	2025-09-15 14:26:09	No I do not	Security and Trust		Michael			
	2025-09-15 14:44:08	No I do not	Security and Trust		John	Western Cape		retired
	2025-09-15 14:51:45	No I do not	Security and Trust	Even more easy to rig elections as was seen in the USA by digital manipulation of results	Gert	Gauteng		employed individual
	2025-09-15 14:54:02	No I do not	Security and Trust		Arlette	Western Cape		retired
	2025-09-15 14:55:20	No I do not	Security and Trust	Electronic voting is too open to fraud.	Barry	Western Cape		retired
	2025-09-15 14:58:58	No I do not	Security and Trust	I do not believe electronic voting is secure. Results are manipulated as seen in the US elections. I think our current system is sufficient.	Ryan	KwaZulu -Natal		business owner
	2025-09-15 15:05:27	No I do not	Security and Trust		Kate			
	2025-09-15 15:07:10	No I do not	Security and Trust	It is common knowledge that the SA government will mess up anything electronic. Try their other systems. Now we expect them to not tamper with electronic votes? No.	Gary	Western Cape		
	2025-09-15 15:09:31	No I do not	Security and Trust		Marcelle	Western Cape		unemployed individual
	2025-09-15 15:15:48	No I do not	Security and Trust	We have Zero trust in the implementation of these systems that are run by the State. The intent is clearly nefarious. These digital systems are not secure. There is hacking at the highest level. The driver behind these systems is the UN which has been exposed as implementing the NWO communism. They are an unelected unaccountable bunch of bureaucrats.	John	Gauteng		retired
	2025-09-15 15:17:54	No I do not	Security and Trust	I don't trust the system.	Therese	Gauteng		unemployed individual
	2025-09-15 15:21:52	No I do not	Security and Trust		Johan	Gauteng		retired
	2025-09-15 15:26:33	No I do not	Security and Trust		Matthew	Western Cape		employed individual
	2025-09-15 15:32:55	No I do not	Security and Trust	We all saw the joke the former elections in the US turned out to be and the fraud that was committed. Do we really want to give rise to more fraud in a country already ridled with it?	David	Western Cape		employed individual
	2025-09-15 15:32:55	No I do not	Security and Trust	E-fraud. Corruption is the norm in the word, especially in this country.	Annelien	Gauteng		employed individual
	2025-09-15 15:37:42	No I do not	Security and Trust		Rodney	Western Cape		retired
	2025-09-15 15:41:02	No I do not	Security and Trust		Eric Leonardus	Gauteng		business owner
	2025-09-15 15:44:17	No I do not	Security and Trust	I don't trust the ANC, I don't trust anything that leans toward centralised control. Electronic voting systems are a gift to any nefarious group hoping to steal an election. Absolutely not.	Michael			
	2025-09-15 15:45:43	No I do not	Security and Trust	How much is this going to cost the taxpayers? We know how it worked in America, so NO	Debra	Western Cape		retired
	2025-09-15 15:50:52	No I do not	Security and Trust		Sue	Gauteng		retired
	2025-09-15 15:51:54	No I do not	Security and Trust	It has been proven world over, particularly in the USA that electronic voting systems are fraught with problems and potential hacking or manipulation of the algorithms biasing one party or one person over another. Paper ballets are the better option and the chain of custody easier to track, maybe not perfect in RSA but hey what do you expect we have a criminal cartel running our govt and their cadres are in the IEC. Also these electronic voting systems have closed source codes and are far from transparent and easy to audit. If you have had enough of the cANCer in our country say no to electronic voting machines.	Daryl			
	2025-09-15 16:09:15	No I do not	Security and Trust		William	Western Cape		retired
	2025-09-15 16:21:00	No I do not	Security and Trust		Pieter	Western Cape		self-employed
	2025-09-15 16:27:07	No I do not	Security and Trust	It is clear that these systems are not secure. And that is applicable all over the world. Best is a paper vote and Manual counting. Refer to theo USA and several other counties.	Tienie	Western Cape		business owner
	2025-09-15 16:55:43	No I do not	Security and Trust	Electronic systems can be hacked and manipulated . Stay with paper	Kim	Gauteng		retired
	2025-09-15 16:59:24	No I do not	Security and Trust	Electronic voting will lead to fraud. Current system is already frauded as boxes get destroyed befire been counted	Nicolette	Gauteng		employed individual
	2025-09-15 17:14:30	No I do not	Security and Trust	Everywere in the world where electronic voting happen there is huge fraud	Gustav	Mpumal anga		unemployed individual
	2025-09-15 17:17:05	No I do not	Security and Trust	The United States elections of 2020 proved that electronic voting is fraught with previously poorly understood loopholes, and open to multiple election interference sources, including from foreign nations.	Alf	Eastern Cape		
	2025-09-15 17:21:07	No I do not	Security and Trust	There us no way I would trust this system after what happened in the USA. Secondly the ANC is corrupt, proved daily. Thirdly I do not support the UN in any way ever, they were not elected by the world. And the final reason, NO, because it's a full sentence.	Chantel	North West		employed individual
	2025-09-15 17:22:15	No I do not	Security and Trust	Why bother they are always rigged. It has never been a fair election since 1994. Same old bull shit, tired of it.	Raeleen	Eastern Cape		unemployed individual
	2025-09-15 17:24:28	No I do not	Security and Trust	Electronic voting systems aroubd the world have been proven to be open to manipulation.	Mark	Eastern Cape		unemployed individual
	2025-09-15 17:27:07	No I do not	Security and Trust	How can we the citizens trust that election fraud won't be at the order of the day? Currently they can't even get their online registration process 100% right!! I don't trust the ANC appointed current commission Let the people choose who should run the voting system not the ANC coalition government as they have stolen enough why should we trust that they won't have corruption in their IT department????	Francois	Eastern Cape		self-employed
	2025-09-15 17:38:52	No I do not	Security and Trust	How will the get this together without spending billions. What about rural people who will definately not have access to the internet. The internet cannot cope over Christmas and New Year with so many people being online and now they want the whole country to access the internet on one day to link to the same website. Who thought this through?	Frances	Eastern Cape		
	2025-09-15 17:40:09	No I do not	Security and Trust	Who is going to check the counters? I will never machines counting votes. Paper and South African identity documents are the ONLY way to go.	Simon	Free State		employed individual
	2025-09-15 17:46:38	No I do not	Security and Trust	Who is going to check the "counting" machines? Paper ballot papers and South African identity documents are the only way to go.	Simon	Free State		employed individual
	2025-09-15 17:50:48	No I do not	Security and Trust		Nicola			
	2025-09-15 18:27:34	No I do not	Security and Trust		herman	Gauteng		retired
	2025-09-15 18:39:42	No I do not	Security and Trust		Thor	KwaZulu -Natal		
	2025-09-15 18:58:19	No I do not	Security and Trust		Rumandi	Mpumal anga		retired
	2025-09-15 19:50:56	No I do not	Security and Trust	I do not believe that an electronic voting system can be constructed in south Africa that will be trust worthy.	Julius	Western Cape		employed individual
	2025-09-15 19:51:52	No I do not	Security and Trust	This will not work in SA too easy to manipulate results	Hercules			retired
	2025-09-15 20:05:57	No I do not	Security and Trust	No No no no no no no ZERO TRUST, PAPER BALLOTS ONLY THE ANC WILL SCREW US OVER	Debbie			
	2025-09-15 20:16:48	No I do not	Security and Trust	This is too easy to manipulate. Paper ballots and in person voting may be cumbersom but they are far more trustworthy.	Harry	Western Cape		retired
	2025-09-15 20:47:03	No I do not	Security and Trust	The votes are going to be manipulated! The electronic votes will not be counted correctly and will not be cross checked by real humans as it is currently being done. That is already a high risk exercise.	Marcus			unemployed individual
	2025-09-15 20:54:56	No I do not	Security and Trust	The USA is busy moving away from the electronic voting system back to paper based voting precisely because electronic voting systems are open to manipulation and fraud. Why would we want to move to a suspect system if not to tamper with votes?	Steve	KwaZulu -Natal		retired
	2025-09-15 21:38:49	No I do not	Security and Trust		AnnaMarie	Limpopo		retired
	2025-09-15 22:04:21	No I do not	Security and Trust		Thelma	KwaZulu -Natal		retired
	2025-09-15 22:20:59	No I do not	Security and Trust	No, I do not support electronic voting because like anything electronic,but can be hacked. The previous US elections were captured using devious means and with all of the criminal activities currently going on in South Africa it can easily be hijacked by political parties.	Allan	Gauteng		business owner

	2025-09-15 23:39:21	No I do not	Security and Trust	We have witnessed the corruption in South Africa for the last 30 years and do not trust the people in charge.	Lize	Western Cape		business owner
	2025-09-16 02:54:28	No I do not	Security and Trust		Julia	Western Cape		
	2025-09-16 05:48:19	No I do not	Security and Trust		Johann			retired
	2025-09-16 06:54:52	No I do not	Security and Trust	This is opening a door to corruption and manipulation of votes, just look what happened with the electronic poling system with the biden administration in USA, it failed.... it showed how it favored a specific political group with fake electronic votes	kevin	Gauteng		employed individual
	2025-09-16 06:57:09	No I do not	Security and Trust		Rudene	Western Cape		retired
	2025-09-16 07:01:06	No I do not	Security and Trust	The integrity of the voting results would be questionable and this creates the ideal platform for corruption to alter the true result required by the voters	Cobus	Gauteng		business owner
	2025-09-16 07:03:06	No I do not	Security and Trust	The ANC will manipulate the results. They are corrupt.	Doug	Gauteng		
	2025-09-16 07:04:32	No I do not	Security and Trust	How to ensure the system is protected against tampering and cyber attacks What backup plans are needed for technical problems How to maintain public confidence in election results With cANCer in the parlement their is no trust in any projects from them and how many $$$ is given to the IEC from them to bybpass the laws?	Willie			
	2025-09-16 07:07:24	No I do not	Security and Trust		Erina	Free State		business owner
	2025-09-16 07:11:37	No I do not	Security and Trust		Elize			
	2025-09-16 07:12:02	No I do not	Security and Trust		Claudia	Gauteng		retired
	2025-09-16 07:14:05	No I do not	Security and Trust		jacobus	Gauteng		employed individual
	2025-09-16 07:15:43	No I do not	Security and Trust	The current ANC government proves over and over again that they are corrput and not trust worthy. As the IEC is run by ANC appointed cadres electronic voting would be a disaster and would be manipulated by the ANC to stay in power.	Dudley			
	2025-09-16 07:16:32	No I do not	Security and Trust		Berni	Gauteng		employed individual
	2025-09-16 07:20:22	No I do not	Security and Trust	Do not trust that the system will not be manipulated and that data would be kept save.	Michael	Gauteng		self-employed
	2025-09-16 07:20:57	No I do not	Security and Trust	I do not support this bill as I do not trust this current government or any future government to not manipulate this data to its own advantage.	margaret	Gauteng		retired
	2025-09-16 07:21:18	No I do not	Security and Trust		Joao Paulo	Gauteng		self-employed
	2025-09-16 07:21:34	No I do not	Security and Trust	It has been shown in America that electronic voting can easily be manipulated, far more than physical ballots, through those that implement or manage the system. In addition, the technology can't be rolled out everywhere and will impact the right to vote for those living in remote areas where internet and/or power is unavailable.	Gustav	Gauteng		employed individual
	2025-09-16 07:22:42	No I do not	Security and Trust	With the ANC in power, there would be guaranteed manipulation of results/vote rigging, etc. Look at their track record .	Terry	Gauteng		retired
	2025-09-16 07:25:40	No I do not	Security and Trust	Only voters with ID' s eligible to vote	Fanie	Gauteng		self-employed
	2025-09-16 07:28:04	No I do not	Security and Trust		julie	KwaZulu-Natal		self-employed
	2025-09-16 07:29:03	No I do not	Security and Trust	The IEC can't be trusted as shown for years and years as they allowed boxes to go missing, allowed dead people to vote and allowed foreigners to vote in elections with stolen IDs. Now you want people to vote electronically and not physically present themselves. This is the biggest mistake ever as anyone would be able to hack the system, just look at how the SASSA system was hacked and no one knew until it was declared by the hackers. My vote and my families vote is no.	Bernadine	Gauteng		employed individual
	2025-09-16 07:30:01	No I do not	Security and Trust	Thank you for the opportunity to raise our concerns about the current affairs within national and local government in the new South Africa! We as the citizens of this country which we created pre 1994, accussed by the ANC apartheids movement of apartheid but are much more extreme in their judgement against other cultures which they are not allowed to do, Mathew chapter 7, the Word of God requesting us to trust them once again factually proved to be the most corrupt, lawless and criminal organisation that ever managed the new South Africa. This all happened because they believe the lie as written in 2 Thessalonians chapter 2, the Word of God, they removed the Truth, the Word of God from the statue of Parliament and replaced it with religion which by definition can mean anything! They did it deliberately and conveniently to be corrupt looting our country from our resources and then asked the citizens and taxpayers to trust them again. How can we trust a government who do not respect, obey and honour God's commandments as written in Exodus chapter 20 repeated in Exodus chapter 34, 1 Corinthians chapter 13 and Mathew chapter 7. We cannot trust the wolves in sheep clothes, by the fruit we knows the tree wether it is good or evil! We cannot trust a government who do not care about their own business and citizens but their religious friends abroad, a government who opened our borders allowing criminals to enter our country and use their finger prints voting for them. The finger prints created by the Creator which no human can reproduce. How clean are the hands of those finger prints, which religion do they believe in? What about job creation in this country and how on earth can we trust those whose hands are unclean in this country? We cannot trust those who's names are written in Mathew chapter 16 and Revelation chapter 13, we do not associate us with them and do not recognise such government. We need a credible, trustworthy and honest government with competent leaders.	Derek	Gauteng		business owner
	2025-09-16 07:30:25	No I do not	Security and Trust		Saroj	KwaZulu-Natal		
	2025-09-16 07:31:50	No I do not	Security and Trust	A computer system can be easily manipulated.They will bribe whoever working on the computer system to crush it and make changes easily.Let people go vote at the addresses allocated for that.	Frank	Gauteng		employed individual
	2025-09-16 07:33:09	No I do not	Security and Trust		Johan	Gauteng		retired
	2025-09-16 07:36:30	No I do not	Security and Trust		Thulane	North West		unemployed individual
	2025-09-16 07:37:08	No I do not	Security and Trust	With the number of cyber intrusions into public sector systems in the last year it’s clear that SA does not have the level of security and expertise in this area to be able to safeguard this.	Jean	Gauteng		employed individual
	2025-09-16 07:41:37	No I do not	Security and Trust		MILTON			
	2025-09-16 07:44:54	No I do not	Security and Trust	Fairly easy to hack.	Renate			
	2025-09-16 07:47:29	No I do not	Security and Trust	We can never trust Electronic voting in a core corrupted South Africa. It is another ANC plot.	The			
	2025-09-16 07:49:30	No I do not	Security and Trust		Carl			business owner
	2025-09-16 07:52:38	No I do not	Security and Trust		Errol	Gauteng		retired
	2025-09-16 07:53:21	No I do not	Security and Trust	This gov can't acquire, run or implement a functional billing system which primary school students could do given half a chance. How are we trust that they can implement secure and trustworthy digital voting? It will be a mess, like everything else they touch. No!	Luther	Gauteng		employed individual
	2025-09-16 07:53:59	No I do not	Security and Trust		Mpho	Limpopo		
	2025-09-16 07:54:46	No I do not	Security and Trust	Personal and important data might leak out. Data might go missing. Opening doors for fraud	Valerie	Free State		retired
	2025-09-16 07:55:55	No I do not	Security and Trust	Easy to manipulate results electronically as happened in other counties	Greg	KwaZulu-Natal		employed individual
	2025-09-16 07:55:58	No I do not	Security and Trust	It has been proven to be a system that can easily be manipulated and changed to suit a specific candidate. The concern is not with making sure a person can't be fraudulent on voting day but after voting, being electronic data, it can easily be manipulated, inflated, reduced or lost. Any person with a bit of knowledge of data know how vulnerable this data is. It can also be infiltrated by external actors. Machines have been proven in court to be open for external access. Totally unacceptable. In person ballot paper voting and counting is proven to be the most secure method.	Quinton			
	2025-09-16 07:56:09	No I do not	Security and Trust	This is just another way of manipulating the results to suit the ANC objectives. Votes will be manipulated and falsified	David	Northern Cape		retired
	2025-09-16 07:56:53	No I do not	Security and Trust		Marthinus	Gauteng		self-employed
	2025-09-16 07:56:59	No I do not	Security and Trust	The cost of setting this up will enable theft & fraud of funds intended to implement the system. We don't trust that the elections will be fair, as it will be easy to use the voters information for the incorrect reasons. And therefor I vote a resounding No to this system!	Patricia	Western Cape		retired
	2025-09-16 07:58:05	No I do not	Security and Trust		Kwanele			

	2025-09-16 07:58:28	No I do not	Security and Trust	The likely manipulation of voting and the exposure of people's information regarding who they voted for.	Thomas			unemployed individual
	2025-09-16 07:58:28	No I do not	Security and Trust	The likely manipulation of voting and the exposure of people's information regarding who they voted for.	Thomas			unemployed individual
	2025-09-16 07:58:28	No I do not	Security and Trust	The likely manipulation of voting and the exposure of people's information regarding who they voted for.	Thomas			unemployed individual
	2025-09-16 07:59:17	No I do not	Security and Trust		Perry	Gauteng		self-employed
	2025-09-16 08:00:38	No I do not	Security and Trust		JJ	North West		retired
	2025-09-16 08:01:34	No I do not	Security and Trust		Andries			
	2025-09-16 08:02:45	No I do not	Security and Trust		Cathleen			
	2025-09-16 08:02:48	No I do not	Security and Trust	Voting and the results could be manipulated. There would be no accountability and the system.could be hacked.	Sieglinde	Mpumalanga		
	2025-09-16 08:05:13	No I do not	Security and Trust	If it is electronic the government of the day whoever they may be will be tempted to fiddle and manipulated to their own ends without anybody watching. Even the United states is not managed to get it right. It's just the temp to get vote rigging established. It's the end of democracy	Dennis			
	2025-09-16 08:05:33	No I do not	Security and Trust	Vote rigging!	Jon	KwaZulu-Natal		business owner
	2025-09-16 08:09:28	No I do not	Security and Trust	One just needs to look at the fraud in first world countries using electronic voting to know its a big NO .	Lynda	KwaZulu-Natal		retired
	2025-09-16 08:09:51	No I do not	Security and Trust		Tshepo			
	2025-09-16 08:10:01	No I do not	Security and Trust	I don't trust serious issues in RSA. You have all kinds of laws protecting citizens but it doesn't help much. Maybe if you have money to go to court, which very few South Africans have. The ANC will find a way to bypass the securities for their own benefit.	Roy	Free State		retired
	2025-09-16 08:11:46	No I do not	Security and Trust	It will open the way for vote rigging and fraud.	Peter	Gauteng		retired
	2025-09-16 08:12:37	No I do not	Security and Trust	Electronic voting provides a means for the government to find out how every citizen voted and therefore a means to target those who voted for opposition parties to the government in power. Electronic voting also creates the opportunity for voting fraud where electronic manipulation of the voting such as deletion or alteration of the votes can be achieved with no physical paper to be a check in a recount of challenged results. NO ELECTRONIC VOTING!	Michael	KwaZulu-Natal		employed individual
	2025-09-16 08:13:25	No I do not	Security and Trust	Electronic voting around the world has proved to be so corrupt, the world is a sick place.	kevin			
	2025-09-16 08:15:42	No I do not	Security and Trust	Concerns over voters fraud and the changing of votes recorded as seen in other countries that implement electronic voting such as the United States of America. Not to mention that trust in the integrity and neutrality of the IEC is non-existent by the wide majority of the South African people.	Matthew	Mpumalanga		
	2025-09-16 08:17:04	No I do not	Security and Trust	Digital votes are easier to manipulate and I do not want human beings to access who I voted for through inspecting the digital vote. I also do not want to have a digital ID to vote. I do not want a digital ID at all.	Brigitta	Western Cape		employed individual
	2025-09-16 08:17:07	No I do not	Security and Trust		Susan	KwaZulu-Natal		self-employed
	2025-09-16 08:17:43	No I do not	Security and Trust	The Electronic voting can be easily manipulated/rigged. it has been proven in many courtiers in Europe. Bad tool in the hands of modern days politicians.	Arcdaie	KwaZulu-Natal		employed individual
	2025-09-16 08:18:21	No I do not	Security and Trust		Wollie	Gauteng		retired
	2025-09-16 08:19:57	No I do not	Security and Trust	I don't want anyone to know who I voted for. And secondly this is going to be very difficult to implement	Alan	KwaZulu-Natal		retired
	2025-09-16 08:20:32	No I do not	Security and Trust	Yes to electronic voting, but without digital id.	Henriette	Eastern Cape		
	2025-09-16 08:21:36	No I do not	Security and Trust	The ANC part of our Government have shown that they can criminalise every and any system for the benefit of the elite ANC members and so a voting system such as this would just play into devious hands.	Eileen Linda	KwaZulu-Natal		retired
	2025-09-16 08:22:40	No I do not	Security and Trust	Electronic systems have been tried globally and have massive drawbacks, not the least of which is vote count manipulation. With something as important as ensuring democracy, hand counted ballots remain the only way to ensure the highest level of voting integrity, along with presenting ID when you go to vote.	Marius	Gauteng		self-employed
	2025-09-16 08:23:36	No I do not	Security and Trust	Electronic voting does not work fairly as the votes can be swopped locally or internationally. The system can be hacked as what happened in the USA when Joe Bidon was elected and many other countries. Fraud and corruption will take place	Dave	Gauteng		retired
	2025-09-16 08:25:10	No I do not	Security and Trust		Buyiswa	Eastern Cape		retired

	2025-09-16 08:27:39	No I do not	Security and Trust	Practically electronic voting should work but seeing how often the computers in municipal entities do not work and how voting can be manipulated electronically it is not a good idea. If we could trust the ANC it would be a different matter	Neels	Limpopo		self-employed
	2025-09-16 08:28:38	No I do not	Security and Trust	There is no way they can guarantee its integrity.	Stephan	Gauteng		employed individual
	2025-09-16 08:28:39	No I do not	Security and Trust		Anna	KwaZulu-Natal		retired
	2025-09-16 08:30:31	No I do not	Security and Trust		Bruce	Gauteng		retired
	2025-09-16 08:30:48	No I do not	Security and Trust	"The idea is that once a Digital ID system is implemented by DA minister Leon Schreiber, voter fraud will no longer be possible, because every voter need just present their fingerprint. And then of course, the IEC need not employ people to count physical ballots, because a computer will do it." However, this means the government will have a record of who voted in what way, and manipulation of results becomes a possibility through voter suppression or vote rigging. If your govt knows who voted in what way and results can be manipulated, how is it not fraud?	Ig	Mpumalanga		employed individual
	2025-09-16 08:30:59	No I do not	Security and Trust	regretfully the ANC has positioned themselves as untrustworthy over the past 3 decades. They don't have the peoples interest as a core practice. I don't believe this electronic voting policy will be any different	alan			
	2025-09-16 08:31:19	No I do not	Security and Trust		Johan	Gauteng		
	2025-09-16 08:31:43	No I do not	Security and Trust	Digital voters are easier to manipulate and I do not want anyone to know who I voted for. NO Digital I/D at all. Security reasons. This has been proven over the World and still corruption has taken place.	Meredith	Gauteng		
	2025-09-16 08:31:57	No I do not	Security and Trust	Don't trust the ANC government that it will be a fair and honest election as they are all fraudsters. Doing it electronically will help the ANC win votes so a BIG NO!!!!!	Carol-Anne	Gauteng		employed individual
	2025-09-16 08:32:34	No I do not	Security and Trust	With the history of corruption in our country, there is no way. Results can be/will be manipulated. There will be no confidentiality - how we voted will be visible.	Lise	Western Cape		employed individual
	2025-09-16 08:32:36	No I do not	Security and Trust	I wish we could move to data voting. It would be quicker, environmentally better, easier for all South Africans to access and results would be live. HOWEVER, Government's honesty, competence and security when it comes to IT is shocking. We need to look at eThekwini's Billing System, SITA crippling Government Departments and a multitude of Government Departments being hacked. This then leads to the biggest problem, software is just code. Apple had the best encryption and security, but the FBI found a back door. If this is possible, what is stopping any Foreign Power, or local political party from finding the backdoor to rig South Africa's elections. The US could assist the DA, the Russians could assist the ANC. And when the integrity is in question, what hard copy is there to audit? We know there have been many software Companies and Auditors complicit in the State Capture, as well as other dubious agreements, so what and who is protecting the South African on the street from another State Capture?	Brendan	KwaZulu-Natal		employed individual
	2025-09-16 08:33:37	No I do not	Security and Trust	South Africa government organs, collectively, are of the highest hacked businesses in the world. It is impossible for any government organ in SA to guarantee that this proposed online facility, including IEC - who only relies on service providers for logical security assistance, to ensure personal data will not be compromised - this data will be compromised instantaneously - this is looking for serious trouble and encouraging misrepresentation of data and vote rigging.	f	Gauteng		business owner
	2025-09-16 08:33:39	No I do not	Security and Trust	Easiest way to commit election fraud.	Liana	Western Cape		unemployed individual
	2025-09-16 08:33:46	No I do not	Security and Trust	If only we could trust the ANC, this would have been a great cost saving, and very accurate system. However, it is no secret whatsoever that the ANC and friends are ruthlessly corrupt, immoral and bent on staying in power no matter what (Robert Mugabe comes to mind...). So, I say NO, NO, NO!	Izak	Gauteng		employed individual
	2025-09-16 08:34:12	No I do not	Security and Trust	Electronic voting does not work. It is open to corruption.	Lindy			
	2025-09-16 08:35:17	No I do not	Security and Trust	ABSOLUTELY OPEN TO RIGGING, AND NOBODY BUT NO BODY SHOULD TRUST THE anc!!	deirdre	Western Cape		self-employed

	2025-09-16 08:35:34	No I do not	Security and Trust	This eliminates the security of the vote, as well as the safety of anyone who voted contrary to the incumbent government's desire. It may eliminate voter fraud on the voter level, but it certainly gives a free highway to additional fraud and control measures, at the government level. There is yet to be a government worthy of this kind of trust. There has also yet to be a government who has proven themselves trustworthy.	Ursula	Gauteng		employed individual
	2025-09-16 08:36:01	No I do not	Security and Trust	As was the case in USA elections, the system is open to fraudulent activities. When there is no trust in your government, this system is a red flag.	Cobus			
	2025-09-16 08:36:57	No I do not	Security and Trust	Chances for manipulation is just too big and your vote won't be private	Hendrik Petrus	Gauteng		employed individual
	2025-09-16 08:37:03	No I do not	Security and Trust	There is no way that an electronic voting system will not be rigged!!!!	Steve	Gauteng		employed individual

	2025-09-16 09:01:57	No I do not	Security and Trust	Such a system seems open to manipulation and fraud.	Dirk			
	2025-09-16 09:02:11	No I do not	Security and Trust	Manipulation of votes and cyber crime issues. Discrimanation against people that voted against the ruling party as votes are connected to IDs	Hendrik			retired
	2025-09-16 09:03:14	No I do not	Security and Trust	Just look at the voter FRAUD in the USA	Frank	Western Cape		retired
	2025-09-16 09:03:48	No I do not	Security and Trust	Easy hacking..fraudulent results...	Arno	Western Cape		retired
	2025-09-16 09:04:01	No I do not	Security and Trust	By the use of digital voting connected to a person's biometric , there will be a large possibility in the direct or distant future to manipulate votes or target voters that vote for the "wrong" party or ideas	Jd			
	2025-09-16 09:04:30	No I do not	Security and Trust	We are not children to easily pull the wool over our eyes. It's well known you can manipulate digital voting machines. Also there could be political persecution as you'd know who voted for whom with fingerprints, Also it's a step further to digital IDs and dystopian control of society	María			
	2025-09-16 09:04:31	No I do not	Security and Trust	There have been too many cases of voting in various countries overseas where electronic voting has either been hacked or manipulated, and there's nothing stopping that happening here. With the huge instances of corruption in South Africa, I don't feel confident with having electronic voting. Also, the privacy and security of voters is not guaranteed.	Colleen	Eastern Cape		self-employed
	2025-09-16 09:04:43	No I do not	Security and Trust	How can we be sure that it will be treated confidentially and can not be manipulated. Who is going to check the results as they come in	Danny	Gauteng		retired
	2025-09-16 09:05:29	No I do not	Security and Trust	It is to easy for the systems to be corrupted with in the government structures and the IEC is part of that structures. I don't believe there will be the transparency or the will for the ANC government or any government not to corrupt the system. This is a bad idea.	Chris	KwaZulu-Natal		business owner

	2025-09-16 09:06:16	No I do not	Security and Trust	THE CROOKS AND THIEVES PRESENTLY RUNNING OUR COUNTRY WILL DEFINITELY FIND WAYS OF CROOKING THE OUTCOME, EVEN IF THEY HAVE TO DIG UP GRAVES TO GET FINGERPRINTS. THESE PATHETIC OUTCASTS WILL STILL FIND AVENUES TO CROOK AND CHEAT, ITS IN THEIR BLOOD	MAHOMED	KwaZulu-Natal		retired
	2025-09-16 09:07:15	No I do not	Security and Trust	Digital ID is a government control mechanism. End it now. Secondly electronic voting is literally being done away with in other countries because of government fraud involved with the voting process. We do not need this system. Voting in person is the way to do it.	Alec	Gauteng		employed individual
	2025-09-16 09:07:51	No I do not	Security and Trust	RSA is a corrupt Republic - limit any further possibility of corruption - keep things simple and transparent.	Darren	Gauteng		
	2025-09-16 09:08:43	No I do not	Security and Trust	Election fraud would be possible on a grand scale as was seen in the USA in the 2020 elections. There was outside access to the election computers. South Africa has a huge corruption problem; they are bound to use Electronic voting to rig elections. You need to have physical ballots that can be recounted as proof Nobody should be able to track who you voted for. I do not agree with digital ID as my biological data belongs to me and is private. Digital ID once hacked is impossible to retrieve.	Omalleagh	Gauteng		
	2025-09-16 09:09:42	No I do not	Security and Trust		Lee	Western Cape		retired
	2025-09-16 09:11:12	No I do not	Security and Trust	LEAVE AS IS THIS IS THE BEST	MICHAEL			retired
	2025-09-16 09:13:00	No I do not	Security and Trust	With the Government's Track Record of corruption, disfunction and nepotism and Cadre preferment, it would be naive to believe the Leopard would change its spots.	SHIRLEY JEAN	KwaZulu-Natal		retired
	2025-09-16 09:13:52	No I do not	Security and Trust		Francois	Free State		unemployed individual
	2025-09-16 09:14:46	No I do not	Security and Trust		Steve	Western Cape		business owner
	2025-09-16 09:15:18	No I do not	Security and Trust		Glenville	Western Cape		self-employed
	2025-09-16 09:15:25	No I do not	Security and Trust	All of the concerns listed are also my concerns. This electronic voting system has been found to be deeply flawed with many other countries - expecially China able to watch and manipulate the results as well as our own country. I no longer trust any of the main parties, they are showing their true colours - they follow the dictates of their paymasters. I do not think there can be sufficient safeguards to prevent people working on the system and changing the outcome. So NO to electronic voting. Bribes will still be paid to enable the desired income. As to fingerprints, how many old people battle with bank machines when fingerprints have been worn down or no longer exist. Teachers, cake decorators, artists, builders etc. rarely have decent fingerprints.	Janet	Gauteng		retired
	2025-09-16 09:15:30	No I do not	Security and Trust	I do not trust the ANC government. The possibility or more likely probability of vote rigging and security breach are extremely high. Any or all information could be corrupted and misused . AI is a major risk to the safer manual voting system.	Thomas	Eastern Cape		retired
	2025-09-16 09:16:15	No I do not	Security and Trust	No thank you World Economic Forum, we see you.	Alex			
	2025-09-16 09:17:32	No I do not	Security and Trust	In the USA it was PROVEN that electronic voting WILL and has been hacked. Paper ballots with physical production of personal ID book is the Only accepted method to be able to vote.	Hendrik	Free State		retired
	2025-09-16 09:17:50	No I do not	Security and Trust	The Government has repeatedly proved themselves untrustworthy, so safety& privacy is threatend by them having knowledge of how one has voted, allowing opportunity for voter intimidation and manipulation of results.	ivan	Western Cape		business owner
	2025-09-16 09:18:00	No I do not	Security and Trust	Opens up room for 'errror...	Johann	Gauteng		employed individual
	2025-09-16 09:18:22	No I do not	Security and Trust	There are many issues to consider amongst others, the history of the ANC which is corrupt to the core therefore manipulation of results is a strong possibility. The majority of the population does not have to technology and will there for need to visit polling stations in any event. There is also a risk of intimidation as has happened in other African countries and the government will know which party an individual voted for. In a corrupt country like ours the only way forward is the current manual system. The existing system will also be far cheaper as the electronic system will cost millions to develop and maintain and there is a risk that the tender will be corrupted costing taxpayers miliions.	Stephen	Western Cape		retired
	2025-09-16 09:18:40	No I do not	Security and Trust	This does not cover the anonymity of the actual vote. Government would now be able to see who voted for whom. Our record of corruption would explode. Skilled IT people can do anything - this is not acceptable. With a physical finger print at least it is a person and not some random ID.	Julie	Western Cape		employed individual
	2025-09-16 09:19:00	No I do not	Security and Trust	Nobody in this goverment can be trusted. The past speaks for itself.	Stebastiaan	Western Cape		retired

	2025-09-16 09:29:02	No I do not	Security and Trust	No , our government is not trustworthy in this regard. We are far from ready for such a step.	Alison	Western Cape		employed individual
	2025-09-16 09:29:08	No I do not	Security and Trust	NO NO NO NO NO!!! For the love of everything, NO! One of the good things of this country is that we have 1 day voting, paper ballots hand-counted, with voter ID. Our elections are free and fair, and although there is voter fraud (as there is in all countries), by keeping to this system the voter fraud is limited and small-scale. Voting machines, where the tallies are done electronically, can so easily be manipulated by hackers! This is how Venezuela lost their country to communists, this is how the last 3 American elections have been a joke. Please research first how many countries across the world that tried electronic voting have gone back to hand counted paper ballots because of the cheating that the electronic voting made so easy. ELECTRONIC VOTING IS NOT SAFE!!! Even if it is safe to CAST YOUR VOTE, it is still possible for the TALLIES to be manipulated because it is all electronic. Hackers can easily manipulate results in the machines. This is actually why these things were invented: to make cheating easier so that the highest bidders can win the election! Please, please, please do not do this. As it is it will cost money which there are so many areas of South Africa that are crying out for money to get sorted out. Please let's not waste taxpayers money setting up our elections (which are working fine as is!) to be easier to be stolen. If we have a government that we are not happy with, at least we know that they did get voted by the people (however misled they may be), and they didn't cheat their way in. Please don't do this. Research the matter thoroughly first. Check with other countries who implemented these things and then (at great cost) got rid of them. We cannot afford the same experiment. 100 million times NO!	Natasha	KwaZulu-Natal		employed individual
	2025-09-16 09:29:14	No I do not	Security and Trust	The secret ballot principal ensures a free and fair election. Voting with one's biometric information, links ones digital ID to one's voting decision. This is neither free nor fair. 1. Voters can be identified, singled out and discriminated against because of their voting choice. This would be difficult for the average person to prove especially without access to the inner workings of the digital process. 2. The results are open to be digitally manipulated without a largely uneducated, digitally illiterate and impoverished citizenry being aware of any rigging at all. 3. Only specialists and insiders will be able to identify and attest to vote rigging in the event of a suspicion of irregularities. The process is fraught with potential difficulties. The elections in the USA are a perfect example.	Tracy	Western Cape		unemployed individual

	2025-09-16 09:48:16	No I do not	Security and Trust	It is clear to me that this system has been dried and tested in other countries and to my knowledge has failed. It is been proven that these systems can be tampered with and the outcomes can be influenced. The old system works and we do not need to change it in South Africa.	Daniel G	KwaZulu-Natal		employed individual
	2025-09-16 09:48:49	No I do not	Security and Trust		Carl	KwaZulu-Natal		business owner
	2025-09-16 09:49:22	No I do not	Security and Trust	It is clear from experiences in other developed countries that the electronic voting system is only as trustworthy as those managing it - and in our country with its long road of corruption it will just be another tool of cheating. Also our practical implementation will still be problematic and if special avenues are put in place for the illiterate people - it will just be another way of mishandling the confidentiality of the data. I cannot see that it is really feasible if you want a truly democratic reflection of the votes, however a more semi automatic system at the voting station under scrutiny of a security group could work. where instead of a paper system it is a selection panel on a voting pad . Zero postage systems only and actual signed vote by the voter on paper.	Elma	Gauteng		

	2025-09-16 09:49:37	No I do not	Security and Trust	However the government spins this one, I firmly believe that it is simply another control measure that will be used to quash (and manipulate) one of the few democratic rights we have left in this country. I state publicly that I do not trust this government to do what is best for the citizens of this country. The less power in the hands of government, the happier South Africans will be.	Lesley	Western Cape		self-employed
	2025-09-16 09:50:06	No I do not	Security and Trust	E-voting means the government will have a record of who voted in what way, and manipulation of results becomes a possibility through voter suppression or vote rigging. Voting is supposed to be ANONYMOUS!! We have seen how in other countries the e-voting systems were rigged. We can't allow that to happen in South Africa. The manual voting and counting system we already have in place works, but volunteers and observers also need to be properly trained ahead of time. All of the key concerns always need to be considered whether by in-person manual voting and counting or electronic. KEY CONSIDERATIONS INCLUDE: – Security and Trust – Access for All South Africans – Practical Implementation – Transparency – Legal Requirements – Voter and Staff Preparation – Privacy and Data Protection – Infrastructure Needs	Angela	KwaZulu-Natal		unemployed individual
	2025-09-16 09:50:57	No I do not	Security and Trust	If I vote in favour of this tool, fraught with corruption, nepotism and a range of unspeakable misdemeanours, will Schreiber promise to go back to his birthplace, Zimbabwe?	Afzal	Gauteng

	2025-09-16 09:54:38	No I do not	Security and Trust	Transparency and Security should not be compromised ..Only tax paying citizens should be allowed to vote	Eldrid	Free State		retired
	2025-09-16 09:54:53	No I do not	Security and Trust	Voting is supposed to be a secret and confidential and this system will enable govt to see who votes for whom. Furthermore, an electronic system is allways at risk of hacking.	Hermanus	Free State		retired
	2025-09-16 09:55:30	No I do not	Security and Trust		Susan	KwaZulu-Natal		retired
	2025-09-16 09:55:46	No I do not	Security and Trust	My concern relates to the implementation of this across the country. Although the manual system is cumbersome it works and people believe the results. I am not comfortable with supporting this change for the following reasons: 1. Voter education including people with no finger prints 2. Rollout of infrastructure to rural areas 3. Open to manipulation of results which are no longer transparent and auditable at the local level 4. Privacy concerns relating to individual votes This is not a good idea for South Africa at this stage. I recommend piloting it on a smaller scale to prove that it works before attempting a national rollout	Jessica	Gauteng		self-employed
	2025-09-16 09:55:47	No I do not	Security and Trust	In the United States, with the recent few elections is turned out that the electronic voting system is problematic, people do not trust it and lots of people are calling for going back to paper ballots. Now we want to implement it? No, keep to the paper ballots. With computers the opportunities for undetectable fraud is so much more. The system needs to be managed by somebody who do have access to the voter information, no matter how many guarantees are made for not collecting voter data or the possibility of tampering. I am a software developer and I know how easy it is to build a secret backdoor into a system and it is done by many of the big corporations that our government trust. No, keep to paper ballots, it is not perfect, but it is more resistant to undetectable fraud	Andre	Western Cape		self-employed
	2025-09-16 09:56:00	No I do not	Security and Trust	I do not want to share my personal details using electronic methods. There are many problems that can arise. If it went through my private bank I might consider this method	glynis	Western Cape		retired

	2025-09-16 10:36:56	No I do not	Security and Trust	Risks of Election Interference in Voting Systems A forensic audit report on the Dominion Voting System's use in Michigan's 2020 presidential election, illustrates severe vulnerabilities in electronic voting infrastructure that can enable interference and compromise democratic processes. Key risks include: Systemic Fraud Through Design Flaws: Voting machines with intentional errors (e.g., 68% error rate in Antrim County, far exceeding federal 0.0008% guidelines) allow bulk adjudication of ballots by administrators without transparency, audit trails, or oversight, potentially flipping vote outcomes—such as the observed Trump-to-Biden switch in Central Lake Township, where 82% of ballots were rejected and manually altered. Unauthorized Manipulation and Tampering: Software updates violating federal Safe Harbor rules (e.g., changes on October 23 and November 5, 2020) altered tabulation results, adding or removing hundreds of votes; missing security and adjudication logs (required by Michigan law) hid tampering attempts, like an unauthorized effort to zero out results on November 21, 2020. Security Breaches and Non-Compliance: Outdated antivirus, unencrypted drives, and shared passwords expose systems to hacking; directives to delete records by December 8, 2020, breached retention laws, preventing audits and enabling cover-ups. Consequences include uncertifiable results, eroded public trust, legal challenges, and national security threats from foreign or domestic actors exploiting these flaws—potentially affecting statewide outcomes in 49 Michigan counties using the same system. The report warns against continued use, recommending decertification to avert broader election invalidation. Hell No! Electronic voting will only be another tool of corruption and absolute power in the arsenal of the ruling ANC.	Dirk	Western Cape		employed individual

	2025-09-16 11:01:21	No I do not	Security and Trust	In a country with such prolific corruption, how can we put trust in such a system, Especially when the old system has shown that fraud can still be rampant. How will the Government ensure that the system is fail proof, that the correct info will be released, and that it is not manipulated to fit the narative of the ANC corrupt goverment?	Marise	Limpopo		employed individual
	2025-09-16 11:01:37	No I do not	Security and Trust		Daniel	Gauteng		self-employed
	2025-09-16 11:01:37	No I do not	Security and Trust	The government inability to implement and monitor electronic systems may leave a door open for agencies to manipulate electoral votes.	Philip	Gauteng		employed individual
	2025-09-16 11:02:00	No I do not	Security and Trust	My top concern is security of, and trust in, the electronic voting system, given that the IEC is itself not a flagship of trustworthiness, given the many allegations against with respect to vote rigging and results manipulations. Internationally, electronic voting systems are being abandoned owing mainly to security and trust concerns. There is good reason to think that in SA, such a system will be manipulated and tampered with to meet the demands of the ruling political class. However, my concerns do not end there. There are also worrying degrees of uncertainty and opacity about several other aspects of the proposal, inter alia access for all voters, implementation specifics, overall transparency, the IEC's purported independence, and protection of personal information. Superficially, this proposal looks good because it would seem to alleviate the long queues and waiting typically associated with voting in SA, but there remains far too much doubt and murkiness about the proposal's details to approve it.	Patrick	Gauteng		employed individual
	2025-09-16 11:02:13	No I do not	Security and Trust	STICK TO PAPER VOTING. Electronic voting can be hacked NO MATTER the security system in play. 	2025-09-16 11:04:11	No I do not	Security and Trust	South Africa is so full of electronical FRAUD. The government can not control it. See the big mess in America. You want to vote and have a say. Then go to the voting station and mark your tick in person.	Evelyn			unemployed individual
	2025-09-16 11:04:12	No I do not	Security and Trust	So this ANC/DA goverment cannot keep the water running, cannot keep the lights on, none of the surage plants are working. But they want a Digital Voting System! Voter fraud with no paper trail, our corrupt goverment officials must be having wet dreams about this already! The actual goal is forcing Digital ID onto the citizens. A key part of the globalist agenda, remember the meeting Ramaposa had with Swab behind closed doors in Davos.??? The meeting that was never talked about what was said??? Digital ID will put your life under globalist control.	Jacobus Gideon			
	2025-09-16 11:04:56	No I do not	Security and Trust	As the electronic voting is tied to the implementation of a Digital ID I object strongly. Firstly a digital ID system takes away all personal freedom. The government will be able to track citizens 24/7, have access to all their financial details, health details and more. In other words, South Africa will become a police state. With the corruption of government and the police who would ant that? As far as electronic voting is concerned does anyone really think that this government, or any other government, will not manipulate the results? If first world governments can't guarantee honest elections it's highly unlikely that ours will. If the government can't manage to get the post delivered, what chance have they of successfully implementing a complex system like this. Lastly, the cost of implementing such a system would be enormous, not what we need right now.	Patrick	Eastern Cape		business owner
	2025-09-16 11:07:14	No I do not	Security and Trust	Not in favor at all	Ernst	Gauteng		employed individual
	2025-09-16 11:08:01	No I do not	Security and Trust	This smells of FRAUD! No to electronic voting. Voting must be anonymous, free, and honest.	Aileen	Western Cape		retired
	2025-09-16 11:08:21	No I do not	Security and Trust	Voting is supposed to be free and fare. This System will lead to corruption and Fraud. Just look at the 2019 Elections in the United States that was hijacked and lead to corruption and voter fraud. Can’t Use electronic Systems if there is constant load shedding. Hackers can manipulate the results.	Petri	Mpumal anga		employed individual
	2025-09-16 11:09:19	No I do not	Security and Trust	Any system with the potential to track personal information and political views is open to abuse. Our government has not shown itself to be worthy of any trust and most likely will corrupt and abuse the system.	Evan	Western Cape		employed individual
	2025-09-16 11:09:52	No I do not	Security and Trust	I strongly object to an electronic voting system. In a country as corrupt as South Africa, this will allow the corrupt government to stay in power. We have a right to free and fair elections without governmental insight and interference. An electronic voting system will be weaponised against voters.	Mada			
	2025-09-16 11:10:51	No I do not	Security and Trust	On paper, and in an environement of trust and integrity the idea of electronic voting is great. Sadly South Africa, with the rampant corruption and looting by ANC and thier various support structures, cannot be trusted and has shown zero integrity, ever. I expect that moving to electronic voting will firstly, open up an avenue for more looting of billions of rands - no doubt the tender process will be rigged to go to an ANC beneficiary (s) and hugely over-priced. The pattern that has prevailed since 1995 will not change. Secondly, it will open up the opportunity to steal votes electronically. They won't need to move their far asses of a chair to do it! This suggestion is absolutely unacceptable and cannot be supported	Lionel			

	2025-09-16 11:10:54	No I do not	Security and Trust		Mike	KwaZulu -Natal		retired
	2025-09-16 11:11:55	No I do not	Security and Trust	No due the current high levels of cyber crimes and openness to manipulation	Dio	Gauteng		employed individual
	2025-09-16 11:11:59	No I do not	Security and Trust	Nothing is working and this voting will be rigged in favour of this dumb governnent. All they can do is steal take for themselves and no system is going to be free and fare. They do not have the knowledge or infrastructure to run this election free and fair.	Frieda	Western Cape		retired
	2025-09-16 11:13:17	No I do not	Security and Trust	This is a very bad idea as it violates the whole principle of "Free and Fair Elections". My reasoning? Such a digital system is far too vulnerable to manipulation by the sitting government and abuse of their power. It poses zero transparency and observation by observers and may lead to persecution of "non aligned voters!" The traditional system is cumbersome but it does promote practical observation and proofing against vote rigging and should be the ONLY and most transparent voting process for ANY democracy.	John	Western Cape		retired
	2025-09-16 11:13:21	No I do not	Security and Trust	Again no option for "All of the above". Digital voting has been known to be open for fraud. Just look at how Biden was elected as president of the USA. Voting should be fair, the current system allows for that, however some fraud has always taken place. Computer systems are always vulnerable to attack, so this is definitely not a good option	Rudi	Western Cape		retired
	2025-09-16 11:13:44	No I do not	Security and Trust		Arie	Western Cape		business owner
	2025-09-16 11:13:50	No I do not	Security and Trust	The concern is the following according this statement: "Allows voters to cast ballots from any computer with internet access." - thus if multiple PC's, laptops, tablets and cell phones are owned and multiple people that are dead or bogus IDs can be used, it means a fraud can still take place since there is no means to eliminate the above from the current system, thus how will the IEC manage this if they could not manage it in the past. Unfortunately the ANC is very manipulative and fraud driven to get votes to stay in power.	George	Gauteng		retired
	2025-09-16 11:14:01	No I do not	Security and Trust	I don't trust the government to keep records safe and also the availability of electronic identification. Not all Citizens would be able to use this facility .	Hans	Gauteng		business owner
	2025-09-16 11:14:17	No I do not	Security and Trust	I vehemently object to electronic voting. This is how corrupt ruling parties will stay in power. Electronic voting systems are rigged with a litany of problems, as revealed by research in countries that have implemented these systems. Electronic voting systems have been shown to be susceptible to tampering, record deletion, undermining of free and fairness of elections and manipulation of overall results. These flaws will most definitely be fully exploited by the already corrupt SA government, which is likely why they are pushing for implementation. Voter results should remain completely anonymous to protect voter identity and our rights to privacy, fairness and anonymity. How I vote is my business and my business alone.	Marne			
	2025-09-16 11:14:34	No I do not	Security and Trust	Idont trust theANCfurtherthanIcanthrowthem.Letsticktothesystemwevealwayshad.WhathappenedtoTrumpwhenhelosttheelectioninagainstBiden.ItwasariggedelectionpartlythroughelectronicvoteswingingNothanks.	Eddie	Mpumalanga		retired
	2025-09-16 11:16:10	No I do not	Security and Trust	We have seen the dishonest results from the US elections. We should learn from that!	Brian	Western Cape		retired
	2025-09-16 11:16:40	No I do not	Security and Trust	No no NO for Electronic Votng!!!	Merrill	KwaZulu -Natal		retired
	2025-09-16 11:16:46	No I do not	Security and Trust	We have seen how electronic voting has caused the rigging of votes in the USA. Every person in the RSA has an ID card or document which identifies the person so there is no need for electronic voting systems which can be hacked. The digitisation of people is a New World Order directive and we in South Africa should not follow this path under any circumstances.	Bernard	Eastern Cape		retired
	2025-09-16 11:17:32	No I do not	Security and Trust	The whole list is applicable or " all of the list " and the opportunity for fraud and manipulation is too good to not be used !!!	Leonard	Western Cape		
	2025-09-16 11:18:11	No I do not	Security and Trust	In a first world country (which South Africa is NOT) ... perhaps How many organisations have already been hacked / compromised due to lack of appropriate IT Security and defense mechanisms ? I would never trust this sort of initiative. Further to that ... without hardcopy crosses on a piece of paper .. the process is SEVERELY liable to abuse / corruption ... etc etc	Iain			employed individual
	2025-09-16 11:18:12	No I do not	Security and Trust	The foundation of a democratic society is freedom of choice, executed by means of a secret ballot! Just look at the corruption that has been exposed in the recent USA election - then I shudder to think what could happen in a country without 1st world technology and ACCOUNTABILITY!!	PETER

	2025-09-16 11:35:25	No I do not	Security and Trust	I honestly cannot support such a system of voting after having seen the highest levels of corruption in our beloved country. I believe an online voting system is for a country where the leaders are true leaders and who have high levels of integrity and sadly there is huge evidence that this is lacking in our land. The system will be abused and very likely rigged by conniving politicians who have lost all support due to lack of vision and commitment to the people of SA. There will be looting of a different kind . Zimbabwe is evidence of this and intrusion into the system by political hackers will distort the votes in their favour so ensuring further feeding of the elites. Please fellow citizens, block this venture with all your strength.	ian	Gauteng		retired

	2025-09-16 11:35:34	No I do not	Security and Trust	Government systems are generally terrible to use. I've had a hard time doing a simple online payment for SARS and now I'm going to struggle to vote because of this incompetence. The government has not proven it's ability to create reliant electronic systems so the IEC will not provide confidence for this. In the past elections, queues were slow because there were network issues. How will they overcome such obvious issues. Furthermore what is their plan to make it transparent, untampered and to ensure that it is secure and won't be hacked?	Neo	Gauteng		employed individual

	2025-09-16 12:25:16	No I do not	Security and Trust	In any civilised, first world country this will be a logical and effective solution but not in a country as corrupt and compromised as South Africa. There is no trust in government and it's institutions and still no meaningful measures to address the rampant crime and corruption. How safe will your personal data be and how foolproof and impenetrable will this system really be? I, for one, am very sceptical.	Dalene	Free State		self-employed
	2025-09-16 12:25:24	No I do not	Security and Trust	No way is electronic voting justifiable. The system can be manipulated by whoever is in power. The Voring Machines are known to be capable of back-door manipulation by officials. This is the case in the United States . Furthermore it becomes possible for the tracking of a person's choice. This is unacceptable regardless of any argument to the contrary.	Simon	Western Cape		self-employed
	2025-09-16 12:25:56	No I do not	Security and Trust	The fraudsters in SA are everywhere with tentacle-networks in government.	Helene	Western Cape		retired
	2025-09-16 12:26:36	No I do not	Security and Trust		Jacobus			
	2025-09-16 12:27:26	No I do not	Security and Trust	I do not trust the government at all. Their record of breaking things that worked perfectly before is a red flag for anything that they want to control. Implementing this system will no doubt cost 'billions' and feed more pigs at the trough, at the expense of the taxpayer.	Brian	Eastern Cape		retired
	2025-09-16 12:28:35	No I do not	Security and Trust	Who is going to control this and which parliamentary family member is going to get the tender for this? I don't trust the current voting system either as there is so much fraud and corruption in SA so nothing will stop them to rig this voting system as well. At least now, when votes are being counted, there are members from all political parties trying to make sure there is no fraud happening.	Geraldine	Gauteng		employed individual
	2025-09-16 12:29:59	No I do not	Security and Trust	With today's crime running rampant even electronic and digital is easily manipulated by crime syndicates	Ian	Eastern Cape		retired
	2025-09-16 12:30:04	No I do not	Security and Trust	We are being forced into digital ID, why ??? All about being controlled, nothing to do with elections at all.	Karen	Eastern Cape		retired
	2025-09-16 12:31:19	No I do not	Security and Trust		Ian	Gauteng		retired
	2025-09-16 12:32:26	No I do not	Security and Trust	I strongly oppose electronic voting under the current conditions. After decades of corruption, unethical leadership and lack of accountability, e-voting would create serious risks of fraud, manipulation and breaches of voter confidentiality. The IEC must first provide independent, verifiable guarantees of security, transparency, and privacy before such a system can even be considered. Until then, electronic voting cannot be trusted.	Ailsa			
	2025-09-16 12:35:26	No I do not	Security and Trust	United States of America are moving AWAY from voting machines due to FRAUD. They used two different manufactured machines. The software (perhaps hardware too) Those machines were designed to be manipulated remotely. Other than that the staff could also manipulate them. They do use tabulators to count the ballots. (Court case in US re their 2020 election will follow soon after their Intel declassified documents and is open for anyone to see.) I DO NOT HAVE FINGERPRINTS. My ID, Passport, Drivers licence and Bank cards were all issued without fingerprints. I have/had a skin problem with my hands. Also, as people age, their fingerprints feign.	Levina	KwaZulu-Natal		retired
	2025-09-16 12:36:22	No I do not	Security and Trust		virgil			
	2025-09-16 12:39:02	No I do not	Security and Trust	Too susceptible to voter ballot manipulation and fraud.	Kerry	Western Cape		retired

	2025-09-16 12:40:33	No I do not	Security and Trust	There is just no way to be sure that it won't invite criminal activity.	Lynette	Western Cape		retired
	2025-09-16 12:41:51	No I do not	Security and Trust	With the so-called hacking in nearly every country the "norm" nowadays so to speak, this envisaged electronic voting system in South Africa is a security risk. With the totally untrustworthy current government (especially the ANC part thereof) in power, this system will surely be manupilated and corrupted with ANC (Absolutely No Consequences). The fact that ones vote (for which Party) will now be electronically captured, only means it will be stored in a databank and thus be available to intimidate, blackmail and/or manupilate voters (especially the elctronic illiterate).....not only pre-election, but also post-election. South Africa is not politically, socially or intellectually ready for this system. In my opinion voting with an ID and pen is our only current option, with the physical counting (with strict Oversight) of ballots.	Werner	Western Cape		retired
	2025-09-16 12:42:08	No I do not	Security and Trust	No trust in government implementation of anything! It all turns to shit	HR	KwaZulu-Natal		retired

	2025-09-16 12:45:13	No I do not	Security and Trust		neville	Gauteng		retired
	2025-09-16 12:46:29	No I do not	Security and Trust	I do not trust the government (ANC) with the info of who voted for which party. With all the hacking of secure sites nowadays it is best to remain with the current system.	michael	Western Cape		retired
	2025-09-16 12:46:48	No I do not	Security and Trust		Jacobus			
	2025-09-16 12:49:21	No I do not	Security and Trust	I say NO to any sort of digital ID of any kind. Just no! Having open access to all our personal info is perfect for corrupt governments, corporations and/or individuals, locally and globally. The threats are real, not 'conspiracy' - there is no conspiracy in anything nowadays - it's all horribly true! It's time the world's citizens WAKE UP and see what control measures political parties and governments are using. Power and control is key to these people and digital ID, linked with AI, will be perfect tools for them to use against us, the trusting, hard working citizens.	Jean	Western Cape		self-employed

	2025-09-16 13:49:36	No I do not	Security and Trust	How will the IEC ensure and be watched not to cheat themselves	RORIE	KwaZulu -Natal		retired
	2025-09-16 13:52:56	No I do not	Security and Trust	I do not agree with ANY of it. I am also not aware of any public participation regarding digital I.D.s. I consider digital I.D.s, in fact any and all digitization, when it comes to citizens or money, as a step towards the One World Government/ Global Dictatorship, which would reduce 99% of the world population to serfdom controlled by the elite. I take note that the DA is promoting digitization. Don't think we are stupid DA!! We see what you are up to.	L	Western Cape		self-employed

	2025-09-16 13:53:41	No I do not	Security and Trust	I strongly oppose the introduction of electronic voting in South Africa. Our current paper ballot system is transparent, reliable, cost-effective, and produces results quickly — usually within a day or two. Electronic voting offers no real advantage, but creates serious risks: Lack of transparency: with paper ballots, every vote can be seen, counted, and recounted. Electronic systems remove that visibility and force citizens to trust machines and software that can be tampered with. Vulnerability to manipulation: around the world, electronic voting has been shown to be open to hacking, insider interference, and disputes. South Africa cannot afford further erosion of trust in elections. Slower and more costly: electronic systems often crash, cause delays, and require massive investment in machines, training, and cybersecurity. This money would be better spent on improving voter education and access. Exclusion risk: many South Africans live in rural areas with unreliable electricity and internet. Electronic voting could disenfranchise these communities. Loss of sovereignty: dependence on foreign technology providers to run our elections undermines our independence. The paper ballot system is simple, visible, and trusted. Electronic voting would open the door to disputes, suspicion, and corruption while adding costs and complexity. For these reasons, I say vehemently NO to electronic voting.	Richard	Western Cape		business owner
	2025-09-16 13:54:18	No I do not	Security and Trust	Trust the IEC, what a joke. Privacy of information, another joke.	Barry

	2025-09-16 14:21:11	No I do not	Security and Trust	NO to the system! The ANC will find a way to manipulate the system. We are all well aware of the potential fraud and again the cost that we don't have will be bloated far beyond your wildest imagination. I also think we don't have the infrastructure to support a national voting system.	Lindy	Gauteng		business owner
	2025-09-16 14:21:40	No I do not	Security and Trust		Jonathan	Mpumal anga		self-employed
	2025-09-16 14:24:10	No I do not	Security and Trust	No one can trust a government official. Fraud!	Suzanne			retired
	2025-09-16 14:24:36	No I do not	Security and Trust	Our government has thoroughly proven they are absolutely incompetent to make anything work except for looting. This is another scam to do the same and open up the door wide for widespread voter fraud.	Peet			
	2025-09-16 14:25:00	No I do not	Security and Trust	my huge fear is the potential open for corruption and a skewed result therefrom with an electronic voting system in our electoral processes. "The idea is that once a Digital ID system is implemented by DA minister Leon Schreiber, voter fraud will no longer be possible, because every voter needs to just present their fingerprint. And then of course, the IEC need not employ people to count physical ballots, because a computer will do it." However, this means the government will have a record of who voted in what way, and manipulation of results becomes a possibility through voter suppression or vote rigging. KEY CONSIDERATIONS INCLUDE: – Security and Trust – Access for All South Africans – Practical Implementation – Transparency – Legal Requirements – Voter and Staff Preparation – Privacy and Data Protection – Infrastructure Needs sadly, our crime and corruption levels in SA don't lend this system to honest transparency & would therefore leave it open to abuse and an a-skewed outcome in the wrong favour !!	WENDY	Gauteng		business owner
	2025-09-16 14:25:17	No I do not	Security and Trust	To much corruption in the country.	George	Western Cape		retired
	2025-09-16 14:25:36	No I do not	Security and Trust	As was seen in the USA during the 2020 Presidential election, there were numerous cases of voting fraud due to their suspect und untested electronic voting system - to the extent that legislation is pending in that country to return to auditable pen and paper voting. Hence, I do oppose this electronic voting system vehemently, as , given South Africa's propensity for fraud at all levels of society, including very much the highest level of politics, this proposed system will undoubtedly be riddled with fraud of all kind, and lead to an election outcome that is not free and fair. We currently have a system that is virtually perfect, that makes it impossible for any person to vote more than once, and 100% verify the identity of every person before the can make their vote by pen on paper at their assigned voting station - from where the votes are physically counted in an indisputable manner - this is probably the best voting system in any country in the world - DO NOT SCREW THIS UP BY INTRODUCIONG A FRAUDULENT ELECTRONIC SYSTEM.	Louis	Western Cape		self-employed
	2025-09-16 14:26:15	No I do not	Security and Trust	With the advent of AI, I do not believe electronic voting will not be corrupted	ROCHE	Western Cape		self-employed

	2025-09-16 15:27:55	No I do not	Security and Trust	Voting are easily rigged with the electronic system	Mogomotsi	Gauteng		
	2025-09-16 15:27:57	No I do not	Security and Trust	Electronic voting has many risks. While the current paper ballot system is also prone to manipulation and fraud, an electronic system means that fraud on a much larger scale can be perpetrated and it is much easier to hide. Electronic voting could also remove the privacy and secrecy of the vote as even if there is no direct link, time stamp and other voter verification data could be used to infer a link between an individual and a vote that was cast, potentially resulting in reprisals for individuals that don't vote "correctly" according to the people in charge. Then our poor infrastructure, unreliable electricity supply and inadequate skills of the staff that are to operate these systems, especially in rural areas, could result in a large percentage of the population not being able to cast their vote.	Achim			
	2025-09-16 15:29:02	No I do not	Security and Trust	Electronic voting is very easy to corrupt and rig voting tallies.	Chris	KwaZulu-Natal		unemployed individual

	2025-09-16 16:10:16	No I do not	Security and Trust	Electronic ballots are open to manipulation. The incentive to manipulate outcomes for the ANC government is too great. A firm NO for me.	Michael	Gauteng		employed individual
	2025-09-16 16:10:24	No I do not	Security and Trust	We've already seen the corruption in most areas of our government. We've also seen how voting machines / electronic voting have been susceptible to corruption / abuse. It is a risk to our democracy.	Adriaan	Western Cape		self-employed
	2025-09-16 16:11:22	No I do not	Security and Trust	And if there's a power outage..? In any case, too easy to hack. It's happened elsewhere, and will for sure happen here.	AJ	Gauteng		retired
	2025-09-16 16:13:15	No I do not	Security and Trust	Any electronic voting system is liable to manipulation to change results. Manual voting is the most trustworthy way to get a legitable result.	Jon	Western Cape		retired
	2025-09-16 16:16:05	No I do not	Security and Trust		Alan	Western Cape		employed individual
	2025-09-16 16:16:29	No I do not	Security and Trust	This removes the secret ballot, which WILL bring in corrupt practices and nefarious actors threatening people to force them to vote a particular way or punishing them for voting a particular way. People have to be free to express their wishes without fear of that being linked to them, in order for a DEMOCRACY to thrive. The count of votes is currently performed by thousands of South Africans across the country. If computerised, just a small group of people will hold sway over the whole national vote. That temptation is disastrous for our ruling party, they won't be able to resist it...NO NO NO Also, having a paper vote is essential to allow for a double check. Computers can go wrong or be hacked and once the results are broken there may be no way to get them back...this is too important to allow that possibility to exist. Also , judging by the computer expertise I've seen within Government departments, definitely NO to them managing a computerised voting system.	Jane	Gauteng		employed individual
	2025-09-16 16:17:37	No I do not	Security and Trust	I think it will just make voter fraud easier.	Elizma

	2025-09-16 16:23:23	No I do not	Security and Trust	This will be just one more way to commit fraught. One more way to manipulate voters.	Irene	Gauteng		retired
	2025-09-16 16:23:30	No I do not	Security and Trust	There are multiple examples worldwide where there have been significant issues of manipulation and fraud associated with electronic voting machines. These are well documented and for a young democracy like ours we require less points of division and dispute. A paper ballot is always superior in the case of any disputes and recounts required. One day voting is also an absolute prerequisite to free and fair elections. Any machine that is programmed by humans is open to manipulation - a paper ballot is either valid or spoilt. This should be avoided at all costs to protect our beautiful democracy!	Alex	Western Cape		business owner
	2025-09-16 16:25:13	No I do not	Security and Trust		Gary	KwaZulu -Natal		business owner
	2025-09-16 16:25:33	No I do not	Security and Trust	I have worked in IT for 25 years and seen how data and coding h=can be manipulated. Nice idea but we aren't ready for that. Home affairs hasn't even got the new book on line for you passport completely figured out. Mine expires in October 2025 - I was going to go overseas for Christmas but can't as I just can't get an online booking. Having a disability I am not going to do it the looooong painful way of going into a home affairs office without an appointment.	Fern	Western Cape		employed individual
	2025-09-16 16:26:36	No I do not	Security and Trust	Electronic doesn't necesarily mean better, number can be altered or systems can be hacked. Work on fixing the existing system, more security and heavier consequences for those caught defrauding the system.	Clayton	Western Cape		employed individual
	2025-09-16 16:27:17	No I do not	Security and Trust	It really is a matter of trust. To say that the ANC is not corrupt is like saying the sun will not rise tomorrow, both so far from the truth. Once the criminal elements, including those named by the Zondo commission can be tried and jailed as well as our corrupt police etc etc, perhaps then we can look at a digital voting system. Right now, with the ANC possibly getting only 18% of the national vote in the next elections, I would surmise that some element of corruption which is difficult to trace and audit will take place in order for them to stay in power. AN ABSOLUTE NO!!!!!	Michael	Western Cape		retired
	2025-09-16 16:30:26	No I do not	Security and Trust	This government has not proven that they can be trusted. The chances of hackers etc does not make this a viable option. We already have issues with ballot papers going missing etc.	Nicole	Western Cape		unemployed individual

	2025-09-16 16:39:56	No I do not	Security and Trust	While electronic voting may promise efficiency, introducing it without stringent safeguards threatens the very foundation of our democracy. Security, transparency, and trust must come first, yet digital systems risk enabling vote manipulation, voter suppression, and loss of privacy, as they can never be observed or audited as openly as paper ballots. Many South Africans also face barriers of access, infrastructure, and digital literacy, making fair participation uncertain. Until clear legal protections, independent auditing mechanisms, and robust infrastructure are in place to guarantee both privacy and transparency, the adoption of electronic voting would undermine rather than strengthen public confidence in our elections.	Rick	Western Cape		retired

	2025-09-16 16:54:06	No I do not	Security and Trust	- Even the most sophisticated computer security systems are vulnerable to professional hacking. SA is not exactly professional and immune to hacking. - Government departments leak like sieves and are riddled with corruption. So how can the IEC cope. - It requires just a single breach to place the biometrics of all voters in the hands of cyber crooks. This, along with AI, could destroy the security of the finger prints of individuals for the rest of their lives! - Based on the massive corruption factor in government departments, how can we expect the vital tenders to be awarded to the right people? Even with the best of intentions, it only takes one bad player to overturn everyone's private identity. The experience of international espionage shows that individuals in key positions can be turned revealing secrete that compromise the lives of countless agents in dangerous countries. Is the IEC really on top of them? Are they better than the CIA, MI6, KGB (or whatever they are called now) and China's secret service? Can the IEC be sure that well hidden silent sleeper bugs are not already included in the reams of protected and therefore opaque computer coding that will be procured. My contention is, "No they cannot be sure." Alternatively, if such were to be open, who in the IEC would be able to check it. Ant if they could, that too would be a major security risk in itself. This is the perfect insoluble Catch 22 problem. Damned if the coding is encrypted securely (if their really is something that is secure if the face of the massive computing capacity of AI systems and their smart authors.) Even more damned if the coding is open for even one well qualified person to check. So sorry, the system can never be secure. - Taking away current checks an balances makes it impossible for party's to check the results. No transparency!	Christopher	Gauteng		self-employed

	2025-09-16 17:28:18	No I do not	Security and Trust	Can't ideally select one reason, there should be an "all of the above". With all the fraud circulating with electronic platforms nowadays, how can this corrupt government 100% ensure that the system isn't hacked or tampered with. It's easy enough for them to rig a paper vote system, this would probably be very easy too. The number of reports, especially home affairs, "the system is offline" happens on a daily basis literally, how can we as the public confidently endorse an electronic system if this government can't even get it's own departments online. This just reeks of potential corruption, especially with the current government, as they know they are losing numbers at an alarming rate. And yes, what about personal information protection etc? What other "tests" are going to be put in place to prevent multiple voting from a single person? If it's digital, it can be manipulated for ideal outcomes, take the gambling industry for example, totally rigged, and what's stopping this government or other "world power" from rigging a digital system. Recipe for disaster and major tampering. In theory , a wonderful idea, in practice, especially in SA, what a joke.	Nic	KwaZulu-Natal		business owner
	2025-09-16 17:28:23	No I do not	Security and Trust	I want my vote to be anonymous. Electronic voting will just add to existing corruption. I'm opposed to a digital ID which will give government absolute control to monitor everything that I do.	Timothy	Western Cape		self-employed

	2025-09-16 19:57:09	No I do not	Security and Trust	This is the height of naivety! There isn't one example of a digital record system that is not hackable. It is only a matter of time before every digital system is compromised. The current manual voting system is open to being tampered with, but at least there is a physical record to prove what happened. By contrast, a digital system can be hacked without anyone knowing and without there being a record of tampering. Putting everyone's personal details on the blockchain enables an unprecedented level of manipulation and control of people by a machine! Politicians can at least be held accountable, a machine cannot. Absolutely No!	Jonathan			self-employed

	2025-09-16 20:00:25	No I do not	Security and Trust		Verenzia	Western Cape		employed individual
	2025-09-16 20:05:15	No I do not	Security and Trust	To whoever it may concern. I strongly disagree with the move of the South African Government to electronic voting. South Africa enjoys respect from many other countries, for it's free and fair elections. The evidence that electronic systems will improve the reliability & transparency of election outcomes is not supported by our country's proud history of elections that have never faced severe challenge for being manipulated. There is an old saying, "If it ain't broken, don't fix it". I strongly suggest the South African Government seek to fix the many institutions and aspects of the Social Contract that it has broken, rather than "improve" one of the few things that actually works very well & is so vital to the health of our Democracy, at a time where Democracy is under threat. The IEC is an organisation that the people of South Africa largely respect. Not only that - the South African Government struggles to keep the lights on due to it's mismanagement of ESKOM. Moving to electronic voting is highly questionable, given that load shedding could well threaten future elections. It's not broken - don't fix it. Government, thank your lucky stars that you have an organisation in the IEC that can actually DELIVER on it's mandate. Look & learn - don't fix! Thanks.	Russ	Western Cape		self-employed

	2025-09-16 23:12:32	No I do not	Security and Trust	The proposal to introduce electronic voting in South Africa, while innovative in concept, cannot be supported in its current form. The challenges outweigh the benefits at this stage: 1. Legal and Constitutional Constraints The current Electoral Act, 1998 prescribes paper-based voting, and no enabling law exists to accommodate electronic systems. Constitutional guarantees of secrecy, fairness, and equality in the vote may be compromised if electronic systems fail or are manipulated. 2. Security and Trust Deficits Global evidence shows persistent risks of hacking, malware, and technical failures in e-voting systems. South Africa’s fragile trust in institutions could be further undermined by real or perceived breaches. 3. Infrastructure and Cost Barriers Many rural and under-resourced areas suffer from unreliable electricity and internet connectivity. The costs of secure hardware, training, and ongoing maintenance would place further strain on the public purse without clear long-term savings. 4. Digital Divide and Accessibility Disparities in access to technology and digital literacy risk excluding large segments of the population, particularly in rural areas and among the elderly. 5. Oversight and Verification Gaps No guaranteed paper trail or verifiable audit mechanism has been presented. Without robust, independent oversight and risk-limiting audits, the integrity of results cannot be guaranteed. Conclusion While the future may require South Africa to modernise aspects of its electoral system, the introduction of electronic voting is premature. Until the legal framework, infrastructure, verification mechanisms, and public confidence are firmly established, the use of e-voting should not proceed.	Yongama	Gauteng		employed individual

	2025-09-16 23:20:41	No I do not	Security and Trust	It's well known that in the US, for example, that voting rigging happens and has happened - remote controlled from another country reportedly (Italy, I heard). So, they're experienced with using digital voting and we are not. It needs to be more deeply explored. We're going to find out that the true winner of the previous election in the US was not Biden but Trump. Then these systems will be fully exposed with their loopholes. I don't trust it and therfore cannot support it. Review needed. Ask Elon what he thinks, he understands the current tech flaws in this. South Africa must not be the puppet of any globalist master, we must stand sovereign - we are already a high jacked country and when we plug the leaks, we can grow. What system is this? Is it the same one used in the US #rigged elections or another? We need more information. Keep it private and manual until we're 100% sure. Then, we also need to know that no tenderpreneurs are stealing.	Jeanne-Ann	Gauteng		unemployed individual
	2025-09-16 23:22:48	No I do not	Security and Trust	A terrible unworkable idea in a 1st world country like America, that will never work properly in South Africa	Duane	Gauteng		employed individual
	2025-09-16 23:24:10	No I do not	Security and Trust	My vote is totally secret this is why at an election you have a voting booth so no one can see you vote or know how you voted. The biggest Democratic county in the world, you have to be at the station in person. On top of this not every voter has access to the internet. At this time we all live in a country where there is bribery and corruption and this will only assist specific Party to gain more votes. Specific party has direct access to this system by whatever illegal way it chooses and will change the votes to suite them , top of this they will steal more money for the unscrupulous politicians. Need I comments more as anyone can read between the lines. It’s a great pity that the disadvantaged people aren’t shown or understand what these specific parties do that effects them and the rest of the innocent people out there.	Anthony	Gauteng		Non-profit

	2025-09-17 01:47:36	No I do not	Security and Trust	Digital ID for voter CHECK-IN is ok. Using it to CAST & COUNT votes is too risky. SA still has power cuts, patchy coverage, millions without phones or readable fingerprints, and no breach-proof state database. E-voting creates a single hackable tally and a record of who voted how, threatening secrecy and trust. Keep paper ballots. Mission creep will occur - once the ID is used for grants, SARS, e-health and voting, cross-linking becomes trivial. Remember the original 1990s promise that the bar-coded ID number would never become a general population register has already been broken; adding ballot linkage accelerates the erosion. 	2025-09-17 02:24:22	No I do not	Security and Trust	Title: Opposition to Implementing Electronic Voting with Digital IDs in South Africa Introduction The proposal to implement electronic voting (e-voting) in South Africa, particularly using digital identity (ID) systems, raises significant concerns regarding election integrity, security, and public trust. While proponents argue that e-voting can modernize the electoral process, historical instances of election fraud and technological vulnerabilities underscore the risks associated with such systems. Historical Instances of E-Voting Fraud Globally, there have been notable cases where electronic voting systems have been compromised or have malfunctioned, leading to questions about their reliability. In the United States, for example, Broward County, Florida, experienced an incident in 2004 where 134 electronic ballots were blank in a one-race election held on Direct Recording Electronic (DRE) voting machines. The margin of victory was just 12 votes, and Florida law required a manual recount, which was impossible because there were no physical ballots to recount Verified Voting . Similarly, in California's Napa County, a 2004 primary election saw over 6,000 votes missed due to a malfunction in an electronic voting machine that failed to record votes marked with dye-based ink from gel pens. Although the issue did not change the election outcome, it highlighted the need for e-voting machines with a paper trail to ensure accuracy and accountability WIRED . Security Concerns with Digital ID Integration Integrating digital IDs into e-voting systems introduces additional security risks. Digital identity systems can be susceptible to data breaches, identity theft, and unauthorized access, potentially compromising voter anonymity and the integrity of the electoral process. For instance, in Russia, researchers have identified vulnerabilities in the e-voting system, including vote swapping, theft of voter accounts, and ballot stuffing, which undermine the credibility of	juz10	Western Cape

	2025-09-17 07:29:23	No I do not	Security and Trust		Charles	Gauteng		self-employed
	2025-09-17 07:29:45	No I do not	Security and Trust	MY own, and many other people in South Africa who are older no longer have fingerprints that the readers can read. These votes will be electronically, and fraudulently allocated to whatever the system has been configured to do. At best it will be considered a spoilt vote, at worst it will be systematically used to commit voter fraud. It should also be considered that a large part of the older population still believe in the struggle, their votes will either not count or be misappropriated. Furthermore, the Digital ID has not been fully rolled out and thus voters will be disenfranchised through this system. Finally Data Manipulation cannot easily be traced, neither is the process transparent. Considering how much fraud is committed with the physical Ballots, which can at least be seen, and Parties have an opportunity to challenge what has been picked up.	William	Gauteng		self-employed

	2025-09-17 07:30:06	No I do not	Security and Trust		Anthony			
	2025-09-17 07:30:22	No I do not	Security and Trust		Adrian	Gauteng		retired
	2025-09-17 07:30:25	No I do not	Security and Trust		ian			self-employed
	2025-09-17 07:32:04	No I do not	Security and Trust	It is much easier to rig an election through electronic means and have zero trust in this government of corruption , looting and lies. Another issue is the record of who voted and for whom. This data could be used against political rivals. The fraud and abuse that can be done electronically is far greater than with a paper counting system. I DO NOT SUPPORT DIGITAL ID's OR DIGITAL ELECTRONIC VOTING SYSTEMS.	Donovan	KwaZulu-Natal		business owner
	2025-09-17 07:33:05	No I do not	Security and Trust		Louis	Western Cape		retired
	2025-09-17 07:36:05	No I do not	Security and Trust	I do not think our country is ready for the technological enhancement due to intimidation in the rural areas by political parties. The fact that the government will know which way was voted is a problem. There is a threat of violence on your home if you do not vote in the way that is "expected".	Stephen	Mpumalanga		
	2025-09-17 07:36:33	No I do not	Security and Trust	A system developed by our government can be manipulated by the same government. The results will then always be in their favor	Cobus	Gauteng		self-employed
	2025-09-17 07:37:03	No I do not	Security and Trust	The problems with our current voting system is not manual or electronic, it is implementation, management, oversight and follow through (leadership and character). Making the voting process an online process might increase ease of access for some, others won't have access, but it also allows for fraud, as these online voting systems tend to be easily manipulated. Unless clear security measures are implemented, managed and enforced it will be no better than counting the physical ballots. The other major issue is mass migration from rural areas into our cities. This will skew votes be they online or manual. The question is also, is this migration orchestrated for the exact purpose of skewing the votes? I do not put it past our corrupt government. Then the question becomes, how will online voting fix this issue, because it seems like it just might exacerbate it.	Leopold			
	2025-09-17 07:37:06	No I do not	Security and Trust	The ANC has proofed to not be trustworthy. They will corrupt the system.	Gys			
	2025-09-17 07:39:35	No I do not	Security and Trust		Andrew	Gauteng		
	2025-09-17 07:39:51	No I do not	Security and Trust	I don't trust the ANC. They are a criminal organization who have no soul or integrity.	Warrwn	Western Cape		self-employed

	2025-09-17 07:55:25	No I do not	Security and Trust	The ANC can not be trusted. They will find a way to rig the elections.	Phillip	Gauteng		retired
	2025-09-17 07:55:40	No I do not	Security and Trust	Electronic ballots are not feasible, since the principles of and electronic system are fundamentally opposed to those of an electoral system. A ballot depends on verification and anonymity. Without verification voter fraud is possible, and without the second voters are vulnerable to external pressure to vote a certain way, knowing a record of their vote exists. An electronic system must either accept votes without a record of who cast them and therefore no verification that the vote is valid to protect anonymity, or record who cast which vote and open the system to voter manipulation. It is telling that nearly every major developed nation in the world still relies on paper ballots. A physical, anonymous, record that can be counted multiple times to verify the outcome is resilient against a large number of attacks, although it is by no means perfect. The security and trustworthiness of an electronic system is not yet proven globally, and particularly in South Africa's corruption-laced state structure it does not stand a chance. Please do not implement something that will further erode public trust.	William	Western Cape		employed individual
	2025-09-17 07:56:16	No I do not	Security and Trust	I feel electronic voting is not trustworthy, if first world nations have this repeatedly coming up as an issue, I can't see it being trusted here. South Africans who are not tech savvy may be influenced when voting. Paper votes can be recounted, monitored, and is anonymous. I feel the IEC has set up enough voting stations to make voting on paper a easy process. Strange that at such a key voting period is when electronic voting is being considered. I already don't trust that this process will be done correctly.	Rui			business owner

	2025-09-17 09:24:25	No I do not	Security and Trust	It has been proven that voting machines can be, and are, used to rig elections. They are extremely open to corruption. They can never be trusted!	Anthea	Western Cape		retired
	2025-09-17 09:25:10	No I do not	Security and Trust	With all the corruption going on in this country, I do not trust the government.	Justine	Western Cape		self-employed
	2025-09-17 09:26:25	No I do not	Security and Trust	Electronic voting via digital ID, as currently proposed, is incompatible with South Africa's constitutional guarantees and violates key provisions of the Electoral Act 73 of 1998. The following points outline the legal and procedural grounds for objection: Section 38(1) of the Electoral Act guarantees that "a voter is entitled to vote in secret." Digital ID-linked voting systems inherently compromise this right by: - Creating traceable voter profiles tied to ballot choices - Enabling metadata capture that can be reverse-engineered - Undermining anonymity through centralized authentication protocols This breaches both the spirit and function of the secret ballot, which is foundational to electoral freedom and protection from coercion. Electronic voting systems lack the observable audit trail required for public confidence. Unlike paper ballots: - Digital systems obscure vote counting - They rely on proprietary code and unverifiable algorithms - They are vulnerable to malware, manipulation, and institutional shielding This undermines electoral transparency, a core tenet of democratic legitimacy.	Andrea			employed individual
	2025-09-17 09:26:30	No I do not	Security and Trust		Richard			retired
	2025-09-17 09:27:22	No I do not	Security and Trust	Electronic voting appears to be the logical way to go, however, this is NOT SOUND, as the results of the voters/ public can be manipulated, and their personal information jeopardized. Apart from that we have a vast number of people in our country who DO NOT have access to any electronic facility .....how do they vote? Having gleaned from other countries who have this means of voting: we the citizens of SA can be compromised through this proposed means of voting, and I therefore DO NOT ACCEPT IT!	Shirley	Western Cape		retired

	2025-09-17 09:28:14	No I do not	Security and Trust	Kanse vir korrupsie met manipulasie van stemme ten gunste van die anc groter.	Danie	Gauteng		
	2025-09-17 09:28:28	No I do not	Security and Trust	Firstly, it has been proven that electronic voting is subject to the algorithm of the development company, and has been an area of massive contention and fraud in the US and other countries. This alone is sufficient reason to stay away from electronic counting. I am a developer in security systems and know how easy it is to manipulate data through numerous means - and this is always subject to the bias of the development company. I have been involved in developing massive national scale biometric solutions for leading international companies, and biometrics have significant challenges at this scale. Secondly it will increase the cost of voting significantly. Thirdly, it is a doorway to electronic ID and monitoring of voting - violating privacy and an open door to centralised digital currencies, all of which I object to in violation of my citizen and privacy rights. 	2025-09-17 09:29:24	No I do not	Security and Trust	Anything this government puts in place is for their benefit so that more money can be stolen.	Patricia	Gauteng		retired

	2025-09-17 09:30:00	No I do not	Security and Trust	This is another ploy ..... those attempting to introduce this now - they don't unfortunately know/understand/ have willingness to look at alternatives; The very party that currently still believes they are the majority decision makers etc If there was corruption allergations it was certainly towards these same, hence it was deflected to accuse others, and then nothing was done - they believe they did not get the majority due to corruption in the vote count not that the majority of people are no longer interested in their stories and cover up lies and mis truths all backed up with no service delivery, but billions upon billions disappearing as fast can a push of a computer key. They have no doubt already figured out the complexities of on line not everyone has access, and by the way, do we really want to share our information with such a band of obvious dishonest individuals which has not changed in 30 odd years. This is another opportunity they are creating to lull the population to misunderstand such a process. We need to stand in line, and vote at a poling station. If there were to be suspicion of wrong doing regarding the voting process, the counting of same and process of reporting same and all it's aspects, then they should rather focus on what has happened in the past that could be repeated and make sure that the system for through immediate investigation is in place and those found guilty of same that there are consequences in place that deal with these types of crime immediately and effectively. Dis allow the chance to duck and dive, deflecting from the truth to how it suits them etc. If the people dont recognize their game plan by now then it is the people who need to wake up to what is being done to them minute by minute not just at election time - that is their permission to continue and pretend they are doing a great job, which if the question was around corruption well certainly 10 out of 10.	Jennifer	Gauteng		
	2025-09-17 09:34:42	No I do not	Security and Trust		Piet	Western Cape		self-employed
	2025-09-17 09:35:09	No I do not	Security and Trust	We have seen how even in first world countries electronic ballot counting is compromised, flawed and can easily be used by dictatorial government to manipulate outcomes. We have a system that works, we have enough volunteers to assist. In a time where jobs are haemorrhaging many more jobs will be lost by implementing this. Don't try an fix something that is not broken.	Reuben	Gauteng		business owner
	2025-09-17 09:36:22	No I do not	Security and Trust	The possibility of VOTER FRAUD and VOTE SUPPRESSION rise exponentially with electronic voting. Votes are supposed to be anonymous, but now it can be tracked with a digital ID as well?	George	Gauteng		self-employed

	2025-09-17 10:03:32	No I do not	Security and Trust	Too easy to swing the votes the way they want, good example is the 2020 USA elections. Too easy to cheat. Which is what will happen!	Kay	KwaZulu-Natal		
	2025-09-17 10:03:55	No I do not	Security and Trust	Given SA's disastrous reputation for online scams and failing to protect personal data in both private and public sectors, I have no faith that rigging would not take place in a digital vote - either server-side or voter-side at the point of decision. 91% of SAs population owns a smartphone. Which means that 9% will be unable to vote. That 9% will be the really poor and the really old. There are many people, not just the infirm, who would require a friend or family member to vote for them or watch over them while they vote, or could be bullied at the decision point. This removes the confidentiality or un-influencability, of the ballot. I'm all in favour of digital voting, but not at the expense of lost privacy.	Godfrey			business owner
	2025-09-17 10:04:43	No I do not	Security and Trust		John	Western Cape		retired
	2025-09-17 10:05:56	No I do not	Security and Trust	Having lived in a country where horror was meted out on those who did not vote for the ruling party, I cannot support this, in any way, given that they will be able to link an identity to a vote. I am completely worried about our privacy and security. The current government might not do this, but I do believe there are parties who could gain power in future who would not be above persectution of those who voted against them.	Colleen	Western Cape		employed individual
	2025-09-17 10:07:35	No I do not	Security and Trust	Votes are very dependent on anonymity. This will breach this completely and voters will be scared of being targeted. Unacceptable in any society. NO	Marco			self-employed

	2025-09-17 14:03:19	No I do not	Security and Trust	I have no trust in the IEC, ANC,GNU or DA for that matter. Sorry, not sorry. Track record of corrupt and inept governance screams loudly.	Liesl	Free State		employed individual
	2025-09-17 14:04:51	No I do not	Security and Trust		Russell	Western Cape		self-employed
	2025-09-17 14:05:10	No I do not	Security and Trust		Denise			
	2025-09-17 14:05:38	No I do not	Security and Trust	Electronic voting as a medium is something too good to be true. While using technological advances as part of the electoral systems is important to increase efficiency and security, electronic voting is ultimately too risky to implement. Firstly, the idea that digital ID's will completely eliminate voter fraud is wishful thinking at best. Nothing is totally secure and people find clever ways to circumnavigate security measures - democracy is not worth this. The electronic voting system may be 'unbreakable' to begin with but will not stay that way. Secondly, privacy concerns present themselves with electronic voting. While voter intimidation can be done on any system, the anonymity of paper ballots is integral to ensuring voter safety and neutrality. Even if the government does not breach the private voting information, political parties may attempt to aquire the information for their own gain, or alternatively the information can be hacked and distributed. A record can also be built up of past votes and in an authoritarian situation used to categorise and harm citizens. Voting is a responsibility and is only done every few years. If that means standing in a line for half a day, then so be it. Instead work should be done to try and make the current system safer, more efficient and quicker.	Timothy	KwaZulu-Natal		self-employed
	2025-09-17 14:09:05	No I do not	Security and Trust	KISS. KEEP IT SIMPLE , NOT ALL PEOPLE ARE I.T. SMART. And many that are have the skill and ability to channel.	mike	Gauteng		retired
	2025-09-17 14:09:10	No I do not	Security and Trust	I have privacy and security concerns about electronic voting in South Africa. Firstly, as others have mentioned, there is no certainty that one's vote will remain a secret to all others besides me. Secondly, there is, as I see it, a heightened possibility of manipulation of the system.	Thomas	Western Cape		retired

	2025-09-17 14:14:44	No I do not	Security and Trust	If companies are able to be infiltrated by hackers, what makes the Electoral Commission think that Electronic Voting is more secure than the citizens visiting a Voting Station? If the Electoral Commission cannot stop the corruption, theft of ballot boxes & the multitude of citizens being bused to different Voting Stations to cast another vote elsewhere. Previously the Home Affairs were so porous as there are citizens who have multiple ID Books, citizens have had their ID information stolen on line. As it stands I still have the ID Books & there is the possibility that these won't be accepted when the next elections come around (2026). I'm still not been able to get an ID Card, because government are delaying a decision with regards to citizens who were born outside of the country. I'm a SA citizen & have lived here for 78 years, worked & been taxed since I started working at age 16. Alan	Alan	KwaZulu-Natal		retired

	2025-09-17 14:19:58	No I do not	Security and Trust	I have many concerns - Many of our voters do not have digital access. Electronic voting has proved to be highly corrupted world wide. Infrastructure needs in our country - i.e. the more technical a process is the less it works. Practical implementation	DELYSE	Gauteng		retired
	2025-09-17 14:21:11	No I do not	Security and Trust	Not everyone has access to the Internet, also there is no sufficient security and trust	Sisipho	Western Cape		employed individual
	2025-09-17 14:23:35	No I do not	Security and Trust	This is merely a means of Data collection and contravening Chapter 2 of the Constitution which deals with the rights of an individual's privacy. We have already lost most of our rights to privacy in all spheres , especially in financial and governmental environments. My privacy is even lost by having to give you my below information	Greg			
	2025-09-17 14:26:43	No I do not	Security and Trust	The proven corruption and incompetency within the SITA (State IT Agency) and other Government departments is a huge problem. Government has not implemented one successful IT system to date- think about the Pensions payout and the problems with fingerprint fraud. Secondly the practicality of getting fingerprints of all citizens especially in the rural areas. How will this be done? Also providing reliable and fast WIFI and connectivity across the entire country? Trust in the government is a huge issue. Yes the way to go in time . A great deal of planning needs to be done and this seems to be rushed just because Home Affairs is backing it.	Eileen	Gauteng		retired

	2025-09-17 17:31:26	No I do not	Security and Trust	Look what happened in America, AMERICA!! This will be an absolute catastrophe!! A gateway to even more corruption than there is at present. Anyone who thinks this is a good idea is either insane it a corrupt politician.	Jill			
	2025-09-17 17:31:28	No I do not	Security and Trust	Look what happened in America, AMERICA!! This will be an absolute catastrophe!! A gateway to even more corruption than there is at present. Anyone who thinks this is a good idea is either insane it a corrupt politician.	Jill			
	2025-09-17 17:32:19	No I do not	Security and Trust	This is just an attempt to distract the citizens from the current problems facing the country. Let's prove that we can deal with the existing problems and tenderpreneuring first. This proposed electronic voting system is open to manipulation and fraud in too many ways. Ghost citizens votes, for instance. Hijacking the election. There is simply not enough money to implement e-voting. Let's fix the existing overwhelming problems first. NB: Prisoners should lose their right to vote as they can easily be influenced to vote for a certain Party by promises of early release. Also, prisoners are in jail because of poor judgment, why should criminals shape our future? E-voting is a decoy to divert attention from the multiple problems facing South Africa. ZERO CONFIDENCE IN THE ABILITY TO TRANSITION TO E-VOTING.	Ada	Gauteng		retired

	2025-09-17 17:32:49	No I do not	Security and Trust		clive	Eastern Cape		business owner
	2025-09-17 17:43:01	No I do not	Security and Trust	Voting in a democracy must not be linked to an ID, since that causes fears of retaliation by those in power after the election. In addition, the electronic voting machines used in the 2020 election in the USA were proven to have been manipulated because they were connected to the internet. Paper voting provides an undeniable audit trail, and many countries in Europe are able to complete all vote counting within a day after voting closes. We already have a system of needing proof of identity to vote, and I can see the benefit of linking voting stations electronically to prevent voting fraud, but I am opposed to such a system linking my vote to my ID.	Garth	Western Cape		retired
	2025-09-17 17:43:22	No I do not	Security and Trust	How to ensure the system is protected against tampering and cyber attacks. SA NOT READY. What backup plans are needed for technical problems. NOT READY. SA still lagging in SABC technology change to this day, many years later. How to maintain public confidence in election results. SA NOT CAPABLE OF SECURING THE RESULTS. MAYBE AFTER ANOTHER 40YEARS. SA is a playing ground for online hacksters globally. Multiple times, Government was hacked, STD BANK was hacked twice. Even the current SA president has been hacked. Loadshedding is also a risk. Consequently, E voting will exclude people in the rural areas. Thus diminishing their participation on democracy. SA, as a developing state should always play to its strengths and not weaknesses. Wanting E-voting now, will only bring election results into disrepute and the little international reputation that still exists. Thus embarrassing SA country and citizens globally. Thank you for receiving my response.	Mmapula	Gauteng		self-employed
	2025-09-17 17:43:58	No I do not	Security and Trust	If you cannot take the time to stand in a que to make a decision for your future you are actually interested in the future and will not actually vote with a proper conscious and well thought out mark.	Laurelle			self-employed
	2025-09-17 17:44:01	No I do not	Security and Trust	If you cannot take the time to stand in a que to make a decision for your future you are actually interested in the future and will not actually vote with a proper conscious and well thought out mark.	Laurelle			self-employed
	2025-09-17 17:45:21	No I do not	Security and Trust	Will never trust an electronic system for this purpose!! I prefer the old way of paper ballots, with all parties in a ward count together and sign off together. All above board and very transparent!!!	Jaco	Gauteng

	2025-09-17 20:57:53	No I do not	Security and Trust	There is so much nonsense going on in the IT field that I do not think the technology can be trusted with such important info. Hacking is the biggest problem. The more it is claimed to be foolproof the bigger the challenge to all hackers to disprove the statement. Fingerprints are not unique. My bank uses these for identification but it cannot read my prints on none of my fingers . This condition exists with a number of us oldies. (I am 87). Rather improve the current paper system. Use automated reading for reliability and speed of results.	John	Western Cape		retired
	2025-09-17 20:58:06	No I do not	Security and Trust	Even IF the IEC implements effective safeguards against anyone accessing who voted how, many voters themselves will feel unsafe about anonymity and could change their votes out of fear of being identified and targeted. In a country rife with political killings, corruption, misinformation campaigns and voter intimidation a secret ballot absolutely has to remain 100% a secret ballot, that is the whole point of a secret ballot. By all means use technology to prevent cheating. Let votes be counted at voting stations vs transported before counting, and have every box stay visible in the room and opened and counted while being livestreamed so the whole nation can help monitor plus allow interested citizens to stay in the rooms and watch in person. Easy. The only reason paper ballots were transported was to easily collate all the little totals. Tech can do that now	Je'anna	Gauteng		Non-profit

	2025-09-17 22:23:44	No I do not	Security and Trust	Good evening IEC, As a concerned citizen who has voted in elections since the 2016 local government election I am happy with manual voting with one person receiving a ballot thus one vote. I have 100% against electronic voting. The current system mus just made stronger by training IEC officials on how to handle ballots and the general public on how to avoid spoiling their vote. Manual ballot voting is still fine in our context in South Africa and thus nothing needs to change. Electronic voting will encourage fraud as questions will Be asked on who will get the tender for the voting machine and who and how is the data handled. People’s lives are at stake and this electronic voting thing cannot be the way to go.	Nkosinathi	Gauteng		employed individual

	2025-09-17 22:25:43	No I do not	Security and Trust	There has been enough proof from developed nations that electronic ballots are manipulatable and therefore easily corruptible. In a country like South Africa, this would be foolhardy to embark on with our prevalent corrupt culture. The South African populace is a vulnerable population with regards to targeting and manipulation from both sides of the political fence. For the sake of our democracy and avoidance of manipulation, this should not be allowed!	Nathi	Gauteng		self-employed
	2025-09-17 22:35:55	No I do not	Security and Trust		Judith	Western Cape		retired
	2025-09-17 22:40:54	No I do not	Security and Trust	I don't support electronic voting because I do not believe that my vote will remain secret.	Marlene	Gauteng		employed individual
	2025-09-17 22:43:29	No I do not	Security and Trust	The US has tried this and it doesn't work. The voting fraud is massive. It is open to fraud and must be avoided at all costs	Pam	Gauteng		self-employed
	2025-09-17 22:48:23	No I do not	Security and Trust	I understand that the world is heading in the direction of electronic everything, and I also know that there could be fraud with paper ballots too, but I don't think we are ready for that in South Africa yet. I worry about the training of people and whether the infrastructure will be ready to reach all the way to the rural areas. However, my main worry is AI and hacking. I no longer believe anyone can 100% guarantee the safety and security of any electronic information or system these days. I don't know what the solution is for years from now, but for right now, I say we are better off sticking to the trusted system we've had the past 21 years.	Maritsa	Eastern Cape		employed individual
	2025-09-17 22:49:05	No I do not	Security and Trust		Renata	North West		unemployed individual
	2025-09-17 23:03:41	No I do not	Security and Trust	The system is controversial and will involve increasing "digital" intrusion into the lives of ordinary people on other fronts. Electronic voting, judging by how much controversy it generates, for example, in the USA, always seems to be contested with resulting polarization and friction, all things we do not need in our already fractured society!	Bernard

	2025-09-18 07:54:45	No I do not	Security and Trust	The South Africzn government can't even get the basics right, how exactly are they going to manage this correctly?!! A hard NO from me.	Anita	Western Cape		employed individual
	2025-09-18 07:54:57	No I do not	Security and Trust	Any new system proposed or introduced by the current government is riddled with background corruption ans schemes to stay in power. How independent the IEC is remains uncertain.	Stephan			
	2025-09-18 07:57:04	No I do not	Security and Trust	I don't want Government to have information on how I voted. a database is also open for more sophisticated manipulation.	Corne	Gauteng		employed individual
	2025-09-18 07:57:38	No I do not	Security and Trust	There is no way to have a transparent vote if you do evoting or digital voting. We saw what happened in America. Votes can be faked, hacked etc with digital voting and digital voting machines. The best way to vote is by ID, in person on a piece of paper, which reconciles to voter roles and can be archived and audited after the vote. This CANNOT be truthfully verified by evoting systems, it makes it so easy commit voter fraud. Any reasonable person with basic logic can see this will open the voting system to manipulation. 	2025-09-18 08:00:42	No I do not	Security and Trust	Electronic Voting - Arguments Against Voting has progressed in technology from traditional days when voters dropped votes marked on a shell, shard of pottery, or card into a box to the current days where voting is controlled by electronics and the processes leading to the vote remain unseen to the human eye. Despite the change in method of voting, the basic facets of good voting tactics remain the same: ensuring one vote per voter, maintaining voter anonymity, accuracy of vote, security of the system, and prevention of fraud. This is where the problem lies in many arguments against electronic voting – opponents do not feel that the voting basics can be maintained in an electronic voting system. The arguments have been divided into 3 general categories of complaints: issues with the technology, vast possibilities of fraud, and protection of voters and their votes. As Bruce Schneier describes it, technology adds more steps to the process and thus increases the possibility of error with each additional step, all of which are largely unseen by the voter. Put Murphy's Law of 'whatever can go wrong, will go wrong' into play, and one can surmise that technology will most likely falter. Not only does the technology create more errors in the electronic workings, but the voters can also commit mistakes due to confusion with the user interface. The terminology is confusing, different machines produce different interfaces, and even the audio guides to help the disabled may prove more confusing than helpful. With the advent of electronic machine voting also comes the higher possibilities of fraudulent machines and practices. First of all, the technology is "black box software," meaning that the public is not allowed access into the software that controls the voting machines. Although companies protect their software to protect against fraud (and to beat back competition), this also leaves the public with no idea of how the voting software works. It would be simple for the com	Catherine

	2025-09-18 08:24:16	No I do not	Security and Trust	Well I thought something so intelligent but also very stupid would at sometime come into play. I am in the electronic and digital industry and I find it the most invasive form of technology. All think it great and yes it makes life easy but it takes a huge chunk of your life away. Technology depletes human interaction, destroys trust, is an invasion of one's privacy, one's life and religion in every form. Technology is designed to tag, control and track the human population for one reason only and that is to control the population. This removes your ability to be a private, moral, just human being and be a puppet. The state knows your thoughts, your likes, dislikes and what you believe, and most of all your trust and dignity will now put you into a category, a box and be labeled.	Norman	Western Cape		business owner

	2025-09-18 08:40:41	No I do not	Security and Trust	This will never work in this country far too much corruption and fraud. There are already enough scams	Diane	KwaZulu -Natal		retired
	2025-09-18 08:40:53	No I do not	Security and Trust	For an example of how this can go bad and break the trust of the voting system in South Africa, one only needs to take a look at the USA. Electronic voting opened the doors for mistrust (whether it was valid or not) and lead to the January 6th incident. A local example of a badly utilized digital solution is our driver licensing system. It took my brother more then SIX MONTHS to get a hold of his license. If national voting took that long the lack of trust would skyrocket. The current system is fast enough as it is. Holding no room for doubt whether the votes are as legitimate as possible, whilst ensuring that there is as much room for error, is by far the best approach. To put it simply: One computer system = ONE point of failure Many vote counters = MANY points of failure (best possible outcome)	Trevor			employed individual
	2025-09-18 08:41:05	No I do not	Security and Trust	Firstly I do not trust our IT infrastructure to be able to handle such a task, maybe if a pilot roll out maybe with by elections to see how effective and how secure it would be. I think it might be a desperate attempt by declining political parties to increase non existent voter turnout out	Mduduzi	Gauteng		self-employed
	2025-09-18 08:41:35	No I do not	Security and Trust	I do not feel comfortable that my vote will not be a secret as there will be an electronic copy.	Hettie	KwaZulu -Natal		retired

	2025-09-18 08:55:05	No I do not	Security and Trust	I can almost say, 'All of the above are my concerns'. In a country where corruption is rife, and has been for the largest part of 31 years, how will this result in success and honesty? Serving the citizens of this country has not been a priority for Government, neither has it been for the majority of politicians. We do know who fund you, we do know your origins. We know that you are bought and paid for by those that set out to, not only imprison us with the COVID plandemic, but set out to harm us with a harmful vaccine. The economy is shot, and that is an understatement. Unemployment is at an all time high. Our children's education standards are deplorable and unacceptable. People are dying by the thousands due to crime, but you stick your noses into other countries' business, like the wars going on. Gang violence and lawless law enforcement affects our human right to a safe and peaceful life. The list is long and I can go on..... As a failed state, which includes a totally degraded economy and lawless country, you still want to throw money after something that isn't even safe to use in a first world country like the US? The previous election in the US has been confirmed as 'stolen', and mostly by irregularities with electronic voting. #justsaying	Jenny	Limpopo		unemployed individual

	2025-09-18 09:19:24	No I do not	Security and Trust	CORRUPT ANC desperately trying to secure / manipulate votes to keep their thieving hands in the feeding trough. The CORRUPT THIEVING USELESS Government must address lies, dishonesty, thieving, crime, violence, gangs, murders, rapes, lawless dangerous taxis, et al. (There are some good hardworking people in Government trying desperately to save our beautiful people of South Africa).	K	Western Cape		unemployed individual
	2025-09-18 09:19:29	No I do not	Security and Trust	If rigged voter numbers could have happened in the US by means of electronic voting, the same could happen in SA. Unfortunately, I don't trust this option. On whose side is the IEC???	Helen	Eastern Cape		retired
	2025-09-18 09:20:32	No I do not	Security and Trust	These machines are instrumental in massive voter fraud. Paper ballots are safer. I reject electronic voting machines entirely.	Lloyd	Western Cape		employed individual
	2025-09-18 09:21:25	No I do not	Security and Trust	IEC is implicated in voter rigging last election. So, it's gonna be worse with e-voting. Transparency is compromised. A lot needs to be changed especially the way our elections are runned.	Ernest	Gauteng		employed individual
	2025-09-18 09:21:58	No I do not	Security and Trust		SHARON	Western Cape		business owner
	2025-09-18 09:22:26	No I do not	Security and Trust	An electronic voter system is open to a massive amount of fraud and voter intimidation. This is a bad idea on meril. Manual accounting of ballots is the safest and most transparent way of voting. Do not agree with this idea at all.	Adrian	Gauteng		business owner
	2025-09-18 09:24:37	No I do not	Security and Trust	There is no guarantee that this system will work. It's software and can be manipulated both pre election and post election and almost instantaneously. Nobody would detect coding that eliminated certain votes or boosted others. Given the Governing party's record of honesty , I don't trust that they will implement a free and fair system. Given that it is software, and hackers abound, there is no level of security that would make this system infallible. If it is implemented, we can say goodbye to democracy and hello to absolute state control.	Kim	Western Cape		self-employed
	2025-09-18 09:26:05	No I do not	Security and Trust		Nicolaas			
	2025-09-18 09:26:38	No I do not	Security and Trust	I am against anything relying on digital ID because the purpose of it ultimately is to gain total control over the global population. This move is just another step in that direction.	Carol			
	2025-09-18 09:28:15	No I do not	Security and Trust	Your vote should be SECRET. This will not be possible with an electronic voter system where your fingerprint is the identifier. Also, there will be no oversight by the different political parties, making this a rife opportunity for corruption.	Toni	Gauteng		employed individual
	2025-09-18 09:31:12	No I do not	Security and Trust	NEVER EVER ELECTRONIC in this chaos of a country. My consern is still the security of ballets thats been lost before or after voting. We need better security.	Willem	Western Cape		retired
	2025-09-18 09:32:32	No I do not	Security and Trust	Let's face it, unfortunately we don't trust our government!	Robyn			
	2025-09-18 09:34:18	No I do not	Security and Trust	We have seen with the 2020 American elections how using electronic voting systems can be used to commit fraud through machines being hacked and outcomes being changed with 100 of thousands of votes turned from one side to the other in seconds. These machines can be hacked from anywhere in the world and would lead South Africa into a state where the vote of the citizen no longer counts because of corruption and fraud.	Barnie	Gauteng		business owner
	2025-09-18 09:35:15	No I do not	Security and Trust	if your bank account and personal details can be so easily hacked nowadays. How corrupt is this voting prosses gonna be. Will be easy peasy for them to be dishonest and cast votes illegally.	Merietjie	Eastern Cape		employed individual

	2025-09-18 09:40:11	No I do not	Security and Trust		Gene	Western Cape		retired
	2025-09-18 09:40:26	No I do not	Security and Trust	Government's attention are on all the WRONG things. START by ending corruption and crime.	DG			employed individual
	2025-09-18 09:40:41	No I do not	Security and Trust	Government will know who votes for what party which could lead to persecution. Votes can be manipulated digitally or hacked.	Jaques			self-employed
	2025-09-18 09:43:27	No I do not	Security and Trust	There's been untested allegations of people being bussed out of voting districts to vote elsewhere, or non South Africans given temporary Id's to vote in a particular district to increase votes for a preferred political party, therefore I lack trust in anyway that votes can be manipulated,!!!!!	Ramadimetje	Gauteng		self-employed
	2025-09-18 09:43:52	No I do not	Security and Trust		Ian	Gauteng		retired
	2025-09-18 09:44:26	No I do not	Security and Trust	"The idea is that once a Digital ID system is implemented by DA minister Leon Schreiber, voter fraud will no longer be possible, because every voter need just present their fingerprint. And then of course, the IEC need not employ people to count physical ballots, because a computer will do it." However, this means the government will have a record of who voted in what way, and manipulation of results becomes a possibility through voter suppression or vote rigging. This ould lay the citizens open for victimization by the parties who have access to this information. It could also possibly be a breach of POPI act. KEY CONSIDERATIONS INCLUDE: – Security and Trust - I am fearful that digital voting will and can be manipulated easily with the right tools and access to create an inaccurate representation of SA wishes. – Access for All South Africans - Not every citizen has digital access – Practical Implementation - rural areas would be left out – Transparency - who will control said information and how? – Legal Requirements - will my personal details and voting preferences still be secret or will the leading party have access to this info to victimize me later? – Voter and Staff Preparation - how will the government prepare for this if the citizens do NOT wish for a digital ID – Privacy and Data Protection - is compromised – Infrastructure Needs - this system will cost a lot to implement around SA and in this current economical environ it is not feasible	Stephen	Western Cape		employed individual
	2025-09-18 09:44:41	No I do not	Security and Trust	Transitioning to electronic voting allows any nefarious actor to target a single system. With a country's democracy at stake, the onus for trust in election is sacrosanct, physical paper ballots ensures transparency, anonymity and, as in previous elections, trusted.	Zan-Pierre	Limpopo		employed individual
	2025-09-18 09:46:26	No I do not	Security and Trust	Electronic voting can be easily manipulated by politicians.	Rob	Western Cape		retired
	2025-09-18 09:47:18	No I do not	Security and Trust	There is too much space for the system to be hacked and voting to be changed. Government websites are dismal - the "system is down" is the catch phrase. How can we be sure that the system will not be down when it comes to voting day?	Lindsay	KwaZulu -Natal		business owner
	2025-09-18 09:47:39	No I do not	Security and Trust		Henry	Limpopo		retired
	2025-09-18 09:47:43	No I do not	Security and Trust	No voting method can or will ever be more secure than paper ballots.	Nicholas	Gauteng		employed individual
	2025-09-18 09:48:08	No I do not	Security and Trust		William			
	2025-09-18 09:48:09	No I do not	Security and Trust	Nothing that the ANC does can be trusted. Their main goal is to cunningly turn the votes in their favour, to stay in power.	Irma	Free State		retired
	2025-09-18 09:48:45	No I do not	Security and Trust	Easy to hack, no matter what guarantees they give you. If the FBI can get hacked what chance do we have of not having vote tampering.	John	Western Cape		self-employed
	2025-09-18 09:49:51	No I do not	Security and Trust	I don't trust the ANC to not use digital voting to manipulate and falsify results.	Dominik

	2025-09-18 10:01:52	No I do not	Security and Trust	our government is so corrupt..look what electronic voting did to the USA...corruption in a 1st world country...just imagine in this 3rd world country!! NO NO NO	Lorraine	KwaZulu -Natal		retired
	2025-09-18 10:02:22	No I do not	Security and Trust	Digital data can too easily be manipulated. Data of who voted for who is also not good since this is private and of no concern to parties involved.	Mariè	North West		business owner
	2025-09-18 10:03:04	No I do not	Security and Trust		Ronel			
	2025-09-18 10:05:20	No I do not	Security and Trust	Monitoring and tracking citizens are illegal without prior consent	Dana	North West		retired
	2025-09-18 10:05:35	No I do not	Security and Trust	While the younger generation might embrace technology, the older generation still find all of this far too complicated, making them reliant on someone else to explain things to them before they trusting accept without fully understanding. There is far too much corruption happening and most people don't understand how easy this can be manipulated. Therefore, such system needs to be safe and secure before rolling it out to the public. I think a working system should be demonstrated to earn the public's trust. We can discuss this again, then.	Clive	KwaZulu -Natal		employed individual
	2025-09-18 10:06:04	No I do not	Security and Trust	Your vote will no longer be confidential	Michael	Western Cape		retired
	2025-09-18 10:06:12	No I do not	Security and Trust	This system will allow the government to see who voted for what party, This also allows for digital interference - I am not fully on board with this.	Nikki	Western Cape		
	2025-09-18 10:06:22	No I do not	Security and Trust	No, no, no., more room for corruption	Machel G	Gauteng		retired
	2025-09-18 10:07:26	No I do not	Security and Trust		Peter	Western Cape		retired
	2025-09-18 10:07:29	No I do not	Security and Trust		Peter	Western Cape		retired
	2025-09-18 10:07:36	No I do not	Security and Trust	Will support when we can be assured that there is no possibility of vote rigging.	Eion	Western Cape		retired
	2025-09-18 10:07:40	No I do not	Security and Trust	The ANC is trying to regain the majority. The only way that can be done is via corruption and illegal voting. Computerized voting will not be transparent.	Joe	Gauteng		employed individual

	2025-09-18 10:07:43	No I do not	Security and Trust	The current governments' ghastly track record of fraud, corruption , theft, and manipulation would render the integrity of the voting outcome as totally unbelievable if the system is introduced.	Rodney	Western Cape		employed individual
	2025-09-18 10:08:07	No I do not	Security and Trust		Ryal			
	2025-09-18 10:08:14	No I do not	Security and Trust	This is the number one threat, to the best outcome we can get to, for a free and fair election. This system is being implemented in other countries and the discord and hate in those countries have become extremely hostile and dangerous BECUASE of this kind of manipulable electronic voting systems . Electoral voting is an effective tool for the SA Government to deliberately cause unrest in the country. And without a doubt to make sure via the corruptly implemented electronic voting system that they will illegally stay in power till the end of days. South Africa already is finding fraud with ballet boxes every time we vote! We cant afford to make this fraudulent practice even EASIER TO COMMIT by the criminals via the electronic voting system. NO!!	Lene	Western Cape		employed individual
	2025-09-18 10:09:12	No I do not	Security and Trust	Digital platforms will always have weak points which could affect results should the platform be hacked. There is no more anonymous voting either which will contravene POPI acts.	Rohan			
	2025-09-18 10:09:29	No I do not	Security and Trust	No. So much more room for corruption. No privacy.	SUSAN	Gauteng		retired
	2025-09-18 10:12:27	No I do not	Security and Trust	Open to fraud and manipulation. Many countries have discovered fraud and manipulation of the system , it has been shown to be untrustworthy. I also do not want to see all the staff that work on our elections loose jobs to big tech. By keeping our system simple ballots we allow many more of our people to take part in working during elections. When we hand it over to machines and big tech we exclude many people from the opportunity work during the elections.	Trudy	Western Cape		unemployed individual
	2025-09-18 10:12:35	No I do not	Security and Trust	Unless the Govt can provide an independent unbiased party that audits the process to ensure there is transparency, legitimacy, securtiy and protection of personal information there is way too much room for manipulation of data and information.	Paula	Gauteng		self-employed
	2025-09-18 10:13:56	No I do not	Security and Trust	Electronic voting in overseas countries has been proven to be open to manipulation of voting results, this was especially prevalent in the USA under the Biden administration and previous Democratic administrations for many years before. We cannot trust the IEC under ANC control to perform an electronic voting result without some form of manipulation in favor of the current ruling party. This also allows for identification of who voted for whom, not allowed under the POPI act.	Peter	Gauteng		retired
	2025-09-18 10:14:54	No I do not	Security and Trust	As seen worldwide we know that there is a high degree of fraud possibillity when it comes to electronic voting. The degree of trust, or rather the lack thereof in the South African culture makes this even more dubious. Technology is helpfull bit not when implemented by the elite few who knows how to operate it.	Andries	Gauteng		
	2025-09-18 10:14:56	No I do not	Security and Trust	SA had so much corruption in the government that I do not trust them to not manipulate the results. Anybody with knowledge on electronic systems can change the outcome. Also there is no privacy with a system like this. However, they manipulate the manual counting as well.	Linda	Gauteng		employed individual
	2025-09-18 10:15:48	No I do not	Security and Trust	I oppose the use of digital ID as this would mean surveillance o.n the citizens all the time a nd have total control of the population	Leila			
	2025-09-18 10:16:23	No I do not	Security and Trust		Miranda	Western Cape		business owner
	2025-09-18 10:17:26	No I do not	Security and Trust	I do not trust our (or any) government to not manipulate results and retain information of who voted for which party.	Cheryl	Gauteng		employed individual
	2025-09-18 10:21:01	No I do not	Security and Trust	Absolutely not. The system will be manipulated!	Janette	Eastern Cape		retired
	2025-09-18 10:21:29	No I do not	Security and Trust		Alex			
	2025-09-18 10:22:12	No I do not	Security and Trust	In countries where this type of system is used, most notably the USA under the Biden administration, and others before that, the system is open to massive rigging and corruption. The IEC has not proven themselves to be independent of ANC influence and they are not a trustworthy watchdog. If there is a truly independent, non-partisan, secure way that this could be done it might work.	Amanda			
	2025-09-18 10:22:28	No I do not	Security and Trust		Nico			
	2025-09-18 10:23:06	No I do not	Security and Trust	Worried that the data can be manipulated as it was in the USA with Biden's win. So no I do not support it.	Lionel	Eastern Cape		employed individual
	2025-09-18 10:24:09	No I do not	Security and Trust	It's a risk because it poses a potential threat to true democracy. There will be a risk of election rigging and its open to possible abuse by government and its citizens.	G

	2025-09-18 11:05:58	No I do not	Security and Trust	Past experience has shown us that the IEC and the those in power cannot be trusted - they will do anything to keep the power, money and control.	Dominique	Gauteng		self-employed
	2025-09-18 11:09:09	No I do not	Security and Trust	The entire bunch of politicians are so corrupt. NO, I will not allow these criminals to take away our last hope of democracy, truth and freedom. To open up the voting to electronic voting allows for more corruption. As it is, many occasions the boxes of votes where disposed of and not counted. We need to get ride of the ANC and all their fellow criminals. (Security and Trust) * Practical Implementation... the last time we voted the IEC sewers collapsed?? * Transparency. There is never transparency from this ANC government. * Legal Requirements. * Voter and Staff & Preparation....The IEC and its staff could hardly manage the last voting. I refuse to give the IEC and ANC and more power. * Privacy and Data Protection. NO this IEC & ANC can not c=be trusted with your private information, never mind you "private" vote. On computers every keystroke is recorded and can be recovered. NO	Shirly	Gauteng		unemployed individual
	2025-09-18 11:09:51	No I do not	Security and Trust	The software was blamed in 1994 for the pause in counting when the ANC was not performing to expectations. When the pause was lifted it was like magic - the ANC had surged ahead. The USA 2020 election was rife with similar pauses and magic effects. Only where paper voting slips were produced personally with guaranteed ID recognition, were there no questions that could not be addressed by recounts. I was an IT professional and know whereof I speak. Make in-person local voting the default. And be careful about electronic pauses. Software is simply coding which does what it is told...	Mathew			retired
	2025-09-18 11:11:12	No I do not	Security and Trust	The main concern is the risk of digital tampering and votes being falsely influenced, as well as being able to trace back who voted for which party, votes are meant to always be anonymous.	Rohan	Western Cape		employed individual

	2025-09-18 11:29:04	No I do not	Security and Trust	I don't think our country can handle ongoing online. Looking at other online sites we have, I don't think South Africa will be able to manage online votes since they struggle with other simpler online sites.	Debbie	Western Cape		employed individual
	2025-09-18 11:33:36	No I do not	Security and Trust	Security and Trust are very big concerns when talking about electronic voting. A democratic election requires 2 parts: 1) Anonymity - each vote cast should be anonymous such that no-one can know who someone voted for (unless the person self makes their choice public, but even then, there should be no way to verify their claim). 2) Trust - no individual person, or company, should be trusted with such an important task. People involved should be able to keep an eye on each other, so that everyone is happy that it is a fair and transparent process. With paper ballots, they are sealed and only opened where everyone with a stake in the election can supervise. With electronic voting, there is no supervision possible. Rigging a paper ballot system does not scale well - it takes a lot of effort to change even a few votes; compared with electronic voting, it is the same effort to change 1 vs millions of votes. Youtuber Tom Scott had made videos regarding Electronic Voting and why it is a bad idea (December 18, 2014 - w3_0x6oaDmI), and then a follow up on December 9, 2019, about why it is still a bad idea (LkH2r-sNjQs). The issues he mentioned is as follows: Issue 1: The Software and Hardware (in cases where electronic counting systems are used). Even Open-Source software has bugs and unknown vulnerabilities (called 0-days); this software is only really tested once every couple of years. Even if the software is perfect, how can the voter know that the latest, unmodified version of the software is installed and running on the system in front of them? Even with modern cryptographic checksums and hashes, how can a layman know and trust that there was no tampering with the machine. With the potential result of an election at stake, there are many people that want to make sure their preferred candidate/party wins – they will try to break the system (both local and foreign people, companies and organizations). Char limit - is 1777 words, can supply full essay on request.	Jaco			
	2025-09-18 11:35:28	No I do not	Security and Trust	This would just be another way for the current regime to control the narrative, manipulate the voters and implement corruption in a new way.	Jay	Mpumalanga		self-employed
	2025-09-18 11:35:58	No I do not	Security and Trust	There will no doubt be a serious attempt to rig the votes through such a system, probably sold to SA by the Russians to help the ANC recover from their drastic losses.	Greg	Western Cape		retired

	2025-09-18 11:42:28	No I do not	Security and Trust	I do not believe that South Africa is ready for a digital voting system to be implemented. The levels of corruption in the public space do not inspire confidence in the integrity of the government, and the private sector in many instances is not much better. Further, I do not believe for one moment that the government can guarantee that votes will remain anonymous as they are now, due to the fact that one's finger-print will be associated with one's vote. That is not an acceptable situation. In the current situation where a voter is admitted, ID and voter registration checked via a completely independent paper-based system, association with the way in which one cast one's vote is not easily achieved. I am not confident that this will be so with a digital system. So no, I am definitely not in favour of implementing a digital voting system for South Africa.	Michael

	2025-09-18 12:35:36	No I do not	Security and Trust	Not enough clarity on this process. Will this limit foreigners or people with false IDENTITIES from voting, too many unanswered questions ?	Beverly	Western Cape		self-employed
	2025-09-18 12:36:14	No I do not	Security and Trust	Our judiciary saps politicians are all captured dishonest corrupt cadre deployed institutions. Do you really believe the IEC is any different? Especially judging from past performance. Apparently the ANC got 39% last year. Taking into account all factors it is possible they got under 20% as they are now polling at. They will get their technologically savvy friends to rig the system. But hey, who will take over from them? Voting is a farce.	Elaine	Free State		self-employed
	2025-09-18 12:37:02	No I do not	Security and Trust	This is another system that will be open to hackers and manipulation by government and/or the IEC themselves. How many fraudulent tenders are going to spring forth from this iniative? The government or the IEC do not have the expertise to make such a system work, it will have to be set out on tender and the corruption will creep in as it always does. In practical terms, how are they going to help the aged and illiterate voters who do not trust any electronic system? This will force them to run dual systems, which will only lead to more corruption and manipulation of the outcome. As it is currently, they have people voting more than once, any electronic system can be manipulated and controlled to obtain a specific outcome. I regard this as just another venture by the ANC to create a new avenue of revenue for corrupt caders.	Kobus			retired

	2025-09-18 13:06:54	No I do not	Security and Trust	Too much corruption - if they cant get the sassa right how are they going to get people without computers and phones to vote. my personal info POPPIA !	LINDA	Western Cape		employed individual
	2025-09-18 13:08:15	No I do not	Security and Trust		Michael	Outside SA	Zimbabwe	business owner
	2025-09-18 13:09:55	No I do not	Security and Trust	The only benefit to such a system is the counting of the votes and reducing the risk of votes being tampered with. The government is not equipped to protect its digital assets as was evidenced in the past year with multiple successful hacking attacks against the government. South Africa has a large number of voters who will struggle with the new technology. South Africa’s voting population is not as large as India or the US and this solution is therefore not a dire need. The government should pilot this system in small areas in JHB and Cape Town and roll it out in stages over the next 20 years to ensure all checks and balances are fully tested.	Roland	Gauteng

	2025-09-18 17:16:27	No I do not	Security and Trust	US has banned Electronic Voting as it is open to hacking or just dishonest adjustment of the captured data. We should stick to the current method of voting, no need to fix something that is not broken. This will only allow the ANC to stay in power - they have shown time and time again they cannot be trusted with anything.	J	Western Cape		employed individual
	2025-09-18 17:22:41	No I do not	Security and Trust	Due to the level of corruption in SA the trust in security for me is nil. Access for all South Africans is a big concern as many live in areas where there is little or no digital access or in some cases understanding. This can be easily manipulated. The practical implementation therefore arises out of the above comment as well as taking into consideration load shedding. I would be very apprehensive regarding private and data protection. In my case I have no finger prints so how would that work for me.	Lorna	Gauteng		retired
	2025-09-18 17:24:21	No I do not	Security and Trust	The incumbent will be able to manipulate vote results by strategically allowing 'system errors', 'network errors' , 'computer frozen' type excuses to disallow and disregard large blocks of votes in opposition regions and areas with zero paper trail. There is already a problem of boxes of ballots being stolen, digitizing the process merely removes the paper trail. Keep to the traditional on paper voting. Last elections attempt to dogotose the voter role caused enough damage to prove the iec cannot be trusted to digitose the process.	Mathew	Western Cape		employed individual
	2025-09-18 17:24:41	No I do not	Security and Trust		Willem	Gauteng		self-employed
	2025-09-18 17:30:26	No I do not	Security and Trust	Not a chance, this only comes up now that the ANC is proving to be failing in national elections and literally, by no means will we accept any changes to the current processes as we expect the ANC will be out of the government majority by 2029 as the current trajectory clearly suggests,.	Dion	KwaZulu-Natal		self-employed
	2025-09-18 17:34:53	No I do not	Security and Trust	Gov cannot be trusted as it is. Elections are never honest and never have been. Top criminal chosen in advance.	Mags	Gauteng		retired
	2025-09-18 17:37:10	No I do not	Security and Trust	My primary concern is security risk: E-voting introduces new vulnerabilities wrt fraud and cyberattacks plus there is the potential for large-scale manipulation and the security of voter data (compromised vote secrecy). We've seen major problems with our Lotto systems, Prasa etc. Introducing this new voting technology will be challenging (we cannot even print drivers' licenses efficiently). We should be guided by the international trend where there is no single, unified move towards e-voting. There has been many complications where it has been implemented (manipulation, systems 'errors' and malfunctions) This should be re-evaluated after the next 2 elections.	Merlene	Western Cape		employed individual
	2025-09-18 17:38:02	No I do not	Security and Trust	i dont agree with the digital ID system of the digital voting. It is too susceptible to tampering and manipulation. I also dont agree with my data being exploited - the world of AI and deep fake is very real.	Dirk	Eastern Cape		business owner
	2025-09-18 17:40:18	No I do not	Security and Trust	I do not even trust the current voting system. With the corruption in this country ,it would then just be the press of a button to sway the vote. Why would I even go to the effort of voting then????	Michele	Western Cape		employed individual
	2025-09-18 17:40:55	No I do not	Security and Trust	This leaves room for corruption and cheating	Christien	KwaZulu-Natal		retired

	2025-09-19 05:10:14	No I do not	Security and Trust	Electronic voting coupled with digital ID is the gateway to a distopian hellhole, where the government has complete control over everyone and knows everything about everyone with a permanent electronic record. I do not support this.	Marnus	Gauteng		employed individual
	2025-09-19 05:19:20	No I do not	Security and Trust	A proper paper voting system is still the way to go. Electronic voting is for rural people especially to confusing.	Gabriel	Gauteng		retired
	2025-09-19 05:25:11	No I do not	Security and Trust	We have witnessed in many countries across the globe how this digital process has been rigged scandalously. Also,how can we trust that we will not be intimidated and coerced because the instituition has our data and records.	Tiago			employed individual
	2025-09-19 05:28:29	No I do not	Security and Trust		Kevin	Gauteng		employed individual
	2025-09-19 05:33:55	No I do not	Security and Trust	While electronic voting may offer convenience and could encourage greater youth participation, I have serious concerns about this bill. The security vulnerabilities and lack of transparency in electronic systems pose significant risks to election integrity. Additionally, this system could create barriers for elderly voters and rural communities who may lack digital literacy or reliable internet access. We must ensure that any voting system serves all citizens equally, not just those who are technologically savvy. Furthermore, Unlike paper ballots, electronic votes can’t be easily recounted or verified by independent observers, making it difficult to confirm election results since system crashes, power outages, or software glitches could disrupt voting or lose votes entirely, potentially disenfranchising voters.	Yolandi

	2025-09-19 09:44:20	No I do not	Security and Trust	No government can be trusted to be true to the people at all times, and definitely not the ANC, who have proved themselves to be thieves and thugs. The possibilities for fraud are obvious and can be used by the ANC or any other government to stay in power against the wishes of the people. The paper ballot system is working. Don't break it!	Anneke	Western Cape		retired
	2025-09-19 09:45:54	No I do not	Security and Trust	It has been proven as the insidious way to steal an election in America. There is ample evidence from computer boffins of how easy it is to re-programme the Dominion voting machines - in just minutes. Trump has correctly and sensibly demanded that in future elections only paper ballots on a single voting day, with Voter ID and cleaned up voter registration indexes be eligible. Topping his voting procedure is the banning of voting machines. Given how banking fraud and financial theft is rife, it is utter madness to want to have electronic voting machines. The outcome will be a stolen election as happened in the US in 2020 - and which, for the sceptics reading this form whom CNN and MSNBC are your Gods - full investigation of the 2020 election is underway and will prove that Biden was an illegitimate president. 	2025-09-19 10:02:34	No I do not	Security and Trust	Since the ANC government assumed power in 1994, South Africa has witnessed a significant decline in critical infrastructure. Key sectors such as railways, airways, municipalities, harbours, the military and police, the postal service, water supply, state hospitals, and road networks have deteriorated. Additionally, the appointment of unqualified individuals to government and parliamentary positions has further undermined institutional effectiveness. Given this context, the introduction of artificial intelligence and electronic voting systems raises serious concerns. Many regions are still grappling with basic administrative systems, such as the national ID card rollout, not mentioning the chaos around driving licence cards. This raises questions about the feasibility and fairness of implementing advanced technologies in electoral processes. Electronic voting, in particular, poses risks to voter privacy and democratic integrity. There is growing fear that such systems could be used to track individual voting choices, opening the door to intimidation and manipulation. In a country where corruption and political interference are already prevalent, the potential for abuse is high. The anc government, perceived by many as corrupt and incompetent, cannot be trusted to implement electronic voting systems transparently. Allegations of vote manipulation in other countries, including the United States, have shown how vulnerable these systems can be to interference by individuals, organizations, or even foreign actors. For South Africa, especially under current leadership, traditional paper-based voting, accompanied by verified identity documents, remains the most secure and trustworthy method. Electronic systems not only risk undermining electoral credibility but could also be exploited to harvest sensitive personal data from citizens.	Derick

	2025-09-19 10:11:01	No I do not	Security and Trust	South Africa does not have the infrastructure and technology to provide the security required for secure e-elections. Even advanced countries such as the US and EU can't provide the required security to provide tamper free elections. Electronic ballot counting does not work securely.	Charles	Gauteng		retired
	2025-09-19 10:13:24	No I do not	Security and Trust	This is an open book for abuse of an individuals data, as well as a risk because then government can easily monitor who has voted for which party. Unfortunately, given the immense and ongoing government corruption, I have no trust in the current government. I definitely don't agree.	Vanessa			self-employed
	2025-09-19 10:15:51	No I do not	Security and Trust		Andrew	Western Cape		self-employed
	2025-09-19 10:16:39	No I do not	Security and Trust	I DO NOT support the idea of Electronic Voting! While I agree with the good ideas that you give as reasons to implement this, such as less man power needed, less logistics of ballot paper distribution and boxes, and a small amount of increased security from tampering, I do not see in any way how electronic systems can increase trust or legitimacy in the voting results of any election, whether local, municipal, or national. Unless this is done in a completely open source way using something like BLockchain where all additions, subtractions, changes etc are irrevocably logged with metadata and timestamps in an unchangeable public ledger which can be traced and analyzed, the very real possibility of hiding votes which the Party does not want, or stuffing votes which they do want, is far more likely. In our incredibly divided and fragile nation, introducing uncertainly into the voting process and outcome is violently dangerous. With paper ballots, they are a physical thing that can be recounted, visiably shown and audited, other political party spectators can watch being counted or cast. With electronic voting, there is absolutely nothing. No way to ensure there are not secret codes in the machines to throw away non-ANC votes. No way to know whether all votes from all machines arrive at the central database. No way to know whether someone didn't just do a few typestrokes on a keyboard to completely change the election outcome. IF we fall to have electronic votes, I would say any 'government' elected by them is not legitimate. Other minor issues include a large amount of the population not having access to eletricity or computers, and thus voting in rural or township areas will be dependant on eletricity supply which the ANC continually tries to destroy. Additionally, people who haven't grown up with technoloagy will not be sure how to use any voting machine correctly and this is open to abuse.	Doug	Western Cape		self-employed

	2025-09-19 10:42:18	No I do not	Security and Trust	i do not think it is the best interest of any south african to have to vote online or with an electronic voting system that would be very easy to rig. as someone who dabbles in electronic programming this is not difficult to do. what stops the anc or any other party for that matter from bribing the company who supplies the electronics to gain any more political needs? our government is known for the corruption it poses and switching the voting system to electronic voting will only ease this corruption. evoting will only make it more corrupt in an already corrupt country where the leaders steal more and more and use that money they steal to only steal more from the country. evoting is not safe with the ammount of corruption we have in this country. waht stops the government from bribery to gain voters on the evoting system?	Hendrik	Gauteng		unemployed individual
	2025-09-19 10:43:40	No I do not	Security and Trust		Gawie	Western Cape		self-employed
	2025-09-19 10:44:27	No I do not	Security and Trust	This thing will allow vote rigging because all a person has to do is hack into the system. And based on the technology in this country, it probably wouldn't be that hard. Also, the government can barely maintain their own websites. For example the home affairs and License registration websites are problematic as it is, imagine what this system will be like on voting day. They need to focus on fixing our current problems instead of introducing new things and further complicating the process. Secondly, this will take away job opportunities in a country where unemployment is already high Most importantly, it will take away the whole anonymity that's involved when voting. If you have my fingerprints to let me vote then surely you will be able to see who I voted for. Our current voting system just needs to be made more efficient and electronic voting is not the way to do it.	Makobo	Gauteng		employed individual

	2025-09-19 11:05:52	No I do not	Security and Trust	1. Confidentiality & Anonymity Electronic voting could compromise the transparency and trust built into manual systems. 2. What if biometric data (like thumbprints) can't be used? What are the other options? 3. Voter tracking by government Fear that digital records could expose who voted for whom as, If identity is linked to a digital vote, anonymity can be compromised 4. Transparency: Manual voting allows observers to verify each step. Electronic systems can become opaque. 5. Risk of hacking: Cybersecurity is a high-profile risk	LORAINE	Gauteng		retired
	2025-09-19 11:12:39	No I do not	Security and Trust	We have to have electronic voting - it's the only way to go to stop corrupt voting	Jenny	KwaZulu-Natal		retired

	2025-09-19 11:13:31	No I do not	Security and Trust	Electronic voting will be difficult due to signal issues. Although most have phones, the system is lately more unreliable than before. Then, the potential of vote rigging and/ or system rigging is so much greater than what the officials are currently doing (and enough smoke signals go off with every event). So not recommended until such time as the officials in charge of it can be trusted to accurately reflect the data captured, as per voter choices, and abide by the outcome obtained without changing it.	Leoni	Limpopo		self-employed
	2025-09-19 11:15:09	No I do not	Security and Trust	I do not support the proposed electronic voting system in its current form. While I recognise the potential benefits of faster counting and improved accessibility, I am deeply concerned about risks to security, ballot secrecy, transparency, and the exclusion of communities without reliable digital access. Until South Africa can guarantee an auditable, fully secure, and inclusive system, paper ballots should remain the foundation of our democracy.	Antoinette	Gauteng		employed individual
	2025-09-19 11:16:04	No I do not	Security and Trust	Hackers gain access to most systems nowadays so the vote can be rigged. Cannot trust the system. Once you have gained access to vote, how private is your vote?	Alan			
	2025-09-19 11:18:25	No I do not	Security and Trust		vera			
	2025-09-19 11:18:33	No I do not	Security and Trust	South Africa does not have the infrastructure to ensure that voting will be fair. There is corruption in so many areas, this will end up being another outlet. There can be data breach of personal information, unregulated data feeds. We are a diverse country with different levels of electronic usage - by making voting electronic there is exposure for the elderly, uneducated and rural population to be exploited.	Karen	Gauteng		employed individual
	2025-09-19 11:24:47	No I do not	Security and Trust	It has been proven that electronic voting in the worlds largest democracy, viz. USA, was used to defraud the American people of a free and fair election. The ANC is the most corrupt party in the world. There is absolutley no way we can trust them to hold free and fair elections, not in the past and certainly not in the future. If they can rig the lotto, then they can rig electronic voting machines.	Patrick	Western Cape		
	2025-09-19 11:29:04	No I do not	Security and Trust		MERLE	Gauteng		retired
	2025-09-19 11:36:38	No I do not	Security and Trust	Everything and anything electronical can be hacked. Who's to say that the Government won't pay someone off to change the search queries on the database and change all votes to them? It's too easy to manipulate. I have not trust in them. Other countries have tried this and fail miserably. Best way to go, is to employ an external Auditing firm who has no interest in the affairs of South Africa and who does not stand to benefit in any means or way to run the election independently. A firm which cannot be manipulated, blackmailed, threatened, bribed.... You get my point.	Renee	Gauteng		business owner
	2025-09-19 11:37:00	No I do not	Security and Trust	It has been proven that electronic voting in the worlds largest democracy was used to defraud the American people of a free and fair election. The ANC is the most corrupt party in the world. There is absolutley no way we can trust them to hold free and fair elections.	Leandra	Gauteng		employed individual
	2025-09-19 11:37:16	No I do not	Security and Trust	This system is extremely open to voter fraud, as seen in other parts of the world.	Noel	Western Cape		
	2025-09-19 11:39:39	No I do not	Security and Trust	With this new system and the ability to access the results and an identify voters dishonest parties will be able to to identify who voted and how. This will lead to intimidation and threats to personal security with the results of a skewed election result.	Davd	KwaZulu-Natal		retired

	2025-09-19 13:44:14	No I do not	Security and Trust		Brenda	Western Cape		retired
	2025-09-19 13:44:15	No I do not	Security and Trust	As wonderful as this may sound and, yes, the digitalisation of services, specifically public services, in South Africa has been slow, we do not have the infrastructure to support this and it is NOT accessible. In spite of a large portion of South Africans using mobile phones, many of the constituents do not own, use, or have the digital literacy to use most devices. Never mind the BIG data farming that this process will conduct. You can directly tie a vote to biometric data. We may have the PoPI Act to protect us, but how the act is deployed and enacted is a different story. Furthermore, I find it laughable that the Department of Home Affairs is behind this endeavour when it is one of the most notorious culprits in "the system is offline" saga of South African. We do not have the capacity to create safe and hack-proof digital systems when we are currently in a budget deficit. The lack of transparency on tender processes and the overinflated amounts that are bound to be presented and accepted do not inspire any kind of confidence. We have young people who cannot get ID documents. never mind that we have one sole driving licence card printing machine for the entire country. This is the most unserious proposal I have ever heard.	Meagan	Western Cape		employed individual
	2025-09-19 13:44:43	No I do not	Security and Trust	Digital voting systems are easier to hack than auditable, paper based elections	Mike	Gauteng		employed individual

	2025-09-19 17:48:34	No I do not	Security and Trust	The existing voting system is problematic, adding a digital facet to an already dysfunctional system won't help. We're dealing with corruption at the highest level on a daily basis, this will create more opportunity for rigged results. Finally, our education system has a minimum pass rate of 30% and a more than 70% illiteracy rate, people struggle with ATMs and now voting. No!	Thabo	KwaZulu-Natal		employed individual
	2025-09-19 17:52:56	No I do not	Security and Trust	No, I do not support the proposed Electronic Voting Policy as it currently stands. While digital systems can improve efficiency, there are serious concerns that must first be addressed. South Africa faces ongoing challenges with fraudulent documents at Home Affairs and an influx of illegal immigrants, which could compromise the integrity of a Digital ID system. Additionally, there are risks of government corruption, voter suppression, and vote manipulation if proper safeguards are not in place. Electronic voting should only be implemented once there is absolute transparency, strong security, and public trust in both the system and the institutions managing it.	Nothando	Gauteng		employed individual
	2025-09-19 17:54:37	No I do not	Security and Trust	It will make it even easier for the government of the day to commit voter fraud.	Andrew	Eastern Cape		retired
	2025-09-19 18:01:27	No I do not	Security and Trust	Worried about what harm that AI can do to the election results.	Charmaine			retired
	2025-09-19 18:06:53	No I do not	Security and Trust	I think America has proven it quite clearly that electronic votes can be manipulated by the state or government.	Annel	KwaZulu-Natal		self-employed
	2025-09-19 18:07:12	No I do not	Security and Trust	This government have been stealing our country blind since 1994 and if they succeed in electronic voting, they will have a blank canvass to do as they want without anyone's approval.	Johanna	Gauteng		retired
	2025-09-19 18:21:11	No I do not	Security and Trust	Digital voting is easily manipulated as suggested by voting in the USA. Government will have access to what and how I voted, which is unconstitutional as my rights to a secret vote will be infringed upon. Giv will be able to target voters that do not support Gov. 	2025-09-19 20:21:02	No I do not	Security and Trust	The opportunities and scope for voting fraud are just too great with any method that must rely on anything as easily changed as a computer memory. To even consider using any method that does not leave a permanent physical and traceable record is very unwise. It needs to be a record where it is difficult to hide tampering. Not something that can be changed in milliseconds at the press of a button. For example: I have in front of me a device that is about the size of my thumbnail (and it can be made much smaller) that, if inserted in a USB port on a computer, will allow me to unobtrusively communicate with that computer. Given an appropriate password, just about anything can then be changed on that computer. If properly prepared, just by pressing a symbol on a cellphone screen. And there are plenty of other ways that computers can be hacked. In a society as generally corrupt as ours it is to be expected that something will be done. It is also to be noted that in places that electronic voting has been used there have been very plausible reports of extensive fraud. Paper remains the way to go (or rather, stay.)	Louis	Western Cape		retired
	2025-09-19 20:23:04	No I do not	Security and Trust	Voter fraud will definitely become a bigger problem than ever before. Even in the USA the Democratic used it for fraud. That is why the DA will also not be against it.	Petrus	Eastern Cape		employed individual
	2025-09-19 20:30:48	No I do not	Security and Trust	This is the easiest way to be fraudulent. The Americans tried it and the found a lot of fraud. It is something that can be easily manipulated by hackers. Look what is happening with the lotto. It is now electronic machines and you already read about the fraud happening. Manual is good- thank you	Chris	Mpumalanga		retired
	2025-09-19 20:36:50	No I do not	Security and Trust	This is just another way for the ANC to commit fraud against the people who oppose them. I get angry just thinking about it.	Catherine	KwaZulu-Natal		retired

	2025-09-20 08:38:40	No I do not	Security and Trust	When we entrust our democracy to electronic systems, we're swapping a centuries-old, transparent process for software and hardware that can be opaque, complex, and vulnerable. Proprietary software often means the public and independent experts cannot fully inspect the code. Without open scrutiny, you can't prove the machine is doing exactly what it's supposed to. Voters and observers can't witness vote counting in real time the way they can with hand-counted paper ballots. Voting machines connected to networks can be targeted by hackers, including state-sponsored actors. Malware or zero-day exploits can be introduced at any point—from development to deployment—without easy detection. A single compromised endpoint can undermine the integrity of votes cast from that machine.	Quintin	Western Cape		retired
	2025-09-20 08:43:00	No I do not	Security and Trust	Vote counting can be easily manipulated electronically and swayed to give advantage to political party. This can be done through either hacking or carefully selective programming.	Hennie

	2025-09-20 09:05:22	No I do not	Security and Trust	No I don't trust this, anything electronic can easily be manipulated by programming etc. Not that counting by hand is any better, has also shown to be very ineffective and manipulated, ballot boxes disappearing, etc.	Van	Gauteng		employed individual
	2025-09-20 09:08:53	No I do not	Security and Trust	Corruption in South Africa is ay its boiling point and the electronic voting system is very much prone to manipulation and rigging. I therefore not trust that the electronic voting system would be the best option under this current situation.	Thobelani	KwaZulu -Natal		employed individual
	2025-09-20 09:24:16	No I do not	Security and Trust	Too easy for corruption and manipulation	Yunus			
	2025-09-20 09:30:57	No I do not	Security and Trust	Moving voting information into the digital space opens up our democratic process to new and unknown threats. In this scenario, highly skilled invisible teams of online hackers and software developers will have the ability to engineer election results, in a way that the results are not auditable either. The advantages of a paper-based system are 1) people need to show enough effort to get out and vote (which means they care enough to participate), 2) the audit trail is physical and cannot be edited as easily as a Word document, 3) the points of influence are well-established, instead of opening up our elections to unknown actors on the internet. I have worked in online software design for over 25 years and I am well aware of how easy it is to manipulate digital data and compromise "secure" systems - our government has zero ability to produce a world-class digital voting system. Even the electronic voting systems in the US have had data breach scandals. Imagine giving the destiny of our democracy over to software designers working on a government tender. I am also very wary of digital ID and connecting my vote with my identity. The current paper-based system ensures privacy, electronic will not. I also do not support digital ID as a concept as there is a worrying trend in the world to identify as many actions online as possible. This is a double-edged sword - definitely we want to reduce criminal activity, but you also need to encourage a thriving democracy where people feel free to debate and speak openly - if their every social media post is linked to their ID number they will never challenge the incumbent government and a failed authoritarian state will ensue. We should respect people's rights to privacy, especially in the online world where data remains persistent, even decades after saying/ doing something.	Evan	Western Cape		business owner

	2025-09-20 13:22:03	No I do not	Security and Trust	Electronic voting will be the death of the democracy in South Africa. We have seen what happened with state capture, how the police & every organ of govt has been subverted. Computer systems can also be intentionally subverted. Outsiders can hack the systems through many ways including the internet. Experience in computer security has shown that resisting such attacks is extremely difficult. Attackers are extremely creative and determined. making them formidable adversaries. A greater threat to most systems is from insiders. Software can be modified maliciously by people with legitimate access before it is installed on thousands of individual voting machines. Most computer crime is perpetrated by insiders, because it is easier for them to commit crimes, and they are less likely to be caught. Worldwide the gambling industry experiences sophisticated insider fraud in spite of extraordinary measures taken to prevent it. Introducing electronic voting will only benefit a government who does not want to relinquish power when legitimately voted out of power. It will never be possible to audit & verify the electoral results as there is no conceivable way of auditing the outcome. With paper ballots, it's possible to do a meaningful manual count, for election auditing or in a recount, because the records being counted will be known to reflect the voters' intent. This is not possible with electronic voting The government will be able to manipulate the voting and the voter's info will no longer be safe and private The argument that electronic voting will draw younger voters in to vote is fallacious. Standing in queues is not what makes youth turnout so low. Young people don't vote because they have no faith in politicians and their empty promises. The older generation turns up to vote because they still hope against hope that they can make a difference. The youth who have grown up experiencing the corruption, lies and empty promises from politicians have given up.	Norma	Gauteng		retired

	2025-09-21 22:05:11	No I do not	Security and Trust	As was seen in the USA during the 2020 Presidential election, there were numerous cases of voting fraud due to their suspect und untested electronic voting system - to the extent that legislation is pending in that country to return to auditable pen and paper voting. Hence, I do oppose this electronic voting system vehemently, as , given South Africa's propensity for fraud at all levels of society, including very much the highest level of politics, this proposed system will undoubtedly be riddled with fraud of all kind, and lead to an election outcome that is not free and fair. We currently have a system that is virtually perfect, that makes it impossible for any person to vote more than once, and 100% verify the identity of every person before the can make their vote by pen on paper at their assigned voting station - from where the votes are physically counted in an indisputable manner - this is probably the best voting system in any country in the world - DO NOT SCREW THIS UP BY INTRODUCING A FRAUDULENT ELECTRONIC SYSTEM.	Sorena			unemployed individual
	2025-09-21 22:13:52	No I do not	Security and Trust		ayanda	Western Cape		employed individual
	2025-09-21 23:38:33	No I do not	Security and Trust	I am very unsure of the how safe this will prove to be Our country is so riddled with corruption and bribery that breaths Concern I would like to say yes though	Theresa			retired

	2025-09-22 04:33:44	No I do not	Security and Trust	My first point of concern is trust. I do not trust the government with my biometric information. I would have considered it if it was a system that for example just scan your smart id bar code. I will not be using my biometric (finger print) information. My second point is security. Computers and digital programs can be hacked. Though the auto counter does sound like an appealing option it is posible to install a trojan than disrups the algorithum and thus give a false count. my third concern is access. I live in an extremly remote town and high tech equipmint might not be practicle here. Alongside the fact that most people in town is illiterate and thus A) can not operate technology. And B) if a staff member assist them then they can be coherced and influinced.	Etienne

	2025-09-23 07:39:06	No I do not	Security and Trust	Systems could be hacked and votes inflated.	Allison	Western Cape		employed individual
	2025-09-23 08:17:31	No I do not	Security and Trust	I do not support the proposed electronic voting policy. Privacy and Data Protection Concerns: I do not trust the government or any central authority to hold detailed, identifiable voting records. Granting access to such data creates an unacceptable risk of surveillance and undermines the constitutional principle of a secret ballot. Risk of Manipulation: Digital systems—no matter how well designed—are vulnerable to hacking, insider tampering, and technical failures. Even the perception that votes can be altered erodes public confidence in democratic outcomes. Lack of Independent Oversight: Before any electronic system could be considered, there must be legally mandated, independent audits and a verifiable paper trail. The current proposal does not convincingly guarantee these safeguards. Until robust, transparent, and independently verifiable mechanisms are proven and legally enforceable, I cannot support this initiative. Sincerely, Brent De Luca Johannesburg, South Africa	Brent	Gauteng		business owner
	2025-09-23 08:23:42	No I do not	Security and Trust	A lot of promises made, but cannot be kept. Electronic voting cannot be audited the same way as actual voting papers. It is more difficult to stuff paper ballots than falsely increase votes electronically. Please do not proceed. Introducing electronic voting will result in a never-ending hole of mistrust in our democracy.	Elia	Western Cape		student
	2025-09-23 08:26:02	No I do not	Security and Trust	Once electronic voting is introduced, a lot of individuals will lose trust in our precious yet fragile electoral system, as electronic voting can be more easily manipulated - no matter about these security promises made. Please do not do this. Otherwise, we will enter a vicious cycle of disengagement due to mistrust in our democracy. Stop it before it is too late.	Stefano	Western Cape		retired
	2025-09-23 08:47:45	No I do not	Security and Trust	I have lost interest	Khulu	Gauteng		self-employed
	2025-09-23 08:50:30	No I do not	Security and Trust	Vote rigging and empty promises have always been an issue, but I believe the electorate may just have had enough of this and will vote correctly for the future that was "Promised" , but never delivered. Streetwise 2 , Caps and T's are a thing of the past!	Colin John	Western Cape		self-employed
	2025-09-23 09:20:45	No I do not	Security and Trust	Digital voting is no more secure than manual voting by all accounts around the world. Fingerprints of the older population are often worn down and difficult to read digitally. Instead the IEC should look at ways of making the current manual voting system and especially the collection, delivery and counting of votes more secure and transparent.	Barbara			retired

	2025-09-23 09:59:58	No I do not	Security and Trust	There have been so many empty promises made by the government! There have been so many Commissions of Enquiry set up! There are so many fraud & corruption cases ongoing & still under investigation concerning virtually every sphere of government & you're asking me to agree to electronic voting that will only be transparent to the "manipulators & hackers"!!!! NO!!!!!	Richard	KwaZulu-Natal		retired
	2025-09-23 10:32:09	No I do not	Security and Trust	Current infracture does not allow for proper trust and security To auotmate controls proper controls should already exist using a fingerprint as a unique id in an attempt to eliminate fraud is odd. There is no 100%. Can ypu imagine the cost of biometric at this scale not to mention the fact that some peoples fingerprints are not scannable Go sit in the line for the current smart ID its scary. Fix the current process before deciding that technology that is not yet properly governed will fix your problems.	Mari-Louise			
	2025-09-23 10:47:17	No I do not	Security and Trust	I do not even have an ID Card, never mind anything else. A lot of elder people are technology challenged and will not be able to use the process, or will be guided incorrectly in the process. Not accessible for all South Africans.	Ellana			employed individual
	2025-09-23 10:47:57	No I do not	Security and Trust	I don't believe that electronic voting systems will ever be fully trustworthy and could possibly be manipulated by bad actors. Theoretically, an audit trail exists, but if a gremlin is present in the system, it becomes an expensive exercise for a few individuals with expert knowledge to resolve and verify the accuracy. Additionally, I believe e-voting systems will contain proprietary software; therefore, the source code will most probably not be in the public domain for scrutiny. Perhaps if a dual system could be implemented where a paper ballot is also present, it could work but this will be very complex and leave the system open to new vulnerabilities. 	2025-09-29 08:42:55	No I do not	Security and Trust	SA has a big problem with trust, corruption is on a all time high. bringing something in that can be bought out on a bid and whoever has the money, wins the election, its not true and not fair.	S	Western Cape		employed individual
	2025-09-29 10:01:09	No I do not	Security and Trust	This information, if not completely confidential, will/can be used against citizens that do not support the ANC or national government in power. Sorry, I do not trust the integrity of the people in power.	Karen			
	2025-09-29 10:24:09	No I do not	Security and Trust		Ilne	Gauteng		retired
	2025-09-29 10:59:02	No I do not	Security and Trust	The whole notion of the digital ID should be opposed. It will become a massive invasion of privacy and a tool for governments and corporations to treat us like sheep. It will become the method of controlling people and eradicating all freedoms (that have taken centuries to fight for) in the long run. Secular, commercial and personal data will be centrally accessible to people we simply do not trust and who lack the maturity to not be tempted to farm and abuse citizen information, which includes our government and corporations, as well as governments and corporations the world over. The electronic voting is objectionable for privacy reasons and because voting manipulation will now no longer be sporadic and location based depending on corrupt officials (with the non-electronic voting method), but will allow manipulation at a centralised and much more far reaching level (if electronic voting). And those concerns exclude the potential for such systems to be hacked, something which has become a daily occurrence. Keep the IEC and voting by hand - it may not be perfect, but it does not smack of the authoritarian and globalist over reach that we have all experienced at an accelerated rate in the last few years. Digital IDs is a big no, let alone the side issue of being forced to vote electronically.	Matthew	Eastern Cape		self-employed
	2025-09-29 11:08:34	No I do not	Security and Trust	With ultimate power comes ultimate responsibility… those with great power have a duty to use it wisely and for good. Having the ability to influence the world comes with a moral obligation to act with careful consideration. Power requires a corresponding sense of accountability and we do not trust that those in power have our best interests at heart.	C			
	2025-09-29 11:13:13	No I do not	Security and Trust	Why is the IEC wanting to go the electronic route when clearly the system is flawed by hackers, manipulation of results by bad state actors, etc. The United States is about to introduce a unified electoral presidential voting system that goes back to the ballot paper so that - and this is crucial - a chain of custody can be guaranteed from when the vote was first cast to final ballotibg figures. It is the only fair way of voting after huge questions have been and continue to be raised about the veracity of the US 2020 elections. In the UK and other European countries - the paper ballot is still used to ensure that there is a paper trail which can be accurately checked. Election. Machines give no such guarantee. If voters don’t trust the system - democracy will come under threat,	Warwick			self-employed

	2025-09-29 19:51:40	No I do not	Security and Trust	Digital voting opens the door to corruption and fraud at an unprecedented level. Our personal information is also at risk to the same hackers who will manipulate this system, causing mass chaos, loss and destruction	Sharné			employed individual
	2025-09-29 20:24:14	No I do not	Security and Trust	The use of electronic voting systems has proven that it is possible to manipulate outcomes through algorithms in the software. If there is no proper control measures in place, fraudulant outcomes is possible. In America where electronic systems was used, everytime fraud was exposed when investigated. With South Africa's track record, I suggest that manual voting be kept. The use of electronic systems to stay in power can have grave consequenses for the country. Now is not the time to implement an electronic system with so little time left before an election. Rather use a proven manual system than be sorry in the end for using a system that was proved untrustworthy. Even if discrepancies is corrected afterwards, the trust of the people will never return. Remember, the government and it's leaders are servants of the people. It is not what the government or governing party/ies want. It is what the people want.	Willem	Western Cape		retired

	2025-09-30 19:08:58	No I do not	Security and Trust	I believe ID theft is a high risk & can thus impact electronic voting which besides the issue of ID theft electronic voting can also be manipulated and would more easily be subject to corruption as officials may not have insight into how data can be interfered with.	Allan	Gauteng		retired
	2025-09-30 19:58:16	No I do not	Security and Trust	The outcome in such a process can be easily manipulated. It will also have transparency implications. There will a problem of access in most areas because of network connections. I think also in terms of resources there would be a problem since the electoral commission has indicated earlier that they are short of funds.	LINDY-ANN	Gauteng		employed individual

	2025-09-30 21:11:06	No I do not	Security and Trust	My main concern is manipulation of election results. If you can go online with voting machines (which will be denied but is doable) you can flip the vote. Many countries do not use electronic voting machines because it cannot be trusted. Paper ballots are still a better option for free and fair elections.	Helena	Western Cape		retired
	2025-09-30 22:29:18	No I do not	Security and Trust	Technical/digital/computer/network systems are vulnerable to hacking, manipulating, sabotage and outages.	Celeste			
	2025-09-30 22:50:49	No I do not	Security and Trust	Electronic voting paves the way for the digital ID roll out that governments of many countries are hoping to implement under Agenda 2030. The collection of a person's biometric data places them in particularly precarious position where their data can easily be used against them by the state, financial institutions and corporations. We see this in China where the population are virtually digital slaves of their government's social credit score system, locked out of their own bank accounts at a moment's notice due to not having a suitable credit score. Providing the government with intimate knowledge of a how a citizen voted can easily lead to manipulation of citizens and elections. Additionally, EVERY DIGITAL SYSTEM IS PERFECTLY HACKABLE. This means that virtually anyone with advanced computer skills can gain access to every person's data.	Rob			
	2025-09-30 23:52:37	No I do not	Security and Trust	Many countries do not use electronic voting machines because it cannot be trusted. Mike Lindell (US) recently said: A whistleblower from inside Smartmatic (Smartmatic Voting Machines) has confirmed under oath that electronic voting machines are easily infiltrated, dangerously vulnerable and have no place in elections. Paper ballot hand-count method is still the best option for free and fair elections.	Elizabeth	Western Cape		retired

	2025-09-16 09:19:46	No I do not	Transparency	Electronic voting is not tamper-proof. Around the world, countries that tested e-voting (such as Germany and the Netherlands) returned to paper ballots because computers can be hacked, systems can fail, and public trust can be destroyed overnight. South Africans must ask tough questions before handing our vote to a machine: Security & Trust: Who will guard against hacking or manipulation of results? Transparency: How will citizens know votes are counted honestly if it all happens inside a computer? Privacy: Will linking votes to Digital IDs expose how individuals voted, breaking the secrecy of the ballot? Access: What happens to rural communities and those without reliable electricity or digital access? Infrastructure: With load-shedding and system failures already a problem, can the IEC guarantee reliability? What We Need If digital verification is used, it must be paired with a paper ballot for every voter. Paper is transparent, auditable, and trusted. Voting software must be open to independent experts for inspection — no “black boxes.” Citizens must have the guarantee of ballot secrecy, with strong protections in law and technology. Any rollout must start with small-scale pilots before touching national elections. Our democracy was built on trust in the vote. Technology should never be allowed to replace that trust with doubt. South Africans must raise their voices now to ensure our elections remain free, fair, and beyond suspicion.	FRANCIS	Mpumalanga		business owner

	2025-09-16 17:47:37	No I do not	Transparency	Anything ANC is corrupt...therefore this move is aimed at the minority. We all know how bad the taxi's drive; pushing in. stopping where they want to stop traffic, making illegal u-turns, skipping stop signs & red lights, etc. etc...yet the minority will be targeted!	Morne	Gauteng		employed individual
	2025-09-16 17:56:25	No I do not	Transparency	Electronic voting systems can and will be abused by those in power.	Francois	Free State		business owner
	2025-09-16 17:59:57	No I do not	Transparency	Digital voting in a country like SA means it will be used against the people. The system becomes an identity matrix which shows who voted for what parties and allows the targeting of individuals based on their voting practices. I have worked in the digital space for 10+ years and can advise how easy it is to rig, manipulate and abuse. There are ways to digitise this type of system, i.e. voting, but it involves oversight, foreplanning and a lot of auditing. An abstraction layer would be needed to shield the voter from being linked to a vote they make but the system would still know if a voter "voted" or not. This is actually an intermediate system to build, but I do not trust our government to build such a thing, nor the entity that will be awarded the tender, nor the cadres that will weaponise a system like this. I will be watching closely if this goes ahead, and I am 100% certain I will see a lack of 3rd party audits, security, privacy and abstraction because even systems outside Africa are not built for the people and their privacy, they are built to profile each citizen.	Jade	KwaZulu -Natal		self-employed
	2025-09-16 18:14:34	No I do not	Transparency	Systems at the bank already exist to identify citizens of South Africa. A citizen is allowed to vote if he/she meet the following criteria: 1. 	2025-09-17 12:48:28	No I do not	Transparency	If we look at every place in the world which fully electronic voting has been implemented we will see it is fraught with issues and specifically vulnerable to exploitation and manipulation. Again and again these systems have failed audits, have been challenged and found to be problematic. I would have no issue with government having central confirmation that a person had indeed voted and block any attempts at voting multiple times, but beyond that the system should be opaque with no way for any organisation to be able to determine how a person had voted. voting should result in a paper ballot that should be counted and adjudicated by representatives of all political parties.	Gary	Gauteng		employed individual
	2025-09-17 12:50:08	No I do not	Transparency	Paper ballots may be a bit more cumbersome, and need more security, however, it has stood the test of time. It ensures almost complete privacy.	Jan			
	2025-09-17 13:09:53	No I do not	Transparency	Electronic voting is how Democratic Party stole 2020 USA election. No transparency in the system - open to more manipulation. ANC will magically get 51 percent of the votes again.	Carlos	Western Cape		retired
	2025-09-17 13:26:33	No I do not	Transparency	I do not trust this government with its track record of corruption. Electronic voting will open us up to the manipulation of voting results by corrupt officials which is easy to believe will happen considering our governments track record of corruption. We don't want ruling autocrats in our country that are not answerable to the people they are meant to serve, and if election results are manipulated to suite one political party and person, it will in essence be a one-party state.	Rob	Western Cape		self-employed
	2025-09-17 13:26:56	No I do not	Transparency	The ruling party are losing their grip on power, I do not believe that this system would be free from corruption or abuse.	Colin	Western Cape		employed individual
	2025-09-17 13:39:01	No I do not	Transparency	In a country where corruption "pay" very well and people get into positions they not qualified for or appointed based on "who" he/she knows. This will be a total disaster for a country that is already flushed down the drain, imagine what level of corruption will take place by using this method of voting. This is a BIG - NO	Jaco	Mpumalanga		employed individual

	2025-09-17 21:08:27	No I do not	Transparency	Formal Opposition to the Proposed Electronic Voting System in South Africa To the Electoral Commission of South Africa (IEC) and Relevant Government Authorities, I write to express my unequivocal opposition to the proposed introduction of electronic voting (e-voting) in South Africa. This system is fundamentally incompatible with our constitutional democracy, risks entrenching foreign domination, and threatens the integrity of our electoral process. Below are the key reasons for my objection: 1. Foreign Influence and Neo-Imperialism The push for e-voting aligns with a broader pattern of Western powers seeking to dictate political outcomes in sovereign African nations. The United States and other foreign actors have a documented history of leveraging technology to manipulate elections, as seen in cases of voter suppression, algorithmic bias, and unverified electronic tallying systems. By adopting e-voting, South Africa risks surrendering control of its democratic processes to external entities, replicating the very apartheid-era power dynamics we fought to dismantle. This is not progress, it is recolonisation through digital means. 2. Cybersecurity Risks and Proven Vulnerability Electronic voting systems are inherently vulnerable to hacking, data breaches, and manipulation. The document cites “cybersecurity risks” as a concern, yet dismisses them as manageable. This ignores global evidence: - In the U.S., electronic voting machines have been repeatedly compromised, with votes altered or deleted in multiple states. - No e-voting system globally has proven impervious to fraud or technical failures. South Africa’s elections are a model of transparency and credibility. Introducing opaque, unaccountable technology jeopardises this legacy. 3. Lack of Transparency and Voter Trust The IEC claims e-voting could “boost voter turnout” and “increase accessibility.” However, the opposite is true: - Distrust in Technology: Many South Africans, particular	Benton	Gauteng		self-employed

	2025-09-18 09:48:23	No I do not	Transparency	I do not support the Digital ID as there are many more concerns with this ID such as tracking and surveillance, freedom of movement and transactions might be restricted with this process!! Why not use the Blockchain to build a voting system? Each transaction can be tracked and locked in. I do not believe Digital IDs is the best way forward.	Marius	Mpumalanga		employed individual
	2025-09-18 09:48:54	No I do not	Transparency	My concerns are that by going digital, that the end result could be changed by the ruling parties.	Lisa	Western Cape		
	2025-09-18 09:51:34	No I do not	Transparency	1. With Land Rover being the 3rd massive company now down due to cyber crime, placing trust in cyber anything especially for the future of the country is insane. 2. Suggested computer system has no audit or way of auditing 3. A virus could loose all the data and votes, because there is no hard Copy 4. We are too 3rd world for rural places to understand processes electronically 5. SA crime and equipment being stolen, where pieces of paper won't be. 6. Buying enough generators to keep the equipment going 7. Cost of maintaining the equipment , updating the software and buying updated software is more expensive than printing papers	Alyss	KwaZulu-Natal		employed individual
	2025-09-18 10:10:31	No I do not	Transparency	The PRIVACY and CONFIDENTIALITY of our votes are imperative at this time - any voting system that records votes against individual identities is massively problematic in a country where voter intimidation is rife. This is an unacceptable level of control and removal of individual multiparty oversight.	Lee-Ann	Eastern Cape		employed individual
	2025-09-18 10:16:26	No I do not	Transparency		Annette			
	2025-09-18 10:20:58	No I do not	Transparency	I am concerned that the vote may not be anonymous and that people will be unduly influenced, especially those who are illiterate and less physically able.	Dirkie			
	2025-09-18 10:25:08	No I do not	Transparency	The existing system has floors yes, but the electronic system will in my opinion open the door to 'even more' government manipulation. Better the devil you know!	Allen	Western Cape		business owner
	2025-09-18 10:26:59	No I do not	Transparency	I have absolutely no faith in the ANC government, or in fact any other parties that could attain political power, that they will not interfere with the outcome of any election done electronically. The way voting was rigged in the United States in their 2020 election proves that electronic voting is even less safe than voting per ballot and politicians cannot be trusted. Whoever controls the computer can influence the outcome. Having parties who participated in overseeing the actual voting and subsequently also the counting is safer.	Jacobus Cornelis	Gauteng		retired
	2025-09-18 10:34:17	No I do not	Transparency		Wilma			
	2025-09-18 11:10:10	No I do not	Transparency	More room for manipulation of election results	Richard	Eastern Cape		employed individual
	2025-09-18 11:11:19	No I do not	Transparency	I do not support electronic voting.	Bronwyn	Eastern Cape		employed individual
	2025-09-18 11:11:57	No I do not	Transparency	This is an invitation for fraud and vote manipulation. The only circumstance that I would entertain an electronic vote would be if everyone's vote was published/ made public. Clearly this would be unacceptable for most voters.	John	Western Cape		self-employed

	2025-09-18 20:20:52	No I do not	Transparency	Actually, we are alright with the traditional voting method. Our votes supposed to be our secret. Electronically they can easily be exposed, and tempared with. Look what happened at the IEC on the previous votes. We already lost trust on the government, so people must not trust the electronic voting systems because they can easily be hacked and manipulated to favour the very same people we lost trust in. After what happened in the previous votes, I knew they gonna take this route. Voting means Electronically there won't be no paper/ evidence as to how many people voted for which party, it will all be in the hands of IEC that we lost also lost trust in.	Gift			employed individual

	2025-09-23 00:56:56	No I do not	Transparency	The current voting system is corrupt enough - digital certainly does not bring more security - as the infiltration just last year of our own national defence company, Denel, by hackers has made clear. Also, what's to stop a corrupt political party in power from even more easily changing the voting results on a computer? At least with the current system, there are hard copies - even if the opposing party's votes are often found dumped in a ditch somewhere. How about we just stop voting altogether and dissolve the bloated goverment and start fresh. I'm sure the remaining 99% of the country will enjoy the relief from having their taxes stolen and misused every month. No to electronic voting. Well done on reading this far (and at all)	Jenna			
	2025-09-23 07:57:09	No I do not	Transparency	We have seen the corruption in America with electronicle voting. If you want to vote go vote in person. There is enough corruption in South Africa. We want a honest and clean voting system.	Petrus	Gauteng		unemployed individual

	2025-09-16 07:48:03	No I do not	Other	My main concern is that electronic voting is prone to failure, as seen in countries like the USA, Germany, Brazil, Estonia, and the Netherlands, where technical glitches and security issues undermined election integrity. Many South Africans lack access to technology or the know-how to use it properly, which could disenfranchise voters. Poor organisation, long queues, and overly complex ballots could be worsened rather than solved. This move also raises questions about alignment with globalist initiatives like the WEF Agenda 2030 and Digital Identity frameworks, potentially presenting the illusion of progress while masking governance failures. E-voting risks eroding public trust, compromising democracy, and centralising control over our votes.	Frederic	KwaZulu-Natal		unemployed individual
	2025-09-16 07:54:08	No I do not	Other	In the last 30 years the ANC government has not introduced or implimented anything successfully, majority failed creating a banana republic situation. All electronic systems can be manipultaed ,look at the debacle in the last few USA elections. Keep electronic out of voting	stephen			
	2025-09-16 07:56:56	No I do not	Other	Who will have access to the data, who will design the system. What back-up is in place to verify that the vote cast was not manipulated to the benefit of a particular political party. Why not keep but modify the paper ballot to be able to be read electronically to help with counting but leave a paper trail for audit. The paper ballot will also double ensure that a voters vote stay secret. Voters vote on paper, insert the ballot themselves into the scanner, voter be able to see what political party the system debit with their vote for correctness and if not to lay complaint and cancel vote to be corrected if machine misread the vote. The paper ballot can then be placed into the normal box to be counted manually for verification purposes of what the system say. Fingerprint can be utilised to verify the person before the paper ballot is issued. Unfortunately corruption will not stop illegals from voting as the problem is with the people at Home Affairs. The USA have problems with their electronic voting systems in some of the States so how will we be better at it given our political climate.	Walter	North West		employed individual
	2025-09-16 08:11:43	No I do not	Other	Corruption will be rampant on a system like this Implementation cost will be too high for a struggling economy And WE cannot teust ANYTHING to do woth the ANC	Ruan			employed individual
	2025-09-16 08:26:15	No I do not	Other	This will be an ideal platform for massive manipulation without monitoring. REf and the player are all ANC..... ? Another ANC diversion and distraction ... 	2025-09-16 09:07:51	No I do not	Other	This makes it easy for the ANC to manipulate , why are they trying to implement this when the ANC is on rocky ground makes one wonder ?????	David	Gauteng		retired
	2025-09-16 09:09:54	No I do not	Other	Confidentiality, voter rigging &/or suppression. Any gap given to the ANC will be used for their nefarious gains!! Just as they use voter fraud - so really between a rock & a hard place, but voter fraud probably the lesser evil??	Martine	Western Cape		
	2025-09-16 09:14:06	No I do not	Other	99.9% of government is the spawn of satan. I don't TRUST anything you do or want to do it's NEVER in the interests of the people . You should repent and do what is right in the sight of Jesus	Inge			
	2025-09-16 09:32:06	No I do not	Other	I am against this in total. Electronic systems and databases are so prone to fraud with all the IT technology available. No government can be trusted with this. Elections can be rigged and then it can be known who you voted for.	Chris	North West		retired
	2025-09-16 09:43:03	No I do not	Other	Hacking and vote manipulation! Whoever controls the 'counting' controls the outcome of any election anywhere!!!	Derek	Western Cape		
	2025-09-16 09:48:41	No I do not	Other	Against digital ID	Dries			retired
	2025-09-16 10:05:14	No I do not	Other	In a country faced with massive unemployment with devastating social consequences it's really betrayal of the highest proportion for IEC not to employ the unemployed seasonally to put food on the table for them and their families. You see as and when we embark on making decisions let's ensure that we apply our minds to the plight faced mostly by the disadvantaged and marginalised majority of our society who through that temporary and interim piece job a semblance of dignity can be brought back into their lives.	Sello	Free State		employed individual
	2025-09-16 10:08:28	No I do not	Other	We have seen how elections can be stolen in USA electronically The IEC has done a good job since the first elections. However it seems at the last election it was underfunded. Firstly I do not agree with totalitarian measures such as digital id. More importantly, we all know that the state awarding IT contractors completely corrupt. The money that will be spent will be astronomical and the result inferior Increase the IECs funding by 50 percent of the proposed electronic voting system for a better election day I am for progress but not at the cost of my personal freedom or rigged elections	Caron			retired
	2025-09-16 10:28:25	No I do not	Other	Why does the South African government rush to embrace systems and policies that are being thrown out by more successful nations because they have been shown to be ineffective, subject to rampant corruption, and a bad idea for the nation? I am concerned about all the issues mentioned: security and trust, access for all South Africans, practical implementation, transparency, legal requirements, voter and staff preparation, privacy and data protection, and infrastructure needs. I am also extremely concerned that this will open up the ability for the government to steal elections because there is no paper trail. Already we have problems with boxes of ballots being thrown away and discovered after the election. With an electronic system, a delete key will be even more powerful and the evidence harder to find.	Heath	Gauteng		business owner
	2025-09-16 10:30:52	No I do not	Other	My vote will not be cofidetial as the iec will see for which party i voted.	Nellie	Limpopo		
	2025-09-16 10:32:16	No I do not	Other	I recall the Americans in Florida, USA also looking into electronic voting a number of years ago. They decided on various reasons NOT to "go this way". Are we now brave enough to introduce this way of voting in RSA???	Nico	Western Cape		retired
	2025-09-16 10:32:16	No I do not	Other	Religion believes.	Yetta	KwaZulu-Natal		self-employed
	2025-09-16 10:40:36	No I do not	Other	NEVER, THIS WON'T WORK HERE!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!	Michael	Gauteng		self-employed

	2025-09-16 10:40:36	No I do not	Other	My concern is all of the above which are open to ruling party manipulation and vote rigging. Also this proposed system is wide open to manipulation by this ANC dominated already proven corrupt government. It is agreed that digital fingerprint would go a long way to stop "voter loading" practices BUT this assumes that every person who has a right to vote also has digital access to the internet and if so, fully understands the digital voting system requirements. I also do not believe the IEC is politically impartial which again could provide a questionable electoral result. PLUS as already stated All of the issues raised are of concern. America has proven beyond doubt that such systems can be hacked and rigged, so WHY, would we want a system like that??? THIS SYSTEM SHOULD NOT EVEN BE CONSIDERED BUT THROWN OUT COMPLETELY!!!!!	LESLIE	Gauteng		business owner
	2025-09-16 10:41:39	No I do not	Other	Computer systems crash conveniently, and databases become corrupt and can be corrupted.	Gerhard	Free State		retired
	2025-09-16 10:48:43	No I do not	Other	The problem is that a database of this nature if hacked or leaked or even sold by fraudsters will most likely create so much legal issues, due to identity theft, with this system you have all details linked to a person, finger print, address, etc. All you need is to fake loan applications and voila, a person borrows money without them even knowing it, so fraud is going to increase substantially. Also the problem with government, is that they are useless, so systems of such a sensitive nature can not be trusted in corrupt thieves hands, so NO. What I do think will be a GOOD thing, is to have public voting on tax allocations and real time reports back on what was paid, who received the money, was the work done according to TAX Payers requirements and if approved was the funds allocated correctly. Tax payers should have a real time voting system to see requests, approve them or decline them, NO MORE BEHIND CLOSED DOORS DEALS, Tax transparency and NO MORE R 10 million rand salaries and FREE tickets on planes, houses and cars. Those benefits MUST BE REVOKED and Tax Payers can Decline those expenses electronically in Real time. We already have sars with e-filing, so now let tax payers use their constitutional VOTING rights and Vote for Tax allocations and Decline those that should not happen.	Wernher	Gauteng		self-employed
	2025-09-16 11:00:37	No I do not	Other		Mark			employed individual
	2025-09-16 11:01:55	No I do not	Other	I do not consent to electronic voting or having a digital ID. The government seems to be moving towards controlling the population by introducing a digital ID which works on all platforms and is linked internationally. This is a global control mechanism. The digital ID system is rigged to ultimately control our every movement taking away our freedoms...	Amber			retired
	2025-09-16 11:07:15	No I do not	Other	All the above. How more open to corruption is this.	Ingrid	Gauteng		retired
	2025-09-16 11:22:46	No I do not	Other	This is SA = fraud, fraud and corruption - trust nothing!	miles	Western Cape		employed individual
	2025-09-16 11:23:56	No I do not	Other	MANIPULATION OF RESULTS , UNLESS SOME FORM OF BLOCK BE IN PLACE TO ENSURE THAT RESULTS ARE NOT CORRUPTED.	NIGEL			
	2025-09-16 11:27:30	No I do not	Other	We have the most corrupt government and this is just another way to hang onto power. They have have decency and cannot be trusted - also dont have the skills to manage this	Mike	Western Cape		retired
	2025-09-16 11:28:00	No I do not	Other	I strongly oppose electronic voting. Corrupt ruling parties will continue to hold power in this way. Research conducted in nations that have adopted electronic voting methods has shown that these systems are rigged and plagued by a long list of issues. It has been demonstrated that electronic voting systems are vulnerable to manipulation, record deletion, and interference with the free and fair conduct of elections. The already dishonest SA government will undoubtedly take full advantage of these shortcomings, which is probably why they are advocating for implementation. To preserve voter identity as well as our rights to privacy, justice, and anonymity, the outcomes of the vote should be entirely anonymous.	Nic			
	2025-09-16 11:30:52	No I do not	Other	All the corcerns listed including that votes should be anonymous and this way they will have a record of who each person voted for, even though they will say that they don't. It is also fully open to corruption and vote manipulation as in other countries with even more technology and security.	Dudley			
	2025-09-16 11:43:00	No I do not	Other	All of the above including manipulation of data/votes collected. In person, ID confirmed voting must be the norm	Nicole			unemployed individual
	2025-09-16 11:48:56	No I do not	Other	With all the corruption on state level and the police and the municipalities and SOEs. This is just another opportunity to manipulate the system to keep political parties in power who do not have the best interest of South Africa and its people.	Gert			
	2025-09-16 11:53:13	No I do not	Other	Unfortunately it has been proven in several countries in Africa, that the electronic voting method are easily manipulated and results can be changed	Fred Raymond	Outside SA	Angola	self-employed
	2025-09-16 12:01:03	No I do not	Other	It might sound good however, there are numerous concerns to consider. Firstly fraud and corruption is rife in our government and country. Citizens definitely don't trust the government or the various bodies or stakeholders. The possibility of all South Africans not having access is high. It has been proven that practical implementation of anything is an epic fail where government and thier stakeholders are concern.	Kim	Western Cape		employed individual
	2025-09-16 12:10:34	No I do not	Other	Goodness!!! There is SO much fraud & corruption already!!! We do NOT need this now !! Leave the voting as it's always been!!!!	Sheila	Gauteng		retired
	2025-09-16 12:29:25	No I do not	Other	South Africans do NOT have the skills to do it. Maybe the knowledge, definitely NOT the skills. SA fails to provide basic power, water and/or sewerage. How can you expect the IEC to roll out and run an electronic voting system???? Dream about something else!	Louis	Mpumalanga		self-employed
	2025-09-16 12:40:37	No I do not	Other	This will implement more corruption!!!	Sharlene	Western Cape		
	2025-09-16 12:49:54	No I do not	Other	Although the idea of less corruption (not possible in our country) is welcome, this is another way for the government to monitor, track and trace everything we do. In an ideal world, it has the possibility to be successful, but NOT in South Africa. We cannot trust the government to have our best interests at heart because they don't. In the current political climate (domestic and international), this is a VERY bad idea, and we, as the citizens of this beautiful country, should do everything we can to prevent it from happening. The voting system should be reviewed instead. We should be able to vote for the president and local government representatives. They should not be appointed by the political party that 'won'. We don't and have not lived in a democratic country for a very long time!!!!	IH	Western Cape		self-employed
	2025-09-16 12:52:25	No I do not	Other	Korruption	Lester	KwaZulu-Natal		unemployed individual
	2025-09-16 12:52:26	No I do not	Other	ABSOLUTELY NO ELECTRONIC VOTING FOR RSA!!! Dear IEC, It is imperative that we take a strong stand against the implementation of electronic voting systems. It doesn't matter who you vote for, the potential for manipulation is 100%. This also opens the door to foreign interference via hackers in RSA elections. We have been witnessing for many years how the British Pilgrims Society through Lord Maloch Brown and his Optec software has manipulated the outcome of elections across many nations but especially in the USA. WE CANNOT ALLOW THIS RED LINE TO BE CROSSED. Even though all electoral systems are flawed, paper ballots with representatives from all political parties counting are still the best option. Please do not proceed. This will be the complete end of the democratic process in our beautiful country.	Linita	Gauteng		business owner
	2025-09-16 13:04:16	No I do not	Other	As long as the ANC is involved we can not trust any changes that they want to make	Albert	Gauteng		retired
	2025-09-16 13:04:19	No I do not	Other	As long as the ANC is involved we can not trust any changes that they want to make	Albert	Gauteng		retired
	2025-09-16 13:37:02	No I do not	Other	Electronic voting could be the ideal solution in preventing fraud and vote rigging, unfortunately though the cons outweigh the potential benefit. Confidentiality, personal information, privacy and government's ability to identify and know who voted and for whom are significant and unacceptable challenges. Most likely, electronic voting will rather serve to undermine this fragile democracy, particularly as the South African government just cannot be trusted.	Noel	Gauteng		retired
	2025-09-16 13:46:58	No I do not	Other	All of the options. It all sounds nice and easy on paper, but with the corruption and intimidation taking place in our country, then votes will no longer be confidential, but transparent. People will be able to identify which party a person voted for. How will they stop 'hackers' from fraudulent votes - I go to the voting stations only to be told I have already voted? Vote counting could also be rigged to give the outcome needed by any one party to rule autonomously.	Anne	Gauteng		employed individual
	2025-09-16 13:49:13	No I do not	Other	All of the above. I am unaware of any public participation regarding digital I.D.s. I consider digital I.D.s, in fact all digitization, as a step towards the One World Government/ Global Dictatorship, which would reduce 99% of the world population to serfdom controlled by the elite. I take note that the DA is promoting digitization.	Dirk			
	2025-09-16 15:16:36	No I do not	Other	This ooens up election to even more voter Fraud	Ludi	Gauteng		employed individual
	2025-09-16 15:27:01	No I do not	Other	Since 94 this goverment and their soe`s couldnt build anything that work. And if it was a copy they could not maintain it. Thiis is another NHI which will not sail. The population servey they mention was on 0.0002% of the total they think voters population. It is not even according to standards.	AC	Gauteng		self-employed

	2025-09-16 15:56:53	No I do not	Other	We have a highly corrupt government. They will be able to tamper with votes, delete votes, add votes, change votes, or even target anyone who does not vote for them. Add to this the infrastructure risk. It would be easy to sabotage power stations in areas where the votes would not be favourable. People who are tech challenged could be taken advantage of. There are so many other issues I can think of but I think I have made my point. It would be nice and quick but not in South Africa yet, because the country is in serious moral decline.	Kenneth	Gauteng		employed individual
	2025-09-16 16:08:10	No I do not	Other	We have seen how the electronic voting system was manipulated in USA in 2020 and 2024 and, with the recent history of this country, I assume the same voter fraud will follow through to South Africa.	David	Western Cape		
	2025-09-16 16:37:32	No I do not	Other	I don't trust the government with this data.	Shaun	KwaZulu -Natal		retired
	2025-09-16 16:40:58	No I do not	Other		Gerhard			
	2025-09-16 16:47:09	No I do not	Other	I do not support the introduction of electronic voting under the current political climate. There's already a serious lack of trust in how the government handles public systems. Giving the state full control over a digital voting system opens the door to vote manipulation, surveillance, and suppression — especially when it's being pushed by politicians with clear agendas. Once voting goes fully digital, how do we know votes won't be changed, tracked, or lost? There's no real transparency or public oversight in the current proposal, and many South Africans won't even have proper access. Until there is real accountability, transparency, and independent control, this is just another way for those in power to tighten their grip.	Ursula	Gauteng		business owner
	2025-09-16 16:48:01	No I do not	Other	I want to support this but some ANC idiot is going to forget to add half the (not ANC) voters and then we're in shit! My concerns are: Who's writing the program? Who's maintaining the program? How do we know its not going to be hacked? How do we know it's not going to add an extra vote for the ANC for each vote for another party? We need step by step transparency of this otherwise I will not be supporting it AT ALL!!! I mean, SARS works like bomb, probably a direct injection to cyrils personal account, they don't miss a thing, so how is it that they can get that right but nothing else in this country work? Everything in this country is fucked except for the SARS website. I can't even get a passport or ID through the bank system and you want to implement electronic voting? In theory, this is brilliant, but practically, I dont trust anyone in this country.	Cristine	Western Cape		employed individual
	2025-09-16 16:49:00	No I do not	Other	Where do I start? Without being rude, I must just say that there are no people more dangerous than those who do not know what they do not know. I am sure that the honourable Minister is taking this decision based on "expert" advice, but he needs to consider all the pro and cons. I will list my prime concerns below: (1) Fraud: The government will hand this over to a subcontractor who will write and supply the software and hardware to accomplish this. No computer software is "unhackable". Any person with a medium level of knowledge of software and software writers, knows the following: (i) All software has a "back door"; often it is only the coding engineer that knows the details. Unscrupulous coders have sold these backdoor details many times in the past. Everyone has their price. And government will NOT have the top IT coders within their ranks to be able to check all the code. (ii) Software is one of the main areas of white collar crime today. Either by the coders who write the software or by adventurous hackers who see the system as a challenge. (iii) Data can be easily manipulated. (2) The data being kept on the system: This is the MOST sensitive data of all; it links every citizen vis their biological markers. This means that all personal details are immediately available on one platform. That is VERY dangerous. Much larger databanks and software systems around the world, owned by much larger and better organizations than our government and with larger budgets - have been hacked. Much more importantly, the voter's choice can be known. No thank you. (3) The ineptitude of Government: I do not have the space or time to list the almost countless examples of relatively simple things that the government has been unable to accomplish over a 30 year period. Handing them a complicated system like this would be a nightmare. I do not have the confidence that our government can accomplish this in any way that would give voters even the tiniest level of confidence.	Garth	Western Cape		business owner
	2025-09-16 16:52:53	No I do not	Other	Open to corruption.	Magdalena			
	2025-09-16 16:58:28	No I do not	Other	voter fraud and vote rigging as seen very clearly in the USA elections	helen	Western Cape		retired
	2025-09-16 16:59:53	No I do not	Other	Corruption, Security, Digital ID. The whole thing is a scam. Firstly, withdraw from the United Nations / NATO / WHO / WEF etc. and start putting our country first.	Ray	Eastern Cape		retired
	2025-09-16 17:07:30	No I do not	Other		Nico	Western Cape		unemployed individual
	2025-09-16 17:08:05	No I do not	Other	South Africa has not been able to implement a digital Passport system at international borders (Airports). This is doomed before it will even start, and will cause voters to be unable to vote. Corruption in South Africa is a huge problem, and this will allow the persons in charge to modify voting results with no audit trails. How a citizen voted will no longer be a secret, and this allows for massive rights violations. This is one of the worst ideas the South African government has come up with.	Lester	Western Cape		self-employed
	2025-09-16 17:12:34	No I do not	Other	Don't trust the systems can be hacked. If an electronic system is hacked how a person trust the results. I have no confidence that the IEC has the capability of securely administering such a system	Wayne	Western Cape		unemployed individual

	2025-09-17 14:57:19	No I do not	Other	The inclusion of non-citizens or undocumented learners in school zoning and admission policies present several challenges and potential risks for this country. The following is a concern. An increased number of students, especially undocumented learners, places more strain on existing educational resources—such as classrooms, teachers, and learning materials—impacting the quality of education for all students. Providing education to non-citizens or undocumented learners can entail additional costs for infrastructure, staffing, and supplies, which might strain government budgets, especially in resource-limited settings. Differing legal statuses may complicate enrollment procedures, accountability, and the enforcement of educational policies, leading to issues related to compliance and governance. The presence of non-citizen or undocumented learners influences community dynamics, potentially leading to social tensions if not managed with inclusive policies and community engagement. Concerns may arise about the potential displacement or reduced opportunities for domestic learners if resources are limited or policies are not carefully managed.	Rina	Gauteng		retired
	2025-09-17 14:58:47	No I do not	Other	This proposition is idiotic. In first world countries like USA electronic voting has led to massive insecurity and broken trust, with ample lawsuits some still ongoing. So introducing it in South Africa will mean that elections will be much easier to rig, which means defraud. It's particularly alarming that the DA can make such a stupid proposition. Our elections worked really well here compared to the rest of Africa, even compared to Germany and USA where tampering and confusion around elections continue. If it ain't broke, don't try fix it Sincerely Steve G	Steve G	Gauteng		employed individual
	2025-09-17 15:44:46	No I do not	Other	I do not trust this government or any other to be honest when it comes to voting machines. The can and have been rigged world wide. It is also an over reach by government to have any knowledge of who voted for whom. Another reason for government to push for tge implementation of digital tracking of citizens. Next it will be social credit scores!	Margot			
	2025-09-17 16:02:21	No I do not	Other	There is far too much fraud going on with the current system of voting in this country, would be even more with electronic. If the USA clank or get it right, how are we ? This will be wide open to fraud and manipulation. There is nothing wrong with how we currently vote. Just needs more control	Wayne	Western Cape		self-employed
	2025-09-17 16:06:58	No I do not	Other	Voting should be anonymous to ensure freedom and fairness. Furthermore, with this, there is no supervision to enforce voting circumstances free of interference e.g an elder person can be forced to vote a certain way as there is no supervision to ensure he/she vote his free will	Bronwyn	Gauteng		employed individual
	2025-09-17 16:10:44	No I do not	Other	Most of the above. Electronic "anything" including voting isn't exactly transparent to the public if you don't want it to be and can be manipulated with virtually no tracability. Especially by a government with questionable ethics.	Helmut

	2025-09-18 09:46:19	No I do not	Other	Goverment can see who you voted for. Computer fraud. Clever IT people can submit extra votes for plo parties (Fraud) . The risk is too high and NOT Transparent for us too see. Votes will NOT be private & Confidential.	Hermann	Western Cape		retired

	2025-09-18 09:51:46	No I do not	Other	Security and trust (look at what happened in America) Access for all South Africans (not everyone are digitally inclined or have the means) Practical Implementation (everyday governmental tasks that should only take days take months or years) Transparency (how can we trust the government to be transparent... looking at how much corruption we already have) Legal requirements (government should be our servants, instead we are the slaves to the government) Privacy and Data Protection (NO!) Infrastructure needs (fix the potholes in the road, fix the electricity grid, fix the water supply, fix what is truly needed first)	Markus	Western Cape		self-employed
	2025-09-18 10:04:25	No I do not	Other	I am against electronic voting as voting should be private but there will now be a record of who voted for which party. Electronic voting also allows the votes to be fraudulently manipulated in favour of anyone.	Trevor	Eastern Cape		retired
	2025-09-18 10:08:02	No I do not	Other	I believe no one should know how any person voted in any public elections and that all votes should remain secret. Biometrix can be used to identify the voter before he votes to ensure he is eligible to vote, but when the voter votes only that voter should know how he voted.	Eric	Gauteng		self-employed
	2025-09-18 10:08:19	No I do not	Other	My top concerns are ALL the above and more. The corrupt cANCer will manipulate the results to keep themselves in power as they have always done. The cANCer cannot be trusted. This would open up enormous FRAUD. What happened to the so-called GNU?	Brian	Gauteng		
	2025-09-18 10:47:55	No I do not	Other		Kit	Gauteng		retired
	2025-09-18 10:57:30	No I do not	Other	Electronic voting opened the way to high level fraud and corruption in the US. Why bring ir here?? Fraud and corruption are out of control in SA. Paper votes with SA ID is SAs only option. I see electronic voting as just another (very obvious) way for unwanted politicians to manipulate votes and. remain in power. Over riding the people's will is absolutely not permitted!!!	Jen	Gauteng		employed individual
	2025-09-18 11:02:56	No I do not	Other	Making it even easier to corrupt votes	Michele			
	2025-09-18 11:20:44	No I do not	Other	Every system is vulnerable to corruption and electronic voting is no different. In fact, it is far worse because there is no paper trail. I absolutely and 100% object to electronic voting in all forms.	Sarah	Western Cape		employed individual
	2025-09-18 11:32:31	No I do not	Other	If your vote is linked to your fingerprint and therefore your contact details, and an authoritarian government comes into power, they can put pressure on those who vote against them, and commit all kinds of atrocities to show their non-partisan base what could happen if they don't vote for them in the future.	David	Western Cape		self-employed
	2025-09-18 11:32:42	No I do not	Other	USA wants to go back to paper voting because they had problems with electronic voting. results can easily be manupilated . With paper you can recount Also the government will have too much personal information about voters and how they vote and for whom they vote	FRANCOIS	Western Cape		self-employed
	2025-09-18 11:43:42	No I do not	Other	Electronic voting will leave the door wide opend for manupilation!	Christiaan Pieter	Gauteng		retired
	2025-09-18 11:52:21	No I do not	Other		Charmaine	Gauteng		
	2025-09-18 11:54:21	No I do not	Other	I do not believe that South Africa is ready for a digital voting system to be implemented. The levels of corruption in the public space do not inspire confidence in the integrity of the government, and the private sector in many instances is not much better. Further, I do not believe for one moment that the government can guarantee that votes will remain anonymous as they are now, due to the fact that one's finger-print will be associated with one's vote. That is not an acceptable situation. In the current situation where a voter is admitted, ID and voter registration checked via a completely independent paper-based system, association with the way in which one cast one's vote is not easily achieved. I am not confident that this will be so with a digital system. So no, I am definitely not in favour of implementing a digital voting system for South Africa.	Franciska	Gauteng		retired
	2025-09-18 12:17:48	No I do not	Other	Both America and Brazil which uses an electronic voting system has brought the authenticity of the system into question with many claiming the elections were rigged. I have issues with every aspect of electronic voting from counting processes, safety and security, transparency, access for everyone, privacy etc. I will not vote if this system is implemented.	Rhona	Gauteng		retired
	2025-09-18 12:25:33	No I do not	Other	Dishonesty. Current govt is corrupt	Vicky	KwaZulu-Natal		retired
	2025-09-18 12:32:36	No I do not	Other	All th eabove mentioned in the selections. This is open to manipulation and tampering with. The track record in this country is not very Good. As in many countries where they have implimented this. Most importantly that this should be a sectret ballard because of all the intimadation that takes place in our country. No government shoulod have a record of who voted in what way.	Joshua	Gauteng		retired
	2025-09-18 13:20:37	No I do not	Other	1.the possibility of govt (and other parties) knowing who individuals vote for leading to possible victimisation and/or retribution (think what is happening in USA right now) In other words, putting power into (potentially) corrupt or authoritarian hands 2. EMPLOYMENT!!! Why would you replace opportunities for employment in South Africa with computers?????	Chirene	Western Cape		
	2025-09-18 13:32:20	No I do not	Other	Voter rigging is my first concern. So many hackers and scammers that we cannot trust anything online anymore. Then not all people have access to digital. Transparency of results. Add to the mix, power outages that we have no idea when they may rear their ugly head.	Eleanor

	2025-09-18 16:21:37	No I do not	Other	ELECTRONIC VOTING IS OUT IT IS SO EASY TO CHANGE VOTES BY A COMPETENT IT PERSON AND RIG FALSE NUMBERSVERY QUICKLY IT HSPPENED IN VENEZUELA AND THE USA ALREADY SO NO TO ELECTRONIC VOTING	Louis	Mpumalanga		retired
	2025-09-18 17:28:27	No I do not	Other	It is well known that that the American ‘mail in’ voting system which utilizes computer counting has been hacked and manipulated in all three recent Presidential Elections…2016 and on..the most blatant being in 2020. The potential for fraud in this system is enormous which is why President Trump is advocating a return to the ‘paper’ ballot system. We in South Africa should reject the idea of computer counting unequivocally….Its a bad idea…?	Alan	Western Cape		retired
	2025-09-18 17:56:03	No I do not	Other	All the above are reasons to reassess this entire proposal. The size of a foolproof system is prohibitive. The present system is adequate. Reduction of government is needed.	Penny	Western Cape		retired
	2025-09-18 18:39:55	No I do not	Other	Pros: - Increases voter convenience and accessibility, especially for citizens abroad or with disabilities. - Reduces logistical costs associated with paper ballots and manual counting. - Enables faster tabulation and reporting of election results. - Can boost voter turnout by offering flexible voting options. Cons: - Susceptible to cybersecurity threats such as hacking, malware, and denial-of-service attacks. - Raises concerns over voter privacy and the secrecy of the ballot. - Technical failures or system outages can disrupt elections. - Requires significant investment in infrastructure, training, and continuous auditing. Countries Using Electronic Voting: - Estonia: Full nationwide internet voting since 2005. - India: Electronic Voting Machines (EVMs) used extensively in national and state elections. - Brazil: One of the largest users of EVMs, with electronic voting since 2000. - United States: Use varies by state, with a mix of direct-recording machines and paper-based systems. - Belgium and Switzerland: Use in certain jurisdictions with paper trails. Overall, electronic voting offers efficiency and convenience but requires robust safeguards, auditing mechanisms, and public trust to ensure legitimacy.	Michelle	Gauteng		employed individual
	2025-09-18 18:51:41	No I do not	Other	I no longer have fingerprints. They are worn off. Prints can no longer be detected by Home Affairs or my bank. I am in my seventies. 	2025-09-19 13:09:12	No I do not	Other	1. South Africa as a country has no broken electoral system, or system works well has been there for since 1994 has never been rigged can't be rigged because of the following security reasons: a) A voter must personally come into a poling station get their ID blocked, finger inked, be given a stamped ballot, then proceed to vote and after voting counting is done manually Infront of independent observers and party agents who would in turn sign the final results as free fair and credible. 2. We as citizens know that even our bank accounts can easily be hacked what immunes the IEC from being hacked. 3. In the last election the main counting wall went off for a few minutes when it came back the number had changed that alone says the IEC is not ready, it is in fact 30 to 50 years away from such a system. 4. Network coverage in this country is bad more especially in the rural areas, basic example would be their ID entering and blocking machines frequently goes out because of network problems. 5. Lastly we are a country of an average voting age of between 45-55 years which would need serious voter education for this kind of elections to succeed.	David	North West		unemployed individual

	2025-09-21 08:43:40	No I do not	Other	Hacking of any kind can still happen if this is implemented. Once the system is hacked the voting and more over other digital fraud can still happen with digital ID's, that the individual does not even know is being committed on their names. Which in turn can later turn badly on them where no one can buy food and so on that will be linked to one's digital ID's. So it is a big fat NO from me on both counts.	Nadine	Gauteng		self-employed
	2025-09-21 09:49:49	No I do not	Other	This is to pave a way so that white people will manipulate the system on their favour of DA. ALREADY YOU SHOWED IT IN THIS INVITATION, MINISTER OF TRADE AND INDUSTRY BUT COMING TO WHITE PARTY, DA MINISTER OF HOME AFFAIRS. WHY DONT YOU ONLY SAY MINISTER OF HOME AFFAIRS LIKE WHEN YOU SAID MINISTER OF TRADE AND INDUSTRY. THESE ALREADY SHOWED US THAT IEC ITS ALREADY BUYERS, THEN HOW CAN WE TRUST AN ELECTRICI VOTING SYSTEM BUT IS BEING CREATED BY A COUNTRY THAT FAVOUR WHITE PEOPLE OVER BLACKS. THIS SYSTEM IS BEING CREATED TO GIVE A DA TO LEAD SOUTH AFRICA, IT DOESN'T FAVOUR US AS BLACKS	Takalani	Limpopo		unemployed individual
	2025-09-21 11:57:35	No I do not	Other	I am not allowed a card id although i have a passport and been here for 76 years so i will not be able to use my card as o don't have on i only have a book sort that out first	neill	KwaZulu -Natal		retired
	2025-09-21 12:01:49	No I do not	Other	A VERY BIG NO TO AN ELECTRONIC VOTING SYSTEM I do not support an electronic voting system at all for all of the reasons provided in the "Top Concern" list above. The ANC and like-minded "organisations" cannot be trusted at all, as proven by their track record since 1994. On top of this any computerised system can be hacked as shown from world-wide incidents. Trying to implement such a system is fraught with issues, inter alia Internet access in remote areas and power stability in these areas too. The cost to do all of this cannot be afforded currently, as there are larger more pressing issues in this mal-governed country of ours, viz. a massive nepotism based parliament that needs to be down sized drastically, to begin at the pinnacle of money wastage in this country. The ANC will also do their damndest to identify how the people have voted, and target those who have been "traitors" to their cause. Enough said	Irate	Gauteng		employed individual
	2025-09-21 14:17:18	No I do not	Other	People who stand for public office are regularly harassed and murders are commonplace. Zimbabwe has for years been a spectacle of voter intimidation, and the current government parties have a long sordid history of silencing dissent. I wouldnt vote if my fingerprint is linked to my vote and I wouldnt want anyone else to place their life at risk for no benefit. Electronic non in person voting have a way to be loaded in favour of the highest bidder, as what is widely claimed by Republicans regarding the elections via mail in ballots after which Biden came to power.	Daniel	Western Cape		employed individual
	2025-09-21 19:02:53	No I do not	Other	Voting will require digital id and too much control by AI which is easily manipulated for a desired result totally negating the will of the citizens already big businesses corporations and foreign powers have too much influence on our internal affairs with total disregard for the citizens	Terrence	Northern Cape		retired
	2025-09-22 05:26:34	No I do not	Other	Some people that work with coarse materials will not have finger prints. With technology it still is possible to have fraudulent activity.	Christina	Western Cape		
	2025-09-22 06:25:48	No I do not	Other	Not being able to vote because of no finger print.	Erna			retired
	2025-09-22 09:09:12	No I do not	Other	My concern - we cannot trust the government. Our voting system should be safe from government influence and they will have the monopoly to further extend their criminal activities via an electronic voting system. It will give the corrupt officials more power to manipulate the votes and those opposing the corrupt way they rule SA and abuse their positions.	Riaan	Gauteng		self-employed
	2025-09-22 09:58:41	No I do not	Other	Can be completely manipulated through AI (Look at the US elections when Biden was elected.)	Michelle	KwaZulu -Natal		employed individual
	2025-09-22 10:28:32	No I do not	Other	CORRUPTION. Tremendous corruption possibilities with electronic voting. NO, NO, NO!!!	Ockert			
	2025-09-22 10:35:38	No I do not	Other	No security is guaranteed as electronic can be easily manipulated and with the South African behaviour of corruption this can be easier way of corrupting the system	Dihkuna	Gauteng		unemployed individual
	2025-09-22 10:37:52	No I do not	Other	As has been demonstrated in the USA, digital voting encourages fraud, and without a ballot paper, it is not possible to challenge results or investigate such fraud. Election results are not taking too long. This appears to be the desperate actions of a failing party clinging to power.	Rudolph	Outside SA	Australia	business owner
	2025-09-22 11:35:51	No I do not	Other	I always choose other as the entire list of concern. I do not trust this electronic voting at all. How about the many who will not have access to it either. No, no, no, not at all and wide open to this already corrupt government. It failed in the US so how on earth could You possibly think it will be ANY better here at all. NO, NO, NO, NO	Antoinette	Western Cape		
	2025-09-22 12:03:01	No I do not	Other	If it did not work in other first world countries, it will definitely not work in this third world country.	Gerda			
	2025-09-22 13:05:32	No I do not	Other	It will never work it did not work in other countries it will never work in SA	Maryann	Gauteng		unemployed individual
	2025-09-22 13:49:29	No I do not	Other	Implementing electronic voting (e-voting) in a country with a "unreliable" government can pose several significant risks and challenges: In a country like SA where 99.9% of the government is "unreliable" manipulation of the electronic voting system to favor certain candidates or parties, and undermining electoral integrity is 100% a given. Citizens in SA may distrust the e-voting system, fearing that votes could be altered or rigged, leading to decreased voter participation and legitimacy issues. The system could become a target for hacking, malware, or cyber-attacks orchestrated or tolerated by corrupt officials, compromising election results. Without proper oversight (Proven during the previous elections), the implementation process may lack transparency, making it difficult to verify results or detect irregularities. The government might use the system to suppress dissent or manipulate outcomes to maintain power, undermining democratic principles (Learned From Previous Elections). In regions with weak technological infrastructure, implementation may be unreliable, increasing the risk of errors or disenfranchisement. Introducing e-voting without proper safeguards could violate electoral laws or international standards, especially if the process is manipulated. In my humble opinion. Given these risks and with the current government, there isn’t a slight possibility that e-voting, if implemented, could ensure strong safeguards, transparent processes, and independent oversight, which will ensure uncompromising and accurate election results.	Rina	Gauteng		retired
	2025-09-22 16:24:25	No I do not	Other	Definitely a NO NO for South Africa.	Peter	Eastern Cape		
	2025-09-22 17:52:20	No I do not	Other	The possibility to rig and corrupt the system in order to facilitate the 'correct' result for those who would do so for nefarious purposes.	Barry	Western Cape		retired

	2025-09-22 18:39:18	No I do not	Other	Implementing electronic voting (e-voting) in a country with an "unreliable" government can pose several significant risks and challenges: In a country like SA, where 99.9% of the government is "unreliable," manipulation of the electronic voting system to favor certain candidates or parties, and undermining electoral integrity, is 100% a given. 	2025-09-22 20:45:43	No I do not	Other	The current voting system is understandably cumbersome and can be defrauded and manipulated. The new proposed electronic system will be easier to manipulate. Thousands of voters finger prints are non-existent, due to various reasons. Old age, construction workers and more . How will their vote be registered and calculated? The voter is identified via an ID book/ID number, the individual is at the voting station in person, except in specific circumstances and can therefore not be impersonated. How up to date are the Home Affairs records? How many "ghost" individuals are there on the system The identity of the voters can easily be traced and their identity is therefore not secure. Although the number of votes will be automatically counted and updated systematically, the logistics and authenticating the the finger print will be a logistical nightmare. In a perfect world, it could possibly work	Billy	Gauteng		retired
	2025-09-23 10:14:57	No I do not	Other	My concern relates to the points listed. Our current voting system is full of fraud and corruption, so you can imagine how much fraud, corruption and manipulation there will be with an Electronic Voting system especially under the current corrupt government. With the current AI electronic technology fraud and corruption taking place in the country, I do not support the proposed Electronic Voting System/Policy in its entirety. How many more opportunities for fraud and corruption do we need to offer the government., This is simply another move to manipulate the voting and make false victories. Do they need another opportunity to practice corruption	Peter	KwaZulu-Natal		retired

	2025-09-16 11:41:32	No I do not	Privacy and Data Protection	I am 79 and the Banks and Municipal finger print machined simply don't work. They take a few and then simply override the system.	Theo			retired
	2025-09-16 11:41:57	No I do not	Privacy and Data Protection	No to a digital id that will track everything a person does. No to the government knowing who voted for which party. We need less government control and more citizen freedom and agency.	Eugene			
	2025-09-16 11:45:58	No I do not	Privacy and Data Protection	You're voting is personal/private.	James			retired
	2025-09-16 11:47:03	No I do not	Privacy and Data Protection	Huge fraud risk, removal of voting privately, massive implementation costs & a shortcut to the Digital ID leading to the social credit system as we are seeing in other countries.	Joff	Western Cape		employed individual
	2025-09-16 11:50:40	No I do not	Privacy and Data Protection		Elizabeth	Gauteng		employed individual
	2025-09-16 11:51:36	No I do not	Privacy and Data Protection	I do not agree with digital ID in it's totality, as this is another step (along with banks going digital, cash being used less) to move SA citizens toward a Credit Score system as is used in China. Look at the demerit system recently implemented for fines. At some point 15 minute cities and all this digital control, with remove ALL movement and sovereignty from humans and enter the Total Control of humanity for the benefit of the 1%. We should not allow this!	Nicola	Western Cape		business owner
	2025-09-16 11:54:01	No I do not	Privacy and Data Protection		Beulah	Gauteng		
	2025-09-16 12:02:39	No I do not	Privacy and Data Protection	Hackers risk, Data theft, Manipulation, Privacy breach, costs and identification of who voted for whom which will be used to threat voters.	Jakkie	Eastern Cape		retired
	2025-09-16 12:02:57	No I do not	Privacy and Data Protection	I am against digital control systems for populations. It's all very well in theory, but it's too easy to exclude people if they don't comply with the political will or narrative of the moment. For example, if I don't get the next round of mRNA injections (possibly "mandated" by the corrupt WHO, to which our politicians all seem to sell us out), will I be allowed to vote? There is also the practicality to consider. As I'm ageing, my fingerprints are becoming less pronounced. They already have trouble taking my prints for passports, and I can imagine being turned away because the technology or the electoral officer can't read my prints.	Alison	Western Cape		business owner
	2025-09-16 12:03:56	No I do not	Privacy and Data Protection	Privacy of vote needs to be absolute voted for to be kept secret Trust that the votes might be rigged so no data online voting. Voting manipulation to be checked at all cost. Security of vote important.	Colleen	Gauteng		employed individual
	2025-09-16 12:06:45	No I do not	Privacy and Data Protection	It might sound good however, there are numerous concerns to consider. Firstly fraud and corruption is rife in our government and country. Citizens definitely don't trust the government or the various bodies or stakeholders. The possibility of all South Africans not having access is high. It has been proven that practical implementation of anything is an epic fail where government and thier stakeholders are concerned.	Jan	Western Cape		retired

	2025-09-16 16:46:38	No I do not	Privacy and Data Protection	While electronic voting may promise efficiency, introducing it without stringent safeguards threatens the very foundation of our democracy. Security, transparency, and trust must come first, yet digital systems risk enabling vote manipulation, voter suppression, and loss of privacy, as they can never be observed or audited as openly as paper ballots. Many South Africans also face barriers of access, infrastructure, and digital literacy, making fair participation uncertain. Until clear legal protections, independent auditing mechanisms, and robust infrastructure are in place to guarantee both privacy and transparency, the adoption of electronic voting would undermine rather than strengthen public confidence in our elections.	Freda			
	2025-09-16 16:52:37	No I do not	Privacy and Data Protection	I refuse to endorse the political system by voting at all, and I definitely won't be complying with any digital ID rollout.	George	Western Cape		self-employed

	2025-09-16 17:29:42	No I do not	Privacy and Data Protection	A digital id is a tool that can far too easily be abused… far from democratic.	George	Western Cape		business owner
	2025-09-16 17:30:43	No I do not	Privacy and Data Protection	Knowing the way the ANC government runs things, I don't trust that they will have the capacity to run this and I'm also not convinced that they won't use the individual voting choice against the voter.	Shaun	KwaZulu-Natal		employed individual
	2025-09-16 17:47:44	No I do not	Privacy and Data Protection	Definitely NO. Proven to be unsave. Any computer system can be hacked. Digital personal info can be used for nefarious intent and my personal information is for me, not for any one else to know or use, no matter for whatever reason.	Marlene	Western Cape		self-employed
	2025-09-16 17:58:11	No I do not	Privacy and Data Protection	Once counting becomes digital you cant dispute or recount physical votes, The counting computer could be hacked far more easier than to hack so many counters, In my opinion;counting has always worked and this is to avoid true accurate votes in favour of parties who want to win,MORE FREEDOM IS NEEDED	Muhammad			
	2025-09-16 18:01:12	No I do not	Privacy and Data Protection	If this is allowed, there would be a public record of who voted for which party and candidate. (I will not be convinced that the voting would be "anonymous", because the system would need to verify my fingerprint with my identification, so the system would record that I voted, as well as linking my identification to the actual vote I cast.)	Marc			
	2025-09-16 18:03:49	No I do not	Privacy and Data Protection	Electronic voting sounds like a leap in the right direction, however, it comes with much negativity! Personally, my greatest concern would be that of Privacy and Data Protection. The ANC government would be able to connect the dots to see who I am and who I voted for. This means that they can manipulate votes electronically. The current system, which admittedly is a laborious one, requiring much manual input, at least only keeps a record of the constituent vote actually having voted - it does not tie a name of e-mail address to my vote. For this reason, I am against electronic voting!	Philip	Western Cape		retired
	2025-09-16 18:03:51	No I do not	Privacy and Data Protection	Electronic voting sounds like a leap in the right direction, however, it comes with much negativity! 	2025-09-16 18:48:52	No I do not	Privacy and Data Protection	A. Everything about a person will be captured and recorded. This means IEC can access my vote result for nefarious purposes. B The cost of implementation will be far greater than the current system. The Govt has a poor record on setting up computer systems and maintaining them. There is not enough expertise in Govt circles to ensure it runs smoothly. The system will be vulnerable to power faults and equipment faults. C. At the moment numerous people are employed on a temporary basis for a a short period for collating and processing a vote by election manually. This is income for many people who participate. These income opportunities are relied on amongst the young voters particularly.	Emil	Western Cape		business owner
	2025-09-16 18:52:59	No I do not	Privacy and Data Protection	My main concern is that my identity will be captured and it will no longer be a secret ballot as my Identity number will be shown and if the information gets into the wrong hands I would be open to possible intimidation and possible physical attacks, in certain communities that is almost certain. The possibility of result rigging by IEC officials who have interest in a particular political party is a great possibility, I have been a party agent at many ,many elections and to have party agents watching and monitoring every process during the voting and counting is still best process for South Africa.	Nigel	Western Cape		retired
	2025-09-16 18:54:47	No I do not	Privacy and Data Protection	I don't trust the Government with my information. I think that the system will be abused and corruption will take place.	Leon	Western Cape		retired

	2025-09-17 07:36:40	No I do not	Privacy and Data Protection	Voting has allways been anonymous. THis ensures that no politcal party can force a person to vote for them, as it happens in privacy in a booth. If you are forced to vote digitally with your fingerprint, the goverment can simply rig / tweek the results , and democracy will disapear in an instant. Certain well established parties have demonstrated an apetite for corruption, and a gross lack of care for the peole. They will certainly try to tamper with the digital outcomes in an attempt to claw back power. Secondly, in an ideal Eutopia where the government has the best interest of the people, it may still be possible for an individual to leak the voter data , and voters choices will be exposed. This leaves individual voter and groups of voter open to persecution, and ends democracy. So its a resounding NO from me. Voting needs to be done anonymously. Rather vocus on getting the voter registration, before citizens go in to the booth to vote, better protected from fraud.	Johanna	Western Cape		employed individual
	2025-09-17 07:40:52	No I do not	Privacy and Data Protection	The government will know exactly how i voted which is NOT supposed to ever happen. It is the start of electronic ID which gives those in power full access to my every move even to the point of being able to control my ability to buy and sell or for that matter do anything without their knowledge. TOTAL CONTROL is not acceptable in the hands of evil or powerful organisations and governments. It has no place in a democracy and especially in South Africa where corruption, fraud, cheating etc have become the norm and go unpunished amongst those in power.	Alastair	Western Cape		retired

	2025-09-17 08:08:52	No I do not	Privacy and Data Protection	Too easy to manipulate votes if electronic data is captured, especially with a government filled with fraud and corruption - this will just add another carrot that they want to grab to make things go their way and not how the people of this nation are necessarily voting. Also, an individual's right to privacy on how they vote could seriously be compromised, as the government will have their hands on the data with electronic voting. We already do not have money - this is just another expense that we cannot afford, rather than improve the existing voting system with perhaps faster access electronically when entering the voting station, so things speed up and queues are shorter.	Karen

	2025-09-17 08:35:34	No I do not	Privacy and Data Protection	The function of the IEC in our elections is to act as independent watchdogs who can supervise and conduct elections to ensure or at least help minimize attempts to rig votes. Because our citizen have relative trust over this process, this gives our elections legitimacy, which particularly in the African context, is of vital importance. And the problem of legitimacy is that it is not a question of what is mathematically provable, it is a question of public confidence. I believe it is possible to create a system using some combination of assymetric cryptography and/or blockchain technology to conduct an electronic election which is simultaneously private with respect to voter choice as well as independently verifiable by the IEC (and potentially anyone). The problem is that if the voting system becomes too complex for a non-expert to understand, then even a good system will in effect become illegitimate. Suppose a party leader proclaims that hackers rigged the last election. Even though this can be proven false by experts, because an average citizen does not have the technical skillset to trust the explanation more than the party leader's, the party leader can continue to proclaim illegitimacy with relative credibility. Please understand that this problem persists with a simpler implementation, say for example votes are sent to a central server and counted. This again relies on experts to verify the integrity of systems at voting stations, of the central server, and of communication in-between. Similar problems will arise. There may come a day in the future where the technical literacy of our population and relative stability of our democracy is such that an electronic voting system can work. But it is not today. 	2025-09-17 11:12:28	No I do not	Privacy and Data Protection	The USA has had electronic vote counting for years and we have all seen how this process has been deliberately hijacked by the sitting government for vote rigging. Mail in ballots have been used to distort and capture elections in the US, and this SA government wants to convince us that nothing can go wrong. Rubbish. Why does the government want electronic voting? At present people can call to scrutinise the electoral ballots and voters roll in the event of discrepancy. After electronic voting? We're at the mercy of the work of the sitting government : "look free and fair elections", while the computer programmers produce any old rubbish. The government seeks more participation in the democratic process. Really? And what do politicians do for you, the voter after they are in power? Whatever they feel like doing, and you can just shut up for the next 5 years until we need you again. It's a joke - in the worst of bad taste. If nobody voted for anyone in the next election, the government would impose martial law to keep the masses in their rightful place - voting fodder and being a consumer to keep the economy going. No. And no again. I will not agree to electronic means to remove my rights as a citizen.	mike	Western Cape		retired

	2025-09-17 16:13:21	No I do not	Privacy and Data Protection	I believe that the concept of having an electronic voting system has merit specifically in ensuring that a voter has access to the voting facility irrespective of where he is in the country on the day that voting is supposed to take place and secondly in ensuring that there is no vote duplication and manipulation of numbers of voters. Ensuring that a voter is legally entitled to vote is critical but ensuring that privacy of the vote placed is equally important. Ensuring that data manipulation to ensure a party of preference gains the majority votes is of course of the highest concern, as is the ability to remove or add votes to the voting pool. A dual process could potentially be used to start off with whereby you can do a manual, documented vote where the vote is then also recorded to the voting system at the same time. This way you have paper verification of the underlying computer votes - this can then be used in cases of dispute occurrences and for control	Willem			retired
	2025-09-17 16:27:38	No I do not	Privacy and Data Protection	People will be victimised if voter data leaks or hackers get access to it. Parties can also target citizens for voting for other parties. SA is not ready for this data cannot be secured properly.	Shepherd	Gauteng		employed individual
	2025-09-17 16:34:13	No I do not	Privacy and Data Protection	The system of governance in our country is in shambles. I do not trust the IEC to protect my personal information. I have already had several bad experiences with government departments involving my personal information	Hayley-Ann			
	2025-09-17 16:34:26	No I do not	Privacy and Data Protection	The vote wouldn't be secret anymore and that's an absolute No No for me. Government can then manipulate voting. That must never happen ! 	2025-09-17 16:42:54	No I do not	Privacy and Data Protection	Most of the concerns flagged are relevant from data protection, the issuing of the new ID'S, the cost of implementation and other countries failures.	Anne			
	2025-09-17 16:44:35	No I do not	Privacy and Data Protection	The New World Order is digitizing our freedoms and privacy away which leads to manipulation by algorithyms, leading to an all rights being denied acvirdibgvto 'their" dictatorship through digital censorship and ultimate control. Shame on the DA, the ANC, the EFF and others who signed our country up to the progamme without our consent. Evil to the core.	Tina	KwaZulu -Natal		retired
	2025-09-17 16:51:42	No I do not	Privacy and Data Protection	I do not support electronic voting. Firstly, the equipment and software for this is going to cost a fortune. Then the supplier will undoubtedly be a BBEE connected person. So the hardware and software will be ten times the price and will only work 1 and 2 on a full moon. Refer to the tablets that were used for the voters roll the last election. The tablet was either not working or the operator of the tablet was incompetent. Now you want to make it more complicated. Definitely not. Secondly, the trust in electronic voting is all time low world wide. American states are bringing back paper ballots in many states, due to the risk of fraud and lack of public trust in electronic voting. I do not trust electronic voting irrespective of the election results. There will always be the specter of fraud or manipulation with electronic voting. Thirdly, have you seen the queues at ATM's certain times of the month in South Africa and have you been in those queues? A large majority are illiterate and have a hard time drawing money from a ATM! Now you want them to be able to vote on a electronic voting device! This is a recipe for disaster. Don't know whose brain fart idea this is, but it must be immediately scraped. 	2025-09-18 09:53:28	No I do not	Privacy and Data Protection	Although "digital computerisation" all sounds very smart, but the hacking or adjustment of an electronic voting system can still be "rigged" . So yes the digital ID can be scanned at a voting station but the actual marking/selection on the ballot paper at a voting station must be untraceable to the persons ID number. The voting can be electronic (press a button next to a name/political party) in the voting booth but no way linked to an ID number or a finger-print	SANTA PE	Eastern Cape		Non-profit
	2025-09-18 09:53:28	No I do not	Privacy and Data Protection	Although "digital computerisation" all sounds very smart, but the hacking or adjustment of an electronic voting system can still be "rigged" . So yes the digital ID can be scanned at a voting station but the actual marking/selection on the ballot paper at a voting station must be untraceable to the persons ID number. The voting can be electronic (press a button next to a name/political party) in the voting booth but no way linked to an ID number or a finger-print	SANTA PE	Eastern Cape		Non-profit
	2025-09-18 09:53:42	No I do not	Privacy and Data Protection		Anna			
	2025-09-18 09:54:23	No I do not	Privacy and Data Protection	The concept is great, possibly for a 1st world country, however the manipulation of data and lack of personal and voting privacy is not acceptable. It is too soon for us to go that route, there are thousands of people who would not understand it as well. Where in the world is it successful? Let's see where is works well, in a similar country, first. Simple is still the best way for our country at this stage.	Jenny	Western Cape		retired
	2025-09-18 09:58:30	No I do not	Privacy and Data Protection	The vote will no longer be secret and state manipulation of voters could ensue	Willie	Western Cape		retired

	2025-09-19 11:43:09	No I do not	Privacy and Data Protection	Electronic voting invites problems for which there are no fixed solutions. Security and trust will always be a challenge. With physical voting, various persons can monitor various part of the process. This completely dissappear with electronic voting. Tracking of voters will also be possible and can thus be misused by anyone able to access the data.	Johan	Western Cape		
	2025-09-19 11:45:17	No I do not	Privacy and Data Protection	I am concerned about the implementation of an electronic voting system for South Africa for a number of reasons. Firstly, the fact that the vote is no longer anonymous completely destroys all semblence of privacy and the right to vote privately. Secondly, access will not be possible for all South African citizens, there are still far too many places where people don't have access to computers, the Internet or WiFi and this will form a huge barrier to entry. Thirdly, I do not support digital ids for the same reason listed above. It will cause a split in those who have access and those who don't and this country does not need any more inequalities than we are already grappling with. Next, I do not have confidence that there won't be tampering, such a system is easy to manipulate and even hack in extreme cases the level of trust is very low. Voters and staff training is going to be a ridiculously complicated process, even those people who do have access to the Internet and WiFi may struggle with an understanding of the necessary procedures and how will they get technical support. There are many who currently do not understand the simple system of choosing one party/candidate in an election as is evident from the number of spoilt votes. One of the benefits proported is that you won't need staff, this is not true. You would need a tech savy staff complement which would further complicated the process. Do we have the infrastructure to support such an indevor, I would hazard to say, no. This country struggles with energy and I have been in a voting tent at night when the power has gone out, it was chaotic enough when there were people to advise the voters and the staff on the correct procedures. What if there is loadshedding during the election, which there is a high chance of due to the amount of electricity that such an endeavour would need to be successfully undertaken. I vote a firm NO to electronic voting and digital ids as well	Kelly	Western Cape		retired

	2025-09-19 15:43:14	No I do not	Privacy and Data Protection	Cannot trust SA government and digital capabilities: Historic news have it that over 10,000 digital vulnerabilities were identified in DHA systems, massive fraud uncovered in the SRD grant system (Weak API security, exposing personal records), the entire gov.za domain was riddled with vulnerabilities, three government websites were cosmetically altered, firewall gaps exist or existed, outdated infrastructure, lack of oversight, the IEC's voter app had inadequately secured API keys, 3rd party trackers, and potential for unauthorized access, 60% of local government entities hadn't conducted cybersecurity risk assessments as of 2023, SA saw a 56% increase in cyberattacks in one year with over 80,000 incidents reported in just six months, etc. Too easy to hack and manipulate current and future systems. In addition numerous 'Commissions of enquiry' has resulted in no guilty fraudsters being sent to jail. People can and will be bought through corruption to manipulate digital voting outcomes to place buddies in government. Digital voting does not belong in SA given this government's track record. This is potentially the most dangerous idea ever. ,	Dietrich			retired

	2025-09-19 21:58:53	No I do not	Privacy and Data Protection	Before I would consider voting electronically, I need to be convinced that there is a system in place whereby my vote cannot be linked to my identity. I would not be willing to vote if there is a chance that the state or any other actor can see how I voted. Currently I am not convinced; the discussion document does not address this glaring problem. I have no problem with logging my fingerprint electronically to enter a voting station, but if my fingerprint access data is linked to my voting data, it's a non-starter - I will not accept this way of voting. It opens the doors to voter persecution. The crux is that voting data needs to remain unlinked to identity, whether it is electronic or not. I imagine the IEC can come up with a system to make this happen, but the system needs to be clearly formulated and clearly stated to South African voters. It will involve more than just promising adequate cybersecurity. A suggestion: Digitize voting, but do not scrap the idea of physical voting stations. Use fingerprints for voting station access, but have voting be done on separate voting machines that are on another system and that do not record identifying information. For an extra layer of security, allow voters to choose from several voting machines at random (so that the order in which voters are recorded entering the voting station is not the same as the order in which they use the voting booth). Since voting stations will still have to be manned, albeit by a smaller number of people, the IEC can continue to provide some local employment. For the elderly, disabled and others who struggle to physically access voting stations: allow them to put in a phone / SMS / online request for an in-person visit by IEC officials with a hand-held voting machine. These citizens will then be able to vote securely from where they are, and again the IEC is a source of employment. The IEC and the state must earn trust with carefully reasoned plans and implementation, not buzzwords.	Ben	KwaZulu-Natal

	2025-09-20 13:50:40	No I do not	Privacy and Data Protection	In previous US elections it was proven that electronic votes were manipulated. That along with the trojan horse of digital id's being secure is absolute rubbish. It is merely to gain control over people in the digital space to force compliance. I do not comply. Voting will be done on paper ballots, counted same day, and supervised by all parties. Which leads me to, why do we need a government? Voting is merely an illusion of choice, as the outcome is pre-determined anyway. I refer voice clip of Helen Zille describing how the votes outcomes should look for ANC and DA. They are all corrupt, all funded by globalists, who do not have our interest at heart but rather how to eradicate us with depopulation agenda. How about we rather just vote to eradicate government in its current form, and we the people take back our country, let's talk about that rather.	Paul			employed individual

	2025-09-28 08:45:42	No I do not	Privacy and Data Protection	With all the fraud and hacking of electronic systems, this is definitely not a safe way to go.	Ruth	Western Cape		retired
	2025-09-28 13:58:48	No I do not	Privacy and Data Protection	The moment there is any way to track how an individual voted in an election that election cannot be free and fair because freedom is broken down from two sides. First: anyone with access to the data can (and at some point will) exert pressure on individual voters. That's the one side. Data-breaches happen every day and against every data holder. Those claiming to be the most secure fall victim often enough that that claim can never be trusted. The other side is that voters, knowing this is a possibility, will pre-empt and vote to protect themselves from repercussions, not for who they want to see in power. When this happens it will always be to the benefit of parties willing to use violence and intimidation and that will never be the parties that should be given power. For electronic systems to work timing, location and identity all have to be logged. These will unavoidably be correlatable, no matter what protections are put in place. The down-side of this will always be greater than the potential upside. What we've seen repeatedly in this country is that the fewer people are involved in anything official the easier it becomes to exert pressure on those people/entities. This has to be considered in conjunction with whatever protections are put in place. The protections themselves are never enough when it's few enough people/ entities in the picture, it has to be backed up by the number of people involved. In this case the number of election workers is itself a safeguard for democracy. This should be about the integrity of our democracy much more than it's convenience of counting votes, or dealing with isolated, small scale counting-concerns. Please don't mess with our democracy. 	2025-09-28 19:33:02	No I do not	Privacy and Data Protection	Roll out of all voters is critical and that they are anonymity is secured as well as the results be not hacked as we are seeing with all other information on the net.	Kabelo	Western Cape		business owner

	2025-09-28 21:20:20	No I do not	Privacy and Data Protection	The purpose of free and fair elections is to ensure that people can cast their votes anonymously. This law in its current form takes that privacy away and takes record of people's voting patterns. The moment those records are compromised and the data is leaked/stolen, it can and will be used by bad actors to go after people who vote in specific ways.	Esther	Gauteng		self-employed
	2025-09-29 09:33:26	No I do not	Privacy and Data Protection	A digital ID system should be opposed with everything we have. If digital IDs are linked to voting then we have absolutely lost our freedom to the government and everything about us becomes a permanent record to be used in social profiling and potentially personal cancellation... who we vote for; where we bank; what we buy; our political and or social views/opinions; what medication we are on or have used; medical reports/history including inoculations and vaccines; sexual preferences; associations and links ..... the lot. This information WILL be hacked and then we are completely vulnerable to malicious actors if that malicious actor is not in fact our own government ,but some external actor. Slowly slowly our freedoms are eroded and all that we become is a sequence of ones and zeros that can be manipulated; grouped; categorised; predicted; isolated; blocked; de-banked; defrauded and herded like cattle.	Graham	Gauteng		retired
	2025-09-29 11:03:21	No I do not	Privacy and Data Protection	This is a trap to get everybody chipped with digital id..to be able to track and trace our every move and then introduce CBDC programmable money to control us in everything they do	Logan	KwaZulu-Natal

	2025-09-17 08:32:46	No I do not	Access for All South Africans	I do not support this policy in any way. Firstly - there is there a security concern with moving to digital ID and digital voting, as results can be manipulated, hacked and accessed via other means. Also - the information will not be private as the government can access the voting ballot. Secondly - this is not realistically accessible to all South Africans - particularly those in rural areas. Thirdly - the current process allows for jobs of officials to support the process right now - particularly in rural areas that will be taken away. Just because the rest of the world is pushing for Digital ID - does not mean that South Africa needs to follow suit. It is time to consider what is really the best for the people and this country and for us to go our own way.	Shirley	Western Cape		self-employed

	2025-09-18 09:56:24	No I do not	Access for All South Africans	We should be careful to adopt the methodologies of other countries, without carefully considering their intentions and outcomes, as well as our own local situation. I think this will make it more difficult for the everyday South African to vote. Not everyone has a smartphone, internet connection or data. In fact, many people live where this is hard to come by. Furthermore, there will likely be capacity issues with the servers. If companies struggle with this in peak periods, year after year, it will no doubt be a major issue for an election where the volumes are higher and the time period is shorter. Couple this with the internet access issue, and that becomes more difficult for those with access issues. Going digital may completely change voter demographics, which is a double-edged sword. We would like to get more people voting, but not only those that "it's easy for". The vote is a privilege as much as it's a right and some effort is good. Lastly, digital fraud is rampant as ever, and far more confusing and complex. Going digital may well exacerbate the concerns around fraud and make things more difficult to verify.	S	Western Cape

	2025-09-18 10:49:35	No I do not	Access for All South Africans	As for the elderly, their finger prints are no longer able to be read so how will they be able to vote? Secondly how will all the rural areas be covered electronically? How will the system exclude foreigners without legal ID's?	Richard	Gauteng		retired
	2025-09-18 10:51:01	No I do not	Access for All South Africans	A considered approach to technology after weighing up all of the potential ramifications, must be applied rather than simply being pushed for convenience. Electronic voting could go a long way to reduce vote fraud, but there are other ways to achieve this that do NOT also involve: 1. marginalizing / disenfranchising people without access to such technology; 2. creating centralized individual voting records The potential abuse of personal confidential voting information is very troubling. Not sure if this breaches any of the spirit of our constitution as well.	Loshendran	Gauteng		self-employed

	2025-09-16 18:37:06	No I do not	Practical Implementation	I think this is the ANC trying to find a way to win the next elections (even if it means stealing votes) Why have they not gone this way in the past? I am very wary	Alexis			
	2025-09-16 20:48:17	No I do not	Practical Implementation	So many concerns rush through my head at this that it is hard for me to put it down correctly. I will start by saying I am against the digital ID for starters, seeing how it is implemented and used in other areas of the world makes me very uneasy and uncomfortable. I do not believe our country could do this effectively without the usual corruption causing major complications. I am not happy with the possibility of votes not being anonymous anymore on this digital platform, that could make things dangerous for many people and volitile. Never mind basic privacy As for the voting changes, there is still big opportunities here for corruption, manipulation, suppression etc. Can we look at real issues, like the fact that there are people in our country without access to running/ clean water. People who's children cannot go to schoo, especially after the rediculous Bella bill asks to shut down small schools. This would include rural schools and harm the people of the country. There are people without access to food or shelter or proper transport. And our government is concerned about changing things to dgital, keeping up appearances with the rest of the world. Guess what, the rest of the world is not in a great state,so copying them is not necessarily a wise decision. Changing the system over to digital will no doubt cost more money, which will come from taxpayers. Our tax money is already not being used wisely and correctly, resulting in local municipalities adding extra costs to our bills, which is ludicrous. Focus on the people. Serve as good leadership is meant to do, designed to do. Think of the full effects of things like digital ids, digital voting. Think.	Nicole	KwaZulu -Natal		self-employed

	2025-09-16 21:28:04	No I do not	Practical Implementation	As a developing country we do not have the internal capacity to ensure that an electronic system will impenetrable from foreign bad actors.	Quintin	Eastern Cape		employed individual
	2025-09-16 21:51:27	No I do not	Practical Implementation	South Africa is in the middle of an electronic fraud epidemic on our bank accounts and cell-phone accounts. Electronic device costs are inflating out of reach for 90% of the population unless one abstains from food, sanitation and school fees, a choice which some citizens make. Don't encourage that bad choice by linking the right to vote to having digital devices. You may allege it's optional, but those who can easily afford smart-phones with data, are the same people who already have the best access to other methods of voting too. So, this legislation INCREASES that gap between the rich and the poor, instead of addressing it. In addition to privacy and security concerns, is the fact that two-step verification is currently failing many South Africans due to unreliable cell-phone services access. Once again instead of addressing the fatal top problem in SA, joblessness, Parliament wastes time on such Europe-style luxuries that over-exert our failing infrastructure. This lala-land bill is just another of those things that insult us while government fails to relieve the employment, corruption, inflation and other crises not being solved while we try to vote like Europe. This will be implemented like the new SASSA cards, in other words with dismal results for ordinary folks.	Wynand	Gauteng		employed individual
	2025-09-16 22:05:59	No I do not	Practical Implementation	I don't trust the previous system, how can I trust a digital system. Both had fraud opportunities.	Cornelius	North West		
	2025-09-17 05:44:43	No I do not	Practical Implementation	I don't think South Africa is ready to go digital or to do online voting. I'm concerned that the votes will be easily rigged. SA is not capable to safe guard people's information as it is. People's data can be easily accessed by private parties and now what about when we opt for online voting? I strongly don't support this.	David Goitsemang	Gauteng		self-employed

	2025-09-17 13:42:58	No I do not	Practical Implementation	IT'S RIDICULOUS. WI-FI, INTERNET, ETC IS SO UNRELIABLE IN THIS COUNTRY, WHEN YOU NEED IT, IT'S GONE. PEOPLE GO TO GREAT LENGTHS TO GET TO A VOTING STATION. HOW WILL THIS WORK BETTER? SORRY MA'M, YOUR FINGERPRINTS DO NOT WORK ON THE SYSTEM, YOU CANNOT VOTE. SIR, YOU DO NOT HAVE ANY FINGERS, YOU CANNOT VOTE. MOST PEOPLE DO NOT UNDERSTAND TECHNOLOGY EVEN IF THEY THINK THEY DO. IMAGINE THE RIGGING OF THE OVERALL OUTCOME; WILL THE COMPUTER BE BLAMED...ITS THE PEOPLE BEHIND THE COMPUTER. IS THERE A COMPUTER TO CHECK THE COMPUTER FOR ERRORS? TECHNOLOGY ONLY WORKS WHEN IT ACTUALLY WORKS. THE CORRUPT WILL ALWAYS FIND A WAY TO UNDERMINE THE HONEST. HUNDREDS OF PLANS CAN BE MADE, BUT OLD SCHOOL USUALLY WORKS BEST, AT LEAST 99% OF THE TIME.	CHARMAINE	North West		employed individual
	2025-09-17 14:32:59	No I do not	Practical Implementation	I believe this system will be hugely problematic. First and foremost, finger print readers are not a reliable technology and finger-prints wear off with age. For years I have struggled to get finger print readers to recognise my identity, despite going to Home Affairs twice. Getting an accurate reading on a reader can be extremely difficult. Also, there is no real possibility for a re-count of results are disputed. Hard copy votes are a permanent record and cannot be manipulated or altered. I also have very serious concerns about the confidentiality of electronic voting, especially in the cyber and digital age.	David	Western Cape		self-employed
	2025-09-17 15:25:59	No I do not	Practical Implementation	We are a third world country and we do not have the infrastructure and the maturity to implement a system like that. We are the world youngest democracy and we should take it easy. Its just too soon to can even think of a system like this.	Rrekgetsi	Limpopo		self-employed

	2025-09-17 19:48:12	No I do not	Practical Implementation	Currently the IEC can't even have the handreaders working at the stations where they are issued, how will they ensure the system can handle electronic voting. They can't guarantee to be online all the time. I just think of the time it takes to verify or change current registered voters. Also no matter what you are told if it is done electronically there will always be a traceable footprint. Ensure proper training, competent supervisors/overseers, have sufficient voting stations with better subdivision of voting tables. Make sure that there's the correct number of voting sheets. If the IEC can get the current system running smoothly people will come out to vote but it is the unnecessary delays and "off line" situations that cause lengthy lines which discourage the voter. At the last National election my observation was that some of the IEC staff did not even know their alphabet or understand how to look up the voters surname on the printed out list. Further, with the National election folk that pre-registered could vote over 2 days whilst the IEC staff also did home visits. At the station where I was an observer there were a number of voters over 65 that wanted to do walk-in votes on those 2 days but were not allowed to as they had not pre-registered. I feel that the IEC staff who see the ID of every voter, that over those 2 pre-election day, that walk ins for folk 65+ should be allowed to vote. The staff is there and the ballot papers with boxes are available. This thing of them having to pre-register should not be a requirement. That will help to reduce the number of old folk having to be brought forward out of the line on voting day. Pre-register should only be for Home Visit voting.	Helene	Gauteng		retired

	2025-09-18 06:20:26	No I do not	Practical Implementation	Fear of manipulation, hacking ,accessibility and illiteracy especially.amongst rural citizens	Mapily	KwaZulu-Natal		unemployed individual
	2025-09-18 06:20:53	No I do not	Practical Implementation	Just as the USA has experienced an election where digital voting was used widely to skew the result to include illegal immigrants, South Africa chooses to adopt the same system. Banking and other digital fraud is showing the inherent flaws in the implementation process. What we need is a new confederate system where direct democracy can be implemented to allow citizens to control all aspects of our lives other than those aspects we choose to delegate UP to provincial or national level for practical not political purposes. A Swiss Canton System is a worthwhile example. So voting paper or digital becomes a less powerful tool for abuse and political manipulation.	Nicholas	Western Cape		self-employed
	2025-09-18 06:23:47	No I do not	Practical Implementation	Unfortunately I do not believe South Africa is ready for this yet. The possibility of fraud is high. There is also the real issue of technical malfunction, even with currently tech required there have been major breakdowns causing delays for voters. We have a long way to go as a country before something like this can be introduced.	Karen	Western Cape		employed individual
	2025-09-18 07:22:10	No I do not	Practical Implementation	This system will just make people less interested in voting.And the possibility to cheat is a problem.	Rainier	Western Cape		retired
	2025-09-18 07:25:55	No I do not	Practical Implementation		Wally			
	2025-09-18 07:27:35	No I do not	Practical Implementation	I, for one, have been unable to obtain electronic ID as I have no fingerprints. As with driving license, which now indicates 'NO PRINTS' on the rear, how would I vote?	Ernest	Mpumalanga		retired
	2025-09-18 07:53:43	No I do not	Practical Implementation	Only people who is interested in voting should be allowed to register. Automatic registration will cause havoc.	Pieter	Gauteng		employed individual

	2025-09-20 06:27:05	No I do not	Practical Implementation	Finger prints are a problem as the elderly in most cases have very little , wear and tear. It is supposed to be secret but this will enable to see who voted, as every print will have an owner then there is the neglect and function of infrastructure.	joy	Gauteng		
	2025-09-21 13:10:15	No I do not	Practical Implementation	Laptop registration was very unreliable at last election. How would all this be with in reach of the rural areas? Don't fix what isn't broken, except the IEC.	Clifford	Gauteng		retired

	2025-09-21 15:56:04	No I do not	Practical Implementation		Ellen	KwaZulu-Natal		
	2025-09-21 16:07:18	No I do not	Practical Implementation	In rural areas technical issues are always a problem. That as well as the ANC probably looking for a good way to rig votes are my two concerns.	Sharlene	Eastern Cape		unemployed individual
	2025-09-21 16:32:29	No I do not	Practical Implementation	• Confidentialaty and anonymity would be compromised, leading to breakdown in trust. • Technical issues in rural areas would be a problem.	Herna	Gauteng		retired
	2025-09-22 09:50:09	No I do not	Practical Implementation	From a scientific stand-point, people's fingerprints decrease in definition with age. My mother who is almost 70 for example, no longer has a fingerprint to use for her driver's license card. People who do pottery on a pottery wheel also lose their fingerprints. From an electricity supply point of view, electronic voting would require a steady supply of electricity. Voter rigging would be very possible just through throwing a switch in areas of a strong opposition while leaving strongholds of ANC intact with power supply. Electronic voting also requires steady supply of internet service. If internet goes down, people can't cast their votes. From a political intimidation point of view, the people are often told that there are cameras looking down on them; that if they vote for another party, then that area won't receive services, etc. If electronic voting means that one's vote (which is meant to be confidential) is visible for all to see, it would discourage many from voting, especially if they want to vote for a party other than the ANC, EFF and MK who engage in these tactics. Quite frankly, I can't understand why the DA would be behind this! In the last election, the electronic system went down in Benoni and Edenvale several times! That was why all those post-its "Stand in the line" and "Don't leave the line" were sent out. Many people did not get the chance to vote because of a reliance on an electronic system! They could have used printed out voter's roles but it was too difficult because they had not been collated adequately. I appreciate wanting a record of everyone who votes, but there is a limit to what this should entail and it should not and must not be used without back-up systems.	Lauren Jeannie	Gauteng		employed individual
	2025-09-22 10:06:00	No I do not	Practical Implementation	The current voting systems are inaccurate (voters list at voting stations not updated) and slow and often "off line" during the last election. This caused voters to queue for hours or give up without voting. Rather improve current systems as a first step and once this is improved/resolved, them make additional changes.	Graham	Eastern Cape		retired
	2025-09-22 17:34:14	No I do not	Practical Implementation	I am not convinced that South Africa has the capability or the expertise to efficiently produce, manage and implement Electronic Voting System. Just take a look at happed to the Post Office, and the Railways to mention entities that were in perfect working condition.	Donovan	KwaZulu-Natal		self-employed
	2025-09-22 19:50:08	No I do not	Practical Implementation	There are many ways digital data can be manipulated especially among those I choose not to vote into government.	Meryl	KwaZulu-Natal		retired

	2025-09-17 13:07:35	Yes I do	Access for All South Africans	I do believe that with it being digital that possibly more South Africans would be able to vote from the comfort of their homes. They could possibly implement places/tents where people do not have a cell phone or tablet and give them access to the applications for voting so that they can possibly vote there on devices. With implementing these voting day stations people can be employed with work or volunteer.	Nichelle	Western Cape		self-employed
	2025-09-17 13:09:44	Yes I do	Access for All South Africans	With the current economic status in our country not everyone has access to digital media so it might be a hurdle that opens up for those who'll be assisting to influence the voter.	Tiny	Gauteng		employed individual

	2025-09-17 14:53:39	Yes I do	Access for All South Africans	electronic voting can work very well in countries with strong digital infrastructure and trust in institutions (Estonia, Brazil, India), but causes problems in places with political polarization, weak oversight, or cybersecurity risks (Kenya, parts of the US, Netherlands when attempted internet voting). South Africa has good digital infrastructure, good institutions. Trust could be a problem, hacking and power outages wouldn't help . I think its a good idea.	Bruce	Western Cape		self-employed

	2025-09-18 08:23:19	Yes I do	Access for All South Africans	Why I say yes to Electronic voting: Improved electoral efficiency: Faster vote counting and result tabulation and reduced human error in vote counting. Potential to boost voter turnout, especially among younger, more digitally literate voters. Potential for increased accessibility for disabled voters. Can help prevent certain types of electoral fraud and corruption by politicians and officials. Enables more efficient elections in a larger population.	Apostle Happiness	KwaZulu-Natal		retired

	2025-09-19 09:02:15	Yes I do	Access for All South Africans	A brilliant move as this system has been a round for numerous years in other nations and it felt rather costly for international voters to physically cast their votes and those ballots needed to be transported back to SA to be counted. A digital solution may bring a sense of efficiency and cost cutting. A more palatable data metric will be made available with the help of LLM in AI technology. Results won't be delayed and corruption and voter fraud may just be eradicated. Sure, the technology and infrastructure will pose a challenge but with the improving Home Affairs, we might just have a chance at getting this to work. A bold plan that one can only hope is not derailed by any election result.	Langa	KwaZulu -Natal		employed individual

	2025-09-19 10:56:00	Yes I do	Access for All South Africans	The IEC would need prior to the implementation of e-voting , create progressive awareness and public engagement before the 2026 general elections. These should include digital literacy in rural areas and the affordability of an -e-voting system. Technological advancement, the country continues to face inequalities, poor digital infrastructure in rural areas could lead to low voter turnout. We cannot rule out issues such as loadshedding, limited internet access, and how voters' personal information will be protected, especially in rural areas. The IEC should brief political parties directly and urge all political parties to make use of this opportunity.	Dalene	Gauteng		employed individual
	2025-09-19 10:59:48	Yes I do	Access for All South Africans	Ancient Greece was the birthplace of democracy. There was no secret voting, everyone voted by a show of hands in a public place. This was true democracy. Representative democracy has many shortcomings, the chief of which is that it is hard to find a candidate that represents all a voter's concerns in one person. There are always conflicts of interests. Single issue electronic voting would solve this problem. In the meantime let us begin with electronic voting for representative democracy. There will be problems, but it will be a beginning.	Lloyd	Western Cape		retired

	2025-09-16 08:43:45	Yes I do	Practical Implementation	Your introductory statement implying that fingerprint identification allows the identification of the user's voting preference is inflammatory, misleading, misinformed and false. In a properly implemented system, the fingerprint identifies the fact that the individual voted, not who s/he voted for. Any system is open to fraud to a suitably motivated adversary. What we need to consider is whether the proposed system is better than the current one, and I believe that it is. Clearly implementatiuon will face significant logistical, procedurtal and technical hurdles, but we can overcome them.	Manoj	KwaZulu -Natal		employed individual

	2025-09-16 10:15:38	Yes I do	Practical Implementation	My only concern is the proposed use of fingerprints to identify voters. I am 69 years old and every time my fingerprints had to be taken (for my driver's license and ID card,) it was a nightmare. On my driver's license it says "No prints ". A very enthusiastic employee of Internal Affairs tried for more than an hour to at last get a fingerprint for my ID card application, but when I had to fetch my card my identification could not be confirmed with my fingerprint. I'm also not able to use my fingerprints on my phone or computer to log in. So what will happen to someone like me when I want to vote? I just do not have visible ridges on my fingers.	Nicci	North West		retired

	2025-09-17 17:46:22	Yes I do	Practical Implementation	E-voting offers South Africa a chance to modernise elections, making them more efficient, inclusive, and sustainable. Replacing paper ballots could simplify complex voting processes, reduce costs, and speed up counting. It also improves accessibility for the elderly, persons with disabilities, and those in remote areas, while appealing to younger, tech-savvy voters. Lessons from India and Brazil show that secure, scalable systems with features like biometric checks and audit trails can build credibility. Yet challenges remain. Cybersecurity risks, limited digital literacy, and unequal access to technology could erode trust and exclude vulnerable groups. Political resistance highlights fears of manipulation and inequality, while legislative changes and strong voter education would be required. International experiences warn that rushed rollouts can damage democratic legitimacy instead of strengthening it. A gradual, pilot-based rollout offers a balanced solution. Starting in areas with better infrastructure would allow the IEC to test safeguards, build capacity, and gain public confidence before expanding. With careful adaptation to South Africa's unique context, e-voting could strengthen democracy, but missteps could deepen mistrust and widen divides.	Rob	Gauteng		business owner

	2025-09-18 04:53:26	Yes I do	Practical Implementation	The only way for anything to work in South Africa is to remove the ANC from power. The country is rotten with fraud, corruption and weak leadership under the ANC rule. Digitizing votes will be great but we require leaders and parties with integrity, values, morals and transparency. Let's call a spade a spade- the ANC has royally messed up the country and its people. 63 million South Africans and only how many vote?!?	Natalie	Western Cape		employed individual

	2025-09-18 08:43:32	Yes I do	Practical Implementation	Given the history over the last 30 years, we have had great plans but actual implementation has failed dismally because of the cadres being given the contracts and not the company that is qualified to do it. As a result the initial costs increase by 1000% or more as each one has to "feed" on the contract.	Keith	Gauteng		retired
	2025-09-18 08:45:15	Yes I do	Practical Implementation	I believe this can work well, if implemented correctly. My mayor concern is will the system function correctly on the day of the vote. Will it be able to handle the amount of voters at the same time. My advice to combat this will be to implement a multi day voting system that gives time for errors to resolved and spread the voting process. This also gives time for those who wish to vote but does not have the means or the tech savviness to do so. The voting process can also be broken down in provinces eliminating the potential problem that to many voters are on the server at the same time.	Christiaan Albertus	Eastern Cape		business owner

	2025-09-19 07:58:52	Yes I do	Practical Implementation	With SA being a huge multi- party democracy, the intended implementation of an electronic voting system is a huge step forward in ensuring a more free and fair electoral process, as well as eradicating , to a large extent vote rigging, especially in deep rural areas, where vigilence is often lax. Moreover, it will afford independent observers to track the voting process and report any bias, if any on the part of staff employed by the IEC. Lastly, it will give more credibility to the entire process nationally and internationally.	MAGS	KwaZulu-Natal		retired

	2025-09-16 16:06:23	Yes I do	No concern	There are no major differences between the two systems. The non digital system is all encompassing, in the sense that, insofar as we are aware, even the most isolated or poor areas in our country are accommodated. While the digital system will exclude communities that are isolated and less privilege. They are both subject to external influence albeit on deferent degrees.	Toney	Gauteng		business owner
	2025-09-16 16:12:08	Yes I do	No concern	Will be deffinitely more accurate and less chances to interfere than with manual. AI is getting more advanced, they will make it saver and discreete. I trust technology more than humans. We have the right figures and your fingerprint so no cheating possible, so convenient to vote from home or anywhere in the world, no queing up for hours! WAKE UP SOUTH AFRICA TO THE MILLENIUM!	VINCENZO	Gauteng		retired

	2025-09-17 11:23:11	Yes I do	No concern	We are living in the digital age, and South Africa's transition to digital voting is long overdue. There is no need for citizens of our country to wait three or four days for election results when those results can be determined and certified within a few hours of the polls closing. Digital voting will also be far more cost-effective and allow voting and referendums to be more feasible and held on a more regular basis, as they should be in a democracy. We must move with the times or continue living in the Stone Age.	Marc	KwaZulu-Natal		employed individual

	2025-09-18 07:44:04	Yes I do	No concern	Being afraid of technology just shows the type of person who did this refuses to trust any systems/institutions Maybe enquire first about the process of making sure that the appropriate people sign off on this Rather than trying to complain ON A COMPUTER about A COMPUTER This is a good thing for the DA, younger voters will be able to vote without much effort. Maybe instead of complaining do something to help turn it into an advantage DA has not shown they care about the working class, they've just shown they care about being "slightly better" than the ANC, grow up and do something that gets people interested, and not this shit.	Marthinus

	2025-09-20 14:40:39	Yes I do	No concern	We need to move with the times and electronic voting is a lot more difficult to manipulate and will be saving the environment and a LOT of money!!	Angeline	Western Cape		retired
	2025-09-20 15:31:09	Yes I do	No concern	Possibly voters need to be given a choice, until such time as everyone has the access to vote electronically.	Lesley			
	2025-09-20 17:11:48	Yes I do	No concern	More people, even old people, who do not want or are unable to stand in a qew for long, will vote and if the government parties or voting department want to manipulate the voting results, they can and will do that anyway. There is always a way to manipulate. One should do the vote counting and fingerprint identifying on several computers though to compare and check for possible duplication. I would like to emphasize the voting allowance and inclusion for the thousands of Permanent Residence voters, who have never been able to vote because of not having Citizenship, but are living in the country for centuries, I am here since 1969 and would love to vote.	Christl	Gauteng		retired
	2025-09-20 21:48:36	Yes I do	No concern	I think that electronic voting will be one of the best things for our citizens. No more voter fraud, no more long queues. Anyone who opposes this is not genuinely interested in free and fair elections. SO WHAT if they know who I voted for??? You insist on knowing how we vote and want our email and personal details. That is what is called Hypocrisy.	John	Western Cape		unemployed individual

	2025-09-16 08:18:15	Yes I do	Privacy and Data Protection	YES Electronic voting needs to be introduced in SA With the current technology worldwide, there is No reason for us not to be up to date & have this valuable process accesable to us! Electronic voting could offer South Africa greater accessibility, faster counting, and reduced logistical costs compared to paper ballots. Many countries have already piloted or fully adopted forms of e-voting—whether through secure online platforms or electronic machines at polling stations. That said, challenges would need to be addressed, such as: Cybersecurity & trust: Ensuring systems are secure from hacking and manipulation. Accessibility gaps: Guaranteeing rural and low-connectivity areas aren't excluded. Transparency: Making sure results are verifiable and auditable. Public trust: Convincing citizens that electronic votes are as reliable as paper ballots. If implemented carefully, with strong oversight and independent audits, it could modernize SA's democracy and make participation easier.	Isabel	Gauteng		retired

	2025-09-17 09:18:41	Yes I do	Privacy and Data Protection	I don't care about the fact that they will know who we vote for, because they can see that already on the paper system as well. The number of the paper they issue to you are in any case written next to you name, so if they want to track it, they will. If we can be sure that there will be no ghost voters, I wonder? IT can be used for many things, and with the latest AI systems they can create quite a few new voters. Furthermore very few people in remote locations have access to digital services. Let alone know how to use it. It will prevent the loss of votes due to documents being dropped along the road, or being rigged, but they can still tell the people where to press to vote for them. Educating people long before the system is implemented, is very important. By showing it on TV is not enough. A lot of people does not even have power, let alone televisions.	Johannie	Western Cape		retired

	2025-09-17 12:33:50	Yes I do	Privacy and Data Protection	My boyfriend is disabled so for us having to vote electronically would be a great. I don't have many concerns regarding the technical aspects of the system. The SARS efiling system works well and I'm sure this will too. What concerns me is the lack of privacy. Since 1994 we have been keeping our votes secret from even our spouses, families and friends. But now that information is going to be available to who knows how many people and to what purpose. Electronic voting will be so much cheaper. No IEC staff to pay and feed and transport. No ballot papers to print and distribute. No venues to set up. If they can get it to work plus preserve our privacy it will be brilliant.	Eshaana	Gauteng		unemployed individual
	2025-09-17 13:18:31	Yes I do	Privacy and Data Protection	I think this is a great idea for reasons: * Only a valid SA ID can be used to vote. * An ID number cannot be used twice as this will be blocked by the system. * An ID number of a deceased person cannot be used as the system should pick up that someone is trying to commit fraud. * An ID number of an underaged person cannot be used, the system can block this automatically. * We can get instant updates on votes and we don't have to rely on someone counting the votes, the system is more accurate. * Voter rigging will be more difficult as the system will control more. 	2025-09-18 11:37:57	Yes I do	Privacy and Data Protection	Data and Privacy Concerns in the Adoption of Internet/Electronic Voting in South Africa The potential implementation of internet or electronic voting in South Africa presents a range of complex challenges, particularly in the realm of data protection and privacy. While such systems may offer convenience and efficiency, they must be critically assessed against the backdrop of constitutional rights, legislative frameworks, and technological vulnerabilities. 1. Cybersecurity Vulnerabilities Electronic voting systems are inherently susceptible to cyber threats such as hacking, phishing, malware, and denial-of-service attacks. These risks could compromise the integrity of the electoral process by altering vote counts, disrupting access, or exposing sensitive voter data. 2. Voter Anonymity and Confidentiality Preserving the secrecy of the ballot is a constitutional imperative. Internet voting systems must ensure that votes cannot be traced back to individual voters. Achieving this requires advanced cryptographic protocols and rigorous system design, which, if poorly implemented, could undermine voter trust and democratic legitimacy. 3. Data Transmission and Storage Risks Electronic voting involves the transmission and storage of highly sensitive data, including personal identifiers and voting choices. If encryption standards are inadequate or servers are poorly secured, this data could be intercepted or leaked, leading to privacy breaches and potential manipulation. 4. Compliance with POPIA and 3rd Party ISPs South Africa’s Protection of Personal Information Act (POPIA) sets strict requirements for the lawful processing of personal data. Any electronic voting system must demonstrate full compliance with POPIA, including: • Lawful and transparent data collection • Secure storage and processing • Clear consent mechanisms • Accountability for data breaches Failure to comply could result in legal penalties and erode public confidence in the electoral system. 	2025-09-19 11:35:31	Yes I do	Privacy and Data Protection	There needs to be an emphasis on privacy and data protection. The data would be of a very sensitive nature and a lot of effort should go into designing the system in such a way that a data breach cannot connect a person's identity to the vote that was cast. Even in the absence of a data breach that type of data should not be available, which means that the voter's identity should only be used as authentication mechanism and should not be connected to the vote in the data whatsoever. This data should be audited for this.	Edrean	Limpopo		self-employed

	2025-09-19 12:01:59	Yes I do	Privacy and Data Protection	I believe verification of voter identify through digital ID will reduce fraud and prevent those who are not legitimate voters from voting, or voting more than once. However, the ID verification should be de-linked from the actual voting process, so that the vote itself remains anonymous, and not linked to the person. In other words there should be a digital iD verification process, and a separate electronic voting process, so that the identity of the voter is not connected to the choice of who they vote for. 	2025-09-16 09:46:33	Yes I do	Security and Trust	We are well into the digital age already and manual processes are long outdated & cumbersome. Electronic voting can simplify and improve the voting process. One concern would obviously be digital security and the trustworthiness of the system used. Even the biggest banks or online entities are vulnerable to digital attack so an electronic voting system will share similar risks. Another point of consideration is access for all South Africans. While majority probably has access to internet & smartphones, there will be a large portion who does not. Alternative means of accessing digital voting will have to be made available for these citizens as well.	Thomas	Free State		employed individual
	2025-09-16 09:51:05	Yes I do	Security and Trust		Robin	Gauteng		employed individual
	2025-09-16 09:58:12	Yes I do	Security and Trust	This should be an added option for citizens hence not everyone has access to the internet. It's a great idea to reduce queuing time and outcomes will be delivered immediately reducing waiting period.	Thandeka	KwaZulu-Natal		employed individual

	2025-09-16 10:34:45	Yes I do	Security and Trust	I agree that we have more to gain from using this system than we have to lose. Currently our system is rigged and flawed and laborious. Provided there are protocols in place for security and privacy of the person's vote, there is no reason this shouldn't work. Provided there is enough help at hand for those that don't understand technology and in areas where power and connectivity might be problematic, this should be fine. I think being able to vote from home will help with anonymity.	Candice	Gauteng		business owner
	2025-09-16 10:37:16	Yes I do	Security and Trust	The identity of the voter need NOT be compromised through the system. Your fingerprint gives you access to vote, then the ID system disconnects from the voting system before you cast your vote.	André	Gauteng		business owner
	2025-09-16 10:48:41	Yes I do	Security and Trust	The only problem is intimidation of certain people . I personally don't care who knows who I vote for but there are folk that do.	Marilyn			retired

	2025-09-16 11:24:32	Yes I do	Security and Trust	I think that it would weed out voter rigging. It would be relatively easy to compare the number of registered voters vs the number of votes received. The exceptions can highlight if any added votes were included. Though the safe guarding of votes i.e. to ensure that my vote stays my vote and that it is not changed to something else is a concern. If an audit trail is saved per vote, which will be properly audited by an external auditor then I am all for this digital voting.	Yumna

	2025-09-16 15:55:23	Yes I do	Security and Trust	If it is implemented it will help to justify a real voters amount and not a fake one	Steinanda	Gauteng		retired
	2025-09-16 15:59:51	Yes I do	Security and Trust	Only South African documented Citizens will be able to vote and there will be no delays in pronouncing the results. No ghosts voters by means of using someone's smart card ID because people put in place to do checks are captured and further the interests of a certain political party over other parties. Iyhooo they turn a blind eye by just doing ticks as if you are the right person to vote. Electronically it is not going to happen, only those entitled to vote will be eligible to vote	Ndabeni Elias	Free State		employed individual
	2025-09-16 16:12:49	Yes I do	Security and Trust	I think the system not only needs to make sure that there is no double-voting, especially if it is decided to keep normal voting systems parallel to the digital version. There also needs to be a way to separate out the person voting and their actual vote , so that it is not possible to be able to link the person with their voting choice. It must still remain a secret ballot. I hope measures would be put in place for South Africans living abroad to also be able to vote electronically, so that one does not have to go to an embassy to vote, as it currently the case.	Jane	Gauteng		self-employed

	2025-09-17 06:37:04	Yes I do	Security and Trust	The biggest issue we face with voting is the rigging of elections and the countless DA votes that get turfed every time. It's blatant. It's obvious. And the minute you bring it up, you're labelled a conspiracy theorist. With electronic voting, and the right system implemented, every single vote will be counted if a computer does it. Instead of relying on humans with the possibility of counting errors, a computer will do it 100% accurately and in a fraction of the time. The biggest issue we then face is the security of the voting system and making sure it can't be breached or rigged. I don't think voting electronically will be 100% foolproof, however I do think it will be a lot more accurate and fair than doing out manually.	Jason	KwaZulu-Natal		self-employed

	2025-09-17 09:20:35	Yes I do	Security and Trust	My key concern is voter pressure and manipulation of votes by parties like the ANC , MK and EFF and others that have misguided voters in the past. Millions of votes are cast by poor South African citizens that do not have a full understanding of how politics works and how politicians and their "field agents" spread false hope by saying "vote for us" and we will improve your living conditions and create jobs for all in South Africa. If the proposed online voting process is developed in such a way that there is absolutely no way to "hack" the system, then I vote for this process.	Roger	Western Cape		employed individual

	2025-09-17 09:40:10	Yes I do	Security and Trust	I think it would be a good thing to be able to voye online,however there is concern of security and trust,also access to those who live kn rural areas,how will this be managed.Will they have online voting stations,and will an independent party be sourced to collect the data,to avoid conflict of interest,and how will our personal info and selection be protected.	Nafeesa	Western Cape		employed individual
	2025-09-17 09:41:31	Yes I do	Security and Trust	I see a lot of people stating that it would be easy to manipulate votes, but then I would ask the question, how difficult is it to manipulate votes currently? You are just scratching a mark on a piece of paper currently, and hundreds of thousands of papers could just be marked by a few people on the day and be submitted. With electronic voting, each individual could check if their own vote is counted toward the party that they intended. The ANC could make up votes for people they think would not have voted, but they are sure to slip up at some point, where if caught doing this, they should be thrown out of the election. I think this would be better than the current paper system which has zero means of checking legitimacy.	Frans			
	2025-09-17 09:46:19	Yes I do	Security and Trust	I'm an advocate for using technology and electronic voting has many benefits in terms of speed and accuracy and may incite registered voters who don't vote to actaully vote which is good for democracy, the only concern is systematically insuring the integrity of the system which is technoligcaly possible with cryptography and blockchain technology. The concern w.r.t electoral integrity is no different to the issues with paper ballots, providing it's free and fair I'm all for it	Gary	Gauteng		employed individual

	2025-09-17 14:03:03	Yes I do	Security and Trust	There are several reputable services providers that assisted other countries with digital voting systems to ensure a free and fair election process. Such service providers needs to be roped in. Regarding access to all eligible voters - DHA can give voters without digital devices the option of visiting a voting centre with access to devices but retaining the integrity of the vote.	Daniel	Gauteng		employed individual
	2025-09-17 14:12:23	Yes I do	Security and Trust	I think e-voting will be excellent. I have the following concerns: Security and Trust: - There is a risk of security breaches/failures that may result in manipulated or lost results. - Even if an e-voting system is successfully implemented and is adequately secure, there is a risk that South Africans may still distrust the results, due to many reasons including public distrust of officials due to South Africa's high level of corruption and lack of digital literacy. Access: An e-voting system should perhaps be mixed to cater to the diverse nature of South Africans, and may include a mix of the following: - Internet e-voting: Citizens cast their votes online from home. - Poll site e-voting: Citizens cast their vote on electronic voting machines, to cater to persons who have limited/no access to technological resources. - Manual, paper ballots: Limited paper ballot voting to be allowed to allow persons experiencing difficulties with e-voting to cast their vote by paper ballot, such as citizens with disabilities who are unable to vote electronically or older/other citizens who are not digitally literate. 	2025-09-18 08:11:31	Yes I do	Security and Trust	Tampering & hacking – Protecting against external cyberattacks, insider threats, and malware. Data integrity – Ensuring votes cannot be altered, duplicated, or deleted. Authentication – Preventing unauthorised access (e.g., multiple votes by the same person, fake voters). Verifiability – Voters and auditors must be able to confirm that votes are recorded and counted correctly. Audit trails – Systems should produce reliable, independent paper or cryptographic trails. Public confidence – If people doubt the system's fairness, the legitimacy of the results is at risk. Privacy - Nobody should know whoI voted for.	Riaan	Western Cape		employed individual
	2025-09-18 08:12:10	Yes I do	Security and Trust		Joy	Gauteng		retired
	2025-09-18 08:13:11	Yes I do	Security and Trust	I fully support the implementation of electronic voting in South Africa. It is the logical next step to modernize our electoral process, improve efficiency, and reduce risks of human error or ballot tampering. The advantages are clear: • With biometric Digital ID systems, electronic voting can be more secure and verifiable than paper ballots. • Properly implemented, these systems can leave an auditable trail that ensures public trust. • Results can be delivered faster while reducing the costs of printing, distributing, and counting paper ballots. • Electronic access makes voting more inclusive for South Africans who face physical, geographic, or logistical barriers. Privacy, data protection, and independent auditing must remain non-negotiable safeguards. With those in place, electronic voting will strengthen our democracy and align our voting system with the digital age.	Eugene	Western Cape		self-employed
	2025-09-18 08:14:10	Yes I do	Security and Trust	Only if the voting district can see the tresults without having to verify who voted, then people won't ve subjected to scrutiny and mistreatment.	Pappie	Gauteng

	2025-09-18 09:51:41	Yes I do	Security and Trust	Access to systems must be secure and limited to select personnel. The main issue is of course that too few people will be on the system and opposition forces will try to undermine and influence the masses who will not be on the system. Fingerprint scanning is also not guaranteed to work as many people are either not on the system or their fingerprints are too worn to get accurate scans (happens). Bottom line is that the system itself needs to be up to date with the voter info, if the voter is not on the system they simply can't vote, too many unregistered votes get into the system or are accepted when they either not real IDs and legal voters or have voted or voted in the wrong area and want to vote again in another. Too many issues like that exist. There simply must be no way a person can vote unless they on the voters roll and only legal votes can vote. Electronic votes are ideal for people who can't get to the stations or are too remote to get to it.	Nick	Eastern Cape		unemployed individual
	2025-09-18 09:56:42	Yes I do	Security and Trust	Fully supported, if and only if it has been tested, tested, tested and tested for any type of security breach and or mal-management.	Gerhard	Western Cape		employed individual

	2025-09-18 10:23:43	Yes I do	Security and Trust	Fraud will be eliminated by this preposed electronic voting system. Since corruption in the ANC is a huge problem even in the most high position holders. I highly recommend every South African citizen to agree with a huge YES because this preposed electronic voting system will be efficient and incorruptible.	Abdul Wasieh	North West		retired
	2025-09-18 10:24:21	Yes I do	Security and Trust		Jan			
	2025-09-18 10:27:03	Yes I do	Security and Trust	Facial recognition is used successfully worldwide for security purposes. Everybody who received a new id card have the face on the government system. The voting app can link to your id profile and make sure it is you voting. An app can link your mobile phone to your government id profile. Thus the phone and the face can only cast one vote. There are more cellphones in South Africa than people, thus it will cover most of the people in the country. Electronic voting is nothing new, many countries already use it successfully, there are examples that can be studied.	Pieter	Western Cape		business owner

	2025-09-18 10:59:40	Yes I do	Security and Trust	I support electronic voting for future elections. I believe the answer is a combination of electronic and manual ballots. The people in the rural areas do not have access to computers. The possible solutions are to have electronic voting stations in the rural areas where rural people can vote under the guidance of IEC personnel. It is quite possible to create a touch screen of all candidates in such a voting station. The IEC will have to ensure that voting fraud is eliminated, which is quite possible if the programming is done by an international independent expertise.	Jacques	Gauteng		employed individual

	2025-09-18 20:22:12	Yes I do	Security and Trust	its important to recognise that the IEC formulated a discussion document based on the Mandate given to the commission by the Electoral Commission ACT S5(e). The eVoting policy discussion document mere provides a basis for rationale interaction on the available technologies that can be integrated into the current voting process. it gives an opportunity to all South Africans to shape how they want to vote. Once the electorate have voiced their choice, accordingly the IEC will draft a policy document for the deliberation of National law makers, who will be charged with the responsibility to ensure that the voice of South Africans finds it way to National Legislation that governs Elections. Let the electorate decide on their own risk apatite, how much of the voting process needs to be automated via the available, e-voting modalities.	Mtho	Western Cape		employed individual

	2025-09-19 14:43:22	Yes I do	Security and Trust	It should be fully electronic using biometrics and mobile phones. I think the majority have voted against because of fear of recriminations.	Cheryll	Limpopo		retired
	2025-09-19 14:55:57	Yes I do	Security and Trust		Carla	Gauteng		employed individual
	2025-09-19 15:01:32	Yes I do	Security and Trust	I would fully support the initiative, many other countries do this very successfully. If the system can be as robust, secure and trustworthy as those used in other countries like in the EU, I do not see a problem with it. In SA, the concern is always on vote manipulation, as some Political Parties will absolutely do everything to stay or get in power. If it is procured transparently, and not controlled by any one state body, it would be a great initiative as almost everyone in SA has a mobile phone, and can then vote easily, and cost evffectively.	Dano	Western Cape		employed individual
	2025-09-19 15:04:01	Yes I do	Security and Trust	Electronic voting process is good because there will be no more lost of ballot boxes but must be agarante of security in all the poling stations	Elex	KwaZulu-Natal		unemployed individual
	2025-09-19 15:34:58	Yes I do	Security and Trust	I welcome the IEC's proposal to explore electronic voting. South Africa should modernise our election system, but it is important to do so in a way that strengthens trust and transparency. 1. Keep Paper Ballots as Backup Electronic counting can make results faster and reduce mistakes, but every vote must still have a paper record. This ensures that, if there is ever a dispute, ballots can be checked by hand. Many countries (India, the U.S., Namibia) have found that a paper trail builds public confidence and helps settle challenges fairly. 2. Start Small and Learn Electronic counting should be introduced gradually through pilots and by-elections before being rolled out nationally. This will give voters, parties, and officials time to learn and build confidence. 3. Audit Every Election It's not enough to trust the machines. After each election, a sample of results should be double-checked against the paper ballots. This simple safeguard reassures everyone that the electronic totals are correct. 4. Be Careful With Internet Voting Voting over the internet might sound convenient, but experts worldwide say it is not yet secure against hacking or coercion. For now, it should stay off the table until it can be proven safe. 5. Put Trust First Our democracy depends on South Africans believing the results. Electronic tools can help, but only if they are transparent, reliable, and backed up by paper. In summary: South Africa should adopt electronic counting plus paper ballots. This is the best balance between efficiency and credibility, speeding up results while protecting the trust that elections rely on.	William	Gauteng		business owner

	2025-09-22 12:42:29	Yes I do	Security and Trust	Security is my concern. As a software developer, I am very aware of how easy it can be to compromise a system and gain access to change results. The digital voting system should include a smart card chip embedded into a voting card that is linked to its holder via 256bit encryption or higher. This allows voters to vote from any point even their own homes and computers over the internet and still maintain security integrity. Doing it this way will prevent voter suppression or rigging and prevent backlog and excessive cuing on voting days. Also this method will require far less cost on infrastructure investment. Further more the software for the system should be managed by an AI and not humans, AI being always impartial and incorruptible vs humans not being impartial and corruptible.	Jason	Gauteng		business owner

	2025-09-17 18:47:21	Yes I do	Transparency	Electronic vote counting is immediate and risk of human error/corruption in vote counting eliminated. It will also save millions instead of printing millions of ballot papers and personnel of IEC deployed at so many places voting stations for long hours. The old school manual voting on ballot papers and envelopes for each is a HUGE waste of money. It should have been done already. Will be much faster and accurate. No need to transport boxes of ballots (which involves lost/corruption/altering in many historic events) We have the technology to do it which will safe billions on the current voting process.	Francois	Mpumalanga		retired
	2025-09-17 20:55:27	Yes I do	Transparency		Johan	Free State		unemployed individual
	2025-09-17 21:05:59	Yes I do	Transparency	This is a great initiative. I have 3 points of concern, though. 1) Most significantly, the trustworthiness of the system. It would be imperative for the end user to be able to see that the results shown are in fact the results that were inputted on the system. It will not be helpful to have a sound and robust process that collects voter data accurately, only to have the final results twisted before public disclosure. There would need to be an "open-source" approach. 2) That we do not waste time and tax-payer money dragging out the feasibility aspects of this project before rollout. 3) Security of the system to prevent people's identities being fraudulently used. The other aspect of this, is that people may be bribed or manipulated to vote a certain way, in ways the IEC wouldn't be able to track.	Ross	Gauteng		self-employed

	2025-09-16 08:13:38	Yes I do	Infrastructure Needs	ive been saying this for years. it was tried in the USA many years ago. they biggest issue is infrastructure and security. You will need live comms so votes can be stored in real time,. you cant have an offline station that you then do something hideous with like bring back a memory stick as that will open up fraude. Expect resistance for those who wont like ballot box stuffing :) But this would be a great step in every country in the world. Could also be applied like the swiss do to individual issue which will help prevent corssing the floor and a few minsters bought off to pass legislation.	paul

	2025-09-16 10:12:49	Yes I do	Infrastructure Needs	There is no doubt that digitisation is the future, having manual processes is far more prone to error, corruption, vote rigging than digital. However, the way the system is designed and implemented is absolutely crucial to it success: safety anonymity, access, reliability, scalability.	T	Western Cape		
	2025-09-16 11:14:02	Yes I do	Infrastructure Needs	I am all for an electronic voting system, it is the future. People that are concerned with the digital votes being easy to manipulate clearly live under a rock when it comes to how easily they tamper with the current system. My only concern is that from an infrastructure standpoint it would take a lot of time and resources to implement, test, and roll out for public access. A big focus will also have to be on security and privacy for every user. As long as they are willing to do those things right, I see no problem with it, in fact, I welcome it. It's about time we catch up with the rest of the world in terms of implementing technology that works.	Anne	Western Cape		employed individual
	2025-09-16 11:19:58	Yes I do	Infrastructure Needs		Roni	Gauteng		employed individual
	2025-09-16 13:44:37	Yes I do	Infrastructure Needs	Any system will need to be accessible to all members of the public - alternative options may need to be looked at for those who do not have access to supported electronic devices.	Debra			
	2025-09-16 14:19:45	Yes I do	Infrastructure Needs	Cybersecurity is a big area and I know SA's online banking system is very advanced and secure, but I worry about the infrastructure needs because SA has a history of infrastructure being stolen or tenders being overblown and corruption entering the space at that point.	Enke-Mari	Outside SA	United States of America	employed individual
	2025-09-16 18:12:35	Yes I do	Infrastructure Needs	I think since a majority of South Africans already have smart phones and the IEC already has an app as well as website that we have gotten used to. The voting system if going fully digital can either be done on personal devices or IEC provided devices. The IEC could source the new voting smart phones from MOBI Cell (the local phone company or any other local manufacturers but absolutely not Apple, Huawei, Xiaoming or other foreign devices so that we support our own and reduce delivery costs) and then have those at voting stations. Each voting station can have 10 - 20 of these low cost devices. But also, who would steal a Mobi cell phone? The current system of having voting stations must continue to accommodate those who do not have devices that would be capable of launching the voting app. But these people must go and apply for access to these phones at their closest voting station. Voter education will be easier because a video can be available at the voting site to show people how voting is done which will reduce the IEC personnel from persuading voters to vote a certain way during the demonstrations. The only issues will be network and electricity. So maybe the IEC should develop an app that works on the older networks or a hybrid because not all areas have access to 4g or 5g internet. For electricity, Eskom must just be forbidden from loadshedding/loadreduction. It must be criminal for power cuts to occur during elections or else the IEC would have to also purchase powerbanks, rooftop solar and batteries and so on. But going for the app will be fantastic and to avoid server crashes, the IEC should maybe have 1 server per province and maybe 2 servers fro WC, KZN and Gauteng. We must avoid system crashes to maintain the integrity of the process.	Sakhile	Mpumalanga		student
	2025-09-16 20:16:55	Yes I do	Infrastructure Needs	I have a fear that the computer systems put in place might not be able to handle the traffic, and also, if this is a government process, it will be open to looting tenders	William	Gauteng		employed individual

	2025-09-17 20:00:48	Yes I do	Infrastructure Needs	This electoral voting system is easily manipulated in 1st world countries. And we are no way near to their sophisticated infrastructure, yet they were able to rig the elections through this system. I still think paper voting is the better of the two. Rural areas have no network and the people there are not as sophisticated as city dwellers when it comes it comes to using Internet. And so in another 5 to 10years maybe with good education and using paper ballots with electoral system, we may reach our goal quicker than electoral voting alone.	Abegail X	Gauteng		retired

	2025-09-16 08:16:06	Yes I do	Other	As long as this also makes it easier for voters outside of the country to vote, I have no objections. (more voting stations so people don't have to travel stupid long distances).	Janine	Western Cape		employed individual
	2025-09-16 08:50:19	Yes I do	Other	A few of the above points are of concern. Privacy and security of information. System reliability.	Konrad	Gauteng		employed individual
	2025-09-16 08:54:24	Yes I do	Other	Your introductory statement implying that fingerprint identification allows the identification of the user's voting preference is inflammatory, misleading, misinformed and false. In a properly implemented system, the fingerprint identifies the fact that the individual voted, not who s/he voted for. Any system is open to fraud to a suitably motivated adversary. What we need to consider is whether the proposed system is better than the current one, and I believe that it is. Clearly implementation will face significant logistical, procedural and technical hurdles, but we can overcome them. Remember the fingerprints on older people's fingers, disappears with ageing.	Pieter	Gauteng		retired
	2025-09-16 10:16:22	Yes I do	Other	This will stop the vote rigging that allows the ruling party to retain its majority	Farouk	KwaZulu -Natal		retired
	2025-09-16 10:25:34	Yes I do	Other	Kiss election integrity goodbye. Paper ballots are the only way to ensure trust in the outcome.	Donn	Gauteng		self-employed
	2025-09-16 10:35:37	Yes I do	Other	Use the Brazilian model with a stand alone electronic communication system that cannot be tempered with.	Musawenkosi	Gauteng		retired

	2025-09-16 11:12:45	Yes I do	Other	All of the listed concerns in the above drop down box are to be considered as each one is dependent on the others for final implementation. SA will need to look at other countries like Estonia who have been using digital voting since 2005, India since 2009 and even discuss with Namibia what they are doing. We need to consider citizens who are of special needs like wheelchairs, blind, deaf, physically impaired using walkers or crutches and citizens who have finger prints which are difficult to read electronically or taken physically. To reduce the possibility of corruption or fraud a combination of AI and digital encryption can be employed. SA needs to move forward in a modern world. Those who are against electronic voting need to be educated that no system in the world is perfect or foolproof.	George	Gauteng		retired
	2025-09-16 12:10:55	Yes I do	Other	In my case, being old, at 87, I have no finger prints left. This idea will therefore not work for folk who fall into my category. It will be a problem for us.	Michael	Western Cape		retired
	2025-09-16 13:00:03	Yes I do	Other	The finger prints on both my hands do not show up on the banking app and also the drivers licence. So How will I cope.	Fiona	KwaZulu -Natal		unemployed individual
	2025-09-16 14:36:56	Yes I do	Other	Technical reliability. Need to be assured of fall-back mechanisms in case of power failure or other systems failure	Keith	Western Cape		retired
	2025-09-16 18:08:27	Yes I do	Other	There are both advantages and risks but if we never take risks, where would we be? Appreciated for accessibility and efficiency by voters locally and abroad. Viewed with suspicion over security risks. Can significantly speed up and simplify elections. Poses risk of hacking, vote manipulation, and loss of privacy. Increased voter participation, especially for remote voters, faster counting, lower costs, and reduced logistical burdens.	Grant	Western Cape		business owner

	2025-09-16 07:42:34	Not fully	Security and Trust	I dont trust any voter manipulation potential. Secondly, voter confidentiality will be lost, so again trust lost.	Gavin			self-employed
	2025-09-16 07:46:08	Not fully	Security and Trust	There has been so much corruption in our country how can South Africans know that this will be a free and fair election	Shireen	Gauteng		retired
	2025-09-16 07:54:36	Not fully	Security and Trust	Need more info. And many people might not have the knowledge or access to electronic systems	Carole	Eastern Cape		self-employed
	2025-09-16 07:56:13	Not fully	Security and Trust	The IEC is owned lock stock and barrel, by the ANC. I don't trust them at all. If the IEC could be replaced by an international, unaffiliated, independent organization, I'd be happy to go electronic. However, with the ineffectual, and politically compromised IEC at the reigns, I'd rather not.	Stuart			
	2025-09-16 07:56:46	Not fully	Security and Trust	Where I voted, many of the observers at voting stations for physical, in-peson voting, couldn't speak English. They were only partially literate at best. How will they 'observe' a digital system. There is poor infrastructure in certain parts of the country. Several times, scanners did not work. Many times the network at DHA is down. The idea is good, however, it will not work in a country where infrastructure is unreliable.	D			
	2025-09-16 08:03:09	Not fully	Security and Trust	This was tested in the USA, and officials shared passwords to the machines to change votes. This is not a secure and trustworthy process. If honesty and security can be 100% guaranteed, it may be a viable option to ensure the ANC no longer cheats in elections.	Nadette	Gauteng		employed individual
	2025-09-16 08:03:59	Not fully	Security and Trust	I do not trust the IEC to be capable of running a fully digital system without any problems. Digital voting systems tend to be rigged and hacked and there will be a permanent record that becomes a huge privacy concern. Perhaps explore cryptographic voting system protocols and run trails ? Perhaps improve the current systems so that public and political trust is gradually built?	Ernest	Gauteng		employed individual
	2025-09-16 08:20:06	Not fully	Security and Trust	Whilst in practice I support electronic voting, I have major concerns that it is too soon to implement it in South Africa. 1) The electronic equipment used in the past two elections has been faulty, with poor connectivity and useless without power to recharge the units. 2) I am concerned that my vote will not be anonymous. By linking the vote electronically to ID's it will be easy to see how individuals voted, and for an unscrupulous and corrupt government, like ours, to manipulate the votes and to target voters who do not vote for the government.	Wendy	KwaZulu-Natal		retired

	2025-09-16 08:26:52	Not fully	Security and Trust	I think security might be an issue. Trust not so much, because who says that the people counting can be trusted? Maybe this can be more accurate? I think it can work if it can't be hacked and all people in SA will still be able to vote. Maybe people can choose online or in person voting, that will be fair.	Petro			
	2025-09-16 08:28:07	Not fully	Security and Trust	Results can be manipulated and also there is no confidentiality - how we voted will be visible.	Shelagh	Gauteng		unemployed individual
	2025-09-16 08:37:11	Not fully	Security and Trust	KEY CONSIDERATIONS INCLUDE: – Security and Trust – Access for All South Africans – Practical Implementation – Transparency – Legal Requirements – Voter and Staff Preparation – Privacy and Data Protection – Infrastructure Needs	Mark	Gauteng		employed individual

	2025-09-16 08:56:16	Not fully	Security and Trust	How can we trust that the results are not manipulated. What's stopping the system from being rigged and a selection not being accepted or changed. This country is not tech savvy and people will be taken advantage of!	Patrick	Gauteng		unemployed individual
	2025-09-16 08:57:51	Not fully	Security and Trust	As was seen in America even foreign countries could hack and manipulate the result. The security system can never be fool proof to hackers.	Robin	KwaZulu -Natal		retired
	2025-09-16 08:58:52	Not fully	Security and Trust	If all concerns raised about it should be dealt with I'm all for it. Remember Russia, USA unfounded election interference.	Domnique	KwaZulu -Natal		employed individual
	2025-09-16 09:04:25	Not fully	Security and Trust	If one country can be relied on to jimmy an electronic system it will be us. There must still be some form of prevention for duplicate voting.	Annie	Gauteng		retired
	2025-09-16 09:07:20	Not fully	Security and Trust	Baie dankie vir die moeite sover. Ek sal graag dit HEELHARTIG wil steun...MAAR, MAAR, MAAR, daar was met die 2020 verkiesing in Amerika TALLE voorbeelde van verkiesingsbdrog .met DIESELFDE I D srelsel en wat het die owerhede daaraan kon doen? NET MOOI NIKS! So nou my vraag : het die EIC darem KENNIS geneem daarvan en watis gedoen om dit te verhoed EN vandag weet die HELE wêreld dat SUID AFRIKA is deur en deur die mees korrupte land in die wêreld en hoe op aarde sal HIERDIE regering met SO IETS vertrou kan word ??	Jan	Mpumalanga		retired
	2025-09-16 09:09:06	Not fully	Security and Trust	Although I think that this is a good way to get more people to vote, the current government is too incompetent to implement this without it becoming a feeding pit for comrades where every result will be questionable, no one trusts the government to do anything with integrity, and so my concerns are around this being a complete balls up.	Jim	Gauteng		employed individual
	2025-09-16 09:12:06	Not fully	Security and Trust	I do not trust the institutions overseeing this procedure. It should be independently audited on an ongoing basis. Our government has shown that it is not trustworthy.	Lois	Western Cape		retired
	2025-09-16 09:12:47	Not fully	Security and Trust	This does not cover the anonymity of the actual vote. Government would now be able to see who voted for whom. That's not on!	Danie	Western Cape		retired
	2025-09-16 09:18:39	Not fully	Security and Trust		ROSE			
	2025-09-16 09:20:02	Not fully	Security and Trust	There are a number of trust issues from privacy to tampering with votes to system failures and so on. The concept has merit and needs to be explored in greater detail within the context of all that is pertinent to South Africa's current issues. Crime and corruption especially.	Christine	Gauteng		self-employed
	2025-09-16 09:21:23	Not fully	Security and Trust	Fraud can never be excluded does not matter what we do. With electronic voting, I think, is even easier. You cannot trace any handwriting. Maybe less old people will vote and that can be an advantage for some parties because they only vote for that party because the parents raised them to be loyal, no matter what...	Leonie	Western Cape		retired
	2025-09-16 09:21:43	Not fully	Security and Trust	Transparency	Jerome	Western Cape		
	2025-09-16 09:25:11	Not fully	Security and Trust	The design has te be secure enough to prohibit comrades to manipulate the process.	Naas	Western Cape		retired
	2025-09-16 09:26:28	Not fully	Security and Trust	How safe is such a system. Will the individuals vote be private. What we need to do is vote for a individual for President and get rid of party politics. That will be a massive cost save for Government. The President will choose his own cabinet of Ministers.	Sid	Western Cape		retired
	2025-09-16 09:27:08	Not fully	Security and Trust		Eileen	KwaZulu -Natal		self-employed
	2025-09-16 09:28:15	Not fully	Security and Trust	Believe it is inevitable in our technological revelution. Provided there are checks and balances to avoid safety and security problems. As well as ensuring all registered voters are able to participat. Thanks for theopportunity to partake.	Lane	Gauteng		self-employed
	2025-09-16 09:29:53	Not fully	Security and Trust		Mari	Western Cape		employed individual

	2025-09-16 10:32:10	Not fully	Security and Trust	It will be a wonderful thing if we can trust this current government. Nothing they have brought to the table can be trusted. They are totally delusional. Have these ideas and no way to implement anything except by fraud and corruption How are they going to get the people in the rural areas to access this without interference and intimidation	Linda	Gauteng		retired
	2025-09-16 10:33:48	Not fully	Security and Trust	I am concerned about vote rigging and intimidation.	Jim	KwaZulu-Natal		retired
	2025-09-16 10:35:38	Not fully	Security and Trust	In principle the idea is good but I do not trust the present people advocating this step to do this with integrity, ethics and morals. There is too much corruption in the political players and they cannot be trusted. Voter security, voter rigging, ghost voters are some of my concerns.	Ray	Western Cape		retired
	2025-09-16 10:36:42	Not fully	Security and Trust		Silas			
	2025-09-16 10:37:24	Not fully	Security and Trust	I support the idea in principle as being progressive but I am suspicious that the process could be hacked by those seeking to manipulate the results, not only from within South Africa but also foreign agencies for their own benefit.	Allan	Gauteng		retired
	2025-09-16 10:44:32	Not fully	Security and Trust	The current electoral system is open to many different forms of mismanagement and interference. An electronic voting system is open to a different set of interferences. Security of an electronic system can be managed centrally, while security of a paper-based electoral system must be managed in a distributed fashion. A blended system is open to interference on different levels and becomes more complex to manage. Eventually an electronic voting system will have to be introduced. It is important that trust is developed well in advance of such an implementation.	Johannes	Gauteng		employed individual
	2025-09-16 10:47:10	Not fully	Security and Trust	The only way electronic voting can work is: 1) when you can immediately verify that your vote has been counted correctly 2) that you can log in afterwards to ensure your vote has not been changed 3) your vote remains secret - trust? 4) the voting totals are displayed in real time at the voting centre for independent verification 5) Backup - paper ballot At the current level of distrust of the government and its institutions in the country it would be best to run a digital and paper vote at the same time for verification. There is no way that a "first" electronic voting result will be generally accepted unless it is backed by a paper ballot count as well. The trust level is just not there.	Bernard	Free State		business owner
	2025-09-16 10:49:15	Not fully	Security and Trust	Lack of confidentiality Can be hacked Difficult to roll out (I still can't even get a smart ID card)	Anne	Western Cape		retired
	2025-09-16 10:50:10	Not fully	Security and Trust	I am concerned that the system would reveal who individual voters voted for opening the way for manipulation and fraud.	Tanja	Gauteng		retired

	2025-09-16 11:27:19	Not fully	Security and Trust	Electronic voting has more benefits to offer than standard paper voting. However, the major concern is the trust in the system and the privacy concerns. Data has to be stored to determine who has voted. The voter should still only be able to vote where they are registered.	Philip	Gauteng		employed individual
	2025-09-16 11:27:22	Not fully	Security and Trust		Roy	Gauteng		retired
	2025-09-16 11:27:34	Not fully	Security and Trust	The digital ID and the associated vote should not be linked in the computer system. Hence the computer can check if a specific ID or ID nr has already voted for fraud prevention, but it must not be linked to voter's choice of political party. Voting must still be done at voting stations where an electronic device will accept votes (only one vote per person), so only the counting will be automated, not the actual voting process	Andre	Western Cape		employed individual

	2025-09-16 11:28:33	Not fully	Security and Trust	To be quite honest. Electronic voting sounds like a good idea. But how did an election got stolen in the US by the electronic votes where peoples names were highjacked and votes changed for the opposite party. Electronically. Nothing is impossible with the help of a few clued up helpers or hijackers. I realise the IEC is in charge. I don't know if they are above board anymore. Sorry. Maybe in a country reverting back to the primitive. The old primitive methods should be used. Although there are also huge loopholes for corruption in the old system. Where not only the fingerprint is used but the fingernail marked as well. Although some have escaped the finger nail and went in for apparently another round previously. Also the dead could still live and vote. This is a difficult choice. If our country were not so corrupt I would have said yes to the new system. But I work on internet. Even more crime is possible online than offline.	Annalize	Gauteng		self-employed
	2025-09-16 11:31:30	Not fully	Security and Trust	It will require major IT security Infrastructure. Too many fraudulent loopholes. It will not work with the corrupt backbone of the politicians.	Liret	Western Cape		business owner
	2025-09-16 11:41:40	Not fully	Security and Trust	A system like this is ony as good as the people who control it, not the people who operates it.	Marius	Mpumalanga		retired

	2025-09-16 11:46:19	Not fully	Security and Trust	Only if it can be CONFIRMED that this can be free of corruption...	Dalena	Western Cape		employed individual
	2025-09-16 11:58:39	Not fully	Security and Trust	Whist this is a good idea, the risks below are very high, particularly as the current ANC government is corrupt and untrustworthy and have put in place the IEC officials, who have not been particularly independent or impartial or competent in some areas of control and in such as voter education and training, judging by turnouts. In particular: Cybersecurity risks and potential for hacking. Need for robust back-up systems. Voter trust and transparency concerns. See above. Digital divide and accessibility issues. Initial set-up costs and technical infrastructure requirements. Need for voter education and training.	Les			
	2025-09-16 12:16:29	Not fully	Security and Trust	Fraud	Nicholas			
	2025-09-16 12:18:05	Not fully	Security and Trust	Fraud	Dawn			
	2025-09-16 12:19:36	Not fully	Security and Trust	I am concerned that it can lead to vote - rigging and I also do not want the government to know who I voted for. Unless a computer program can be devised that eliminates the possibility of vote-rigging and ensures the confidentiality of my vote , I cannot support e-voting.	Sandra	Western Cape		self-employed
	2025-09-16 12:20:02	Not fully	Security and Trust	I'm for the idea, but the concerns noted are really valid. I myself would feel really better if they were all attended to and assurances were give genuinely made by the IEC concerning them. I don't know if I'm comfortable with the current crop of leadership implementing this process though. Our current body politic is selfish and would do anything to get ahead and one up one another regardless of how that would affect the nation at large. We need total reassurances as a people but the current leadership is unethical, immoral, corrupt and care little about the masses of our people. All these are a breeding ground for vote rigging, one can't put anything past the current leadership. We need better, self controlled, moral, ethical, competent leaders. The kind who will put the people first at all cost and put this country back on the glory path that it was meant to be on at the dawn of this democracy. Exactly what the people voted for. We can only go full on electronic when all these concerns are fully attended to and a process is in place to mitigate them all.	Itumeleng	Gauteng		employed individual
	2025-09-16 12:20:22	Not fully	Security and Trust	Fraud	Basil			
	2025-09-16 12:31:24	Not fully	Security and Trust	Everything digital can be hacked, which raises many concerns - identity theft, breach of voter anonymity, election rigging etc. Extremely secure, robust systems with built in self checking and verification will be necessary. Many South Africans do not have access to secure , modern digital technology access, notwithstanding the high uptake of mobile technology.	Dennis	Western Cape		employed individual
	2025-09-16 12:36:49	Not fully	Security and Trust	I need to know that the voting system is at least as secure as my banking system, preferably more secure. I also need to know that there is no way to identify my vote at all. I would probably be more likely to consider electronic voting if a dual system of electronic backed up with paper voting, as a control mechanism, is trialled for a few voting cycles.	Dianne	Western Cape		retired
	2025-09-16 12:38:07	Not fully	Security and Trust	Ordinary Internet Protocol (Centralized) System This system uses a centralized database managed by a single authority. It is highly susceptible to fraud and rigging due to a single point of failure. Cybersecurity Risk: The central server is a prime target for hackers, making it easy to alter or delete votes on a massive scale. Lack of Transparency: Since the vote count is a "black box" operation, there's no way for the public to independently verify the results. Insider Threat: A dishonest administrator can easily manipulate the vote count from within. Voter Coercion: Linking a voter's digital ID or fingerprint to their vote creates a record that could be used for voter suppression or intimidation. ? Blockchain Platform (Decentralized) System This system uses a decentralized, distributed ledger that is immutable and transparent, preventing a single point of failure. User-End Vulnerability: The biggest risk is not the blockchain itself, but the voter's device. Malware on a computer or phone could alter a vote before it is sent to the blockchain, an attack that the system cannot detect. Privacy vs. Verifiability: Ensuring a truly anonymous vote while allowing public verification is a major challenge. If a vote can be traced, it can be exploited. Accessibility: Not all citizens have the necessary technology or digital literacy to participate, potentially disenfranchising parts of the population. ⚖️ Conclusion A centralized system is fundamentally vulnerable to rigging from a single point of failure. While a blockchain system solves this, it fails to address the critical issue of securing the voter's device from manipulation. The integrity of an electronic vote can't be guaranteed at the source. Therefore, neither system can provide a definitive, foolproof solution to voter fraud.	John	KwaZulu-Natal		self-employed

	2025-09-16 13:25:49	Not fully	Security and Trust	The only people with access to the voting system and records should be fully independent of Government. Political parties should have full access to very independently confirm votes were not altered, substituted or tampered with. Each vote must be sealed with blockchain encryption, at source voting device, and any viewing events, changes or vanishing are auditable by the AG and independent professionals without access to their encrypted voting status or choice. The public must be educated these records are encrypted and no political party has access to information tying individuals to voting preferences. It's a lot easier to alter electronic records	Kelvin	Western Cape		business owner
	2025-09-16 13:48:56	Not fully	Security and Trust	A few issues come to mind: 1. The cost of implementation - inflated pricing for hardware and software needed to implement this. Tenderpreneurship corruption is a risk. 2. Phantom voters - If you obfuscate the voter information, to ensure voter anonymity, you rasie the risk of phantom voters supporting whichever party. 3. Auditing now becomes a technological issue. Each party will have to have independent data scientists and code auditors, who will have to concur that everything is above board, on both a hardware and software level. There are proven records of voting machines having been hacked. 4. Connectivity - Our last elections have shown glaring inadequacies with the machines that confirmed voter identity. Now we're talking about uploading fingerprints, which take a lot more data, and therefore bandwith, to upload to the relevant voting stations. 5. Electricity - A massive amount will have to be spent on electrifying voter stations where there's no electricity. 6. Trust - Manual counting can be managed via simple checks and balances. Electronic voting puts the power in the hands of those with technological know-how. I suggest some top politicians in each party actually qialify themselves in the relevant technologies (blockchain, code auditing, data science) and not just trust a hired third-party to put their stamp of approval on this. In closing - Electronic voting is the way forward, yes. The technology is available, but care needs to be taken that it does not just enable a new form of corruption, whether in procurement or in the actual voting. Just look at how many billions was spent on eNatis and how long it took.	Alistair	Western Cape		self-employed
	2025-09-16 13:54:56	Not fully	Security and Trust	The biggest problem with an electronic voting system is hacking and the problem with paper only voting is fraud like ballet stuffing. A hybrid paper and electronic system like VVPAT verifiable paper audit trail would the safest solution. This is been proven to work in India, parts of the US, Brazil because it balances speed, accessibility, and auditability	Peter	Western Cape		business owner
	2025-09-16 14:02:26	Not fully	Security and Trust	If the government can guarantee that the e-voting system is safe and un-hackable, and will be private and anonymous, I am very happy to embrace it as a viable means of voting.	Gregory	Gauteng		employed individual

	2025-09-16 14:45:36	Not fully	Security and Trust	From a personal perspective, voting electronically in South Africa would feel risky because my vote could be hacked, altered, or even lost if the system fails, and I might not have any way to prove how I actually voted. I'd also worry about privacy, since my personal details and voting choice could be exposed or misused if the system isn't secure. Also, the Government will exactly know your vote. From a practical perfect world scenario it would be the best and most convenient method for all South Africans. Regards, CH	CH	Eastern Cape		employed individual
	2025-09-16 14:53:47	Not fully	Security and Trust	I do think that, for the sake of accuracy and efficiency, we need an electronic voting system. However, given the corruption in this country, I don't trust our government to implement said system. We have one machine in the country that prints driver's licenses, yet we're expected to believe that the government can roll out an effective electronic voting system? It would just give rise to many more instances of tender fraud. The electronic voting system would also deter a lot of people from voting, particularly older voters, who are distrustful of technology. As much as I don't want the older generation of ANC voters to continue to vote and hold us back as a country, we cannot deny people their democratic right to vote.	Lauren-Leigh	Western Cape		self-employed

	2025-09-17 00:51:13	Not fully	Security and Trust	I am broadly in favour of the principle of electronic voting, recognising its potential to modernise the electoral process, enhance accessibility, increase youth participation, and improve efficiency in the administration and counting of votes. I welcome the Electoral Commission’s initiative in stimulating this important national discussion. However, my support is conditional on the manner of implementation. Experience from other jurisdictions has demonstrated that while e-voting can succeed, it can also fail if introduced without the necessary safeguards. Countries such as Namibia, Germany and Ireland have abandoned their experiments with e-voting due to concerns relating to trust, legal certainty, and technical security. By contrast, Estonia has shown that long-term success is possible where implementation is grounded in strong digital identity frameworks, robust cybersecurity protections, and continuous public engagement. In this regard, I respectfully emphasise the following points for consideration: Security and Integrity: Cybersecurity threats (including hacking, manipulation of results, and data breaches) must be addressed through strong encryption, independent auditing, and voter-verifiable paper audit trails (VVPATs). Public Trust and Transparency: Building trust is essential. Comprehensive public education campaigns, transparent pilot testing, and clear communication of safeguards are necessary before any large-scale rollout. Addressing the Digital Divide: Many South Africans, particularly in rural areas, elderly communities, and those with limited digital literacy, may be excluded if the system is not designed inclusively. Accessibility features and parallel safeguards must be built into any e-voting solution. Phased Implementation: A gradual and evidence-based rollout, beginning with limited pilot projects (e.g., by-elections or municipal elections), should precede any national implementation. Lessons from these pilots should inform refinements.	Zavoneq	Gauteng		retired
	2025-09-17 02:13:52	Not fully	Security and Trust	I support ONLY, ONLY. On condition that the entire process and data is available to all voting parties FROM THE START. NOT later in the voting process. Full transparency and multi party management of this process. Failing the above, I do NOT support as it is clear that no political party is fully trustworthy. There is ZERO trust of any government today-all are corrupt to varying degrees.	Yvonne	KwaZulu -Natal		retired

	2025-09-17 07:35:53	Not fully	Security and Trust	I support the adoption of digital mechanisms that facilitate secure and convenient access to the electoral system. Digital voting provides an opportunity to introduce robust safeguards that reduce the risk of fraud and electoral manipulation. It is, however, imperative that the digital identifiers used for voter authentication are protected through stringent security measures and maintained in strict confidence. While the replacement of traditional identification documentation with digital verification is a progressive development, the integrity of the process requires that both voting and verification procedures are encrypted at source. This will ensure the highest levels of protection, confidentiality, and public trust in the electoral process. Not a good idea if the government is able to see how you've voted. Leaves the way open for corruption.	Maureen	Gauteng		employed individual
	2025-09-17 07:40:17	Not fully	Security and Trust	It seems too good to be true, and therefore cannot be. The potential for abuse far out weighs any potential benefit. No one within our current system can be trusted to do the right thing for the people.	Alf	Gauteng		retired
	2025-09-17 07:51:23	Not fully	Security and Trust	While e-voting has so many benefits, especially for individuals with disabilities such as myself, there are so many risks associated with it. My top concern is the security and trust associated with such an endeavour. There have already been numerous government security breaches within this year (2025). Further concern is the sharing of personal information that is required, which could lead to fraud, or worse, voters being targeted and/or abused based on their votes. Lastly, the infrastructure requirements, and the implementation/use thereof, for such an implementation will not only cost taxpayers a fortune, but also take so long to implement that it will probably be disbanded before it's inception, similar to the "digital licence" project that is ever ongoing without any light at the end of the tunnel.	Grant	Western Cape		employed individual
	2025-09-17 07:51:28	Not fully	Security and Trust	All political parties have shown themselves to be rather untrustworthy in basically all matters pertaining to their modus operandi and voting which is supposed to be a secret ballot from the public will at this stage of political maturity, which hardly exist, be under severe threat.. Then there is the dubious infrastructure as well as a lot seemingly the elder cohort of voters who might have problems with the technology and the unfortunate possibility of intimidation by political thugs who operate with impunity country wide. If the parties can be isolated from being able to use the data base can be guaranteed and the government can only access data by being transparent of their need to be cognizant of any other data except the numbers counted there might be some guarantee of impartiality. Thus a body other than officialdom should be the custodian of this very sensitive data.	Jakobus P H	Western Cape		retired

	2025-09-17 13:33:19	Not fully	Security and Trust	My problem is that he wants to use fingerprints to identify if you are a citizen or not and a evil party like EFF or atleast all the parties who get evil leaders will now be able to go back and see who dared to challange him/ her, so this is a safety risk to people that a communist, fascist or dictator in the far left or far right can exploit. Secondly the problem is computer hacking by countries such as our friends Russia who have interfered in other countries' elections before through cyber crime. I, though, might be in support of a system that uses the old system of voting at voting stations, you use your ID to confirm that you are a citizen and instead of using paper, you can use a kiosk with PC's to cast the vote on a website so to speak, and then get your thumb inked. Each PC should have its own unique code to log into like PC's on University campusses which prevents someone from casting a vote on a personal computer, so these PC's have a unique, direct link to the website or IEC voting website and the website only recognise these PC's at the voting stations etc. I will only support this if cyber security is tough, otherwise we stick to the classic system.	Arnold	Mpumalanga		unemployed individual

	2025-09-17 14:02:27	Not fully	Security and Trust	Electronic counting provides the opportunity for massive voter fraud, resulting in election outcomes that do not reflect the will of the people. The situation is exacerbated by the low trust in the current government and the publicly available evidence of politicians and government officials involved in corruption and other legislative breaches. It will take a parallel manual system over several election periods to convince the general public that the electronic voting system is infallible and not prone to manipulation by unscrupulous actors. I can thus only support an electronic system if it can be guaranteed that a parallel manual system will be used over say a 20 year period to verify the accuracy and validity of the electronic system. It will also be necessary to develop a mechanism that will conceal the way in which individual voters vote. This is necessary to prevent political parties from extorting voters for their votes. 	2025-09-17 15:00:08	Not fully	Security and Trust	With all the scams going on then making sure the app is safe, secure and audited is critical. We have seen too many examples of electronic things going wrong. However, the original voting in 1994 was full of fraud and missing votes and replaced votes and scam votes all of which will lead to suspicion of accuracy. But the existing vote methods are also suspect. It needs Home Affairs to demonstrate that their new system is secure as a starting point of efficacy. With corruption throughout the 'officials' of SA (govt, police et al) the land is bare for continued corruption - existing and new voting systems.	Paul	Eastern Cape		retired
	2025-09-17 15:15:03	Not fully	Security and Trust	Before the US elections last year, I would have fully supported electronic voting. I know it has worked in India. My concern is this could be open to manipulation from third parties or worse other countries such as Russia etc.	Jacky	Gauteng		employed individual
	2025-09-17 15:26:17	Not fully	Security and Trust	If North Korea, China, Russia, etc., can hack billions out the crypto market, what security will provide sufficient confidence that the existing corrupt players will not manipulate e-votes to their advantage the same as they are doing with the current system?	Paul	KwaZulu-Natal		retired

	2025-09-17 21:21:19	Not fully	Security and Trust	1. Costs: the equipment and software for this is going to cost a fortune, which RSA cannot afford after trillions have been stolen by the corrupt governing party 2. Hidden agenda: The ANC have proven themselves to be corrupt and they want to hold on to power, in order to totally destroy this once functional country. They are in government to enrich themselves and their cronies. By doing the elections online gives parties with hidden agendas a greater chance of defrauding and changing the votes to enable them to win 3. Lack of transparency: this is proven over 30y ears of malfunctioning government. BBEE is just another trojan horse to facilitate corrupt dealings and there can be no confidence that the appointed BBEE connected people and firms has gone through vigorous screening processes. 4. Costs: the equipment and software for this is going to cost a fortune, which RSA cannot afford after trillions have been stolen by the corrupt governing party. Given lack of transparency as per 3 above, hardware and software will be tenfold the real price 5. No confidence in proper testing of such systems before go-live: RSA has a wreckage of history of failed systems and not reaching deadlines. It is too much asked to put an election at risk 6. World wide trust in electronic voting is very low and many are bringing back paper ballots. What in RSA is working properly so that we can be confident it will be better than any of the countries that are miles ahead of us electronically? 7. Digital security: Electronic voting machines are vulnerable to outside hacking, especially with the exponential rise in AI capabilities. The fact that the government have access to how every citizen has voted makes the voters vulnerable to intimidation and other means of targeting. There is no evidence that RSA is better at digital security than the rest of the world 8. In theory, if implemented properly, there could be less chance of vote rigging using electronic voting systems	Willie	Gauteng

	2025-09-18 06:00:07	Not fully	Security and Trust	As a software developer I know it is possible to implement one-way hashing such that it is possible to detect if a voter has voted, but not the other way around who has voted for what. Same technique is already used with password, where you can detect if the password is correct, but without storing the actual password or to make it possible to lookup user's passwords. However, this means the system MUST be open source so that security experts can analyze if the implementation was done correctly and that the system does not cheat, cannot be rigged with fake voters and does not contains security loophole that can be exploited. The act must make provision for this incase a reputable security adviser detects a flaw in the source code or infrastructure and how the government will rectify this. In addition the actual implementation of the system MUST be audited by a reputable independant non-South African auditor to ensure that the source code that was published is indeed the actual code used in the voting system and that no backdoors exist. 	2025-09-18 09:15:31	Not fully	Security and Trust	Why Electronic Voting is Dangerous in South Africa South Africans fought hard for the right to vote. The ballot box is the one weapon ordinary people have to hold corrupt politicians accountable. Now the ANC wants to replace paper ballots with electronic voting systems linked to Digital IDs. Sounds modern, right? Wrong. In a country with one of the most corrupt ruling parties in the world, this is a recipe for disaster. Here’s why: Results can be manipulated: A single hacked server can change thousands of votes. With paper, you can recount. With digital, you just have to trust the machine. No transparency: Right now, you can watch votes being counted with your own eyes. With electronic voting, everything happens inside a black box controlled by the state. Privacy destroyed: Linked to Digital IDs and fingerprints, government could know exactly how you voted. Imagine the intimidation and fear that creates. Cybersecurity failures: Home Affairs can’t even keep our ID records safe. Do you really trust them with your vote? Millions left behind: Rural South Africans without reliable electricity, internet, or digital literacy will be excluded. Democracy for some, not for all. ANC capture: Once the system is rigged digitally, it will be nearly impossible to prove or challenge. The Bottom Line Electronic voting sounds efficient, but in reality it would hand the ANC a powerful new tool to rig elections behind closed doors. Democracy dies when the people can no longer trust the vote. South Africa does not need flashy gadgets. We need free, fair, transparent elections with paper ballots that can be recounted in the open. Public pressure stopped the National Credit Act amendments. Now we must raise our voices again. Say NO to electronic voting. Protect the ballot box. Protect democracy.	Clint	Gauteng		business owner

	2025-09-18 10:47:22	Not fully	Security and Trust	Voter suppression and vote rigging needs to be addressed first and foremost	Ann	Western Cape		retired
	2025-09-18 10:53:41	Not fully	Security and Trust	The main issue in SA is that corruption is still thriving and out of control amongst our current political leaders, it is therefore unrealistic and premature to expect people to trust that a state-owned electronic platform could be free from manipulations and deliver accurate results. We are also facing huge infrastructure limitations with large chunks of rural population having no access to basic facilities such as water and electricity. SA would have to be subject to a fragmented voting system to accommodate the less fortunate thus increasing the risk of results falling through the cracks. Having said that, I also believe that SA needs to embrace technological advancements but also have a realistic approach on what needs to happen before new systems can be introduced accross the board.	Celine	Gauteng		employed individual
	2025-09-18 10:55:36	Not fully	Security and Trust	It really is a difficult question to answer. Obviously, digitization is the way to go however it is as much subject to fraud by the officials who will control the procedure. We have tremendous difficulty getting the voting papers into the correct areas perhaps digitization is an answer but have we the technique to do this . Unfortunately which ever system we use we will undoubtably find a way to cheat the system.	Vernon	Western Cape		retired
	2025-09-18 10:56:21	Not fully	Security and Trust	i do believe that ONLY people who pay TAXES should have the right to vote	sharon	Gauteng

	2025-09-18 11:14:21	Not fully	Security and Trust	My biggest concern is security and trust from the government. They simply cannot be trusted and digital voting means that it becomes easier for them to manipulate votes. The idea is great, but I don't hold faith that our government can execute it honestly. My next concern is accessibility. With a lot of our citizens in rural areas, how will they be able to vote - will this be more of a mission for them? Again, the idea of digital voting is great, but execusion not so much.	Siobhan	Western Cape		self-employed
	2025-09-18 11:18:12	Not fully	Security and Trust	I think the security and trust are some of the most important concerns - privacy and data need to be fully protected, especially to keep votes and other data secret so that it cannot be abused. I am also concerned that the website or platform would not be efficient/ be able to handle large amounts of traffic (as has been evidenced by many other South African platforms).	Melaie

	2025-09-18 11:33:51	Not fully	Security and Trust	I would agree with the Electronic Voting Policy in order to get more people to participate in the voting. I have worked at a voting station for the last 30 years and it is terrible for me how few people come to vote. I think with the last National Elections it was just over 30%. So many people moan about the functioning and policies of the Government but so little of them come to the voting stations to choose someone else. I just think that there might easily be manipulation or vote-rigging with an electronic system. Might have a better opinion when I know how the plan to to it?	Hannes	Free State		self-employed

	2025-09-18 15:05:32	Not fully	Security and Trust	Security Risks Vulnerable to hacking, malware, or insider manipulation. Concerns about trust in the system if technical issues arise (e.g., “black box” perception where the public cannot see what happens inside the machine). Technical Failures Hardware or software errors can cause disruptions, lost votes, or miscounts. Power outages or connectivity issues (in internet-based systems) may prevent people from voting. Cost Expensive to procure, maintain, update, and secure electronic voting machines. Requires training for election officials and technical support staff. Transparency and Trust Issues Unlike a paper ballot that anyone can observe being counted, e-voting requires trust in technology and the people maintaining it. Without a paper trail, recounts and audits are very difficult. Digital Divide Not everyone has equal access to technology or feels comfortable using it. Could unintentionally disenfranchise older voters or those in rural/low-tech areas.	Corne	Mpumalanga		employed individual
	2025-09-18 15:45:01	Not fully	Security and Trust	RSA is governed by criminals. I don't trust them to not rig the system. They are are geniuses when it comes to to wrongdoings	Hilda	Gauteng		retired

	2025-09-19 07:41:46	Not fully	Security and Trust	Security and Trust, POPIA, Access to all South Africans, in particular the Rural Areas Recommendation - Ensure a Security, instill Trust, align with POPIA and have a dule system - Optional for in person or Electronic to meet the needs of all. In this way you cater for those not trusting the Electronic system, unsure of their data security as well as those who do not have access to electronic systems.	Rene	Eastern Cape		employed individual
	2025-09-19 08:02:35	Not fully	Security and Trust	"voter fraud will no longer be possible, because every voter need just present their fingerprint." If only. Electronic voting can reduce certain traditional forms of electoral fraud such as ballot-box stuffing and ballot theft, which have historically plagued paper-based systems. BUT electronic systems introduce new vulnerabilities. A major concern is the potential for undetectable large-scale fraud through malicious software, particularly in systems without a verifiable paper trail. A corrupt insider or vendor could hide code that alters election results across thousands of machines, and existing certification procedures may not catch such tampering. Electronic voting can mitigate some forms of fraud present in manual systems but introduces new risks related to software integrity, transparency, and cybersecurity. Systems with verifiable paper backups are generally considered more secure than paperless electronic or purely online systems. The integrity of the overall electoral process depends not just on the voting method, but on institutional transparency, auditability, and public trust. Lets face it, we don't trust that this corrupt government has the will or integrity to run a "free and fair" election. They certainly don't have the brain capacity to outsmart malicious outside actors who might influence elections either.	Nanya	Western Cape

	2025-09-19 08:20:30	Not fully	Security and Trust	The government of South Africa has lost the trust of the public over the course of 17 years, which is reflected in both comprehensive opinion polls as well as the national and provincial votes. Due to unchallenged corruption and a lack of punishment for such actions against the public, it is impossible to entrust any voting system to any organisation that is directly or indirectly governed by the ruling party, the ANC. This is an unfortunate but true reality of the leading party. THEREFORE, any electronic voting system MUST be FULLY compliant with the POPIA, and anonymise voting data from any human handlers. Through technology such as encryption and blockchain, this is possible. Any system that allows a human participant ANY opportunity to see, process, or manage voting data 100% open to the possibility of corruption, which is an unfortunate likelihood in South Africa. This must be considered before the new system can go ahead unchallenged.	Daniel	Western Cape		business owner

	2025-09-19 14:51:48	Not fully	Security and Trust	As an IT and cybersecurity professional I would want to see this implemented in a way that nobody can see my vote or tamper with it.	Grant	Gauteng		employed individual
	2025-09-19 14:58:46	Not fully	Security and Trust	Will this system be hack proof? Who are the people that's going to man this? There should not be anyone that's politically connected near this system. The system must not be able to be changed or updated by anyone. Only registered voters must be able to vote once only. Every registered voter must vote in person with fingerprint to check against ID number. If all the above are met, then it's a Big yes from me. Hackers must be invited to hack every possibility.	Sew	KwaZulu -Natal		retired
	2025-09-19 14:59:35	Not fully	Security and Trust	I support electronic voting however we live in a country where people need a safe space to do this. I believe that the paper system should be done away with and voting should be done electronically at the voting stations using voting stations. Where a person does not have an ID card - unlikely but exceptions exist, there can be a manual voting queue. In the manual voting queue proof is required that a smart ID card is lost or they don't have one, and the home affairs system can be checked as well. There has to be a better system than the manual voting system so rather than not doing electronic voting at all, rather find a safer way to do it. Do I care that people know who I vote for? Yes, employers, friends, institutions must not have access to this information. It is very polarising.	Wendy	Gauteng		employed individual

	2025-09-19 17:14:03	Not fully	Security and Trust	A solution would have to be made in order for one's vote to be private and the system must be secure in order to prevent vote fraud.	Alison	KwaZulu -Natal		retired
	2025-09-19 17:14:04	Not fully	Security and Trust	A solution would have to be made in order for one's vote to be private and the system must be secure in order to prevent vote fraud.	Alison	KwaZulu -Natal		retired
	2025-09-19 17:30:18	Not fully	Security and Trust	I do not support the Electronic Voting Policy as proposed because my top concern is security and trust. South Africa's democracy depends on guaranteeing a free and secret vote. If electronic voting is tied to digital IDs and fingerprints, citizens cannot be assured that their choices remain anonymous. This opens the door to intimidation, manipulation, or suppression, destroying public trust in the IEC and the electoral process. Computers can also be hacked, and without a transparent, voter-verifiable paper trail, ordinary citizens cannot independently check that results are correct. Trust is built on transparency and accountability, not blind faith in a digital system. Electronic voting should not be implemented until safeguards are guaranteed, such as a verifiable paper audit trail, independent oversight, and clear protection of voter anonymity.	Gezina	Eastern Cape		unemployed individual
	2025-09-20 05:49:55	Not fully	Security and Trust	My concerns: - Security and Trust – Access for All South Africans – Practical Implementation – Transparency – Legal Requirements – Voter and Staff Preparation – Privacy and Data Protection – Infrastructure Needs	Wilna	North West		retired
	2025-09-20 06:39:39	Not fully	Security and Trust	I dont trust that the system willl be programmed correctly. It can still be rigged. Our privacy needs to be protected.	Cobus			
	2025-09-20 07:00:52	Not fully	Security and Trust	If electronic voting system is not 100% secured by n legitimate private institution ,the integrity of the system can be manipulated	Joe	Gauteng		retired
	2025-09-20 07:22:18	Not fully	Security and Trust	It's disappointing and infuriating that the highest crimes, thefts, and embezzlement occurs with our ministers or candidates appointed to protect and care for society. They're either convicted criminals or should be. Voting becomes increasingly difficult, because one party is more corrupt than the other. South Africa is becoming like all those poor African countries, sadly.	Samacia	Western Cape		employed individual
	2025-09-20 08:57:48	Not fully	Security and Trust	A working electronic system has more major benefits with proper design and administration, than continuing with the cumbersome and weak, paper system. And in my view can be more validated than the current process. The electronic process is globally widely used. And has secure tamper proof "secrecy factors". Which must be incorporated into the new SA system.	Anthony	Western Cape		retired

	2025-09-21 12:10:56	Not fully	Security and Trust	In theory it is a good idea, but how workable it would be is open to debate with the dangers of hacking. Also the number of political parties must be pared down. Ridiculous amount of parties set up to gain their 15 minutes of fame and get only a handful of votes thereby diluting the whole voting process.	Aletta	Gauteng		retired
	2025-09-21 12:23:11	Not fully	Security and Trust	South Africa has the opportunity to modernise its electoral process through electronic voting (e-voting), but a cautious and inclusive approach is needed. A hybrid system that combines digital verification with a paper ballot audit trail is the best way forward, ensuring both efficiency and trust. International experience shows this works. Countries such as Germany, Canada and the Netherlands use electronic systems to speed up verification and counting, while paper ballots provide transparency and an independent audit trail. This dual model balances innovation with accountability. Key benefits include: Security and Trust: Digital ID and biometric checks prevent multiple voting, while paper ballots remain available for independent recounts. Transparency: A physical audit trail upholds the principle of the secret ballot and allows observers to verify results. Accessibility: Electronic processes suit urban and tech-literate voters, while paper ensures inclusion for rural and elderly communities. Practical Rollout: Phased implementation builds public confidence and allows system refinement. Legal Compliance: A hybrid model aligns with constitutional guarantees of secrecy, fairness, and transparency. This approach protects against digital risks while improving efficiency and accessibility. By adopting a hybrid system, South Africa can strengthen democratic integrity, modernise responsibly, and follow proven international best practice.	Neil	Western Cape		employed individual
	2025-09-21 16:32:49	Not fully	Security and Trust	It does seem to me that an electronic sysyem will open election results to even more rigging than with the current manual paper based system	Gerald	Gauteng		self-employed

	2025-09-16 09:03:28	Not fully	Privacy and Data Protection	Basically the list of issues should include all of the above. It is a good idea in theory, but unfortunately there will be major security concerns. Data protection definitely being the major risk and this would be data for all South Africans, local and international. Security and trust. When last did I trust the ANC with anything? Never. I'm not going to start now and especially not with my personal information that can be hacked. Even though it's already a possibility as these days everything is registered online. Access to all? They still have problems having access to all and that's still on the paper method.	Elmarie			
	2025-09-16 09:12:09	Not fully	Privacy and Data Protection	Voting is supposed to be private. How will choices be kept private? The system needs to be setup so that your fingerprint is required to be able to vote. But the selection screen should be scrambled so that your choice can not be linked to the fingerprint.	Grant	Western Cape		employed individual
	2025-09-16 09:24:25	Not fully	Privacy and Data Protection	Provided it is tamper proof then OK - but with the corruption of the current ANC government this may lead to irregularities and fraud	Neville	Western Cape		retired
	2025-09-16 09:25:46	Not fully	Privacy and Data Protection	There needs to be safeguards built into the legislation to protect individual voters against privacy infringements especially by 'BigBrother' governmental agencies	Bill	KwaZulu -Natal		retired
	2025-09-16 09:29:14	Not fully	Privacy and Data Protection	This system is about the information security, implementation and the system efficiency. Security of infomation is paramount. No government can know who voted for who. This information will be completely abused in the hans of for example an ANC or MK government (proven to be so even without electrinic voting). The system must work and be tested so a phased approach will probably needed and learning done in local by-elections for example to tests its affectiveness. Efficincy should be way higher than voting poll station done manually and it will save a great deal of time and money when well implemented. It will also allow for far greater ease of access enabeling and encouraging many more people to vote. Imagine you can just go to a bank or other enable counter with fingerprint or eye security systems in place and vote - and then go home. It will improve voter turn out for sure which is what every dmocracy can and must encourage. WIth a good administration and system this will be a true step forward for democracy. But in the wrong hands without provacy and security safegaurds it willbe a disaster in Africa where government over reach is almost first nature to polititians and autocrats.	Alan	Gauteng		business owner
	2025-09-16 09:29:22	Not fully	Privacy and Data Protection	Keeping voter information secure Protecting voter anonymity Managing election data responsibly In addition, this online voting needs to be open to all South Africans, not the privileged few.	Karin	Western Cape		unemployed individual
	2025-09-16 09:34:44	Not fully	Privacy and Data Protection	I do not support the implementation of digital ID's as this provides to much power to the government. 	2025-09-16 22:35:29	Not fully	Privacy and Data Protection	I support the idea of digital voting, and am a firm believer that technology should be fully utilized as far as safe and possible. I do though agree that such digital voting process should first be ensured to be anonymous and safe, to not jeopardize or expose the voter in any way. That would assure a free and fair voting process.	M	Western Cape		employed individual
	2025-09-16 23:05:41	Not fully	Privacy and Data Protection	It is an excellent idea in theory, hence my 'not fully' proviso. It is the practical application that concerns me. I am worried that there will be insufficient security around the system. There is going to be a huge lack of voter trust. There is currently too much corruption occurring in government, add to the mix voter trust .. How will it be accessed by all South Africans should the trust element be addressed? How will the system be practically implemented? I know that if you remove the human element, the potential for corruption is reduced... so explain how this will be dealt with. How will the whole electronic voting work to ensure a transparent process - and thereby gaining voter trust? And legal requirements such as POPIA and so on? You will all have your work cut out ensuring that staff are prepared - the voters are more intelligent than they are given credit for.. it's the staff readiness and potential apathy that concerns me.. And then finally we have slow internet and electricity issues in this country, how will you address this? So, as I said - a good idea in theory...	Susan	Eastern Cape		self-employed
	2025-09-16 23:11:20	Not fully	Privacy and Data Protection	It is not necessary to record who voted for what party. In a conventional vote, you identify yourself and then you have the right (a form) to vote in secret. The same principle can easily apply to a voting system. You identify yourself using biometrics AND ARE THEN GIVEN A VOTING TOKEN to vote with in secret. Once exercised it becomes void. That way there is no room for manipulation. Simple and easy to program.	Philip	Gauteng		employed individual

	2025-09-17 07:32:50	Not fully	Privacy and Data Protection	I support the adoption of digital mechanisms that facilitate secure and convenient access to the electoral system. Digital voting provides an opportunity to introduce robust safeguards that reduce the risk of fraud and electoral manipulation. It is, however, imperative that the digital identifiers used for voter authentication are protected through stringent security measures and maintained in strict confidence. While the replacement of traditional identification documentation with digital verification is a progressive development, the integrity of the process requires that both voting and verification procedures are encrypted at source. This will ensure the highest levels of protection, confidentiality, and public trust in the electoral process.	lee	Gauteng		self-employed

	2025-09-17 12:42:42	Not fully	Privacy and Data Protection	all of the above reasons apply not enough information on it. doubt the security and trust of process/transparency open to abuse will they know who voted for whom thereby intimidate. in a society as corrupt as ours not much can be trusted. how will everyone get digitised often these ideas are good for law abiding citizens but not for the corrupt and manipulative	Terry			retired

	2025-09-17 12:59:47	Not fully	Privacy and Data Protection		Paul	Western Cape		retired
	2025-09-17 13:30:07	Not fully	Privacy and Data Protection	As noted in various comments, this govt is utterly corrupt, unscrupulous and ruthless; it will stop at virtually nothing to retain power. It is therefore very dangerous to put such a powerful tool in the hands of a lawless govt with leanings towards social dictatorship and which would not hesitate to access the data to alter election result or intimidate indivuals who voted against it. I would support this system only if it's bomb-proof against any means to access its data, and IF IT IS REGULARLY CHECKED BY INDEPENDENT COMPANIES TO ENSURE it stays bomb-proof.	Paul	KwaZulu -Natal		retired
	2025-09-17 15:03:21	Not fully	Privacy and Data Protection	e-voting could work in a country with competent administration, solid county-wide internet, proper system design, proper message encryption between terminal and host. Every voters information would have to be captured to a host system in a private and secure manner. This data would have to be kept secure and backed up with unimpeachable reliability and security between elections. Host systems would have to be hack-proof, This is a job for real professional management. SITA - the awful warning. And how shall it work in offline mode? will that even be considered? A proper system design must take online and offline conditions safely into account, I love Dr Schreiber's enthusiasm that digital IDs are the key to all sorts of systems, but relying on this form of identity to access rickety systems is dangerous and threatens the reliability and user trust of all digital ID related processing. Considering the current prevailing Mafia mindset in the country, the corruption, tender fraud and entitlement, lack of respect for the law and a toothless justice system - I would say - e-voting? maybe some time in the distant future when the current self-serving corrupt leadership has died out - if it is replaced with a more service oriented crop of public servants with more commitment to the common good, it could be a good idea, Even those states in the USA that use voting machines do not seem to be without controversy.	Barry	Western Cape		retired
	2025-09-17 15:27:56	Not fully	Privacy and Data Protection	The fact that government can see who people voted for is a concern and the manipulation thereof. Otherwise a great concept	Freda	KwaZulu -Natal		retired
	2025-09-17 15:56:57	Not fully	Privacy and Data Protection	Voting should be annonomous to ensure freedom and fairness. Furthermore, with this, there is no supervision to enforce voting circumstances free of interference e.g an elder person can be forced to vote a certain way as there is no supervision to ensure he/she vote his free will	Elizabeth	Gauteng		employed individual

	2025-09-18 07:08:32	Not fully	Privacy and Data Protection	I love the idea of going digital. But to fully support it, it should still anonymize the voters. I'm implemented well I believe it can be great.	George	Gauteng		employed individual
	2025-09-18 07:20:48	Not fully	Privacy and Data Protection	I will support the bill about going digital by voting electronically only if who I voted for remains a secret	Hennie	KwaZulu -Natal		retired
	2025-09-18 07:37:10	Not fully	Privacy and Data Protection	Regardless of whether or not it's electronic, someone can ALWAYS manipulate the results. And I don't like the fact that the government can see who voted for who. However, I do think that it will help us a lot as we don't have to stand in queues for so long, and that might motivate more people to vote. Being able to vote from your own home would be the ultimate of course. But the government must be transparent and the security of the system must be up to date at all times. 	2025-09-19 08:55:11	Not fully	Privacy and Data Protection	First off… I believe not everyone should be allowed to vote… Do you have a tax number? No? Sorry you cant vote. If you do not contribute to the economy, you should be at the mercy of those that do… Then electronic voting is not a bad idea at its core. The problem comes in at how the voting system is set up or designed… As a web developer myself, I know for a fact that if intentionally designed, the system can track whether you have voted, without being able to know who you voted for… So there is no valid reason why the government should have access to data such as who is voting for who… But if you take into account that the whole world is moving into a direction of CBDC’s and surveillance of the general public via many means… It is clear as day that they will intentionally design the system to also track who you vote for. Then as for rigging… it is very easy to design a system to allow someone to manipulate data. And as such before we do not have trust in government, my vote is against it. 	2025-09-30 11:14:36	Not fully	Privacy and Data Protection	With the great amountof distrust in the coalition government due to corruption, it is of big concern how one's data will be used and shared and how advance is the system that is going to be used to ensure that there will be full guarantee of protection against cyber attacks. Their is also a distrust in the IEC that this body are more aligned with political parties than being an independent organisation.	Shahieda			
▼ **Access for All South Africans**	**82**							
	2025-09-16 07:50:58	Not fully	Access for All South Africans	While I applaud Minister Schreiber's efforts to move the country into the 1st world. I believe that e-voting will not work in South Africa. We do not have internet connection throughout the country. Does this mean that where there is no internet, voting is done as it is now, or is the information now stored on a computer drive, to be sent to some sort of centre for analysis? If it is the latter, this will be fraught with opportunity for fraud and skulduggery We also have a huge number of South Africans that cannot even use a bank card and don't understand the banking process, how will they understand this voting process? Our banks have some of the best electronic systems in the world with unbelievable security measures and they still experience fraud, along with their customers. I cannot envisage a ANC Government program being nearly as safe and secure as that of the financial institutions who spend millions, and employ the best of the best in this regard Can Minister Schreiber advise as to how many highly qualified IT and Annalists they will be employing for this venture? If it is a contract that is awarded to an ANC connected Company, Mmm we all know how that works Perhaps a better solution would be some sort of facial recognition system. Home Affairs must identify that you are a legal South African registered with home affairs. Once confirmed then you are given a ballot paper to register your vote I am not a computer guy but it is just a thought, again I think we will have an internet problem. Home Affairs systems are continually off line or so slow it takes a day. Will the system in conjunction with the IEC be any better. I doubt it Let's be honest, we are still a 4th world country where many of the citizens cannot read and write, that includes Government Ministers and Officials A great idea and concept, but it will not work	Garth	Gauteng		business owner
	2025-09-16 08:24:29	Not fully	Access for All South Africans	participation is already an issue, and this would exclude further	Dennis Bailey	KwaZulu-Natal		retired
	2025-09-16 09:03:11	Not fully	Access for All South Africans	I don't think we have the security capabilities to do this effectively. Besides which, since we didn't listen to Jay Naidoo in the first Mandela administration, we do not a have widespread digital literacy in South Africa	Rodney	Gauteng		self-employed
	2025-09-16 09:21:18	Not fully	Access for All South Africans	I dont fully endorse electronic electronics because many South Africans dont have access to electronic equipment and also the verifications of such voters may be lacking, so perhaps a dual run should be put in place and test the feasibility of such an election process. 	2025-09-17 16:11:57	Not fully	Access for All South Africans	Completely and wholeheartedly support electronic voting. Biggest concern is how it would be implemented especially for those who are not fully illiterate. Could the systems employed by banks not be used for electronic voting? Password protected and access gained by taking a selfie (facial recognition). The number you have registered with is the only number you can use to cast your vote. Should you loose the number you need to go "in-store" with an affidavit from the police that your phone was stolen/lost. If you go to your service provider you can retain your number - this should all be part of the voter education. Once the number and id has been used the system kicks you out. The amount of political parties should be limited - it is absolutely ridiculous how long the ballot paper was with the last voting. People were queing till after 11h00 at some of the polls and were assured that they would be able to vote. A lot of people we spoke to gave up because the ques were just too long every time they went back. In estates you can ask the estates to assist for all homeowners and tenants to vote inside the estate. They already have the residents biometrics. For the elderly my heart bleeds because they cannot stand for so long and many have impairements or illness. Could the banks and churches not assist here. A week before the nation votes all elderly people are invited to vote according to their birth years for instance anyone born between 1920 - 1945 and then 1946 - 1956 and so on. Old age homes can assist their elderly to vote and provide tea and coffee and refreshments. The same apply for the churches. Employers can have their staff vote at work by going according to the alphabet. There are so many ways to ensure everybody gets the opportunity to vote. Schools can also assist by having learners who have already turned 18 to vote at the school using biometrics (as they will have applied for them for their 1st id's already). Nobody has to que anywhere.	Michelle	Gauteng		employed individual

	2025-09-16 16:05:05	Not fully	Transparency	Dit lyk na 'n goeie idee, maar blykbaar is daar steeds geleentheid vir bedrog en konkelary. Daar kort na my mening groter deursigtigheid en absoluut betroubare, goed opgeleide amptenary. As die huidige sisteem vervang word, moet dit immers wees met 'n báie beter een.	Dolly	Western Cape		retired
	2025-09-16 16:49:16	Not fully	Transparency	There is too great of a human factor still involved in the voting process it is open for so much corruption and tge payment schedule for the people working for IEC is not very organised its very crazy and we have to be given time to go to our own voting stations we are not even considered	Delicia	Western Cape		retired
	2025-09-16 17:05:35	Not fully	Transparency	The problem with electronic voting is as stated there is room for manipulation and in South Africa , It is very possible if the required outcome is not achieved. This needs to be neutralised before full support.	Tyran	Mpumal anga		retired
	2025-09-16 17:23:03	Not fully	Transparency	If we did not have so much corruption in SA, this could actually be very beneficial. And, our general IT platforms that have been introduced are lacking, so we are very far behind implementing any electronic voting platform. As it stands, I think electronic voting is only a good idea for the disabled and elderly to participate in for convenience.	Alicia	Western Cape		employed individual
	2025-09-16 17:30:22	Not fully	Transparency	I do support this change, however not fully. If it works by fingerprints then it's a great idea. The only problem is as you've mentioned that there will be no privacy if who I voted for this promoting or intimidating the voter	Dawna			
	2025-09-16 19:11:21	Not fully	Transparency	What system will be used? Has it been used in other countries and proved to have no back doors for manipulation by whoever is in control.	Christopher	KwaZulu -Natal		retired
	2025-09-16 19:16:36	Not fully	Transparency	I do support something like this, but I think that the software used should be open source. So that all parties can look through the code and make sure there are no manipulation of votes. Then I also think the voter details which will be stored should be encrypted with SHA-256 to make sure nobody votes twice. Something unique should be added to the details which can not change for that person, but which can be varified by voting officials, before hashing. This is to hide voter details from political parties, etc. to stop fear of somebody knowing who you voted for.	Jan	Free State		self-employed
	2025-09-16 19:40:34	Not fully	Transparency	I am concerned about the protection of my right to vote in secret, whether all South Africans will have access to this, the potential of electronic vote rigging, and whether an electronic voting system will be to the benefit of South Africans in totality. I have not seen any assurances that puts me at ease that this is the way to go. I do like the idea that we can vote much faster than what is currently happening, and that a person will only be able to vote once, with no possibility of cheating.	Alta	Western Cape		business owner

	2025-09-17 08:38:22	Not fully	Transparency	I fully support electronic voting system - it males sense and saves a lot of time. BUT: I do have concerns regarding the secrecy of my vote - I do not trust the SA system enough to trust that my registering to vote and my actual vote will be separate and my vote anonymous; Furthermore I have concerns about vote rigging. Any auditor will tell you that it is extremely difficult to audit a computer system for what happens between input and output. And since voting is per definition anonymous, manipulation of the program will be extremely difficult to track. There was actually a very good movie in this regard long ago. Also nobody, nobody should have access to results BEFORE the close of the polls. If we can get foolproof (is that possible) assurance that the system will be safe and sound (and Schreiber is a politician, his word is not worth a lot and he is temporary) , then I will support it in full.	Piet	Western Cape		business owner
	2025-09-17 08:42:53	Not fully	Transparency	Electronic manipulation of original vote, abusive use of id's of people that did not vote as well as invalid id's e.g. of deceased, not processed, too young and bogus id's . This is one of several concerns of transparency in an environment where there is an increasing distrust of political agenda's and dishonesty / lack of values by those that are in positions of power. 	2025-09-17 17:06:59	Not fully	Transparency	To ensure that every smallest detail of an electronic voting system is fully transparent, it is absolutely essential that the following is adhered to: 1. Absolutely not one single proprietary component may be used 2. All components, be it software or hardware equipment, but be open sourced and inspectable 3. Only in person validation of voter status and voting must be allowed, no proxy or other methods. 4. A dual system of voting must be employed. A voter casts the same vote twice. If not, the system warns the user of the discrepancy and unless both systems match, the vote is not recorded. 5. Once a voter has been validated, the only way forward is to vote, but no id validation is done on the device, so a vote can never be traced and it fully anonymous. There may be other requirements, but without the above, the e-voting system will be dead is the water before it's even started.	Roland	Western Cape		business owner
	2025-09-17 17:11:20	Not fully	Transparency	Worried it’s not secure enough too many hackers out there, what security is in place to guaranteed ID fraud/ leakage not going to happen. Will the voter system only allow 1 vote per ID number… so many questions here	Luane	Gauteng		retired

	2025-09-18 09:07:44	Not fully	Transparency	As a South African I suggest that the voting process should go digital because the current system is not as reliable as it use to be due to parties not wanting to let go of power but manipulate the process even when the IEC have measures to mitigate that situation but I also think that they are infiltrated, corrupted by the system as well.	Mpiyakhe	Gauteng		unemployed individual
	2025-09-18 09:28:14	Not fully	Transparency	I believe the counting and announcing of votes in a digital system should be handled independently of government. If the same people who run the system also control the results, the public won’t trust it. An independent body, with outside observers and audits, would go a long way to building security and trust, ensuring transparency, and protecting privacy and data. It also fits with the legal requirement that our elections be free and fair, while keeping the practical side clear — the process must be simple enough for voters to see it’s fair, but strong enough to stand up to tampering. 	2025-09-16 14:12:04	Not fully	Other	I recently had to replace my ID document as my wallet was stolen by a pick-pocket. It took almost 6 months to replace and I established that the problem was to do with my lack of fingerprints. Attempts were made to obtain these when I applied for a new card and the application eventually got stuck in the 'Fingerprints department'. The card was eventually issued but I don't have fingerprints so would not be able to vote if these were required at Election time. My photograph on the card is a good likeness but would this be acceptable for voting. I'm sure that there are many elderly people (I'm almost 84) in my position, who would be excluded from voting due to the lack of fingerprints. I was put through the fingerprinting process 3 or 4 times before the officials realised that I have none and that they were wasting their time trying to record them.	Anthony Roger	Western Cape		retired
	2025-09-16 14:12:57	Not fully	Other	Not good for Govt to view who voted which way, and criminals employed everywhere, will manipulate the outcome to suit the government.	Celia	KwaZulu -Natal		retired
	2025-09-16 14:44:01	Not fully	Other	I do support it as long as there are a good security system attached to it and that no party will be able to manipulate any outcome. We definitely do not need loop holes.	Miranda	Gauteng		retired
	2025-09-16 17:50:38	Not fully	Other	Electronic voting in principal should be faster more secure and cost the tax payer less. My concern are mainly Government competence to reach all of the latter. Don't trust the current bureaucracy to keep this in budget, and will most probably be used as another vehicle for corruption. Skills to manage the system; Keeping the system up and making it easier for a citizen to vote digitally, than polling stations. Two government website this year have given me endless hassles. DOL (Department Of Labour) website was off for 3 months earlier this year. Was logged out of my CIPC (Companies and Intellectual Property Commission) https://www.cipc.co.za/ and https://www.bizportal.gov.za/ account for 2 months as it is imposable to make contact with any support.	Christo	Gauteng		business owner
	2025-09-16 18:55:03	Not fully	Other	If this is finger print or Retina based then I can agree with this, under condition that Cyber Security is of the highest possible degree and run by Leon Schreiber, who has done a phenomenal job at Home Affairs, so I would trust him with this. I would not trust this if it is run by the ANC /IEC as there is simply way too much corruption from Top to Bottom. At the last elections, I saw boxes and boxes and boxes of voting papers thrown in the bushes. and when I went to report this at SAPS, I was told they can do nothing about it. This can not happen again.	Tracy	Western Cape		retired

	2025-09-17 12:15:26	Not fully	Other	The statement that South Africa intends to introduce an electronic voting system for the next elections (likely referring to the 2029 national polls, as e-voting has been ruled out for the 2026 local government elections) is based on ongoing discussions by the Independent Electoral Commission (IEC). The IEC hosted a conference in March 2025 and released a policy discussion document inviting public input until September 2025, exploring potential implementation without a firm commitment yet. While you mentioned no major concerns, evaluating the attached points in the context of the current Government of National Unity (GNU)—often criticized for inefficiencies, corruption scandals, persistent infrastructure failures like load shedding, and slow service delivery—highlights potential risks that could amplify challenges. Below, I weigh each point with benefits and drawbacks, drawing on the IEC's discussions and broader South African realities. ### Security and Trust **Benefits**: E-voting could incorporate advanced measures like encryption, blockchain, and biometric authentication to reduce human errors in manual counting and enhance vote integrity, potentially building trust if audited independently. Countries like Estonia have shown that robust systems can maintain security even in digitally advanced societies. **Drawbacks in Government Context**: The GNU's track record of cybersecurity lapses—such as data breaches in government departments and unaddressed vulnerabilities in state IT systems—raises doubts about safeguarding against hacking or tampering. Public trust is already low due to past election glitches (e.g., 2024 results board freezes) and perceptions of corruption, with 52% of South Africans concerned about hacking risks. An inept administration might outsource to unreliable vendors, leading to scandals like those in the DRC, where rushed e-voting eroded confidence. This could fuel allegations of manipulation, especially in a polarized political landscape.	Keith	Gauteng		self-employed
	2025-09-17 14:11:07	Not fully	Other	Digital ID is a globalist agenda and therefore part of the complete loss of our freedoms. Using our fingerprints takes away those freedoms but the concept of electronic control via other means is not a bad concept.	Alex	Western Cape		self-employed

	2025-09-17 16:25:37	Not fully	Other	The system is in theory good but only in a country free from corruption . Our electronic system lends itself to open house to fiddle with votes. Don't tell me about all the security in place - history has shown that no system is safe - someone will find a way to gain access and we know what that will mean we are not ready for such a change. The current system is laborious and not ideal but in the current state of things it is preferable with less chance of outside interference. Only when we rid the country of the current state of affairs it remains the better of the proposed system	Peter	Northern Cape		
	2025-09-17 17:55:43	Not fully	Other	Response to the Electronic Voting Bill: Agree, But With Conditions While the move toward electronic voting may offer efficiency and modernization, it must be approached with rigorous safeguards. I agree with the intent — but only if the following demands are met: - Independent audits of all digital systems: No system should be trusted blindly. Regular, third-party audits are essential to ensure integrity, detect tampering, and maintain public confidence. Open-source code for voting platforms: Transparency is non-negotiable. If the code is open, experts can inspect it for backdoors, vulnerabilities, or manipulation logic. Closed systems breed suspicion. Strict data anonymization protocols: Biometric verification must never compromise voter privacy. The system must guarantee that no vote can be traced back to an individual — ever. Offline fallback systems to prevent disenfranchisement: Digital infrastructure can fail — or be sabotaged. A secure, manual fallback ensures no voter is disenfranchised due to outages, cyberattacks, or deliberate interference. Public oversight boards with cross-party representation: Trust comes from balance. Oversight must include voices from across the political spectrum, civil society, and technical experts — not just government insiders. --- Without these conditions, electronic voting risks becoming a tool of control rather than empowerment. The technology is powerful — but so is the temptation to misuse it. Safeguards must come first.	Richard

	2025-09-21 06:53:40	Not fully	Infrastructure Needs	I can see this being another tender disaster. Spending millions to develop or buy a computer system that can do voting, that thrn doesn't work. The new Dept of home Affairs system is constantly crashing and off line leading to huge delays. Why would this be any different? And what about load shedding, will the elections be cancelled because there isn't any power? The current way is slow, but it works, and it is safe and secure for citizens to use.	Barbara	KwaZulu-Natal		employed individual
	2025-09-21 21:43:25	Not fully	Infrastructure Needs	The IEC is PRO ANC, EFF, and MK. I would not trust them at all.	Louise	Gauteng		Non-profit
	2025-09-23 12:03:39	Not fully	Infrastructure Needs	The digital divide is real in South Africa; many people still lack stable internet, devices, or even reliable electricity. That risks disenfranchisement. • The track record with technology in elections has had issues (e.g. devices malfunctioning) and trust is fragile. • There is risk that costs of setting up a secure system could be very high, and the system could require constant maintenance, which might strain budget or lead to cut-corners. • If the system is flawed, the downside is big: loss of trust in democracy, claims of fraud, possible legal challenges. So unless I saw solid evidence that all those "musts" above will be met (audit trails, inclusion, infrastructure, oversight, transparency), I would vote no or vote yes conditionally (meaning "yes, but only if all these safeguards are put in place, and only after a pilot or phased roll-out"	Tsholo	Gauteng		employed individual
