage future private investment in renewable energy and storage. I therefore request that the final policy require transparent cost studies, safeguards against double recovery, fair treatment of imports and exports, recognition of batteries and peak-demand reduction, clear disclosure of subsidies and surcharges, and meaningful public consultation before the detailed tariff structures are implemented. The guiding principle should be simple: **consumers should pay for the efficient costs they actually cause and receive fair recognition for the measurable value they provide to the electricity system.	Kevin Neville	self-employed
	2026-09-28 09:29:11	Not fully	Other		Residential Ratepayer (Grid Reliant)	My comment is different from most> I saw this movie in my Department of Water Affairs. There is a policy to re-evaluate the value of old assets which have been fully paid for by past consumers, and then apply depreciation on these re-valued assets. This is not accepted accounting prctice and leads to double accounting and inflated tariffs. it is fair to allow increased mantenance charges and also to set aside for future refurbishment or anticipated maintenance, but not to charge depreciation on revalued assets. Depreciation is a book entry, but it leads to understatement of profits and thus to tricking NERSA to grant higher tariffs.	Norman	retired
	2026-09-28 09:32:22	Not fully	Other		Prepaid Meter User	Great that we think of poorer folk but are we going to give R1000 worth for free? What about taking the value of the home and current usage into account. Pensioners?	Frances	retired
	2026-09-28 09:40:21	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Please Eskom - we can not go one paying such a huge portion of our small incomes to electricity! It is genuinely impossible. For someone earning less than R15000 a month, an electiricty bill comprising of R650 consumption and R750 fees and charges produces a monthly bill of around R1400. This is during a light month. There are only two people living in this household. We do not use electricity for cooking or heating hot drinks. We do not have a swimming pool. We use the washing machine once a week. All our bulbs are eco friendly. We use lighting on average from about 6 to about 10opm daily. We only turn on our hot water geyser an hour before we need to use it. Despite all this we are absolutely breaking under these ever increasing tarrifs that we cannot escape. no matter what we do! My mother is a pensioner - she gets R2400 from the government. At the end of the month, the government (Eskom) then charges her R2400 for electricity. This is a 76 year old woman who has workedcher whole life as a teacher. Her bill is made up of very small consumption, massive fees, and then massive interest on unpaid amounts because the amount just expands every month. It is literally impossible for her to pay it off - she will never ever be able to clear aa debt of R2400 with a R2400 income. Does this mean that Eskom now plans to go around harrassing and evicting SASSA pensioners from their homes and denying them basic services, just to make up for years of incompetence and state capture? Due to this issue I will be voting EFF in the upcoming elections, becasue you lot are a bunch of greedy bastards who lie and pretend we cant afford things while trying to impose a foreign neo-liberal economic system on a population with 43% youth unemployment. And dont think that next year we wont get angrier. We will get angrier and angrier and angrier. Your political economy of inefficiency has been laid bare, and I find it treasonous and criminal that you expect the hard working and poor people of South Africa to pay for it. Sincerely Michelle te Water	Michelle

	2026-09-28 10:04:49	Not fully	Municipal Hidden Surcharges & Diverted Electricity Revenues		Residential Ratepayer (Grid Reliant), Prepaid Meter User	I want an electricity system where I can see exactly what I'm being charged, understand why, and have meaningful regulatory protection as an ordinary consumer", I'd pay especially close attention to the unbundled billing, fixed-capacity charges, municipal markups, solar-export charges, cross-subsidies and protection for low-income households sections of the actual EPP—not just the three coloured summaries.	Pumlani	employed individual
	2026-09-28 10:12:29	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	I recognise the importance of creating a transparent, sustainable and cost-reflective electricity pricing system. I also recognise the need to protect vulnerable households and to ensure that the electricity network remains financially sustainable. However, I am concerned that the proposed tariff structure could place a disproportionate financial burden on ordinary households that have already invested substantial personal funds in solar photovoltaic systems, batteries, inverters and related equipment in response to the prolonged unreliability of South Africa's electricity supply. Many ordinary households did not purchase solar and battery systems primarily as a means of avoiding legitimate electricity charges. They invested because they needed a reliable electricity supply for their homes. During periods of severe electricity supply instability, households experienced load-shedding and other interruptions to electricity supply. In response, many families used their own savings or incurred substantial debt to purchase solar panels, batteries, inverters and related equipment and services. These investments were made in circumstances in which households could not reasonably rely on the public electricity system to provide uninterrupted electricity. For many households, these systems therefore represent a substantial private investment made to maintain access to electricity, rather than simply an alternative method of purchasing electricity. The proposed EPP moves towards greater recovery of network costs through fixed and capacity-related charges. I are concerned about the effect of this approach on households that have already invested in reducing their reliance on electricity purchased from the grid. A household that has invested in solar and battery storage may substantially reduce the amount of electricity it purchases from the grid while remaining connected to the grid. Such a household can therefore face a situation in which: the household has already paid privately for substantial electricity-generation and storage infrastructure, purchases less electricity from the grid, but nevertheless faces significant fixed charges simply because it remains connected to the network. This raises an important question of fairness and proportionality. The household has not ceased to contribute to the electricity system. It continues to maintain a grid connection and may rely on the network when its own generation and storage are insufficient. However, its private investment has reduced its demand for electricity supplied through the network. The tariff structure should therefore carefully distinguish between legitimate recovery of network costs and imposing a financial burden that discourages households from reducing their dependence on the grid. South Africa needs additional electricity-generation capacity and a more resilient electricity system. Household investment in solar generation and battery storage has contributed to this transition. The tariff framework should therefore avoid creating incentives for households to abandon or refrain from investing in distributed generation and storage. I respectfully request that the Department and the relevant regulatory authorities: 1. Conduct and publish a detailed residential financial-impact assessment before implementing the proposed tariff structure. 2. Specifically assess the impact on small households that have already invested substantial personal funds in solar and battery systems because of unreliable electricity supply. 3. Ensure that fixed network and capacity charges remain proportionate and do not disproportionately penalise households that have reduced their electricity consumption through private generation and storage. 4. Provide transparent calculations showing how residential solar exports will be valued and what charges will be deducted from the value of exported electricity. 5. Consider appropriate transitional arrangements for existing residential solar and battery installations. 6. Ensure that the final tariff framework does not unintentionally discourage household investment in energy efficiency, distributed generation and battery storage. 7. Publish clear examples of the expected annual electricity costs for representative households before the policy is implemented.	Lodewijk	employed individual

	2026-09-28 10:19:57	Not fully	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Prepaid Meter User		Haydn	self-employed
	2026-09-28 10:22:04	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Small / Medium Business Owner (SMME)	I object to fixed network and capacity charges for residential customers. A monthly fee that remains payable when a household uses very little electricity would place an unfair burden on low-use customers and reduce the benefit of saving electricity or installing rooftop solar. Please retain an affordable tariff based primarily on actual electricity use.	Dennis	business owner
	2026-09-28 10:24:47	Not fully	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Prepaid Meter User	How will this work for those with meters? Also, retirees on fixed incomes cannot now cut back on electricity usage to save costs...	Susan	retired
	2026-09-28 10:29:31	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	We invested in solar capacity to reduce the load on the grid during loadshedding and ensure a continuous supply so that I could continue working from home contributing to the economy and employ others. Now we are being punished. I am not against everyone contributing a small amount to provide access to the grid - but this must be capped to be affordable for all but the basic users - and the kilowatt increase for the indigent is not acceptable. They are not paying at all - why should they get such a large increase? If Eskom invested more in renewable instead of burning diesel and coal, we would not be in this mess - or at least would be navigating our way out of it. The cow will run dry eventually.	Mark	self-employed
	2026-09-28 10:32:43	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer, Prepaid Meter User	While I support the billing transparency to expose "hidden" costs, I don't see how this new bill benefits struggling tax-paying South Africans. All I see is more ways to bury costs—I don't believe NERSA is impartial, and it doesn't have the paying public's interests at heart. Home owners, and businesses were forced to consider alternatives—not to mention more environmentally friendly, and curruption immune methods of energy sourcing—because the government failed at paying their dues and properly maintaining the power grid. Why should the public now pay for their failure?	Rich	unemployed individual

	2026-09-28 10:39:07	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	The moment compulsory fixed charges are introduced I'm disconnecting from the grid. Not that my single disconnect will have a crazy impact on the overall pain in which Eskom finds itself but if there are a number of other users that feels the same way ... let's say there's 100k consumers in the country in the same stance, that's somewhere between R50m and R100m per month gone from the budget. Will the same fixed charges be applied to low-income households that qualifies for free basic electricity? In principle I do believe the direction is appropriate, the grid needs to be maintained, irrespective of the usage volumes, but transformers et al also take more strain on higher usage compared to lower usage, so maintenance costs aren't linear to number of connected homes, but more likely on a logarithmic scale to usage demands down specific branches of the grid. I do not think it's fair to penalise the rooftop solar users that essentially saved the grid, primarily by reducing demand, but at the same time were also actual paying users, so now Eskom are essentially just supporting the free-loaders with their actual customers bailing out, leaving Eskom in a mess of their own making. Re free electricity - I run a full household. We consume less than 100kWh (variable, but seemingly between 50 and 80kWh) from the grid every month. Adding self generating capacity (solar) to that we run between 210 and 280kWh every month. 300kWh thus exceeds what an optimised household could run at. 300kWh is excessive. All consumers should be treated the same, if one gets free electricity, so should everybody else. Bringing free-loading to an end would force the free-loaders to start contributing to the economy.	Jaco	business owner

	2026-09-28 10:49:36	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	The proposed bill contains various concerns that needs to be addressed, and several changes should be implemented. (A) Mandatory fixed grid capacity fees and standby charges: (1) NERSA should impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. (2) Low-usage and energy-conserving households must be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. (3) Utilities should absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers. (B) Cross-subsidising smelter discounts (NPAs) & expanded FBE on tariffs: (1) Any revenue shortfall arising from Negotiated Pricing Agreements (NPAs) with private commercial smelters must be funded exclusively via the fiscus (Department of Trade, Industry and Competition or National Treasury) and legally ring-fenced from standard consumer tariffs. (2) Any expansion of Free Basic Electricity (FBE) above 50 kWh should be fully backed by the National Treasury Equitable Share grant before implementation, with an explicit ban on funding social allocations through municipal electricity surcharges. (3) Full public disclosure and annual audited reporting of all NPA discounts and inter-tariff subsidy transfers on consumer invoices (Policy Position 50(j)) must be required. (C) Municipality hidden surcharges & diverted electricity revenues: (1) NERSA must automatically reject any municipal tariff application that is not supported by a fully audited, publicly accessible Cost of Supply (CoS) study (Policy Position 25(a)). (2) The immediate statutory ring-fencing of all municipal electricity revenues into dedicated maintenance accounts must be implemented, legally prohibiting councils from diverting electricity revenue to fund unrelated municipal wage bills or deficits. (3) National Treasury must set a hard, uniform percentage cap on the Municipal Surcharge on Electricity (MSOE) to prevent local councils from using surcharges to circumvent NERSA tariff controls. (D) Passing theft, non-technical losses & bad debts onto paying customers: (1) NERSA should immediately enforce Policy Position 43(b) by clawing back and disallowing any tariff requests where municipal distribution losses exceed national regulatory standards (typically 7%–10%). (2) Paying consumers must be legally shielded from funding municipal arrears and Eskom debt defaults through local tariff markups or surcharge adjustments. (3) Licensees should be required to implement strict, automated tamper detection, independent metering audits, and universal prepaid infrastructure in non-paying areas before requesting any tariff increases from compliant ratepayers. (E) Elimination of inclining block tariffs (IBRs) for middle-income homes: (1) NERSA must retain an energy-conservation tariff tier for non-indigent, low-to-middle-income consumers that does not penalise modest energy usage with large monthly service fees. (2) The migration from IBRs to unbundled domestic tariffs must be phased in gradually over a minimum of five years, with mandatory local affordability impact assessments. (3) Smart metering infrastructure and Time-of-Use domestic options must be provided without upfront capital cost penalties to the end-user. (F) Double network fees (DOuS) on solar prosumer exports: (1) DUoS and TUoS network charges on exported electricity (Policy Position 33(d)) should be completely removed, considering that embedded solar reduces local line losses and daytime substation loading. (2) Solar export credits should be eligible to offset the total monthly municipal utility bill, including fixed network and customer service charges. (3) Fair, cost-reflective feed-in credit rates that reflect the true economic value of daytime peak/standard clean power injected into local distribution networks should be provided.	Marcus	employed individual
	2026-09-28 10:55:54	Not fully	Municipal Hidden Surcharges & Diverted Electricity Revenues		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Prepaid Meter User	I support, in principle, stronger measures to hold municipalities accountable for financial mismanagement, misappropriation of funds, poor maintenance and failures in electricity service delivery. What I strongly oppose, however, is any pricing framework that effectively penalises consumers for making their own alternative electricity-supply arrangements after years in which Eskom and many municipalities failed to provide a sufficiently reliable electricity supply. Households and businesses did not install solar panels, batteries, inverters and other alternative systems simply to avoid paying for electricity. In many cases they spent substantial amounts of their own money because they needed a reliable supply and the existing system was not providing one. It would be deeply unfair to respond to that investment by imposing additional charges on those consumers merely because their reduced dependence on the grid has affected traditional municipal electricity revenue. I am equally concerned by the continued growth of fixed, availability, capacity and similar charges that consumers must pay irrespective of their actual electricity consumption. There comes a point where the accumulation of fixed fees begins to rival, or even exceed, the cost of the utility actually being consumed. Consumers are then no longer paying primarily for electricity; they are increasingly being charged simply for remaining connected to a system whose maintenance, reliability and service delivery have often fallen well below reasonable expectations. Cost-reflective pricing must work both ways. If consumers are expected to pay the genuine cost of providing and maintaining electricity infrastructure, then municipalities and electricity distributors must also be held accountable for actually providing and maintaining that infrastructure efficiently. "Cost reflective" cannot simply become a mechanism through which inefficiency, historical underinvestment, poor financial management or declining electricity sales are transferred indefinitely onto compliant consumers. I am particularly opposed to using new fixed charges as a means of replacing revenue lost because consumers have reduced their grid consumption through private investment in alternative generation. If consumers respond rationally to unreliable supply and rising electricity prices by reducing their dependence on the grid, the appropriate response should be to improve the competitiveness, efficiency and reliability of the grid — not to construct new charges that make it increasingly difficult for consumers to reduce their electricity bills at all. There is also a broader issue of accountability. South Africans already contribute substantial amounts through national taxation, municipal rates, electricity tariffs and numerous other charges and levies. It is therefore entirely reasonable for the public to ask where this money is going when infrastructure maintenance, repairs, expansion and basic service delivery remain inadequate in so many municipalities. Before imposing additional financial burdens on consumers, priority should be given to fixing municipal financial management, addressing corruption and waste, enforcing proper maintenance programmes, investing in necessary infrastructure and ensuring that existing revenue is used effectively. Consumers should not become the financial shock absorber for institutional failure. I am willing to pay a fair and transparent amount for a properly maintained, reliable electricity network and for services that are genuinely being provided. I am also willing to accept that maintaining grid infrastructure has a legitimate cost even where an individual household's electricity consumption declines. But there must be a reasonable relationship between the charge, the actual cost of providing the service, and the quality of the service being delivered. Government, municipalities and electricity distributors must meet consumers halfway. Demonstrate proper financial management. Maintain the infrastructure. Invest in expansion where it is required. Deliver a reliable service. Provide transparent evidence showing how fixed charges are calculated and what those charges actually fund. Hold failing municipalities accountable. Then ask consumers to pay their fair share. What should not happen is for consumers who have already spent their own money compensating for failures in electricity supply to be treated as an alternative revenue source simply because traditional electricity-sales income is declining. That would reward institutional failure while penalising the very people who took responsibility for solving the problem themselves.	Werner	

	2026-09-28 10:59:27	Not fully	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Residential Ratepayer (Grid Reliant), Prepaid Meter User	I object to the proposed electricity tariff and payment system because it places too much reliance on regulatory and municipal discretion without sufficient accountability to citizens. Electricity is an essential service, and mechanisms of this complexity require credible transparency, meaningful public participation and effective safeguards against abuse. My concern is that these conditions are not adequately in place. Transparency is undermined when information and processes are controlled by the very institutions being challenged. Public participation loses its meaning when citizens raising difficult questions are stonewalled or excluded from meetings at the discretion of officials who regard their contributions as “disruptive”. There must also be meaningful personal accountability for mismanagement and the abuse of systems and processes. The proposal should reflect the institutional conditions under which it will operate. Expanding discretionary powers before addressing these failures risks adding to the burden on citizens and perpetuating existing abuses. It is also unacceptable to impose further charges on households that invested in alternative electricity supplies out of necessity, following failures of governance, service delivery and financial integrity. These households face the prospect of effectively “paying three times”: for a failing public service, for their own replacement supply, and now through additional charges. Finally, announcements of profits running into billions of rand are difficult to reconcile with mounting pressure on ratepayers and arrangements under which some users receive preferential electricity pricing or supply. Such disparities require a clear, publicly defensible explanation. I therefore call for the proposal to be revised to limit discretionary powers, establish enforceable accountability and protect consumers from unfair additional costs. Reform must address the failures that have eroded public trust before asking citizens to accept further financial burdens.	Johan	retired

	2026-09-28 11:12:52	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	1. We are being taxed to death already. Enough is enough. Using solar is helping stabilize the grid to avoid loadshedding in the future. This also helps Eskom to better maintain the existing infrastructure. 2. Promote good solar installations but still charge a small fee for network usage & distribution. You cannot charge customers for using the sun. 3. Raising Free Basic Electricity from 50 kWh to up to 300 kWh per month is totally absurd. We cannot continue with "freebies" in this country. I don't mind increasing the free basic for the elderly only but up to 150kw.	Zunaid	employed individual
	2026-09-28 11:18:20	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Prepaid Meter User	For my house and small businesses I invested private savings into rooftop solar, batteries, or energy-efficiency measures to survive the ever increasing cost of electricity. Notwithstanding this I will be hit with steep monthly fixed fees simply for remaining connected to the grid. Overcomming exorbitant electricity cost is no longer possible by conserving electricity, as fixed network fees will create a high, unavoidable monthly billing floor. We demand a pay for what you use tarrif structure. It should be kept in mind that the solar solution was necessary due to Eskoms inability to supply electricity to our business necessitating us to invest in this technology. By levying network charges on both energy imported and energy exported, the state will be taxing private clean energy fed back into local communities. Prohibiting consumers from using export credits to offset fixed monthly network fees drastically erodes the financial return on our private rooftop solar, disincentivising decarbonisation and pushing us to defect from the grid entirely. We demand the complete removal of DUoS and TUoS network charges on exported electricity (Policy Position 33(d)), recognising that embedded solar reduces local line losses and daytime substation loading. Insist that solar export credits be eligible to offset the total monthly municipal utility bill, including fixed network and customer service charges. Fair, cost-reflective feed-in credit rates that reflect the true economic value of daytime peak/standard clean power injected into local distribution networks. We further demand that any revenue shortfall arising from Negotiated Pricing Agreements (NPAs) with private commercial smelters be funded exclusively via the fiscus (Department of Trade, Industry and Competition or National Treasury) and legally ring-fenced from standard consumer tariffs. Insist that any expansion of Free Basic Electricity (FBE) above 50 kWh be fully backed by the National Treasury Equitable Share grant before implementation, with an explicit ban on funding social allocations through municipal electricity surcharges. Require full public disclosure and annual audited reporting of all NPA discounts and inter-tariff subsidy transfers on consumer invoices (Policy Position 50(j)). That NERSA retain an energy-conservation tariff tier for non-indigent, low-to-middle-income consumers that does not penalise modest energy usage with large monthly service fees. Insist that the migration from IBRs to unbundled domestic tariffs be phased in gradually over a minimum of five years, with mandatory local affordability impact assessments. Require that smart metering infrastructure and Time-of-Use domestic options be provided without upfront capital cost penalties to the end-user. That NERSA automatically reject any municipal tariff application that is not supported by a fully audited, publicly accessible Cost of Supply (CoS) study (Policy Position 25(a)). Insist on the immediate statutory ring-fencing of all municipal electricity revenues into dedicated maintenance accounts, legally prohibiting councils from diverting electricity revenue to fund unrelated municipal wage bills or deficits. Demand that National Treasury set a hard, uniform percentage cap on the Municipal Surcharge on Electricity (MSOE) to prevent local councils from using surcharges to circumvent NERSA tariff controls. Demand that NERSA immediately enforce Policy Position 43(b) by clawing back and disallowing any tariff requests where municipal distribution losses exceed national regulatory standards (typically 7%–10%). Insist that paying consumers be legally shielded from funding municipal arrears and Eskom debt defaults through local tariff markups or surcharge adjustments. Require licensees to implement strict, automated tamper detection, independent metering audits, and universal prepaid infrastructure in non-paying areas before requesting any tariff increases from compliant ratepayers. 	2026-09-28 11:46:19	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	I support unbundled billing transparency, banning hidden municipal surpluses, capping prepaid vendor fees, and excluding power theft from allowed utility revenue, but demand statutory caps on fixed capacity fees, the removal of DUoS charges on solar exports, full bill offsetting for prosumers, and strict ring-fencing of industrial concessions from consumer tariffs.	Riaan	employed individual
	2026-09-28 11:49:42	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	It is appalling how ministers can even make suggestions like this. When the grid was in danger of collapsing the then minister encouraged consumers to get solar to relieve the grid, which we did, now that more people are becoming self-sustaining the current minister sees an opportunity to milk the situation and once again let the minority pay for the majority. each and every person with solar has it by force, i can assure you that nobody decided to install this purely because they had the money, it was done to be less reliant on our government institutions who fail to provide in the people`s basic needs even though we are religiously billed for it. trying to avoid having to replace rotten food after outages that takes days to restore and avoiding having to bath babies in cold water because there is no hot water. leave the people alone that are taking loans to help the grid survive and shift your focus to municipalities who earn massive performance bonusses but fail to collect the moneys owed to Eskom. Government entities billing consumers for services not rendered should be illegal. nobody will have a problem paying for what they use. I demand that NERSA impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. I insist that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. We require utilities to absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers.	Ryan	employed individual

	2026-09-28 12:04:16	Not fully	Double Network Fees (DUoS) on Solar Prosumer Exports		Residential Ratepayer (Grid Reliant), Prepaid Meter User	While I appreciate the extended timeline to have my say, and fully support your crackdown on hidden municipal markups and grid theft, I am writing to you out of deep frustration. The technical rules proposed in the EPP 2026 feel less like a fair modernization of our power grid and more like a financial punishment for citizens who stepped up when the country needed them most. Please record my formal objections to the following clauses before this policy is finalized: 1. Why should I pay a heavy baseline fee when I am actively saving power? The decision to shift billing away from actual consumption (c/kWh) toward mandatory monthly network and capacity fees is profoundly unfair. It strips me of my financial control. If my household works hard to cut down on electricity to survive a tough economy, our bill should reflect that effort. Forcing us to pay hefty, mandatory fixed fees simply for being connected to the grid—regardless of what we use—is regressive and deeply demoralizing. 2. Stop victimizing citizens who invested in rooftop solar During years of state power failures and load-shedding, private citizens like me used our own hard-earned capital to invest in solar infrastructure. We did this at zero cost to the state. The City of Cape Town does not pay a single cent toward the maintenance, cleaning, or upkeep of my private system. By installing solar, we actively took the strain off a collapsing national grid. Now, the EPP 2026 seeks to victimize us for that self-reliance. Forcing grid-tied solar owners onto strict Time-of-Use tariffs, making us pay network charges on the clean energy we export back to help the city, and then blocking those export credits from offsetting our fixed monthly fees is punitive. It destroys the financial viability of going green and feels like the state is trying to recoup its own historical losses on the backs of proactive citizens. 3. Everyday ratepayers cannot absorb the cost of industrial deals The plan to expand below-cost Negotiated Pricing Agreements (NPAs) for heavy industrial smelters, alongside raising Free Basic Electricity up to 300 kWh without external national funding, is alarming. If the state offers these massive discounts and free quotas without a separate, dedicated budget from the National Treasury, the revenue shortfall will inevitably land on ordinary paying consumers. Middle-class households and small businesses are already financially stretched; we cannot become the default funding mechanism for heavy industry and unbacked state promises. My Closing Plea The EPP 2026 in its current form actively disincentivizes energy conservation and penalizes the very people who helped keep the lights on through private investment. I urge the Department to revise this draft. Please cap the fixed connection fees so they remain minor, and ensure that solar exporters receive fair, unpenalized credits that can offset their entire bill.	Muhammad	self-employed
	2026-09-28 12:06:11	Not fully	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant)	ESKOM has been, for many years, the architect of its own downfall. The gross inefficiencies, ingrained corruption, excessive salary bills for incompetent staff have all led to lack of maintenance and investment and hence loadshedding. This has resulted in a proliferation of solar, both domestic and industrial, and a number of IPPs entering the energy marketplace. Bottom line is a fall-off in revenue and, rather than doing the logical and sustainable thing and reducing expenditure, ESKOM is seeking to gouge yet more from the domestic consumer. The only supportable item in this ill-advised policy is the banning of municipal markups to fund non-energy matters, and the passing on of electricity theft and bad debt to consumers. The move to increase the free electricity to indigent households is laudable, but not if it is at the expense of already over-burdened paying clients - budget for it in the Social Grants category, don't try a Robin Hood tactic to garner political favour. I would also like to see statutory caps on any fixed fees, and these should be equitably spread over all energy consumers - no "get out of jail free" tickets for smelters. Anyone seriously considering supplying energy at a loss needs their head examining; but, if it is necessary, then a small group of consumers should not be penalised - ring-fence the loss and spread the pain.	Mike	retired
	2026-09-28 12:17:55	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I run a small business that is service driven. I cannot increase my capacity or income as I can only do what I can do with my hands one at a time. Increasing clientele is not an option. Only raising prices, which are already so high to meet my expenses that I have lost a number of decades-old clients. I cannot afford to keep subsidising the service sector that is so badly managed and rife with graft, corruption, nepotism and poor management that depends on me an others like me to continue to work our fingers to the bone while they can simply mandate BY LEGISLATION that I simply fork out more and more of what I work for. Please!!! Let this service go to the private sector who can be regulated, invite market capitalism, innovation and competition, and better serve the whole of South Africa.	Nic	self-employed
	2026-09-28 12:18:14	Not fully	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Residential Ratepayer (Grid Reliant)	Excessive fixed gid and standby charges will not halt the 'death spiral' but increase it. It will just become more cost effective to go off grid completely and those that can will. Combined with increased 'below cost rates' for industrial users and increased electricity provision for indigent households will mean fewer and fewer 'middle class' have to foot the bill all round	Jay

	2026-09-28 12:51:08	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Thank you for bringing the Revised Electricity Pricing Policy to my attention. I have looked into the actual government documentation and I think some important distinctions need to be made before presenting the proposed changes as established facts. Firstly, this is a draft policy currently in the public-comment process. It does not itself impose a new tariff or specify a fixed monthly charge that every household will pay. The Minister has extended the public comment period to 28 October 2026, after which the policy still has to be finalised and implemented through the relevant regulatory processes. There are certainly issues in the proposal that deserve scrutiny, particularly the move towards fixed and capacity-related charges and the treatment of grid-connected solar. However, describing these simply as "penalties" or stating that all households "will" face particular charges presents proposed policy mechanisms as though the final tariffs and their financial impact have already been determined. The same applies to the proposed increase in Free Basic Electricity. The Minister has discussed increasing the current 50 kWh allocation to between 200 and 300 kWh for qualifying indigent households, but 300 kWh has not been approved as a universal entitlement. There is also an ongoing debate about how any increase would be funded. That is a legitimate question for public comment, but it is not yet established that paying consumers will necessarily carry the cost. I also think the discussion around negotiated pricing agreements needs more context. South Africa's electricity tariffs have increased by more than 900% since 2007/08, while inflation has increased by roughly 150%. This has contributed to severe problems in energy-intensive industries, including the closure of many ferrochrome smelters. The government is therefore attempting to use negotiated pricing arrangements partly to address industrial competitiveness, investment and employment. That does not mean such arrangements should be accepted without scrutiny. I would support asking exactly who bears the cost of any preferential pricing and requiring complete transparency around any cross-subsidy. But saying that households will simply be forced to pay for discounted industrial electricity goes further than the evidence currently establishes. There are also consumer-protection elements in the proposed policy that this message doesn't mention, including stronger controls over municipal electricity surpluses, electricity theft and bad debt, greater transparency in tariff structures, and requirements for electricity costs to be properly separated and accounted for. For me, the important questions are therefore not simply whether people should "fight" the policy, but: • What will the actual impact be on a typical household electricity bill? • What maximum fixed and capacity charges will apply to ordinary residential consumers? • How will low-consumption households be protected? • How will rooftop solar customers be charged for network services, and will those charges accurately reflect their actual use of the network? • How will exported solar electricity be valued? • Who ultimately funds expanded Free Basic Electricity if the existing government allocation is insufficient? • How will negotiated industrial pricing be funded, and what safeguards prevent ordinary consumers from carrying those costs? • What mechanisms will prevent electricity theft, bad debt and municipal inefficiency from simply being transferred to compliant customers? Those are questions I believe government should answer clearly before the policy is finalised.	carl	employed individual

	2026-09-28 14:11:29	Not fully	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant)	ESKOM is disgusting gone up by 1000% with all the extra charges	Lidwina Meredith	retired
	2026-09-28 14:21:14	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	My greatest concern is around the punitive costs to be picked up for solar users. Already my electricity costs for my small office has increased 3 fold over the past few years and I make use of solar to help manage the costs. If I get penalized because of this it will unnecessarily increase the cost of electricity for my small business. If it has an impact on me with my small business, I cannot imagine the impact it is going to have on other users that are trying to protect themselves from run away costs that they have no control over. Also, it it not clear what impact the change in 3 phase billing is going to have on residential users where three phase has been installed.	Peta-Lynn	business owner

	2026-09-28 14:30:26	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Commercial / Industrial Power User	I support the use of reasonable fixed charges and usage charges for all consumers. These should be the same for all classes of consumers connected to the grid. Solar power generators should not be penalized as they chose to install solar which inadvertently assisted Eskom with load shedding. To penalize consumers with Solar now is in very bad taste. Instead, as we all wished for surplus power again so this could be used as an opportunity to discount to large users like smelters and create new factories / customers to take up the surpluses ensuing Eskom does not lose the revenue and we as a country start creating the jobs we so desperately need. The current strategy in my view just tries to fix Eskom's short term loss of revenue (created by their own making and new technology) instead of creating and using the opportunity solar has created to create new employment in SA.	GARY	business owner
	2026-09-28 14:54:06	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	? 	2026-09-28 16:17:45	Not fully	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Residential Ratepayer (Grid Reliant)	I do not support special pricing agreements for smelters. Rate payers should not subsidise smelters in order to survive. What if smelters demand electricity for free in order to survive and stay in the country? The increase of free electrucity to indigend households is just an election trick to gain votes for the ANC!	David	retired
	2026-09-28 16:18:56	Not fully	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs		Residential Ratepayer (Grid Reliant)	It is outrageous that consumers should pay more than big companies! It should not be allowed!	Karen	self-employed
	2026-09-28 16:20:01	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	Your proposed bill penalises households that have aimed to RELIEVE the pressure off Eskom while rewarding those who do not pay. Your proposed network surcharge for having grid-tied solar is already punitive enough to "justify your network availability" with an already elevated/higher prepaid premium for the little extra we need, while your double billing reverse charge disincentivises people further from assisting in power generation, preventing them from being part of the solution instead of part of the problem! Your sneaky "tax rebate" on PV panels was already hint enough seeing that you didnt extend it to include battery storage since your agenda was clear to charge them more for distribution. These policies do not empower people to be SOVEREIGN CITIZENS , they make them MORE reliant on a socialist state instead of less. Back to the drawing board!	Natalie	self-employed
	2026-09-28 16:22:53	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Prepaid Meter User	As a retired resident in the Ekurhuleni municipality, we had an exorbitant 18.5% increase in Tarif A pre-paid electricity tariffs, July 2026! Investigating the NERSA process for approved 2026 electricity increases, numerous emails to Ekurhuleni Germiston asking them to explain this ridiculous electricity increase, NO RESPONSE at all. I just don't see how residents will be able to afford this purposed "fixed capacity fee" on top of the already exorbitant 2026 increase.	Bernard	retired
	2026-09-28 16:25:26	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	I object to cross subsidisation. Industry must pay in full for the electricity and distribution costs it uses. Home owners can no longer be subjected to increased costs on an ongoing basis. I am prepared to pay for the electricity i use but object to fixed to the proposed fixed costs. Whilst it is necessary to provide free electricity to the poor 50 kw per month is adequate for most small households I object to increases of more than 100% on the current provision.	Alan	retired

	2026-09-28 17:16:20	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Prepaid Meter User	This issue is also critical to me: Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes. As an ordinary middle-income consumer, I am concerned that the proposed changes may not provide a meaningful benefit to households like mine. My priority is for my total household electricity bill to remain affordable and, where possible, decrease from what I currently pay. I am particularly concerned that increased fixed or network-related charges could reduce the financial benefit of using less electricity. If these charges increase over time, households that carefully manage their electricity consumption may still face rising monthly costs. I believe the revised pricing structure should ensure that middle-income, paying households are not disproportionately burdened with additional costs. The policy should provide meaningful protection for consumers who pay their electricity bills and actively manage their consumption, while ensuring that affordability remains a key consideration.	Sbonelo	employed individual

	2026-09-29 06:16:09	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Small / Medium Business Owner (SMME)	I have gone off-grid in 2016 (Small holding, purchased from Eskom directly) for the simple reason that I could not reduce the monthly grid/network, etc charges. My actual energy charges made up only about 30% of my monthly bill at that time making it impossible to save on costs. What this proposed approach will do now is it will force everybody that is not off-grid yet, to do so. The equation for urban customers will now be pushed to full off-grid where till now it was actually favoured towards grid tied and often no solar component at all being the best option in town. This makes no sense for South Africa where we need to be sensible towards our energy management by properly integrating private/home owner generation capacity and national capacity. The proposed changes are an attempt to make Eskom profitable but at the cost of sensibility and a holistic approach and has not been thought through. The big issue to address is the commercial smelter subsidies, the rampant energy theft and municipal mismanagement and not forcing more people off-grid (wasting available energy capacity). 	2026-09-29 08:05:15	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer	I have a rooftop solar system with batteries that does not export to the grid. I use grid power only as a backup to charge my batteries when there is insufficient sun. I accept that I should contribute fairly to the cost of maintaining the network I rely on, but I am concerned that the proposed fixed network, capacity and standby charges will be set so high that they wipe out the benefit of my investment in solar, which I made largely to cope with load shedding. I ask that fixed charges be capped at a reasonable share of an average household bill, that they be proportionate to the capacity a household actually draws, and that any changes be phased in gradually. I also ask that time-of-use tariffs remain optional for residential customers, so that households can charge batteries off-peak. I support the policy's proposals to make bills transparent, stop hidden municipal markups, and prevent theft and bad debt being passed on to paying customers.	Ehsan	employed individual

	2026-09-29 10:22:06	Not fully	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	I understand that there is a structural challenge and ongoing costs, but the context of Eskom's abuse of its customers and the needs of the average citizen must be taken into account. This is not an easy decision to make, but more nuance should be applied to the proposed costs, and something needs to be done to address the historical (perhaps still current?) corruption before moving on to a new way forward. This commentary space is a key part of the process. Have economists weighed in? A parastatal has a responsibility to the health of the economy and the citizens it serves. Does this bill in its current form truly serve South Africans?	Lindsay	self-employed
	2026-09-29 10:34:27	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Prepaid Meter User	I Support unbundled billing transparency, banning hidden municipal surpluses, capping prepaid vendor fees, and excluding power theft from allowed utility revenue, but demand statutory caps on fixed capacity fees, the removal of DUoS charges on solar exports, full bill offsetting for prosumers, and strict ring-fencing of industrial concessions from consumer tariffs.	Lesley	retired
	2026-09-29 10:46:33	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	My Objections to the Revised Electricity Pricing Policy 2026 Mandatory Fixed Charges for All Homes I object to the move away from a pricing model based primarily on the electricity I actually use, towards compulsory monthly network and capacity charges. Even if I reduce my consumption through energy efficiency or invest my own money in solar and batteries, I could still face substantial charges simply for remaining connected to the grid. This undermines the incentive for consumers to save electricity and invest in alternative energy. Penalising Rooftop Solar Users I strongly object to a system that effectively penalises households that have invested their own money in rooftop solar to reduce pressure on the national grid. Solar users could be required to pay network charges on electricity they consume as well as electricity they export, while their export credits cannot be used to offset fixed monthly charges. Punishing people who have invested in becoming part of the solution to South Africa's electricity crisis is, in my view, shameful and fundamentally unfair. Consumers who reduce their demand on the grid should be encouraged, not financially penalised. Industrial Electricity Discounts at the Expense of Ratepayers I object to below-cost negotiated electricity pricing for large industrial users if the resulting revenue shortfall is ultimately recovered from ordinary households and small businesses. I recognise the importance of industry and jobs, but these benefits should not be funded by forcing already struggling consumers to pay more for electricity. If government believes these industrial agreements are necessary, the cost should be transparently funded rather than hidden in the electricity tariffs paid by ordinary consumers. Expanded Free Basic Electricity — Who Pays? I support assistance for vulnerable households, but I object to expanding Free Basic Electricity from 50 kWh to as much as 300 kWh per month without clearly identifying where the additional funding will come from. If the national grant budget is not increased, there is a real concern that the cost will simply be transferred to consumers who already pay their electricity accounts. Social support is important, but it should be transparently funded rather than quietly loaded onto paying consumers. Support for Ending Hidden Municipal Electricity Surpluses The one part of the proposed policy that I support is the move to address hidden municipal electricity surpluses and excessive electricity mark-ups. Municipalities should not be able to use electricity tariffs as an opaque source of additional revenue or pass uncontrolled theft and bad debts onto consumers who pay their accounts. Electricity charges should be transparent, properly justified and based on clearly identifiable costs. Consumers have a right to know exactly what they are paying for and how electricity revenue is being used. In summary, I object to a policy that risks making electricity more expensive for consumers who conserve energy, invest in solar and batteries, and consistently pay their accounts. We should be encouraging consumers to become part of the solution to South Africa's electricity challenges — not punishing them for doing so.	Dimitri	employed individual
	2026-09-29 10:49:34	Not fully	Other		Residential Ratepayer (Grid Reliant), Prepaid Meter User	The extension of "free" electricity to 300 units per month is simply unaffordable. The normal paying electricity consumers are already overstretched. The fiscus is similarly overstretched with government debt relative to GDP unsustainable and numerous other fiscal commitments, beyond electricity, ready to stretch the deficit further. Cut back that intention to at most 100 units per month of "free" electricity, balanced by a clampdown on electricity theft. Furthermore, make damage to electricity infrastructure treated as sabotage with high treason added to it, so that criminals face top punishment. And good luck with replacing copper with aluminium, where feasible.	Johan	retired
	2026-09-29 11:21:17	Not fully	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant)	Ek het twee vrae: Wie gaan die koste van die verhoogde susidie aan behoeftige huishoudings betaal; en As Nersa in die verlede al so baie knoeiwerk gedoen het, hoe gaan hulle binne die voorgestelde tydsraamwerk al die vereiste tariefstrukture billik en korrek bepaal? 	2026-09-29 11:47:17	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	I am opposed to Fixed Grid Costs, as it does not give me the opportunity to save on lower usage of electricity. I am opposed to penalties on Solar and Low-usage , as we bought, at out own cost, Solar due to the State not bveing able to supply electricity - load shedding.	Alexander	business owner

	2026-09-29 11:57:14	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Prepaid Meter User	Although a small connection fee may be valid, housholds who try hard to use electricity sparingly, especially pensioners, should be rewarded for their prudent usage and not hit with a high fixed fee that is beyond their control and breaks their budget. Similarly, people who have invested in solar to assist the grid with a renewable source of energy should not now be penalised with high fixed fees, which will also discourage more South Africans to foot the cost of installing their own renewable source of energy which will be beneficial to our country for the future. All other cross-subsidisations, hidden costs and diverted revenues should be eliminated.	Pamela	retired
	2026-09-29 12:02:38	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer	Demand that NERSA impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. Insist that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. Require utilities to absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers.	Neels	employed individual
	2026-09-29 12:37:17	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	Allow solar users to contribute surplus solar into the grid at a smaller rate vs the normal usage rate, allowing them to contribute to the country and also offset their connection fee in that way. This will benefit both parties.	Christian	employed individual
	2026-09-29 12:49:52	Not fully	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Residential Ratepayer (Grid Reliant)	Why should energy efficiency be punished? Because of people taking on solar it's taken pressure off the grid, this should like other countries be rewarded, not penalised. Most of us struggle to make ends meet, if we are forced to pay more may of us cannot survive.	Tracey	self-employed

	2026-09-29 13:19:51	Not fully	Other		Small / Medium Business Owner (SMME), Prepaid Meter User	I would like to raise a concern regarding the Revised Electricity Pricing Policy and, in particular, the proposed shift toward greater fixed network and capacity charges. My concern is this: Does the new system merely make legitimate network costs more transparent, or does it create a mechanism through which captive customers become an increasingly reliable source of revenue regardless of how efficiently the electricity system is managed? South Africans have already carried substantial costs associated with Eskom through electricity tariffs, municipal charges, taxes and taxpayer-funded debt relief. Eskom's recent improved financial position also exists alongside very large taxpayer-funded debt relief. This does not mean that every Eskom loss is passed directly into electricity tariffs, but it illustrates the broader problem: when the electricity system develops a financial shortfall, someone ultimately has to finance that gap nad I am concerned that is ultimately the man on teh street. The proposed pricing philosophy may include safeguards intended to prevent inefficient or imprudent costs from simply being passed on to consumers. However, I remain concerned about whether those safeguards will be strong enough in practice and who uphold them when the criminal element surrounding eskom. South Africa has documented problems involving criminal losses within the electricity system, municipal electricity losses, theft, bad debt, regulatory mistakes and poor financial management. Against that background, I do not believe consumers should simply be assured that these costs will not eventually find their way back to paying households through tariffs, fixed network charges, municipal charges or taxpayer-funded support. I therefore believe the revised policy should contain strong, enforceable protections ensuring that compliant households and businesses are not required to absorb the financial consequences of corruption, theft, inefficiency, bad debt or regulatory failures. In particular, I would like the policy to clearly address: which costs may and may not be recovered from paying consumers; how inefficient expenditure, theft and non-technical losses will be excluded from tariff calculations; how bad debt and municipal non-payment will be treated; what protections exist against continually increasing fixed network charges; whether consumers who reduce their consumption or invest in solar could increasingly be relied upon to fund system-wide financial shortfalls through unavoidable fixed charges; and what independent oversight and auditing mechanisms will ensure these protections are actually enforced. Consumers should pay a fair and transparent amount for the electricity and network services they genuinely receive. They should not become the default funding mechanism for failures elsewhere in the electricity system. Please include these concerns in my submission on the Revised Electricity Pricing Policy. Kind regards,	Jozua	business owner
	2026-09-29 14:06:56	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Rooftop Solar / Prosumer, Prepaid Meter User	I am in support of transparent billing, cutting out extra charges like municipal hidden prices and third party fees but you cannot allow Eskom failures, corruption and mishandling to be recovered from consumers by inflating fixed fees. The majority of the costs should be variable and the pricing should reflect this. If someone elects to go off-grid but maintain a connection (for whatever reason) or can provide power back into the grid, this should be supported not penalised. If Eskom and the government cannot provide electricity effectively, efficiently and at reasonable cost, Eskom's monopoly should be ended and private business allowed to come in and compete. 	2026-09-29 16:44:56	Not fully	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	I am concerned that a functional state entity deteriorated to a financial consumption entiprise that erode society instead of being the lever of the state to create the very platforms to empower society to develop economically and create the environment where society can thrive. Please explain the exponential ESKOM salary increases and performance bonuses with a declared revenue surplus and the unsustainable escalation of electricity cost for consumers. Government start by incentivizing households and businesses that invest in solar and other energy production, then turn on those who chose to minimise the impact of unsustainable electrical tarrifs increases through solar systems. The argument that it is unfair to be connected to grid for reduced electrical consumption simply ignore that the consumer still pay for the electricity used and free capacity for industrial use that grow the economy and jobs. On top of this then the consumer is required to subsidise the industrial complex to pay for their reduced tarrifs whilst foreign ownership is making the profit and work toward less labour intensive automation. Keep going by exploiting the productive middle class toward a people who will simply innovate toward total indipendance from the state . This will continue to devide South Africa as a nation and escalate conflict. We really need national , provincial and local leadership that stop exploiting the people for selfish reasons. 	2026-09-29 22:07:01	Not fully	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant), Municipal Official / Engineer	I do not fully support the EPP as published. I support genuine cost-reflective pricing, transparency, ring-fencing of municipal electricity revenue, proper recovery of real network costs, and limits on theft, losses and bad debt being passed to paying consumers. My concern is that “cost-reflective” must mean the efficient and prudent cost of supplying electricity, not every subsidy, municipal revenue requirement, industrial concession, legacy cost or historical inefficiency that happens to sit inside the system. Prices are not merely revenue-collection tools. They are market signals. Consumers and businesses respond to the price they actually pay. If that price is distorted by unrelated fiscal objectives, the resulting behaviour and investment decisions will also be distorted. This is especially important now that customers can reduce grid dependence through solar, batteries and alternative technologies. I therefore support full disclosure of municipal surcharges and cross-subsidies, but disclosure alone is not enough. Genuine network charges are defensible; charges designed merely to replace declining electricity sales are not. Export charges on solar should be based on actual cost causation. Industrial discounts and social subsidies should be transparent and separately funded where appropriate. Most importantly, regulation must have consequences. NERSA determinations should remain binding unless lawfully suspended or set aside. Unlawful overcharges should ordinarily be refunded with interest. Culpable non-compliance should not leave a municipality or utility financially better off, and identifiable decision-makers should face consequences where conduct is deliberate, reckless or grossly negligent. I have submitted a fuller written submission separately.	Jim	self-employed

	2026-09-30 11:30:23	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Prepaid Meter User	I fully agree that the electricity pricing policy must be reviewed. It is high time that municipalities account for their fee increases - ban hidden municipal surpluses. I want to obejct to the following: * mandatory fixed grid capacity fees - why must I pay for electricity I don't even get to use (we are subjected to daily load reduction as our municipality owns Eskom millions and the infrastructure is contantly breaking down) * standby charges on solar and low-usage homes - I pay for something else which works, but now I must be punished for using solar instead of Eskom. * punitive double network fees on solar exports - I have extra and must be penilised if I went to share it with other SOut hAfricans. * the elimination of stepped block tariffs for standard households, and the risk of retail consumers funding industrial smelter discounts or unfunded social expansions - the honest, tax paying citizens are killed to pay for those with illigeal connections and must now also fund discounts and free electricity. TOTALLY UNFAIR	Marie	employed individual
	2026-09-30 12:12:49	Not fully	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	I have my entire life done nothing but use electricity and water sparingly, it has become unaffordable to survive on a day to day basis. this makes one very despondent and negative. I am sick and tired of been a law abiding paying consumer. Due to to corruption and mismanagement on the part of Eskom and the municipality increasingly find that I don't know how I am going to afford electricity going forward. Rentals, food, utilities and transport is for the rich. I am beyond despondent!!!	Michelle	retired
	2026-09-30 13:09:44	Not fully	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	Sadly the bulk of the "experts" and decision makers in this discussion have proven to be totally incompetent. The objectives of all state owned entities has always been, and will continue to be, driven by greed, stupidity and incompetence. This has been and ANC modus operandi for decades now. Whilst the concept of transparency is great, I have zero trust that it will be applied to be benefit of the people of South Africa. I really don't care a fuck about the structural and financial mess our incompetent government has created for themselves. The question is how will this benefit the people. The answer is simple: If the implementation is not grounded on the correct principles it doesn't make any sense - no injustice on the people can be solved by a new system - it can only be solved by a new government with the correct fundamental understanding of building a successful nation.	Lionel

	2026-10-01 14:52:52	Not fully	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	When Eskom could not meet demand due to poor management and lack of maintenance they penalised their failures by imposing recurring load shedding crippled businesses and households. To be able to operate businesses and allow households to prevent damage to homes and prevent food spoilage and wasted costs, and additional costs from insurers. citizens invested tens of billions of Rands in private savings to install rooftop solar, inverters, and battery banks. Now that Eskom is able to meet demand due to the reduced demand they kept asking the citizens to reduce their demand. Now because of citizens initiatives, they wish to penalise them because of their loss of revenue that they caused. Municipalities lack of management and corruption has caused poor reliable power supply between load shedding periods further forcing households to 'make a plan' and provide their own power. Again because of citizens initiatives, they wish to penalise them because of their loss of revenue that they caused.	Jonathan	retired
	2026-10-01 14:59:53	Not fully	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer	This is not reform. It is the state sending you the bill for a job it already failed. Fifteen years Eskom could not keep the lights on. So people spent their own money. Solar. Batteries. Generators. Because the monopoly could not do the one thing it exists to do. And the answer in this policy? A standing charge. For being connected to the grid you no longer trust. Plus a standby levy, so they can keep idle plant warm. Plus network fees on the power you export. You pay to use less of a service they could not deliver. Call it cost-reflectivity if you want. It is a sun tax. Cost-reflective would mean an efficient operator. Assets written down. Losses that stay with the people who caused them. This draft does the opposite. Assets get priced at replacement cost, so yesterday's debt and tomorrow's credit rating land on today's tariff. Paying customers are still the shock absorber. Theft and non-payment get a benchmark and a press release. Smelter deals get expanded. Free Basic Electricity gets talked up from 50 kWh to 200, maybe 300, and the R21 billion envelope stays where it is. When Treasury does not fill that hole, it will not come out of cadre deployment. Or municipal waste. It will come out of the bill of the household that actually pays. And unbundling the invoice is not a market. A market is rival generators. Open wheeling. Traders who can undercut the incumbent. This keeps NERSA as the price-setter. Drops clear wholesale access for independent traders. Then invents another stack of frameworks, due in twelve months. Competition is the press statement. The rulebook still exists to keep the old balance sheet whole. Scrapping the block tariffs does the same thing from the other side. Load a fixed capacity charge onto ordinary homes, and the careful user subsidises a network sized for everyone else. The industrious get fined. The politically favoured get the discount. That is not equity. That is the oldest pricing model in the country. Extract from the compliant. Announce relief for the connected. Call the gap a policy position. If they want cost-reflective power, fund the grants from the fiscus. Stop hiding the municipal mark-ups. Price the grid at what it efficiently costs. And let private generation compete without a penalty for keeping the lights on when Eskom would not. Anything else is another five-year plan to socialise failure.	Bernhard	business owner
	2026-10-01 15:18:20	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I want to know who comes up with these policy consepts. While there is aspects of the policy I think is good all, there is some really concerning aspects of the draft. All that me as the consumer want is fairly priced and reliable electricity, not service fee upon service fee because I am a cash cow for my municipality. Thank you	Rudi	employed individual

	2026-10-01 16:35:27	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Most of the changes you are wanting to make will hit the poorer people hardest. You cannot subsidize industry and make the small consumers pay for the shortfall! THIS IS UNACCEPTABLE. You also want to punish solar capability to help reduce the strain on the grid??? And refuse to let credits be spent on your already terrible-but-you-still-want-more-tarrifs just to stay connected? this is just greed for your gain at our expense. Also, you want to punish households who try and reduce the strain on the grid? You are just encouraging greater use so you can make more money. And if it leads to loadshedding again?? Do not take away our tiered usage costs! This punishes those who care about the environmental costs, and puts unnecessary strain on those who can afford it the least.	Richard	
	2026-10-01 16:36:44	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Commercial / Industrial Power User, Rooftop Solar / Prosumer, Prepaid Meter User	I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form (Rejects mandatory fixed grid capacity fees and standby charges on solar and low-usage homes, punitive double network fees on solar exports, the elimination of stepped block tariffs for standard households, and the risk of retail consumers funding industrial smelter discounts or unfunded social expansions). Supports unbundled billing transparency, banning hidden municipal surpluses, capping prepaid vendor fees, and excluding power theft from allowed utility revenue, but demands statutory caps on fixed capacity fees, the removal of DUoS charges on solar exports, full bill offsetting for prosumers, and strict ring-fencing of industrial concessions from consumer tariffs	Gert	self-employed
	2026-10-01 16:40:23	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	As a solar user for several years I, and other solar users, have been helping Eskom with capacity management. This has helped Eskom keep its cost down by not requiring Eskom to upgrade its last mile infrastructure. Eskom now wants to significantly load infrastructure costs to recover what I have already subsidised. Additionally Eskom wants pro-active users to subsidise Industrial Users from these fixed rates placing the burden of economic growth on pro-active users who have helped Eskom by adding generation capacity to their network. Through these measures Eskom is undermining household investment returns, penalising me for conserving energy conservation, this is extending my solar payback periods, and severely penalising low use consumers.	Hendrik	self-employed
	2026-10-01 16:48:52	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	I am concerned because i intend considering installation of solar in my home and in the near future in a Community Development Project comprising of a Church, Community Hall, Private School and a Recreational/Sports facility. Currently my suburb of Southridge experiences electricity interruptions when it rains heavily. However, the cost of electricity in SA is becoming unaffordable for the average home.	trevor	retired

	2026-10-01 19:01:04	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer, Prepaid Meter User	Electricity pricing affects every household and business, so meaningful public participation is important. That said, I think the debate needs to be based on facts rather than fear, political rhetoric or dramatic headlines. There are certainly aspects of the proposal that deserve serious scrutiny: Fixed electricity charges: If more of the cost is shifted from consumption to unavoidable fixed charges, households that use very little electricity could effectively pay more for simply being connected. That needs to be carefully assessed. Solar users: People who have invested their own money in solar, batteries and reducing their dependence on Eskom should not suddenly find that the financial benefits of doing so are substantially eroded through new charges. At the same time, users who remain connected to the grid should reasonably contribute towards maintaining that network. Time-of-use tariffs: These can encourage consumers to shift consumption away from expensive peak periods, but they must be transparent, practical and accompanied by appropriate metering. Municipal electricity mark-ups: Consumers have every right to know exactly what portion of their electricity bill represents the actual cost of electricity and what portion is being used to subsidise broader municipal finances. Electricity losses and theft: Paying customers should not simply become the automatic solution to the enormous problems created by electricity theft, illegal connections, meter tampering and poor revenue collection. There must be accountability for these losses. Industrial electricity pricing: Any preferential arrangements for large electricity users should be transparent and demonstrate a clear economic benefit to South Africa. The public should be able to see who receives the benefit, what it costs and who ultimately carries that cost. Free Basic Electricity: Supporting genuinely indigent households is important, but the funding mechanism must be transparent. It should not simply become another hidden cost transferred onto households and small businesses that already struggle with rising living costs. There is, however, something missing from this discussion: South Africans also need a sustainable electricity system. Eskom and municipalities have enormous infrastructure, maintenance and network costs. Someone ultimately has to pay for those costs. The answer therefore cannot simply be “don't charge consumers”. The real question is whether the proposed pricing structure is fair, transparent, economically sustainable and properly regulated. I am particularly concerned about the growing tendency to make people who have invested in solar the convenient target. Many households invested their own money in solar precisely because they wanted greater energy security and less dependence on the grid. They should not be punished for doing so. Equally, however, a solar owner who continues to rely on the electricity grid must recognise that the grid still has a cost. What I would like to see is proper evidence behind every major claim being made in this campaign — including the alleged cost of industrial subsidies, the financial impact of increasing Free Basic Electricity, the proposed network charges and precisely how the new tariff structures would affect households at different levels of consumption. Most importantly, the public should read the actual Government Gazette and proposed EPP 2026 rather than relying solely on campaign emails, social-media graphics or political slogans. If the proposed policy genuinely makes electricity less affordable for ordinary South Africans, that should be demonstrated with numbers. If particular provisions are beneficial, those should also be acknowledged. We need electricity policy based on transparency, accountability and sound economics — not another political battle where consumers are frightened into taking a particular position. I support meaningful public participation, but I also believe South Africans deserve the full picture: the costs, the benefits, the winners, the losers and the evidence behind each claim. 	2026-10-01 19:20:04	Not fully	All of the above	Double Network Fees (DUoS) on Solar Prosumer Exports	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Commercial / Industrial Power User, Rooftop Solar / Prosumer, Prepaid Meter User, Municipal Official / Engineer	Dear Director-General For attention: Mr Joseph Maraba I recently submitted comments regarding the Revised Electricity Pricing Policy 2026. Having subsequently considered several additional provisions of the draft in greater detail, I wish to place the following supplementary concerns on record. 1. Consumers who conserve electricity must continue to benefit financially from doing so I am particularly concerned by Policy Position 38 and the proposed movement away from inclining-block tariffs for many residential customers toward tariff structures containing separate network capacity charges, customer service charges and energy charges. I understand the principle that maintaining an electricity network has costs which do not disappear simply because a household consumes less electricity. However, there must remain a meaningful financial reward for conserving electricity. For years consumers have been encouraged to reduce consumption, install efficient appliances, use timers, change behaviour and generally place less demand on the electricity system. It would be completely counterproductive to restructure residential tariffs so that an increasingly large portion of the monthly account becomes unavoidable irrespective of consumption. A household which uses substantially less electricity should pay substantially less. Otherwise consumers are effectively being told: “Please conserve electricity — but do not expect your bill to fall proportionately when you do.” That is neither a sensible conservation signal nor a fair outcome for responsible consumers. I therefore request that any fixed, network, capacity or service component applicable to residential consumers be strictly limited to the genuine efficient cost of providing those services and not be used simply to replace revenue lost as electricity consumption declines. 2. Electricity theft, excessive losses and bad debt must not be transferred to paying customers I strongly support Policy Positions 42 and 43 insofar as they prevent technical and non-technical losses and bad debt exceeding approved regulatory standards from being recovered from ordinary electricity consumers. This protection should remain explicit and should not subsequently be weakened through regulations, tariff methodologies or other mechanisms. Consumers who pay their accounts should not be expected to compensate electricity distributors for excessive theft, illegal connections, meter tampering, ineffective revenue collection or uncontrolled bad debt. There must be accountability somewhere in the system other than continually increasing the amount recovered from the customer who actually pays. 3. Preferential industrial electricity prices must never become a household subsidy I recognise that South Africa has legitimate reasons for wanting to protect employment and retain energy-intensive industries. However, Negotiated Pricing Agreements must not result in ordinary households and small businesses indirectly subsidising preferential electricity prices offered to large industrial consumers. If such agreements are genuinely economically beneficial and remain above the appropriate cost of supply, this should be demonstrable through transparent regulatory analysis. If they require a subsidy for wider economic or employment-policy reasons, that subsidy should be transparently identified and appropriately funded. It should not be hidden in the tariffs of unrelated electricity customers. I therefore request that the final policy expressly prohibit any revenue shortfall created by a Negotiated Pricing Agreement from being transferred directly or indirectly to residential and small-business consumers. 4. Free Basic Electricity must be funded transparently I have no objection to providing essential electricity assistance to genuinely indigent households. I support the principle contained in Policy Position 52 that Free Basic Electricity should be funded through government transfers and reflected in the appropriate government budget allocation. That principle needs to remain absolutely clear. If the Free Basic Electricity allocation is substantially increased in future, the additional cost should not quietly migrate into higher electricity tariffs for other consumers. Social welfare assistance should be transparent, appropriately targeted and transparently funded. 5. The proposed treatment of future residential solar customers risks driving consumers completely off-grid As stated in my previous submission, our household is seriously considering a substantial investment in solar generation and battery storage, primarily because of the continuously escalating cost of electricity and the historical unreliability of supply. Policy Position 33 gives me considerable reason to reconsider whether remaining grid-connected would ultimately be financially sensible. Under the proposed structure a net-billing customer could be subject to time-of-use pricing, network charges relating to electricity drawn from the grid, network charges relating to electricity exported into the grid, and additional retail charges, while export credits cannot offset certain network and retail charges. I accept that consumers who remain connected to the electricity grid should make a reasonable contribution toward the genuine cost of having that network available. What I do not accept is a tariff structure that risks making self-generation financially unattractive simply because the electricity provider needs to preserve revenue. There is an obvious unintended consequence here. If the combined cost of remaining connected to the grid becomes unreasonable, households with sufficient means will have an increasingly strong financial incentive to install substantially larger battery capacity, retain generator backup and disconnect from the electricity network entirely. In that situation, the electricity provider will no longer receive a smaller amount from that household. It will receive nothing. No connection charge. No network charge. No service charge. No electricity purchases. That cannot be the desired outcome of electricity-pricing reform. Government should therefore structure tariffs in a manner which makes it financially attractive for privately generating households to remain connected to the grid rather than creating incentives for those customers to leave it altogether. 6. Paying customers cannot remain the solution to every financial problem in the electricity system There is a broader principle underlying all of these concerns. South African electricity consumers have endured years of substantial tariff increases while simultaneously experiencing periods of severe supply unreliability. Households are now being asked to adapt once again to an entirely different tariff structure. There must be a limit to the assumption that every financial difficulty within the electricity sector can ultimately be solved by extracting additional revenue from those customers who remain connected and continue paying their accounts. Electricity pricing reform should protect responsible consumers, reward efficiency and conservation, encourage private investment in generation, enforce accountability for losses and bad debt, and ensure that subsidies are transparent. It should not simply rearrange electricity charges so that consumers continue paying essentially the same or more regardless of how effectively they reduce their dependence on the grid. I therefore respectfully request that these concerns be taken into account when the final Electricity Pricing Policy is determined.	CC

	2026-10-01 19:53:10	Not fully	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant)	I believe that the ANC government's cadre deployment and BBEEE policies have largely contributed to the extremely high real terms increases in unit electricity prices to the general public. They can substantially reduce costs by doing away with BBEEE and Cadre deployment. Just do it and introduce full merit based employment in this country. What the new electricity proposals will achieve, whilst people continue to lose jobs as a result of already sky high electric power prices, is a continued reduction in real economic growth. The government's policies are generally failing.	Bryan	retired
	2026-10-01 20:23:58	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	Currently, municipalities are adding extra "slush funds" /revenue and rate paying consumers are also absorbing the cost of electricity theft etc. The new bill just changes where the law abiding, lower and middle class citizen has to pick up the slack for businesses and the beneficiaries of the free electricity plan. It's not solving the nation's electricity fee crises. And frugality won't help under the new plan, which isn't fair at all. You always get what you incentivize. So a tiered system which rewards frugality and welcomes the extra input from solar power systems should be implemented, with the municipality slush funds still banned, and a financial assistance from the treasury for expanding the free electricity plan without the already overloaded rate-payers suffering more. So essentially a merge of the current system and some of the proposed changes that keeps the right people responsible to foot the right bills.	Adriel

	2026-10-02 06:43:20	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer, Prepaid Meter User	When we had load shedding, and then infrastructure failings, in order to keep our small business running I had to take a loan to install solar. That's a huge expense for me but I still need the grid and power is very expensive and the intermediate prepaid contractors add a hefty charge too, but they are needed as the municipalities won't be able to manage running the prepaid system alone. Why penalise if people can push power into the grid (I don't)? It's helps support all those households that get free power. And a flat monthly fee is crazy too. I don't see how any of these policies are going to stop illegal connections which is the biggest drain on the grid. It feels like the middle/lower income people who are trying to play by the book and do the best they can are the ones who get penalised the most. The ones at the bottom stay there unless the are skelm, and the group is getting larger. More middle income households are becoming low income as costs of living surge. Post 2020 the govt has done nothing to help small business owners, and especially those who were/are self-employed to financially recover.	Janine	self-employed

	2026-10-02 10:55:26	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer, Prepaid Meter User	Residents were encouraged to start using solar solutions with tax benefits. How can a government then turn around by penalizing the same or nullify the investment. I find it bluntly unfair to disregard residents' efforts to minimize energy consumption and save cost and save the climate. Isn't there enough tax being paid by the middle class for government to use for there responsibility to provide much needed energy to grow the economy?	Pieter	retired
	2026-10-02 10:59:05	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	As a solar user still connected to the grid, the fixed charge portion of my bill is completely dis-proportionate to my extremely low usage from the grid. I have no objection to paying a proportionate amount to cover the realistic costs of the meter and I would also like the option of disconnecting from the grid if that allowed me to waive the fixed charge altogether. It should not cost the user a Kings ransom to be able to connect a solar system to the grid and being able to proportionately 100% compensate a grid supplied Kwh for each Kwh exported to the grid.	Christopher	retired
	2026-10-02 11:16:46	Not fully	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Rooftop Solar / Prosumer		Chris	
	2026-10-02 11:18:53	Not fully	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME)	If we are to truly transform our society to one that works ethically, each person needs to do their part. Giving big business cuts and asking individuals to cover those costs allows big business to do less than their part in contributing, while gaining massive benefit. This further widens the poverty gap, creating social unrest and injustice, and has in history lead to civil war. Energy costs in South Africa are already much above what the average can afford, and these proposed revisions add to the problem. We need to find better solutions that empower as many people as possible. People are the best resource we have, and they need to be enabled to create a stable, happy society.	Daniel	business owner

	2026-10-02 11:31:51	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer	For many years Eskom has passed on the costs of its large scale corruption and high cost policies onto the ordinary consumer. The massive spike in eskom charges over the last 12 years is evidence. At the same time they failed in their mandate to supply power to the grid in a stable consistent manner, meaning many businesses and households spent a large amount of capital, buying other forms of power supply to supplement eskom power and remain in part a member of the first world. Now eskom only delivers fairly reasonable consistent power supply, because so many users have closed businesses or gone partially or totally offgrid. Eskom wants to continue getting paid the previous amounts of money, however has less power to sell. This means rather than adjust their business to suite the new model in a way that encourages growth, they try to extract more revenue from their sales. Change the way you do business, do away with BEE corrupt business practices, be accountable for your coal purchases and hire competent managers to oversee fieldworkers that are lazy for the most part. Maybe you will stabilize as people see the holes have been plugged in their boat. Positive future - continue on the same path you are on, negative future.	Jonathan	business owner

	2026-10-02 12:17:39	Not fully	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Residential Ratepayer (Grid Reliant)	I support Policy Positions 47, 42 and 43, particularly protecting paying consumers from excessive municipal mark-ups and from costs caused by theft, tampering and bad debt. I strongly oppose Policy Position 38 if it removes incentives for households to conserve electricity and introduces unavoidable fixed charges that disproportionately penalise low-usage consumers. I also oppose expanding preferential industrial pricing where the cost could ultimately be shifted onto households and small businesses. I support increasing Free Basic Electricity for households genuinely in need, but Policy Position 52 needs a sustainable and transparent funding mechanism. Essential social support should not simply become another hidden cost on already-paying consumers. Please ensure that electricity pricing remains fair, transparent, and encourages conservation rather than penalising it.	Mari	employed individual
	2026-10-02 12:23:00	Not fully	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Rooftop Solar / Prosumer	After solar users had to finance their own PV systems (without assistance from the State), it is unacceptable to want to burden them (or other rate payers) with additional fees, to cover written off bad debt, theft and non-technical losses.	Etienne	employed individual
	2026-10-02 12:44:09	Not fully	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes		Prepaid Meter User	Old age pensioners are burdened with escalating tariffs linked to property valuation or amount of units purchased per month which is grossly unfair. All Sassa pensioners should be entitled to paying the lowest tariff with subsided free basic units per month.	Walter	retired

	2026-10-02 13:00:28	Not fully	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Residential Ratepayer (Grid Reliant)	Frugal, low-volume consumers can no longer lower their utility bills by conserving electricity, as fixed network fees create a high, unavoidable monthly billing floor. I insist that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. The utilities should be required to absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers. Any revenue shortfall arising from Negotiated Pricing Agreements (NPAs) with private commercial smelters, must be funded exclusively via the fiscus (Department of Trade, Industry and Competition or National Treasury) and legally ring-fenced from standard consumer tariffs. Any expansion of Free Basic Electricity (FBE) above 50 kWh must be fully backed by the National Treasury Equitable Share grant before implementation, with an explicit ban on funding social allocations through municipal electricity surcharges. Full public disclosure and annual audited reporting must be made of all NPA discounts and inter-tariff subsidy transfers on consumer invoices (Policy Position 50(j)). NERSA must retain an energy-conservation tariff tier for non-indigent, low-to-middle-income consumers that does not penalise modest energy usage with large monthly service fees. The migration from IBRs to unbundled domestic tariffs must be phased in gradually over a minimum of five years, with mandatory local affordability impact assessments. NERSA must automatically reject any municipal tariff application that is not supported by a fully audited, publicly accessible Cost of Supply (CoS) study (Policy Position 25(a)). There must be an immediate statutory ring-fencing of all municipal electricity revenues into dedicated maintenance accounts, legally prohibiting councils from diverting electricity revenue to fund unrelated municipal wage bills or deficits. National Treasury must set a hard, uniform percentage cap on the Municipal Surcharge on Electricity (MSOE) to prevent local councils from using surcharges to circumvent NERSA tariff controls. NERSA must immediately enforce Policy Position 43(b) by clawing back and disallowing any tariff requests where municipal distribution losses exceed national regulatory standards (typically 7%–10%). Paying consumers must be legally shielded from funding municipal arrears and Eskom debt defaults through local tariff mark-ups or surcharge adjustments. Licensees must implement strict, automated tamper detection, independent metering audits, and universal prepaid infrastructure in non-paying areas before requesting any tariff increases from compliant ratepayers.	Everett	retired
	2026-10-02 13:04:54	Not fully	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes		Residential Ratepayer (Grid Reliant)	Policy Position 33: Strict Rules for Prosumers & Rooftop Solar – do NOT agree. Should not be forced to pay TOU tariffs or standard DuoS and TUoS network charges. Should just be charged for Kw used as they would if they were completely reliant on the grid. Power exported back to the grid should be paid for by Eskom at a fair and reasonable price but being charged network fees on EXPORTED electricity is, quite frankly, ridiculous and spectacularly unfair. Policy Position 38: Restructuring Domestic Tariffs & Scrapping Standard IBR – do NOT agree. As a pensioner about to change to the lower block rate tariff in order to try to afford electricity, it seems very unfair to low income (but not indigent) households who struggle as much to make ends meet. Policy Positions 50 – 54: Subsidies, FBE Expansion and NPAs – do not fully agree. Losses on FBE will have to be funded by households already struggling to keep their heads above water financially. NPA's should not be expanded as, once again, WHO will pick up the losses? Households again?	Sharon	retired

	2026-10-03 13:10:10	Not fully	All of the above	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Prepaid Meter User	I do not support the Draft Revised Electricity Pricing Policy in its current form. While I support greater transparency, accountability, targeted assistance for vulnerable households, limitations on municipal abuse of electricity revenues, and measures to prevent excessive losses from theft being passed to paying consumers, I believe the policy requires significant amendment. The primary objective of electricity policy should be to provide reliable electricity at the lowest sustainable cost possible to households, ratepayers, pensioners, small businesses and taxpayers. South Africans have already paid heavily for failures within the electricity sector through taxes, rising tariffs, load shedding and substantial private investment in generators, solar systems, batteries and other backup solutions. Consumers should not be expected to continue funding the consequences of government, Eskom or municipal failures. I oppose the removal of tariff structures that reward lower consumption. Consumers who conserve electricity reduce demand on the grid and should continue to benefit financially from doing so. Those who use less electricity should generally pay less than those who use more. I also oppose excessive fixed monthly charges and connection fees. Any such charges should be limited, transparent, cost-reflective and strictly necessary. Fixed charges must not become a mechanism to guarantee revenue regardless of usage. Households and small businesses should not be required to subsidise discounted electricity supplied to large industrial users. Nor should paying consumers be expected to absorb the costs of electricity theft, non-payment, bad debt, debt write-offs, inefficiency or poor revenue collection. I strongly support measures preventing municipalities from using electricity tariffs as a hidden source of funding for unrelated expenditure. Consumers deserve transparent pricing and honest accounting. I support assistance for genuinely indigent households and believe pensioners should also qualify for a basic electricity allowance. However, such support should be funded transparently and not through hidden cross-subsidies or higher tariffs imposed on other consumers. I strongly oppose policies that penalise rooftop solar, battery systems and other alternative energy investments. Consumers who invested their own money to reduce pressure on the grid should be treated as partners in the electricity system, not as a source of additional revenue. Consumers who export surplus electricity to the grid should be permitted to offset that electricity against their consumption, including applicable charges, and should receive fair compensation where they generate more electricity than they use. If the grid receives value from privately generated electricity, the consumer supplying that electricity should receive value in return. In summary, I oppose any policy that increases costs for households, discourages energy conservation, penalises private generation, transfers the costs of inefficiency or non-payment to compliant consumers, or uses electricity pricing as a hidden taxation mechanism. Electricity policy should put consumers first, reward responsible behaviour, encourage private investment in energy generation, and ensure that ordinary South Africans are not required to pay for failures they did not create. My pool pump and heatpump are set to use midday, cheap electricity. By charging me punitive expensive Tariff wil have me go off the grid. Then you want to slap me with another punitive fixed cost for just having access to a municipal cable? I have been paying for 40 years to have that cable. The original cost of laying that cable should be covered by now? Stop this silly unfair theft or we will revolt against you.	DEON GOOSEN	business owner
	2026-10-03 14:54:36	Not fully	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Residential Ratepayer (Grid Reliant)	The proposed bill, as it stands, will seriously impact the majority of urban residents (the majority of South Africans), making electricity even more expensive. Selling power to large users at below costs simply means someone else must end up paying for ther power - the average citizens! Instead if fixing the root cause of Soth Africa's power problems - Eskom's inefficeincy - this bill aims to make the citizens pay for it.	Carol	self-employed
	2026-10-03 15:05:29	Not fully	All of the above	Municipal Hidden Surcharges & Diverted Electricity Revenues	Residential Ratepayer (Grid Reliant)	As usual, instead of addressing the real reason for the problem - Eskom's inability to put their house in order and be efficient - this bill looks to penalise the residents of South Africa. Upping the threshold for free electricity and charging bulk uses at below production cost simply means someone else has to make up the short fall - the ordinary citizens! The average household in this country is already facing severe financial pressure, what with the spiralling cost of living , food fuel, etc. and now the government want to make them pay for a basic service they should be providing. Enough!!	Patrick	self-employed

	2026-10-05 10:22:10	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	1. Minimal capacity & standby charges to maintain the network only - access to electricity is not a luxury. It is a basic human right and should be provided at the lowest cost possible. - old infrastructure has already been depreciated - new infrastructure will be built on PPPs and the proof of actual costs is a guess based on Eskom and municipalities previous inefficiencies while private companies will need reasonable IRRs. Where is the price cap?- potentially holding the country hostage to profit-seeking, continued inefficiencies and corruption based on returns at high cost. - transmission is still a strategic monopoly (even with concessionaires, there is no choice in using a different grid)- it should be considered a basic and WELL administered utility enabling growth and development of the country and its people. Not corporations. - would encourage further private solar installation (reduced pressure in the fiscus, reduce the risks of power shortages for when the coal power stations come to the end of life , improve consumer affordability of energy and improves environmental and health outcomes) - avoid penalising the poor disproportionately 2. Billing transparency - how else can a consumer evaluate the value of their services? - Eskom and other service providers (municipalities and concessionaires) need to be accountable and clear in their costing) - could drive better consumer behaviour (electricity saving, solar installation, time shifting,) 3. Double billing and net credit for prosumers - what kind of behaviour do we want to drive? Excessive and careless electricity usage which is seen to come only at a financial cost to the user? Or a communal one where those who have abundant are encouraged share without penalty and resulting in competitive lowered costs and greater access and productivity nationally?	Natascha	employed individual
	2026-10-05 10:42:00	Not fully	Double Network Fees (DUoS) on Solar Prosumer Exports		Residential Ratepayer (Grid Reliant), Rooftop Solar / Prosumer, Prepaid Meter User	Rooftop solar should be subsidized by Eskom aa without it we will be back to loadshedding. The proposals will push more people completely off the grid as all the extra pricing from Eskom has already done. All unjust pricing tariffs will have consequences. In this case more people leaving the grid.	Hennie	employed individual

	2026-10-05 11:16:12	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	No to the Proposed Electricity Tariff increases for Residential Use. The South African Government can no longer rely on the Public to pay for its Revenue Shortfalls. The South African Government therefore has got to adjust its Economic System to cater for a Basic Survival Mode. A. No to Mandatory Fixed Charges to Residents for monthly Network and Capacity Connection fees plus a flat Energy Rate. a. How can Residents assess and control their Electricity usage and what is charged for the Network ? b. The problems the Public already has to cope with include : 1. Existing high Cost of Living, existing high Rates & Taxes and unemployment. 2. Inadequate Government Security to combat increase in Crime due to corruption, unemployment and drug abuse. 3. Inadequate Public Communication / Assistance with Government Departments. 4. Expensive Digital equipment and use charges. 5. Inadequate maintenance of Municipal Infra-structure of Services and Facilities. c. Most South Africans today can barely afford their basic monthly needs. It is therefore essential not to scrap " Pay Less if you Conserve " Stepped Tariffs [Policy Position 38]. B. No to Discounted Industrial Deals [Policy Position 54] with the Public having to pay the shortfall through Retail Tariffs. Due to International high Cost of Oil and South Africa's reliance on Import Products, it is necessary for Government to : a. Develop Nuclear Energy for Domestic Use. b. Create Jobs by encouraging the development of Commercial and Industrial Enterprises in South Africa. Ensure competent Supervisors at all levels of Management from Street Cleaners to Research, to ensure quality and reduction in Cost. c. All Gambling Profits to be heavily taxed to ensure increase in Government Revenue. C. No to Expanded Free Electricity [Policy Position 52] from 50 kwh to 300 kwh per month for Indigent Households. This increase to be paid by the Public, is unacceptable as the Public already can barely afford their own basic needs. a. To assist the Unemployed & Homeless, it is necessary for Government to establish the Kibbutz System where employment can be offered with the establishment of various Agricultural / Commercial and Industrial Activities such as for food, clothing, repairs & recycling waste. b. To supply " Sun Stoves " for those in need. Government is responsible to look after its People and make South Africa less reliant on Imports. D. No to Hidden Municipal " Slush Funds " [Policy Position 47]. E. It is essential to exclude Stolen Power from Bill [Policy Position 42 & 43], as the Public cannot and should not have to pay for Distribution Losses such as for Cable Theft and Meter Tampering.	Hendrika	retired

	2026-10-06 20:40:05	Not fully	All of the above	Double Network Fees (DUoS) on Solar Prosumer Exports	Prepaid Meter User	The one who uses should pay fairly for what they use. Lowering costs for one group and raising the cost for another is unjust. Lowering the cost for one user without raising the cost for another user would be fair if the bulk use of power lowers the total service delivery costs for the user in which the cost is lowered. But such a price reduction must be financially viable and justified and not be passed on to other users. Those who contribute to the power system through solar will also only be encouraged to do so if it is financially beneficial. Cost implications of being connected to the grid must be carefully considered as these "power suppliers" and "customers" will be lost and cause further financial strain to Eskom if a financial gain is not achieved for the user, while covering real maintenance costs used to keep such users connected and serviced by Eskom. 	2026-10-07 14:53:33	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer, Prepaid Meter User	Demand that NERSA impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. Insist that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. Require utilities to absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers. Insist that solar export credits be eligible to offset the total monthly municipal utility bill, including fixed network and customer service charges. Require fair, cost-reflective feed-in credit rates that reflect the true economic value of daytime peak/standard clean power injected into local distribution networks.	Friedrich	retired
	2026-10-07 16:30:23	Not fully	All of the above	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers	Residential Ratepayer (Grid Reliant)	Folk can no longer afford to pay for Eskom's (and other SOE's) ongoing inefficiency, corruption and fleecing of citizens. This government (particularly the ANC) has long proven it cares nothing for SA or SA citizens, or for building a working economy. Privatise and imprison those who are known to be little less than outright criminals.	Peta	

	2026-10-07 16:45:57	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Stance: Object / amend. I support cost transparency and a workable wholesale market. I object to the bill architecture this draft imposes on households and small businesses. 1. Cap fixed capacity and standby charges The draft moves distributors off volume risk by billing a monthly network or capacity charge whether or not electricity is used, and Policy Position 15 adds a wholesale standby charge for backup generation. For a low-use home, a pensioner, or a small firm that already cut demand, that charge becomes the bill. People who installed rooftop solar and batteries did so with private savings because the grid failed them. A high unavoidable monthly floor treats that response as free-riding rather than as demand the system no longer has to serve at peak. Cost recovery is legitimate. Unlimited fixed recovery is not. NERSA should be required to cap fixed network and capacity charges so they cannot exceed 15 to 20 percent of an average domestic bill. Low-use and energy-conserving households need a protected tariff. Utilities should first recover costs through lower losses and better collection, not by shifting all volume risk onto captive customers. 2. Do not tax solar exports twice Grid-tied prosumers must pay Distribution and Transmission Use-of-System charges on imports and again on exports. Export credits are limited to the utility's avoided purchase cost, and they may not offset network or retail charges. An extra retail fee is added for the meter. Daytime embedded generation reduces local losses and substation loading. Charging the network on the way in and on the way out ignores that value and invites grid defection, which leaves fewer customers to pay for the same wires. Remove DUoS and TUoS on exported energy under Policy Position 33(d). Allow export credits to offset the full municipal bill, including fixed charges. Set the credit at the real value of daytime power injected into the local network, not only the cheapest avoided purchase. 3. Smelter discounts and expanded free basic power must not sit on the retail tariff Negotiated Pricing Agreements give energy-intensive users, including ferrochrome smelters, concessional power. The draft also contemplates lifting Free Basic Electricity from 50 kWh toward 200–300 kWh. Policy Position 50 then says all connected users contribute to subsidies. Industrial jobs and indigent support matter. Neither is a reason for paying households and SMMEs to fund private smelter discounts or an unfunded social expansion. Any NPA shortfall must be financed by the fiscus, through the Department of Trade, Industry and Competition or National Treasury, and ring-fenced from standard tariffs. Any FBE increase above 50 kWh must be fully backed by the equitable share before it starts, with a ban on funding it through municipal electricity surcharges. NPA discounts and subsidy transfers should be disclosed annually and audited, as Policy Position 50(j) already points toward. 4. Do not scrap inclining block tariffs overnight Policy Position 38 removes inclining block rates for ordinary domestic customers and replaces them with a lifeline tariff only for indigent connections under 60 amps, plus a flat energy rate and fixed charges for everyone else. Three-phase homes move to mandatory time-of-use. That removes the incentive and the ability to stay in a cheaper block. Shared meters, retirees and lower-middle-income homes will see an immediate jump. Keep a conservation tier for non-indigent low-to-middle users. Phase any move to fully unbundled domestic tariffs over at least five years, with a published affordability assessment. Smart meters and time-of-use options must not carry an upfront capital penalty for the household. 5. Ring-fence municipal electricity revenue Policy Position 47 correctly stops municipalities from stacking a new surcharge on top of opaque surpluses, and it ties NERSA's base tariff to an audited cost of supply. That reform only works if it is enforced. Councils have long used electricity markups to fund salaries and other deficits while networks decay. NERSA should reject any municipal tariff application that lacks a public, audited cost-of-supply study. Electricity revenue must be ring-fenced for network maintenance and supply, not for unrelated wage bills. National Treasury should cap the Municipal Surcharge on Electricity so a council cannot dodge NERSA by relabelling the markup. 6. Paying customers must not fund theft and bad debt Policy Positions 42 and 43 require benchmarks for losses and bad debt, and they say amounts above the standard are unacceptable and must be cut from allowed revenue. Enforce that immediately. Where distribution losses exceed the regulatory band, commonly about 7 to 10 percent, the excess must be disallowed, not recovered from compliant customers. Law-abiding households already pay for their own use. They should not also pay for bypassed meters and uncollected debt. What I support I support unbundled bills that show generation, network and retail separately, a five-year path to cost-reflective tariffs based on real cost-of-supply studies, equal scrutiny of transmission cost-sharing, the end of hidden municipal markups, and loss benchmarks that utilities must meet. Competitive wholesale trading is the right direction after the Electricity Regulation Amendment Act. It does not require a pricing policy that raises the monthly floor for frugal homes, double-charges private solar, or hides industrial concessions inside the household tariff. Amend those positions before the policy is approved.	Bapi	unemployed individual

	2026-10-09 11:29:39	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Prepaid Meter User	This policy is biased towards helping industry instead of helping the ordinary citizens of this country. Life in general has become so expensive and now it is expected of the ordinary citizen to fund industry? How is charging people a set tariff before even paying for electricity usage, or charging people for owning solar power systems anything but trying to get more money from people? Fixed charges in addition to normal electricity usage will greatly affect the ordinary citizen's standard of living. Then you have the solar power charges which are in addition to the money that is paid by citizens to be installed. Solar power which is a renewable source of energy while grid electricity is powered by coal which is non-renewable and harmful to the environment - so citizens are essentially being punished for using renewable energy (which lowers carbon emissions and which our country agreed to lower) all because of coal powered plants, industry and people trying to make revenue?	Caitlin	
	2026-10-09 14:46:42	Not fully	Passing Theft, Non-Technical Losses & Bad Debts onto Paying Consumers		Prepaid Meter User		Hester	retired

						FORMAL OBJECTION: REVISED ELECTRICITY PRICING POLICY (EPP 2026) I formally object to the proposed Revised Electricity Pricing Policy (EPP 2026), particularly the provisions affecting residential and small-business consumers who have invested their own capital in rooftop solar generation and battery storage. South African consumers have faced years of escalating electricity tariffs and unreliable supply. Many have invested substantial amounts in solar systems to reduce electricity expenditure, improve energy security and limit dependence on the grid. The proposed policy threatens to undermine these investments by introducing or expanding fixed network charges, capacity-related costs and other charges that remain payable even when consumers substantially reduce their grid electricity consumption. 1. FIXED NETWORK CHARGES - POLICY POSITION 30 I acknowledge that maintaining an electricity connection involves legitimate costs. However, fixed charges must reflect actual, efficient network costs and not become a mechanism for recovering revenue lost when consumers purchase less electricity. Consumers who reduce grid demand should receive corresponding financial benefits. Network charges must be transparent, independently verified and proportionate to the capacity genuinely required. 2. STANDBY COSTS - POLICY POSITION 15 Customers with solar and battery storage do not necessarily impose the same standby requirements as customers entirely dependent on the grid. Standby costs should reflect actual system requirements and must not duplicate existing network or capacity charges. 3. SOLAR EXPORTS - POLICY POSITION 33 The proposed net-billing arrangements may undervalue electricity exported by private generators while imposing additional network and transaction charges. Export compensation should reflect demonstrable avoided electricity and network costs. Any export-related charges must be justified, proportionate and independently regulated. 4. PROTECTION OF EXISTING INVESTMENTS Consumers invested in solar systems based on expected electricity savings and reasonable payback periods. Substantial changes to fixed charges and export compensation could materially undermine these investments. Existing installations should receive appropriate transitional protection, with gradual implementation and adequate advance notice. 5. AFFORDABILITY AND SMALL-BUSINESS SUSTAINABILITY Increasing unavoidable monthly electricity charges will place additional pressure on households and small businesses, even where they have successfully reduced grid consumption. The Department should publish realistic bill-impact assessments comparing customers with and without solar, including battery storage and low-grid-consumption scenarios. 6. REQUESTED AMENDMENTS I request that the policy: - Limit fixed charges to independently verified, efficient network costs. - Recognise measurable reductions in grid demand and the benefits of private solar generation. - Provide fair, transparent compensation for exported electricity. - Prevent unjustified duplication of network, capacity and standby charges. - Protect existing solar investments through transitional arrangements. - Require public affordability assessments and independent NERSA scrutiny before implementation. CONCLUSION I accept that electricity infrastructure must remain financially sustainable and that connected consumers should contribute fairly towards its costs. However, utility financial sustainability must not be achieved by substantially eroding the savings consumers have independently funded through solar generation and energy efficiency. Consumers should not be financially penalised for reducing electricity consumption and grid dependence. I therefore formally object to the proposed policy in its present form and request that these provisions be reconsidered and amended before finalisation.

I OBJECT to the Revised Electricity Pricing Policy (EPP 2026) in its current form (Rejects mandatory fixed grid capacity fees and standby charges on solar and low-usage homes, punitive double network fees on solar exports, the elimination of stepped block tariffs for standard households, and the risk of retail consumers funding industrial smelter discounts or unfunded social expansions). I agree with protecting people from municipal corrupt practices	Franco	business owner
	2026-10-13 16:27:44	Not fully	All of the above	Cross-Subsidising Smelter Discounts (NPAs) & Expanded FBE on Tariffs	Rooftop Solar / Prosumer	I am totally against and protest that smelters have subsidized fees. This is grossly unfair, that the small household consumer is expected to foot the bill. No, those smelters, mines etc rake in the millions so they must also cough up an pay for all their electricity consumption. I'm also appalled that Eskom's inefficient collections and prosecutions of illegal connections and non-payers is supposed to also be burdened onto already backbreaking household incomes. I have not yet returned to my pre-COVID salary, my husband is unemployed, and I will not stand for footing the bill for people who do not pay, neither for those robbing the system for illegal connections, and most certainly do not have enough income to foot mass-user's bills either. I am also dead against municipal fees and addons when it is Eskom who should be contacted directly. This will curb municipal maladministration and also lessen the burden on municipal resources. What I do agree with though, is that those still connected to the grid should be paying a reasonable monthly fee to remain on the grid, since this is the only way that maintenance can happen effectively. 	2026-10-27 14:02:53	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Prepaid Meter User	It is not fair to penalize consumers for finding, and paying for, other sources of electricity. Why should consumers who are taking strain off the grid be charged for doing exactly what has been asked of consumers for many years - "use less electricity to avoid putting strain on the grid and prevent loadshedding"? As a country we have been forced to put up with unreliable output from Eskom and have suffered things like loadshedding as a result of poor management and maintenance of infrastructure. When substations trip, we are left without electricity for hours and sometimes days on end before our electricity is restored. How then can a mandatory standby charge be justified when the whole reason for using the grid as a backup source of electricity is because it cannot be relied on to provide uninterrupted electricity? What are the ramifications for the grid not being available to provide electricity should they be needed as a backup system? Will charges be deducted from a consumers account when they need to fall back onto the grid when alternative sources of electricity have depleted and the grid is also down?	Tenille	
	2026-10-27 17:43:21	Not fully	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant)	Demand that NERSA impose a strict statutory cap on fixed network and capacity charges, ensuring fixed availability fees cannot exceed 15% to 20% of an average domestic electricity bill. Insist that low-usage and energy-conserving households be protected from fixed capacity charges that disproportionately penalise lower-middle-income families. Require utilities to absorb fixed infrastructure costs through internal operational efficiencies rather than shifting revenue risk entirely onto captive consumers.	Angelique	employed individual
	2026-10-29 01:59:44	Not fully	Elimination of Inclining Block Tariffs (IBRs) for Middle-Income Homes		Residential Ratepayer (Grid Reliant)		Josephine	retired
	2026-10-29 09:13:55	Not fully	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Residential Ratepayer (Grid Reliant)	Network fees should not be charged on exported electricity because that seems to me to amount to a double charge for using the network. Use of the grid at night should not be penalized so long as the usage remains below a certain threshhold, perhaps equivalent to the amount of free electricity provided to people who cannot afford electricity. In the case of free electricity provided to people who cannot pay, the breaker amperage should be 10 A or a maximum of 20 A, because this is all a paying customer like myself needs, and opportunities for the theft of large amounts of electricity need to be curtailed. 	2026-09-25 14:56:23	Yes I do	All of the above	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes	Residential Ratepayer (Grid Reliant), Prepaid Meter User	1. Introduction and summary of position I submit these comments personally, as a Chartered Accountant and paying residential consumer. I support the Draft Policy's objectives of transparency, unbundled billing and ring-fencing of electricity revenue, but not its cost-recovery mechanisms, which shift a growing share of system costs onto the shrinking base of households and small businesses that already pay in full. Tariffs have risen by roughly 907% since 2007 against inflation of about 150%. I object to the proposals in sections 3 to 6 and support those in section 7. 2. Guiding principle: cost-reflective pricing must be applied consistently Cost-reflectivity must be applied consistently: each customer pays the efficient cost of the service it uses. It cannot justify higher fixed household charges while below-cost industrial tariffs and expanded free allocations are recovered from other customers. Support for indigent households is legitimate, but must be funded transparently from the fiscus, not recovered as a hidden levy on other households' bills. A tariff prices a service; it is not a tool for income redistribution. 3. Objection 1: Mandatory fixed network and capacity charges for all households The Draft Policy shifts residential billing towards mandatory monthly network and capacity charges payable regardless of consumption. This is regressive, penalising low-consumption households that already economise; it weakens the incentive to conserve; and, unless strictly limited, it becomes guaranteed revenue that shields utilities from inefficiency and duplicates existing municipal charges. I request that: (a) fixed charges be limited to demonstrably fixed, customer-specific costs set by a NERSA-approved cost-of-supply study, and capped as a percentage of the average bill; (b) existing municipal basic and availability charges be absorbed so that no cost is recovered twice; and (c) any fixed charge be phased in over at least three years, with its impact published in advance. 4. Objection 2: Treatment of rooftop solar and embedded generation exports Embedded generators would be placed on compulsory Time-of-Use tariffs, pay network charges on both imports and exports, and be barred from offsetting export credits against fixed charges. Households invested in solar because the State could not guarantee supply, reducing peak demand at no cost to the fiscus. Exported electricity is largely consumed by neighbours, who already pay the network charge on it, so charging exports double-counts it. Retrospective changes undermine regulatory certainty and will accelerate grid defection. I request that: (d) network charges be levied only on net imports, and export credits be permitted to offset the full account, valued at no less than the utility's avoided cost of energy; (e) installations registered before the final policy be grandfathered on existing terms for at least ten years; and (f) Time-of-Use tariffs be optional. 5. Objection 3: Expansion of below-cost Negotiated Pricing Agreements for industrial users The Draft Policy contemplates expanding below-cost Negotiated Pricing Agreements (NPAs) for energy-intensive users, including smelters. Unless funded externally, the shortfall is recovered from households and small businesses, contradicting the Policy's own cost-reflectivity principle. Industrial support is a matter for industrial policy and the budget, and no cost-benefit analysis has been published. I request that: (g) any below-cost NPA be funded in full from the national budget or the beneficiary, never through cross-subsidy in other customers' tariffs; (h) the terms of every NPA, including the discount, annual subsidy value, duration and employment commitments, be published and reported annually to Parliament; and (i) every NPA carry a sunset date, performance conditions and a clawback, with NERSA confirming in each tariff determination that no NPA shortfall is included in other customers' allowed revenue. 6. Objection 4: Expansion of Free Basic Electricity without additional funding Increasing Free Basic Electricity (FBE) from 50 kWh to as much as 300 kWh per month without additional grant funding is an unfunded mandate that will fall on strained municipal finances or on paying consumers, driving them off the grid. At that level it becomes a general entitlement, and the Minister has confirmed that no targeted assessment of tariff impacts on households has been done. I request that: (j) any FBE increase be conditional on a matching increase in the Equitable Share or a dedicated grant, preceded by a published financial impact assessment; (k) FBE be restricted to verified indigent households through prepaid metering, with regular re-verification; and (l) the full cost of FBE be disclosed separately and not recovered through other customers' tariffs. 7. Support: Prohibition of hidden municipal surpluses and of passing on theft and bad debt I support the prohibition on undisclosed municipal electricity mark-ups and on recovering theft, illegal connections and non-payment from paying customers, subject to the conditions that: (m) electricity revenue be ring-fenced in separate, audited accounts, with any surplus transfer disclosed and capped by NERSA; (n) non-technical losses and bad debt be excluded from allowed revenue, with NERSA empowered to reject non-compliant tariff applications and impose penalties; and (o) these protections not be undone by the measures in sections 3 to 6. 8. Conclusion I request that the Department revise the Draft Policy accordingly: applying cost-reflectivity consistently, funding all subsidies transparently from the fiscus, showing every cross-subsidy on itemised bills, and publishing a socio-economic impact assessment before adoption. I would welcome confirmation of receipt.	Theuns	employed individual

	2026-09-28 07:50:28	Yes I do	All of the above	Double Network Fees (DUoS) on Solar Prosumer Exports	Residential Ratepayer (Grid Reliant), Small / Medium Business Owner (SMME), Rooftop Solar / Prosumer	I do not fully support EPP 2026. I write as a rooftop solar owner. Support: PP42/43: Losses and bad debt above NERSA benchmarks must be excluded from allowed revenue. Benchmarks must be published, audited annually, and never recovered through surcharges or service fees. PP47: I support ending hidden municipal markups. Electricity revenue must be ring-fenced for network maintenance, and any surcharge must be itemised and capped. Object: PP33 (export charges): Charging network fees on both imports and exports double-charges one connection. Where exports cause real network costs (reverse flow, voltage rise), identify them through hosting-capacity studies and charge on that basis, not as a blanket fee. Export credits must be allowed to offset the full bill, including fixed charges. PP11/15/27/30 (fixed and standby charges): Fixed charges must be based on an audited, public Cost of Supply study, with a regulated limit on the fixed share of a domestic bill and a phased introduction. PP38 (inclining block tariffs): Removal requires at least a five-year transition and published bill-impact modelling. PP50/54 (NPAs and Free Basic Electricity): Smelter discounts and FBE expansion must be funded by the fiscus and kept separate from consumer tariffs, with annual audited disclosure. 	2026-09-28 16:02:44	Yes I do	Municipal Hidden Surcharges & Diverted Electricity Revenues		Residential Ratepayer (Grid Reliant)	Public Comment on the Revised Electricity Pricing Policy (EPP) 2026 I welcome the opportunity to comment on the Revised Electricity Pricing Policy 2026. I understand that South Africa needs a sustainable electricity-pricing system that allows Eskom, municipalities and other electricity providers to recover the legitimate costs of maintaining and developing the electricity network. However, I am concerned about how the proposed changes could affect ordinary working households and families with limited disposable income. My annual income is approximately R172,000, and I have four people depending on my income. This means that any increase in unavoidable electricity costs would have a direct impact on my household's ability to afford other basic necessities such as food, transport, education, housing and healthcare. My concerns are as follows: 1. Fixed electricity charges I am concerned about the introduction or expansion of fixed network and connection charges. A household should not face a significant increase in its electricity bill simply because it remains connected to the electricity grid. One of the ways households currently manage their finances is by reducing electricity consumption when money is limited. If a larger portion of the bill becomes a fixed charge, households may lose the ability to reduce their electricity expenses through responsible consumption. I therefore request that fixed charges for residential consumers be carefully limited and that lower-income households receive appropriate protection. 2. Affordability for working households Working does not necessarily mean that a household has sufficient disposable income. Many working people support children, spouses, parents or other dependants. I request that the Department assess the impact of the proposed tariff structure on households according to household income and number of dependants, rather than assuming that all formally employed households can absorb additional electricity costs. 3. Protection for households that use less electricity Consumers should not be financially disadvantaged for making an effort to save electricity. Households that reduce consumption, use energy-efficient appliances or install solar should continue to have a meaningful opportunity to reduce their electricity bills. I therefore request that the final tariff structure preserves meaningful savings for consumers who reduce their electricity consumption. 4. Rooftop solar and electricity exports I understand that consumers using the electricity grid should contribute towards maintaining the network. However, consumers who invest their own money in solar systems should not be discouraged from reducing pressure on the national electricity system. Any network charges applicable to solar users should be reasonable, transparent and proportionate. Consumers should also receive fair and transparent compensation for electricity exported to the grid. 5. Free Basic Electricity If Free Basic Electricity is increased, I support the principle of providing greater protection to vulnerable households. However, I am concerned about the possibility that the cost could indirectly be transferred to other ordinary electricity consumers. The Government should clearly explain how any expansion of Free Basic Electricity will be funded and should ensure that working households who are not classified as indigent are not unfairly burdened with the additional cost. 6. Transparency regarding the actual cost to consumers Before the policy is implemented, consumers should be provided with clear examples showing how the proposed tariff structure could affect different households. For example, the Department should publish estimated bills for households using 100 kWh, 200 kWh, 350 kWh, 500 kWh and 750 kWh per month, including all fixed, network, capacity and energy charges. Consumers should be able to compare their current bill with the proposed system before the final policy is adopted. 7. Protection against excessive increases I request that the final policy include safeguards preventing electricity tariff restructuring from resulting in unaffordable increases for ordinary households. Any new charges should be phased in gradually where necessary, with particular consideration given to households with low and moderate incomes and multiple dependants.	HEROLD	employed individual
	2026-09-28 16:05:34	Yes I do	Mandatory Fixed Grid & Standby Charges on Solar and Low-Usage Homes		Rooftop Solar / Prosumer	This is exactly why people need to read the actual Government Gazette instead of being frightened by sensational headlines. The Revised Electricity Pricing Policy is still a draft open for public comment, not a final tariff regime. Government has extended the comment deadline to 28 October 2026. Government of South Africa +1 There are legitimate concerns here, particularly around cost-reflective tariffs, fixed capacity/network charges and how solar customers will be treated. Those deserve serious scrutiny. Government itself says the policy is intended to introduce more transparent and cost-reflective tariffs. Department of Employment But Dear South Africa needs to stop presenting worst-case consequences as if they are already guaranteed. For example, the claim that households will pay for an expanded 300 kWh Free Basic Electricity allocation is not established. The published policy does not guarantee 200–300 kWh; funding is still subject to government budget decisions. Dear South Africa +1 And if we are going to talk about electricity costs, let's talk about the fundamental issue: South Africans who pay their bills should not continually be expected to carry the financial consequences of electricity theft, municipal inefficiency, corruption, bad debt and poor management. In fact, the draft contains provisions intended to prevent excessive theft and bad debt from simply being passed on to compliant consumers, and it proposes greater transparency around municipal electricity surcharges. Dear South Africa So yes — read the policy, challenge it and submit comments. But don't manufacture certainty where there isn't any. We need evidence-based opposition, not fear-based campaigning. And government needs to understand something very clearly: people who invested their own money in solar to reduce their dependence on the grid should not be treated as an ATM to compensate for failures elsewhere in the electricity system. If these reforms are genuinely about a sustainable electricity sector, then the first priority should be efficient management, transparent pricing, accountability and protecting paying consumers — not simply finding new ways to extract more money from them. And let me make one thing absolutely clear: I invested my own money in solar precisely so that I can generate and use my own electricity. I will not accept being treated as though I should be charged for the sunlight falling on my own property. If I am not using Eskom’s electricity, I should not be paying an electricity consumption charge for power I generated myself. I understand that a grid-connected customer can legitimately incur charges for access to and use of the electricity network — that is different from being charged for the electricity my own solar system generates. The sun belongs to nobody. I paid for the equipment, installation and maintenance. I will not be made to pay the state for the sunlight.	Elmarie	retired
