	2026-09-14 14:39:30	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	South Africans have dealt with poor maintenance and corruption in eskom for years. We were constantly told to use less power to protect the grid. Now we have to pay for using less? That is extremely unfair. Fixed fees will unduly burden ordinary consumers in an already difficult economy. Currently if you cannot afford to pay a certain amount you can in theory switch off a geyser or turn off appliances to use less power. Fixed fees take that option away. Access to electricity is a right and eskom is walking over the people it should serve. Rather eskom and the municipalities should look at their own spending and address corruption, which is where most of the money is lost. Stop punishing consumers. We are already struggling enough as is.	L	employed individual

	2026-09-14 14:45:20	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	We should not be penalized for taking preventative measures to ensure constant electrical supply and at the same time, lessening the burden on the grid by using solar generated power.	Kathleen	business owner
	2026-09-14 14:51:11	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	No, no, no. We went to the expense of installing solar, with proper licenced electricians, for safety, and now we must be penalised? To be more green and off the grid? It is your ANC government through corruption, inefficiency and lack of maintenance that caused this problem. Of load shedding. Now we citizens are expected to pay for it? We are tax payers and rate payers, we expect decent, qualified public workers, with high standards. It is 2026 for Heaven's sake. We are supposedly not classed as 3rd world anymore. But what we got was cadre employment, tender rigging and corruption. We citizens say enough is enough. We are not going to take this anymore. Come November 4th, we will show you.	Avril	business owner

	2026-09-14 14:51:23	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	NO to more costs to subsidise escom greed and incompetence NO NO NO NO	S	
	2026-09-14 14:51:24	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	NO to more costs to subsidise escom greed and incompetence NO NO NO NO	S	
	2026-09-14 14:57:13	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	As a law-abiding citizen, I invested in a rooftop solar system to cope with constant power outages after Eskom repeatedly asked the public for assistance. Now, it feels as though law-abiding citizens are being punished for stepping up to help. It is entirely unjust to target household solar users while millions of illegal connections go unaddressed and municipalities owe an estimated R119 billion to the utility. Eskom needs to resolve its severe internal management problems, curb electricity theft, and collect its outstanding debts before squeezing humble citizens and pensioners in this country, who simply tried to keep their lights on.	James	employed individual
	2026-09-14 14:57:56	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It remains disgusting that an organization who were ultimately responsible for consumers looking for alternatives to interrupted power supply, now insist on wanting to penalize these same consumers for taking the mentioned alternative actions. The very bases has come with us for years of theft, money laundering and poor or non-existent management at Eskom, now being thrust back on the society through greed to raise further funding in order to continue the blatant theft and money laundering that is the original reason for the financial woes of ESKOM. The protection of the poor consumers is also proving to be inadequate and one cannot but wonder if this body has also been taken over by the same syndicates who have been using Eskom as a channel for steeling public money for years.	Gordon	retired
	2026-09-14 15:04:26	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	We already pay sin, income, provisional, vat, PAYE amongst many other taxes. the one alternative we choose to spend the little money we've saved up, in order to get relief from the broken systems that we're allowed by Eskom to over charge us for a basic right to electricity is also being bid to charge us another tax. Diabolical if you ask me, the sa economy is now begging the little working class to seek relief by migrating, cz honestly why do we work if all our money goes to the government??	Mandisa	employed individual
	2026-09-14 15:07:35	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This is Eskom's problem, not the consumers. If you people hadn't replaced competent staff with your DUMB BEE staff, this problem wouldn't exist. The fact that you are forcing everyone to take their own initiatives, resulting in residents relying less on Eskom, doesn't give you the right to look for other unethical ways to screw South Africans. If you don't provide service, YOU DON'T GET PAID!!! If the ANC wants to act like a tyranny, it will not end well.	Greg	
	2026-09-14 15:14:25	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I am deeply concerned about the potential impact of the Electricity Sector Market Transformation Position Paper on ordinary South African households. As a citizen and consumer, I believe our energy policies should make electricity more affordable, reliable and accessible - not place an increasing financial burden on households that are already struggling with the rising cost of living. I am particularly concerned about the potential introduction of higher fixed charges and other costs that could penalise households that have invested in alternative energy solutions such as solar, while households that cannot afford solar may face increasing electricity costs and municipal charges. South Africans should not be placed in a position where they are financially disadvantaged regardless of whether they invest in solar or remain dependent on the grid. I support a fair and sustainable electricity system that encourages responsible energy use and investment in alternative energy, while protecting ordinary households from excessive costs. I therefore urge the Department to carefully consider the financial impact of these proposed changes on households, pensioners and people living on fixed or limited incomes, and to ensure that any changes to the electricity market are transparent, affordable, equitable and in the best interests of South African consumers. Please take the concerns of ordinary citizens seriously before implementing policies that could have a long-term impact on household finances.	Ailsa	retired

	2026-09-14 15:25:03	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The cost of electricity is ballooning every year. People are voting with their investments to invest in solar, and now the same revenue is expected to be sourced from a decreased customer base. If people want to go off grid and escape the high fixed rates being set up they must be free to do so. Those who don't have solar and are dependent on the grid for power must pay a fair rate and not an exorbitant one. Taxes for other services by greedy municipalities should not be gleaned from power payments. We are tired of the state capture taking place under the ANC who has taken so much from citizens for over 30years. It needs to stop!	Marianna	employed individual

	2026-09-14 15:41:36	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The South African consumer has been abandoned. There is no compensation for the crippling financial losses caused by relentless load shedding—no relief for the heightened security risks, the spoiled food, the cold water taps, or the destruction of electrical equipment from power surges. Citizens have been forced to fend for themselves, taking desperate measures to survive. This collapse is the direct result of the cANCer government’s incompetence and its blatant disregard for constitutional obligations to the people of South Africa. Alternatives had to be pursued at enormous personal cost—solar power among them. Yet, instead of acknowledging failure, the government now seeks to impose punitive fees on those who dared to find solutions, masking its own policy disasters behind unjust charges.	George	unemployed individual
	2026-09-14 15:45:31	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Absolutely nonsense that ESKOM could not provide because of corruption, overstaffing, over paying the caders, causing loadshedding, costing the country billions if not trillions, and then to come and say, effectively, pay again, because you made plans to overcome our inadequacy.	Pienaar	retired

	2026-09-15 14:05:58	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	First, we were punished with loadshedding which damaged businesses and jobs. It literally put our lives at risk with failing security systems, lack of road lighting and non-functioning traffic lights. It also affected those with medical needs, so we spent inordinate amounts of money to balance these scales, first with generators and then with various renewable energy solutions, which, ironically, were subsidized by Eskom in the early days. Our failing electricity infrastructure is through no fault of the consumer, but a combination of the failures of ESKOM through lack of foresight, planning and corruption as well as SAPS' inability to maintain law and order in preventing infrastructure theft - also due mostly to corruption within their ranks. So the entire failure sits within the government structures, not within the general populace. There was always enough money for ESKOM, but it has been looted and exacerbated by their absolute inability to collect their outstanding revenues, so now, the compliant society is punished again with added charges, instead of targeting their own corrupt underbelly and non-compliant users? EKOM has just posted a R30,3 BILLION profit, which just highlights my point above. There is sufficient money, if it is not looted first. Focus on stabilizing the supply, collecting your revenue and targeting your looters and then no adjustments are necessary.	Colin	self-employed
	2026-09-15 14:12:35	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	First, we were punished with load shedding which damaged businesses and jobs. 	2026-09-15 14:13:20	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	While I appreciate that the energy market needs to be restructured, I don't believe that this Policy Paper has been well thought it. Or perhaps it has and they intend to push everyone over the edge of their budgets. My opinion is that Eskom should be unbundled, and IPP's given equal opportunity to provide energy into the grid, so that true market competition forces begin to ease the burden on the consumer, and corruption is reduced as a result. My concern is that the Policy Paper looks to punish solar users for assisting Eskom by reducing load on the grid, and looks to punish the non-solar user via municipalities hiking tariffs to recover lost revenue	Duncan	business owner
	2026-09-15 14:33:01	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	We pay very high costs and taxes all around. Government needs to find ways to supply power at lower costs. that way they will get more business.	Hassan	employed individual

	2026-09-15 15:32:57	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	As a residential consumer supplied directly by Eskom, I support a fair contribution toward legitimate network costs. However, households that invested significant private capital in solar and battery systems should not be subjected to disproportionate fixed charges that undermine those investments. Any network charges should be transparent, cost-reflective, and based on actual infrastructure costs rather than recovery of lost electricity sales revenue.	Syntyché	employed individual
	2026-09-15 15:41:46	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The audacity of the Department of Energy to set up the consumer (solar or dependent on the grid) for even more price hikes is unbelievable, especially after years of economic damage done by loadshedding and corruption. Healthy competition is supposed to benefit the consumer, not cripple it. It is due to massive government corruption, huge government salaries, poorly maintained infrastructure and a government with weak policies that has failed its people leaving them without employment, that South Africa sits in this economic situation. Change the leaders. Insist on integrity and substance in what politician and governments say, not window dressing statements. Furthermore industry - often owned by the wealthy - should not be favoured in the electrical tariffs it receives compared with the average household. And if we are trying encourage people to work from home, how is this tariff that will hit captive consumers the hardest, not going to damage small home based industries and lower employment even more. Furthermore, why are solar users penalised - for thinking ahead?	Justin

	2026-09-16 08:41:33	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I urge the government to: Stop penalising private capital and solar investment through punitive fixed grid fees. Protect captive consumers by preventing municipalities from imposing excessive tariffs on non-solar homes to recover revenue lost from industrial and off-grid customers. Make wholesale electricity-market reforms transparent and ensure that ordinary households are not left paying the bill. South Africans need fair, affordable, and transparent energy policies that encourage investment rather than punish consumers who seek reliable alternatives.	Abdul Maalik	employed individual
	2026-09-16 08:42:52	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The living God, creator of the heavens and earth gave every one the sun, why does the South African government think that they can penalize its citizens that have, for the majority, gone into debt to generate clean, safe and sustainable power where the government has failed to provide a service. If generating solar power was such a threat to the governments gravy train, that they are continuously plundering for their personal benefits, why do they allow for the technology to be accessible. They again want a certain sector of the citizens to pay for an aged and dilapidated grid, that they will never correct, and put those households and business under more financial strain than they are already. Does anyone really believe that the government will charge every single house that uses electricity and get that right. That means that the rich, middle class and lower class down to informal settlements all need to pay the same penalty, I think not. This entire proposed paper is there to simply keep a cash cow going for the thieves in government and their mafia in the procurement and tender processes, feeding their own pockets. The citizens of this country need to stand together and not pay one cent to this scheme, just like the majority did to the e-toll scheme.	Basil	employed individual
	2026-09-16 08:56:09	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Please address the theft by those in charge and stop making us pay for their inefficiency and lack of accountability.	Michelle

	2026-09-16 09:59:51	No I do not	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	I am a home-based, specialised mining auditor with international clients, and for the past 17 years, because of ESKOM's incompetent management of electricity supply and load shedding (in direct contravention of its "monopoly licence"), I have been forced to spend increasing amounts of my own, and my business's, money on solar and battery power to ensure a continuing power supply, so I could maintain contact with my international clients. I am outraged that the Government is proposing to penalise me with extra charges because I could not rely on ESKOM to give me a continuous power supply. The Government, through ESKOM, is trying to bully me, and thousands of other small business owners, into paying for the Govenbment and ESKOM's incompetent, corruption-riddled manangement of power supply. Remove ESKOM's monopoly and allow the free market to supply power to the country. Let the Private Sector take over the Grid and make financial arrangements for the Govenrment to subsidise the Private Sector those parts of supply for the indigent (the "free" power for the poor).	Arend	self-employed

	2026-09-16 10:10:30	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	A “Sun Tax” on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. The “Captive Ratepayer Trap” and Municipal Insolvency: Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance. Wholesale Price Volatility and Market Power Manipulation: Eskom Generation still controls the overwhelming majority of South Africa’s dispatchable baseload power. In unbundled spot markets worldwide, dominant suppliers have engaged in economic or physical withholding to artificially spike market clearing prices. Without hard statutory bid caps and aggressive oversight, wholesale price volatility will be passed directly down to retail consumers. Severe Conflicts of Interest Within the NTCSA: Consolidating transmission grid ownership (TNSP), system dispatch (SO), market clearing (MO), and legacy state off-take contracts (CPA) within a single entity under Eskom Holdings creates structural conflicts of interest. NTCSA could face internal commercial pressure to favour Eskom assets or delay third-party grid connections. Premature Market Launch Amid Unresolved Municipal Debt: Opening an advanced wholesale market with mandatory imbalance penalties in 2026/2027 while municipal distribution debt to Eskom remains unresolved is premature. Financially distressed municipalities that fail prudential credit requirements will be excluded from trading platforms, creating a divided nation of well-supplied metros and failing, power-starved rural councils. 	2026-09-16 11:18:22	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	With all of the raised and very valid concerns in the picture, it is clearly premature to effect this restructuring. Eskom and local municipalities clearly do not have any of their ducks in a row yet to conduct this reatructure in a proper, fair and ecnomically sound way. The consumers at the bottom of the line will carry the worst brunt as usual, when we have been forced to take measures into our own hands to secure more reliable power generation, now we're going to be penalised for that. It is completely unfair and unjust for rate payers to pay for the incompetence, corruption and bad planning on the part of the public sector.	Andrea	employed individual
	2026-09-16 11:19:26	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I object to the mandatory fixed solar charges, captive consumer price hikes, and municipal revenue losses as it will will hurt ordinary households and small businesses. Once again the honest ordinary household and small business is the target of unscrupulous government actions.	Annolien	retired

	2026-09-16 13:20:11	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom was a state of the art energy producer renowned across Southern Africa just four decades ago. Since then wholescale corruption at all levels, infrastructure collapse, mismanagement, and years of lies, have corroded what was once a perfectly running, efficient, and affordable service. It is an injustice that ordinary residents, - who have used their saving to instal solar panels just to cook, use a fridge, heater and have lights, - should have to bear the costs of Eskom mismanagement. The extra costs for poorer citizens will add unnecessary living expenses to their already tight budgets. The minister of energy should hang his head in shame!	Jean	employed individual
	2026-09-16 13:44:45	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Stop the "Sun Tax": Do not penalise private capital and solar investments with punitive fixed grid fees. Protect Captive Consumers: Bar municipalities from hiking tariffs on non-solar homes to cover lost revenue from industrial and off-grid defection. Transparency First: Ensure wholesale market reforms do not leave everyday households footing the bill for grid infrastructure. Furthermore, the mention of the electricity grid being under stress/strain would cause the conclusion that less electricity being drawn from the grid would be better and even safer for all, especially when users/consumers have a separate power/generating supply other than the main grid. It causes one to think what the big idea is around these parts of the world.	Christiaan	unemployed individual
	2026-09-16 14:00:12	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This is crazy! What a damned cheek!! 	2026-09-16 16:51:52	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I respectfully oppose the adoption of the South African Wholesale Electricity Market (SAWEM) framework in its current form. The proposed market design fails to safeguard affordability for households and small businesses, while simultaneously threatening the financial stability of municipalities that rely on electricity surpluses to cross-subsidize indigent communities. Allowing large users to bypass municipal distribution networks undermines the constitutional obligation to ensure equitable access to basic services. Furthermore, the SAWEM paper does not adequately address Eskom’s entrenched market power. Without strict oversight and transparent governance, Eskom Generation could distort competition, leaving consumers exposed to higher tariffs and slowing the transition to renewable energy. The absence of clear provisions for environmental protection and just transition principles raises serious compliance concerns, as the framework risks locking South Africa into costly and polluting generation technologies. For these reasons, I urge regulators to reject the SAWEM proposal in its current form and to initiate a more transparent, consultative process that prioritizes affordability, municipal sustainability, and alignment with South Africa’s just energy transition commitments.	Bert	employed individual

	2026-09-16 17:15:06	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom has proven itself to be an unreliable supplier. Now it will be an unreliable supplier and an even more expensive one. It is the only company I know of tells its customers not to use its product (reduce consumption). Now that we are, they realise the drop in their revenue needs to be catered for by other means. I fail to see why the public is held ransom for their inability to effectively and efficiently run that organisation. They allowed rampant theft by suppliers and employess for many years which cost billions. Furthermore, with electricity being one of the key inputs in many organisations, this cost will merely be passed on to the consumer (who will already be paying a higher cost for power). This will further create an atmosphere of negative sentiment when it comes to a business friendly South Africa. This will have an adverse effect on foreign and local investment, with the ripple effect being a further increase in unemployment. I would like to know what the SARB has to say as to how this affects their inflation targets - and their stance on resultant interest rates.	Keith	retired

	2026-09-16 17:31:18	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Why is it that those of us who are too 'wealthy' to get any sort of grant have to always bear the cost of the inefficiency of the government departments? After working all my years and still paying tax, 'they' still want to fleece those of us who are watching our pennies so as not to be a burden on others and to meet our obligations!	Bernice	retired
	2026-09-16 17:46:24	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	1. Stop the "Sun Tax": Do not penalise private capital and solar investments with punitive fixed grid fees. 2. Protect Captive Consumers: Bar municipalities from hiking tariffs on non-solar homes to cover lost revenue from industrial and off-grid defection. 3. Transparency First: Ensure wholesale market reforms do not leave everyday households footing the bill for grid infrastructure. 4. Electricity and water tariffs have increased dramatically over the past few years, while residents continue to experience service delivery failures and power supply challenges. It is difficult to accept additional levies and fixed charges, especially when many people have invested significant amounts in solar systems to reduce their dependence on the grid. If I use electricity from the grid, I fully expect to pay for the energy I consume. However, charging households substantial fixed fees regardless of consumption feels unfair, particularly when consumers are already carrying the cost of backup power and renewable energy systems. Citizens should not be expected to absorb the financial consequences of poor planning, mismanagement, or inefficiencies within government and utility providers. People who invest in solar are helping to reduce demand on the network. Instead of being penalized with additional charges, there should be a fair and transparent approach that balances the costs of maintaining the grid with the contributions made by customers who generate some of their own electricity.	Petrus	employed individual
	2026-09-16 18:01:03	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It cannot be that the state first encouraged users to go solar and now wants to punish them for having done so. Eskom did not end up in the state it is because of consumers but because of miss management. The responsibility should lie in the government not the small middle class citizen that managed to afford to put solar on his roof to ensure better reliability of electricity so he can work and live. No putting extra charge on him because he is having solar is unfair and unethical.	Sascha	employed individual
	2026-09-16 18:57:57	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I am tired of subsidising the poor when Govt wastes trillions on schemes to enrich themselves, make poor ideological decisions with out sorting our economy so that the majority can secure jobs excluding the elderly, disabled and like reasonable reasons. Grow the economy and become competitive against the world, so that we can improve conditions for all citizens being able to provide the necessities of life for themselves and their families, so that we once again regain our self respect, good, morals and ethics, responsible, respectful and honest people, and get the bad eggs to court and convicted within three years, to clean up and get rid of criminals and hooligans. Eskom issues are pathetic, making a profit when they have been baled on numerous occasions by Govt freebies and claim that they have solved loadshedding, rubbish. The private funding by large & small companies including homeowners have contributed hugely towards the reduction of loadshedding. Your power production is still below of former targets, ad the humongous increases imposed on all people in South Africa is making us poorer by the day, and our Rand is worthless against other major currencies in the world and our GDP growth is pathetically low. Yet PEPS and those elected are grossly overpaid for their qualifications and contribution to South Africa as a whole	Theo	retired

	2026-09-16 19:06:23	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The so called "anti-free-riding" policy is irrational as citizens that have saved ESCOM and the State from continued “load shedding”/ darkness are no punished. In all other countries green alternatives energy generation are subsidized with incentives. The generation of clean power has saved the State embarrassment and costly extensions to the System (generation and distribution). To counter this, the government and municipalities are shifting tariffs toward unavoidable, high fixed monthly capacity charge forcing citizens to pay a heavy fixed connection fees regardless of how little power you draw. Using less is the only protection the poor has and this is now taken from them! The poor will be trapped paying skyrocketing fixed tariffs, forced basic service charges, and heavier cross-subsidies to keep failing municipal distribution networks afloat.	Jan	self-employed

	2026-09-17 09:48:11	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Stop the "Sun Tax": Do not penalise private capital and solar investments with punitive fixed grid fees. A short while ago, government was subsidizing domestic installation and use of solar infrastructure, in order to lighten the load on the electricity grid. Now government wants to take punitive action against those that have conformed to this policy and all because it allowed decades of corruption, theft and treasonous self-sabotage within Eskom! The Constitution requires policy to be consistent, logical and fair. This new phase of government energy policy cannot be seen in isolation - it is clearly a dangerous mutation of the same thread of policy, which will undermine the evolution of South Africa's path towards the adoption of sustainable, non-polluting energy sources. It is not logical, it is not consistent (since it marks a reversal of a sound evolutionary path) and is therefore unfair, which brings it into conflict with the Constitution. Protect Captive Consumers: Bar municipalities from hiking tariffs on non-solar homes to cover lost revenue from industrial and off-grid defection. Transparency First: Ensure wholesale market reforms do not leave everyday households footing the bill for grid infrastructure.	Evert	retired
	2026-09-17 10:00:29	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Object: Mandatory fixed solar charges are laughable - sun power cost the consumer nothing, nature provides it for free. The consumer who has to save up funds to be able to afford it pays a huge amount to get it installed. Furthermore, it is CLEAN energy consumption which is beneficial to all. Captive consumer price hikes, and municipal revenue losses will hurt ordinary households and small businesses. This is just another way to put more and more pressure on ordinary households and small businesses that can hardly come by and urgently need to save money because of almost all expenses are rising to impossible tariffs. Solar and wind power is the way to go if one pays reverence to the earth, embrace it instead of using it as a means to collect more money for those in charge!	Nicola	retired

	2026-09-17 12:28:21	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I oppose the proposed Electricity Sector Market Transformation Position Paper in its current form. South Africans have invested their own money in solar, batteries and energy efficiency because the existing electricity system has failed to provide reliable and affordable power. It is unfair to then penalize these households with higher fixed network charges because they have reduced their reliance on the grid. Electricity reform should encourage competition, private generation, energy efficiency and consumer choice, not undermine the incentive for households to invest in their own electricity supply. Network costs should be recovered fairly and transparently, but consumers who use less grid electricity should not effectively be punished for doing so. I therefore oppose the Position Paper and call for policies that protect residential consumers and encourage, rather than discourage, investment in private electricity generation.	Dane	
	2026-09-17 12:46:45	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Solar Power Belongs to THE ALMIGHTY CREATOR AND THEREFORE IS FREELY ACCESSIBLE TO ALL ON EARTH.....NO GOVERNMENT CAN LAY CLAIM TO IT AND CHARGE PEOPLE FOR USING IT.....IT IS YET ANOTHER UNBEARABLE TOTALLY UNACCEPTABLE PLOY TO CATCH US THE HAPLESS CITIZENS SO THAT THE GOVERNMENT CAN FILL THEIR OWN POCKETS!!!!!WE GET NOTHNG AS IT IS FOR ALLLLL THE EXORBITANT TAXES WE ALRDY PAY!!!! 	2026-09-17 17:34:03	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	ESKOM, the ANC and the SA government in general - read ANC - has made a complete MESS of our electricity supply. The result was that people and businesses fixed the problem, which is the ONLY reason we don't have load shedding, ESKOM cannot generate sufficient electricity. To now punish those people who fixed the problem is outrageous. Frankly EVERY SINGLE ANC LEADER IN GOVERNMENT, EMPLOYED BY GOVERNMENT, IN PARLIAMENT etc, should be paying the difference between the cost of generation and the depleted number of customers, which makes electricity completely unaffordable in this country. Eskom should be privatised IMMEDIATELY. The ANC is not fit to run a bath - oh yes, Panyaza is quite good at that - let alone our parasitals and a country!	Catherine	business owner

	2026-09-18 10:37:13	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Let me understand the history of how this all came to be: first Eskom got rid of all their senior staff that have the knowledge and experience that could have been passed down to new employees because they were white (Eskom shooting themselves in the foot). A few years later Eskom is staffed with incompetent people because they got rid of transfer of knowledge and are now hiring purely on BEE stats and not on merit. Fast forward to now: corruption, over staffing, over paying of salaries and too few clever staff results in too little money for Eskom to cover all their “expenses”, including the free electricity the politicians promised the poor. Now for where we find ourselves complaining about: Eskom thinks they can Invoice for NOTHING! If this law comes to light, I will start sending Eskom monthly invoices from my little retail shop, because Eskom has the possibility of walking past my shop, walking in and buying something. Are they out of their minds? You cannot invoice for nothing! Andre de Ruyter predicted this situation correctly: raise the price of electricity too much and you will lose your customers who subsidize the free electricity for the poor. Eskom, YOU fu*ked up! 	2026-09-18 12:18:53	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	So the government also wishes to charge the citzen for the sun . Those people are clawns and after stealing all the money in the state coffers have to find new ways of stealing more money . Southafricans should think very carefully in whom to vote next . Enough of thieves running our country	Pedro	retired
	2026-09-18 12:27:01	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	For years Eskom has been charging the household consumer more whilst having different rates for business. We have been carrying the cost for certain areas that are exempt from paying anything. We must be vigilant and careful with unbundling, alternative structures and we the people must choose what is best for us. We need coal and nuclear power stations urgently.	Ruth	retired
	2026-09-18 12:50:23	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		colin	retired

	2026-09-18 12:55:33	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The rise of home solar is the direct result of Eskom mismanagement, theft and inefficiency. As we stand today many, many areas have regular power failures. Forget about the inconvenience. South Africa needs a working economy. A working economy needs electricity. Solar home owners are not free riders. They have invested huge capital to keep this country afloat in a time that Eskom only cared about huge salaries and making sure contractors could earn ludicrous fees. In short stealing the country clean. This is Eskom. Taxing home solar installations is an approach carefully designed to have more money in the dwindling pot for much the same motivations. If Eskom was vaguely honest, they would have offered rebates for solar installations, cut top salaries by half and cut top management by half. That would show some intention.	Gerhardus	
	2026-09-18 13:15:59	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		Hugo	employed individual
	2026-09-18 13:34:29	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I paid for my solar installation because Eskom could not surplus power. I refuse to pay additional charges to anyone. They dont own the sun. They have no right to punish people for providing their own power to have lights. Alarms, etc. Enough milking if citizens. We are tired of this nonsense. If Eskom sells less power they must cut their staff compliments. Ditto for municipalities. No sympathy for thieves.	Theresa	retired
	2026-09-18 13:40:22	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Solar systems still need maintenance and have failures, this still consume funds. Insurance are already a burdan. Why pay for something that is already included in electric prices? Why must users always get stepped on for mis management and failures of eskom and every aspect in this country? I also want to start a buseness where I can charge anyone without delivering. Get the funds from your buddies that do not pay and have ilegal connections. We still pay for systems and struggle with current prices in the market, so this will eventually demand a tax revolt. Enough is enough!!!	Andre	employed individual

	2026-09-18 15:34:25	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	For decades, Eskom's failures have placed an enormous burden on South African households, businesses, and contributed to job losses. Load shedding, unreliable supply, escalating electricity costs, and well-documented governance and corruption failures have forced ordinary South Africans to seek alternative energy solutions at their own expense. Now, the prospect of imposing mandatory fixed charges on customers who have invested in their own solar systems raises a fundamental question: why should consumers be financially penalised for taking responsibility for their own energy security? I support market competition, Eskom unbundling, and open wholesale trading as important components of reform that can encourage private investment and strengthen South Africa's energy market. I never thought I would see this day, but government has failed the people it is meant to serve. I object to mandatory fixed solar charges that risk undermining the very investment in alternative energy that consumers were forced to make. #unaffordableenergypricesZA Enough is enough!	Aneesa

	2026-09-18 16:18:52	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	90% of us, no probably more, got solar due to load shedding and unreliable service due to lack and planning from Eskom. Now you want to tax us on a expense that is directly caused and originated from Eskom Pay back the solar installation + interest incl money that went to the bank for financing and then maybe you have a leg to stand on. Also SA is part of the Kyoto Protocol to reduce greenhouse gasses, below an AI summary of this tax initiative - In South Africa's case, where coal still dominates generation, discouraging rooftop solar is hard to defend on climate or energy-security grounds. A better approach would be to keep the cross-subsidy goal but design it so solar owners still have a clear reason to invest — for example, a modest fixed grid fee instead of a punitive tax on solar generation. So: not necessarily "immoral," but from an energy-policy perspective it looks counterproductive if the country wants cleaner power, less load-shedding, and faster private investment in generation. 	2026-09-19 09:24:23	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The south Africa government will find anything,anyway to charge south Africans on anything. Everything is already expensive, leave us alone to us the energy from the sun,did you as the government create the sun?!No you didn't. So leave us out of your evil agenda. We dont want to be part of it.	Olivia	unemployed individual
	2026-09-19 09:51:11	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I object to parts of the SAWEM roadmap published by the Department of Electricity and Energy, for these reasons: 1. Fixed grid charges penalise people who acted in good faith. Households and businesses invested in rooftop solar during load shedding, some with tax incentives the state provided. Shifting to high, unavoidable fixed fees undermines the value of those investments after the fact and weakens trust in future energy policy. 2. Fixed charges are regressive and discourage efficiency. A large fixed fee takes a bigger share of low-income and low-usage households' budgets. It also weakens the incentive to save electricity, which conflicts with South Africa's climate and energy-efficiency commitments. 3. The "anti-free-riding" charge must be based on evidence. Grid charges should come from independent, published cost-of-service studies approved by NERSA. Those studies should also count the benefits solar brings to the grid, such as lower peak demand and reduced strain during shortages. 4. Ordinary consumers become captive ratepayers. If large users above the threshold can leave municipal grids, households and small businesses will be left to carry municipal revenue gaps and legacy cross-subsidies. That risks a spiral of rising tariffs for those least able to pay. 5. Eskom's dominance creates market-power risk. Opening a market while one producer controls most generation invites price manipulation and volatility. Retail consumers need firm protections before trading begins. 6. Separating "wires" from "retail" may add costs, not remove them. Separate fees, extra margins and admin costs could raise bills, especially where municipalities lack the capacity to implement the change well. I request that the Department: • set grid charges through transparent, NERSA-approved cost studies that account for solar's benefits, and phase them in gradually • protect existing solar investments with grandfathering or transitional arrangements • require large users who leave municipal grids to pay a fair share of legacy costs and cross-subsidies • establish an independent market operator, active market monitoring and price safeguards before trading starts • protect indigent households and free basic electricity • publish a socio-economic impact assessment of the effect on household tariffs	Johannes	self-employed
	2026-09-19 10:42:18	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Since 1994 the ANC have sent every state -owned entity into poverty with their mismanagement, theft, corruption, looting and lack of proper maintenance. We are all aware how the ANC and their Cadres have used Eskom as their private bank with coal mafias, selling to countries for less that SA Citizens have had to pay and forcing rate and tax paying citizens to cover the cost of their incompetence and now they want to push it even further with this nonsense. Any person who votes for the ANC in the next election needs to be deported as they do not have the right to have a vote on the way this country moves forward. 32 years of the ANC pillaging the South African public - well NO MORE!!! 	2026-09-19 15:39:12	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	All SOE's critical to the wellbeing of South Africa were hollowed out during the State Capture Era, including Eskom. Many promises were made but large-scale corruption continues. True to form, we the citizens, are again being financially punished for bad governance. I therefore STRONGLY object to 1) Private capital and solar investments being penalized with punitive fixed grid fees. 2) If large industrial and commercial users who exceed the demand are allowed to exit the municipal supply and buy cheaper power, this will strip municipalities of the revenue required to subsidize indigent households. Captive consumers must therefore be PROTECTED by BARRING municipalities from hiking tariffs on non-solar homes to cover lost revenue from industrial and off-grid defection. 3) Transparency: To ensure wholesale market reforms DO NOT leave everyday households having to foot the bill for grid infrastructure. 4) Opening the envisaged advanced wholesale market in 2026/2027 is premature while growing municipal distribution debt to Eskom remains unresolved.	Theresa	retired

	2026-09-20 21:27:40	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation.	Andrew	employed individual
	2026-09-21 03:05:35	No I do not	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	I support genuine competition in South Africa's electricity market, but I do not support using tariff reform as a mechanism to penalise households and businesses that have invested their own money to reduce their dependence on Eskom. For years, South Africans were encouraged to reduce electricity consumption, invest in energy-efficient appliances, use alternative energy sources and install solar and batteries. Many people responded exactly as they were asked to. Now that those investments are reducing their electricity purchases, it would be fundamentally unfair to simply replace lost consumption revenue with ever-increasing fixed charges. There is a legitimate argument that someone connected to the grid should contribute towards the cost of maintaining the network, even if they generate some of their own electricity. But that does not mean the customer should be charged in a way that removes the financial benefit of reducing demand or going partially off-grid. The principle should be simple: pay for the infrastructure and services you actually use, and pay in proportion to the costs you impose on the system. If a household draws heavily from the grid during peak demand, it makes sense that it should contribute more to the capacity required to support that demand. Conversely, someone who uses very little grid electricity, generates their own power and shifts consumption away from peak periods should not be treated in the same way. A much better tariff model would therefore consider actual measured maximum demand and time of use. Peak-period demand should carry an appropriate network-capacity cost, while electricity used during periods of low demand should be cheaper. That would encourage people with batteries, geysers and other controllable loads to shift consumption away from peak periods rather than simply charging everyone a large unavoidable monthly fee. This would also create the right incentives for solar and batteries. Instead of treating private investment in generation as a threat to the electricity system, government should make it economically beneficial for consumers to reduce peak demand and feed useful surplus electricity into the grid. Competition is potentially the most important part of this reform. If consumers and businesses have genuine alternatives, electricity suppliers and distributors will have to compete on price, reliability and service rather than simply passing inefficient costs on to customers. The government's own reform programme says the purpose of moving toward a more competitive electricity market is to reduce reliance on a single supplier and improve efficiency, investment and competition. But competition cannot be meaningful if customers remain effectively captive to fixed charges that make it uneconomic to reduce their dependence on the grid. Eskom and the distribution sector need to become more efficient, not simply find new ways to recover every rand of their existing cost structure from consumers. NERSA has already recognised the impact that changes to fixed charges can have on low-consumption households and has adopted phased approaches to some of these changes. Ultimately, South Africans should not be punished for becoming more energy efficient. If I spend my own money installing solar panels, batteries and efficient appliances, reducing my demand on the national grid should be rewarded—not turned into an excuse to charge me more. The goal should be to make electricity cheaper, more reliable and more competitive—not to protect an existing revenue model at the expense of consumers.	Rudie	
	2026-09-21 03:36:21	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This raises a serious question about fairness for ordinary residential electricity consumers. Two people can earn exactly the same salary yet face very different financial circumstances. Colleague earn the same income, but one lives in a government-subsidised house and the other own a property financed through the bank and must therefore pay rates, levies, bond repayments and other costs that he does not bear in the same way. Now consider electricity. The proposed market reforms appear to give large commercial and industrial users greater freedom to choose where they buy their electricity, while ordinary households remain “captive customers” of municipal or Eskom tariffs. At the same time, there is a move towards recovering a greater share of the electricity system’s fixed costs through charges that are less dependent on how much electricity a household actually uses. That creates a legitimate concern: what happens to the ordinary household that uses very little electricity but cannot afford to install solar panels, batteries or other forms of alternative generation? If wealthier consumers can increasingly reduce their dependence on the grid while lower- and middle-income households remain reliant on it, the cost of maintaining that grid must not simply be shifted onto those with the least ability to opt out. I am not opposed to people investing in solar power or choosing cheaper sources of electricity. The question is whether this transition is being designed fairly. Before ordinary consumers are asked to carry a greater share of fixed costs, there should be far greater transparency about Eskom’s operating costs, executive remuneration, bonuses, procurement practices, inefficiencies and the actual costs being recovered through tariffs. Electricity reform should promote competition and efficiency without creating a system in which those who cannot afford alternatives end up paying a disproportionate share of the transition’s costs. Those with the least choice should not automatically become those who carry the greatest burden.	QV	employed individual

	2026-09-22 06:41:20	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	There are a number of ways to move Eskom towards profitability: 1. Get rid of Cadre deployment; sadly most cadres are NOT qualified to engage in business leadership, never mind large business leadership 2. Scrap BBBEE in the State sector: we - the people - effectively OWN the SOE's. We demand accountability and the best expertise available. Get the best people for the job, based on experience and training and education. Do not base it on colour. The government has done this for 32 years and EVERYTHING has slowly but surely been reduced to being non profitable, crumbling infrastructure and loss of value. 3. End the "free electricity" campaign: while there is a place for giving the minimum amount of electricity for free to households that are actually indigent, the situation with areas like Soweto has spiralled out of control. The government - due to fear of losing votes - has NOT backed Eskom in enforcing payment by large groups of people. NOTING IS FOR FREE: If you give to one person, another has to pay. 4. The answer to Eskom and its problems is a much wider challenge: reduce red tape for SME's, increase security, fix the education system. All of these will reduce unemployment, increase DFE and make south africa wealthier. We need industrialization - but not funded by the handful of captive Eskom customers. It can ONLY be effective if real reform takes place; Clearly the current government is incapable of that. RSA is stagnating while our neighbouring countries are starting to thrive because they finally understand what induces growth. WAKE UP SA GOVERNMENT	Garth	business owner

	2026-09-25 13:35:00	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	A few points I'd like to make in my opposition: 1. Affordability and Above-inflation hikes. Escalation risk: Tariffs have historically outpaced inflation and household incomes. Consumers buy less electricity due to efficiency or solar, but face higher bills to cover fixed revenue. A punitive structure penalizes remaining grid-tied consumers instead of cutting utility bloat. 2. Complex Unbundled Bill Structures. Hidden costs: Splitting bills into energy, capacity, transmission, and municipal surcharges obscures total expenses.Fixed fee traps: Capacity and network charges force households to pay high baseline fees regardless of consumption.Municipal abuse: Allows local authorities to perpetuate inflated surcharges and cross-subsidies. 3. Unfunded Indigent Expansion & Subsidies. Math ain't mathing: Expanding free basic electricity (FBE) 4 to 6 times lacks a credible, non-fiscus funding model. Corruption risk: Municipalities already misallocate a vast percentage of indigent funds.Unfair shifts: Removing cross-subsidies threatens to spike prices for vulnerable rural and low-income users. 4. Industrial Special Agreements. Market distortion: Expanding low-tariff deals to broader industrial players shifts the cost burden back to residential and small business users.Transparency deficit: Criteria for choosing favored industrial beneficiaries remain opaque. 5. Weak Regulatory Enforcement. NERSA failures: New policies are meaningless if the regulator fails to enforce cost-of-supply studies and license compliance.Bad debt absorption: Policies must explicitly block legacy municipal and consumer debt from entering tariff calculations. I urge the Department to withdraw the current draft and revise it to prioritize consumer affordability, operational accountability, and transparent pricing structures.	Damian	employed individual

	2026-09-28 08:04:06	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. Insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. Require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households. Demand a binding, published transition roadmap that progressively lowers the eligibility threshold, ensuring retail market choice is expanded to ordinary households and SMMEs rather than remaining an exclusive corporate privilege. Require NERSA to implement mandatory tariff-parity benchmarks ensuring captive customer tariffs do not exceed wholesale-plus-efficient-delivery benchmark prices. Oppose any mechanism that uses captive household tariffs to recover stranded costs or uncompetitive legacy contract premiums. Demand mandatory cost-reflective bidding caps for any single generation entity that controls more than 20% of active dispatchable capacity in the market. Require full public transparency and real-time reporting of day-ahead and intra-day market bidding data to enable independent civil oversight. Mandate severe, legally enforceable financial penalties and license cancellations for participants found guilty of collusive bidding, capacity withholding, or market manipulation. Demand that the Department of Electricity and Energy, National Treasury, and SALGA establish a ring-fenced National Municipal Transition Mechanism before large commercial users are permitted to bypass municipal distribution accounts. Require municipal electricity distribution entities to ring-fence network maintenance budgets into dedicated accounts to prevent tariff revenue from being diverted into general municipal administrative expenses. Demand a transparent resolution framework for historical municipal bulk electricity debt that does not penalise paying ratepayers through inflated local tariffs. Demand that the five-year transition period for the full legal and operational independence of the NTCSA from Eskom Holdings be significantly shortened. Mandate strict statutory ring-fencing, independent board governance, and separate accounting between the Market Operator (MO) and the Central Purchasing Agency (CPA). Require an independent, external ombud mechanism to adjudicate grid access disputes, connection queue allocations, and dispatch fairness without regulatory delay. Demand the immediate publication of a clear, standardized licensing and remuneration framework for Independent Transmission Projects (ITPs) to crowd in private capital for grid expansion. Require transparent, non-discriminatory grid allocation rules that prevent transmission capacity hoarding by non-performing projects. Insist that re-dispatching and congestion management costs caused by network delays be borne by network service providers rather than passed on to retail consumers through balancing surcharges. 	2026-09-28 13:26:22	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This draft is Pure PROFITEERING!!!! A “Sun Tax” on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation.The “Captive Ratepayer Trap” and Municipal Insolvency: Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance.Wholesale Price Volatility and Market Power Manipulation: Eskom Generation still controls the overwhelming majority of South Africa’s dispatchable baseload power. In unbundled spot markets worldwide, dominant suppliers have engaged in economic or physical withholding to artificially spike market clearing prices. Without hard statutory bid caps and aggressive oversight, wholesale price volatility will be passed directly down to retail consumers.Severe Conflicts of Interest Within the NTCSA: Consolidating transmission grid ownership (TNSP), system dispatch (SO), market clearing (MO), and legacy state off-take contracts (CPA) within a single entity under Eskom Holdings creates structural conflicts of interest. NTCSA could face internal commercial pressure to favour Eskom assets or delay third-party grid connections.Premature Market Launch Amid Unresolved Municipal Debt: Opening an advanced wholesale market with mandatory imbalance penalties in 2026/2027 while municipal distribution debt to Eskom remains unresolved is premature. Financially distressed municipalities that fail prudential credit requirements will be excluded from trading platforms, creating a divided nation of well-supplied metros and failing, power-starved rural councils. 	2026-10-01 05:36:49	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Every past of this stinks of corruption. Every part of this has the little guy in the crosshairs and ends up paying exorbitant prices regardless of whether you have solar or not. Not to mention that the little guy ends up fitting the bill, once again, for the failure of the government. During load shedding we paid. Whether by replacing appliances due to power surges or otherwise. We pay to have solar installed to have a more constant supply of electricity and lessen the blows. After load shedding we continue to pay for their corruption causing continued collapse of what used to be a fully function system. We not pay for lost food because of the failing devices we needed to put on our on appliances to protect the appliances from loss and to “quality” that the insurance will pay for the appliance in the case of a surge. We continued to install our solar systems because our failed government allows their falling departments to keep pushing prices up for them to pocket more money and not fix their failures. All while we little people continue to have less and less money available at the end of the month. Rising fuel prices Rising electricity prices Rising food prices The fat politicians smile because their food and fuel is supplied by the little people. Pathetic. Start targeting politicians for their failures instead.	Aiden

	2026-10-01 12:41:46	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Over reach of perceived power and authority. Government has failed and trying to make the citizens pay more for those who don't. We are already over taxed.	Jason	unemployed individual
	2026-10-01 14:58:55	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Why tax the solar user? What did they do? Eskom is the one that messed up SA's power system. Eskom is the one that failed the nation. It is because of Eskom s failure and crazy high prices that companies and private people went to solar options. No you want to punish them and us the grid user for your negligence?	Dion	employed individual
	2026-10-01 18:09:34	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I support opening the electricity sector to competition. Ending Eskom's single-buyer monopoly, separating the networks from generation and trading, and letting private generators compete are overdue and will help to end load-shedding for good. I support the paper only with the following amendments. 1. No penalty on solar. The "anti-free-riding" principle must not become a tax on households and small businesses that generate their own power. Network charges must reflect the actual, audited cost of the connection, be phased in and be capped. A move to "high, unavoidable fixed monthly connection fees" is not acceptable. 2. Protect captive customers. Residential and small business users will stay captive on municipal networks while large users above 1 MW get access to the competitive market. Captive customers must not end up paying for the system while large users get the savings. Set a dated path that lowers the eligibility threshold so households and small businesses can also choose their supplier. 3. A truly independent transmission operator. NTCSA must be fully independent of Eskom's generation business, with published rules for grid access and no preferential treatment. 4. Market power. NERSA needs the capacity and the power to monitor and penalise price manipulation in the wholesale market from day one. 5. Municipal finances. Municipalities that rely on electricity sales to fund other services should be required to ring-fence electricity revenue and publish it, rather than pushing the cost of their own financial problems onto consumers through the tariff. Competition, not higher fixed charges, should be how prices come down.	Ockert	employed individual
	2026-10-02 09:49:41	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The mismanagement at Eskom has caused the problems. It was the number one utility in the world at the turn of the century. Making the general public and private enterprise fund amendments that could only lead to more concerns is wrong. However, if there is fair and open market participation whereby businesses can compete fairly and achieve reasonable returns to generate an economic and societal uplift in the power sector, then certain changes and restructuring is plausible provided enough public participation in the changes that do not end up penalizing tax payers and paying consumers.	Michael	
	2026-10-02 17:14:42	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	South Africa needs a free and open market to get out of the hole it's in. We had failing infrastructure due to rampant corruption and mismanagement which lead to ongoing load-sheddings. Because of this, many businesses and residents turned to solar, to create stability for themselves where Eskom failed. Now you want to penalise and tax those same businesses and people who were able to make a plan and break free from the monopoly. The idea of a "sun tax" is preposterous. Electricity prices have increased at a ridiculous rate for households, not because electricity has gotten more expensive, but because corruption and multi-million rand bonuses are expensive. A free and open market would give this country a fast-track to affordable, sustainable electricity.	Gavin	
	2026-10-03 13:26:01	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	We've spent our lives paying taxes and service tariffs. Now we saved up and got a solar system because Eskom failed us. Why should we be penalised further? Eskom is so corrupt and ineffecient and we have had to deal with you constantly increasing your salaries and giving yourself bonuses you Do Not deserve. Get your house in order! Before you start taxing the little sun that shines on others.	Lois	retired

	2026-08-26 12:15:40	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Major Consumer Concerns & Risks 1. The Risk of Sharp Tariff Hikes during Transition The Concern: Introducing competitive private generation often forces the legacy utility (Eskom) to spread its massive fixed operational and debt costs across a shrinking pool of standard municipal or residential customers. The Impact: Early stages of market transformation can trigger steep "cost-reflective" tariff increases to protect the state grid's financial viability, disproportionately impacting everyday household budgets. 2. Complex Multi-Trader Billing and "Confusion Costs" The Concern: Moving from a single vertical provider to a competitive open market introduces multiple independent power producers (IPPs), traders, and distributors. The Impact: Without rigid regulatory oversight, consumers may face confusing tiered pricing models, hidden transmission/wheeling service fees, and administrative bottlenecks when trying to resolve billing errors or service faults. 3. Threats to Free Basic Electricity (FBE) & Social Subsidies The Concern: Under a transformed, profit-driven competitive market, the mechanisms that fund cross-subsidies for low-income households and Free Basic Electricity (FBE) are heavily pressured. The Impact: Indigent consumers and vulnerable communities risk being priced out if the position paper fails to explicitly safeguard and ring-fence social electricity grants within the new market structure. 4. Municipal Financial Stability and Local Service Delivery The Concern: South African municipalities currently rely heavily on the surcharges and profit margins generated from re-selling Eskom electricity to fund other critical local services (e.g., waste management, road maintenance, and water infrastructure). The Impact: If large commercial and industrial consumers bypass local municipalities to buy directly from open-market traders, local municipal revenues will collapse, resulting in a severe decline in general local service delivery. 5. Grid Reliability and the "Cherry-Picking" of Lucrative Areas The Concern: Private entities naturally prioritize high-revenue, low-risk urban hubs and industrial corridors when upgrading infrastructure or offering competitive tariffs. The Impact: Rural, remote, or economically depressed areas may suffer from chronic underinvestment, leading to poorer infrastructure maintenance, slower fault response times, and an unequal "two-tier" energy network. 	2026-08-26 17:43:37	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer		Marthinus	employed individual
	2026-08-26 17:48:59	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Yes to competition. Yes to private generation. Yes to wheeling. Yes to independent traders. Yes to cost-reflective network charges. Yes to paying a fair price for maintaining the grid. But no to using regulated tariffs to preserve Eskom or municipal revenue at the expense of customers who have invested privately in generation and storage. And absolutely no to making households responsible for inefficiencies, historical debt, political failures or legacy costs that are unrelated to the actual cost of providing them with network services. I support the Department's objective of transforming South Africa's electricity market and moving away from the historical single-buyer model. However, I believe the success of this transformation should be measured not only by increased competition in wholesale electricity generation, but also by whether ordinary electricity consumers are protected from the unintended consequences of the transition. In particular, I am concerned that residential customers who invest in solar and battery storage may increasingly become subject to fixed or unavoidable charges designed primarily to compensate distributors for declining electricity sales. There is an important distinction between recovering the efficient cost of maintaining a network and recovering revenue that has been lost because consumers have become more energy efficient or have invested in alternative generation. I do recognise that grid-connected solar customers still use the network and therefore it is reasonable for them to contribute toward the cost of maintaining that network. However, such charges should be transparent, cost-reflective and non-discriminatory, and should not become a mechanism for protecting incumbent distributors from the competitive effects of distributed generation. If a residential consumer substantially reduces their electricity purchases through investment in solar and battery storage, what proportion of any resulting fixed or network charge represents the efficient cost of continuing to provide that consumer with network access? And what proportion represents recovery of revenue previously derived from electricity sales? Will the Department commit to ensuring that the latter does not become the basis for tariff design? Before implementing material changes to residential tariffs, how about we publish the methodology showing: - network cost - customer cost - capacity cost - metering cost - retail cost - municipal cross-subsidies - legacy and stranded costs	Michael	employed individual
	2026-08-26 17:55:00	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Over 32 years, this ANC led government has destroyed the world-class , in not leading electricity generation entity and they now want the consumer to pay the price. Splitting will not solve Eskom's poor financial management problem. In my my opinion, this splitting will make it worse and may be thew last nail in our gravely ill economy's coffin.	Richard	retired

	2026-08-27 09:27:28	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Citizens who spent private capital to solve the state's energy crisis will now face steep baseline connection taxes to subsidise legacy grid infrastructure and that is unfair and totally unacceptable. While large industrial corporations exceeding 1 MW will be permitted to bypass municipal lines to buy cheaper power directly on an open wholesale market, ordinary residential homes remain "captive" to local municipal tariffs. This leaves everyday households to foot the bill for municipal revenue shortfalls and cross-subsidies. Everyday households who opted to install solar etc. can not stand in for the Government's boo-boos for not being able to supply enough electricity. And the Eskom tariffs are, as it is, outrageous. Ek gaan dié in Afrikaans sê: geen onderhoud word aan die Eskom lyne of transformers gedoen nie, daarom is daar kort-kort outages en sit ons op die plase sonder krag. Maar jy betaal elke maand jou lynfooie en dit gaan ook kort-kort op terwyl geen onderhoud gedoen word nie. Dit moet stop. Hierdie hi-jacking deur die regering op mense se hard verdiende geld. 	2026-08-27 10:22:28	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	The only reason any of us have invested in Solar is to protect ourselves from the ongoing and likely perpetual incompetence of a parasitic state. If the state could distract themselves even momentarily from gorging themselves at the trough of our tax money they could possible supply electricity (and water). However, in the absence of that utopian vision, we must protect our homes and businesses. If the cost to us of mitigating the state's incompetence is additional taxation/tariffs then how are we supposed to continue paying the already high taxes to fund your lavish lifestyles? Assuming your interest is the maintenance of your theft based incomes from the pool of taxpayer money, logic (a rare and unusual thing in government) would hold that you should be protecting your tax base and not eroding it by pushing people to either leave, or once again find alternatives. Why not encourage the ability to sell in to the grid, and utilise that selling in process as an offset to additional charges? I know many of the words in this passage are likely too long for government officials, but I do hope that you can find a translator. Please leave taxpayers alone and perhaps source your income from the enormous, unregulated and untaxed so called "informal economy" who are running on inyokanyokas and steeling electricity, rather than forcing us to pay more. 	2026-08-27 15:24:35	No I do not	All of the above	Captive Consumer Tariff Protection	Small / Medium Business Owner (SMME)	It is unacceptable for those with solar to be forced to pay more especially since outages and the shortage of electricity is a concern for the government. Those with it are assisting yourselves that others not have these problems and they should be paid back the cost of the installation which was installed due to government not maintaining the electricity plants in the first place	Brenda	retired
	2026-08-27 15:35:32	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Do not penalize citizens for fixing Hoverment mistakes	John	retired
	2026-08-27 15:36:46	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	I do not support the Electricity Sector Market Transformation Position Paper in its present form. I support genuine competition, increased private generation and the reduction of Eskom's historic monopoly. However, I object to implementing the proposed market structure before adequate protections for ordinary residential and small-business consumers have been clearly defined and made enforceable. The Position Paper itself envisages that, during the transition, larger eligible customers will progressively be able to purchase electricity through the wholesale market or traders of their choice, while remaining customers, including small residential customers, will remain "captive" to the retail arm of their existing distribution company and will continue to pay regulated tariffs. This creates a serious risk of a two-tier electricity market. Large consumers may gain the benefits of competition and alternative procurement while households and small businesses remain unable to choose their electricity supplier. At the same time, the departure or reduced consumption of large customers may leave a smaller captive customer base carrying a disproportionate share of distribution costs, municipal electricity revenue requirements and existing cross-subsidies. I therefore object to residential consumers being treated as captive customers without clear statutory protections against unreasonable tariff increases and without a defined timetable for extending meaningful retail competition and consumer choice to them. I am also concerned that Eskom Generation will remain the dominant generator when the competitive market begins. The Position Paper itself recognises that Eskom Generation may retain sufficient market power to require continuing regulation. The market should not be opened until effective, independent and enforceable market-power safeguards are in place. Competition in name will not protect consumers if one participant remains capable of materially influencing market prices. Similarly, I am concerned about potential conflicts of interest within the NTCSA while competitive trading and market-administration functions remain associated with the same institutional structure. Ring-fencing, governance independence, transparent market rules and independent oversight should be established before the market becomes operational, rather than being developed after problems arise. The financial position of municipal electricity distributors is another major concern. The reform should not preserve municipal financial viability by shifting revenue shortfalls, inefficiencies, excessive losses, unpaid accounts or declining electricity sales onto captive residential consumers through higher unavoidable tariffs or network charges. Any separation of electricity charges into energy, network, retail or other components must be transparent and demonstrably cost-reflective. Consumers should be charged for the reasonable and efficiently incurred costs of the services and network capacity they actually use, rather than being required to compensate distributors simply because consumption patterns or the electricity market have changed. This principle is especially important for households and businesses that have invested their own capital in rooftop solar, batteries, energy efficiency and demand reduction. The new market structure should not retrospectively undermine legitimate private investment by replacing reduced electricity purchases with disproportionate fixed charges. Distributed generation and reduced demand can also provide system benefits, and those benefits should be recognised when tariffs are designed. I further object to proceeding without adequate safeguards against transmission constraints and congestion. Opening generation markets cannot deliver effective competition if new generators cannot obtain timely and non-discriminatory access to transmission capacity. Transmission expansion, transparent grid-capacity allocation and appropriate congestion-management rules should therefore be prerequisites for effective competition. I request that the final framework expressly provide for: * transparent, independently regulated and demonstrably cost-reflective network and retail tariffs; * protection of captive residential and small-business consumers against disproportionate tariff increases; * a defined pathway and timetable towards broader retail competition and consumer choice; * effective market-power controls applicable to Eskom Generation before competitive market operation; * genuine institutional independence and enforceable conflict-of-interest safeguards for the market operator and system operator; * protection against municipal revenue shortfalls and inefficiencies simply being transferred to captive electricity consumers; * fair treatment of consumers who have invested in rooftop solar, battery storage and energy efficiency; * transparent treatment of network costs, with charges reflecting the capacity and services actually required by each customer; and * sufficient transmission capacity and fair grid-access rules to allow genuine competition between generators. Market reform should increase competition, reduce costs, attract private investment and improve consumer choice. It should not replace one monopoly structure with a system in which ordinary households remain captive while larger customers obtain access to competitive electricity procurement. For these reasons, I object to the Position Paper in its present form and request that these consumer protections be incorporated before the proposed market structure is implemented. How dare the government penalise people who made an effort, who took the in itiative to cope with Eskoms diabolical mess. This should not happen.	Fern	
	2026-08-27 21:50:06	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	I'm against this paper because it doesn't speak about the poor communities. We have been begging Eskom for the flat rate as none our communities are able to buy electricity currently. Unemployment and cost of living are the main factors problem. Again if there's an open market for different companies to sell electricity that won't work because of greed and corruption. Solar system is also the cheapest way for the poor of the poorest but now it won't work when the community has to pay penalties. Can the government please propose bills that accommodates poor people.	Emma	unemployed individual
	2026-08-27 21:55:07	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	The current situation is not due to the rate paying citizens but the absolute theft and incompetence from Eskom and the Anc. Solar users were forced to find alternatives for our businesses and households on top of still paying for Eskom's non-existent service or respect for their customers. I would rather give up my Eskom connection and become completely self reliant!	Francois

	2026-08-28 06:34:06	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	I oppose the policy principle aiming to "discourage free riding" by imposing mandatory fixed monthly capacity and network charges on grid-connected solar users.This proposal represents a profound injustice to South African citizens and highlights a chronic pattern of the government overburdening the consumer while failing to deliver basic services effectively, efficiently, or adequately. 1. Penalising Private Solutions to State Failures South African households and businesses did not invest their hard-earned savings into rooftop solar and battery infrastructure as a luxury. They did so out of sheer necessity to protect their homes, livelihoods, and appliances from the devastating economic impacts of state-driven load shedding. For the state to now label these self-reliant citizens as "free riders" is a distortion of reality. Citizens used private capital to solve an energy crisis the government could not manage. Penalising this private initiative with a baseline connection tax is deeply unfair. 2. Shifting the Financial Burden of Institutional Inefficiency The argument that solar users are not paying their "fair share" of fixed network maintenance is an attempt to force consumers to cross-subsidise Eskom's legacy financial mismanagement and municipal revenue shortfalls. Consumers are continuously expected to pay more for a grid that has proven unreliable for over a decade. The state expects ratepayers to fund infrastructure maintenance, yet when those services are delivered, they are consistently inadequate. 3. Creating an Unfair "Captive Ratepayer" Trap The proposed framework allows large industrial corporations to bypass municipal lines and shop for cheaper power on an open wholesale market. Meanwhile, ordinary residential homes are locked into a "captive" relationship with local municipalities. This creates a predatory system where everyday citizens are left to foot the bill for failing municipal structures, while big industry escapes the burden. In conclusion, the South African consumer is already stretched to a breaking point by high inflation, rising living costs, and failing public infrastructure. The government cannot continue to treat the public as an bottomless ATM to fund institutional inefficiencies.I urge the Department to reject the imposition of fixed capacity charges on domestic solar users. The state should incentivise, rather than penalise, citizens who are actively reducing the strain on the national grid.	Nomzamo	employed individual
	2026-08-28 07:02:10	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	I am strongly opposed to the proposed approach of imposing additional fixed network and capacity charges on households and businesses that have invested substantially in their own electricity-generation capacity. While I accept that maintaining a national electricity network has a cost and that a fair tariff structure must recognise the cost of keeping grid capacity available, I do not believe that consumers who have invested their own money in solar, batteries and other alternative energy solutions should simply be labelled as “free riders” and required to carry an additional financial burden for a system that has been severely mismanaged for many years. There are several fundamental issues that need to be considered. 1. Consumers invested in solar because the state failed to provide reliable electricity For many years, South Africans were subjected to load-shedding as a direct consequence of failures within Eskom and the broader electricity system. Households and businesses had little choice but to invest their own capital in solar panels, inverters, batteries and other backup systems to protect themselves from the consequences of an unreliable public electricity supply. These investments were not made to avoid contributing to the electricity system. They were made because the system could no longer be relied upon. It is therefore difficult to accept the argument that these consumers are now “free riders” because they purchase less electricity from the grid. 2. Government actively encouraged private investment in solar This is particularly important. Government itself introduced financial incentives specifically to encourage private investment in renewable energy. For residential users, SARS provided a solar tax incentive allowing individuals to claim 25% of the cost of qualifying solar PV panels, subject to a maximum of R15,000, for qualifying installations during the 2024 year of assessment. For businesses, government substantially enhanced the renewable-energy tax incentive, allowing qualifying businesses to deduct 125% of the cost of qualifying renewable-energy assets upfront for a specified period. SARS explicitly stated that the purpose was to encourage greater private investment in renewable energy in response to South Africa's struggle to produce reliable electricity through the national grid. Government therefore cannot reasonably encourage taxpayers to invest their own money to reduce pressure on the national grid and subsequently penalise those same taxpayers because their investment has reduced their consumption from the grid. The policy message becomes contradictory: “Please invest your own money to solve the electricity crisis” followed by: “Because you have invested your own money and now consume less electricity from us, you must pay more to compensate for the grid.” That is neither fair nor conducive to investor or taxpayer confidence. 3. Eskom's problems were not caused by solar consumers The underlying problem is not that households installed solar. The underlying problem was the deterioration of Eskom's generation capacity, maintenance, governance and financial position over many years. It is therefore inappropriate to shift the consequences of those failures onto consumers who took responsible steps to protect themselves. If Eskom and the electricity system had been properly managed and maintained, there would have been far less incentive for households and businesses to spend billions of rands of their own money on alternative electricity supplies in the first place. 4. Municipal electricity tariffs raise an additional concern There is also a serious issue surrounding municipal electricity revenue. Municipalities purchase electricity from Eskom and resell it to consumers. Electricity revenue has become an important source of municipal income, and electricity surpluses have historically been used by municipalities to support other municipal functions. Consequently, where consumers reduce their electricity consumption through solar and battery installations, municipalities can experience a reduction in electricity-related revenue. The answer, however, cannot simply be to make households that have reduced their consumption pay additional fixed charges to compensate municipalities for lost revenue. Municipalities need to address their underlying financial and operational problems rather than effectively turning electricity consumers into a captive revenue source. 5. The taxpayer is already carrying an enormous burden This issue also has to be considered within the broader South African tax environment. South Africa has an exceptionally narrow tax base relative to the number of people who depend on government services and social support. SARS reports that tax revenue increased from R113.8 billion in 1994/95 to R1.855 trillion in 2024/25, while the tax-to-GDP ratio reached 25.1%. In 2025/26, SARS reported net revenue collections of approximately R2.01 trillion and a tax-to-GDP ratio of 25.9%. At the same time, only a relatively small proportion of the population carries the overwhelming majority of the personal income-tax burden. The solution to government and municipal financial problems cannot continually be to extract more money from the same compliant taxpayers. South Africans are already paying: personal income tax; VAT; fuel levies; municipal rates; electricity charges; water and sanitation charges; licence fees and other government charges; and, increasingly, private costs for services that the state should provide. Many taxpayers are effectively paying twice: once for the public service through taxation and tariffs, and again privately because the public service is unreliable. Examples include solar and batteries for electricity, boreholes and tanks for water, private security for personal safety, and private healthcare and education where public services are inadequate. 6. The “fair share” argument must work both ways If government wants to argue that grid-connected consumers must contribute to the fixed cost of maintaining the network, then consumers are equally entitled to ask: What is the fair value of the service being provided? If a consumer pays a substantial fixed charge for grid availability, that charge should be transparent, cost-reflective and demonstrably linked to the actual cost of maintaining the network. It should not become a mechanism for recovering lost municipal revenue, subsidising inefficiency, or protecting inefficient state-owned or municipal structures from competition. There should also be a clear distinction between: a legitimate cost-reflective network charge and a penalty imposed on consumers because they have reduced their dependence on an inefficient electricity supplier. Those are fundamentally different things. 7. Private generation should be encouraged, not discouraged South Africa needs more private investment in electricity generation, not less. Every household or business that installs solar: reduces pressure on the grid; reduces Eskom's generation requirements; reduces demand during peak periods; contributes to energy security; and reduces the need for additional public capital expenditure. If the policy response to this is to make private generation increasingly unattractive through additional unavoidable charges, government risks undermining precisely the investment it previously encouraged. That would be a serious policy contradiction. Conclusion I therefore believe that any proposed move towards mandatory fixed network or capacity charges must be subject to much greater scrutiny before being implemented. I would support a genuinely transparent and cost-reflective tariff structure where charges are demonstrably necessary to maintain the grid and are applied fairly across all users. I would not support a system that effectively penalises households and businesses for investing their own money in solar and batteries after y	Eddie	retired
	2026-08-28 07:12:05	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	There is already a monthly charge for availability, if you use electricity or not,. It is not justifiable to way the person down further who can support himself.	Sam	self-employed

	2026-08-28 07:34:30	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	The lying, ANC-corrupted government and Eskom claim to have solved the electricity crisis in South Africa. It has never been the case. Many ordinary consumers and businesses have installed solar power in one form or another, and THEY solved the electricity problem. We keep on being punished for solving a govt problem and decreased income for Eskom due to the lack of power delivery. Stop stealing from the citizens of South Africa! By the way, was the position of the Minister of Electricity not supposed to be temporary? The president said so. Start cost-cutting by axing all deputy ministers. Are they going to tax the air we breathe next? Will there be a Minister of Air?	D

	2026-08-28 10:03:09	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Sir / Madam As a home owner we are already paying a R524.24 monthly fee just for our electricity connection. I pay for my electricity separately now, via the smart meter account. Adding the smart meter instead of the old reliable rotating disk kWh meter, which was accurate, has increased my account by an additional 8-12 kWh per month. What should happen to ensure reasonable costs to SA consumers is the following. All government run institutions should be sold to professional technical companies, so they can be run efficiently at the lowest cost to consumer. This ANC led government is taxing the workers to death, whilst accumulating vast personal wealth and paying no regard to their total destruction of South Africa.	Jeffrey	retired
	2026-08-28 10:11:40	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	I am already burdened by the fixed monthly cost that is at 50% of my electricity purchase - I do not have solar power, but use electricity very conservatively, and I'm penalised by this additional expense because of governments failure.	Gareth	
	2026-08-28 10:21:16	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	What I would really like to understand is this: what happens to a household that completely goes off-grid? If I invest my own money in solar generation, batteries and backup systems and disconnect physically from the municipal electricity network, I am no longer using their wires, infrastructure or electricity supply. So on what basis would I still be expected to pay fixed grid or connection charges? I understand that the electricity grid needs to be maintained and that there are legitimate costs involved. But if someone chooses to become completely self-sufficient and carries the full cost and risk of their own generation and storage, surely they should not be treated the same as someone who remains connected to and dependent on the grid. Otherwise, where is the incentive for households to invest their own money to reduce pressure on the national grid? If the objective is a competitive electricity market, then surely consumers should also have the freedom to completely opt out of the grid — without being subjected to perpetual charges for a service they no longer use. That is the part of this proposed model I would really like someone to explain clearly.	Drikus	employed individual
	2026-08-28 10:40:00	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	In 2007 Eskom produced 252 GW at that time the organisation was at the limit of its potential and lacking a maintenance plan. As a result of this tremendous incompetence, the power supply dropped off and was at its lowest in 2020 at 192 GW. In 2025 it had risen very little only to 200 GW. Now we are expected to subsidise this in addition to find our own source of energy. Eskom cannot have it both ways. The days of national power generation are over.	ALLAN	self-employed
	2026-08-28 10:41:41	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Years of complacency, mismanagement & corruption by ESKOM have led to a complete downgrading of the supply. 	2026-08-28 13:19:35	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	I strongly object to the principle of introducing unavoidable fixed network or capacity charges on households simply because they remain connected to the grid while making substantial private investments in solar generation and battery storage. South African households and businesses have invested their own money in alternative energy largely because the existing electricity system has failed to provide a reliable and affordable service. Those who have reduced their dependence on the grid should not subsequently be treated as a problem that needs to be financially penalised. Indeed, they should be commended and compensated! More broadly, the electricity policy should encourage private investment in renewable energy, energy efficiency, battery storage and genuine energy independence—not create additional charges that discourage these investments or force consumers to continue subsidising infrastructure they increasingly do not use. Consumers should have meaningful freedom to choose how they generate and consume electricity, provided that appropriate safety and technical standards are met. Government policy should reward innovation and private investment in solving the country's energy challenges, rather than creating new financial penalties for those who have taken responsibility for their own energy supply. I therefore urge the Department to reconsider any measures that would unfairly penalise consumers who have invested in solar, batteries or other forms of independent electricity generation, and to ensure that future electricity-market reforms promote competition, consumer choice, affordability and genuine energy independence. The aspect of the technical support must also be provided on a competitive market as it may become another manipulated service by government. Government can reduce SASSA grant recipients to really older people and medical unfit for work people. The saving of SASSA can be used for infrastructure to subsidised and indirectly support the already over-taxed working class people. There should not be an additional amount of money payable to access the network (for cable usage). The municipalities are receiving property taxes without providing street lighting at night. They can reduce their staff (to bring down unnecessory salary expenses), freeze salaries for a year or two (to be paid according to real market compensation) and really work effectively towards a better life for all - earn your salary based on the principle 'equal work for equal pay'. The Constitution guarantees freedom on different levels (association with the choice of the service provider, fair competition, not exercise own choice to have access to the grid and solar, etc.) - to have a capped group to carry the financial burden is not in the spirit of the Constitution and the suggestion boarders on criminal activity. The test is: Will the poor and the poorest of the poor be exempted from this? If yes, then it will be imbalanced again and UNCONSTITUTIONAL (unfair treatment). After all, it seems that the NDP 2030 was a fictile process, empty promises and just a carrot in front of the broader community!	Willie	unemployed individual

	2026-08-31 10:04:37	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	I object to the new Mandatory fixed monthly Charge regardless of how much Electricity is used. Government is elected to see that the basic needs of its People are provided for and are affordable. A. Regarding the National Distribution of Energy : As our Economy is based on the Market "Supply and Demand", it is Government's duty to ensure adequate Supply for its People. a. The Supply of Electricity should utilize a variety of Energy Sources available such as from Solar, Wind, Gas, Oil, Coal, Hydro-electric as well as Nuclear. b. The Demand for Electricity should be calculated separately for Industrial, Commercial and Domestic Use, as their needs are different. c. Control and Security should be exercised by Government through Management and Supervision with regard to Electricity required for Wholesale, Commercial or Municipal Use. B. Regarding Municipal Tariffs : However, problems arise with regard to : a. As a result of the already high Cost of Living, Unemployment and those like myself a Pensioner disabled on an Oxygen machine, Residents cannot afford the increase in paying for Electricity to subsidize Municipal Revenue shortfalls and cross subsidies. b. Another problem is the increase in Cost of Municipal Infra-structure due to Government Policy of Mixed Land Use & High Residential Densities in Residential Areas. A Government is elected to provide for the basic needs of its People to ensure a healthy Nation. It is therefore necessary to ensure that appropriate and affordable Living Conditions are available within a habitable Residential Environment. c. Bearing in mind that Electrical Solar Panels are expensive and of limited lifespan. The lack of Municipal Revenue from Electrical Network as a result of the increase in use of Solar Panels, could be catered for with an additional "Purchase" Tax on Solar Panels bought.	Hendrika	retired
	2026-08-31 10:05:22	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Being taxed on the use of sunlight is ridiculous. If the supply of electricity is inconsistent then expect to lose business to private enterprise. People using solar should be able to sell excess power to the utility which will reduce generation cost to utilities. Rural consumers already pay a monthly extension fee and municipal consumers pay a monthly MCB fee.	Burnley	employed individual
	2026-08-31 10:16:45	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	ESKOM and CITY POWER have been managed into insolvency by handing out electricity to "the real free riders", and is now desperate to extract these costs from honest, hard working tax payers. This is the true nature of Africanist National-Socialism. Nowhere else in the world are private individuals or households punished for going green and reducing their reliance of governments. Both institutions have been found to be deeply inefficient - both in terms of number of employees (even excluding contractors that actually do the work) per GW electricity generated/distributed/transmitted, and in terms of salaries/benefits per employee: It has been published in ESKOM's financial reports that the AVERAGE remuneration is over R1million annually, compared to 50k Euro in the wealthiest Nation in Europe, namely Luxembourg - at current exchange rates that is R800k!!! But the true costs is that these Africanist policies are and have been killing the economy, and the resultant unemployment will continue to increase until all has been destroyed. God bless our leaders for their stupidity, greed and self-enrichment. It is about time SA rewards those who get off the grid, instead of punishing them. Whether by free electricity, free water, free services (refuse collection, schooling, health, social grants) and the list goes on and on, punishing those who do work, and rewarding government employees and all those who don't contribute (whatever the justification they give for not contributing - the issue is that they are not contributing) becomes a disincentive to do any work or grow the SA economy. 	2026-09-02 10:27:28	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	I strongly oppose the proposed SAWEM policy structure due to its unfair financial impact on residential consumers and rooftop solar investors. Shifting tariff structures to high, mandatory fixed grid charges penalises households that invested their own capital to alleviate grid pressure, incorrectly framing self-generation as "free-riding." Furthermore, allowing large industrial users to bypass local grids leaves ordinary households as "captive ratepayers" who must absorb municipal revenue shortfalls and cross-subsidies. Without strict retail price protections, introducing a competitive wholesale market alongside dominant generation entities exposes everyday consumers to price volatility and inflated monthly utility bills. 	2026-09-07 13:36:50	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Another way that the government is trying to take money from hardworking ratepayers! When the gvt could not supply electricity, those of us who could, made a plan to continue to live and work by installing solar systems. This was essential to myself and my husband who work from home. And now we will be punished for looking after ourselves. I do not agree that we are "freeloading" or not paying our fair share. I have always paid my municipal accounts and electricity accounts, but what is municipality doing to make sure people in informal settlements pay their share? Very concerned about being a "captive consumer" who will have no other option than to be connected to Eskom if we do continue to be connected to the grid. It is imperatove that there is a binding, published transition roadmap that progressively lowers the eligibility threshold to buy power from providers other than eskom, ensuring retail market choice is expanded to ordinary households and SMMEs rather than remaining an exclusive corporate privilege. It is essential that NERSA must implement mandatory tariff-parity benchmarks yo ensure captive customer tariffs do not exceed wholesale-plus-efficient-delivery benchmark prices. I am opposed to any mechanism that uses captive household tariffs to recover stranded costs or uncompetitive legacy contract premiums.	Charle	self-employed

	2026-09-11 15:48:55	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	A single or concentrated source of supply invites every problem that a monopoly does. Establishing a market for multiple energy providers and differentiating electricity costs for the consumer between generation, transmission, distribution, and whatsoever else from a single "pay as you use energy" metric is useful when implemented ideally, but I for one cannot help but ask where all taxpayer money goes if not to cover state costs such as infrastructure. Punishing responsible individuals whose livelihood depends on reliable electricity supply by raising costs acts only as a cash grab intended to capitalise on the privileged few in a position to switch to independent power. Worse still, doing this while keeping your average resident locked at the mercy of a single provider in a faux open market defeats every benefit of both a state-controlled market as well as a free market. And none of this serves to address the debt crisis which on its own risks undermining the benefits that a healthy free market would bring, whether as drafted or whether ideal. 	2026-09-11 16:17:53	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	For households that do remain connected to the grid while using solar, any fixed or network charges should be fair, transparent and based on the actual service being provided. They should not simply become a way of recovering lost electricity sales or municipal revenue from people who have invested in reducing their reliance on the grid. I am also concerned that residential customers may remain captive while larger commercial users are given more freedom to buy electricity elsewhere. There should be safeguards to ensure that any loss of higher-paying customers does not simply result in increased costs being passed on to ordinary households. Consumers should also not have to carry unnecessary costs caused by poor forecasting, administration or inefficient management by municipalities or electricity providers. There are still many important details that appear to be left for future regulations, market rules and tariff structures. These should also be open to proper public consultation, especially where they affect household electricity costs, solar users and consumer choice	Ahmed Mayet

	2026-09-11 18:12:39	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Good day, I oppose the Electricity Sector Market Transformation Position Paper proposed by the Department of Electricity and Energy. I demand a binding, published transition roadmap that progressively lowers the eligibility threshold, ensuring retail market choice is expanded to ordinary households and SMMEs rather than remaining an exclusive corporate privilege. I require NERSA to implement mandatory tariff-parity benchmarks ensuring captive customer tariffs do not exceed wholesale-plus-efficient-delivery benchmark prices. A democratic government should oppose any mechanism that uses captive household tariffs to recover stranded costs or uncompetitive legacy contract premiums. The Department of Electricity and Energy cannot allow that the largest, highest-paying electricity users to exit municipal supply, because this creates a two-tiered energy economy. As high-volume users migrate to competitive private contracts, the fixed costs of maintaining legacy municipal networks and state-owned infrastructure will be concentrated onto captive residential households, driving up standard retail tariffs. Kind regards, Francois Conradie	Francois	student

	2026-09-12 08:30:35	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	When Government first encouraged businesses and individuals to install solar to "assist Eskoms failing grid and supply", my question was how this would impact those who could not afford solar. What would happen when Eskom realise they're now losing revenue? Well, that answer is now revealed. Skyrocketing tariffs. Exorbitant basic charges. And the average person have to rely on credit to pay their electricity bills! And to crown things off...Eskom wants to penalise too those that could afford to install Solar, making one wonder if the short term tax benefit was worth it. And where's government on this? Standing in front of cadres who all earn above average salaries making hollow public statements promising the people "transparency" on how costs are calculated while signing off new added charges and tariffs for the average household consumer in the background... behind closed doors. It is clear government don't give two hoots about the people. As long as they can continue to fund the gravy train why would they care if average households can survive? Government was voted into power by the people, so government can take care of its' people....not the other way around. It is high time government acknowledge their failures, and then fix it, without asking the public to fund their failed models. I mean, they already have our tax money to run this country, to increase taxes further, adding to already high municipal bills, fuel price, food and other costs to the consumer to pick up where government has failed is nothing but silent extortion.	Jasper	employed individual
	2026-09-12 08:39:08	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	I believe the whole pricing system of the electricity supply should be independantly restructured and changed.	Hekkie

	2026-09-13 07:25:16	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	at my rural property as a direct Eskom client the fixed tariff is at R4500 a month before any electricity usage is billed with minimal consumption, relatively speaking our bull is regularly at R7,000 - R8,000 per month. this will become significantly worse of this bill is to be passed. In municipal the fixed charges are nowhere near as high, but this is what we are likely to be facing. Eskom is a typical state entity which is poorly run, with high cost , inefficient systems and would fail instantly if faced with a direct private competitor to offer alternate services. My suggestion is to revamp Eskom into an efficiently run institution as would any private successful company and tariffs will come down instead of going up.	Helge	business owner

	2026-09-13 08:56:28	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Electricity Sector Market Transformation Position Paper I call on the Department of Electricity and Energy to ensure that electricity-sector market transformation strengthens competition, attracts private investment, and protects consumers rather than shifting the costs of market reform onto households. 1. Stop the “Sun Tax” The Department must reject punitive fixed grid charges that penalise households and businesses that invest in solar and other distributed-energy solutions. Private capital is helping to expand generation capacity, reduce pressure on the grid, and improve energy security. Penalising these investments through excessive fixed charges risks discouraging precisely the private-sector participation needed to transform the electricity market. Grid-use charges should be cost-reflective, transparent, and proportionate—not designed to punish consumers for reducing their reliance on the grid. 2. Protect Captive Consumers The Department must prevent municipalities from increasing electricity tariffs on consumers who remain dependent on the grid simply to compensate for revenue lost through industrial customers, private generation, or off-grid defection. Consumers who cannot afford solar, batteries, or alternative energy supplies should not become the default source of municipal revenue. Municipal tariff structures must be fair, transparent, and based on demonstrable costs of service. The financial consequences of changing electricity markets must be addressed through proper reform of municipal business models—not by imposing disproportionate costs on captive households. 3. Transparency First Wholesale electricity-market reforms must be accompanied by clear disclosure of who bears the costs of maintaining and expanding the electricity network. The transition to a more competitive electricity market should not result in ordinary households unknowingly subsidising infrastructure, stranded costs, or market participants through opaque tariffs and charges. The Department should require transparent cost allocation, meaningful public consultation, and regular reporting on the impact of market reforms on different categories of consumers. Conclusion Electricity-sector reform should reward investment, innovation, and efficiency—not penalise consumers for making sensible energy choices. The Department of Electricity and Energy should therefore commit to: No punitive “sun tax” on private solar and distributed generation. No tariff dumping whereby captive residential consumers carry the cost of customer defections elsewhere in the market. Full transparency on electricity-sector costs, subsidies, infrastructure charges, and the distribution of those costs across consumers. A successful electricity-market transformation must leave consumers with more choices, greater transparency, and fairer prices—not fewer choices and higher bills.	Eddie	
	2026-09-13 09:00:54	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	The fixed charges for home use are R500+ per month before any electricity used. This is a very big sum out of fixed pension payouts and should be reduced drastically for over 70s. It inhibits us doing our baking and general cooking, by trying to keep our bill at a certain level each month.	Angela	retired
	2026-09-13 09:06:10	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Once again consumers are being penalized for the government and Eskom's negligence, corruption and BEE errors, if things had been managed properly, these problems would not exist, the anc was handed a functional country which they mismanaged into the state in which it now is. To repair the damage they have done to the country willtake at least 10 to 20 years perhaps more.	PETER

	2026-09-13 14:37:29	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Electricity is a public good, stop using it to fleece every consumer concerned. Eskom was hollowed out in broad daylight while government watched and did nothing. Now it is literally using tariffs to claw back all that was stolen so that fat cat officials can be paid undeserved salaries at the expense of consumers while pretenting to be financially recovering from years of corruption. Eskom is not doing well, just enriching itself from abnormal tariffs billed to consumers while claiming a good balance sheet. It's an illusion. The sooner everyone concerned wakes up to this reality the better. After all the corruption, non-payment and stolen electricity for years, we are yet to see anyone facing serious consequence and money being paid back for all of this. This is where the revival of Eskon must start, with orange overalls for everyone who stole from Eskom and the clawing back of every cent stolen. Instead you are using tariffs to punish consumers for Eskom failures over the years. We refuse to pay for years of incompetence and thievery by Eskom officials and its workers who were complicit in destroying Eskom from within. We refuse to compensate Eskom for political interference and ridiculous promises of free electricity that led to the serious non-payment troubles that plagued municipalities for years and still happening to date. We refuse to pay for all stolen electricity through illegal connections driven primarily by Eskom contractors. We refuse to pay for all government officials from all spheres of government who are not paying their Eskom bills, just disgusting, wanting people to pay while municipal workers and councilors owe Eskom. Here and not any further, this is where we draw the line.	Itumeleng	employed individual

	2026-09-13 16:19:42	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Eskom makes a big profit. So they declare. In the next declaration they say they are losing millions. Which ever declaration is true, I don't know, but to think the man in the street upgrades his electrical system on his own costs, and they say now the community must still pay for the electricity they don't use.!!! What a cheek. What do they want with more money if the spend less for generation. And then they go so far as expecting people, who cannot afford solar , to pay more to the municipality to save the municipality from bankruptcy. Eskom should be privatised. But that won't happen because thegovernment relies on the income, whether the deliver or not.	Roy

	2026-09-13 16:42:51	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	STOP the Sun Tax; Protect the Consumers, bar municipalities from hiking tariffs on none solar homes; Transparency must be first! Ensure WHOLESALE MARKETING REFORMS do not leave everyday households footing the bill for grid infrastructure!	Harald	retired
	2026-09-13 16:50:31	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Prior to The ANC taking over the running of the country in 1994, Eskom was one of the most efficiently run power generating operations in the entire WORLD! Today, it is a totally USELESS BANKRUPT outfit, run by incompetent and corrupt people. Ahem, nudge-nudge, wink-wink, does that not apply to EVERYTHING run by the ANC government??? Per MyBroadBand article of 31/8/26, the average salary of Eskom staff is R1,2 million pa!!! This includes top management down to floor cleaners. That is R100,000 pm!!! The authorities must focus and stop those people (primarily in the poorer areas) making illegal connections. But our incompetent and corrupt police are totally useless and incapable of undertaking such a task. Eskom must reduce its staff complement, but they won't because that'll increase our unemployment figure. So, to satisfy BEE, we just employ every Dick, Tom and Harry, regardless of their competence, and the public must just fork out the money required to pay "those" people!!! THIS CANNOT BE ALLOWED TO CONTINUE!!!	Michel	retired
	2026-09-13 17:01:42	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Stop the Sun Tax- punitive fixed grid fees. Bar Municipalities from hiking tarifs on non solar homes. Homeowners are already over taxed. Do not leave homeowners footing the bill for grid infrastucture. Collect arears from people and Parlimentarians and businesses, State Departments which will make Eskom proftable and not requesting high increases in future !!	CJ	retired
	2026-09-13 17:02:04	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	This new legislation seems set to cause additional hardship to individuals and small businesses. Electricity tariffs are already causing significant hardship to people who cannot afford to implement solar systems. They have caused the failure of small businesses because of lack of supply or unaffordable tariffs. Those individuals, the self-employed and SMMEs that did invest in solar systems because of Eskom's failure to keep the electricity flowing are not only paying for their installations and the interest on any financing they may have had to take out -- they will now be paying even more because the government perceives them as an untapped cash resource. So many people invested in solar because they were desperate, and went out on a financial limb to do so. This legislation is taxing the sun. Not acceptable in a free country.	Heath	business owner

	2026-09-13 20:23:43	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	A “Sun Tax” on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. The “Captive Ratepayer Trap” and Municipal Insolvency: Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance. Wholesale Price Volatility and Market Power Manipulation: Eskom Generation still controls the overwhelming majority of South Africa’s dispatchable baseload power. In unbundled spot markets worldwide, dominant suppliers have engaged in economic or physical withholding to artificially spike market clearing prices. Without hard statutory bid caps and aggressive oversight, wholesale price volatility will be passed directly down to retail consumers. Severe Conflicts of Interest Within the NTCSA: Consolidating transmission grid ownership (TNSP), system dispatch (SO), market clearing (MO), and legacy state off-take contracts (CPA) within a single entity under Eskom Holdings creates structural conflicts of interest. NTCSA could face internal commercial pressure to favour Eskom assets or delay third-party grid connections. Premature Market Launch Amid Unresolved Municipal Debt: Opening an advanced wholesale market with mandatory imbalance penalties in 2026/2027 while municipal distribution debt to Eskom remains unresolved is premature. Financially distressed municipalities that fail prudential credit requirements will be excluded from trading platforms, creating a divided nation of well-supplied metros and failing, power-starved rural councils. 	2026-09-14 07:50:33	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	We should get a TAX deduction for contributing towards a greener environment and planet. I don't see how I can be taxed on something that is not provided by ESKOM or the Municipal. The SUN is free and is there for anybody to be used. ESKOM is responsible for their own demise and they could not maintain and improve on what was was working. If they did their JOB in the first place, we would not have had the need for SOLAR system in the first place. I have already paid TAX on the products, equipment and installation. If the Chemist now comes and says we have to pay TAX because we are getting Vitamin D from the sun and not from them or because I ride to work on my bicycle, the petrol garages want to tax me for not buying fuel from them.	Nico	retired
	2026-09-14 07:53:57	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Eskom should get off of its fat arse and start investing in cheaper electricity, no matter how much I try and save on my municipal bill, my bill escalates with all the hikes in fixed charges and then you here of all the millions that the CEO of Eskom received for a bonus! Cut the bonus crap then you have money!	Selome	employed individual
	2026-09-14 07:56:59	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Crazy how we were encouraged to get as much solar power as possible to take the "pressure off" Eskom, and now that many have obliged, they are under threat of being taxed and/or fined. It's also incredibly unfair that people who could not afford solar, or renters who don't have the option of solar, are now expected to cover Eskom's shortfall. Not just unfair, but insane! Not our fault you can't run your business. Stop the bloated salaries and bonuses to Eskom staff, (they will find a lot of funding there) and allow other service providers. That's why Eskom has a stranglehold on our necks, they have no competition. Absolutely sickening. And now there are all these middlemen getting in on the action and inflating the cost of power even more. As a customer, many now have to pay a metering service, who buys from a municipality, who buys from Eskom. Each level adds their markup. Enough already!	T

Since when did SA or any country own the Sun??? Secondly to expect non-solar homes to cover lost revenue is outrageous and essentially just another way for allowing corruption to take place!	Linda	employed individual
	2026-09-14 09:28:20	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Mandatory fixed solar charges, captive consumer price hikes, and municipal revenue losses will hurt ordinary households and small businesses. the Mandatory Fixed Grid Charges on Rooftop Solar policy explicitly targets grid-connected solar and partial-defection users under an “anti-free-riding” principle, shifting tariff structures from volumetric consumption (units used) to high, unavoidable fixed monthly connection fees. The “Captive Ratepayer” Risk where large industrial and commercial users exceeding set thresholds (e.g., 1 MW) will be allowed to bypass municipal grids to buy cheaper power directly from private traders. Ordinary households and small businesses will remain “captive” to municipal distribution grids, risking higher tariffs to cover municipal revenue deficits and legacy cross-subsidies. With Wholesale Price Volatility & Market Power means with Eskom Generation remaining the dominant producer, risks of market power, pricing manipulation, and trading speculation could translate into retail tariff volatility if regulatory protections are inadequate. And Restructuring the Distribution Value Chain means Municipal and Eskom distributors must separate the physical grid (“wires”) from electricity sales (“retail/trading”), introducing separate fees for grid	chris	self-employed

	2026-09-14 10:01:05	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Consumers cannot be held responsible for Eskom's operational failures, historical mismanagement, inadequate infrastructure maintenance, electricity theft, illegal connections, or the failure to recover payment from those who consume electricity without paying for it. Yet the recurring response to these challenges appears to be the same: increase tariffs and require law-abiding consumers to bear the cost. That approach is fundamentally unfair. Households that pay their electricity accounts on time, use electricity responsibly, and comply with all applicable rules should not be expected to serve as the financial buffer for losses resulting from theft, illegal connections, non-payment, inefficiency, and poor governance. This concern is particularly relevant for consumers who have invested their own resources in solar energy systems. These households have committed significant private capital to reduce their dependence on an unreliable electricity supply, protect themselves from load-shedding, and manage rising energy costs. To label such consumers as "free riders" simply because they purchase fewer units of electricity from the grid is both unreasonable and unfair. Nor should they be penalized through excessive fixed charges because their investment has successfully reduced grid consumption. Likewise, consumers who cannot afford solar installations should not become captive revenue sources to offset lost income resulting from customer migration away from the grid, industries securing alternative energy supplies, or revenue losses caused by theft, illegal connections, and non-payment. Revenue shortfalls cannot be addressed simply by extracting more money from compliant consumers. If electricity revenue is being lost through theft, the priority must be to prevent and prosecute theft. If illegal connections are widespread, those connections must be removed and offenders held accountable. If infrastructure failures are contributing to financial losses, the root causes must be addressed. Where inefficiency, waste, or poor financial management exists, increasing consumer tariffs should not be the default solution. There must be a clear distinction between legitimate cost recovery and requiring compliant consumers to subsidize systemic failures. Tariff increases should not be approved merely because an electricity supplier or municipality claims that additional revenue is required. Consumers are entitled to transparent and detailed explanations, including: 1. How much revenue is lost annually due to electricity theft and illegal connections? 2. How much revenue is lost through non-payment? 3. What actions have been taken to recover these losses? 4. What proportion of the proposed tariff increase is linked to legitimate electricity supply costs? 5. What proportion is intended to compensate for reduced consumption arising from solar generation and energy-efficiency measures? 6. Why should compliant, paying consumers be expected to subsidize losses caused by factors beyond their control? 7. What measurable improvements in service delivery, reliability, or infrastructure will consumers receive in exchange for every additional rand charged? Tariff increases must never become a substitute for accountability. Consumers cannot continually be told that electricity prices must rise because the system is under financial strain while the underlying causes of that strain remain unresolved. The message to Eskom, municipalities, and regulators should be clear: Do not penalize paying consumers for the failure to address non-paying consumers. Do not punish solar users for reducing their reliance on an unreliable grid. And do not transform compliant households into a permanent source of revenue to compensate for theft, illegal connections, non-payment, inefficiency, and poor governance. Before requesting additional contributions from consumers, Eskom and municipalities must demonstrate that they have exhausted every reasonable measure to eliminate avoidable losses, improve operational efficiency, combat theft, disconnect illegal connections, and strengthen revenue collection. Consumers should pay a fair and reasonable price for the electricity they legitimately consume, not an ever-increasing surcharge to cover the costs of theft, mismanagement, inefficiency, and systemic failure.	Christelle

	2026-09-14 10:19:45	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Taxpayers should not be paying for the mistakes made by government's mismanagement of ESKOM and the supply of electricity - one of our national assets. If there are cheaper alternatives, then the whole grid should be moving towards that while keeping a robust back-up supply in Eskom. Any excess capacity should be sold to our neighbours who are experiencing an energy deficit. Make sure the grid is maintained and lease it to any independent power producers who make use of it. Legislate that independent power producers are always linked to the main grid. Consumers cannot be held responsible for Eskom's operational failures, historical mismanagement, inadequate infrastructure maintenance, electricity theft, illegal connections, or the failure to recover payment from those who consume electricity without paying for it. Yet the recurring response to these challenges appears to be the same: increase tariffs and require law-abiding consumers to bear the cost. That approach is fundamentally flawed and unfair. Households that pay their electricity accounts on time, use electricity responsibly, and comply with all applicable rules should not be expected to serve as the financial buffer for losses resulting from theft, illegal connections, non-payment, inefficiency, and poor governance. Consumers who cannot afford solar installations should not become captive revenue sources to offset lost income resulting from customer migration away from the grid, industries securing alternative energy supplies, or revenue losses caused by theft, illegal connections, and non-payment. Revenue shortfalls cannot be addressed simply by extracting more money from compliant consumers. If electricity revenue is being lost through theft, the priority must be to prevent and prosecute theft. If illegal connections are widespread, those connections must be removed and offenders held accountable. If infrastructure failures are contributing to financial losses, the root causes must be addressed. Where inefficiency, waste, or poor financial management exists, increasing consumer tariffs should not be the default solution. There must be a clear distinction between legitimate cost recovery and requiring compliant consumers to subsidize systemic failures. Tariff increases should not be approved merely because an electricity supplier or municipality claims that additional revenue is required. Consumers are entitled to transparent and detailed explanations, including: 1. How much revenue is lost annually due to electricity theft and illegal connections? 2. How much revenue is lost through non-payment? 3. What actions have been taken to recover these losses? 4. What proportion of the proposed tariff increase is linked to legitimate electricity supply costs? 5. What proportion is intended to compensate for reduced consumption arising from solar generation and energy-efficiency measures? 6. Why should compliant, paying consumers be expected to subsidize losses caused by factors beyond their control? 7. What measurable improvements in service delivery, reliability, or infrastructure will consumers receive in exchange for every additional rand charged? Tariff increases must never become a substitute for accountability. Consumers cannot continually be told that electricity prices must rise because the system is under financial strain while the underlying causes of that strain remain unresolved. The message to Eskom, municipalities, and regulators should be clear: Do not penalize paying consumers for the failure to address non-paying consumers. Do not punish solar users for reducing their reliance on an unreliable grid. And do not transform compliant households into a permanent source of revenue to compensate for theft, illegal connections, non-payment, inefficiency, and poor governance. Before requesting additional contributions from consumers, Eskom and municipalities must demonstrate that they have exhausted every reasonable measure to eliminate avoidable losses, improve operational efficiency, combat theft, disconnect illegal connections, and strengthen revenue collection. Sharon	employed individual
	2026-09-14 10:23:13	No I do not	All of the above	Captive Consumer Tariff Protection	Small / Medium Business Owner (SMME)	Residential and small business should not be held liable for ESKOM's incompetence, greed, overspending and corruption. Due to no fault but their own many residential owners[who could afford it] and companies moved to solar. Thereby causing an ease on the grid during constant load shedding. And for there troubles were illegally penalized. If i could so afford, i would immediately switch to solar for both home and business. It seems every time we hear news from ESKOM, it has to do with a gross iniquity on the part that is dictated upon those who rely on the grid and it should be stopped. Lest we forget them purchasing a wooden mop fro R238 000.	Sheldon	business owner
	2026-09-14 10:23:44	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Eskom screwed up and failed to supply electricity during load shedding because they did not invest in additional power stations and when they did the projects were/are riddled with corruption. They did not maintain or extend to national distribution system to where power was /is required most, forced the meg users off the Eskom grid to generate their own power. Not too long ago Eskom was asking its consumers to use less electricity and now having forced people off the Eskom grid they expect those consumers who cannot exit their grid to pay extortionately high fixed tariffs to cover the mess that they have created. Unacceptable and must be fought against by all necessary means!	Peter	retired
	2026-09-14 10:29:55	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Daily electricity cost from Eskom is too high for normal households. South Africans need a cheaper electricity source. Some installed solar to achieve the goal of cheaper energy to stay a flout in our difficult financial conditions. If solar get penalized through tariff it does not seem fair. Eskom have out priced themselves from the South African economy and the consumers. They are supplying energy yes but at what cost. Municipalities should be able to make a small profit form the services they supply, to sustain service delivery, but with the high cost of services it seems not possible. If there is a bill it should bring cheaper energy to all. Municipalities, Businesses and residential owners. How do we make it happen? How do we make sure what we implement is sustainable? Without functional Municipalities and infrastructure no economy will move forward. I belief one of the critical issues in South Africa is to reduce compensation payments to high-ranking employees overall South Africa, in the Public Sector and Private Sector or to reduce the number of high-ranking employees to reduce cost. Restructuring. (I belief it is out of control).	Johanna	employed individual

	2026-09-14 10:47:50	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	**Public Comment: Electricity Sector Market Transformation Position Paper I am submitting this comment as a citizen accountable for what has been placed in my hands — my household budget, my home, my responsibility to my family and community. The Law of Love asks two questions of any policy: *does it do harm, and if harm has already been done, who is required to make restitution?* On both counts, this paper concerns me. **On solar households ("anti-free-riding" fixed charges):** Investing in solar was an act of stewardship — reducing dependency, reducing strain on a grid that has repeatedly failed to keep its own commitments to the public. To now recast that stewardship as "free-riding," and respond with punitive fixed capacity charges, inverts responsibility. The household did not create the shortfall in municipal revenue; decades of underinvestment and mismanagement did. Restitution belongs with those who caused the harm, not with those who acted responsibly to avoid it. **On non-solar households (municipal cost-shifting):** This is the deeper injustice. As industrial users exit to buy wholesale power directly, and solar households reduce consumption, the remaining "captive consumers" — often those least able to afford any alternative — are left to absorb the shortfall through tariff hikes and forced service charges. This is not market reform; it is the transfer of a systemic failure onto those with the fewest options. A policy that protects large industrial consumers and directs the resulting deficit toward ordinary households cannot be called equitable restructuring. **What I am asking the Department to do:** 1. Do not impose punitive fixed grid fees on households that have invested in solar. 2. Prohibit municipalities from recovering lost industrial and off-grid revenue by hiking tariffs on captive residential consumers. 3. Publish, before any implementation, a transparent accounting of who bears the cost of this transition and why. A policy that quietly shifts the burden of institutional failure onto the households with the least power to resist it is not restructuring — it is displacement of responsibility. I ask that this be corrected before the paper proceeds. Respectfully submitted, Robert-Louis Isak: Noad	robert-louis-isak	retired

	2026-09-14 12:03:34	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	As usual government policy is to "milk the cow". When they are in trouble and will not accept competition they automatically strike wherever they can. Households helped ESKOM out when they were in trouble not being able to generate sufficient power for all but now are being punished for doing so. The government must realise that the world is changing and one item most often referred to is "green energy". ESKOM must move away from coal and use some alternative form of electricity generation. I most strongly object to having to pay a fixed amount monthly purely to keep ESKOM's doors open.	Christopher	
	2026-09-14 12:12:03	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Dear NERSA Can you please implement mandatory tariff-parity benchmarks to ensure that captive customer tariffs will not exceed wholesale-plus-efficient-delivery benchmark prices? 	2026-09-14 12:32:25	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	I support reforms that improve the reliability, affordability and sustainability of South Africa's electricity system. However, I am concerned that the proposed market changes could shift additional financial burdens onto ordinary residential consumers. In particular, I request that the Department: 1. Protect households that invest in solar. Residential consumers who reduce their dependence on the grid through private investment in renewable energy should not be subjected to disproportionate fixed charges that undermine the financial benefit of that investment. 2. Protect consumers who cannot afford solar. Market reforms should not result in households without alternative energy sources carrying an increasing share of municipal distribution costs as higher-consumption customers reduce their grid usage or purchase electricity elsewhere. 3. Ensure that tariffs remain fair and transparent. Any fixed, capacity or network charges should be demonstrably cost-reflective, reasonable and subject to proper regulatory scrutiny. 4. Assess the effect on households before implementation. The Department should publish a clear assessment of how the proposed reforms could affect residential electricity bills, particularly those of low- and middle-income households. Electricity-market reform is necessary, but it should not unintentionally penalise either households that invest in their own generation or those who cannot afford to do so. I respectfully request that you take these consumer-protection concerns into account before the policy is finalised.	Ilsette	self-employed
	2026-09-14 12:33:45	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	The words "captive consumers" hits you in the face like a punch from Mohamed Ali. This is the norm in everything that the ANC touches - overtaxed in all sectors, personal tax, petroleum products, household rates and taxes, schooling etc. etc. Living in Ekurhuleni is a nightmare, we are already being overcharged for electricity, and I believe Rates and Taxes are also over-inflated If, at least, you receive reliable service, people would not mind paying a slight premium for this but this certainly is not the case Over the last three to four months we have had electricity outages lasting between 5 and 7 days	Peter	retired
	2026-09-14 12:37:45	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	If it wasn't for Eskom capture by Jacob Zuma and company, we would not be in this predicament. The ANC is to blame for this problem and the people of South Africa should not have to pay for their corruption and blatant stealing to enrich themselves.	Astrid	retired

	2026-09-14 13:03:17	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	I object to the "anti free riding" principle and the shift from consumption based billing to mandatory fixed network charges. These charges are not cost reflective, they are targeted. In City Power's area a residential prepaid customer pays R241.50 a month in fixed charges from 1 July 2026, while a postpaid customer on a single phase 80 amp connection pays R1,483. Same street, same transformer, same wires, six times the fixed charge. A household that installs grid tied solar is not allowed to stay on prepaid and is moved to the higher structure automatically. The charge follows the meter, not the cost of the network. Ratepayers have paid above inflation increases for years now while infrastructure visibly deteriorates, and no licensee is required to prove that network revenue was spent on the network. Rooftop solar owners are not free riders. They reduce peak demand and losses, and they funded their own generation out of taxed income because the state could not supply them. I ask for three things. A statutory cap on fixed charges based on an independently audited cost of supply study. Removal of any rule that forces customers with own generation onto a higher fixed charge tariff. Ring fenced network revenue with published annual maintenance spend, so that no increase is granted without proof of what the last one bought. I do support competition and unbundling, however I totally object to a reform that gives choice to the largest users and sends the bill to households. The corruption embedded in the ANC at all levels is incredible. It will be cheaper to get a few more panels and an extra battery than to stay "grid tied" - Eskom are going to lose a very large share of the income coming from clients, who they forced to go the solar route due to their own corruption and mismanagement, which they are trying to now ship the blame to home owners already struggling. 	2026-09-15 12:07:52	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	To penalise the current homeowners who can not afford solar power is unreasonable. Municipalities are struggling to replace infrastructure and not leaving them room to receive electricity to distribute, but going for the wholesale markets to the mines and large corporations that can afford it is a not care policy. Solar was done to help Eskom creating enough power and if all the solar is suddenly gone will Eskom be able to give enough electricity to sustain the country. Households and small bussinesses will be hurt, in an already overburdened high cost of living situation. On top of this municipalities is also burdened to give "free" electricity to certain households. For good governance it is necessary not to go forward with captive consumer tariffs. Captive in this case say it as it is - unable to defend ourselves.	Maria	retired

	2026-09-15 13:11:54	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	The end consumer get always taxed the heaviest as there is no further way down to collect money. Industry always get the largest benefit because they are the so called providers. They do not pass the benefits they receive to their customers because their mission is to maximize profit. To Eskom: Why can you not live and let live. Find better ways and manage more efficiently.	Abraham	self-employed
	2026-09-15 14:20:15	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer		Inez	
	2026-09-15 14:52:39	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	A "Sun Tax" on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. The "Captive Ratepayer Trap" and Municipal Insolvency: Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance. Wholesale Price Volatility and Market Power Manipulation: Eskom Generation still controls the overwhelming majority of South Africa's dispatchable baseload power. In unbundled spot markets worldwide, dominant suppliers have engaged in economic or physical withholding to artificially spike market clearing prices. Without hard statutory bid caps and aggressive oversight, wholesale price volatility will be passed directly down to retail consumers. Severe Conflicts of Interest Within the NTCSA: Consolidating transmission grid ownership (TNSP), system dispatch (SO), market clearing (MO), and legacy state off-take contracts (CPA) within a single entity under Eskom Holdings creates structural conflicts of interest. NTCSA could face internal commercial pressure to favour Eskom assets or delay third-party grid connections. Premature Market Launch Amid Unresolved Municipal Debt: Opening an advanced wholesale market with mandatory imbalance penalties in 2026/2027 while municipal distribution debt to Eskom remains unresolved is premature. Financially distressed municipalities that fail prudential credit requirements will be excluded from trading platforms, creating a divided nation of well-supplied metros and failing, power-starved rural councils. 	2026-09-16 14:13:10	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Once again they are trying to rob the public of what little money we have. Most people are already living hand to mouth, some not even able to do that, this will make the cost of living even more unaffordable. My next question is do they include these charges/penalties/tarriffs when calculating the inflation rate? Probably not. I do not support this in the least. By all means open up the opportunity for other Electricity providers to supply Municipalities etc. This will be good competition for Eskom if they are able to supply electricity at a lower rate than Eskom. In this day and age, with this economy, cost cutting in any form is good. As for charging a tax for solar users, that is ridiculous. Previously it was encouraged to install solar, but now people are being penalized just because we haven't had load-shedding in a while, it makes no sense at all. That is a complete 180 and unethical in my opinion.	Nevilene	employed individual

	2026-09-17 22:05:39	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Eskom has lost it source of income since the public were forced to create their own power at their own cost. The plan is now to penalize the public for creating a solution to depend less on the grid. The lower demand, has rapidly decreased income revenue of a non-functional entity called Eskom. Mismanagement, corruption, excessive yearly rates for electricity with systems that is outdated and soon will cost more to maintain. Privatise electricity and use the resources in SA, like sun and wind to create electricity that is eco-friendly and more cost effective for all.	Denise	employed individual
	2026-09-17 22:43:00	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	The cost of everything is going up and up. Now because Eskom is failing to run their business efficiently, we, the consumer, must bail them out with increased tariffs. Eskom should be going after the municipalities that are not paying their bills, and be holding or reducing the costs for the customers that are busy paying but not getting support in return.	Matthew	employed individual

	2026-09-18 11:07:53	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	As an ordinary working person, I can barely make it through each month while paying my bond and other rising living costs. I simply do not have the extra money to install solar. What concerns me is that I may now be expected to pay even more because the electricity provider is losing revenue from customers who can afford to generate their own electricity through solar. Why should households like mine, who cannot afford solar and therefore cannot benefit from it, be penalised with higher costs? I am already struggling with the high electricity tariffs. It feels unfair that those of us who have no alternative are expected to carry an even greater financial burden.	Reagan	employed individual
	2026-09-18 15:55:12	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	I do not think it is moral or ethical that independent solar users get penalised for being independent and that those who cannot afford to go the solar route should be Municipal captive cash cows.	Clare	retired
	2026-09-18 16:06:51	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Eskom/Government corruption is solely blamed on the financial fiasco at Eskom due to incompetence because of BEE and idiotic decisions made by totally incompetent management. 	2026-10-06 14:12:11	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	We have been held hostage and to emotional blackmail for decades now. The money is looted and in order to find new avenues of filling their coffers they devise intricate ideas to illicit illegal billing processes in the guise of 'gove. of the day 'progress' while none of any that are spending their days employed to do the looting. Whatever we, as citizens endeavour to do to overcome the restrictive stranglehold this gov. of the day has on us they are right there blocking all efforts. Yet we dont hear of what the non-payers whoever they are will be charged - to get the vote like without them some bad person is going to come in and destroy their lives. This level of discussion in it's underhand manner is criminal and targets a minority of those of us who do pay. We are in the grip of narcissistic power grabbing, money grabbing, greedy dictators. Everything they suggest is merely about topping up where they have stollen everything and continue to do so even as they are investigated. There are merely fancy words to mask what they are really doing, and that is avoiding the truth of what they have done to cause this from the top to the bottom. Call in the police and arrest them all, and take their possessions which they only have purchased with stolen money. Thank you	Jennifer	
	2026-10-06 19:46:21	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	The sun does not belang to the state, sunshine is free, furthermore there is no financial input from the government for our solar units how can they now charge us, fix the corruption first and there will be more than enough money for all to have free electricity, why can some get free electricity and others not. Agent we all supposed to be equal	Nicky	
	2026-10-09 08:52:15	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	This raises serious concerns about fairness. Large businesses will have the freedom to access cheaper electricity, while ordinary households and small businesses could be left paying higher tariffs to compensate for lost municipal revenue. Why should those with the least bargaining power carry an increasing share of the financial burden? Access to affordable electricity should not depend on how much electricity you consume or how big your business is. This risks creating a system where the biggest consumers benefit from competition, while everyone else pays the price.	Zene	
	2026-10-14 12:18:16	No I do not	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	There are many users who work really hard to be low users without solar and they will be penalised unnecessarily. 	2026-08-26 16:57:12	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	The energy crisis falls squarely in the State's lap. Private citizens have, at huge expense, had to make alternative plans. Now, by penalising us all by blanket pricing, we once again are paying for illicit, unethical charges which make using Eskom's power provision next to impossible. Having it is of little use, making an alternative plan causes penalties. There is no freedom to move sideways in this over-reach of the State. The solution is that if free citizens draw on free sunshine, the state should back off and worry about how to provide sustainable power for the citizens that do elect to use it or who unfortunately can't make alternative arrangements for power supply.	Jenny Grinwis	business owner

	2026-08-26 20:32:35	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	PLEASE NO MORE!!!

	2026-08-27 07:24:09	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	This seems to be just another way for Eskom to screw the good guys whilst allowing the major consumers and freeloaders to get away without punishment. How about Eskom recovering the billions of outstanding debt owed by non-paying municipalities, perhaps if they hadn't allowed them to get away with it in the first place they wouldn't be in such a desperate situation today. As a 70 year old pensioner (without a pension...and still working!) it is becoming increasingly difficult just to get by. I expect the municipality will add their mark-up to this 'standard charge' thereby making it even more unaffordable. Eish!	Paul	self-employed

	2026-08-27 07:31:40	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	All residents and ie businesses should've charged on what they use from Eskom not fixed rates.As it is the few that are paying for electricity are charged exorbitant amounts.Solar is expensive to install and it is free God given energy,why the manipulation?,it is always towards the pockets of a few	Lass	employed individual
	2026-08-27 07:33:32	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	We need more players in the environment in order for the consumer to get more competitive pricing and not be held hostage by one.	Sarah	employed individual
	2026-08-27 07:39:46	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	South Africe has a free market system. STOP SUBSIDISING THE ESCOM CABAL AND THEIR PERSONNEL. Fire the bloody black management. Reduce personnel numbers and work towards profitability in a free market system. ESCOM is milking the consumers for their own benifit yet the consumers receive NO BLOODY BENIFITS but price increases and lead shedding/reduction/interruptions all called shit service.	Johan	retired
	2026-08-27 07:44:10	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer		Maritza	self-employed
	2026-08-27 07:51:25	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	Some years ago government encouraged residential electricity consumers to install solar systems to alleviate the pressure on Eskom which could no longer provide reliable electricity supply due to corruption and mismanagement. The government even went so far as to offer cash back incentives for solar installations. As a result of these solar investments by private consumers, the demand on Eskom reduced significantly, resulting in a drastic reduction in load shedding. Now, because the demand on Eskom has reduced, this has meant less income for Eskom, despite the outrageous electricity hikes that we experience each year. So the next money making scheme by Eskom, in conjunction with government, is to penalize the very people that alleviated the electricity supply problem. Instead, government should be looking at dismantling Eskom, a corrupt and useless SOE, and instead encourage the private to take over, as we have seen in the rail transport sector.	Chris	self-employed
	2026-08-27 07:56:28	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	The inability of Eskom & Municipalities to supply reliable electricity was the reason most citizens then looked for alternative ways to have a reliable source of power. To once again look to these same people for extra income is wrong. This is an additional tax suggested for your middle-income household which is already overtaxed!!!	Lloyd	retired
	2026-08-27 07:59:27	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	I was forced to spend a huge part of my hard earned savings to look after my family during extensive electricity outages caused by goverment failures. We should have been rewarded for assisting during this crisis, instead we are now going to be punished for this! People who never save and provide are always better off in this country, there is no incentive to self care.	Gloria	retired

	2026-08-27 10:45:11	No I do not	All of the above	Market Power & Price Manipulation	Energy Sector Professional / Engineer	The ANC Government has systematically destroyed all service industries and stolen the revenues for party and personal gains to the detriment of the populace. Eskom and the municipalities are examples of this. Eskom could not supply demand and actually discouraged the public to purchase energy. The public expended capital to solve the energy supply problem . Now, as was predictable, the government hyenas are attempting to reclaw their stolen revenue by any means possible. This by imposing levies on the person's that bailed Eskom out after their ineptitude.	Norman	retired
	2026-08-27 10:46:22	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	Due to the government being incapable of providing steady electricity to consumers, many households and businesses installed solar as this affected their lives, livelihood and the economy. This action helped in reducing pressure on Eskom and now the government wants to penalise the very people who spent their own money and assisted the government in reducing loadshedding which was affecting the economy. Instead of appreciating their efforts, government wants to now penalise them, they want to control and manipulate prices. This overreach should be stopped, if they are incapable of providing electricity then let the private sector decide for themselves instead of introducing all these laws to control and manipulate the electricity supply, adding extra costs and penalising the very people who paid out of their own pocket to save the economy.	Stella	employed individual

	2026-08-27 11:37:28	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	1. A Penalty on Private Initiative: Citizens who spent private capital to solve the state's energy crisis will now face steep baseline connection taxes to subsidise legacy grid infrastructure. 2. The "Captive Ratepayer" Trap: While large industrial corporations exceeding 1 MW will be permitted to bypass municipal lines to buy cheaper power directly on an open wholesale market, ordinary residential homes remain "captive" to local municipal tariffs. This leaves everyday households to foot the bill for municipal revenue shortfalls and cross-subsidies. 3. Wholesale Price Volatility & Market Dominance: With Eskom Generation controlling the vast majority of baseload power, the risks of market power, pricing manipulation, and speculation could spill over into retail tariffs if oversight fails.	Malcolm	retired
	2026-08-27 11:39:24	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	Eskom cannot supply to all of its consumers at the best of times, which is why solar has been the only option for many users. This has taken some pressure off the grid, which is a good thing. Why punish users for that? Ridiculous proposal.	Nicolr	retired
	2026-08-27 11:50:55	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	Eskom being a GMO is placing the burden of their survival on residents. 	2026-08-27 11:55:35	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	1. Citizens who spent private capital to solve the state's energy crisis are now being punished and will now face steep baseline connection taxes to subsidise legacy grid infrastructure. 2. While large industrial corporations exceeding 1 MW will be permitted to bypass municipal lines to buy cheaper power directly on an open wholesale market, ordinary residential homes remain "captive" to local municipal tariffs. This leaves everyday households to foot the bill for municipal revenue shortfalls and cross-subsidies. 3. With Eskom Generation controlling the vast majority of baseload power, the risks of market power, pricing manipulation, and speculation will spill over into retail tariffs if oversight fails and in our curret government this is almost guaranteed. 4. The policy explicitly targets grid-connected solar and partial-defection users under an “anti-free-riding” principle, shifting tariff structures from volumetric consumption (units used) to high, unavoidable fixed monthly connection fees. 5. Restructuring the Distribution Value Chain: Municipal and Eskom distributors must separate the physical grid (“wires”) from electricity sales (“retail/trading”), introducing separate fees for grid delivery and energy units. 8. Market competition, Eskom unbundling, and open wholesale trading are essential to solve South Africa’s energy crisis and attract private capital, and Eskom is not in a position to accomplish this end. 9. Mandatory fixed solar charges, captive consumer price hikes, and municipal revenue losses will hurt ordinary households and small businesses so where is the electioneering promise of "free electricity" now? 10. Wholesale market reform should proceed only if strict caps are placed on fixed network fees, captive ratepayers are protected, and municipal cross-subsidies are safeguarded. 	2026-08-27 17:15:17	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	The ANC government mismanaged Eskom to the extent that it became not only corrupt, on an industrial scale, but fundamentally dysfunctional. These people who now govern need to be reminded that when the White man governed the country Eskom was not only managed responsibly, which made load shedding unheard of, but it also supplied --- sold electricity to several other States on the African continent, and profited from doing so. The cost of electricity to the consumer was also never an issue with the South African citizen, unlike the current iniquitous state of affairs that we endure which is utterly disgraceful! I personally can only recommend that those who are governing accept the need that they do not have the competence to do so, and that they accept that the only hope for the country is that the White man take over again and govern! 	2026-08-28 12:54:47	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	False promise of competition While the bill claims to open the market, in practice politically connected companies are likely to dominate. South Africa's history of tender corruption means "competition" often becomes a façade for patronage networks. Risk of regulatory capture NERSA and other regulators have struggled to enforce accountability. Without strong independence, SAWEM could be captured by the same corrupt interests that hollowed out Eskom. Eskom's unresolved debt Eskom remains financially crippled with hundreds of billions in debt. Splitting markets without fixing Eskom's balance sheet risks creating chaos rather than stability. Infrastructure decay Power stations are collapsing due to mismanagement. A wholesale market cannot function if the underlying generation fleet is unreliable. The reason why many consumers are looking for alternatives. SOE track record State-owned enterprises like SAA, Transnet, and Denel have all failed under corruption and mismanagement. Expecting a new electricity market to succeed under the same governance culture is unrealistic. Broader Context: Corruption & Mismanagement State capture legacy The Zondo Commission revealed how billions were looted from Eskom through inflated coal contracts and politically connected suppliers. SAWEM risks becoming another avenue for looting. Cadre deployment Key positions are filled based on loyalty rather than competence. This undermines technical expertise needed to run a complex electricity market. Public distrust Citizens have endured years of load shedding, broken promises, and failed reforms. Another "grand plan" without accountability feels like déjà vu Conclusion I don't support the SAWEM bill because it ignores the root problem: corruption and mismanagement in government and state-owned enterprises. Creating a new market structure without fixing governance is like repainting a collapsing house — cosmetic change without structural repair. If South Africa truly wants energy reform, it must first: - Prosecute corrupt officials and recover stolen funds. - Professionalise/Privatise management of SOEs. - Guarantee transparency in procurement and regulation. Only then can a competitive electricity market deliver real benefits.	Nicholas	self-employed

	2026-08-28 13:32:29	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	This is exactly why public participation matters. South Africans who have invested their own hard-earned money in solar, batteries and other alternatives have done so to become less dependent on an unreliable electricity system — not to avoid contributing to the cost of the grid. If fixed network and capacity charges are going to become unavoidable, then there needs to be real transparency around how those charges are calculated, who ultimately carries the cost, and whether households and businesses that have invested in alternative energy are being treated fairly. We need an electricity system that encourages private investment and innovation, rather than creating new financial barriers for those trying to become more self-sufficient. Our voices matter. We need to make sure they are heard.	Ailsa	retired

	2026-08-28 22:12:15	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	Unless the private sector gets involved and fair market of competition is made available, we will continue to be held hostage to whatever Eskom decides. Penalties being charged to those who could afford an alternative form of electricity is day light robbery. Eskom was unable to meet basic requirements and the entire South Africa economy suffered. Dismantle current state to make electricity affordable for all South Africans.	Denise	employed individual
	2026-08-28 22:40:51	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	Electricity price inflation is arguably one of the highest increases South African consumers are currently facing, at approximately 17%, yet as consumers we have very little choice or ability to avoid these increases. For years, when Eskom was unable to provide a reliable electricity supply, households and businesses were forced to invest their own money in alternative solutions such as solar systems, batteries, generators and other forms of backup power. Consumers did this out of necessity, not luxury. It is therefore extremely frustrating that those same consumers now appear to be penalised for becoming less dependent on Eskom. During two of the coldest days of the 2026 winter in Emalahleni, we once again experienced periods without Eskom electricity supply. The irony is difficult to ignore: when electricity was needed most, the supply was once again unreliable. The absence of widespread load shedding should also not be interpreted as evidence that Eskom has suddenly solved South Africa's electricity problems. A significant part of the pressure on the national grid has been reduced because households, businesses and the private sector have invested billions of rand in their own electricity-generation capacity. In effect, private consumers and businesses have had to take responsibility for a service that Eskom was unable to provide reliably. Yet consumers continue to carry the financial burden of years of poor planning, mismanagement, corruption, inefficiency and inadequate infrastructure investment through continually increasing electricity tariffs. What makes the situation particularly concerning is that many urban consumers have no meaningful alternative electricity supplier. Eskom and municipal electricity distributors effectively operate in a monopoly environment, leaving consumers with little choice other than to accept whatever tariff increases are imposed. South Africans have already paid for alternative power systems because the electricity supply could not be relied upon. We should not now be expected to continuously absorb excessive tariff increases in order to compensate for the very failures that forced us to become more self-sufficient in the first place. Consumers deserve reliable electricity, transparent and justifiable pricing, and a system in which efficiency and accountability are rewarded — not one in which consumers are repeatedly expected to pay for institutional failures beyond their control.	Wiehann	self-employed
	2026-08-29 00:06:00	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	The top down approach needs to be flipped on its head. Residential should be the cheapest rates establishments 500 sq ft to 3000 sq ft the next tier 3000 and up the highest paying tier. Establishments falling in this category should have to lower their usage to the bare minimum to none or reduce their footprint and consumption. Most of these establishments air condition empty space ,outdoors hundreds of thousands of lights and power outlets. They need to reduce their footprint and their consumption of the power grid. They are the energy hogs! Let's get real!	Lori	self-employed
	2026-08-29 02:39:19	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	It can never be right, as South Africa citizens you are required to pay taxon ever , we pay tax on the electricity we buying plus a service fee. Just today I bought electricity of R250 and only received 70 units. This can not be, the poor and middle class households are feeling the branch of decisions being made just so that corruption can grow.	Tessa	unemployed individual

	2026-08-29 09:40:14	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	We can not be held responsible for the Governments incompetency to solve the countries electrical problems as they fail to maintain the facilities, "Ordinary households and small businesses will remain “captive” to municipal distribution grids, risking higher tariffs to cover municipal revenue deficits and legacy cross-subsidies" this is now to rectify the government inability to solve their shortfalls after we have already payed all the Taxes' required to maintain these.	William	employed individual
	2026-08-29 09:44:13	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	WHAT ABOUT INSTALLING GAS EQUIPMENT LIKE STOWES AND GEYERS THAT ALSO REDUCE YOUR ELECTRICITY BILL. THIS GOVERMENT IS INSANE . NOT LONG AGO THEY REQUEST AND PLEAD FOR INSTALLING SOLAR BY THE PRIVATE SECTOR TO HELP ESCOM. EVEN GAVE A VAT REDUCTION ON INTALLING COST. MORE AND MORE SOLAR WERE INSTALLED, AND THAT REDUCE LOADSHEDDING AND AFTER THAT THEY CLAIM HOW GOOD THEY ARE TO RESTORE ELECTRICITY SUPPLY.	Jasper	retired
	2026-08-29 10:01:25	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer		Jacobus	
	2026-08-29 11:23:13	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	The failure of the state to run Eskom efficiently as a low-cost reliable supplier of electrical power led to massive, wasteful capital expenditure by the private sector and individuals to ameliorate deleterious effect of widespread ongoing load shedding. There was little or no tax relief for early adopters of private solutions to circumvent problems related to intermittent electrical supply. The capital, ongoing maintenance and end of life replacement costs of private installations (with interest payable from date of cost incurred) must be recoverable from the state. Many individuals may find the proposed "connection tax" simply too high and then prefer to become totally independent of the grid. The government should be encouraging independence from the state rather than taxing independence and self-determination.	Neil	retired

	2026-08-30 07:05:28	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	Unfortunately i had predicted the situation many years ago, the maths were simple. Eskom had a problem with supply, the public played a major part in solving the problem which came at significant cost from the individuals. The inefficiencies and booming cost of Eskom also drove high using customers away and the result being more generation capacity than required. Add the fact that many people do not pay for electricity required the income to come from somewhere and one of those was to reshape the business model to further burden the very people that played a major role in resolving the initial problem. Let us not forget the government income derived from tax on the sale of all the solar systems, why are they not carrying the cost? Oh but they are because they bailed out Eskom for years because they allowed what was once the electrical supplier that was the envy of the world be run by a litany of incompetents for a quarter of a century.	Gary	employed individual
	2026-08-30 07:20:54	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	One again the honest taxpayer must be punished for the government's incompetence, and lack of accountability.	Wynand	self-employed

	2026-08-30 16:33:10	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	When Failure Becomes a Tariff: Eskom, Solar Power and the Price of Public Distrust South Africans did not turn to rooftop solar because it was fashionable. They did so because the national electricity system failed them. Businesses and households were forced to adapt to rolling blackouts, lost productivity, damaged equipment and the daily uncertainty of whether the lights would stay on. In typical South African fashion, people made a plan. They invested their own money, carried their own risk and began insulating themselves from a crisis they did not create. Now, after years of load shedding and public frustration, Eskom appears determined to "balance the books" by targeting the very citizens and companies that reduced their dependence on the grid. That is not sound policy. It is a punishment for self-reliance. It asks responsible consumers to pay again for the consequences of institutional failure. The irony is impossible to miss. The sun belongs to no utility, no minister, no board and no balance sheet. It shines without permission and without invoice. Yet households that used that freely available resource to keep their homes running are now being treated as though they have undermined the system. The truth is simpler: they responded rationally to an unreliable service. No engineering degree is required to understand the anger. When an essential service collapses, people seek alternatives. When they seek alternatives, they should not be penalised for exposing the depth of the failure. Eskom's financial problems cannot be solved by discouraging resilience, innovation and private investment in energy security. That only deepens public distrust. South Africa needs a stable grid. It also needs citizens and businesses who are encouraged, not punished, for helping reduce pressure on that grid. Rooftop solar is not the enemy of Eskom. It is a symptom of Eskom's failure and a practical response to it. Instead of treating solar users as convenient revenue targets, the utility and the state should ask why so many people felt compelled to escape dependence on the system in the first place. If Eskom wants public cooperation, it must first rebuild public confidence. That begins with accountability, transparent pricing and recognition that citizens who invested in their own energy security did so because they had little choice. To punish them now is not merely poor judgment; it is an insult to every South African who kept going while the grid failed around them.	Andrew	self-employed
	2026-08-30 16:45:26	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	Totally inept. They cannot run a tap, never-mind a country. 	2026-08-30 17:30:13	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	Hoe does splitting a failed SOE into many solve any problems, all you are doing is multiplying the problems and opportunities for already rampant fraud and corruption. Then on top of this, people who have made their own plans and had to fork out a small fortune to get solar for their homes and businesses to somehow keep the economy going, and now going to be punished for the same failed organisation. Eskom was a power house of southern African electricity making money for our country from neighbors and charging tax payers much lower rates, but under the ANC has become corrupt, failing and all added to the taxpayer to fund, unacceptable.	Michael	business owner
	2026-08-30 17:49:18	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	1. This law is not going to solve the municipal income problem, but make it worse. The solar-powered population is going to exit the eskom/municipality grid. The ANC Government should've learned from the E-toll saga that it cannot just pass a rediculous legislation and think that the citizens will comply. To force people to commit to these rediculous laws will only succeed in driving customers away from the power grid. 2. We need to see an entry in this law that force the municipality to disconnect those households that don't want to pay the rediculous penalties, and instead use that money to increase their solar capacity. The lower income bracket population is already looking for ways and means to replace municipal eskom with solar. The proposed law is definitely going to speed up the off-grid migration.	Henry	unemployed individual
	2026-08-30 18:48:19	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	I totally object to the fact that when Eskom, or any government department, uses this tactic to cover up for their own incompetence, they make a new "law" in order to penalize the people with foresight. It is actually "legalized theft" that is being perpetrated on the private citizens who are able to plan better for their futures. Eskom received a world prize for being the best run, & cheapest supplier of electricity in the world, prior to 1994, & the sheer incompetence & destruction of Eskom by corrupt individuals has forced private people and businesses around the country take the actions that they did, by spending their own money, to help the situation. If this was not done, we would still be having load shedding. It is purely this one fact that has led to no load shedding over the last 18 or so months. Not the actions of either Eskom, or the government. It is a totally disingenuous action. Rather, the government needs to incentivize people & businesses for putting more renewable energy into the grid. This will bring the price of electricity down. Examples of this are available worldwide. The normal individual is already paying more for security due to all the other issues caused by government - no policing, potholes, crime, theft of both infrastructure & private property, & the list goes on & on..... 	2026-08-31 05:11:23	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	STOP the state to try and govern and thus steal out hard earned money by having fixed cost applied to every consumer of Eskom's electricity. This will make the poorer even poorer and the rich even richer. The state is unable to steal the public's money as there is nothing left and now with new legislation the state are trying to open new channels of so-called income, to steal even more. STOP THIS BS!	Chris	retired

	2026-08-31 07:21:09	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	It is both disappointing and unacceptable that the Government now appears intent on penalising ratepayers for its own inability to fulfil its mandate of providing a reliable electricity supply. It is precisely this failure in service delivery that has resulted in countless incidents of damaged household appliances, including refrigerators, televisions, and other electrical equipment, as well as the spoilage of refrigerated and frozen food. Faced with these ongoing challenges, consumers had little choice but to find alternative solutions. At first, most people regarded the Government's inability to provide a stable electricity supply as a temporary problem. As outages continued, however, households and businesses were forced to purchase generators to maintain some degree of normality. These generators are expensive to operate, consuming significant amounts of fuel and, in turn, generating additional revenue for the Government through fuel taxes and levies. As electricity supply failures persisted and became a long-term reality, consumers began exploring alternative energy solutions. For many, this meant investing in solar power systems. Solar energy was by no means an easy or inexpensive option. It required substantial capital expenditure, not an investment guaranteed to generate returns, and comes with equipment that has a finite lifespan and ongoing maintenance costs. Consumers made these sacrifices primarily to address the electricity challenges they faced, while simultaneously reducing demand on the national grid and easing the burden on the Government's electricity infrastructure. Initially, Government policies appeared supportive of the adoption of solar energy. However, this stance now seems to be changing. Instead of recognising the financial sacrifices made by consumers to compensate for service delivery failures, solar users are increasingly viewed as an additional source of revenue. This creates the perception that already overburdened consumers are once again being expected to carry the cost of Government shortcomings. One is left wondering what other forms of self-help could eventually become targets for taxation or penalties. Would residents who repair roads and fill potholes because of Government inaction be charged for doing so? Would communities that clean their own streets or maintain public spaces in the absence of municipal services be expected to pay additional levies? The principle appears no different. Consumers did not choose these alternatives out of convenience or profit. They adopted them out of necessity, to mitigate the effects of ongoing service delivery failures and to ensure a reasonable quality of life despite those challenges.	Monty	employed individual

	2026-09-01 04:15:46	No I do not	All of the above	Market Power & Price Manipulation	Small / Medium Business Owner (SMME)	The South African Government and Eskom have caused huge financial damage to livelihoods accross South Africa. Lockdowns were unnecessary. Mismanagement of Eskom's income and resources, together with gross corruption, have led to greater than necessary increases year on year for the last couple of decades. Eskom does not deserve to be an electricity provider, and it definitely should no longer have the monopoly it has had. The consumer has been getting a raw deal for decades now and it is enough. When corruption and mismanagement forced citizens to start financing renewable energy/solar solutions to survive the disruption and loss of income from lack of power, Eskom did nothing to pay reparations. Then, it started grabbing more and more from the same consumers it's employees stole from and intentionally sabotaged equipment to get kick-backs from uncrupulous suppliers, and little was done to deal with the corruption effectively. Now that citizens have gone out on a limb to purchase expensive alternative power solutions to help relieve the pressure on Eskom, the thankless, greedy directorship and beaurocrats want to punish us more to save municipalities through drummed up fixed charges that penalise the consumer for having helped them out. This is nothing short of criminal behaviour and an indictment on those who continue to propose further disgusting abuse of the consumer. The consumer does not have more to give. The government and Eskom and municipalities are drunk on abuse and think it is a game they will win. It will backfire very soon. The public has had enough of greedy, emotionally disconnected elite's abuses. The public is stretched and many cannot take any more of this financial rape.	Andrew

	2026-09-01 17:20:50	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	Opposing Market Power and Price Manipulation as a Policy Framework The proposed electricity market framework should reject the premise that market power and the possibility of price manipulation justify greater government control over electricity pricing. The fundamental problem is not that markets are inherently prone to manipulation, but that competition has been severely restricted by the State's own historical monopoly over electricity generation and distribution. Eskom's dominant position is not evidence of a market failure in the conventional sense; it is largely the consequence of a State-created and State-protected monopoly. The appropriate response is therefore not to impose additional controls, fixed charges, or regulatory mechanisms that make consumers more dependent on the existing system. Instead, government should remove barriers to competition and allow private generation, storage, wheeling, independent power producers and alternative suppliers to compete on a level playing field. Market power becomes dangerous when consumers have no meaningful alternative. The solution is to increase consumer choice, not to make consumers more captive. There is also a fundamental distinction between legitimate regulation against fraud or collusion and the broader claim that government must intervene because market participants might manipulate prices. If a company abuses a dominant position, colludes with competitors, or deliberately manipulates a market, such conduct should be addressed through transparent competition law and independent regulatory enforcement. But the mere existence of a large market participant does not establish that price manipulation is occurring. Nor should speculative concerns about wholesale price volatility be used to justify transferring greater pricing power to the State. A competitive electricity market can itself provide important signals about supply, demand, investment and scarcity. Suppressing those signals through politically determined prices or mandatory charges can conceal rather than solve underlying problems. Most importantly, consumers who have invested their own money in solar generation and batteries should not subsequently be treated as a problem because they have reduced their dependence on the grid. Their investment represents precisely the kind of private initiative that should be encouraged. The policy objective should therefore be clear: protect consumers from coercion and anti-competitive conduct, while expanding competition and consumer choice—not protecting incumbent institutions from competition.	Stegman	

	2026-09-01 18:30:58	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	'Free-riding' is an extraordinary way to label those who have used savings to shift to solar and shift the previous pressure on the grid. Mind boggling.	Lynn	Non-profit

	2026-09-11 15:59:06	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	At some point, P. Ramaposa, in answer to the electricity/load shedding that ESCOM experienced, both from their own internal mis-managment of funds, and the corruption in municipalities. If if is not clear by now, when will we 'wake up'?' All the resultant financial losses incurred by the corrupt of which their is a frightening figure of how many fall under this plunder of SA - basically it 'bumps' down to us the comsumer/general public. Excom has done nothing to stop the non payers illegal connections. Those getting the grant should have money deducted directly paid to ESCOM and water. As a consumer who consumes has to pay. Anyway P. Ramaposa encouraged us to 'get solar' as a solution, even went so far to offer a R 15 000.00 tax reduction - ha ha ha. Personally my business would have closed, I was paying people to sit around the best part of the day as we could not function in our work. So job losses, product increases as factories couldnt run their machinery the impact is over whelming - ruining lives, livelihoods and plus plus plus. The gov. does not even pay for electricity/water it's part of their perks along with the corrupt activities. This is another criminal act on the highest of scales and if the eff party can threaten to 'bring SA to a halt' for whatever issue it is time we had an opportunity to STOP this immediately. We are held hostage under abuse, financial loss, emotional blackmail, threats to our existance all by the same group of users, abusers, non functioning greedy minded sociopathic mental disorder - Job creation promises - ha ha ha - everything they do destroys efforts made and motivation has been reduced to 'why even bother' they are taking everything from us ..... the poor are the poor and have been rendered more so. Speachless, when he had 580 000.00 thousand US dollars in his couch that in itself is a criminal offence that all is being done to wriggle out of and how much is that shin-dig costing us tax payers - We have always paid for services they make it sound like we live in kindergarten when it is them who covert the prize of the creators of all our problems. Let them pay the money back	Jennifer	
	2026-09-11 16:07:44	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	I'm just so fucking over this country. Let the peasants pay and fuck the poor. Viva poverty, viva.	Lee	employed individual

	2026-09-11 16:13:13	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	As a household that has invested significantly in rooftop solar, I am not in favour of a system that imposes increasingly high fixed grid charges on solar users. We have invested our own money to reduce our reliance on the grid, lower electricity demand, and contribute to a more sustainable energy system. Penalising households for generating their own power undermines that investment and discourages further private investment in renewable energy. Any new electricity market should ensure that households with solar are treated fairly, with transparent and reasonable grid charges that reflect actual network usage rather than simply shifting costs onto those who have invested in alternatives.	Sasha	self-employed
	2026-09-11 16:20:07	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	I will not pay to anyone because I am off grid and the sun does not belong to them.	casper	retired

	2026-09-11 16:38:56	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	A “Sun Tax” on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. The “Captive Ratepayer Trap” and Municipal Insolvency: Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance. 	2026-09-12 00:29:07	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	A “Sun Tax” on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. The “Captive Ratepayer Trap” and Municipal Insolvency: Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance. Wholesale Price Volatility and Market Power Manipulation: Eskom Generation still controls the overwhelming majority of South Africa’s dispatchable baseload power. In unbundled spot markets worldwide, dominant suppliers have engaged in economic or physical withholding to artificially spike market clearing prices. Without hard statutory bid caps and aggressive oversight, wholesale price volatility will be passed directly down to retail consumers. Severe Conflicts of Interest Within the NTCSA: Consolidating transmission grid ownership (TNSP), system dispatch (SO), market clearing (MO), and legacy state off-take contracts (CPA) within a single entity under Eskom Holdings creates structural conflicts of interest. NTCSA could face internal commercial pressure to favour Eskom assets or delay third-party grid connections. Premature Market Launch Amid Unresolved Municipal Debt: Opening an advanced wholesale market with mandatory imbalance penalties in 2026/2027 while municipal distribution debt to Eskom remains unresolved is premature. Financially distressed municipalities that fail prudential credit requirements will be excluded from trading platforms, creating a divided nation of well-supplied metros and failing, power-starved rural councils.	Pat	employed individual
	2026-09-12 00:46:15	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	Stop the "Sun Tax": Do not penalise private capital and solar investments with punitive fixed grid fees. 	2026-09-12 05:21:47	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	What the Policy Proposes: The position paper establishes the principle to “discourage free riding,” arguing that modern electricity networks have high fixed infrastructure costs and low operational costs. Under this framework, tariffs will shift away from pure volumetric consumption charges (cents per kilowatt-hour) toward mandatory fixed capacity and network charges for all grid-connected customers, regardless of how little electricity they consume. Only consumers who disconnect completely from the national grid will be exempt from these fixed fees. The Underlying Risk: Households and small businesses that invested significant private capital into rooftop solar, batteries, and energy efficiency to protect themselves from load shedding will be forced to pay higher monthly baseline connection fees. This structural shift acts as a financial penalty on private decarbonisation, extending solar payback periods and increasing electricity bills for low-volume and frugal users. Points to Demand in Your Public Submission: Demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. Insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. Require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households.	richard	unemployed individual
	2026-09-12 05:36:10	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	As people of SA we cannot afford all these additional charges that the goverment is loading on the people of SA. Business is going bankcrupt people are in financial stress .Pensioners are below zero toelance finacialy to all the price hikes that is laid on us. By goverment so they can keep up have the highest salaries in the world paid by the people who try to keep heads above the water .. The goverment is thru legistration preventing free trade. Where we have to look for ulternative methods to be able to put food on our tables and keep up with rising fuel cost electricty becoming unafordable.	Linda	retired

	2026-09-12 07:37:23	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	4: Municipal Financial Collapse & Loss of Cross-Subsidies What the Policy Proposes: The position paper mandates the unbundling of electricity distribution businesses into separate regulated network service providers (“wires”) and licensed retail trading businesses. It also enforces strict prudential (creditworthiness) requirements for wholesale market participation, while acknowledging that many municipal distributors currently fail to meet baseline financial viability criteria. The Underlying Risk: Local municipalities rely heavily on the profit margins generated from bulk electricity sales to industrial and commercial clients to cross-subsidise indigent households, free basic electricity (FBE), and municipal service delivery. If large customers bypass local councils to purchase from private traders, municipal distribution revenues could collapse, accelerating local government insolvency and worsening service delivery failures across towns and cities. Points to Demand in Your Public Submission: Demand that the Department of Electricity and Energy, National Treasury, and SALGA establish a ring-fenced National Municipal Transition Mechanism before large commercial users are permitted to bypass municipal distribution accounts. Require municipal electricity distribution entities to ring-fence network maintenance budgets into dedicated accounts to prevent tariff revenue from being diverted into general municipal administrative expenses. Demand a transparent resolution framework for historical municipal bulk electricity debt that does not penalise paying ratepayers through inflated local tariffs.	Peter	retired

	2026-09-12 08:10:19	No I do not	All of the above	Market Power & Price Manipulation	Small / Medium Business Owner (SMME)	I support electricity-market reform, but I strongly object to any policy that places an unfair financial burden on ordinary households, small businesses, or people who have invested their own money in solar power. Solar users should not be penalised through excessive fixed or capacity charges simply because they buy less electricity from the grid. Any network charge must be reasonable, transparent and directly related to the actual cost of providing the grid connection. I am equally concerned that households and small businesses who remain dependent on municipal electricity could be forced to carry higher tariffs and cross-subsidies as large industrial users move to alternative suppliers. Government must ensure that electricity reform does not shift the financial burden onto captive consumers. Tariffs and fixed charges should be cost-reflective, transparent and independently regulated, with clear protection for vulnerable consumers. I therefore object to any tariff structure that effectively becomes a penalty on solar investment or unfairly increases the burden on ordinary residential and small-business consumers.	Francis	business owner

	2026-09-12 09:14:01	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	I am an elderly person who, as it is, can hardly afford the municipal charges. and at 67 still work to afford to live. I hardly use refuse, because I compost, use as little plastic as possible and recycle - yet I have to pay the monthly refuse fee without having any option. I use electricity sparingly because it is already so expensive, never switch on the geyser, boil water on gas for tee and personal hygiene instead of using the geyser, switch on a small lamp in the evening instead of main lights and have the most power for a washing machine and a fridge - yet pay a high levy on the lines. Same with water, I have a well point - which does use electricity but I am afraid to water my veg too often for that reason, use whatever I can of "dirty" water to water plants and flush the toilet, yet I pay more for the usage of the water facility than what I pay on the actual used water. In which world is this the correct thing to do. How are people like me supposed to carry on a decent life when tariffs are increased without concern for the human in the street. The huge companies who can afford must pay their usage fee like everyone else and the corrupt Eskom officials must be brought to justice, including their inflated salaries (question remains, what they are doing to deserve these salaries - besides stealing from tax payers to line their own pockets). These people are driving the country into ruin and not to mention the poor in the informal settlements who now already cannot afford their lives, they will continue to live like in the stone ages without enough water and electricity while the big companies get all the benefits and the poor get none. Surely there is something major wrong with this picture. People, wake up and stop this madness.	Ursula	employed individual

						Disadvantages of South Africa's proposed open electricity market The proposed South African Wholesale Electricity Market (SAWEM) would change how electricity is bought and sold in South Africa. Instead of Eskom being the primary single buyer of electricity from generators, the system would allow multiple buyers and sellers to participate in a competitive wholesale market. Although this could create opportunities for competition and investment, South African citizens could face several disadvantages during the transition and if the market is poorly regulated. 1. Possible increase in electricity prices One of the biggest concerns is that competition does not automatically mean cheaper electricity for every household. Cost-reflective tariffs: The government is moving toward electricity prices that recover the costs of producing, transmitting and distributing electricity. If these costs are passed on more fully to consumers, households could face higher bills or prepaid electricity running out faster. Market price fluctuations: Wholesale electricity prices could vary according to supply, demand, generation availability and other market conditions. These fluctuations may eventually affect electricity tariffs. Higher fixed charges: Consumers could pay more in fixed network or capacity charges, even when they reduce their electricity consumption. South Africa's draft electricity pricing policy explicitly supports cost-reflective tariffs, while also recognising the need to protect vulnerable and low-income households. Department of Electricity and Energy +2 2. Poor households could be affected the most Low-income families may not benefit equally from a competitive electricity market. Wealthier households may be able to install solar panels, batteries or alternative energy systems. Poor households, tenants and people living in informal settlements may have little ability to switch suppliers or invest in backup electricity. This could create a two-tier electricity system: Wealthier households Can potentially invest in solar, batteries and alternative electricity suppliers. Poor and vulnerable households May remain dependent on the public grid and have fewer options when tariffs increase. The risk is that competition could improve choice for some consumers while leaving others exposed to rising costs. Government's own pricing framework recognises the importance of Free Basic Electricity, lifeline tariffs and other protections for vulnerable consumers. Department of Electricity and Energy +1 3. Eskom's financial problems could affect citizens Eskom is already carrying substantial financial obligations. Restructuring the electricity industry could create additional financial and operational pressures if the transition is not carefully managed. Potential consequences include: Higher electricity tariffs to recover Eskom's existing costs and debts. Government having to provide additional financial support, potentially placing pressure on public finances. Reduced funds available for other public services if the restructuring requires further taxpayer assistance. Increased risk of service interruptions if financial instability affects maintenance or investment. The government's restructuring task team has specifically identified municipal arrears owed to Eskom as a threat to Eskom and the broader electricity sector. South African Government +1 4. Risk of private-sector profit taking priority over public interest Under a competitive market, private electricity generators and traders may seek to maximise profits. This is not necessarily harmful, but it creates a risk if regulation is weak. For example, companies might: Charge higher prices during periods of electricity shortages. Focus on supplying profitable commercial and industrial customers. Avoid investing in areas where household electricity demand is low or collection rates are poor. Reduce services or withdraw from markets where they cannot make sufficient returns. This could particularly affect rural communities, low-income households and municipalities with limited financial resources. Important: These are potential risks, not evidence that SAWEM will necessarily result in exploitation. Effective regulation, competition and consumer protection are intended to prevent such outcomes. 5. Municipal electricity services could become more complicated Many South Africans receive electricity through municipalities rather than directly from Eskom. A multi-buyer market could introduce additional trading arrangements, network charges, contracts and billing responsibilities. Possible disadvantages include: More complicated electricity bills. Confusion about which company is responsible for supply interruptions. Disputes between municipalities, electricity traders, distributors and consumers. Increased administrative costs that could ultimately be passed on to households. The proposed market architecture includes arrangements for transmission and distribution charges, market settlement and retail supply. These systems must work effectively to avoid consumer harm. Government of South Africa +1 6. Job losses or uncertainty during Eskom restructuring Moving away from the single-buyer model and restructuring Eskom could affect employees, contractors and businesses that depend on the existing electricity structure. Potential risks include: Changes to Eskom's organisational structure and staffing requirements. Job uncertainty in affected departments or businesses. Possible retrenchments if certain functions become duplicated or are outsourced. Disruption to communities that depend on Eskom-related employment. The scale of any job losses cannot be determined from the market roadmap alone. It will depend on the final restructuring arrangements, labour agreements and implementation decisions. 7. Greater complexity could create billing and supply disputes A competitive market may involve several entities performing different functions: Electricity generators Produce electricity Wholesale market and traders Buy, sell and settle electricity transactions Transmission and distribution networks Transport electricity to customers Households and businesses Receive and pay for electricity If the market rules, payment systems or responsibilities are unclear, customers could experience delayed refunds, incorrect bills, disputes over supply and difficulty obtaining assistance. The market design recognises the need for settlement arrangements, consumer protection and a retailer-of-last-resort framework. Parliament of South Africa +1 8. Competition may not immediately improve electricity reliability The purpose of SAWEM includes attracting investment and improving electricity supply. However, establishing a market does not automatically build new power stations, transmission lines or distribution infrastructure. Citizens could still experience: Electricity shortages if generation capacity remains insufficient. Delays in connecting new power projects to the grid. Continued load-shedding risks during the transition. Higher costs if emergency electricity procurement becomes necessary. Government acknowledges that major investment in transmission infrastructure is needed to connect new generation projects and support a competitive market. South African Government +1 9. Potential inequality between regions Electricity suppliers may prefer areas with high demand and reliable payment. This could make it more difficult to attract investment to poorer rural areas or municipalities with weak electricity infrastructure. Unless the regulatory framework guarantees fair access and protects less profitable areas, regional inequality could increase.		
				Market Power &	Residential Electricity	10. Citizens may have less certainty about future electricity costs

	2026-09-13 06:59:12	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	It is clear that these proposals are NOT for the benefit of the ordinary citizens of this country, but are simply a money-grabbing ploy to keep funding corrupt officials. We are tired of being burdened with your criminal neglect, greed and incompetence.	Glenn	self-employed
	2026-09-13 07:14:05	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	The 'Sun tax' is yet another example of double taxation in SA. Citizens who were forced to provide their own power when government failed us should not be further penalised, especially since the 'rebate' was selectively applied. Eskom is now celebrating profit and end of loadshedding, but that is as a result of lack of demand, and high pricing. It remains a wasteful enterprise. I strongly feel that we should fully de-regulate the energy market and allow open private competition. It is well demonstrated that government regulation is neither effective nor efficient. Municipalities are poorly managed and this bill provides no protection to residential households. Strict caps should be introduced.	Tina

	2026-09-13 11:00:21	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	I strongly oppose the proposed Electricity Sector Market Transformation Position Paper. As a residential electricity consumer and ratepayer, my primary concern is market power and the potential for price manipulation. Electricity consumers should not be forced to carry increasing costs because of restructuring, reduced electricity consumption, or declining municipal revenues. I particularly oppose any new or increased tariffs, fixed charges or other fees that raise the cost of electricity. Consumers who have invested their own money in solar, batteries and energy efficiency should not be penalised for reducing their reliance on the grid. Electricity distributors should improve efficiency and control costs rather than using increased tariffs and unavoidable charges to recover lost revenue from consumers. I therefore object to any policy that allows market restructuring to result in higher or unfair electricity costs for residential consumers and ratepayers. Electricity must remain affordable, transparent and fairly priced.	basson	unemployed individual
	2026-09-13 11:01:29	No I do not	All of the above	Market Power & Price Manipulation	Small / Medium Business Owner (SMME)	We need less government interference & taxes. Eskom can run profitably if they root out corruption and employ competent technocrats. What they propose is extrortion like most other taxes. Cut government staff & renumeration. Few business owners can even make as much as their saleries and yet they add very little value to anyones' lives.	Henk	business owner
	2026-09-13 11:01:46	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	This is absolutely ridiculous. There are numerous other ways in which people avoid using electricity from Eskom to reduce consumption of electricity. Are they now going to place an extra charge on those that use candles, those that switch lights off to conserve cost, those that braai, those that have gas stoves etc. In an effort to get people to use more electricity, perhaps they should rather encourage the use of electric vehicles, restoration of the electric rail system. Raising revenue to compensate for the free electricity being dished out to those who do not deserve anything is another step in the right direction. Many countries have been very successful in reducing pollution, saving lives by encouraging people to invest in solar energy. Independent access to energy generated by homes provides access to energy in the event of major blackouts.	David	retired

	2026-09-13 11:02:22	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	Dear Eskom. Remember SANRAL? You are next. 	2026-09-13 13:01:10	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	Before this corrupt, theiving bunch came into power, the contract we had with the power supplier was simple; 1. They agreed to generate power at a reasonable cost 2. I agreed to use and pay for said power and a reasonable price That agreement worked well for both the supplier and the user. Then the ANC happened! With all their "expertise" they could not generate the same amount of power at the same cost as the people before them had done. Over the last 25 years the graph shows costs moving up at a 45 degree angle, while the amount of power being produced at that ever increasing cost declines steadily. It's time we stopped paying for the ANC's inability, not just in power production, but in every aspect of running the country. That said, we must give credit where credit is due. The ANC has run the country incredibly well... into the ground!	Mark	retired

	2026-09-13 14:09:37	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	I reject the proposed Electricity Sector Market Transformation Position Paper in its entirety. This policy is not reform—it is exploitation. The government seeks control, and unfair policies that strip citizens of free will. It is a corrupt attempt to penalise households for solving a problem the state itself failed to fix. It is simply another way for government to be corrupt and steal money from ordinary citizens. We needed solar because the government could not provide reliable electricity. Families invested their own money to secure power when the grid collapsed. Now, instead of supporting self-reliance, the government wants to punish those who made alternative plans with punitive fixed grid fees and capacity charges. I specifically reject: 1. The Sun Tax: unavoidable monthly levies on solar households, penalising private capital and discouraging clean energy adoption. 2. Tariff hikes that trap non-solar households as captive consumers, forced to subsidise industrial defection and municipal mismanagement. 3. Market unbundling that allows large mines and factories to bypass municipalities, leaving ordinary homes to carry the financial burden. 4. The erosion of household budgets through unavoidable fixed charges, regardless of consumption. 5. The lack of transparency in wholesale reforms, which risks leaving everyday citizens footing the bill for failing infrastructure. This Position Paper is an overreach. It discourages clean energy, undermines private investment, and traps households in spiralling costs. It is fundamentally unjust to penalise citizens for taking initiative when government failed to deliver electricity in the first place. I therefore call on the Department of Electricity and Energy to: 1. Stop the Sun Tax and protect private solar investment. 2. Protect captive consumers from unfair tariff hikes. 3. Ensure transparency so reforms do not burden ordinary households. The government has become a burden, seeking only to extract money and consolidate power. Citizens do not need more bureaucracy and penalties—we need fair, transparent policies that protect households and encourage clean energy adoption.	Danie	employed individual

	2026-09-13 21:23:32	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	I strongly reject any policy that requires ordinary households to pay substantial fixed electricity or grid charges for services they are not actually receiving or meaningfully using. It is fundamentally unfair to expect a consumer to pay simply because they are connected to a network, particularly where that consumer has invested their own money in solar panels, batteries and other alternative-energy solutions to reduce their dependence on the grid. We cannot be expected to pay for electricity we do not consume, services we do not receive, and infrastructure we barely use, simply to protect the revenue of an inefficient system. If the grid is being used, consumers should pay a fair and reasonable charge for the actual service provided. But the government must not turn the grid connection into an unavoidable source of revenue while simultaneously making it increasingly expensive for households to generate their own electricity. This is especially concerning when large commercial and industrial users may be given greater freedom to negotiate or source electricity elsewhere, while ordinary households remain effectively captive to municipal distribution systems. Why should ordinary households carry the burden while larger consumers are given greater choice? A household that has spent its own money investing in solar should not be punished for trying to become less dependent on the national grid. Such investment should be encouraged because it can reduce demand on the electricity system—not penalised through excessive fixed charges. I refuse to support an electricity model in which consumers are treated as captive ratepayers whose primary purpose is to keep paying for a system regardless of how little service they actually receive from it. Electricity reform should deliver better service, greater competition, affordability and genuine consumer choice. It must not simply create new ways of collecting money from ordinary South Africans. We deserve to pay fairly for the electricity and services we actually receive—not be forced to pay indefinitely for a service we have increasingly had to provide for ourselves. 	2026-09-14 09:39:23	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	Eskom, therefor the Government of South Africa, has the responsibility to supply all residents with affordable energy. Due to bad management and corruption this obligation was not met and along with the rest of world who was thinking ahead in terms of energy, some of the energy users I the country made other plans to fulfil the mandate of their own energy supply as in any other democracy. If Eskom, therefor the government, had any inclination of serving the people of they country, they would come up with alternative solutions to the problem instead of just continuing to overburden their customers for their mistakes. If Telkom and OpenServe could get it right, why not Eskom. Give a better alternative and people will gladly buy in	Asher	employed individual
	2026-09-14 09:43:34	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	This bill will make electricity prices skyrocket at the municipal level and I cannot see how it is fair for businesses to save costs and people pay for it	PH	employed individual
	2026-09-14 09:46:38	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	People already cannot afford electricity. Some have made the the move to solar systems as a move to try stay above the water. Forcing people to pay for a service the sun, AND NOT THE DEPARTMENT, is providing is criminal. Everyone involved in making and approving this policy must be investigated. Because only people who are not directly affected by this crime, or severely affected are the criminal themselves. That's why they would want it and accept it as law.	Onthatile	unemployed individual
	2026-09-14 10:01:01	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	Electricity tariffs must remain fair and affordable. South Africans cannot continue to absorb steep annual increases caused by years of mismanagement, inefficiency, and poor decision-making within Eskom. Consumers should not be expected to pay the price for failures they did not create. Those of us who have invested our own hard-earned capital into solar energy have done so to secure reliable electricity for our families, businesses, and communities. These investments have also contributed to economic growth, job creation, and reduced pressure on the national grid. Government has no right to penalise citizens and businesses for taking responsibility where state-owned infrastructure has failed. The proposed "Sun Tax" and punitive fixed grid charges unfairly target homeowners and businesses that have invested in renewable energy solutions. Instead of discouraging private investment, government should be supporting and incentivising initiatives that strengthen energy security and reduce dependence on an already strained electricity system. Key principles that must be protected include: No punitive solar taxes or excessive fixed grid fees that penalise private investment in renewable energy. Protection for captive consumers, ensuring municipalities do not increase tariffs on non-solar households to recover revenue lost through industrial and off-grid migration. Transparency in electricity market reforms, ensuring ordinary households are not left carrying the financial burden of grid infrastructure costs. Fair and reasonable electricity pricing that reflects efficient management rather than the cost of historical failures. Solar power does not belong to any political party or government. Sunshine is a natural resource available to all South Africans. The rapid expansion of solar installations across the country has helped reduce demand on Eskom and contributed to greater energy stability. Consumers should be recognised for this contribution, not punished for it. It is neither fair nor sustainable to manipulate electricity pricing in ways that make South Africans poorer. Around the world, governments encourage cleaner energy adoption and reward efforts to reduce emissions and ease pressure on national grids. South Africa should be doing the same. Furthermore, it is unreasonable for households and small businesses that have reduced their consumption and invested in self-generation to subsidise inefficiencies elsewhere in the system. The focus should be on improving governance, reducing waste, strengthening infrastructure, and attracting private investment into energy generation and distribution. South Africans have demonstrated a willingness to invest in the country's future. Government should work alongside citizens and the private sector to build a reliable, affordable, and sustainable energy system, rather than introducing policies that discourage investment, innovation, and economic growth.	Derick	
	2026-09-14 10:01:11	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	Stop the "Sun Tax": Do not penalise private capital and solar investments with punitive fixed grid fees. 	2026-09-14 11:33:08	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	To whom it concern, I write to formally register my objection to the proposed introduction of punitive fixed grid fees, commonly referred to as the “Sun Tax.” 1. **Stop the Sun Tax** Penalising private citizens and businesses who invest in solar energy undermines national energy resilience. These investments represent private capital directed toward solving our shared energy challenges. Punitive grid fees discourage innovation, weaken investor confidence, and contradict the government’s stated commitment to renewable energy. 2. **Protect Captive Consumers** Municipalities must not be permitted to raise tariffs on non-solar households to compensate for lost revenue from industrial or off-grid defection. Such measures unfairly punish captive consumers who remain reliant on the grid, deepening inequality and eroding public trust. 3. **Transparency First** Wholesale market reforms must be implemented with full transparency. Everyday households should not be left carrying the cost of grid infrastructure while larger industrial players benefit disproportionately. Clear, accountable mechanisms are required to ensure fairness in cost allocation. Whether households generate their own power or purchase every kilowatt from their local council, this policy directly affects affordability and fairness. I urge the Department to reconsider these measures and instead pursue reforms that encourage renewable adoption, protect vulnerable consumers, and uphold transparency in energy governance. Thank you for recording this objection as part of the official government record. Yours faithfully,	Juan A	employed individual
	2026-09-14 11:34:08	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	Eskom must focus on cost reduction rather than passing on their inefficiencies to the consumer. Eskom can't provide electricity for the whole country, so why do they want to penalise users that actually do something to create their own electricity. Eskom should thank such people. 	2026-09-14 15:50:42	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	The consumer is tired of having his pocket pillaged to prop up the consequences of the mismanagement, and incompetence, of those who govern us at both the national and municipal levels of government. The time has surely come for the people to make their stand and say Enough is enough! What is proposed offends free enterprise and the indisputable right of people to invoke ways and means to reduce the cost of living for themselves if done so lawfully which is the case when we invoke solar power and other clean energies. As I have stated before, many times, when are those who are currently governing us going to recognize that they don't have the qualifications or expertise to do so, and accept that they should resign and allow those who have the expertise to take over. MICHAEL HOOD	MICHAEL ERIC	retired

	2026-09-14 16:41:24	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	I strongly oppose any policy that penalises South Africans for investing their own money in solar, batteries, and energy independence. Many households and businesses were forced to make these investments because of years of unreliable electricity supply, load shedding, rising tariffs, and deteriorating infrastructure. It is unacceptable to now treat those same people as “free riders” simply because they have reduced or eliminated their dependence on the grid. If a consumer uses Eskom’s electricity or reserves genuine network capacity, fair and transparent charges for services actually provided can be justified. But government and utilities should not create ever-increasing compulsory fixed charges simply to recover revenue lost because consumers have become more self-sufficient. South Africa should be encouraging private generation, storage, competition and genuine energy independence — not constructing new tariffs and regulatory barriers to protect an incumbent system from competition. The same concern applies to households who cannot afford solar. They must not become the captive revenue base left behind to carry escalating municipal and grid costs as larger customers gain alternative supply arrangements. Energy reform should produce more competition, lower costs, greater reliability and greater consumer choice. It should not become another mechanism for extracting money from citizens regardless of whether electricity is actually supplied to them. I therefore reject any policy framework that shifts the burden onto ordinary households through unavoidable capacity charges, punitive treatment of self-generation, or artificial restrictions on genuine private electricity competition. This cannot go on and on and on.	Barbara	business owner
	2026-09-15 08:48:51	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	It is unfair to keep on inventing ways to burden the citizens of South Africa for the sake of making money. The average South African is already not so average anymore. Life is so expensive and everything keeps on increasing. It is expected that we must just absorb all levies, taxes and additional charges. The truth is that most of the middle class and below cannot afford any more increases, be it electricity, municipal charges, fuel price increases and the list can go on and on. Things like this is the reason why there are so many financially struggling people in our country. I do not support the Transformation position paper at all.	Renee	employed individual

	2026-09-15 09:20:11	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	I have serious concerns about the proposed legislation and the direction in which our electricity policy is moving. For years, ordinary South Africans were subjected to load-shedding and an unreliable electricity supply. Many households who could afford to do so were eventually forced to invest significant amounts of their own money in solar systems, inverters and batteries simply to maintain a basic and reliable electricity supply. These investments were not made to avoid contributing to the country's electricity system. They were made because people had been left with little choice. It is therefore extremely concerning to now hear proposals that people who have invested their own money in alternative energy solutions may be required to pay additional monthly charges because the traditional electricity revenue model is under pressure. Where is the fairness in this? Those who cannot afford solar and battery systems remain dependent on the grid and are already facing substantial electricity increases. Those who managed to save and invest in their own backup systems are now potentially being penalised for reducing their dependence on the grid. Before government looks for yet another way to extract money from already financially stretched taxpayers and consumers, I believe there needs to be far greater transparency and accountability regarding how existing public funds are managed. South Africans need confidence that the money they contribute through taxes, rates and electricity tariffs is being used efficiently, responsibly and for the benefit of the country — not simply that additional revenue will continually be found whenever government entities face financial shortfalls. People have already paid the price for years of inadequate electricity supply. Many of us spent money we could barely afford because we needed to keep our homes, businesses and families functioning. Government should be asking how it can restore public confidence, improve efficiency, reduce waste and protect the electricity system — not continually find new ways to charge the people who are already carrying the financial burden. We need responsible governance, accountability and sustainable solutions, not an endless cycle of increasing costs for ordinary South Africans.	Lisa	employed individual
	2026-09-15 10:17:03	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	WE ELDERLY RESIDENTS ARE BEING FORCED TO LEAVE OUR HOMES DUE TO THE HIGH COSTS OF RATES, ELECTRICITY ETC . 	2026-09-15 12:00:23	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	I hereby object to the proposed mandatory fixed solar charges, captive-consumer price increases and related tariff changes. These measures risk placing an unfair additional financial burden on ordinary households and small businesses, particularly those that have invested their own money in solar generation and battery systems to reduce their reliance on the electricity grid. Consumers who generate part of their own electricity should not be penalised through compulsory fixed charges or higher tariffs simply because they have taken steps to reduce their electricity consumption and become more energy independent. Such charges could also discourage further private investment in renewable energy and energy efficiency. I am also concerned that reduced municipal electricity revenue could result in these costs being shifted onto remaining electricity consumers, creating a cycle of increasing tariffs and declining affordability. I therefore strongly object to the proposed measures in their current form and call for a fairer tariff structure that protects ordinary households and small businesses, recognises private investment in electricity generation, and does not penalise consumers for reducing their dependence on the grid. I request that these proposals be reconsidered and that meaningful consultation with affected consumers take place before any such charges or increases are implemented.	Jean

	2026-09-17 14:59:52	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	South Africa and Eskom may be the only country and power utility in the world to actively victimise its own customer base. When you live in countries in Europe, Scandinavia, Australasia and Canada and you put up rooftop solar or a similar small-scale method of augmenting your electricity and feeding back into the grid, you get rewarded for being forward thinking and alleviating pressure on the grid. But because of our corrupt government and its equally corrupt power utility, people trying to lessen the load on the grid are actively threatened with fines, victimised for doing the right thing. Eskom's faulty logic: They can't generate enough electricity, but they still force you to use them because they are a monopoly, and have raised their tariffs by around 2 000% since 1994. Electricity prices in South Africa have increased by nearly 2,000% since 1994, far outstripping the country's cumulative inflation rate. In 1994, Eskom's average electricity tariff was roughly 10.32 cents per kilowatt-hour (c/kWh). Following decades of compounding price hikes, the average tariff escalated to approximately R2.12 per kWh. In 2008 a 27.5% increase. In 2009 a record 31.3% increase. From 2010 to 2012 successive annual increases averaging around 25% each year. Between 2007 and 2026, electricity tariffs have grown more than six times faster than general consumer inflation, and the trend looks likely to continue.	Theuns	employed individual

	2026-09-19 09:59:05	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	The Electricity Sector Market Transformation Position Paper appears to avoid the actual and relevant underlying issues by not addressing these issues. Adaptation to incorporate the changing technological development of alternative electricity into the supply grid is understandable and make sense from a security perspective when it comes to network maintenance. However, to charge an availability fee for low level users who started to switch to solar energy obscure the real issues that needs to be addressed. Electricity from a household perspective is only a lifestyle product, not a life threatening thing if a household does not have it. It is merely a convenience product. When this product becomes too expensive the price and demand principles will operate and substitutions will be pursued like solar, coal, gas. Affordability is a great factor especially when the bill for electricity becomes the main expense of a household. Charging of an available fee is just another factor that will quicken the move to substituting products. More sadly, the portion of the populace that cannot afford alternatives runs on “flocking the dying horse”. Electricity is an infrastructure thing especially for the welfare of a countries economy. Supply thus needs to remain stable, reliable, and cheap enough to support economic growth. The shifting of mega users to bulk supply networks make sense, but it ignores a major part of the economic contributing businesses and smaller enterprises. The proposed way forward has an extortion implication, which sadly hides the issues of poor long term strategic leadership regarding technological advancements, and considering the strategic implications of income loaded onto a lifestyle product sold as a necessity for survival. Survival and an ability to operate is not the same. The proper structuring of municipal and national income is what is needed based on governmental responsibility (no matter at what level) considering provision of reliable and affordable infrastructure marginally above breakeven pricing levels. Failure in this will lead to a social-economic death spiral. Please revisit this proposed policy’s underlying assumptions responsibly.	Douwe	retired

	2026-09-23 19:55:35	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	Eskom wants the businesses and the normal household to be taxed for solar. My question is this, eskom can't produce enough power at this stage, how is taxing the solar users help eskom to be more stable and produce more electricity. The other thing that eskom must bear in mind is that all the solar systems currently in use in South Africa was bought by the owner and is maintained by them, eskom has not supplied any funds towards a solar system, but now the consumer must be taxed because eskom is to corrupt to be operated properly. Eskom should first clean inhouse before going to the consumer for their mistakes. This is a failing plan!	Jacobus	employed individual

	2026-09-25 18:08:05	No I do not	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	I am writing to formally object to the proposed South African Wholesale Electricity Market (SAWEM) roadmap. While transitioning to a competitive market is necessary, this specific policy framework unjustly shields large industries while penalizing standard households and small businesses. My primary objections are as follows: Unfair Fixed Grid Charges: Imposing high, unavoidable fixed monthly fees on rooftop solar owners under the guise of an "anti-free-riding" principle is unacceptable. This punishes proactive citizens who invested their own private capital to survive load shedding and stabilize the grid. The "Captive Ratepayer" Burden: Allowing large industrial users to bypass municipal grids to buy cheaper power directly from private traders will hollow out municipal revenues. This leaves ordinary households and small businesses as "captive ratepayers," unjustly shifting the massive financial burden of legacy cross-subsidies and municipal deficits onto those least able to afford it. Price Volatility and Monopoly Risks: With Eskom Generation remaining the dominant producer, the proposed market is highly vulnerable to price manipulation, trading speculation, and severe retail tariff volatility. The draft currently lacks adequate regulatory protections for standard consumers against market power abuses. Cost Duplication in Distribution: Forcing the separation of the physical grid ("wires") from electricity sales ("retail") introduces the high risk of stacked, duplicative fees. This restructuring will inevitably drive up the total cost of electricity for the end-user. This policy facilitates an inequitable transition that benefits large industrial players and traders at the direct expense of the average South African ratepayer. I strongly urge a revision of this framework to protect standard consumers from bearing the costs of this market restructuring.	Garreth	employed individual

	2026-08-25 16:58:20	No I do not	All of the above	Grid Congestion & Transmission Delays	Residential Electricity Consumer / Ratepayer	1) ESKOM IS SUPPOSED TO BE A NON-PROFIT!!! 2) The unbundling of ESKOM is the Worst Mistake ever!!! 3) Renewals are NOT Green or Sustainable!!! 4) A “Sun Tax” on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. The “Captive Ratepayer Trap” and Municipal Insolvency: Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance. Wholesale Price Volatility and Market Power Manipulation: Eskom Generation still controls the overwhelming majority of South Africa’s dispatchable baseload power. In unbundled spot markets worldwide, dominant suppliers have engaged in economic or physical withholding to artificially spike market clearing prices. Without hard statutory bid caps and aggressive oversight, wholesale price volatility will be passed directly down to retail consumers. Severe Conflicts of Interest Within the NTCSA: Consolidating transmission grid ownership (TNSP), system dispatch (SO), market clearing (MO), and legacy state off-take contracts (CPA) within a single entity under Eskom Holdings creates structural conflicts of interest. NTCSA could face internal commercial pressure to favour Eskom assets or delay third-party grid connections. Premature Market Launch Amid Unresolved Municipal Debt: Opening an advanced wholesale market with mandatory imbalance penalties in 2026/2027 while municipal distribution debt to Eskom remains unresolved is premature. Financially distressed municipalities that fail prudential credit requirements will be excluded from trading platforms, creating a divided nation of well-supplied metros and failing, power-starved rural councils. 	2026-08-31 22:07:33	No I do not	All of the above	Grid Congestion & Transmission Delays	Residential Electricity Consumer / Ratepayer	Penalizing households that help relieve pressure on the national grid creates a perverse incentive. Power generated and consumed at the point of use reduces strain on aging transmission networks and helps offset challenges associated with maintaining existing infrastructure. Most households have already assumed the debt, financial costs, maintenance responsibilities and capital outlay required to secure a reliable power supply due to the government's ongoing inability to provide this service consistently and with minimal disruption. This approach contradicts efforts to encourage the transition to greener energy solutions and achieve climate-friendly targets. Households that are already contributing to these objectives may now be penalized, while many families, already under significant financial pressure in the current economy, are finding it increasingly difficult to remain above the poverty line.	Carina	
	2026-09-01 11:52:06	No I do not	All of the above	Grid Congestion & Transmission Delays	Residential Electricity Consumer / Ratepayer	No comment , I beieve those that have been invested in solar to be left alone as they releave the grid from demand so in essense they helping the grid	hylton	employed individual

	2026-08-26 16:14:09	No I do not	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	In Jhb , I already pay a fixed charge of R250 / month to remain on the grid. Most months my consumption is very low, so my cost/ unit is very high. If the fixed cost increases further I'll just remove my property from the grid and use a generator on very overcast days	Alastair	retired
	2026-08-26 17:01:24	No I do not	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	The policy should open things wide open for users to buy electricity from any provide: municipality or private energy wholesaler The problem here is that as a rate payer I am being taxed on three levels for the same thing : 1. Municiple rates & taxes: should already cover the electricity connection charge 2. Eskom Electricity pricing: likely already factoring in connection cost into pricing 3. Now add on a fixed electricity connection charge which is already included in the above (in Cape Town we already pay this - something like R300 /month) So I have no option to chose a lower cost provider/reseller of that electricity and I am double paying Eskom and the Municipality for the same connection "service". What a scam	Nathan	employed individual

	2026-08-27 12:00:14	No I do not	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	have installed Solar because of the states failure to supply uninterrupted electricity to my home. This has cost me a lot of money - if you are thinking of charging me for freeing up electricity for others then you are seriously barking up the wrong tree. I refer to the following statements made recently: Ramokgopa revealed that diligent, paying consumers are forced to subsidize non-paying customers because the current tariff structure bakes unpaid municipal debt into the cost of supply. " - Unveiled in August 2026, the new policy aims to ban Eskom and municipalities from passing these uncollected debts onto compliant users. - Ramokgopa noted that from 2007 to 2024, electricity prices surged by 937%, far outpacing the 155% inflation rate over the same period. - Under the proposed framework, Nersa will enforce transparent, cost-reflective tariffs and a 10-year price forecast to protect consumers and help industrial investors." So, all of the above are just lies masked as promises to placate the desparate public and garner votes whilst taxing the already overburdened tax payer.	Gerda	
	2026-08-27 12:27:55	No I do not	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	BECAUSE OF WIDESPREAD CORRUPTION AND INEFFICENCY WITHIN ESKOM AND THE GOVERNMENT IN GENERAL WHY MUST WE BE CONSTANTLY PENALIZED TO PAY FOR THIER INCOMPETENCE AND STUBBORN REFUSAL HAND THE COUNTRY OVER TO PEOPLE WHO CAN RUN IT	Sharon

	2026-08-28 14:19:00	No I do not	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	To whom it may concern I write as a grid-connected customer who, like many households, invested in solar generation because the national utility could not keep essential equipment running. Eskom and the State now argue that solar-equipped households “free-ride”: we buy fewer kilowatt-hours, yet still use the grid for backup and night-time supply, and therefore do not pay our “fair share” of fixed network and generation-capacity costs. That is the principle used to justify higher fixed charges, the generation capacity charge, forced migration onto Homeflex time-of-use tariffs, and the registration regime for small-scale embedded generation. That principle is economically tidy and historically false. Households did not install solar to dodge network costs. They installed it because years of load shedding, delayed maintenance, and tariff shocks made the grid an unreliable last resort. People spent their own capital so fridges, medical devices, pumps and lights would not fail. In doing so they reduced demand on a strained system at the very moments when Eskom most needed relief. To treat that investment as a subsidy extracted from “full-paying” neighbours is to blame the customer for a failure the supplier created. Countries whose governments plan ahead treat distributed solar as load relief. They subsidise, net-bill or otherwise reward households that generate their own power and ease peak pressure on the grid. South Africa’s response is the opposite: after citizens did, at private cost, what the State failed to do, the policy is to recover “backup” costs from them and to restructure tariffs so that using less energy is punished. If the grid must recover fixed costs from those who remain connected, say so plainly and design charges that track actual use of the network — not a moral claim that self-reliance is free-riding. A household that invested to keep the lights on is not a free-rider. A utility that first made the grid unusable and then billed citizens for still needing it is. I ask Eskom and the Department to abandon the language of “discouraging free-riding” and to align policy with what every competent energy administration already knows: private solar that reduces system load should be encouraged, not penalised.	Jan	retired
	2026-08-28 14:43:47	No I do not	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	Is this change to steal more from the ratepayers or to improve service delivery? Another ANC plot to enrich themselves and their comrades.	MOHAMED Ali	employed individual
	2026-08-28 15:42:28	No I do not	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	In the UK , my daughter also have solar panels on the roof of their home and they get refunded by their municipality for the generation of electricity. Now here in our country the Government wants to steal from home owners that spent their own funds to get ESKOM out of their generation predicament. Typical of the corrupt ANC cadres.	Patrick	retired

	2026-08-29 09:06:20	No I do not	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	Solar power was a solution that individuals, corporate consumers and other role players chose to overcome the inefficiencies and ineffectiveness of Eskom as well as the lack of maintenance in the infrastructure that the current government pursues. Instead of rewarding problem solving, they just find ways to continue to fill their own pockets, "LEGALLY". This is the very definition of toxic governance that is rife in South Africa. Rather than taking a brutal and honest self-reflection and say, "Let's reward these problem solvers for trying to ease the burden on the grid and let's see how we can make the infrastructure better.", they take the convenient route and say, "Problem solvers have provided us an opportunity to make easy money, let's see how we can do that legally." Too many people trying to take too much money from a system that is not working rather than using the brain power to fix the situation and encourage people to solve practical problems with practical solutions rather than taking the convenient fiscal route that just lines some bureaucratic sphincter muscle's pocket. 	2026-08-30 14:45:18	No I do not	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	This is an after the fact, bad faith action. While I have sympathy for the thought. it is fa fact that if every person that has solar were to immediately abandon the Solar and start consuming "normally" the grid would immediately fall apart. I installed Solar to protect my equipment and ensure continuity. Both Eskom and municipalities offer not warranty of service and availability, they accept no punitive or even just compensatory responsibility for lack of service, yet want to bite the hand that fed them. The government was criminally derelict. First of all it encouraged consumer to become independent. They overpay all Eskom employees, (more than market median for sub-par delivery). They did not plan, participated (as an organisation) in corruption, paying for services not rendered or rendered shoddily. way beyond what is the international norm for both maintenance and expansion. Once there is a semblance of stability, wholly enabled by the very people they want to overburden, they now feel that we must sponsor further incapacity and malpractice because we invested some of our money to become largely independent of them. If they don't want to sell us electricity cut us off, we will make our own plans, but I will not pay a cent more than my neighbour. I use Eskom as a backup because its available, but if they don't want even that income, I will gladly forego the convenience. The state wants to have "favourite" children! I already participate beyond most in the wellfare of my compatriates, on my own terms. its not the government's role to be anyone's conscience. If they are serious, ban all further installations stop our ability to buy stuff, which would be unconstitutional, but those are signs of being serious, but milking your neighbour's cow, that is criminal.	Jose	retired
	2026-08-30 21:24:12	No I do not	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	This government wants to penalise everyone who is tired of the lack of service delivery in the electricity field. We have to spend large amounts of money to compensate for Eskoms' corruption and inefficiency.	Chris	retired
	2026-08-31 10:52:37	No I do not	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	The government keep on spending money as if there is no end to it and we must just keep on giving.	Lodewikus	employed individual

	2026-09-11 16:48:53	No I do not	All of the above	Municipal Financial Collapse	Municipal Official / Councillor	There are far too many politicians who are ill equipped and qualified. When I was still working I had to take as a specialist graduate commands from a grade 10 qualified Councillor who had no insight in running a business. Also, lost of money can be saved by employing skilled people, who is willing to work efficiently and focus on optimum service delivery. Cutting back on labour costs will bring down all other related costs. Currently, it is socialist oriented politicians and trade unions with ill and unpractical policies that make major decisions.	Johan	retired
	2026-09-11 17:36:28	No I do not	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	I strongly object to the Electricity Sector Market Transformation Position Paper and reject any policy that shifts the financial burden of maintaining the electricity grid onto ordinary South African households. Consumers who have invested their own money in solar should not be punished with excessive fixed charges or so-called “anti-free-riding” fees simply because they are reducing their dependence on Eskom, while households that cannot afford solar must not be forced to carry the cost of declining municipal revenue through higher tariffs and compulsory charges. Government must protect consumers, not penalise them for reducing electricity costs or make them responsible for the financial consequences of restructuring the electricity market. Any reform must be transparent, fair, affordable and sustainable, with clear protections for both solar and non-solar households. I therefore call on the Department of Electricity and Energy to withdraw any measures that unfairly increase household electricity costs, reject punitive charges on private solar investment, and ensure that ordinary consumers are not used as a financial buffer for failing municipal systems or market restructuring.	Jan	retired

	2026-09-13 13:28:30	No I do not	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	Eskom should be treated as just one source for povision of electricity and should do so on a responsibly managed basis - and should not seek to punish anyone who makes alternative arrangements. Eskom is not entitled to deter competition!	Jennifer	self-employed

	2026-09-13 14:29:34	No I do not	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	Skip to content Dear South Africa Democratically Engaged, Active and Responsible Menu Electricity Transformation paper 8,893 comments individually delivered to the Minister, so far The Department of Electricity and Energy has published a structural roadmap to dismantle South Africa's single-buyer electricity model and replace it with a competitive open market: the South African Wholesale Electricity Market (SAWEM). While market competition aims to end Eskom's generation monopoly and encourage private investment, the underlying policy introduces fundamental shifts that directly affect your monthly utility bills and private solar investments: Mandatory Fixed Grid Charges on Rooftop Solar: The policy explicitly targets grid-connected solar and partial-defection users under an "anti-free-riding" principle, shifting tariff structures from volumetric consumption (units used) to high, unavoidable fixed monthly connection fees. The "Captive Ratepayer" Risk: Large industrial and commercial users exceeding set thresholds (e.g., 1 MW) will be allowed to bypass municipal grids to buy cheaper power directly from private traders. Ordinary households and small businesses will remain "captive" to municipal distribution grids, risking higher tariffs to cover municipal revenue deficits and legacy cross-subsidies. Wholesale Price Volatility & Market Power: With Eskom Generation remaining the dominant producer, risks of market power, pricing manipulation, and trading speculation could translate into retail tariff volatility if regulatory protections are inadequate. Restructuring the Distribution Value Chain: Municipal and Eskom distributors must separate the physical grid ("wires") from electricity sales ("retail/trading"), introducing separate fees for grid delivery and energy units. click the link for more info, or scroll down to have your say Where Do You Stand? Support: Market competition, Eskom unbundling, and open wholesale trading are essential to solve South Africa's energy crisis and attract private capital. Object: Mandatory fixed solar charges, captive consumer price hikes, and municipal revenue losses will hurt ordinary households and small businesses. Support with Amendments: Wholesale market reform should proceed only if strict caps are placed on fixed network fees, captive ratepayers are protected, and municipal cross-subsidies are safeguarded. Have your say – shape the paper. The field is required. The field is required. The field is required. The field is required. The field is required. The field is required. The proposed Electricity Sector Market Transformation Position Paper represents the most consequential restructuring of South Africa's energy landscape in decades. At its core, the policy navigates a fundamental conflict: introducing free-market competition and cost-reflective tariffs versus protecting municipal financial viability, rooftop solar investments, and vulnerable captive consumers. What SUPPORTERS Say (The Case for Market Reform & Wholesale Competition) What OPPONENTS & SKEPTICS Say (The Case for Ratepayer & Solar Protection) A "Sun Tax" on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. The "Captive Ratepayer Trap" and Municipal Insolvency: Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance. Wholesale Price Volatility and Market Power Manipulation: Eskom Generation still controls the overwhelming majority of South Africa's dispatchable baseload power. In unbundled spot markets worldwide, dominant suppliers have engaged in economic or physical withholding to artificially spike market clearing prices. Without hard statutory bid caps and aggressive oversight, wholesale price volatility will be passed directly down to retail consumers. Severe Conflicts of Interest Within the NTCSA: Consolidating transmission grid ownership (TNSP), system dispatch (SO), market clearing (MO), and legacy state off-take contracts (CPA) within a single entity under Eskom Holdings creates structural conflicts of interest. NTCSA could face internal commercial pressure to favour Eskom assets or delay third-party grid connections. Premature Market Launch Amid Unresolved Municipal Debt: Opening an advanced wholesale market with mandatory imbalance penalties in 2026/2027 while municipal distribution debt to Eskom remains unresolved is premature. Financially distressed municipalities that fail prudential credit requirements will be excluded from trading platforms, creating a divided nation of well-supplied metros and failing, power-starved rural councils. Discover more Energy & Utilities electricity trading We simply cannot afford to carry the burden of eskom's failures , and the defection of larger companies and affluent households from the grid. We are just about making ends meet with all the recent petrol hikes - and the ripple effect it has on tge prices of EVERYTHING ELSE. How do you politicians sleep at night ?!?!?!?	Loganathan	retired

	2026-09-13 15:19:05	No I do not	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	Why must the non-solar consumers pay for the loss of income caused by solar consumers when Eskom almost requested the consumers not to use their product, being the only company in the world to do that. Eskom even gave discounts to consumers that wanted to go solar then took the discounts away. Now, after years they realise that was wrong and now they want to penalise the loyal paying non-solar consumers, which is not right. Eskom has failed because of the greed and incompetence of those who have been running the SOE. We have been 'punished' with tariff increases of over 900% since 1988 and gruelling loadshedding since 2007! Eskom has apparently now made double its profits! So why are we being punished every which way by Eskom? They need to sort their house out before they destroy our lives even more. All the above is totally against our World Class Constitution of South Africa and thus totally illegal as well as unlawful!!!!!	Leslie	business owner

	2026-09-14 09:41:46	No I do not	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	This is just another tax wrapped in clever language to force current customers to pay more to receive less. Eskom exports electricity, right? So maybe instead of taxing solar users who saved them at a time of crisis and are now giving them excess, Eskom should export the surplus. Allowing heavy users to get discounted rates directly, while not giving the rest of us that option sounds like an unfair market dynamic. It also sounds a lot like a centrally controlled government hasn't thought through the entire problem, because taking away from municipalities while giving them no option to recover those lost costs and leaving them with the deficit is myopic.	Gerrit	employed individual
	2026-09-14 09:46:08	No I do not	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	Eskom encouraged homes to install solar system to ease total grid collapse. Now they want to punish the very same homes that assisted during the difficult times. The Minister of Electricity must find alternative ways to address Eskom's income issues.	Bernard

	2026-09-15 09:46:28	No I do not	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	While splitting ESKOM makes sense if SA were not plagued by corruption and incompetence there is surely no expectation that this will take place in a way that will benefit SA as a whole and, given the history of the past 30 years, that the process will not benefit a small minority of well-connected people ESKOM's history over the last 30 years is simply a case of corruption, incompetence and stupidity - so unless "fixing" ESKOM is part of this then the probabiltiy of the process being a disaster is high, remembering that many, many billions of state funds were happily dished out to ESKOM as handouts with no real improvement in its operation SA's people deserve a rational, properly functioning electricity sector so any activity that will stop the municipalities using inflated electricity prices, stop aluminium smelters paying an outrageously low tarrif and other nonsense must be the result of ANY changes	Robert	retired
	2026-09-15 09:52:04	No I do not	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	Stop the "Sun Tax" I'm sick of increasing cost of electricity. Eskom and NERSA allow unaffordable annual increases which results in unaffordable tariffs. Municipalities and Eskom fail and the residential consumers must pay for their inefficiency. Consumers had to incur the cost of implementing these alternatives in order to compensate for the constant loss of electricity - weekly we suffer from load reduction in our town as the local municipality owns Eskom millions. Now that the electricity supplier is losing consumers due to high tariffs and ongoing supply problems, they want to penalize the very consumers who have spent their own time and money to address the supplier's failure to provide a reliable and affordable service. Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance. 	2026-09-19 08:51:06	No I do not	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	Eskom can offer solar power alongside electricity to all consumers. Government can fund this as they waste billions of tax payers money daily. So the funding is there. Eskom could position themselves as the primary solar provider and allow solar users to send excess power back to grid. Win win for all players. No solar tax. Can this campaign break the lack of political will to do so for the greater good of all South Africans?	Helen	self-employed
	2026-09-20 11:55:01	No I do not	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	**NO — I strongly oppose this proposed restructuring of the electricity sector. Ordinary households should not be forced to carry higher fixed charges, increased tariffs, or additional municipal costs because of policies that allow large electricity users and other consumers to change how they purchase power. It is unacceptable to place an even greater financial burden on pensioners, low-income families, and ordinary consumers who cannot afford expensive solar or off-grid alternatives. I reject any policy that shifts the cost of an inefficient or failing electricity distribution system onto captive consumers, and I call for these proposals to be reconsidered and rejected unless they can demonstrably protect consumers from further financial hardship.**	Jan	retired
	2026-09-20 16:11:11	No I do not	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	Hyperscale data centres will be able to contract directly with IRPP's and not have to go through local participation and objections to their extreme use of water and power, and noise and air pollution . Not only does this mean that municipalities will receive less income, but locals will have no say in the theft of their water and electricity. In a country where there are major issues with these, and where one hyperscale data centre uses as much power as Kimberley or Mbombela, this is totally unacceptable. Another case of the tech billionaire oligarchs abusing ordinary people	Lance	business owner

	2026-09-23 10:11:19	No I do not	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	Stop charging citizens for sunlight! Stop extortion of citizens and keeping them tied to the collapsed unreliable Escom.	Susan	
	2026-09-25 19:43:54	No I do not	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	We are pensioners and paid R750 000 to install solar panels to be sure of stable electricity supply. We can not afford to pay penalties to Escom or the municipality.	Ina	retired
	2026-09-25 21:38:08	No I do not	All of the above	Municipal Financial Collapse	Small / Medium Business Owner (SMME)	It is high time that Eskom received some serious competition. We the tax paying minority are being sucked dry to subsidise the sheeple who vote for and receive grants for everything imaginable. Why is there still a " Covid" grant? Now they are saying we must now give these people 300 units of electricity. Everyone has to live and the middle class are always being targeted as if we have a never ending source of money, which is definitely not the axe.	Peter	business owner
	2026-09-26 10:34:15	No I do not	All of the above	Municipal Financial Collapse	Small / Medium Business Owner (SMME)		Alun	business owner
	2026-09-27 06:35:53	No I do not	All of the above	Municipal Financial Collapse	Small / Medium Business Owner (SMME)	Eskom management have failed dismally. They want to charge consumers for using the sun to get away from an unreliable source of electricity from eskom. Cut down on your bloated useless staff , bonuses, excessive increases and go after all the non payers. Stop milking the payers and the solar contributers who in fact ended load shedding for eskom and the country. Now u have a revenue problem because of an inability to properly manage the only electricity business and supplier in the country. We all see how useless you are and we all know we are being made to pay more so that you can continue riding the income gravy train for eskom management and employees alike while we as businesses struggle with 2 to 3 days of intermittent electricity per week. U should be ashamed	S	business owner

	2026-08-29 13:53:12	No I do not	All of the above	NTCSA Conflicts of Interest	Small / Medium Business Owner (SMME)	Official Public Comment: Electricity Sector Market Transformation Position Paper Submitting Category: Strongly Opposed Submission Deadline: 20 September 2026 The proposal to introduce mandatory, fixed monthly capacity and network charges under the guise of preventing "free riding" is an inversion of reality and a direct penalty on private initiative. Active Interference vs. Private Rescue: Private citizens and businesses invested billions of Rands in post-tax savings to install rooftop solar and battery systems out of sheer necessity. For years, the government actively hindered private energy adoption through artificial generation caps, administrative red tape, and punitive feed-in policies, offering zero solutions of its own to the crippling failures it wrought. When those barriers were finally removed, private capital stepped in, relieved critical pressure on the national grid, saved billions in emergency diesel generation, and single-handedly kept the economy afloat. Systemic Projection and the "Free Rider" Myth: The audacity of the state to label self-funded solar owners as "free riders"—after sitting on its hands while load shedding dragged the economy down and citizens used their own money to patch a sinking ship—is not only a direct insult, it is projection, pure and simple. The state took zero capital risk and invested zero public funds into these installations. Taxing private capacity simply to cover lost volumetric revenue and subsidize legacy utility inefficiencies is revenue extraction, not energy reform. Perverse Incentives: Restructuring billing away from actual consumption toward unavoidable grid connection fees penalizes self-reliance. The intent is clear and the execution is unacceptable: force the public to fund the solution to energy instability from their own pockets, then levy a baseline tax on the very capacity built to survive that exact state failure. This framework must be scrapped, and tariffs must continue to incentivize self-generation, localized power production, and grid resilience.	Anton	self-employed

						I can make it brutal and unequivocal, but I will not state personal theft by identified individuals as proven fact without evidence. This version frames it as your political conclusion and demands investigation. THE DESTRUCTION AND CAPTURE OF SOUTH AFRICA'S ENERGY ECONOMY Let us stop pretending. In my view, Cyril Ramaphosa's dismantling of Eskom is not reform. It is the calculated destruction, division and capture of South Africa's most important national asset. Eskom is being carved into generation, transmission and distribution while the supply of coal, diesel and other essential resources remains a vast river of money. South Africans are expected to believe that this is being done for efficiency and the public good. I do not believe it for one second. I believe this is about power, control and money. I believe Ramaphosa and his politically connected family network, including his brothers in law, must be subjected to an immediate, independent and uncompromising investigation to determine who will ultimately own, control, supply and profit from every part of this restructuring. Energy drives every factory, mine, farm, hospital, school, business and household. Destroy or capture the energy system and you control the entire economy. That is precisely why this cannot be dismissed as an ordinary restructuring exercise. This is another nail in South Africa's coffin. We are watching the foundations of the economy being cut apart while citizens are fed polished speeches about reform, transformation and efficiency. Behind those words lies a country drowning in corruption, political patronage, unemployment, failing infrastructure and economic decay. South Africa is not functioning as a genuinely free market economy. It is being strangled by a politically captured system in which the state controls the machinery while connected interests position themselves around the money. If Ramaphosa's restructuring is legitimate, then expose everything: Publish every contract. Identify every beneficial owner. Disclose every family, political and commercial connection. Reveal who supplies the coal and diesel. Show who profits from generation, transmission and distribution. Place every transaction under independent public scrutiny. Until that happens, I will regard this process for what I believe it to be: the wholesale capture of South Africa's energy economy for the benefit of an entrenched political elite. This is not governance. It is economic destruction on a national scale. It must be exposed. It must be investigated. It must be stopped.

	2026-08-31 10:45:33	No I do not	All of the above	NTCSA Conflicts of Interest	Residential Electricity Consumer / Ratepayer	You are incompetent to provide electricity. BECAUSE the money is in your own pockets. The son belongs to God who created it. Are you willing to pay back all the costs of people that installed solar. We are already maxed out on rate payments. Your time is done, there is a new government coming starting this municipal election.	Pieter	retired
	2026-08-31 13:38:26	No I do not	All of the above	NTCSA Conflicts of Interest	Residential Electricity Consumer / Ratepayer	What the Policy Proposes: The position paper establishes the principle to "discourage free riding," arguing that modern electricity networks have high fixed infrastructure costs and low operational costs. Under this framework, tariffs will shift away from pure volumetric consumption charges (cents per kilowatt-hour) toward mandatory fixed capacity and network charges for all grid-connected customers, regardless of how little electricity they consume. Only consumers who disconnect completely from the national grid will be exempt from these fixed fees.	Naresh	unemployed individual
	2026-09-05 09:33:51	No I do not	All of the above	NTCSA Conflicts of Interest	Residential Electricity Consumer / Ratepayer	Where does the scandal stop . It feel like the government also owns the sun . Our corrupt leaders always looking for ways to steal from Joe public . Disgracefull	Pedro	retired
	2026-09-07 06:26:03	No I do not	All of the above	NTCSA Conflicts of Interest	Residential Electricity Consumer / Ratepayer	Absolute nonsense having to pay the city when they cannot provide basic services. Residents should not be financially penalised for investing their own money in alternative and sustainable energy solutions, particularly in response to the well-documented reliability and cost challenges associated with the national electricity system. Rather than creating additional fees and barriers, the City should be supporting and incentivising the transition towards decentralised, renewable energy. Residents who invest in solar reduce pressure on the electricity grid and contribute to a more sustainable and resilient energy system. I am also concerned by what appears to be an increasing reliance on permits, fees and additional charges imposed on ratepayers. The City should focus on its core responsibility of delivering efficient municipal services and using public funds responsibly, rather than continually seeking additional revenue from residents. If additional charges are being proposed, the City should clearly demonstrate what service or additional cost they are intended to recover, and why that cost should be borne specifically by residents who have invested in alternative energy. The City should reconsider any provision that financially discourages residents from adopting renewable energy and instead support residents who are investing their own resources in a cleaner, more sustainable and more resilient energy future. 	2026-09-11 20:39:11	No I do not	All of the above	NTCSA Conflicts of Interest	Residential Electricity Consumer / Ratepayer	To The Department of Electricity and Energy, I wish to submit my strongest objection to the proposals contained in the Electricity Sector Market Transformation Position Paper. This policy is fundamentally flawed and punishes the very people it should be protecting. 1. You are penalizing citizens who invested their own money in solar to keep the lights on during years of load-shedding. Instead of being recognized for reducing pressure on the grid, they are now being targeted with punitive fixed charges under the label of "anti-free-riding". This is illogical and unjust. 2. At the same time, you are abandoning ordinary households who cannot afford solar. By allowing large industry to exit the municipal system, you are stripping municipalities of their revenue base. The inevitable result is that captive, low-income consumers will be left to carry the cost of a failing distribution network through skyrocketing tariffs. How is this fair or sustainable? You cannot create a system where everyone pays more regardless of whether they have solar or not. One group pays for not using the grid enough, the other pays because everyone else is leaving the grid. This double penalty is economically destructive and socially regressive. This is not market transformation. It is a cost-shifting exercise that transfers the burden of years of mismanagement directly onto households. I urge you to reconsider this approach entirely. 	2026-08-26 17:52:43	No I do not	Fixed Charges & Solar Penalties	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	We spend our own money to fix YOUR corruption and incompetence. Not paying a single cent more. And if you don’t believe us, ask SANRAL how e-Tolls worked out for them.	S	
	2026-08-27 08:06:04	No I do not	Fixed Charges & Solar Penalties	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Rooftop-solar owners spent their own money reducing pressure on an overloaded and unreliable grid. That lower demand helped limit load-shedding and contributed to keeping the lights on for everyone—it was not the only factor, but it was a meaningful one. Punishing those same households with additional charges is therefore completely backwards. Solar owners should pay a fair, transparent fee for the grid services they actually use, but they should not be penalised merely because municipalities and Eskom are losing electricity sales. South Africans helped solve part of the state’s electricity crisis at their own expense; taxing them for doing so is unfair and will discourage the private investment the country still desperately needs.	Joss	employed individual
	2026-08-27 14:45:08	No I do not	Fixed Charges & Solar Penalties	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Why should we pay for the Governments ineptitude and theft. 	2026-08-26 15:26:06	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	he proposed regulatory shift by the Department of Electricity and Energy from a volumetric billing model to a fixed-capacity tariff structure presents significant financial and systemic risks. Below is an analysis of the policy's impact on private solar owners, the market, and the national grid. Structural Shift: Volumetric vs. Fixed-Capacity Tariffs Billing Mechanism: Under the current volumetric model, users pay only for the kilowatt-hours they consume. The proposed model introduces high mandatory fixed fees alongside a lower per-unit rate, establishing unavoidable baseline costs regardless of how little power you actually draw from the grid. Capital Efficiency and ROI: The return on investment for a standard solar installation currently averages between 3 to 6 years. Implementing fixed charges will significantly extend this payback period, fundamentally degrading the financial viability of private solar investments. Grid Maintenance Funding: Historically, grid maintenance was subsidized heavily by high-volume consumers. The new framework shifts this burden to all grid-tied connections, imposing a continuous financial liability on households and businesses that have actively made themselves self-sufficient. Negative Effects on Existing Solar Owners Sunk Cost Penalization: Ratepayers who deployed private capital (ZAR) to mitigate Eskom's historical capacity shortfalls and protect their operations are retroactively penalized for reducing their grid reliance. Erosion of Monthly Savings: The primary financial benefit of a grid-tied solar system is the reduction of the monthly municipal or Eskom bill. High fixed connection charges will absorb these savings, increasing monthly utility overheads even when drawing zero grid power during daylight hours. Disincentivizing Future Solar Adoption Destruction of the Business Case: A fixed connection tax alters the cost-benefit analysis for new solar installations. If households and businesses cannot drastically cut their monthly bills, the incentive to invest hundreds of thousands of Rands into Tier-1 panels and lithium batteries evaporates. The "Defection" Threshold: Rather than maintaining a grid connection for backup power, the policy incentivizes well-capitalized users to over-capitalize on batteries and generators to go completely off-grid, removing their revenue from the system entirely. Macroeconomic Risks for South Africa Suppression of Decentralized Generation: South Africa’s grid stabilized largely because the private sector added over 5,000 MW of private rooftop solar, alleviating pressure on Eskom's aging coal fleet. Disincentivizing this private generation risks returning the country to supply deficits during peak demand or extreme weather events. Accelerated Municipal Collapse: Municipalities rely on electricity sales to cross-subsidize other failing services. If fixed charges push affluent ratepayers entirely off the grid, municipalities will suffer catastrophic revenue loss. This shortfall will inevitably be passed on to lower-income, captive ratepayers who cannot afford alternative energy. Regulatory Instability: Punishing private citizens for solving a state-created crisis signals deep policy instability. This deters future domestic and foreign investment in the broader renewable energy and infrastructure sectors.	Luke

	2026-08-26 15:38:46	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Citizens who invested their own money in solar energy solutions to mitigate the impact of the country's energy crisis should not be penalized with excessive baseline connection charges. Many households turned to alternative energy sources because of years of load shedding, unreliable electricity supply, and the government's failure to provide a stable energy system. It is unfair to place the financial burden of maintaining legacy grid infrastructure primarily on solar owners. The responsibility for addressing electricity funding challenges lies with government and energy authorities, not with citizens who acted independently to secure reliable power for their homes.	Kevin	employed individual
	2026-08-26 15:39:04	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This logic is flawed. If i don't use a drop of electricity I'm still mandated to pay a service charge etc etc. All of these total more than a grand before i consume a single watt. Now they're saying, no no, you're not paying your fair share. You're getting more than a grand for absolutely nothing (barring a little piece of paper to say i owe money which SAP generates). Make it make bloody sense? If we use you, we're billed to hell. If we don't use you, you still want to find a way to bill us to hell. I'm quite over this monopoly and price fixing BS. Get your financial affairs in order, reduce staff, find proper suppliers then come to us with "amendments". We are paying 400% more than we should be. We once had the cheapest power in the world. Lets get back to that point and only THEN... will we consider this "pay for the guy next door" nonsense.	Chad	self-employed

	2026-08-26 15:40:00	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Elize	employed individual
	2026-08-26 15:41:51	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Funds have been mismanaged for years, which is why Eskom had loadshedding in the first place - lack of maintenance of infrastructure. It is unreasonable to expect people to seek alternate power solutions on their own dime due to your failure but still expect that they continue paying your fees when you have proven yourselves incapable of maintenance.	Sam	self-employed
	2026-08-26 15:42:07	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Due to the corruption and inefficiencies at both Eskom and Johannesburg City Power we faced long term load shedding and continue to have outages caused by infrastructure failure. At the time of frequent load shedding over a LONG period of time Eskom pleaded with users to reduce electricity consumption. Large numbers of consumers SUPPORTED Eskom in their drive to reduce consumption by installing Solar Power. It now seems that Eskom management did not forecast the full effect of their drive to persuade customers to reduce consumption and are now finding the income they are receiving is less than predicted. As a consequence Eskom is trying to find any means they can, outside approved tariffs, to raise more revenue. CONSUMERS WHO SUPPORTED ESKOM OUT OF THEIR OWN POCKETS BY INSTALLING SOLAR SYSTEMS, LARGELY IN AFTER TAX MONEY, ARE NOW BEING PENALISED TO SUPPORT AN ELECTRICITY DISTRIBUTION SYSTEM WHICH HAS NOT BEEN MAINTAINED AND IS NOT FIT FOR PURPOSE. POOR MANAGEMENT AND CORRUPTION CANNOT CONTINUE TO BE FUNDED BY RESIDENTIAL CONSUMERS.	Steven	retired
	2026-08-26 15:42:19	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is understandable that Municipalities etc is depended on the sale of electricity to maintain infrastructure. It would however also be unfair to pennelise consumers that had to invest in supplying their own power due to state/ESKOM mismanagement. The fixed rate should this be fair and not to extort people and be applicable to all consumer not only those that have solar systems. Counter proposal would be to have a fixed amount of electrify sold to each household Say R100. If the household used it (e.g. no solar) it would be no loss to regular person's costing. If not used (e.g. solar system users) it would be deemed a reasonable fee for system maintenance. Also the user could also opt to use it so not unfair to these users as well.	Michael	
	2026-08-26 15:43:06	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		James	retired
	2026-08-26 15:44:00	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom screwed up. Corruption has caused electricity prices to exceed inflation and it cost us a fortune to get our own power when they couldn’t supply. And naw want to charge us for having solar is outrageous.	Rod	retired
	2026-08-26 15:46:35	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This is a penalty on private initiative as ordinary citizens who spent large sums of our own money to solve the state's energy crisis, which directly affected almost everyone, will now face steep baseline connection taxes to subsidies legacy grid infrastructure. Why are we paying more after investing so much capital. It is a "Captive Ratepayer" Trap, because large industrial corporations exceeding 1 MW will be permitted to bypass municipal lines to buy cheaper power directly on an open wholesale market, ordinary residential homes remain "captive" to local municipal tariffs. This leaves everyday households to foot the bill for municipal revenue shortfalls and cross-subsidies. With Eskom Generation controlling the baseload power, it poses risks of market power, pricing manipulation, and speculation and will result in severely increased retail tariffs if oversight fails.	Nathan	business owner
	2026-08-26 15:46:39	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Load shedding forced us to spend our hard earned savings on solar to have power, now we need pay more on network charges, while current network charges are supposed to cover infrastructure maintenance. My low consumption has nothing to do with infrastructure maintenance costs, but to do with the actual generation! Don't get those two confused	Ivanda	employed individual

	2026-08-26 15:47:02	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The manipulation of municipal accounts to balance the books and afford the elite another opportunity to steal from ordinary South African citizens must be stopped. Every time an effort is made to help oneself, there is a grabbing hand of government.	Eileen Linda	retired
	2026-08-26 15:47:27	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Homeowners who spent their own money on solar systems should not be punished for solving a problem that government failed to address. Years of load shedding, poor infrastructure management, and corruption forced many citizens to seek alternative energy solutions at significant personal cost. These households should not now be singled out through excessive connection fees to fund legacy grid infrastructure. The responsibility for finding sustainable funding solutions rests with government and electricity providers, not with citizens who took proactive steps to secure reliable power for their families.	Rosina	employed individual
	2026-08-26 15:47:39	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The investment by solar users is probably what enabled current Eskom grid stability. No 'free ride' , it cost a huge portion of my savings just to normalise my power supply. Now all kinds of regulations proposed after we have invested, and probably 'saved' Eskom to a large degree.	Les	retired
	2026-08-26 15:50:01	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Firstly, this is totally unfair as each household consumes different quantities of electricity units - with or without alternative power solutions - why should people who consume less units be forced to pay as much as bigger households who use more units. Every single citizen of the country will be unfairly affected by these blanket charges. Secondly, we had no choice but to install solar electricity as Eskom let us down year after year for decades. Why should we be penalized for finding a solution to load shedding, AND we had to pay for that solution out of our own savings, all because Eskom are incompetent and corrupt.	Breanne	employed individual
	2026-08-26 15:50:41	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This will be cripiling for those consumers who might have saved up for a long time to install solar and then have to pay rediculously inflated prices.	Sarel	retired
	2026-08-26 15:51:24	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The proposed baseline connection charges for households with solar installations raise serious concerns regarding fairness and equity. Citizens invested private capital in renewable energy solutions largely because persistent load shedding and energy supply challenges left them with little choice. These investments helped reduce pressure on the national grid and improved energy resilience. It would be unjust to target solar users with additional charges to subsidize aging infrastructure when the underlying energy crisis resulted from years of inadequate planning, mismanagement, and governance failures. Any solution to funding the electricity network should be broad-based and equitable, rather than disproportionately affecting homeowners who invested in alternative energy sources.	Rosemarry	retired
	2026-08-26 15:52:19	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom seems to forget that people get solar power systems because their supply is unreliable. Affecting businesses and households alike. To penalise these people for fixing Eskom failures is ridiculous. Furthermore the people still paying for electricity are already footing the bill for the freeloaders. The only concern that Eskom has is their own pockets because if the people that actually pay for the electricity stop paying then the money funding the freeloaders is also going to run dry. Why haven't they started penalties etc for all the free solar geysers installed in the free houses. The government can install free solar power but want to penalise the private individuals who just want to live their lives without the inconvenience of loadshedding and ridiculous tariffs.	Leah	employed individual
	2026-08-26 15:53:05	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	A number of consumers purchased solar-powered kits out of their own pockets. VAT was paid in those transactions which ultimately benefits the State's coffers. It's ridiculous to now want to charge the consumers again. Us purchasing these kits helped the State by not requiring to produce more electricity than they could. We effectively reduced the dependency on the grid. Yes, we are using some of the existing infrastructure to get the electricity into our home & I don't mind paying a small levy for this, but it must not be exorbitant. This government is become too greedy as their avenues of "sucking more money" from the public becomes less. What next? Charge us for darkness or light from the Moon? Death by Taxes, death by Electricity, death by Water!!!	Zunaid	employed individual
	2026-08-26 15:55:09	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom cannot produce electricity properly and timeously and not the government thinks they have it right and want us to pay for their stupidness. Eskom and the government are useless	Sunjith	retired
	2026-08-26 15:55:15	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Andre	self-employed
	2026-08-26 15:55:44	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The people who installed solar on their properties did so because the government failed them as per the constitution. These installations saved Eskom by reducing the power needed by South Africa. Now the government is going to penalize these people for helping them. Disgusting!	Dave	
	2026-08-26 15:57:29	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Government made a call to citizens to get alternative way of getting their lights at the hight of loadshedding to reduce the load from the grid. People responded by buying , at exorbitant prices. Solar panels or batteries. At the time of that call, there was no indication that with people will be punished for responding to their call. We cannot allow Government to abuse us as citizens. Please advice them to go to India and get the money from the Gupta brothers whom they allowed to turn Eskom from " Gold to Dust "	Masingita	retired

	2026-08-26 15:59:41	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This will result in people moving completely off grid. This doesn't help south africa at all.	Marcello	employed individual
	2026-08-26 16:00:55	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Fokken Eskom KONTE, drek laer as slangkak	Andries	employed individual
	2026-08-26 16:01:10	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Another corrupt way to steal from SA home owners. Eskom were and still is incompetent but instead of fixing there incompetency they choose to steal from home owners	Johan	retired
	2026-08-26 16:03:36	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	They forget that during the loadshedding period, they encouraged people to make alternative arrangements w.r.t power. What they didn't factor in was that all their paying customers would be able to make their own plans. Now that they're left with those that don't pay, we, the "payers" are being punished once again. Perhaps they should sort out the non-payers and free-loaders to get money. I suspect that's just too much effort for them and therefore easier to milk the "payers" to cover their incompetence and shortfalls whilst all the non-payers and fee-loaders carry on regardless.	Melanie	employed individual
	2026-08-26 16:05:24	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Kuben	
	2026-08-26 16:05:54	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Formal objection Subject: Objection to Proposed Electricity Market and Tariff Reforms I strongly object to any electricity tariff reforms that impose disproportionate fixed grid charges on households that have invested in rooftop solar and battery storage. Consumers who have invested their own capital in renewable energy and storage have done so partly to reduce their dependence on the national grid, relieve pressure on Eskom's generation capacity, and reduce their electricity costs. It is fundamentally unfair to penalise these consumers through excessive fixed charges simply because they have reduced their electricity consumption. While I support greater competition in the electricity sector and measures that improve the reliability and efficiency of South Africa's electricity system, the transition to a competitive wholesale electricity market should not be used to undermine private investment in renewable energy. Any network charges should be transparent, reasonable, cost-reflective and proportionate to the actual services and network capacity required by the customer. They should not become a mechanism for recovering lost Eskom revenue from consumers who have reduced their reliance on the grid. I therefore call for: 1. The rejection of excessive mandatory fixed charges on rooftop-solar and battery-storage users. 2. A transparent, independently justified methodology for determining any network or connection charges. 3. Protection for households that have already invested in solar and battery systems based on existing tariff structures. 4. Fair compensation for electricity exported to the grid. 5. Tariffs that encourage, rather than discourage, private investment in renewable energy and energy storage. 6. Meaningful public consultation before significant changes to residential electricity tariffs are implemented. South Africa should be encouraging households and businesses to invest in energy independence, renewable generation and battery storage—not creating financial penalties that discourage these investments. I therefore reject any proposed tariff or legislative measures that unfairly penalise rooftop-solar and battery-storage users through excessive or unavoidable fixed charges.	Simon

	2026-08-26 16:08:30	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Ramokgopa, first get the people in the townships to pay..We all know they get free electricity anf not paying a cent. So there is your problem+ Corruption anf theft in your department. You will just push solar users even further away from municipal power. People will rather invest a couple thousand more and go completely off the grid. Then you will be even more screwed. Correct things that went wrong, not the citizen that, on motivation from the president helped to stabilize the grid. You are on the wrong track because millions of households invested in solar because of Eskom and I really doubt it if they will bend the knee again. Wake up	Tana	employed individual
	2026-08-26 16:08:43	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	TOTALLY UNACCEPTABLE for the government to be siphoning more funds from private citizens in an unjust manner. Citizens were forced to borrow funds to put up solar as Eskom had failed at their task and we had no power. ENOUGH IS ENOUGH. Paying citizens are once again being penalized so the government can rake in further funds to compensate for their poor performance and lack of abilities in running Eskom. It will force citizens to go off the grid completely	Marina	self-employed
	2026-08-26 16:09:14	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	I resent being used as a punching bag to subsidise whatever is going wrong at any given time. First, ESKOM pleaded with us to reduce our electricity consumption because they couldn't generate enough power. Then they pleaded with us to use MORE power because so many industrial and private consumers had cut back so much, it was costing them too much to generate the reduced electricity demand. Then during load shedding, they told us to use less electricity because they could not produce enough to satisfy peak demand. We then got fed up with the lack of power reliability (load-shedding schedules that were never kept to) and installed solar power to give us continuity of supply because ESKOM broke its licence conditions requiring unbroken supply for 96% of the time (I am not sure of the exact figures). Now we are being punished by punitive fees because we tried to protect our businesses by bringing in alternative reliable power through solar. The next step after registration of solar facilities will be an out-and-out tax on solar-generated power. It is bad enough already that ESKOM is bullying its direct customers into registering their solar facilities so it can impose punitive charges for having the temerity to generate power for their businesses because ESKOM couldn't. Why hasn't ESKOM been held accountable for not meeting its licence conditions on security of supply? Many of us are moving heaven and earth to get off the Grid and away from ESKOM's incompetence and stupidity, and its lack of management and foresight. When we do get off the Grid, we will be accused of causing ESKOM's collapse because they cannot collect enough money to pay their operating expenses.	Arend	business owner
	2026-08-26 16:10:17	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Rather deal with illegal connections. They contribute up to 80 % of Local Municipalities' bad debt.	Caroli	self-employed
	2026-08-26 16:10:48	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	ESKOM is stealing the coffers dry, FORCING me to protect MY and the of my FAMILY by investing heavily into Solar. Why must I pay for Government/Eskoms failure to deliver? I am helping you by elleviatimg tou from the burden of enegy consumption. YOUR bad planning, failure to maintain, and outright GREED should not become my problem! I do NOT support this bill!	Andre	self-employed
	2026-08-26 16:11:46	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	The new Eskom proposals are absurd. Electricity provision failures over many many years compelled residential electricity users to have solar panels placed on the roofs of their properties in order to gain sufficient power to meet daily/monthly needs so as to maintain normal daily existence. Those who watch Eskom's annual results which are absurdly promoted as huge gains in achievements & profits when there are staggering capital losses cannot avoid views of unacceptable & absurd salary increases for all Eskom employees for which the unfortunate consumer has to bear responsibility indefinitely into the future.	David	retired
	2026-08-26 16:13:43	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This proposal will just make consumers with solar to move off the grid which will further exacerbate the problem . I have invested a large capital amount to be independent from the grid	James	retired

	2026-08-26 16:23:03	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	People have spent their own money to solve a problem the government and eskom could have avoided by simply doing their jobs. Instead they're scrambling to create more taxes to replace the misused funds that get wasted everyday. And the cherry on the cake is the insult of accusing people of trying to get a free ride while we pay out of our own pocket to pick up eskom's slack. It seems the only entities trying to get a free ride are eskom and the government.	Aston	employed individual
	2026-08-26 16:24:17	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Again, because of corruption as a result of the current government of the day, the law abiding citizens must be punished. If they, you know who, did not plunder this key state entity, we would not have this conversation. I see value, in having competition in the market, but not in this country where some cadre will get the contract. It's a damn disgrace!	Louis	
	2026-08-26 16:24:24	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	If I consume less electricity, my bill should materially decrease. A tariff structure that increasingly disconnects my monthly bill from the amount of electricity I actually consume is something I oppose, regardless of whether I achieved that reduction through solar, batteries, energy-efficient appliances, behavioural changes, or simply using less electricity. Eskom's own tariff application acknowledges that overly fixed network charges reduce the incentive for customers to manage consumption efficiently. And we know that Illegal electricity connections remain a significant challenge for Eskom, contributing to non-technical losses, infrastructure overloading, equipment damage and increased pressure on the distribution network. Eskom should prioritise addressing illegal connections, meter tampering and electricity theft before shifting an increasing share of its revenue recovery onto compliant, paying customers through higher fixed charges.	Luvuyo	employed individual
	2026-08-26 16:24:32	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Better to have higher tariffs for peak use and cheaper at night to spread demand rather than look to tax rooftop solar	Claire	
	2026-08-26 16:24:44	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	During the years of Load Shedding, I was forced to install Solar Power in my home, due to the fact that I lecture on-line, as well as face to face. I do this for one reason only, NOT the money, but in an attempt to restore the Industrial technical skills here in South Africa. 90% of my course attendees are from young, previously disadvantaged citizens, who have been denied their career path due to the conversion of Technikons into Technical Universities. This has starved Industry of the "Go Between" the Foreman and the Engineer, a vital link, no more. So, at 82 years young I still continue my extended career and have helped thousands of young South Africans since I left Eskom in 2013, where I was a Senior Consultant in their special Projects division . And now this SOE wants to add additional charges to citizens who have been forced to spend massive money simply to keep the power available? No Way.	Charles	self-employed

	2026-08-26 16:30:25	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The President asked us to help them reduce elctricity consumption and offerred us an incentive to install solar power, which many people did and now they want to penalise us for helping the country out of loadshedding! How totally ridiculous is this? What I do inside my property to survive their non service delivery is entirely my business and they have no right to now try and tax me for their inefficiencies!!!!	Johan	retired
	2026-08-26 16:30:56	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	As previous on some or other site how do they want to charge us for solar power as we paid for the panels and what goes with it. Let them look somewhere else to get there money . Who's SON is it it is not theirs so they must forget about it. The son comes from God and not the government.	Nigel	
	2026-08-26 16:32:41	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	All that will happen is users will go 100% off the grid and Eskom will have even fewer customers	Geoff	
	2026-08-26 16:33:15	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom is failing. To try fix their business, users were subsidised to move to solar to assist the failing grid. Now that users have done so, they would like to claim fees from them to support their continued failing business model. Every move they make places more strain on low income households and fails to resolve the underlying issues. Rather than try milk citizens for more funding, stop corruption, reduce theft, improve maintenance and provide a better service. Instead of paying the proposed fixed connection fee, users will simply increase their solar and completely disconnect from the grid completely. This will lead to a smaller and smaller base paying for the same failing government infrastructure and will ultimately end up further increasing fees for low income users who are unable to pay for solar and are tied to the grid. Households and small businesses that invested into rooftop solar, batteries, and energy efficiency to support the failing grid and protect themselves from load shedding will now be forced to pay higher monthly baseline connection fees when Eskom left us no choice but to try diversify our risk. This structural shift acts as a financial penalty on private decarbonisation, extending solar payback periods and increasing electricity bills for low-volume and frugal users. There should not be a fixed fee for connection to the grid. No usage means no payment. NERSA must place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. Instead of penalising us further, allow a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. It is critical that an independent socio-economic impact assessment is conducted on how fixed monthly fees affect low-income and energy-conserving households.	Myburgh	employed individual
	2026-08-26 16:33:19	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	As usual, the ANC has broken its commitment to the consumer and taxpayer - they are self confessed thieves who remain on power on absolutely no mandate other than head count - they have legalised thievery in every domain - we have spend many hundreds of thousands just to protect our own interests to ensure business continuity and now we are made out to be thieves - can you imagine a government telling citizens to add solar and then turn around and call them thieves of the economy - this is sickness at the heart and soul of man and the ANC represents a virus with no cure - I will fight this in court if I have to	Markus	business owner
	2026-08-26 16:34:07	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The President asked us to help them reduce elctricity consumption and offerred us an incentive to install solar power, which many people did and now they want to penalise us for helping the country out of loadshedding! 	2026-08-26 17:19:04	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Once again the corrupt and incompetent DANC GNU and associated SOE's do what they do best: punish initiative and efficiency in order to keep the gravy train running. ### Position: Opposition to the Proposed Electricity Market Tariff Transformation **What the Policy Proposes** The Electricity Sector Market Transformation Position Paper proposes a fundamental change in the way grid-connected electricity consumers are charged. Under the stated objective of discouraging so-called **“free riding”**, the paper argues that electricity networks carry substantial fixed infrastructure costs that must be recovered regardless of the amount of electricity consumed. The proposed approach would therefore shift a greater portion of electricity tariffs away from consumption-based charges (cents per kilowatt-hour) towards **mandatory fixed capacity, connection and network charges**. These charges would apply to grid-connected customers irrespective of how little electricity they draw from the grid. In effect, consumers would have to disconnect from the grid entirely to avoid these charges. **Why I Oppose This Approach** I strongly oppose this principle because it risks penalising precisely those consumers who have acted responsibly in response to South Africa's electricity crisis, brought about by government inaction, ineptitude and corruption. Households and small businesses have invested substantial amounts of their **own after-tax capital** in rooftop solar, battery storage and energy-efficiency measures. These investments were made not only to reduce electricity costs, but also to protect homes and businesses against load shedding, unreliable supply and rapidly escalating electricity tariffs. These consumers should not now be characterised, directly or indirectly, as **“free riders”** simply because they have reduced their dependence on the grid. Introducing substantial mandatory fixed charges fundamentally changes the economics upon which these investments were made. It could extend solar and battery payback periods, reduce the financial incentive for further private renewable-energy investment and disproportionately penalise consumers who deliberately conserve electricity. There is also a broader policy contradiction. South Africa should be encouraging households and businesses to invest private capital in renewable generation, storage and energy efficiency. A tariff structure that effectively imposes an **“availability tax” on grid-connected solar users** risks achieving the opposite. Consumers who retain a grid connection should reasonably contribute towards the infrastructure and services they use. However, **cost recovery must be transparent, proportionate and demonstrably related to the actual cost of providing that service**. Grid access should not become a mechanism for recovering revenue lost because consumers have reduced their electricity purchases through legitimate private investment. ### What I Believe Should Be Required I therefore call for: * **Strict regulatory limits on fixed charges.** NERSA should establish enforceable caps on fixed network, capacity and connection charges to prevent these charges from becoming an alternative mechanism for recovering lost volumetric electricity revenue. * **Fair recognition of private generation.** Grid-tied rooftop solar customers who export electricity should receive transparent and economically reasonable compensation for energy supplied to the network. Such credits should be capable of offsetting legitimate network charges. * **A tiered and proportionate tariff structure.** A household drawing very little electricity from the grid should not automatically carry the same network cost burden as a substantially larger consumer merely because both retain a grid connection. * **Protection for low-consumption consumers.** Any tariff reform must specifically assess the impact on pensioners, low-income households, energy-efficient households and other consumers whose electricity consumption is inherently low. * **An independent socio-economic and investment impact assessment.** Before implementing materially higher fixed charges, an independent assessment should determine their effect on household affordability, small businesses, rooftop-solar economics, battery investment, energy efficiency and South Africa's broader renewable-energy objectives. * **Full transparency regarding cost allocation.** Utilities should be required to demonstrate which genuine network costs are being recovered through fixed charges and why those costs should be allocated to particular customer categories. ### The Principle at Stake South Africans who invested their own money to reduce their dependence on an unreliable electricity system **should not subsequently be financially penalised for doing so**. A sustainable electricity market certainly requires consumers to make a fair contribution towards the grid infrastructure they use. But **fair contribution is not the same as guaranteeing utilities a fixed level of revenue regardless of how efficiently consumers use electricity or how much of their own energy they generate**. Electricity-market reform should encourage efficiency, investment, innovation and private generation—not create tariff structures that make consumers financially indifferent to conserving electricity or investing in renewable energy. The objective should therefore be **fair payment for actual grid services**, not the protection of historical utility revenue models at the expense of consumers who have invested in becoming more energy-efficient and self-sufficient.	Pieter	self-employed
	2026-08-26 17:19:26	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We installed solar as we could not depend on eskom,now we are penalised for creating our own electricity. This will push consumers to move off the grid completely to boycott this plan. Government should be supporting solar initiatives and not penalising people for using it	Mia	employed individual
	2026-08-26 17:20:42	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The argument of solar users not paying their fair share of fixed costs is flawed as using less state supplied sources enables ESCOM the capacity to supply lower end users who had no access previously. It is just another scheme to milk and already over taxed minority who are already at near breaking point as far as taxes are concerned	bruce	
	2026-08-26 17:21:01	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom failed to deliver and will always fail. People were forced to supply their own power. Absolute cheek to now try and get public to pay their exhorbitant salaries and bonus. Get rid of the useless top management. Nothing will change if they remain in a position of power.	Melanie	retired
	2026-08-26 17:21:16	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Instead of penalizing consumers who have solar power why not harness the surplus to feed the grid. The failure of the State to run companies like Eskom with any degree of professionalism led to the crises that forced individuals and companies to find another means of ensuring electrical and water supply. If the state run companies had not failed the public would not have been forced to take action. Allowing this to go through is another way of raping the public's purses to support the gross mismanagement and over-staffing the entities without any positive results. Your chasing away productive people.	Peter	business owner
	2026-08-26 17:21:33	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Solar panel households should not be penalized	Nico	business owner
	2026-08-26 17:24:04	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Jasper	
	2026-08-26 17:27:42	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Fixed Charges & Solar Penalties	Sandra	retired
	2026-08-26 17:27:58	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The only fair way to charge for anything, including electricity, is for people to pay for what they use. You would not expect a restaurant patron to pay for 3 meals when she ordered and ate only one. Nor would you expect a person shopping to pay for goods that they do not have in their shopping cart. Why should electricity be any different?	Jennifer	retired
	2026-08-26 17:28:39	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	South Africa had a world class, cheap and reliable electricity generation and distribution system until the ANC raped the system , stole all the reserves meant to replace aging power stations, and maintain and extend the distribution system. Now the paying customers are being victimized for Eskom's failures, after having spent millions to ensure a simple reliable power supply to their homes. Disgusting state of affairs.	Trevor	retired

	2026-08-26 17:29:05	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The government is clutching at what few income straws are left, before it loses power in political load-shedding in the local elections. 1) Solar is necessary anyway to reduce dependency on fossil fuels and try, too late, to put the brakes on global warming. We talked the talk, but didn't walk the talk. Or if we walked, it was backwards. 2) Solar does make conventionalsupply and consumption uneven. But the government should make projections on the assumption that it wants renewables long-term. It might be a good idea to see how countries like France have done this. They gave households subsidies to install solar. It was so massively successful that they've ben able to now reduced subsidies. However, unlike Mandela's first administration , we don't seem to take advice from anyone anymore. 3) On the face of it, a LOW flat rate could be good to stabilise the sector. However, as we've seen for more than 30 years, these kinds of rates ,fees, etc. are simply new sources for looting. 4) The middle class in Johannesburg is looted out. CITY POWER "teams" now go around disconnecting people who have paid and then demand fees to reconnect. It's almost impossible to tell the difference between official, outsourced, and gangsters You have to go solar if you can afford it. It's tthe only reliable alternative. 5) Rule No 1: NEVER AGREE IN PRINCIPLE IN SOUTH AFRICA. ONLY AGREE WHEN FIGURES HAVE BEEN PRODUCED AND COMMITTED TO DRAFT LEGISLATION. 6) I hate to write like this	Rodney	self-employed

	2026-08-26 17:36:21	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This corrupt government just wants to keep stealing our money	Tex	unemployed individual
	2026-08-26 17:37:47	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Another ANC idea to take more money from normal people trying to guarantee electricity supply because they couldn't. Stop some of the corruption and the inefficiencies in the current ruling party + there would be no need for this. Good plan to stop newcomers entering the solar panel solution!!!	Graham	
	2026-08-26 17:37:55	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The state gave us a tax rebate for installing solar to alleviate eskom's lack of generation, and now you want to tax us after we helped you.	David	
	2026-08-26 17:39:32	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is the failure of government and Eskom which put all of SA into this position and it it the individuals who had to install their own generation to the tune of GW in SA as a whole and alleviate the problem. I have absolutely no faith in government, Eskom and all their combined corruption to implement a solution and manage this - except lining the pockets of some individuals (again). If this gets implemented I will definitely go off the grid. No more free rides from me!	Harry	
	2026-08-26 17:40:15	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Private initiative should not be penalised because of Eskom's incompetence. A market related Eskom availability fixed charge is reasonable.	John	business owner
	2026-08-26 17:40:16	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Consumers moved to solar to save costs and to avoid the total collapse of the grid. They should be thanked not penalised. Escom should find ways to cut costs as consumer demand reduces, not lookfor new ways to increase income.	Hannes	retired
	2026-08-26 17:40:45	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		HB	employed individual
	2026-08-26 17:42:10	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I object to the government trying to penalize its citizens who were forced to install solar energy because the government failed to provide stable electricity. What is next? Will those who have installed backup water solutions be taxed because the government is failing to provide a consistent supply of drinkable water to its citizens?	Steve	retired
	2026-08-26 17:45:19	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We had to cope with power outages for a long time until we could afford to install solar. It took a lot of my savings. Now as a pensioner I have to pay even more for Eskom’s failures.	Irene	retired
	2026-08-26 17:45:34	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		John	retired
	2026-08-26 17:45:35	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We took our own money to fix a government problem and now the government want to charge us for it! I say NO!	Tamsyn	
	2026-08-26 17:45:45	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We already pay a connection fee but should not need to pay for the reduced usage because we used our own money to offset the failure of Eskom to provide consistent power and to mitigate against excessive future price increases due to continued mismanagement by Eskom. The state continue to seek to fund its ongoing mismanagement and fiscal wasteful expenditure and policies that are simply in place to buy votes from non-paying users.	Scott	retired
	2026-08-26 17:45:52	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This draft regulation is once again government grasping at straws. Due to their corruption ESKOM could not keep the lights on, and now that private sector came up with solutions government like all communists wants to punish them for not surrendering total control to the government. I do not support this nonsense with punishing solar client because all they are doing is just punishing the poor paying person, but dozens of houses are connected illegally and government is refusing to do anything about it because they can not "offend" the voters.	Francois	employed individual
	2026-08-26 17:46:18	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Owen	
	2026-08-26 17:47:00	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	I will never support any initiative that this corrupt government thinks up to take more money from the hard working citizens and small businesses. They are rotten to the core, and have proven, time and time again, that they have absolutely no qualms about bleeding normal South Africans to keep themselves in wealth and comfort. I spent over R4 million putting up a solar solution for my small business because Eskom is so useless that I could not do business without spending that money. The looters need to rot in hell and be replaced by honest, ethical people. Although, I think that is a pipe dream as there are no honest ethical people in the ANC and this government.	Monique	business owner
	2026-08-26 17:51:36	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Deon	retired
	2026-08-26 17:52:19	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		James	retired
	2026-08-26 17:52:54	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The entire electrical network has though incompetence and probably fraud and corruption been rendered useless. So some of us spent large amounts of money to install solar and of course that reduced their honest income. To now penalise those people is totally outrageous. Completely, foolish and unacceptable. Just take more from those that solved their own problem is absolutely 180 degrees offline and reprehensible. Whoever made this proposal should be sent back to school to learn the difference between right and wrong!	Thomas	retired
	2026-08-26 17:53:44	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom and government are penalising consumers due to their own Eskom/government shortcomings. After all, solar installations have assisted greatly to reduce load shedding. Also, it seems government are penalising those that support the movement to green energy..they should be supporting that initiative. Other governments in their countries are subsidising the move towards green energy.	Dieter	self-employed
	2026-08-26 17:53:44	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is immoral to tax people for showing initiative and trying to remedy a problem created by a service provider Part of the line connection charges charged by local municipalities should go towards supporting the national grid	Stuart	retired
	2026-08-26 17:54:21	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I would not have made the investment in a solar if it had not been for the failure by Escom to provide a proper service. It will take many years for me to recover my costs and now that progress in this regard is being made, suddenly there is this proposal which will effectively punish me for protecting myself from Escom's non-performance. Farmers are not charged a fee for having their property linked to a public road, but they pay a fuel tax which is an indirect user tax. User pays principle. A car company can't charge you for owning their brand, they must recover their overheads when you buy the vehicle, buy parts and use their service facilities.	Hugh

	2026-08-26 18:00:23	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom and government are penalizing consumers for a problem they caused by looting the country and ESKOM. The infrastructure was neglected and not maintained. Today ESKOM is still not in a position to generate more power than the country generated in the early 2000's. After all, solar installations have assisted greatly to reduce load shedding. Also, it seems government are penalizing those that support the movement to green energy. They must follow the example of other countries and support green energy initiatives	Barend	retired
	2026-08-26 18:01:30	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Don’t know why citizens have to bear the brunt of Eskom’s bad management. It’s time for citizens to stand up for themselves.	Charlotte	
	2026-08-26 18:01:41	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is the Government's responsibility to provide affordable electricity to the people. The Government should have started more than 20 years ago to plan and build for the future. They should have clamped down on illegal electricity usage in rural areas. Privatisation is not going to quickly fix the shortfall. People who generate their own electricity with solar panels or wind turbines should not have to pay a cent to the Government because they're too pathetic to provide it. The sun doesn't belong to 1 person or the government. Why should people be taxed when they have a solar panel? Stop lining your own pockets. Stop the corruption. Stop stealing from the people.	Ilse	
	2026-08-26 18:02:11	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I object to the proposal to impose mandatory fixed network and capacity charges on grid-connected customers regardless of their actual use of grid electricity. Households and small businesses that have invested significant private funds in solar, batteries and energy efficiency have done so to reduce their reliance on the grid, manage load shedding and support cleaner energy. Penalising these consumers through higher fixed charges undermines those investments, discourages further private renewable-energy adoption and disproportionately affects households that actively reduce their electricity consumption. I call on NERSA to: * Place strict statutory caps on fixed network and capacity charges. * Introduce a fair, tiered tariff model that properly credits rooftop solar users for energy fed into the grid and recognises their contribution to the electricity system. * Ensure that fixed charges do not simply become an availability tax that undermines the financial benefits of investing in renewable energy. * Require an independent socio-economic impact assessment of the proposed charges, particularly their effect on low-income, energy-efficient and self-generating households. Consumers who reduce their demand on the grid should not be financially punished for doing so. The tariff structure should encourage investment in renewable energy and energy efficiency, not make it less economically viable.	Bruce	

	2026-08-26 18:02:33	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	You should be ashamed by raping the system and us the consumers. Stop the bullying and racketeering! If your house was in order,then there would be NO reason for going the solar route.	Mano	retired
	2026-08-26 18:03:45	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		LJP	retired
	2026-08-26 18:04:30	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Although the consumption has reduced for private users, the municipality is also able to "buy" excess solar capacity units from these same people to reduce their own bill and not pay the price necessarily that they would pay to Eskom. Solar systems also need maintenance, so they are paying towards that, and then the units that the municipality "buys back" should then surely pay towards private solar systems maintenance if this is the stance. Get to a proposal that works, that could be mutually beneficial.	Esmerelda	employed individual
	2026-08-26 18:06:00	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We invested in solar energy because of the govts failure to provide stable energy! Now we have to pay eskom for their failure on top of them not reimbursing us for the lack of power! Not acceptable! Now we are being penalised for reducing use of Eskom generated power. Adding insult to injury - municipalities “buy” power from Eskom and neglect to pay for it - as ithe money paid by buyers has “disappeared'	Tracey	employed individual

	2026-08-26 18:23:27	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom should rather buy electricity from solar rooftop owner's	Winston	retired
	2026-08-26 18:23:30	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Daylight robbery - as usual. Greedy grasping Eskom - as corrupt as ever	Lyn	retired
	2026-08-26 18:23:56	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	It is fundamentally wrong to expect people to pay for services they are not receiving. Solar power systems operate independently of Eskom, so charging consumers for electricity they are generating and using themselves makes little sense. Eskom's tariffs have become increasingly unaffordable for many households, forcing people to invest in alternative energy solutions at significant personal expense. To then impose additional charges on those same individuals simply for reducing their reliance on the grid feels deeply unfair. Instead of penalizing people for finding sustainable ways to manage rising electricity costs, the focus should be on providing affordable and reliable power. The idea of charging consumers for services not rendered raises serious questions about fairness and accountability.	Carina	business owner
	2026-08-26 18:24:48	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Households and small businesses that invested significant private capital into rooftop solar, batteries, and energy efficiency to protect themselves from load shedding will be forced to pay higher monthly baseline connection fees. This structural shift acts as a financial penalty on private decarbonisation, extending solar payback periods and increasing electricity bills for low-volume and frugal users. Demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. Insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. Require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households.	Thinus	employed individual
	2026-08-26 18:26:35	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The present pay-for-use approach is fair. Charging a fixed charge for "capacity" that we may or may not use is completely unfair.	Alan	employed individual
	2026-08-26 18:28:00	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Anyone who has installed solar panels have already paid VAT on the installation. It is dishonest of the Government to now want to tax Solar Panels which they encouraged when the Eskom grid could not supply the needs of the country. Concerned citizens who at their own cost installed Solar panels as a remedy of a failing system should be rewarded not penalized by being taxed	GAYE	retired
	2026-08-26 18:28:13	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We have spent money to save money, have a reliable supply, why should we be penalised for doing that. We are in effect reducing the municipal Eskom bill! Even if you use 0 kwH you have to pay the fixed charge!	Deon	retired
	2026-08-26 18:28:37	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Many of us installed solar purely because of inept electricity service. To be penalised for this down the line is ridiculous. The fact that it helps the environment is a bonus	Jenny	retired
	2026-08-26 18:28:39	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The proposed Mandatory Fixed Grid Charges on Rooftop Solar would be unethical in the extreme. It will fall in the same class as being forced to pay for the air that one breathes !! First the state via Eskom neglected providing us properly and consistently with electricity. Then homeowners and others resorted to doing it themselves by putting up their own solar systems, paid for by themselves. Light from the sun should be as FREE as the air we breath (and one wonders for how long the latter will still last). And though the state, via Eskom (and new proposed associates), had no role in funding our own solar systems, they now want to cash in by unethically "taxing" us for our own initiatives.	Michael	retired

	2026-08-26 19:01:47	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	Thank you for the opportunity to highlight our concern related to energy supply. As we all experience very difficult times under the current corrupt government with excessive prices on essential commodities, state control is not the answer. The current political decision making model is total outdated and needs to be replace with a model that trend the market's overall and not only certain friendly markets, those connected who are favouring the current regime! The problem with the current regime is they are just copy cats of other countries, wether it fits the citizens or not, wether it does have a negative impact on the people of South Africa or not it does not matter! If they consider the prices of fuel, food, materials, energy, medical services and service in general they do not care. Our taxes we pay and all the others add ons made us much poorer than the same foreign market's. South Africa need a roll out of their own unique model which fits into our own consumers, to satisfy the needs of the South African's! Everytime a politician jump into a Boeing visiting other countries to be a copy cat we as citizens are been taxed or punished with more control and more law's with more expenses with much less cash to survive as business owner's and taxpayers! During load shedding many businesses closed permanently with job losses, many expensive equipment was damaged, even crime flourished, more and more corruption and lawlessness! If it was not for the private sector who invested to secure their own energy supply the total collapse of the grid was about to happen! The government on all platforms asked time and time again to be patient which happened, a couple of years later they want to punish those who helped them when they were in trouble. This is insanity, politicians without any wisdom not considered to the prop of South Africa because they don't have the wisdom, nor the understanding of the current economy and the suffering of us as taxpayers. Your President Ramaphosa recently with their launch lied publicly when he said the ANC ended load shedding! Thanks for the investment of the private sector and especially home owners who rescued the grid from collapsing. Rethink this proposal and design a model that fit our country, our people, our economy who can contribute towards job creation and prosperity for our citizens and people! We need wise leaders, Matthew chapter 25, the Word of God, not fools or wicked politicians!	Derek	business owner
	2026-08-26 19:02:29	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I cannot believe this, the government begged us to help them by getting solar,. Now I have spend thousands on a system that helped them when they needed it, I must pay even more and still maintain, service and replace when necessary. I think this is nothing but pure robbery!!	Kevin	business owner
	2026-08-26 19:08:02	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The government incentivised us to go solar with their tax breaks, as load shedding was severe and they wanted less pressure on Eskom. Now they want to penalize us for doing so. We would never have had to resort to solar if the government effectively managed electricity in SA and Eskom's incompetence . The installation of solar has come at great expense to us.	Lindsey	retired

	2026-08-26 19:25:43	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	1. The consumer must not be expected to fund municipal incompetence! Fix the wasteful inefficiencies first e.g. electricity theft; lights on all day; theft and inefficiency at Eskom e.g. high salaries and bonuses and increases for poor service! 2. The solar sector needs to organise like the taxi sector. Maybe they should call for a solar "shut-down" at short notice, just to see how little value solar brings to the Country!	Anthony	retired
	2026-08-26 19:28:04	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Barry	employed individual
	2026-08-26 19:28:16	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I have invested private savings into rooftop solar and batteries to keep lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation.	Charles	retired
	2026-08-26 19:29:01	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Johannes	employed individual
	2026-08-26 19:29:36	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We are been BULLIED BY A STATE OWENED COMPANY AGAIN FROM OUR HARD EARNED MONEY we invested AND to take the monnies from us which is not owing to them.	Ferenc	self-employed
	2026-08-26 19:31:26	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I do not support the proposed Electricity Sector Market Transformation Position Paper in its current form. I am particularly concerned about increased fixed electricity charges and any tariffs or penalties that effectively punish households and businesses for installing solar. Many South Africans invested significant amounts in solar because of unreliable electricity supply and rising electricity costs. These investments reduce pressure on the national grid, improve energy resilience and support the transition to cleaner energy. Consumers should contribute fairly towards genuine grid infrastructure costs, but these charges must be reasonable, transparent and directly related to the service provided. Solar users should not be penalised simply because they have reduced their reliance on grid-supplied electricity. I therefore request that the proposals relating to fixed charges and the treatment of private solar generation be reconsidered and amended.	Jared	business owner
	2026-08-26 19:32:34	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Ever increasing pole and infrastructure fees does not work! Eskom tried it at our small-hold to the point that consumption was barely 10% of the total bill. That forced us to go the solar route. Now we have surplus every day which we can't even donate to the grid. Recommendation: More storage capacity by government to reduce or even stop the enormous diesel bill along with purchasing surplus from solar owners is what needs to be considered ASAP.	michiel

	2026-08-26 19:42:29	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Why should I pay R15 per KwH when I use little on prepaid? Eskom forced us to solar. If we all go back onto the grid Eskom will be in trouble. Perhaps we must do for 3 months to get the message through. Don't force us.	Thomasz	retired
	2026-08-26 19:44:06	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Support with Amendments: Wholesale market reform should proceed only if strict caps are placed on fixed network fees, captive ratepayers are protected, and municipal cross-subsidies are safeguarded.	Richard	
	2026-08-26 19:45:54	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)		shauneen	business owner
	2026-08-26 19:49:23	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I object to the proposed approach to mandatory fixed charges for grid-connected residential solar users. I am a residential electricity consumer who remains connected to the grid and continues to purchase and pay for a considerable amount of grid electricity every month. I have also invested my own private capital in solar generation, which I use particularly to power high-consumption appliances such as my swimming-pool pump and geyser. I strongly object to residential consumers such as myself being characterised, expressly or implicitly, as "free riders" because we have reduced part of our electricity consumption through private generation. I have not withdrawn from the electricity system while expecting other consumers to subsidise my household. I continue to purchase grid electricity for ordinary day-to-day household consumption. I have simply spent my own money to reduce the demand my household places on the grid. South Africans have endured years of constrained electricity supply and load shedding. During that period, households were actively incentivised to reduce their dependence on the grid and many invested substantial amounts of their own money in solar generation, batteries and other energy-saving technologies. It is fundamentally inequitable to subsequently restructure tariffs in a manner that financially disadvantages those same consumers because their investment successfully reduced the electricity they purchase from the grid. There is also a serious policy contradiction in attempting to encourage private generation and reduced electricity demand while simultaneously reducing the financial benefit of doing so through unavoidable fixed charges. Consumers should have an economic incentive to reduce demand, improve energy efficiency and invest their own capital in distributed generation. I accept that ordinary charges associated with maintaining a grid connection may legitimately form part of an electricity tariff. What I oppose is using increased mandatory fixed charges as a means of recovering revenue lost because a household has chosen to purchase fewer kilowatt-hours from the grid. A reduction in electricity consumption should not itself create a new financial liability. My solar installation reduces my household's demand on the electricity system. I funded that infrastructure privately, bear the cost of maintaining it privately, and continue to purchase electricity from the grid. I therefore reject the proposition that reducing my grid consumption constitutes "free riding" or that it provides a legitimate basis for imposing additional unavoidable charges on my household. I therefore object to the proposed tariff approach insofar as it permits or encourages additional mandatory fixed charges targeted at residential consumers because they have installed solar generation or reduced their consumption of grid electricity.	Gabriella	employed individual

	2026-08-26 19:50:29	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is simply unconscionable to burden consumers with Eskom's past and present inefficiencies, namely over-staffing, managerial incompetence, and other corporate inadequacies. It is doubly unconscionable to attempt legislation changes that at bottom are designed to extort more money from consumers who through their own initiative and money have helped Eskom solve its generation insufficiency by installing SSEG systems. It is triply unconscionable that this proposal effectively seeks to tax the use of sunlight. These glaring shortcomings will not fix Eskom because that will require competent management that is empowered to take hard decisions, and it is very likely that the main consequence of these absurd proposals will be to prompt anyone who can afford it to go off-grid completely, leaving Eskom with an ever-growing portion of non-payers. 	2026-08-26 20:05:20	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom has failed to supply constant reliable electricity. As a government the ANC has failed to protect the electrical infrastructure which allows for the constant loss of power due to cable theft, and every other excuse that can be made up. The ANC has stolen all the money to the point that Eskom is bankrupt and the city councils are bankrupt so they cannot do maintenance and upgrades hence the unreliability of the power grid. You asked the consumer to use power sparingly. The less power the consumer uses the less income there is, hence there is less money to steal and even less money for maintenance and upgrades. The consumer has reduced the load on the electrical system by installing solar systems at their expense, for the most you have refused to allow consumers to feed back into the grid any spare power they have from their solar system. Now you want to charge any consumer with solar power a penalty fee to boost your revenue so you can continue abusing the funds you receive. It is wrong on every level and just another government rip off to rape the consumer. What will happen next is that most people with solar will upgrade and go off the grid completely. Eskom and ANC government you are shooting yourself in the foot once again !	C	business owner

	2026-08-26 21:08:09	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The ANC cannot supply enough energy for South African residents' needs because they allowed ESCOM, together with all else they touched, go to naught. Now that a resident makes a plan, which by the way has partly helped ESCOM to stop loadshedding due to the lower demand, they want to PUNISH households for this? How does that make sense? Why not rather focus the effort on every house having panels that can supply additional electricity onto the grid - oh, that won't fill their pockets, will it?	HM	retired

	2026-08-26 21:08:11	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Moosa	retired
	2026-08-26 21:09:07	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It's inconceivable that this government continues to punish the very people who are easing the state's burden. Citizens who have solar panels are helping the country to avoid atrocious load shedding schedules , provide a service for themselves because government has dismally failed to do so. It's actually disgusting what government is proposing.	Mapotlo	retired
	2026-08-26 21:12:14	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The government should welcome people who invest in solar panels since the more electricity is produced, the more is available and this should help to reduce the price. We aleady pay a monthly fee just to be connected to the grid. They should not be allowed to increase this. And residential homes should not be captive to a supplier which id simply keen to exploit them. We should be able to run our excess power back into the grid and either be paid for it ot have the meter run backwards to reduce the amount we are billed for each month. In some areas they claim that the grid cannot manage electricity receive from residential houses, but in other areas this is not a problem This situation has been known for many years, yet I never hear about effort being made to update and fix the grid so that it can work more effectively.	Meg	retired
	2026-08-26 21:18:16	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We as residents were initially incentivised to install solar power to support and alleviate the load on the system. Now, we are penalised for doing so because unfortunately the people with the ability to move to solar are also the only people paying for electricity - hence the diminishing income conundrum facing Eskom. A better suggestion would be to recover the infrastructure maintenance and expansion as a flat rate on the per unit tariff. Then everyone should pay for what they use. If you use below a certain subminimum then your tariff is capped a minimum level to ensure access for the poor paying customer in the form of a rebate in units. Unlike Water, electricity is not a basic right. It is a service that you pay for based on your usage.	Pieter	employed individual
	2026-08-26 21:20:35	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Alf	retired
	2026-08-26 21:22:45	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	First you incentivise us to install solar, now you punish us. If we use fewer units, we are less of a strain on the grid and therefore should not need to compensate for maintenance on the grid to the same extent that people who use many more units should. Your logic is flawed and your motives are disengenuous.	Lauren	employed individual
	2026-08-26 21:24:50	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Joy	retired
	2026-08-26 21:27:17	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Poor performance by ESKOM and the failure of the State to oversee fair electricity prices should not result in households have to fill the gaps. For many years ESKOM and the State promoted the idea of elevating the burden on electricity consumption. Secondly, how is it possible to penalise green power generation? This should be promoted by the State.	Joseph	
	2026-08-26 21:29:53	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We pay huge rates already, for very little in return. Rates are for infrastructure maintenance. People will go off grid completely.	Victoria

	2026-08-26 22:21:54	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Penalizing those who have already committed their own private funds toward self sufficiency and grid overload is not only unfair, but destroys the user pays principle. This will discourage solar investment, and polarize the market into complete self sufficiency, or no solar investment at all and favour larger consumers at the expense of smaller less affluent households. This is basically encouraging inefficient cost allocation, and penalizing those least able to pay.	mark	retired
	2026-08-26 22:25:41	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	In our area we still have regular power outages due to poor Eskom infrastructure and working remotely creates challenges for us when the power is out for 3-4 days at a time This amendment is total bullshit when Eskom cannot provide continuous power, which also affect the cell phone towers which go off after a few hours, we are then completely isolated , so people end up going to the local restaurant who had a generator to get connection to the WiFi available!!!!!!	Peter	
	2026-08-26 22:29:09	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	As a homeowner who invested significant personal capital in rooftop solar and battery storage — specifically to offset the state's failure to guarantee reliable electricity supply I find it deeply unfair that this same investment is now being reframed as "free-riding" that must be penalised through unavoidable fixed charges. Households like mine reduced their draw on strained municipal and Eskom infrastructure at their own expense, effectively subsidising grid stability during a national crisis. To now be billed as though that contribution never happened inverts the logic of the policy. I am also concerned about the asymmetry in the proposed framework: large industrial users above 1 MW will be permitted to bypass municipal supply and buy directly on the wholesale market, while ordinary residential ratepayers remain "captive" to municipal tariffs and cross-subsidy obligations. This risks placing the heaviest burden of legacy infrastructure costs on households least able to negotiate their way out of it, while insulating large corporates from the same pressures. I request that any restructuring of tariffs: 1. Recognise and credit self-generation's contribution to reducing grid strain, rather than treating it as a shortfall to be recovered from consumers; 2. Apply any new fixed-charge model proportionately and transparently, with full public disclosure of the cost-recovery calculations behind it; and 3. Extend the same market-access principles offered to large industrial users to residential and small commercial ratepayers, or provide equivalent protections against unchecked tariff increases. I urge the Department to reconsider a framework that penalises private investment made in direct response to the state's own supply failures.	Karl	employed individual

	2026-08-27 05:38:04	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Public Comment on the Electricity Sector Market Transformation Position Paper, 2026 I welcome the broader objective of transforming South Africa's electricity sector into a more competitive, reliable and financially sustainable market. However, I have serious concerns about how the proposed approach to network cost recovery could affect households that have made significant private investments in rooftop solar and battery storage. I am a residential property owner who has invested my own savings in a solar and battery system. This investment was not made to avoid contributing to the electricity system. It was made because households were forced to find practical solutions to an unreliable electricity supply, including load shedding, and to protect our homes, livelihoods and household finances. I therefore believe the principle of "discouraging free riding" needs to be applied with considerable caution. A household with rooftop solar and batteries may consume substantially fewer units from the grid, but it does not necessarily cease to depend on the grid. The property remains connected to the network and may rely on it at night, during periods of inadequate solar generation, during extended periods of bad weather, or when battery capacity is depleted. I accept that maintaining this connection has a cost and that those costs must be recovered fairly. However, fairness must operate in both directions. 1. Private investment in energy resilience should not become a financial disadvantage South African households that invested substantial amounts of their own money in solar and batteries have effectively contributed private capital towards reducing demand on the electricity system and improving household energy resilience. Government should therefore avoid creating a tariff structure in which households are encouraged to invest in distributed generation, only to face progressively higher unavoidable charges because they have successfully reduced their electricity consumption. The policy should distinguish between genuine network cost recovery and charges that effectively undermine the economic rationale for private investment in renewable energy. 2. Network charges should be transparent, proportionate and cost-reflective I support the principle that customers should contribute fairly towards the infrastructure and services they actually use. However, any fixed network or capacity charge should be transparently linked to the actual cost of providing and maintaining the connection. Charges should not become a mechanism for recovering unrelated municipal financial shortfalls, inefficiencies or historical losses from a shrinking group of compliant customers. There should be clear transparency on what each charge pays for, how it is calculated, who is liable for it and how the methodology prevents cross-subsidisation from becoming excessive or arbitrary. 3. Do not punish consumers for reducing consumption South Africa has spent years encouraging energy efficiency, private electricity generation and reduced dependence on the national grid. It would be counterproductive if the regulatory framework effectively told consumers that reducing their electricity consumption will result in a proportionately higher unavoidable charge. The policy should instead recognise distributed generation and battery storage as part of the country's broader energy transition and resilience strategy. 4. Residential consumers need greater choice I am concerned about the distinction between large "eligible" customers and residential or small-business "captive" customers. If larger customers are eventually able to procure electricity competitively while ordinary households remain dependent on municipal or regulated retail suppliers, the framework must contain strong safeguards against residential consumers carrying a disproportionate share of network and municipal revenue-recovery costs. Households should not become the residual customer base responsible for financing the system after the most commercially attractive customers have greater procurement options. 5. Solar households should have meaningful economic participation The policy should provide a clear and fair framework for residential and small-scale embedded generation, including transparent rules for exporting surplus electricity to the grid and appropriate compensation for electricity supplied to the system. Where households feed electricity into the grid, the value of that contribution should be recognised fairly rather than treating the household exclusively as a consumer. 6. Existing solar investments require regulatory certainty Many households made their investment decisions based on the regulatory environment that existed at the time. Government should therefore provide sufficient certainty and avoid retrospective or punitive changes that materially undermine the economics of existing solar and battery investments. A stable regulatory environment is essential if government wants continued private-sector and household investment in electricity generation. 7. The transition must protect the public interest I support the objective of creating a financially sustainable electricity sector. But sustainability cannot simply mean shifting more of the fixed cost burden onto consumers who remain connected to the grid. The ultimate test should be whether the new market structure produces a more reliable, competitive, transparent and affordable electricity system. I therefore request that the Department carefully reconsider how the "anti-free-riding" principle is applied to households with rooftop solar and battery storage and ensure that: * network charges are transparent and genuinely cost-reflective; * charges are proportionate to the services and network capacity provided; * households that invest in renewable energy are not unfairly penalised; * existing solar investments receive appropriate regulatory protection; * residential consumers are not left carrying disproportionate municipal or network costs; * small-scale generators have meaningful opportunities to participate in the electricity market; and * the final regulatory framework continues to incentivise, rather than discourage, private investment in distributed renewable energy and energy storage. South Africa needs more private investment in electricity infrastructure, not less. Thousands of households have already put their own money behind that objective. The regulatory framework should recognise these citizens as partners in solving the country's energy challenge, rather than treating them primarily as a problem of "free riding". I therefore urge the Department to ensure that the final policy achieves genuine cost recovery without creating a regulatory penalty for consumers who have invested in their own energy resilience.	Teko	employed individual
	2026-08-27 05:44:03	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation.	Kevin

	2026-08-27 06:01:03	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I fully accept that municipalities need revenue to maintain electricity infrastructure and that consumers should pay fairly for the electricity and services they receive. However, households that have invested their own money into compliant solar systems should not be singled out and charged additional fees simply because they consume less electricity from the grid. The issue is not whether consumers should contribute towards municipal infrastructure—it is whether it is fair to impose an additional charge specifically on households that have reduced their dependence on an unreliable electricity supply through private investment. 1. We already pay for the electricity we use A solar household does not stop paying the municipality entirely. We still purchase electricity from the grid: during the night, during extended bad weather, when batteries are depleted, when household demand exceeds solar production. Every kilowatt-hour consumed from the municipal network is already paid for at the applicable tariff. If electricity is supplied, it is paid for. The principle should therefore be payment for services consumed, not punishment for consuming less. Fixed charges may legitimately exist for network access, but they should apply fairly to all comparable customers rather than becoming a disguised solar penalty. NERSA itself has recognised the broader debate around fixed network and capacity charges, which remains an important regulatory issue. 2. Solar households invested private money to reduce pressure on the grid Installing solar is not free. Homeowners spend substantial amounts of their own money on: solar panels, inverters, batteries, electrical upgrades, maintenance and replacement equipment. This investment is made without the municipality funding the installation. By generating part of our own electricity, we reduce demand on the municipal network during daylight hours, particularly when many households would otherwise draw heavily from the grid. Instead of discouraging these investments, municipalities should recognise that distributed generation can reduce demand on existing infrastructure and improve energy resilience. 3. The electricity network is often unreliable One of the strongest reasons households invested in solar was not luxury—it was necessity. Many communities experience: repeated cable theft, damaged electrical infrastructure, transformer failures, prolonged outages lasting several days while repairs are completed, unstable electricity supply despite paying monthly municipal accounts. It is difficult to justify charging additional fees to residents who invested their own money because the electricity network could not consistently provide a reliable service. Consumers did not create the unreliability—they responded to it. 4. Cable theft and poor infrastructure should not become the consumer's burden twice Residents already suffer financially when municipal infrastructure fails. During prolonged outages households experience: spoiled food, inability to work remotely, security risks, damaged appliances, inconvenience and financial losses. Many homeowners then invest hundreds of thousands of rand into backup energy solutions to protect their families and livelihoods. Charging those same households additional solar-related fees effectively mean consumers pay twice: through municipal electricity tariffs; and through private investment to compensate for unreliable infrastructure. That is difficult to defend from a fairness perspective. 5. A compliant solar system is not automatically a threat to the grid Municipalities understandably have a responsibility to ensure that embedded generation systems are safe and compliant. Registration, inspection and technical standards are reasonable because improperly connected systems can create safety risks for utility workers and the network. Eskom likewise states that properly registered systems help ensure safe parallel operation. However, safety compliance is different from a punitive monthly levy. If a homeowner has a compliant system that meets the required standards and does not unlawfully feed electricity into the network, there should be a clear distinction between regulating safety and generating additional municipal revenue. Compliance should be encouraged—not financially punished. 6. Municipalities should reward responsible consumers, not discourage them South Africa regularly encourages citizens to become more energy efficient and reduce pressure on the national electricity system. Solar households are doing exactly that. They are: reducing peak demand, improving household resilience, lowering dependence on municipal generation, investing in renewable energy, reducing the burden during periods of constrained supply. Introducing excessive fixed charges creates the opposite incentive: it discourages future solar adoption and may eventually encourage households who can afford it to disconnect from the municipal network altogether. That outcome benefits neither municipalities nor communities. 7. Revenue collection should focus on non-payment instead A more equitable approach would be to improve revenue collection from consumers who are already receiving electricity but fail to pay for it. Law-abiding residents who consistently pay their municipal accounts should not become the easiest source of additional revenue simply because they installed solar. Municipalities should prioritise: collecting overdue electricity debt, addressing illegal electricity connections, reducing electricity theft, improving billing accuracy, maintaining infrastructure effectively, preventing cable theft through better security and faster repairs. Recovering revenue from widespread non-payment is fundamentally different from imposing new charges on responsible paying households. 8. Fixed network costs must be transparent and reasonable There is an important distinction between a legitimate network access charge and a solar penalty. If municipalities genuinely incur unavoidable costs to maintain poles, transformers, substations and billing infrastructure for every connected household, those costs should be transparent, justified and fairly structured across customers using the network. What consumers object to is a situation where solar users are specifically targeted with disproportionate additional charges simply because they reduced their electricity purchases. Any tariff should therefore be: transparent, cost-based, non-discriminatory, approved through the proper regulatory process, subject to public consultation. Recent debate in South Africa has highlighted significant concern around increasing fixed electricity charges and the effect these charges may have on rooftop solar households. 	2026-08-27 06:41:03	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We strongly oppose any electricity market reforms that place an additional financial burden on ordinary households, small businesses and property owners. South Africans who have invested in rooftop solar should not be penalised with unavoidable fixed grid charges, while large users are given greater opportunities to bypass municipal distribution networks. There is a serious risk that ordinary consumers will become captive ratepayers, forced to carry increasing municipal electricity distribution costs and revenue shortfalls while receiving fewer services. We therefore call for: Protection of households and small businesses from excessive fixed charges. Fair treatment of private solar investment and energy independence. Transparent, regulated and affordable electricity tariffs. Strong safeguards against market manipulation and excessive pricing. No shifting of municipal financial failures onto electricity consumers. Electricity is an essential service, not an opportunity to extract ever-increasing revenue from citizens. We call on government to reconsider these reforms and put affordable electricity, consumer protection and accountable service delivery before revenue collection.	Magda	business owner
	2026-08-27 06:41:06	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Disgusting they are destroying our country.	Jennifer	retired
	2026-08-27 06:42:07	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Households should be rewarded for reducing the stress on the national grid, not punished.	Keryn	retired

	2026-08-27 06:52:25	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	What did the very clever people at Eskom think was going to happen when they asked everyone to use less of their product? It must have come as a shock when they realized that people listened to them and actually used less (of their) electricity. But wait a minute, why are they now making less money - surprise! Increase the price, people use even less... Welcome death spiral. Eskom is on life support thanks to solar users. Perhaps it's time to pull the plug on them. How long would the grid last if all solar users stopped using their own energy and relied only Eskom? Rooftop solar installation is the only reason why Eskom hasn't completely collapsed. They should be grateful, and instead of punishing the solar users, they should compensate them.	Niel	self-employed

	2026-08-27 07:55:58	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Why should we have to pay a connection charge for a service we already paid a connection charge for when we bought our house? Every time a property changes hands, Tshwane Municipality charges a new connection fee plus a deposit. When we bought our duplex ten years ago, we paid a deposit and connection fee because the account changed ownership. We later switched to prepaid electricity — and that deposit simply disappeared. We checked, and it's no longer reflected on the account. While still renting out the duplex, we bought a house last year, and the exact same thing happened: another connection fee, another deposit. I have a solar system that doesn't rely on municipal power, and I don't actually need the connection. At this rate, I might as well install a silent, remote-start diesel/petrol generator to cover any shortfalls instead. It's unreasonable to keep stacking fee on fee, especially when, as consumers, we have no visibility into whether these charges are even being used for their stated purpose	Jannie	employed individual
	2026-08-27 08:00:32	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	You did not pay for my solar so how come you want me to pay a fixed tariff for using sunpwer?	A	
	2026-08-27 08:01:24	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I did not spend R160K on solar panels and batteries because I wanted to, but rather because of Government and Eskom's failure to ensure reliable supply. If anything, I should be insisting on a rebate!	Gerhard	employed individual
	2026-08-27 08:01:44	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Why does it fall on the public every single time to bail out inept corrupt officials who cannot keep their hands to themselves and actually work towards building a better South Africa. Another levy to keep corruption going. Enough is enough.	Duane	employed individual
	2026-08-27 08:03:01	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	How dare the government try penalise people for solving their problems. I paid a fortune to get solar and now am expected to pay more & more because Eskom and the municipalities can't stick to a budget & steal as much as they can. I think the time is coming for a national movement where all solar users switch off their solar for 24 hours lets see how the grid copes then.	Mandy	employed individual
	2026-08-27 08:04:35	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Sarah Jane	self-employed
	2026-08-27 08:05:29	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	In the past, there was a time when Eskom was functioning perfectly fine without any of these requirements. Instead of making this the people's problem, why don't the government fall back onto what worked in the past? I believe if available funds are used effectively without all the corruption, everything will be fine.	Talita	
	2026-08-27 08:05:56	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Every rate payer that pays network charges pays to that which is specifically there to cover the cost of grid maintenance. I do not support the bill. Eskom needs to become more creative in their thinking instead of just going after those that can afford solar. Due to Eskom's own fault, people have had to survive and install solar systems. Now that Eskom has realised that they are loosing millions due to the populations resilience they want to take more of our hard earned earnings. It is every solar owners constitutional right to install solar and use the free power of the sun. If Eskom is not reaping the benefits of solar then they should start. Maybe they can charge more for electricity at night? That way they can recoup something when solar isn't functional.	Werner	business owner
	2026-08-27 08:06:44	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is completely unfair. We used our pensions and hard earned money, even borrowed money to help the Government and Eskom. This is a kick in the teeth. We are still paying off our loan for our solar system. We already pay fixed line monthly service fee of around R 300. Now this, enough is enough	Somasundaram	retired

	2026-08-27 08:11:58	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I work from home and due to the loadshedding and unrealiable electricity supply I was forced to go the solar way. It's not fair that I am now penalized because of the governments failure to supply electricity. Also the price of electricity is outrages and just keeps going up.	Megan	employed individual
	2026-08-27 08:12:45	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Pieter	employed individual
	2026-08-27 08:12:57	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	In most cases owners of home PV systems partially produce their own power and are not fully off the grid. In many cases that will be a 50/50 split. This is equitable as this is still a sizable purchase from Eskom every month, but without the penalty of being pushed into highest tariff blocks. Eskom's proposed strategy for those who were pushed to invest in solar in the load shedding days is a clawback strategy as thanks for the contribution that households made to solve the energy crisis. It will push many to reinvest and ditch Eskom altogether. Eskom keeps inventing new ways to gouge its best customers - those who actually pay diligently. If it were effective at collecting from municipalities and controlling illegal connections, it would not have to turn to its paying customers to try and fill a leaking revenue bucket.	Rowan

	2026-08-27 08:30:08	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	If Eskom is unable to compete in a free market environment they should re-model themselves. They were the ones that brought about the greater part of living off the grid!	Danny	retired
	2026-08-27 08:30:14	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Why must we be penalised for their incompetence. Stuff that for a joke.	Deri-Lee	employed individual
	2026-08-27 08:31:55	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom couldn't provide a stable electricity supply and so people made another plan with solar and they now get penalised for this. That is not fair!	Derryth	employed individual
	2026-08-27 08:35:58	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Government should stop victimising consumers Eskom has been allowd to steal peoples money though greed	vaughan	
	2026-08-27 08:37:26	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	First, we, the rate payers are asked to do our best to help a strained electricity supply because Eskom cannot do it's job properly. Then, when we take it in our own hands at a great cost to not accept being subjected to this BS loadshedding, we are targeted and penalised because why? Eskom cannot pay it's ridiculous amounts of bonuses to its people? Corruption and mediocrity (from any governmental institution or the government directly) are not acceptable excuses any more.	Jorette	
	2026-08-27 08:37:28	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom (and SA Government) must either clean out all corruption and employ entirely on merit, or Eskom must wind down and sell to private investors. Eskom was once a well-run ship - now it is a disgusting mess. They supply to people who don't pay. They employ people who can't do the work. They make deals with corrupt suppliers - for coal, etc. When becomes cheaper to install a complete off-grid solar solution than it does to use Eskom, nobody would be foolish enough to continue paying MORE for a corrupt and unreliable electricity supply. As soon as the cost of Eskom electricity exceeds the cost of installing a sufficiently large battery, those who have been running partially on Eskom will take the step and go 100% offline - and those customers will be permanently lost.	John	employed individual
	2026-08-27 08:38:06	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Rate payers who were forced to pay for expensive solar alternatives for electricity should not be punished any further to cover Eskom's debt.	Gregory	employed individual

	2026-08-27 08:39:22	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Total idiocy! For decades Eskom and municipalities have been screwing consumers with abhorrent charges, and now want consumers who took the initiative to rid themselves from this thievery by installing solar capacity to further pay for their thievery? Absolutely NO!!	Hannes	retired
	2026-08-27 08:39:48	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We are continually faced with increased electrical costs with no increased value in return. Despite "no load shedding" we experience weekly outages. Mandatory Fixed Grid Charges on Rooftop Solar defeats the object of reducing electricity usage - why , then , have radio adverts begging consumers to reduce their electrical usage ? It's all lies we are told by COJ and Eskom- where is our money actually going? Certainly not on infrastructure maintenance or improvement - we dont see any of that happening. We do however, see circuit breakers being stolen and sold back to COJ.	Amanda	employed individual
	2026-08-27 08:40:31	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Those of us who have been able to move to solar did so to because the Eskom grid was unreliable, unstable, and under severe pressure because the government didn't see fit to upgrade according to the growing population, obscene electricity price increases over the years, and quite frankly, we thought it would be a good thing so that we do our part to relieve pressure on the grid. The ongoing corruption in our country is unacceptable. Please stop punishing the tax-paying, law-abiding citizens of SA for trying to do the right thing.	Yolanda	employed individual
	2026-08-27 08:40:56	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	If Eskom had historically used the revenue it received from consumers to properly maintain its infrastructure, invest in future generation capacity, and operate efficiently, South Africans would never have been forced to seek alternative power sources on the scale we see today. The widespread adoption of solar power is not a lifestyle choice; it is a direct response to years of mismanagement, inadequate maintenance, poor planning, and failures in governance across Eskom, national oversight structures, and many municipalities. Fixed charges effectively shift the financial burden of Eskom's operational failures onto consumers. Instead of being held accountable for delivering reliable electricity at a competitive price, Eskom would be guaranteed an income stream regardless of how much electricity it generates, distributes, or delivers. This creates a dangerous incentive structure. An organisation should not be rewarded for underperformance, yet fixed charges do precisely that by insulating Eskom from the consequences of inefficiency and poor service delivery. South African households and businesses have already spent billions of rand of their own money on solar installations, batteries, inverters, generators, and other backup solutions, largely because they could no longer rely on Eskom to provide a consistent supply of electricity. These investments effectively represent consumers paying for their own electricity resilience and infrastructure. It is therefore unreasonable to expect those same consumers to pay additional fixed charges to subsidise a utility that failed to provide the very service they were forced to replace. Introducing fixed charges during a period of economic hardship and persistent inflation is particularly punitive. Consumers are already carrying the costs of maintaining their own energy security. To require payment irrespective of actual consumption means charging people not for a service delivered, but for the mere possibility that a service might be available. In any other market, such a model would be difficult to justify. More fundamentally, a fixed-charge model weakens the link between revenue and performance. If a utility receives payment regardless of whether it improves reliability, expands generation capacity, reduces outages, or delivers electricity efficiently, where is the incentive to perform better? Instead of driving operational excellence, the proposal risks entrenching a culture where poor performance is financially protected rather than corrected. The reality is that the rapid growth of private solar generation stands as one of the clearest indictments of Eskom's historical performance. Consumers did not choose to become their own power producers because Eskom was succeeding; they did so because Eskom was failing. To now penalise those same consumers with mandatory fixed charges is not only counterintuitive, it is fundamentally unfair. It forces ratepayers to pay twice: once for the infrastructure they had to build themselves, and again to support an institution whose inability to deliver precipitated those investments in the first place. 	2026-08-27 08:45:48	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is totally ridiculous to expect the consumer, who HAD to make alternative arrangments by installing Solar, to be penalised now that Eskom apparenlty has excess capacity! It is Eskom and the governments 's failure over many years that 's led to this and we should not have to pay or be taxed more than we already are. This will result in people with solar to enhance their systems and go of the grid altogether, leaving Eskom with a clientele who either can't pay, won't pay, or who are stealing electricity. Not a great business model and will lead to Eskom's collapse.	Monika	retired
	2026-08-27 08:46:08	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I am already paying the fixed rate for solar, although I don't have a solar system installed. This is not fair ?	Alva	retired

	2026-08-27 08:57:58	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	so now they want to recover the corruptly stolen money that put eskom in the position they are now, from the residents and company's that tired of the continual power outages and plowed their hard earned cash into solar installations which then reduced the pressure on eskom. what is the justice in that when the original thieves go unpunished?	David	retired
	2026-08-27 08:59:03	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I feel it is entirely unfair to further tax the ratepayer for the government's inability to provide electricity. It is not only unfair, it is outright ridiculous. Homeowners who installed rooftop solar at immense personal expense, did so to keep their household power going, we had no choice when Eskom was loadshedding on a daily basis. Now, realising people are buying much less electricity, now they want to cry fowl and try and get their piece of the pie back. My feedback to goverment is: You had the responsibility to provide the country with stable power, you messed it up, we made other plans, now deal with it.	Marica	self-employed
	2026-08-27 08:59:51	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We spent nearly R300 000 setting up a Roof Solar and Battery system so that we can give ourselves electricity during loadshedding as we work from home and could not afford not to have electricity. We made the investment based on what we would be saving in electricity. The repayment period was long ....now you want to make it even longer. During the loadshedding period Eskom was encouraging us to do anything possible to help with their inability to generate adequate electricity. Now that we have helped them reduce/ eliminate loadshedding they want to penalize all those that invested their own hard cash in the process. This changing of the goal posts is totally unfair and will only lead to people going totally off grid.	Abe	business owner

	2026-08-27 09:08:37	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Total mismanagement has caused the collapse of Eskom resulting in load shedding forcing consumers to turn to solar alternatives. This they did at thier own expense while increasingly paying more for Eskom power. Taxing these consumers for stepping in where government has failed is unfair! Eskom can increase their profits by dealing with illegal connections and cable theft not to mention an inflated workforce!	Wynand	employed individual

	2026-08-27 09:11:22	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	Eskom did not supply us with the necessary electricity to properly run a small business. Businesses were forced to spend capital on solar systems and we had to pay lots of money for a system as well as to Eskom for new transformer and meter installations. A law like this totally disregards the millions of Rands that private businesses had to spend to secure electricity a few years ago during the serious load shedding. It will be totally unfair if these private businesses and individuals are now AGAIN penelised by fixed charges and solar penalties. Rather, companies with solar systems should receive some lower charges since they are helping to provide stable electricity, on private capital, that Eskom cannot supply alone and therefore enhance the economy of South Africa. There should be cheaper tariffs for every private property or business who have solar.	Adriaan	business owner
	2026-08-27 09:13:00	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The only people that destroyed Eskom was the ANC with all the corruption and thieving and now they don't like it when the Residents have made a plan. They then want to overcharging us now. How ridiculous! We will then just spend a few more Rands and go completely offline and remove our grid connection.	Murray	retired

	2026-08-27 09:19:41	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I, the undersigned, hereby object to the proposed restructuring of electricity tariffs and the introduction of mandatory fixed monthly capacity and network charges for all grid-connected properties. 1. Punitive Measures Against Private Investment South Africans who invested their own hard-earned savings into rooftop solar and battery systems did so to protect their homes and businesses from load shedding, reduce pressure on the national grid, and contribute to environmental sustainability. The proposed fixed charges effectively penalise citizens for being proactive, responsible, and solution-driven. This is not a fair or rational policy approach. It undermines public trust and discourages future private investment in renewable energy. 2. Solar Users Are Not “Free Riders” Solar households already pay for: Full installation costs Battery storage Inverters Ongoing maintenance Grid connection fees Night-time or backup usage The claim that solar users are “free riding” ignores the fact that solar reduces strain on the grid, lowers peak demand, and contributes to national energy stability. Solar generation is clean, non-polluting, and aligned with global climate commitments, whereas traditional electricity production is carbon-intensive. Punishing clean energy adoption contradicts South Africa’s environmental and economic objectives. 3. The Three-Tier Structure Masks the Real Issues The proposed framework does not create a true open market. Although large industrial users above 1 MW may access wholesale power, ordinary households remain captive ratepayers, locked into municipal tariffs and forced to subsidise municipal revenue shortfalls. This entrenches inequality and contradicts the stated goal of market transformation. 4. Risk of Market Dominance and Price Manipulation With Eskom Generation retaining control over most baseload supply, the proposed market structure creates: Concentrated market power Potential price manipulation Volatility in wholesale pricing Downstream impacts on municipal tariffs Without strong oversight, households may face higher costs, not lower ones. 5. Fixed Monthly Charges Are Unavoidable and Unfair Moving away from volumetric billing toward unavoidable fixed charges means: Households will pay high monthly fees even if they consume very little grid electricity Solar users will be forced to subsidise legacy infrastructure they are barely using Municipalities will rely on these charges to compensate for inefficiencies and mismanagement This is not free trade, nor is it a genuine market reform. It is a compulsory levy on all connected properties. 6. The Proposal Is Autocratic and Anti-Innovation Introducing punitive fixed charges for solar adoption is: Anti-competitive Anti-innovation Socialistic in nature Contrary to global best practice Harmful to citizens who acted responsibly during a national crisis South Africans should not be punished for reducing their reliance on failing state infrastructure. Conclusion I formally object to the proposed tariff restructuring and fixed monthly charges. The policy unfairly targets solar users, discourages renewable energy adoption, entrenches municipal monopolies, and fails to address the real structural issues within the electricity sector. I request that the Department revise the framework to support - not penalise - private investment in clean energy, and to ensure equitable, transparent, and market-aligned electricity pricing for all South Africans. 	2026-08-27 09:30:03	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	We are already very unfairly penalised by the City of Cape Town for fixed monthly charges. We are very seriously considering going off the grid completely.	Johan	business owner
	2026-08-27 09:31:09	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Shirley	retired

	2026-08-27 09:33:53	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Large industrial and commercial users exceeding set thresholds (e.g., 1 MW) will be allowed to bypass municipal grids to buy cheaper power directly from private traders. Ordinary households and small businesses will remain “captive” to municipal distribution grids, risking higher tariffs to cover municipal revenue deficits and legacy cross-subsidies.	Angeline	
	2026-08-27 09:34:01	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	"Mandatory Fixed Grid Charges on Rooftop Solar: The policy explicitly targets grid-connected solar and partial-defection users under an “anti-free-riding” principle, shifting tariff structures from volumetric consumption (units used) to high, unavoidable fixed monthly connection fees." THIS WILL NOT WORK FOR THE REASON: People will simply disconnect their solar from the grid and figure out a way to keep using it during sunshine hours: companies will have a field day retrofitting installations. Consumers will still use Eskom at night. So really, your policy is just going to make peoples live slightly more complicated and inconvenient and costly and you would not have achieved your intended outcome. Or perhaps causing us inconvenience and extra costs ARE your intended outcome... of course...	Dimitar	self-employed
	2026-08-27 09:34:31	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	UNACCEPTABLE : How can there be a standard charge for different household , do 2 houses use the same amount of electricity? This is more of a money making scheme for an already corrupt sector, so it is just to line their pockets.The solar houses have taken pressure off the grid , and do not require power as often , if at all !! .Now they will have to pay for something they rarely use , the same as a house that uses R3000 electricity .Sorry But NOT LOGICAL ! People are already struggling with the cost of electricity .With this structure we pay wether there is electricity or not .How can a household that uses R1500 electrcity a month, now pay the same as a house that uses R5000 a month .If that is the case i will burn electricity like rubbish. My geyser will be on all day . I will slow roast all my food , boil the kettle because i can, leave all my lights on day and night , coz no matter how much i do or do not use , there is a standard fee.	Debbie	employed individual
	2026-08-27 09:36:26	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The introduction of solar was as a result of total failure by the government to supply continuous electricity due to theft failure and maladministration. The situation was saved by the growing use of solar and lack of reliance on our famous government. Now after us saving them from disaster they are wanting to steal money from us in return.	bruce	
	2026-08-27 09:36:48	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	Most solar was installed due to the failure of Eskom to provide, to restructure costing now after installation is unethical.	Jacques	business owner
	2026-08-27 09:39:05	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Why does everything the governmant fail to do becomes the responsibility and additional burden of the citizens. They could not provide electricity so citizens made a plan and used their hard earned savings and loans to put solar in. Now you want to charge us additional for it. Enough is Enough.	Devi	employed individual
	2026-08-27 09:43:13	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We have to look after ourselves for electricity supply because the government and ESKOM clearly can't. At one stage they encouraged the nation to install solar to alleviate the demand and pressure on the grid. Now they are discovering that they are losing a lot of income, and we get penalised. This is not fair and not even good business practice. Instead, they should clean up their own house and fix all the corruption and maintenance issues.	Tjaart	retired

	2026-08-27 09:47:56	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	If the electricity sector was privatized, the cost of infrastructure could be effectively managed. At present management of Escom in rural areas is problematic to say the least. Escom is unable to effective address the electricity needs of the country. It would be more effective to work with individuals who are setting up independent production, than punishing them for addressing the shortfalls. As a pensioner struggling with constant increases in all prices, I for one will need to go off 100% off grid in the propsed scenario, as I cannot suffer more crushing costs to cover out of control, top heavy, state expenditure.	Pamela	
	2026-08-27 09:48:00	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Andrew	employed individual
	2026-08-27 09:48:20	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We had to install rooftop solar at a huge expense in order to be able to live and work, we must remember that Eskom could not provide enough electricity to ensure food was not wasted because of fridges not working, safety as alarms and lights in a dangerous country did not work. We are already being taxed at extraordinarily high rates on every conceivable revenue stream, we are getting poorer and have no security for the future, if there is an additional charge implemented regardless of supply, we all know it will just be wasted. I see their problem, but this is not the solution, the accountants must wake up to the reality that billing accurately for a supply that is properly delivered is the only way to solve this problem. If they are saying that it is not viable for individuals to pay for what is delivered as the whole grid requires the base income from all the households regardless of their consumption, then perhaps it is time to go completely off the grid. They should be allowing households to supply back into the grid for credits and modernize the whole system and become efficient and competitive. I believe with will and skills it could be done. Bailing out is the easy route and creates apathy and waste.	Julia	business owner

	2026-08-27 09:53:22	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We are already very unfairly penalised by the City of Cape Town for fixed monthly charges. The financial pressures of carrying everyone who do not pay tax or rates is really taking a toll on the average household. There are many families who have tried to avoid these excessive costs in the long run by installing solar and it is disgraceful that once again, we are being charged unneccessarily for the pockets of others. The "anti-free riding policy" is a joke as solar is from the sun. It is not "manufactured" by the government or any municipality and it is unfair to instill fixed charges and solar penalties especially for the families/companies who have tried their best to save energy. The question again rises - who are we paying for or carrying? The bottom line always leads to the mis-managed government held companies and municipalities and never addresses the actual problem. It is easier to adjust for more income than correct the actual issue.	Julie	employed individual
	2026-08-27 09:53:38	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is ridiculous that instead of supporting people choosing more environmentally friendly options, government is now proposing to tax them. We have already made major capital outlays to make this shift. If you are not getting enough revenue, fix yourselves, get rid of the rot, don't outsource that cost to us. What makes me even more angry is that government actually subsidized (very small amounts) for our panels, to incentivize our shift to solar. Now there has been a 180 degree shift and government now wants to penalize us. This erodes any tiny shred of remaining trust. All of this on top of a totally failing electricity provision service. Its time for government to get their greedy hands off energy provision, and open it to market competition in South Africa. Government have failed dismally over the last 30 years. It is time to let go, or the people will make you let go. We will hold you accountable.	Alanna	employed individual
	2026-08-27 09:54:12	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We tried to help Eskom so stabilize their power network by going partly solar. Why do they want to penalize us for that?	D	retired
	2026-08-27 09:55:35	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This is another way of taking MORE from those with initiative to overcome already failed electricity supply. Unethical in every way.	Rob	self-employed
	2026-08-27 09:55:52	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The decision to install solar was driven by environmental concerns, having witnessed and been shocked by the uncontrolled Eskom pollution on the Gauteng Highveld. It was an expensive choice that will take years to recover from savings in electricity. It is a small contribution to the environment that citizens should be encouraged to do, not punished for. 	2026-08-27 10:18:20	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Solar users installed solar to help relieve the pressure on the failing SOE. Because of solar installations, we have had no load shedding for a while. In the meantime, electricity users grow in numbers - receiving free electricity, connecting illegally and not paying for electricity or maintenance of availability of power. Looking at salaries, bonusses and lack of care, it is unacceptable to expect a small portion of the citizens to keep on supporting and paying for everything. It is easy to tax and demand more money if you yourself does not pay for electricity and you insist on providing for all, while only a small portion of users pay for it. Government ask people to vote for them and the freelancers all abide. Government ask people to install solar and then penalize them. Something has got to give soon. This blatant robbery has to stop. Or ESKOM WILL collapse.	Deon	retired
	2026-08-27 10:18:47	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	These Charges are purely because of the ANC's race-based incompetence and dishonesty. IT is a dishonesty-based proposal to make proactive, constructive, responsible people pay for the useless, destructive, irresponsible government.	Martin	retired
	2026-08-27 10:19:00	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Michelle	retired
	2026-08-27 10:20:37	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I strongly object to any proposal arising from the Electricity Sector Market Transformation Position Paper that places additional financial burdens on South African households, businesses and taxpayers as a means of addressing the failures of the electricity sector. South Africans have already paid an enormous price for the deterioration of Eskom through years of load shedding, repeated electricity tariff increases, taxpayer-funded bailouts and the broader economic consequences of an unreliable electricity supply. It is fundamentally unfair to expect citizens to continue carrying the financial consequences of mismanagement, state capture, corruption and governance failures for which they were not responsible. Before government imposes further costs on electricity consumers, there should be far greater emphasis on accountability, recovery and consequence management. Those responsible for corruption and the misuse of public funds must be pursued, stolen or improperly obtained funds should be recovered wherever legally possible, and government should demonstrate that every reasonable avenue has been exhausted before asking ordinary South Africans to contribute more. Households and businesses are already under significant financial pressure. Many have also spent substantial amounts on solar panels, batteries, inverters and generators simply to secure a reliable electricity supply that the state and Eskom were unable to provide. It is therefore particularly difficult to justify asking these same citizens to shoulder yet another cost associated with restructuring or repairing the electricity system. Electricity-sector reform is necessary, but reform should not become another mechanism for transferring the financial consequences of institutional failure onto the public. I urge government and the relevant authorities to reconsider any measures that unnecessarily increase the financial burden on South Africans and instead prioritise accountability, efficient expenditure, recovery of losses arising from corruption, improved governance and a sustainable electricity market that rewards efficiency rather than passing historical failures on to consumers. South Africans should not continually be expected to pay for failures they did not create while meaningful accountability for those failures remains inadequate.	Jackie	business owner
	2026-08-27 10:24:06	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We were asked to cut back / conserve electricity usage. Solar made this possible. Now they want to penalise us for conserving usage! They have to find new ways to keep their fat paycheques going.	Brenton	employed individual

	2026-08-27 10:27:24	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We have paid a huge amount of money on the recommendation of Escom and the government to install solar. This has not taken us off the grid, but just supplies electricity when the power is down and generates electricity (via solar) during daylight hours. We generate more than we use during the day and this is fed back into the grid. We are not compensated for this, however you want to charge us a fee on a monthly basis - this is not fair.	Don	retired
	2026-08-27 10:28:15	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Hazel	self-employed
	2026-08-27 10:29:48	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This is unconstitutional as it infringes on the rights of private property. Eskom and government encouraged home owners and business to invest in alternative power sources during the electricity crisis and Eskom's failure due to corruption, (which we paid for) so many people responded positively despite this, and created debt in order to provide power for their homes and businesses and alleviate the pressure on Eskom. Now after being faithfully and responsible citizens they want to punish us for the help. This is criminal. The solar equipment is not the property of the government, council, or Eskom it is paid for without their assistance. Then there was the system of selling power back to the grid to help with supply, that failed to materialize despite it being done by many. Yet still we get repaid by this criminal reaction. Charge for use or remove your point of supply is the only option. But to expect household who use minimum power and get penalized for this is ludicrous and criminal., especially while big business gets to pay less. So now we are expected to subsidize once more. This is insane.	William	
	2026-08-27 10:29:56	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Pierre	retired
	2026-08-27 10:30:18	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I agree that Eskom or the municipality should be able to charge a reasonable fixed network fee for keeping a property connected to the grid and providing the option to use Eskom electricity when it is needed. I understand that maintaining the network costs money, even if I do not use a large amount of electricity from it. Where I disagree is with the idea of penalising or taxing people because they have invested their own money in solar power and batteries and therefore use less Eskom electricity. For years, we have been told that South Africa's electricity system was under enormous pressure and that we needed to reduce our electricity consumption. Load shedding was introduced because, according to Eskom, there was not enough generation capacity to meet demand. Many South Africans then spent their own money on solar systems and batteries precisely so that they could become less dependent on the grid and reduce the pressure on Eskom. Now it feels like a contradiction. When we were using too much electricity, we were told to use less. We responded by investing our own money to use less Eskom electricity, and now we are being told that we may have to pay more because we use too little. I have no problem paying a fair fee for being connected to the grid and having Eskom's infrastructure available when I need it. What I do have a problem with is being financially penalised because I invested my own money to generate my own electricity. If the government believes that I should be taxed or charged specifically because I have solar power, then the same principle should work both ways. Eskom should compensate me for all the hours during which it failed to provide the electricity service that I was paying for — including all the hours of load shedding that I had to endure. You cannot expect people to spend their own money finding solutions when the state's infrastructure cannot reliably meet demand, and then later financially penalise those same people because their solution worked. I support a fair network charge. I do not support a penalty or tax on people simply because they have invested in becoming less dependent on the grid. The principle should be simple: pay for the network and the service that is made available to you — but do not penalise people because they need less of that service.	Naas	
	2026-08-27 10:30:58	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Because Eskom has failed in its duty to provide reliable and continuous electricity supply, many have been forced to spend capital to install back up solar systems at an enormous additional cost to the Eskom costs which have risen far above inflation due to incompetence, corruption and mismanagement. Eskom is in no position to dictate penalties and terms to compensate for its gross mismanagement of the utility. The management of Eskom and the government should be held accountable for the degradation of the utility and its failure to proved a basic service which has been fully funded for by rate & tax payers both in the form of utility bills, connection fees and high taxes.	Nigel	self-employed

	2026-08-27 10:48:02	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This legislation is totally outrageous and amounts to stealing from the consumer/ratepayer. This is merely to keep energy workers and management in their positions at outrageous salaries as we have learnt. In my view this is a criminal. The Department of Electricity and Energy needs to learn that the world has changed and left them behind. Energy supply in South Africa has become much more competitive. Ratepayers should not be punished for spending their own money supplying their own electricity. One of the reasons that there is no more load shedding is exactly because so many consumers/ratepayers and businesses have invested considerable money into providing their own electricity. ESKOM could not be trusted anymore and has become far too expensive. This is primarily to grossly inflated salaries, a grossly inflated workforce, incompetence and corruption.	Ean	retired

	2026-08-27 10:49:15	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	While the move to a more open and free market model is positive, the proposed restriction and punishment of private/captive ratepayers through the addition of higher fixed charges is unacceptable. Ratepayers used their own money to alleviate the issues of the state, and now the incompetent state seeks compensation for their own failings. Fixed charges cannot be added/ increased for only a select group, just like additional charges for water cannot be added to those who also have boreholes. If the proposal to add higher fixed charges for solar users is passed; there will be a huge shift and complete disconnection from the grid our of spite and higher ROI This will undoubtably lead to even further issues on the state side. Do not shoot yourself in the foot because of greed and incompetence.	Michael	employed individual
	2026-08-27 10:52:24	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I do not understand why those who have solar should be penalised. When the country was in trouble with loadshedding, the government incentivised individuals to install rooftop solar to reduce the load requirements on the grid. People did their part and will now be punished for doing so. In addition, the infrastructure required to deliver municipal electricity to houses was installed decades ago and has already been paid for by taxpayers and ratepayers. Why should solar users now have to pay again?	Keith	employed individual
	2026-08-27 10:53:37	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	How dare the municipality try and charge me for the sun! Go take a long walk off a short plank! Im absolutely outraged! I have worked my butt off to keep my small business afloat and continue to employ my small team of staff through all this ineptitude of our government with our electricity - and now you want to penalise me for it! Thats a HARD NO from me! I will not pay one cent for using the sun to keep the employment i created with ZERO help from any government structure, and put food on vulnerable peoples tables! NO NO NO NO NO NO NO!!!!!!!!!!!!!!!!!!!!!!	Heather	business owner
	2026-08-27 10:54:23	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Private solar installations relieved pressure on the grid, and are still doing so every day. Without the solar installations, I don't think Eskom will look so good. Now they want to penalise us for their corruption. It's not fair and will somehow backfire when implemented.	Jokkie	retired
	2026-08-27 10:54:59	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Affordable electricity and reliable supply are paramount to a growing economy. Residents should not be charged a fee for implementing solar at their own cost.	Laurence	unemployed individual
	2026-08-27 10:58:05	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	In order for businesses to survive in the intense load shedding days, businesses had to invest in solar to survive. Because of Eskom's mismanagement that load shedding occurred. Had Eskom been well managed, load shedding would not have occurred and the take up of solar would have been much less and so Eskom would not have problem now.	Geoff	business owner

	2026-08-27 11:21:19	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	ESKOM forced us to make big investments in sourcing power by way of solar input because they were unable to do so due to incompetence and corruption. Now they want to source the lost revenue as a result of this incompetence and corruption by way of unjustifiable connection taxes. I am currently 95% off grid so I will just invest a bit more for the 5% and terminate grid connection.	Bruce	retired
	2026-08-27 11:22:38	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I find this ridiculous; the reason people went out and go solar was because Eskom could not keep a continuous flow of electricity in this country. Other countries do not even know what load shedding is, and they all seem to have enough electricity. Solar and inverters are not cheap and everyone who has them paid for them out their own pockets. They run on the sun and batteries. Does the government own the sun too???? Furthermore, I am on prepaid electricity. Yet every time I put the same amount of money value to buy electricity the units are less every time and seem to be running out a lot faster than previously. This government is trying to bleed us South Africans dry. They try to get money from us on everything even when our Solar power has nothing to do with them. I have no faith at all in this government. We need a government that cares and stands up for its citizens.	Mechele	employed individual
	2026-08-27 11:24:06	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The citizens of this country are already so laden with trying to keep all the government staff rich and happy. ENOUGH! If we can afford solar and not be bothered with Eskom's failings then we should be allowed. Governments are not God, they can not both do nothing to help the country and also insist that we must keep funding incompetence, corruption, cronyism and whatever else they decide to keep themselves able to have all the perks and none of the responsibilities	Lesley	retired
	2026-08-27 11:25:12	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Unfortunately this is aimed at the "always paying" part of SA. Eskom drained the system by supplying the non payers and still do. They even encouraged people to go solar in order to relief pressure on them . Now they want to penalise those who assisted them. It is common sense that the people whom are paying are the one who can afford to go solar. Was this your plan or pure stupidity to ask people to go solar. It is common to find many SA citizens whom are earning huge salaries and refusing to pay municipal fees, school fees etcetera. Their motivation: The anc promised them it will be FREE. I have seen many of these accounts and it is shocking. My solar is mine, not yours to misuse!	Pieter	retired

	2026-08-27 11:29:18	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Firstly I am disappointed that government want to control what we install in our household. We pay electricity as we consume. Majority of us at this point want full off grid. Not even wanting to depend on them. We still pay rates monthly that should allow them to services any street lights and maintainanace of some sorts they referring to. Secondly how do you regulate solar and not other energy source such as as gas. It makes no sense. A government official has no right to assess what we do in our household. As long as as neighbour's are safe and no illegal activities. We are in this situation of because of inefficiencies of public service. Now we are being charged for looking at alternatives. They should focus on stabilizing electricity supply and allow those installing solar ,atleast they will reduce dependency on the grid	Peter	employed individual

	2026-08-27 12:22:07	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	How can the Government propose to penalize the public for finding a solution to non-delivery of service by Eskom? They are incapable of managing our electricity supply and then want to penalize people for finding a solution to the problem. This is insane!	Dirk	
	2026-08-27 12:25:30	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	My husband and I had to take out a loan after experiencing a cycle of power outages that would last for days. We'd have electricity for 2-3 days before the cycle began again, this was after we had our daughter. The JHB municipal has failed to deliver on basic services and now we must be penalised for government inefficiency and incompetence. We shouldn't be paying anything for stepping up and doing what the government has failed to do. Rolling blackouts isn't normal. Instead of making us foot the bill for your inadequacy how about the government curb wasteful expenditure and corruption that's crippled our infrastructure.	Gomotsegang	employed individual
	2026-08-27 12:25:51	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It will further increase the cost of living which is allready very high and make things even more expensive and this going to force people out of the country	natascha	employed individual
	2026-08-27 12:25:56	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Consumers installed solar panels in large numbers due to Eskom's incompetence. Had Eskom been efficient and corruption free, there would have been no need for the consumer to step in. By stepping in, the South African consumer helped save the country's economy that was on the brink of total collapse due to Eskom's failure to deliver. It is very unfair that the same consumer who helped save this economy will now be punished, conveniently for Eskom as they seem to be back on their feet. This just seems like round 2 of suffering the consequences of Eskmo's incompetence! And again, the incompetence is on the strategic management team	Njabulo	employed individual
	2026-08-27 12:30:23	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Chris	self-employed
	2026-08-27 12:31:29	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The proposal makes provision for the penalization of electricity users who assisted the government by obtaining at huge costs to themselves and then be saddled with fixed monthly costs that was not part of citizen's agreement previously and basically end up taxing electricity users in addition to their own capital expenses to install solar. This seems unethical and immoral and opportunistic to get more money from consumers by adding nothing from consumers by way of electricity provision. I object to the proposal that would install fixed electricity charges to consumers, retaxing the consumer for what has already been paid by taxes previously. I do support Escom unbundling and market reform, if done transparently and honestly, curbing corruption and overcharging by the municipalities.	Maarten	business owner

	2026-08-27 12:34:53	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Cape Town tried to levy a fixed charge for water and sewerage. Whilst I support the reasons for so doing the implementation was bad. It was based on the value of property - below R2m nil which is ok as this was the objective ; R2m to R5m increasing rate which is fine , the wealthier the mare you pay. Above R10m appaling. At R10m the rate was .004% (two zeros) and at R100m .0006% (3 zeros) whereas R5m was .007% almost double the rate for a R10m property. THE MIDDLE CLASSES WERE HAMMERED AT THE EXPENSE OF THE WEALTHY!! In addition the fixed charge should be based on the capacity of the electricity provided. For example I live in a unit comprising 3 2-bed cottages. We have one electricity cable providing all 3 cottages and we all have single phase electricity. The three of us combined should not pay more that, say a 4-bed house which uses two or three phase electricity. FIXED CHARGE BASED ON CAPACITY WOULD BE FAIR. Large complexes would pay their fair share!	Kevin	retired
	2026-08-27 12:35:00	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	escom cannot pass its problems onto consumers who have already gone to high expense to combat its inability to provide	Nigel	retired

	2026-08-27 12:50:18	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Why should we pay for corruption? The reason we needed our own plan was because of theft/corruption/incompetence find a word that fits. So now we must totally disconnect from the grid?	a	
	2026-08-27 12:52:44	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We have, as end consumers, been forced to invest vast sums of hard earned money to make ourselves less dependent on a failing state that increases electricity fees annually far above inflation and has effectively become unaffordable to most households. To now suggest that we should be held accountable and pay fixed fee's monthly due to governments' failing is once again making tax paying South Africans responsible for the governments inability to manage costs and SOE's properly, and cost effectively.	Willem	employed individual
	2026-08-27 12:57:04	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Being penalized to keep the economy going if you do not realize it conditions at your home affects your contribution and efficiency to the economy.	Sam	self-employed
	2026-08-27 12:59:57	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	As one of the "early adopters" of solar power as of 2023, I paid for my humble, but self-sufficient Solar with Battery back-up out of my own pocket. This was before the laughable "tax break" incentive, and well before the solar market crashed. There is no question that the private sector, especially residential rooftop solar stabilized the grid and saved the country and Eskom from the death-spiral it was in. Today solar power accounts for more than 9GW. That's more than Medupi and Kusile power plants combined. Eskom has lost a great deal of market-share, and through ongoing internal and municipal corruption and mismanagement is still hemorrhaging money. Predicably, Eskom now wants the same residents that paid large amounts out of their own pockets for a stable electricity supply, to pay MORE simply to be connected to their grid. Instead of offering a better or new service, they simply want to keep milking the middle class cows dry. Well, no more. I'd sooner go completely off-grid than pay a single cent to this parastatal that has failed us time and time again, and demands more money without fixing the internal issues that persist. Take this for instance. There may not have been loadshedding for a while, but in the 25/26 FY, Eskom spent 6 BILLION rand on diesel. This year it's down to 992 Million. Why are they spending this much when they claim that their availability rates are "the best it's been". This in the middle of a diesel crisis, where it's due to go up by another R3 in September to an all time-high. If Eskom wasn't guzzling all the fuel, there would be more available for the rest of us at a lower rate. Basic supply and demand economics. In short, once again, should these excessive rates be introduced (much like CoCT's new water "connection fee") I'll instruct them to cut the connection and go completely off-grid.	Ben	employed individual
	2026-08-27 13:02:32	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Taxing us for our solar panels?! Outrageous. This is not free riding: the purchase, maintenance, repairs and replacement involved in a solar system are expensive in terms of money and effort.	Diana	self-employed
	2026-08-27 13:05:38	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We vote for a group of people to form a government and to look after state issues and to protect us, not to take advantage of their position and to make us suffer for their incompetence. None of us were interested in becoming involved with electrical issues until the government, despite enormous amounts of capital, was no longer able to supply a reliable service. We, the people who spent our hard-earned money to attempt to alleviate the problem, should definitely now no be punished for same. The old trick of blaming the very person who tried to assist seems to be the order of the day. Well, the adage of what you soe is what you will reap comes to mind, which is what we will remind them when the time comes for them to lose the national elections.	Glen	business owner
	2026-08-27 13:06:11	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Residential consumers have no choice but to supplement with solar particularly to prevent food spoilage and keep home offices running where no other employment is available and downtime is loss of income. It is unfair to penalise people for making solar a backup plan just as much as people use gas in their houses to cook and heat water as well - they are not penalised. Independent contract people do not have fixed salaries so they cannot afford fixed tariffs.	Teija	self-employed
	2026-08-27 13:06:38	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I can't and shouldn't be punished for wanting self reliance and stability in my property. Eskom must fix its own issues as a company.	Fisokwakhe

	2026-08-27 13:18:11	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The "Fixed charge" on the utility bill from the municipality is a fixed amount every month irrespective of the usage. This amount is allegedly approved by NERSA after submission of detail by the various municipalities. There is no reason to penalize users who consume less electricity. Some users were incentivised by ESKOM to install solar panels. They cannot make an about turn on this aspect now.	Paul	retired
	2026-08-27 13:20:41	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I am a 78 year old pensioner now living in a unit in an old age establishment. I use gas for heating water, showering and cooking. I use electricity for telephone, lights and TV, and remember the days when the electricity account from the municipality was universally referred to as the Lights Account. We are NOT on the residential tariff because there are as yet undeveloped stands to be built upon by contractors using electricity from the complex. According to municipal laws, for safety reasons, you are only allowed a single supply to a property designated by a survey diagram. So our tariff is a bulk supply, or Business and General. I pay for the energy I use, and if my memory is correct, when my house was built years ago we had to pay a connection fee to reflect the capital and maintenance costs for the extension of the network to supply my new connection, for the life of that connection. This removal of maintenance costs out of the energy costs simplified the revision of the energy tariffs when updating to reflect new coal prices. This worked extremely well, and is the basis of residential tariffs to this day. However, since 1994 things got crazy when there was free electricity for all, except the dutiful citizens. Therefore the proposed introduction of a fixed charge into tariffs is an evil proposition reflecting the municipality/Eskom's inability to charge the large industrial consumers a tariff that truly reflects their usage. Years ago, Eskom charged the smelters at Richards Bay a special, secret tariff that reduced the cost of electricity the greater the use of electricity, for an indefinite time period. It is not known if there was even consideration in the tariff to compensate for rising costs of production due to inflation. What a disaster, as it encouraged the company to smelt ever more at ever decreasing costs, instead of them being on a tariff that reflected the true cost of the electricity they used. And you cannot interrupt the supply of electricity to and aluminium smelter without destroying the entire plant ! After all the "challenges " corruption and looting from Eskom, you cannot now come and load the sins of the fathers onto us citizens, without even more people stealing electricity or revolting. If you want to balance the books, you must raise the charges to the big industrialists and State Enterprises, who no doubt, have lobbied you into this situation over 30 years.	allan	retired
	2026-08-27 13:22:47	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	A “Sun Tax” on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation.	KIRAN ITCHARAM	business owner
	2026-08-27 13:23:29	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	Small businesses are already struggling in this difficult economy, many of us have taken large loans to install solar so that our businesses can continue to operate with the load shedding. We cannot afford to now be double taxed with high fixed connection fees and or solar disincentives, we are still paying off big loans. Our reduction of load on the eskom grid has helped to stabilise the grid situation, we should be helped and thanked, not punished.	Noel	business owner
	2026-08-27 13:25:36	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Again the actual rate payer is punished. We got solar because ESKOM was unreliable. In the meantime you allow municipalities and individuals to steal through illegal connections and non-payment. This is just another way to wring a bit more out of the middleclass paying customer, a base that is rapidly shrinking due to government greediness, corruption and complete incompetence.	Hendrik

	2026-08-27 13:50:51	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The fix charge must be the same for all properties and standarised across municipality. Some municipality are charges fix charges for "wires" double than others - no any other solar penalties.	George	self-employed
	2026-08-27 13:52:02	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	If the government wants us to pay a penalty to be connected to eskom for having Solar. Than I'll rather cutt of eskom completely... they can't charge us for using the sun... that's like being taxed for the oxygen we breath.	Marius	employed individual
	2026-08-27 13:52:20	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	It cost me R300,000 to protect my small but successful business form collapse when Eskom failed the country by crippling it with its "solution" of stranglehold load shedding. It is time that Eskom learns how to properly and professionally run a service business - and it is not by punishing private initiative with Big Brother tariffs on solar panels. Rather be apt at getting non-payers and people stealing electricity to pay up!	Denise	business owner
	2026-08-27 13:52:49	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Patrick	retired
	2026-08-27 13:54:32	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This will effectively force the private sector to pay even more for the mismanagement, theft. corruption and bankruptacy of the past decades in the government owned and operated electricity generation, transmission and supply bodies. The sooner the utilities are privatized and competition is created in the industry, the better. Those of us who managed to afford to install our own generation (rooftop PV) mostly did so under duress to be able to continue productively contributing to the economy, whether as a business or working from home when we were forced out of our workplaces during the pandemic. Even so, ESKOM could not meet the demand and continued loadshedding. The private investments in alternative energy enabled ESKOM and supply authorities to supply electricity to other consumers (whether that electricity was paid for at realistic tariffs, if at all, or not). The likelihood of us ever recouping the full cost of our own rooftop PV system is low, considering the finite lifetime of the batteries and solar panels. The South African electricity tariffs penalize the smaller consumers: (and ESKOM's tariffs have become particularly complex), with higher tariffs and charges being applied to what are perceived to be a wealthier and captive class of residential and small/medium business consumers. This paper presents a blatant attempt to extract more revenue from these same consumers without offering any further benefit or advantage.	Dennis	employed individual
	2026-08-27 13:56:08	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We already pay a fixed rate for electricity if you have a prepaid meter. People have spent their hard-earned cash on solar to help themselves which has assisted Eskom to avoid load shedding. If management of Eskom had management and governed the SOE efficiently, there would have been no or very little corruption, load shedding would have been avoided and also us as the public would not have resorted to installation of solar power. Why should big corporation pay less for electricity per unit and us as the public have to pay a higher rate. This is totally unfair as you are taxing the people to death, making us poorer each year. Eskom's concern is to produce and supply electricity. Where, how and when a customer ultimately uses that electricity is the customer's concern, not the supplier's. The customer is entitled to determine its own energy requirements and how best to meet those requirements. If Eskom is unable to provide the quantity, reliability or quality of electricity required by a customer, and that customer therefore chooses to invest its own capital in alternative energy solutions, the consequences of that decision should not be regarded as Eskom's business or concern. The customer has invested its own money, assumed the associated risks and developed an alternative means of meeting its energy requirements. If this results in the customer purchasing less electricity from Eskom, any resulting reduction in Eskom's revenue is a consequence of the customer's legitimate decision to secure an alternative supply—not a loss that the customer should be responsible for compensating Eskom. In a free market, a supplier does not acquire an entitlement to a customer's future expenditure merely because that customer previously purchased its product. If the supplier cannot or does not provide what the customer requires, the customer must be free to seek alternatives, particularly where those alternatives are funded entirely by the customer. Eskom's inability to retain that customer's business is therefore a commercial consequence of the market and of its ability to meet the customer's requirements. It should not become the customer's responsibility simply because the customer has invested its own capital to overcome a failure or limitation in the existing supply.	Peter	retired

	2026-08-27 14:20:54	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This would be tragic funny if not cruel. We already paid for the establishment of Eskom and all the power stations etc that provide electricity. Now we should strictly be charged for what we consume. Anything above that would be plain daylight robbery and theft. And if recourse to the ConCort doesnt succeed we will organise protests and civil disobedience. The criminals in government must be stopped. Better still, ousted and dressed in orange .	Doreen	retired
	2026-08-27 14:22:14	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This is a ploy to fleece customers that had no choice but to separate from state owned power, now they want to penalize us for poor management of eskom. Pay for what is used no fix charge should ever be applied.	Dylan	
	2026-08-27 14:23:45	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I went off grid 11 years ago because Eskom was charging about R1400 in fixed charges to agricultural holdings. Today the fixed charges run about R5000. Some municipalities are now charging R1700. For those with Solar power these fixed charges are a major incentive to go completely off grid. What my solar cost was about 5 years worth of Eskom power - what a major return on investment. At todays solar prices and current electricity cost it is well worth re-directing what you pay for electricity to a loan to install solar. What are consumers paying for in any case? We are paying millions and millions of Rand for diesel which is never delivered, repairs that are substandard resulting in blown up substations, and we are paying the salaries of those who are enabling this corruption.	Karen	retired

	2026-08-27 14:28:54	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Why should we the tax payers who spent our money to relieve the stress on the sub par, unmaintained electrical infrastructure be punished for the government's inability to do their jobs properly? First we are told we use too much and loadshedding is there to relive the stress on the system, then we install solar that the government had no issue taxing us on and now you want us to pay more because we did. Useless.	Ryno	employed individual
	2026-08-27 14:34:52	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	**NO — I strongly object to any electricity reform that places an unfair and unavoidable financial burden on ordinary households.** South Africans who have invested their own money in rooftop solar to reduce their dependence on Eskom and municipal electricity should not be punished with excessive fixed grid charges simply for remaining connected to the network. While greater competition and private investment in electricity generation may be necessary, reform must not create a system where wealthy large users can negotiate cheaper electricity directly while ordinary households and small businesses are left as captive customers carrying an increasing share of network and municipal costs. The government must protect consumers, place strict limits on fixed grid charges, ensure fair treatment of solar users, prevent market manipulation, and guarantee transparent, affordable electricity pricing. **Electricity reform should reduce the cost of living — not become another mechanism for extracting more money from already financially pressured South Africans. I therefore reject this proposal in its current form and call for substantial amendments that put consumers, affordability and fairness first.**	Jan Lorens	retired
	2026-08-27 14:35:13	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Just more money for the ANC to steal!! 	2026-08-27 15:34:58	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Households and businesses who invested in solar actually are the ones who saved the country from much longer load shedding, not Eskom so called "turn around" If I am penalized for this then off grid will be my path.	Peter	retired
	2026-08-27 15:35:42	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		William	retired
	2026-08-27 15:35:55	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	To "tax" private initiative to install solar power is counterproductive. Government should rather encourage it. Solar energy is much cleaner and cheaper in the long run.	Hans	retired
	2026-08-27 15:37:08	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	We helped Eskom out of the mess they created and now they want to penalize the people who invested in solar.	Koos	retired
	2026-08-27 15:38:02	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Our Mossel Bay Municipality already added a electricity tarrif because of additional switching charges when loadshedding started to cover for the additional cost for maintenance and labour due to Eskom non delivery of power. We helped Eskom to install solar system, now Eskom try to hit the public again with extra taxes. We will take Eskom to Court	Andre	retired
	2026-08-27 15:40:50	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The reason I am moving to solar in the first place is because our electricity is far too expensive. If the Grid supplied electricity was cheaper it would not have become a viable option to change to rooftop solar. Eskom is not competitve and has not kept up with changes and infrastructure. Why should I be paying the price for incompetance. Our minister cannot justify his proposals for fixed cost maintanance as he is.	Ilze	
	2026-08-27 15:48:53	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Tania	unemployed individual

	2026-08-27 15:49:22	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	THe proposal to remove consumption as the basis for electricity supply and standing charge is grossly unfair and ridiculous. Private citizens were obliged to invest substantial sums in installing their own solar panels, batteries and inverters because of Eskom's inability to guarantee consistent domestic supply largely because of internal well known corrupt practices. To now victimise consumers with a policy targeting these private solar investors is cynical and insidious and completely ignoring the basic economic model of pricing based on supply and demand. It is only fair that those consuming the most electricity in their homes pay a higher burden than those who consume very little - if anything at all. This country has enough freeloaders who never pay for their electricity through illegal collection. A reasonable standing charge for those with their own solar generation recognises their sacrifice and considerable investment in reducing demand on the generating system and sincere effort to lower their energy footprint. I strongly object as a homeowner, ratepayer and one who has invested a great deal in solar infrastructure in my home. Eskom needs to think again and the energy regulator needs to protect private customers from unfair attempts to exploit responsible citizens committed to cleaner and cheaper energy in their homes.	Richard	retired
	2026-08-27 15:49:44	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This idea is an admission that Eskom is badly managed. That electricity tariffs have increased more than 1100% in 10 years is proof enough. Now they come with a poor excuse that we, the household must pay for the transmission which is already largely installed and already paid for. What it says is that i must switch off my municipal/eskom connection, increase the solar and install a wind generator, and add a further battery? It will pay for itself in 3 years. We already have to pay the municipality a fixed charge for the distribution which is already prohibitive, so why must we pay more.??	patrick	retired
	2026-08-27 15:50:52	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Every positive initiative is interfered with by this retrogressive government. Have done nothing positive	Vijay	retired
	2026-08-27 15:51:59	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I do not consent. When Zuma announced that the shortfall of eskom will be taken from the consumers, that made me decide to get solar, because it is wrong to take money from consumers to substitute stolen money. Now you want to do it again. No, no, no!	Bernd	employed individual

	2026-08-27 15:52:15	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is totally stupid to have fixed charges because of network expenses. These charges should be included in the price per unit charged to the consumer. It does not make sense that everyone pays the same, but some uses a lot more than others. Everyone should contribute to the extend that they use the network. The more you use, the more you need to contribute, or else it will be like charging people toll road fees, irrespective of the fact whether they have a car or not. The same should apply to the electrical infrastructure costs. Everyone that use the network should pay for what they use, and not just pay because it is there. It would not be fair to someone using only 100 kwh per month to pay the same as someone using 1000 kwh per month for the network costs. Include the network costs into the price per kwh and charge a price per khw as needed.	Gerrie	self-employed
	2026-08-27 15:54:34	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The Minister of Electricity begged home-owners to please install solar systems to alleviate the pressure on the electrical grid. This was duly done and now they are wanting to charge us for the work the sun does.	Wendy	self-employed

	2026-08-27 17:26:22	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Solar power was a neccessity as my husband works from home and could not be without power during loadshedding. We had to take out an additional loan to pay for the solar system that we are still paying for. We don't use ESKOM power, but do like the option of them being a backup system in long rainy seasons. I'd rather go completely off grid than be forced to lay for something that we don't use, the money gets stollen in any case.	Nicolene	employed individual
	2026-08-27 17:28:46	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Notwithstanding years of mismanagement and corruption and continuing to pay the monthly service and administration fee and VAT the installation of generators and solar, at own expense, was necessary. Now to implement a direct connection/solar charge to supplement new structures is unacceptable. It becomes an open fee hiking initiative, as undoubtedly there will be further uncontrollable inefficiencies and costs that the consumer will be forced to cover.	John	
	2026-08-27 17:28:51	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Having been encouraged with tax breaks to install Solar to help stop grid collapse, there is now proposed penalties associated with this. In addition to this, the carbon footprint of each household or business who has installed Solar has been reduced. Penalising people for doing the right thing is preposterous.	Tracy	business owner
	2026-08-27 17:32:38	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Annegre	retired
	2026-08-27 17:48:55	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I find it totally amazing that when they couldn't supply electricity. Solar was being pushed and the result is load shedding disappeared, and now they want nail the people that made it possiable. Reduce the staff as it is common knowledge they are over paid and there are far to many. Yet on the other hand some business get huge reduction in price unit.	Howard	retired
	2026-08-27 17:49:36	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		mike	retired
	2026-08-27 17:50:54	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We already pay the municipality for connection to the grid regardless of how much or how little we use. Now, those who used their initiative during the hard years of load shedding, not to mention a sizeable portion of their income / savings, to install solar / batteries / generator will now have to pay extra for the privilege of having spent that hard earned money? The government, NERSA, and ESKOM must urgently consider the following before implementing any sort of energy overhaul: 1. Do not penalise those private citizens who helped you out when you couldn't even provide basic electrical services. Doing so will only encourage more people to disconnect completely from the national grid, regardless of the discomfort. Are you trying to make us choose between putting food on the table and keeping the lights on at night? 2. Allow those producing an excess of solar energy during the day to feed that back into the grid, such as happens in Cape Town. This will help lower ESKOM's operational costs and help households pay their rap[idly spiralling monthly municipal bills. And you can sell the excess electricity to our power strapped neighbours again. 3. Set up a system to ensure that residential electricity consumers do not fall victim to predatory municipal pricing structures because they, unlike businesses, cannot get their electricity from anywhere else at a better price. Remember dear government, you only get to cut open the goose that lays the golden eggs once.	Richard	retired
	2026-08-27 17:58:03	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	When Escom experienced trouble delivering electricity, they encouraged people to go for alternatives to lessen the demand on escom. Now that there is a decreasing demand they do a turn- around. If they want to go ahead with this, more people will go for the option to be totally independant from Escom. The result is fewer ratepayers left to cover costs. The proposed 300kw free electricity will become a huge stone in their financial shoe.	HANS	retired
	2026-08-27 17:58:13	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Let the government pay us all back for the money we have spent on solar. We had to go solar because this government failed to keep the lights on. And this is purely due to their theft, corruption and total inability to build working power stations & maintain existing power stations. How much money has gone down the drain over the last few years due to bad management, bad maintenance and failure to expand our electrical system correctly?? The mind boggles at the arrogance and cheek of thinking they can tax those of us who have had the foresight to provide our own power. And all because Eskom is losing money due to a lot of the paying customers moving to alternative means of power.	JANET	employed individual
	2026-08-27 18:00:43	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	How can they tax a person who out of his own pocket install solar. The government is pathetic with service delivery. The government do not own the sun. They don't deliver a service. Taxation in SA is, according to me, is a fraud	Willem	retired

Joy	unemployed individual
	2026-08-27 18:32:57	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The municipality gives us high electrisity rates and loadshedding and when we decide to take matters in to our own hands they decide we should now too pay for just being on the grid?????They just keep taking more money and using 20% of the tax for infrastructure and other things and decide it's enough and take the rest home!!! Absolutely UNACCEPTABLE!!!!	Barto	
	2026-08-27 18:33:23	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I think this is broad daylight robbery. The Goverment should encourage its citizen's to to go solar, and this tax is just another way for them to rob and steal us . Work with the people not against them	Erica	self-employed
	2026-08-27 18:39:10	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	At first the Government incentivizes you to install Solar power and now they want to screw you for doing just that. This is total unacceptable and Government must know their place on earth and not playing GOD.	Joao	business owner
	2026-08-27 18:43:07	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	In this time of climate crisis, the last thing any government should be doing is punishing people who are going green with self sufficient energy production. Whether that is wind turbines or solar panels. If anything, the government should be subsidizing the installation of such energy production devices, not charging the customer for having done so. Relieving the commitment of Eskom to provide energy should be celebrated and rewarded, not penalised and charged for.	Jane	retired
	2026-08-27 18:48:28	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I do not think it is fair to impose a flat availability taxes on roof top solar owners. The reason owners find themselves in that position is to solve the energy crisis that was created not by them but by the system.There must be some form of credit given to them for daytime energy injection offsetting fixed network costs.	Deborah	
	2026-08-27 18:48:55	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Citizens have spent their own hard earned money, in order to make existing in this country a bit more easier., by installing personal solar installations at the residences. Now this inefficient government and Eskom want to penalize us for that. They should be thanking us (and paying us) as we are freeing up available power from the grid that can be used to ease the burden elsewhere. Same applies to municipalities. We are freeing up power, that they can sell off elsewhere, and now they want to tax/charge/penalize us for making it easier for them. They can go to -------you know where~!	Selwyn	
	2026-08-27 18:51:35	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	My home has a solar power installation, which was an expensive addition to my home. Like those of most other people, the installation was forced due to the euphemistically called 'load shedding debacle. I had it installed to ensure power to my home, not to save money. By this, I mean that the cost of the installation will possibly never be amortised because the actual electricity usage portion of my municipal electricity bill is dwarfed by those of all the additional charges. It means that my 'before-and-after' electricity bill has not significantly changed. It would be nice to go completely off grid, but Eskom has made sure that the cost of doing so too prohibitive.	Phil	retired

	2026-08-27 18:51:52	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This is totally ridiculous. We have already spent money to save ourselves the extravagant electricity charges per kwh, now they want to tax us for this. When will this stealing from hard working honest people end???	Carien	employed individual

	2026-08-27 19:04:59	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I support and agree with all those opposed in the various comments and statements. Ridiculous notion!!!! Government owned entities - do your own due diligence and do not rely on sly policy amendments to slide something through that has been beneficial to most electricity users and to Escom, no less! Thieves - all of you.	kerry-ann	employed individual
	2026-08-27 19:06:12	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	1. Window Tax. Withholding people from free energy usage. 2. By this logic, if I choose to make my own lemonade at home, I should pay excess tax for not purchasing ready-made lemonade from the shop? Same goes for any food, really. Why not allow the consumer to choose how much they want to use of your product? 3. If Eskom supplied properly and at decent rates to the actual paying community, we would not have been forced to find our own solutions. 4. Get every user of electricity to pay for their own usage. That way, you will have less "free-riders". Eskom and the department of electricity and energy does not know how to run their own company/ fulfil their responsibilities and expect others to cough up for their mistakes. 6. Government wants to "privatise" all the things they are responsible for. However, we still need to pay for a government. Why not allow privately run towns and cities to govern themselves then? Having this type of open market mindset is becoming more ridiculous and people and not realising the full extent of the outcome.	Jurie	business owner

	2026-08-27 19:26:55	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I am prepared to pay for the infrastructure upkeep as part of the cost per kilowatt. Anything you buy has fixed costs associated with it. Including deorecuation, repairs and maintennace. Those fixed costs are billed into the product and calculated as part of the product price. That's fair. Asking rate payers, the stupid sitting ducks you think we are, to pay for the use of the infrastructure unrelated to consumption is once again unfair and anti-market. If you choose not to do it that way then we will find a solution for that too.. like we had to when you couldn't provide electricity. When you destroyed with our economy because you couldn't provide electricity. We will create a private seller to sell to us per unit that we can use when we want. But we are no longer sitting ducks and we will not pay for infructure maintennce unrelated to consumption. Or i will buy a generator for thise days. We lived through load shedding so we are capable of living without electricity. Try us! I will dind a way to get off the grid compketeky as a result. Stop thinking government can just tax people out of the mess! You sell electricity. Now bill it for the consumption. Of thebproduct youvsell. I dont see MTN xharging a flat rate for their netwirk infrastructure. They charge per unit consumed. That the right way to do business. If you can't do that then hand over the grid to a private organization who can. I'm tired of incompetence, bad systems and easy scapegoats needing to foot the bill. But this does reveal the major problem with electricity. Most of the users are not even paying for their consumption, and now the oaying customers have moved to solar. So how do you extract from those people? That's what's being revealed here. And once again the sitting ducks must shut up and pay. We'll no more... I'm not paying a flat fee so that thieves can continue to steal electricity and the municipalities who can't collect burden law abiding citizens as a quick fix	Lenise	unemployed individual
	2026-08-27 19:28:33	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The SA taxpayer has already bailed out Eskom to the tune of R250 000 000 000. We have already been penalised. The unintended consequence will be that they will loose even my R1500 per month as I will just add more, more panels, more batteries and another inverter and go off the gird competely. On our farm we are already paying R12000 fixed charges without a single kWh used its robbery!!	Ilze	employed individual

	2026-08-27 19:49:51	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	ESKOM is a state monopoly. This is unacceptable. Monopolies do not work. The state has no business with electricity creation in South Africa. ESKOM cannot provide enough reasonably priced electricity for everybody. But it wants FULL CONTROL nonetheless. That is why alternative sourcing of electricity is punished as a threatening competitor to an ailing state monopoly.	ANTHONY	retired
	2026-08-27 19:54:51	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	What the Policy Proposes: The policy introduces a dual market structure dividing consumers into “Eligible Customers” and “Captive Customers.” Only large commercial and industrial consumers exceeding a specified demand threshold (e.g., 1 MW) will initially have the legal right to purchase directly on the open wholesale market or contract with private traders. All residential households and smaller commercial entities will remain “captive” to incumbent municipal or Eskom distribution retail tariffs. The Underlying Risk: Allowing the largest, highest-paying electricity users to exit municipal supply creates a two-tiered energy economy. As high-volume users migrate to competitive private contracts, the fixed costs of maintaining legacy municipal networks and state-owned infrastructure will be concentrated onto captive residential households, driving up standard retail tariffs. Points to Demand in Your Public Submission: Demand a binding, published transition roadmap that progressively lowers the eligibility threshold, ensuring retail market choice is expanded to ordinary households and SMMEs rather than remaining an exclusive corporate privilege. Require NERSA to implement mandatory tariff-parity benchmarks ensuring captive customer tariffs do not exceed wholesale-plus-efficient-delivery benchmark prices. Oppose any mechanism that uses captive household tariffs to recover stranded costs or uncompetitive legacy contract premiums.	Gary	employed individual
	2026-08-27 19:59:07	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	There is no reason why Eskom should have the right to apply a fixed fee for those households that have Solar. The Solar industry has blossomed because of Eskom's incompetence!!! Now that we have other solutions to Eskom, Eskom needs to sort out a business model that works for them, as opposed to just penalising the Public!!! It's an absolute travesty that Eskom should be even allowed to impose a fixed fee on any of their customers. Fair's fair!! You pay for what you use!! There is nothing to discuss!!!!! 	2026-08-27 21:34:11	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	Why must we oay fir tgeir inefficiency and incompetece. Iinstalled solar as there are often power outages in our area. This was at a huge cost to me. If they were clever they wiuld allow us to feed back into the grid and that extra electricity could go to poor households at a cheaper price. We are relieving the pressure on power supply and now we must pay extra for helping!!!	Helen	self-employed
	2026-08-27 21:42:48	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom cannot control the free market so they are attempting to regain market share of the comsumers they already lost. If they reduce their redundant work force and lower their top management's salaries and bonusses, there would be enough funds so that they are not at a scramble after funds from the matket share try already lost	Barend	employed individual
	2026-08-27 21:43:46	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I understand the grid has to be maintained, but far too few inept and corrupt municipal cronies go to jail every year for the money they waste or steal for me to believe that any additional tax in this country will be used correctly. Once all municipalities have clean audits and do their jobs, then we can revisit extra taxes. For the time being, cut the salaries of the fat cats on tax payed salaries in half to maintain the grid.	Nicolaas	employed individual
	2026-08-27 21:50:10	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	After years of inefficient management it always comes down to the honest tax payer having to bear the brunt. Eskom failed as a company to.provide a service, consumers made alternative arrangements instead of waiting in the dark. Further, Eskom has lost contracts with broader Africa countries - Lesotho and Botswana have already struck deals on alternative power sources causing a further blow to their larger income streams. Eskom must do like every other business - innovate, diffrentiate and offer good service or run the risk of becoming redundant not box customers in	Shaahid	employed individual
	2026-08-27 21:58:48	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We already pay a surcharge to this municipality due to them implementing their own surcharge when loadshedding was prevalent and loss of sales forced them to replace lost revenue. Now more! And Eskom stuffed this up in the first place! Not going to fly with me	Henri	retired
	2026-08-27 22:09:17	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	After 2007, residents were urged for years to adopt solar to alleviate the electricity shortage, with Eskom and government offering subsidies to enourage the uptake of solar. It is absurd to now come back and penalise residents for following their urging. Moreover, the cost of running the grid/transmission system has not gone up due to the residential solar uptake, at all. If anything, the grid costs less to operate because it does not transmit these solar residential MWh. The fact that industrial solar farms have come into existence, that now require new grid capacity to get their output to market, has strictly nothing to do with residential solar. For too long that industry screamed from the rooftops (no pun intended) that they would deliver 'cheap solar electricity' but omitted the cost of the grid extensions they suddenly required, and the control systems and civil engineering structures that come with it. The cost of such grid extensions shall be entirely borne by the solar farm industry, not offloaded onto residents. Penalizing residents who on average each already invested a quarter million Rand to help Eskom cope with demand when it needed help, is absurd. It is further absurd beyond description that the government wants more money just to run the elec transmission system when in fact the government owes the SA population and industry money for having completely and utterly mismanaged Eskom, causing billions of rand damage from loadshedding alone, let alone the mismanaged nation's infrastructure (water, sewage, roads, traffic lights, security), some seventy bankrupted State Owned Enterprises, hunreds of municipalities, all entities which they inherited in good order in 1994 from the previous government. Problem is of course that the money the government owes us, is our own money. The government has no own funds, they mismanage our funds.	Geert F	retired
	2026-08-27 22:35:58	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Paul	retired
	2026-08-27 22:39:27	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Recent past indicated grid overload. Solar installation seemingly was marketed. Now that citizens have under stressful financial constraints have installed, there's new attempts to entrap us. Further, I cannot understand why we should pay "suntax" when God is the only being causing the sun to shine. Seriously is this even a point to debate?	Kenny	
	2026-08-27 22:45:06	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The government has mismanaged Eskom in particular and the electricity supply in general, so badly, that consumers were literally forced to make massive investments in alternative energy sources. These investments should be rewarded for reducing the load on the national grid such that Eskom was able to catch up on grossly mismanaged maintenance programs. Punishment should be meted out to the corrupt fraudsters and incompetent deployed cadres that caused the problem, and not to the concerned citizens that assisted in reducing the Eskom load.	Bruce	retired
	2026-08-27 23:06:36	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	After 2007 residents were urged for years, with subsidies, to adopt solar to help alleviate the electricity shortage. It is absurd to now penalise us for doing exactly that. Residential solar has not increased grid costs — if anything it has reduced them, as those MWh do not need to be transmitted. Industrial solar farms that now require expensive new grid extensions have nothing to do with residential solar. They promised 'cheap solar' but omitted the cost of grid extensions, control systems and civil works. Those costs must be borne by that industry, not residents. Homeowners on average invested R250,000+ to help Eskom when it needed help. To now penalise them is unjust and opens the door to further corruption and abuse of power. Homeowners who went solar reduced demand and helped end the loadshedding crisis caused by incompetence and corruption. It is absurd that government wants more money to run the transmission system when it owes the population billions for mismanaging Eskom and collapsing our infrastructure — water, sewage, roads, SOEs and municipalities — all inherited in good order in 1994. Government has no own funds, it mismanages our funds. I will not support or pay any additional charge for privately funded solar, whether grid-connected or not.	Ina	retired
	2026-08-27 23:21:54	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	They can't tax us for the sun. It's not theirs it was given to everyone on earth by GOD so it's not south Africa's to tax anyone on . Who do they think they are They are most certainly not GOD Why do they need more money but they keep telling to use as little as possible if I was selling I'd cut the price by 75 % then everyone could afford to buy all the electricity and they would make lots of money. Does anyone at escom or the anc know anything about marketing. Volume makes money not theft by price increase. Does anyone know anything about anything. They never stopped loadshedding The motorists and industry paid stupid prices for legally buying grossly over inflated diesel . That money allowed them to use the diesel generators, now Cyril is using that slogan for electioneering . Don't allow your vote to be bought from lies.	Johnny	retired
	2026-08-27 23:30:16	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I totally reject this proposal. Technically, households with solar and batteries reduce grid demand, peak pressure, network losses and the need for additional generation capacity. Imposing high unavoidable fixed charges weakens the incentive to invest in energy efficiency and renewable energy and effectively makes consumers pay for electricity they are no longer using. Any network charge should be transparent, proportionate and based on the actual cost of keeping that household connected—not used to recover revenue lost because people have reduced their dependence on the grid.	Brain	unemployed individual

	2026-08-27 23:40:49	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	If this government were more efficient and had properly addressed the corruption, mismanagement and looting at Eskom, instead of allowing policies and procurement practices that have placed enormous costs on the economy, ordinary South Africans would not be forced to "make a plan" just to keep the lights on. Load shedding did far more damage than simply inconveniencing households. Businesses were forced to shut down, relocate or invest heavily in alternative power solutions. Companies had to purchase generators, install solar systems, invest in batteries and absorb the cost of diesel and maintenance—all because Eskom could not reliably provide the service customers were already paying for. Eskom carried little or none of those additional costs; businesses and consumers did. Now, after citizens have invested their own money to become less dependent on an unreliable electricity supply, we are apparently expected to pay even more. Electricity prices in South Africa have increased dramatically since 1994. The average price has reportedly risen from around 10.32 cents per kWh to approximately 188.07 cents per kWh—a staggering increase of about 1,722% over three decades. And now you want to tax people for generating their own electricity? If citizens had not been pushed into installing solar because of years of mismanagement, unreliable supply and escalating electricity costs, most of us would never have had to make that investment in the first place. What is next—a tax on generators? And will Rand Water start taxing people for storing water in tanks because they have had to prepare for water shortages and interruptions? People are not installing solar, generators or water tanks because they are trying to undermine the system. They are doing it because they are trying to survive, protect their businesses and keep their households functioning. Instead of punishing citizens for becoming self-reliant, perhaps the focus should be on fixing the institutions that created the problem in the first place. South Africans have already paid—through higher tariffs, lost productivity, business closures, job losses and billions spent on backup infrastructure. Now you want more money from the very people who had to spend their own money to compensate for your failures? Pathetic, to say the least.	Steven	
	2026-08-27 23:44:27	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	People had to go solar to avoid loadshedding and the frequent power outages.. Residential solar has allowed Eskom to no longer load shed because their demand load has been permanently reduced. Go after the illegal connections to recoup funds. Not the people who have moved away from a shoddy service provider. Eskom HAD THE MONOPOLY and still couldnt get it right. Now they want to charge people for NOT USING their intermittent failed service.	S	self-employed

	2026-08-28 06:31:47	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I did my bit to help Eskom and SA by paying a lot of money to buy and install a solar system in 2022 when the loadshedding was really bad. Now you want to punish me for being a good citizen? This is once again an absolutely disgraceful proposal and needs to be shot down with the contempt it deserves by all law abiding citizens.	Mike	retired
	2026-08-28 06:32:04	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This is another assault by an incompetent government on individuals who have had no alternative but to provide for their own needs on electricity. Not difeferent from having to pay for own security and many other services that were supposedly covered by our extremely hiogh taxation rates.	C J	retired
	2026-08-28 06:32:13	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Connection to the grid was paid for when first installed in each residence. Rewiring of each residence is at homeowners own experience anyway. Grid maintenance is the municipality's responsibility and duty, and should have been being done on a continual basis. That the municipality has shirked it's duty does not entitle it to charge residents a second time.	Joy	retired
	2026-08-28 06:33:28	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	Eskom has driven ordinary South Africans to resort to alternative power sources because: a) Electricity prices keep rising unreasonably, despite the fact that many of us are struggling to make ends meet in a stagnant economy. b) Our power supply has become unreliable, with power cutting unexpectedly, sometimes even for days. No one reimburses us for food that we have to throw away, or for the work disruption that this causes for those of us who are self-employed and work from home, as I do. >>> The reason that Eskom's rates keep rising is that we are footing the bill for its corrupt and inept management (including Eskom's refusal, over the years, to maintain the grid). To add to this, the rolling power blackouts also translated into less money flowing into Eskom's coffers. This was no fault of the consumer. Eskom brought it upon themselves. >>> For those of us who have installed solar, or are on the brink of doing so, this is an additional expense that Eskom has forced us into, yet Eskom now seeks to punish us for wanting relief from their unreliable and increasingly costly service. How is this fair? >>> When Eskom first started running into trouble (because of ineptitude and corruption), we were urged to look into alternative power sources, but now, they're turning the game around, and seeking to charge us what is effectively a "sun tax". This is immoral and unethical, and it's also immoral and unethical to call us "free riders", as we will still be paying for those units of electricity that we will be consuming.	T. Matthew	self-employed

Amelia	self-employed
	2026-08-28 07:00:28	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This is rediculous, and it's time the government start owning up to all their stealing and corruption.	Mark	employed individual
	2026-08-28 07:04:36	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	I am writing to formally register my strong objection to the proposed restructuring of electricity tariffs towards mandatory fixed capacity charges for grid-connected solar and battery system owners. Unfair Financial Burden Following State Failure: As a property owner, I was forced to make substantial private capital investments in high-capacity solar equipment and batteries strictly to guarantee power continuity due to the state's persistent failure to manage load shedding. Penalizing citizens and businesses who stepped in to solve an energy crisis with private funds—by now imposing fixed connection taxes—is economically unjust and retroactively undermines private investment. Economic Disincentive and Risk of Grid Defection: The grid requires maintenance, but punishing embedded generation with heavy baseline charges alters the return on investment for small-scale generators. If grid connection charges become unreasonable, it will force property owners like myself to expand current battery and solar capacity slightly to disconnect entirely from the grid (go off-grid). If a significant number of private generation owners proceed with total grid defection, municipalities and Eskom will lose 100% of the remaining revenue from these properties, worsening the precise cross-subsidization and revenue issue this policy claims to address. Conclusion: I urge the Department of Electricity and Energy to reject mandatory fixed connection charges for properties with small-scale embedded generation (SSEG) and instead implement fair, incentive-aligned frameworks that encourage remaining connected to the grid without penalizing self-reliance.	Stefano	business owner

	2026-08-28 08:03:18	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The Government advocated and even put in place mechanisms to incetivise private roof top solar just to relieve pressure on the grid during load shedding, this was my money that I invested and now that there is more generation capacity I am being penalized by being taxed. Eskom should look to fund their shortcomings from people not paying their dues, municipalities that owe them money, theft and graft within their own structures and stop the bleeding and then assess whether it is necessary to levy additional charges. Municipalities will use this as an excuse to make up for their shortfalls irrespective of their own mistakes and misappropriation of public funds. I already pay income tax, all the bailouts the SOE get come from public funds already, this new tax effectively means that I am being taxed twice. Eskom must become more efficient by privatization and be run as a proper business rather than look for external funding. Be fair, stop penalizing rate and tax payers and look inwards to your own incompetence and fix this, you will see you don't need to levy more. You will have a surplus.	Willem	employed individual
	2026-08-28 08:05:56	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Juanita	
	2026-08-28 08:08:43	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This is totally unacceptable. We spent thousands of our hard earned money in solar, just to be able to keep the lights on and continue living a normal life, while the state was unable to to provide this basic need. Now they want to charge us for something they were unable to supply. Totally unacceptable.... In other countries, you can push your excess solar power to the grid and get a credit. Solar financial charges be municipalities or government, should not be allowed.	Phillip	unemployed individual

	2026-08-28 08:24:13	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Mismanagement and corruption at ESKOM is making ESKOM inefficient. Their incompetence lead to load shedding. The people of SA helped ESKOM by reducing usage and opting for self provide and now that same people who helped and adhered to ESKOMs cry for less usage and sparing the resources wants to punish the people of SA. Go to the townships and remove illegal connections. Collect the billions owned to ESKOM by government departments not settling their electricity bills. Restructure ESKOM to make it more efficient. In fact, privatize ESKOM!!! That will end corruption, fraud, tender fraud but to name a few.	Nico	employed individual
	2026-08-28 08:24:36	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We should be actively encouraging solar installations, not taxing them (or with a view to taxing them). Remember that, during Eskom's load-shedding debacle, we were INCENTIVISED (via SARS) to install solar? Now that solar makes a significant, and growing (and under-utilised), contribution to electricity generation, they want to tax us on what they previously incentivised. Perhaps they have a collective short memory...or just double standards. More solar reduces the need for additional generation (including the proposed, massively expensive, nuclear build at Thyspunt in the Eastern Cape). If Eskom was even remotely competent, neither of these outcomes would be necessary. Next up? How about a tax on air? (Based on both availability and consumption, of course.)	Nick	self-employed
	2026-08-28 08:24:38	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Once again they are targetting the paying citizen instead of recovering the money for electricity from the state enterprises and people stealing, they are bleeding us dry.	David	employed individual
	2026-08-28 08:25:01	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I installed basic solar because the state could not ensure that the power remained on,even with continuous price increases. I will not now pay an additional tax on that investment.	Patrick	retired

	2026-08-28 08:48:22	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	First the government asked us to help them by generating our own power and besides the sunlight is free for all now we are expected to pay for this? I do not agree that we should pay for something that is generated legally and that for which we paid out of our own pockets.	Carlos	retired
	2026-08-28 08:49:12	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Charging a higher grid connectivity amount for households using solar is extremely unfair. This is also anti-competitive and monopoly type of behavior. Eskom's failures have caused most private household solar users to move to solar. Households using solar reduces load requirements, so Eskom will not have to burn enormous amounts of money on diesel, thereby saving costs. I think households using solar should actually be incentivised rather than penalised.	UDESH	self-employed
	2026-08-28 08:49:23	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We benefit Eskom by install solar to took pressure off the grid in critical times . Still helping to prevent blackouts. No reason to take more money via penalties.	Letitia	retired

	2026-08-28 09:29:05	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I am writing to express my strongest opposition to the proposed electricity transformation paper and its associated regulatory changes. For years, Eskom has failed in its most fundamental responsibility: providing a reliable, efficient, and uninterrupted power supply to South Africa. Unannounced loadshedding, decaying infrastructure, and operational failures have repeatedly brought the national economy to its knees, destroying businesses and placing undue hardship on households across the country. In response to state failure, South African citizens and businesses acted responsibly by investing their own private capital into alternative energy solutions—such as solar and battery storage—to keep their homes functioning, protect their livelihoods, and relieve pressure on the national grid. Punishing citizens for adapting to Eskom's shortcomings through increased grid-access tariffs, punitive levies, or unfair regulations on self-generation is unacceptable. Rather than burdening the public with persistent, above-inflation tariff hikes to cover operational deficits, leadership must address the root causes of the energy crisis: operational mismanagement, systemic corruption, and financial waste. Eliminating corruption and enforcing fiscal accountability within the energy sector would yield more than enough revenue to stabilize the utility without placing further financial pressure on struggling households and businesses. I urge you to halt the implementation of this policy paper immediately, protect independent power generation, and focus on fixing the public utility rather than penalizing self-reliant citizens.	Jade	unemployed individual

	2026-08-28 09:44:10	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. I insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. I require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households. What a homeowner does "behind the meter" (on their own property between the plug points and the distribution board) is outside the statutory purview of the utility. My system is zero-export and protected by anti-islanding technology, and it imposes zero structural stress on the public grid, making additional billing levies irrational. Due to years of mismanagement and financial abuse at Eskom, the public MUST NOT be punished for this!	Heather	employed individual

	2026-08-28 10:13:38	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We are alpeady paying availability fees, so why pay more?	Berrie	retired
	2026-08-28 10:13:47	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Penalising hard working tax payers who are alreading offering up so much of their earnings to a goverment that does not use the money for its intended purposes but for their own pockets is absurd. The goverment could not support it's citizens, (by creating this electricity crisis) who are then forced to make alternative plans by installing hugely expensive solar systems now want to penalise its citizens for actually helping them by reducing the demand, shame on you!!!!!!!!!! Rather focus on cleaning up your act, and become honest God fearing leaders.	MARINA	employed individual
	2026-08-28 10:16:41	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Carel	self-employed
	2026-08-28 10:17:38	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Solar Penalties I think it's unfair to charge fixed tariffs for being innovative. and being held captive by state-owned entities who cannot produce. We had to spend money to have electricity when Eskom could not produce. No they want to charge us again because of there incompetence. Why do we have to keep paying??? It suited them fine when there was a crisis and we did not use electricity. No that the demand is lower the want to penalizes us again. You can't have it both ways ESKOM	Annetjie	unemployed individual
	2026-08-28 10:17:40	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I do not accept any monthly fixed charges to be connected to the grid. Those charges is way to much and out of proportion. For that amount of money a month for fixed charges I can expand my solar system instead of paying it to municipality and then be totally off grid. Why must I be taxed and penalised if I was not the cause of the power problems in the first place. Create incentives such as selling power to Eskom so that there is a reason for being connected to the grid. Its extortion to now try and recoop money for the loss by means of raising fixed charges to make up for the money losses. The fixed charges are more than what I pay montly for my solar system. Its absolutely rediculous. We will not pay it. Rather disconnect from municipality.	Heinrich	employed individual
	2026-08-28 10:22:46	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Renee	employed individual
	2026-08-28 10:24:44	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	There are regular electricity breakdowns in our area due to poor maintenance and outdated infrastructure. At a critical time of daily load shedding and being depended on the use of a CPAP medical device I invested in a household solar system at massive cost. The President of the country, Pres. Ramaposa, personally promoted home rooftop units to decrease the demand. This assisted Government, the economy (decreased loadshedding) of the country as well as ESKOM tremendously and Pres. Ramaposa even offered a tax rebate on solar panels. All people using rooftop solar systems are continuously decreasing the pressure on generation, supply and demand for electricity and also the pressure on infrastructure. In effect solar generation assists with the protection of the network in the long run. The use of rooftop systems is actually a public-private partnership to assist Government. All self-generating rooftop systems are contributing to the economy and a reduction in the ecological footprint (global warming) with decreased need for burning of fossil fuels. It will be extremely unfair and inhuman to penalize those that assist Government. Considering the bigger picture the installation and maintenance of such solar systems also contribute directly to the economy, job creation and the government fiscus in the form of import tax and VAT. Government should rather look at the reform of ESKOM and effective use of resources.	Johan	retired
	2026-08-28 10:25:48	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	How can government gave a tax rebate one year to encourage private installation of solar panals just to hit you with this now? If they ahve manage and prevent loadshedding we would not have been forced to get solar ay high cost. It will take 12 to 15 years to break even on your investment made for solar. I would have preferred to invest that money somewhere else , instead of installing solar at the time, but was forced into rathet getting solar because of loadshedding	Gideon	retired

	2026-08-28 12:31:59	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	I believe we should not be charged for making alternative energy plans for electricity problems caused by ESKOM's incompetence.	Curt	business owner
	2026-08-28 12:36:43	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The so called free-riding argument is not enough to affect the grid in such a capacity that it can not handle it. These are houses that existed on the grid before. And to top that off, if your aim is to install solar energy in order to negate the effects of loadshedding, most of these households are fully installed with batteries and backup reserves that do not require grid power at night. During the night as well, these are considered the lowest stress periods. If these houses are pulling from the grid at this time and it causes a problem, or an overload. Then how do you explain the grid not failing during peak generation in the day? This failure is purely coincidental, or linkd to night time vandalism and criminality. Not because a house with solar started pulling power from the grid again. If your arguent is based on statistics linked to failures and when they happened, you might want to double check where the failure happened and whether it was linked to vandals or lack of maintenance. Find the faults within Eskom and the government first before you make decisions that affect the population.	Michael	employed individual
	2026-08-28 12:40:40	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Where the electricity supply is so unreliable that customers are compelled to incur additional expenditure on generators, batteries, solar systems, fuel or other alternative energy solutions simply to maintain a basic and reasonable level of electricity supply, this places an unfair additional financial burden on the customer. These are not costs that customers would ordinarily choose to incur. They are costs that arise as a direct consequence of having to mitigate the effects of an unreliable electricity supply. I therefore believe that there should be greater accountability for these additional costs and that customers should not simply be expected to absorb the financial consequences of failures in the electricity supply system. At the very least, the cost of maintaining the electricity network and ensuring a reliable supply should be properly reflected in the service being provided, rather than effectively requiring customers to pay twice—once for the electricity service and again for their own alternative electricity solution. I would therefore like to understand what mechanism exists for customers to obtain relief, compensation, or an appropriate adjustment where they have incurred additional costs as a result of an inadequate or unreliable electricity supply.	Roz	business owner

	2026-08-28 12:53:55	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Been forced to spend huge amounts of capital to lessen the impact of the incompitent provider, we are now been penalized for easing the load on the grid. Eskom, the only company in the world that ask you to use less of their product, and then penalize you for using less of their product.	Dawid	employed individual
	2026-08-28 12:54:43	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The ANC government through its incompentence to provide me with stable, reliable power to my home, causing damages to fridges and other appliances as well as loss of frosen meat that got rotten, have forced me to spend an enormes amount of money on solar to make sure I have stable electricity at home. I will not pay for your mistakes and corruption. Make Soweto pay for their services and stop stealing from hard working South Africans. The people will vote you out as this paper is just another proposal to steal from us.	Dirk	employed individual
	2026-08-28 13:03:04	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is Ironic that the same government that destroyed /Robbed Eskom want to charge Tariffs on those that have had to spend their hard earned money to install Solar energy now want to claim taxes from those that invested in Solar ... My solar costs R6000.00 per month (Rental agreement) because Eskom is incompetent and unable give me a product ....Why the F..k would anyone want to pay for something you cannot get ?? Surely the ANC party cannot get away with that bull s,,t !!! On the other hand , if the ANC government had installed the solar at their own cost i would,ve been happy to pay them a monthly fee for the system and energy :) I say they should re direct our paid taxes to up grade Eskom , employ competent people to run it and maintain Eskom ...Then i wouldnt mind paying my fees over .... Our next problem is water , wait , its coming !!!! We haven,t had water in fairlands now for over a week !!!!! and you know what ? at the end of the month , the bill is still same !!	Antonio	retired
	2026-08-28 13:06:45	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskimo through it's ineptitude has created the present problem with electricity distribution and failed collection of payments due by users. Therefore and as usual, to continue filling the bottomless pit of ineptitude, the minister chooses to inflict a punishment on consumers who had no choice but to turn to Sun Power. If the minister had, at Eskom's cost the equipment necessary to receive the Free sun's power, it would be fair for him to require payment for that electricity. But that is not the case. Essentially, there is no reason to penalise the consumer who invested his hard earned cash ; he has ensured his supply of electricity by tapping into the sun. But the ongoing cost of equipment is a continued burden on him and not on the minister! If the minister is looking for uninvoiced earnings, I suggest that he tours the country as a whole and sees for himself that thousands of users of his product are not paying a single Rand for the electricity they consume. Start collecting from them Mr minister. Then you can stop writing off overdue accounts and get finally to the point where No payment means No electricity. You may as well start cutting off the unpaid accounts of the various municipalities. Perhaps then we can even be surprised by a reduction of unit costs. That would certainly encourage those users of sun power to yhonk about disconnecting their solar systems.	Pierre-Yves	retired

	2026-08-28 13:46:41	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It should be a "right" to choose options to save money. If I have a choice in a democracy, and I want to walk away from blatant theft and corruption, unfair legislation, I want to exercise that right without being financially penalized. Theis goverment should cut down on expenses and "govern" properly. Taxes should be based on actual, legitimate expenses and citizens should pay levies to cover costs. Every province and municipality should be a self supported "public service centre". As the new tax complying strategy gains momentum, illegal electrical connections should be addressed so that everyone pays equal.	Adam	self-employed
	2026-08-28 13:46:53	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I am writing to formally and absolutely reject the structural proposals outlined in the Electricity Sector Market Transformation Position Paper, specifically the mandate to impose unavoidable fixed monthly capacity charges on residential properties utilizing private solar generation. This policy is a transparent attempt to penalize South Africans for solving a crisis the state created, while shielding legacy monopolies from the consequences of their own collapse. Here is exactly why this framework is fundamentally flawed and must be revised: 1. For over a decade, ratepayers have suffered through load shedding, forced to use their own hard-earned capital to keep their households functioning. We stepped in to relieve pressure on a failing grid. Taxing us for this private investment under the guise of "network maintenance" is a punitive cash grab that actively discourages renewable energy adoption. 2. Middle-class households are already bleeding dry. When a family is already paying an average of R4,000 a month just for municipal water and rates before a single appliance is switched on, adding a mandatory fixed electricity tax to subsidize municipal revenue shortfalls is completely unsustainable. We refuse to be captive cash cows for broken local municipalities while massive corporations are granted wholesale market bypasses. 3. A forward-thinking government would be incentivizing micro-generation and grid feed-in to stabilize national supply, not threatening to tax self-sufficiency. If you want households to pay a premium for grid connection, you need to offer a grid that actually functions reliably and equitably, rather than simply moving the billing goalposts to protect bloated state entities. Consider this a definitive objection to any fixed capacity tariffs levied against private residential solar owners. Do not punish the very citizens who actively mitigated the energy crisis.	Jade	employed individual
	2026-08-28 13:47:20	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Households and small businesses that invested significant private capital into rooftop solar, batteries, and energy efficiency to protect themselves from load shedding will be forced to pay higher monthly baseline connection fees. This structural shift acts as a financial penalty on private decarbonisation, extending solar payback periods and increasing electricity bills for low-volume and frugal users. We privately paid for our Solar, no help or subsidy from Gov. even though the problem (loadshedding) is due to the inability from government. Demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. Insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. Require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households.	CARLA	self-employed

	2026-08-28 13:50:08	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The reason why South Africa is in this mess It's because Eskom has misused and stolen public funds employing excessive unqualified ANC and Cosatu members to gobble at the pig's trough for years. By amongst other things supporting gangster cadres manipulating BEE and stealing coal, transporters swapping coal for rocks, wilfully damaging equipment to be repaired by monkey cadres with no electrical knowledge . From 1994 they kept shutting down multiple massive power plants That were just recently maintained at the time. Instead of maintaining the architecture that was there Eskom decided to start shutting down a lot of Capacity available to them then after that they introduced load shading and continuous price increases which pushed prices up. By over several 1000 percent pushing out Africa to Become one of the most expensive electricity suppliers in the world Far above any European countries and many other countries with stronger currencies than South Africa. They forced people off the grid due to heavy load shedding and ridiculous price increases year upon year. If anything the people in charge of eskom previously and Currently and their cadre mates should all be financially audited to see how they benefited by stealing money from that foundation and any and all people found to have stolen even a R1.00 Should be forced to pay back the money and serve jail time.Any logical person can see that it doesn't take 16 years to fix up a damaged system. They created the problems that exist today.	Rod	retired
	2026-08-28 13:52:04	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This is the most ridiculous tax anyone could have thought of. 	2026-08-28 15:36:36	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	What is astounding is that the governments incompetence has forced consumers and the market to find alternatives, which are I might add, 100 percent carbon efficient ,and now they are going to be punished for resolving a crisis ,albeit on an individual basis, which was the governments mandate and responsibility. The failures of government led to the electricity crisis. The avarice of municipalities has seen a massive exploitation of ratepayers through the imposition of inflated electricity tariffs. In addition, Eskom power comes with one of the highest carbon footprints ion the world. It was therefore necessary in the light of the unstable supply, prudent from a cost perspective and in the interests of the planet to install solar. Now the government which in 15 years destroyed a low cost and reliable supply of electricity into an expensive a poorly run service seeks to penalize those its policies have already impoverished. It is not in the interests of natural justice or common sense to support this legislation. copy	Dirk C	
	2026-08-28 15:36:40	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I have installed at my cost solar on my roof and did it when our Country was experiencing load shedding. You now consider this free loading and I object most strenuously to this as you are now penalizing people who used their own funds to help solve a national crisis, apart from our actively trying to help address climate change. Now itis your plan to penalise us. Shame on you!	Andrew

	2026-08-28 17:15:19	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	**Submission on the Electricity Sector Market Transformation Position Paper (Government Gazette No. 55226, Notice 7841, 21 August 2026)** I object to the "discourage free riding" principle and to the proposed shift from volumetric tariffs to mandatory fixed capacity and network charges for grid-connected residential customers with embedded generation. **1. The free-riding characterisation is not cost-reflective.** Network cost is driven by a customer's contribution to system and network peak demand, not by annual energy throughput. A household with rooftop PV and battery storage typically reduces its evening peak draw and its coincident demand on the local network. Charging that household a flat, unavoidable fee ignores cost causation entirely and penalises the customer whose investment lowers network cost. If the Department believes otherwise, the burden of proof lies with it: no fixed-charge structure should be approved before NERSA publishes an unbundled, audited cost-of-supply study demonstrating the actual cost each customer class imposes on the wires business. **2. Municipal revenue shortfalls are not caused by rooftop solar.** They are caused by distribution and non-technical losses, non-payment, unmetered consumption, historical Eskom arrears, and decades of treating electricity surplus as general municipal revenue. Recovering that shortfall through fixed charges on the households that reduced their own demand transfers the cost of municipal financial failure onto compliant paying customers. The municipal debt and losses problem must be resolved on its own terms before the recovery base is restructured. **3. The policy is internally inconsistent.** The paper permits customers above the eligibility threshold to leave municipal supply and buy competitively, while residential households remain captive to regulated municipal tariffs. The state cannot simultaneously sanction defection by the largest, highest-margin users and label residential embedded generation as free riding. The free-riding logic is being applied selectively to the only customers who have no ability to escape it. **4. An unavoidable fixed charge is regressive.** It falls hardest, per kilowatt-hour, on low-consumption households, including indigent and prepaid customers with no solar installation at all. Any restructuring toward fixed charges must be assessed for its impact on low-use households, not only on embedded generators. **5. Private capital resolved a state supply failure.** Households and small businesses funded rooftop PV and storage because the state could not deliver reliable supply. That investment reduced unserved energy and deferred network and generation reinforcement. Those avoided costs are real and must be recognised in the tariff methodology. Grid-tied SSEG customers are also excluded from wholesale market participation under this framework, leaving them exposed to all of the cost and none of the value.	Gerhardt	
	2026-08-28 17:19:50	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I worked hard all my life and now I must pay for government and Eskoms problems. This is for me and my hard-earned money that I invested in my home. Why must I pay for government's inefficiencies. Why must I suffer just because I am a energy consciences person. Shocking what the government is doing to this country.	Jeanne	retired
	2026-08-28 17:24:50	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This is not fair to the consumer. Many people have spent a lot of money on installing solar, for environmental reasons, as well as so as not be dependant on Eskom, which for many years was so unreliable. People are being punished for being proactive, and in effect aiding the state and Eskom, by reducing their load on the grid.	Shelley	retired
	2026-08-28 17:26:29	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This proposal is nonsensical. When solar became available, Eskom actually paid a subsidy to get home users to reduce load on the grid. It's neither fair nor productive to now disincentivise and penalise users for helping minimise the risk and cost of Eskom's involvement. In addition, there is serious complication in terms of achieving a rational charge. If I use non-electric solar to heat my geyser water, Eskom will want to charge me for that, because I ought to be using their product? If not, why not? And how many panels, of what size, and what size battery, and what if the panels actually are out of action or switched off? How old, because they lose effectiveness with age? Will Eskom refund my use of the home generation system when its service is down? It does not save money to use solar power, it only increases the dependability of the supply. Solar power is environmentally friendly, Eskom's power is not, and the arrival of electric vehicles is going to pose a problem to the grid, so the nation needs every bit of Solar we can need. It's just foolish to penalise it!	Claude	retired

	2026-08-28 17:29:41	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Through no fault of the consumer Eskom failed to deliver. Initially Eskom pleaded with consumers to limit electricity usage and switch off appliances. These requests were continually broadcast on National TV. SARS subsequently encouraged the public to install Solar by offering tax deductions. At some considerable cost home owners installed solar to reduce reliance on Eskom and return to a more normal life. The installed solar also reduced day time load on Eskom enabling Eskom to more effectively utilise their pumped water generating systems. For Eskom to now demand what constitutes a tax on sunlight is unfair. By Eskoms own actions they encouraged South Africa to seek alternative sources of power and now want to penalise South Africans for doing just that.	James	retired

	2026-08-29 07:55:15	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The overload of taxation for a failed system is past ridiculous with no return on money taken - services like water, electricity, trains, road repair, accident fund... all hits the "missing middle" - can't get social services due to a salary (thank my Creator!!). Yet if I did get SASSA, it goes up R10 or so!!! Now with National Health on the horizon, my medical aid goes up and levies increase!!! This is a multiple level issue - from petrol, VAT, car license levies, tolls... private security, paying VAT on stolen goods... yax for SABC... NO Post Office... air pollution... the list seems endless. Eskom issues started as a few hours of load shedding then continuus sessions, I lost food in fridge and freezer contents in the R1000's!!! To protect my self and financial burden, over time I used my money, to get energy efficient lights, freezer, induction hobs, gas equipment - paying VAT everytime!!! Then came the generator that cost too much fuel, then solar water, then solar electricity... including VAT - private individuals can't dodge the VAT!!! I pay for electricity I use plus a connection fee already!!! All the above is not included in the inflation basket that feeds my annual increases so loosing money!!!! The next step is disconnection from the grid at a cost of more solar panels... soon the government will bring in an air levy, water levy... Sounds ridiculous but the government is killing us slowly!!!	Gavin	employed individual
	2026-08-29 07:56:15	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Consumers who installed solar spent their own money to buy solar panels. They should not have to pay for electricity they do not receive from Eskom. Taxing them for Eskom's failure to provide stable electricity is stealing.	Helena	retired
	2026-08-29 08:02:07	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Alet	
	2026-08-29 08:07:18	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	NERSA need to place a strict framework in place to protect private users who have installed solar power, at great cost to themselves, in order to protect themselves from Eskom's inability to provide stable supply, from being susceptible to "punishment" for reducing their reliance on Eskom. How can Eskom keep asking us to reduce consumption as the network is under strain and then punish us for doing just that?	Evan	employed individual
	2026-08-29 08:10:12	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	Please do not punish people who are trying to be self reliant due to Eskom's failure. We responded to the impact of loadshedding by having solar, not we are victims of that. Why can't we be allowed to benefit from Green energy?	E	business owner

	2026-08-29 08:25:51	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	With less demand for grid power, there is less staff and even less management positions to fill. Cut the staff complment and the shortfall in income is recouped without any further laws or changes to be legislated . After the incentive to subsidies solar panels this new proposal is a 180 degree turnabout. Not acceptable	Louis	employed individual
	2026-08-29 08:29:09	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	In my view it would be simply unlawful.	Naude	self-employed
	2026-08-29 08:29:49	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The Government, Eskom, City Power are not capable to provide constant electricity. Reason is that power plants have been neglected, were not maintained and all the top managers and some other senior staff, have stolen the money designated for maintenance, logistics and qualified technicians. By being penalised, more money will be generated to be stolen by corrupt officials and politicians. Money have been extorted since 1994 and now we as taxpayers must once again foot the bill. I am STRONGLY AGAINS ANY FIXED POWER TARRIFS AND ROOFTOP SOLAR. The sun is a gift from God and does not belong to the Government or any other human being, especially in South Africa.	Fanie	retired
	2026-08-29 08:37:32	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I finally bought my solar panels after struggling to cope with the difficulties of loadshedding. That happened because of inefficiency of Eskom to maintain SA's power supply. As a pensioner I certainly don't want to be penalised because of Eskom and municipality issues.	Diana	retired
	2026-08-29 08:39:59	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Tish	retired
	2026-08-29 08:40:14	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Due to incompetence by self interest and political interference with cadre deployment, maintenance of infrastructure suffered resulting in the populace paying the price. Power outages resulted in people having to provide their own means of generating electricity to survive. Survive like oxygen pumps not working. This resulted in that the current brag by Eskom that there are no longer electricity outages (load shedding) is a direct result of the number of people / private enterprise who no longer depend on Eskom / municipalities for electricity. They were responsible for the solar etc. way of independence from Eskom . Now that the income to distribute for self enrichment is so low that Eskom can not make a profit without having unaffordable charges, alternative means must be found to steal. Hence the charges for connectivity and not for consumption. Stop all efforts to steal!!!! Start being productive workers and not collectors to enrich yourself!!!	Philip	
	2026-08-29 08:42:05	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This is utter BS, in almost every other country in the world you are compensated for using or having solar energy because you are less of a strain on the grid and infrastructure, yet our corrupt government wants to charge you for a service that they have trouble delivering. I will not pay this proposed tariff. I will sooner disconnect from the grid completely	Jonathan	employed individual

	2026-08-29 11:08:58	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The government seriously wants to now add a tax to the sun? How about instead of trying to find a way to make more money, they should be asking "where are we failing that so many of our citizens find us unreliable to provide the basic necessity of electricity" And I know that a lot of these people or businesses that move over to solar set up UPS systems so that even if there isn't enough units on the solar, they still aren't using from the grid. That's how unreliable Eskom is. That even the backup has a backup.	Tara	
	2026-08-29 11:10:18	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		N	
	2026-08-29 11:14:54	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We have invested in Solar systems to release pressure on the electrical system in order to help Escom who were not able to supply on demand. Now you want to penalize those that came to the table to help solve the electricity issues of this country. That is completely unfair and Escom should rather look into ways to thrash out fraud and corruption in Escom and look at ways to save costs	Louis	
	2026-08-29 11:17:31	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I strongly object to additional fixed charges being imposed on households with rooftop solar. Many of us invested heavily in solar and battery storage because of Eskom's unreliability, load shedding and continuously increasing electricity costs. Private solar users have reduced demand on the grid and contributed to improving the resilience of the electricity system, often at significant personal cost. We should not now be penalised simply because we took responsibility for securing our own electricity supply. Any grid-access charge should be fair, transparent and cost-reflective, and should not disproportionately target or discourage households that have invested in renewable energy.	Ernst	employed individual
	2026-08-29 11:20:14	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Tumelo	
	2026-08-29 11:21:16	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It's an absolute disgrace what this government is proposing. This must surely be the death knell for the ruling party. Goodbye and good riddance. I don't support this proposed bill at all.	Arvind	retired
	2026-08-29 11:22:03	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	As a residential user who invested significantly in my solar system I am fully opposed to being charged for something that we do not need. Firstly you haven't addressed the theft and maladministration that has occurred at Eskom for years and which led to the country going into Loadshedding. Then we install solar which actually fixed your mess and brought loadshedding to an end and now you want to penalise us. The only fair way to charge for electricity is usage based. It's not that hard, you know how much electricity you sell so build your fixed costs into the price per kwh. Stop stealing from the taxpayers and start taking accountability for running an efficient enterprise.	Tony	
	2026-08-29 11:24:40	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Wolf	
	2026-08-29 11:26:06	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	They are providing a service that has failed. How do they explain the free electricity for shack dwellers to which a huge portion of dwellers are illegal foreigners. If the service that they are providing was efficient and cost effective then there won't be a need to seek an alternative source. Solar energy only became necessary in the last 10 years because of governments failures. Government is rolling out prepaid meters , how will that work with in solving the stance of government on the issue of the impact on the costs incurred in generating electricity on the grid. The stance of government is only a money making scheme. More money more corruption.	Mark	retired

	2026-08-29 13:33:54	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	ESKOM was in trouble and subsidised solar instalations. Now they want to punnish the very people who helped them. The act doesn't account for solar setup not using ESKOM power at night. Many have batteries that suply power at night.	ANTHONY	retired
	2026-08-29 13:41:53	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Private solar assisted government through the power crisis. Why should these solar solution that saved the country and businesses from a major crisis, be punished indefinitely? The government and government departments should not receive any form of passive income for services not provided. In a country where taxes skyrocket and services failed with little exception, no passive income should be allowed. It encourages the mismanagement of funds. If government and municipalities don't have unlimited access to the pockets of the private industry by laws, they institute themselves, they will start working more careful with money and not appoint large numbers of people without increasing service delivery to the taxpayers and public. If they want to charge for solar, they need to take full responsibility for the maintenance and upgrades of such systems.	Heleen	self-employed

	2026-08-29 14:00:39	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Investment into private renewable energy became essential over the past 1-2 decades, as a direct result of state ineptitude. Now the state seeks to penalise consumers for making plans when they themselves could not provide what they were supposed to. NERSA has to place strict statutory caps on these proposed fixed network and capacity charges If the state want to penalise grid-tied rooftop solar owners, they should similarly reward them for energy injection - this could take the form of offsetting fixed network costs rather than imposing flat availability taxes. Finally, such a fixed rate system will have a large impact on low-income households and anyone who strives to budget by conserving energy. How will this be considered?	Janneke	employed individual
	2026-08-29 14:07:26	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom!! You cannot let your bungling and inefficiencies be my problem!	Greg	
	2026-08-29 14:10:34	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. Insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. Require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households.	Natasha	employed individual
	2026-08-29 14:38:40	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Hoe belaglik en maghonger kan die regering raak. Het hul nou regtig gedink huishoudings gaan stil in die donker sit en hoop die Regering/ ESKOM gaan die krag probleem oplos. Nee lankal nie meer nie. My pa het aan asbestose gely en was 24 uur op suurstof. Het regering hulp verleen, NEE. Daar is gesondheid voorskrifte oor hoe lank produkte teen n sekere temparatuur gehou moet word en so kan ek vele voorskrifte noem. Hoeveel skade het huishoudings nie gely as gevolg van produkte wat weggegooi moes word as gevolg van ure sonder krag. Moes ons op ons hande sit. Nee dit is nie ons ingesteltyd nie. Kry n oplossing, ja dit is ons gesindheid. Wat het die belasting betaler gedoen om die pyn te veroorsaak, net mooi niks. Om die belaglike bepaling te oorkom sal maar net wees om dan totaal van grid te gaan. Lê nog geld uit en raak al minder afhanklik van Kaapstad Stadsraad en raak onafhanklik. Gaan meer geld kos maar eerder dit as om n melkkoei te raak. Ons was gedwing om die pad te loop en nou wil julle kenners sonder wysheid oneerlike planne maak om jul koffers te vul.Kry skaam!! 	2026-08-29 14:48:44	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I am planning on installing a solar system for my house. If additional fees are added to my municipal account for my electricity connection, it makes the pay-back period either much longer or the system might not pay itself off at all. Everyone who wants to install a solar system will consider this and a lot of people will not install solar systems because it does not make financial sense anymore. This is especially bad in this time since Eskom is still under pressure. Additionally, Eskom still mostly burns coal for generation and solar is much more environmentally friendly. People should be rewarded or subsidized to install proper solar systems rather than penalizing them. Home solar systems make the grid more stable, predictable and gives Eskom spare capacity to allow routine maintenance.	Van Wyk	employed individual
	2026-08-29 14:54:05	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	When they get everyone to pay for services (Especially those that are stealing , those who do not pay their accounts AND all government depts, employees including the MPs and the president.)	stella	retired

	2026-08-29 15:23:10	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We have saved them from total disaster and now they want us to saved the disfunctional municipalities.	Jan	retired
	2026-08-29 15:25:42	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The government is once again trying to hide its incompetence to provide services. The focus should be on how to expand the capacity of Escom, and how to end the corruption at Escom. Now they are focusing on how to get more money - that could be grabbed again. Get competent people to do the job, and that will solve a number of problems.	Theo	self-employed
	2026-08-29 15:28:01	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is nothing short of disgusting how this ANC led government has broken ESKOM and now want to punish those that are bypassing, essentially bad governance. Fix ESKOM! Get out of the way of those that pursue progress!	Clint	
	2026-08-29 15:31:11	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Charl	
	2026-08-29 15:37:03	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I have in the past had to throw away various food items, Bath in ice cold water , cook food on a braai grid as a result of power cuts. Even now, with no load shedding, I find myself having to cook on a gas plate due to breakdowns , transformer and cables stolen as well as ageing infrastructure. Having solar prevents the above from happening to me. The cost to have this power is exhorbitant and I do not see why I must now be penalised due to the interupted supply I receive from escom/ council. Why do I as a resident not have the same option as business where I can source the least expensive supply. Pensions do not increase in proportion to the cost of living as it is.	Athol	retired
	2026-08-29 15:53:39	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We suffered aprox 15years of Loadshedding, which prompted the Govt to permit Commercial and Residential solar instillations and even offered a tax reduction for a year. South Africa enjoys many hours of sunshine which makes sense to see Solar as a non-emissions future energy source. Eskom is a monopoly yet was not able to maintain a regular stable energy supply and even ensure that Municipalities pay their accounts regularly. Now the Minister raises a poor thought through response, saying Solar users are "not paying their fair share" because they recharge at night. Firstly, most solar users have battery back up, so recharging at night is minimal, as most recharging is done by the solar system during the day. In effect we are being charged for using the SUN , which Eskom does not own. Solar was installed by users to minimize the loadshedding and simultaneously it also relieved Eskom,s overall load enabling supply to non solar users. This is a penalty to Solar users, despite us investing large amounts of money to bypass loadshedding, now Eskom is scratching for income by charging a fixed line fee to offset their reducing income. This is simply another TAX which is designed to sustain a poorly managed SOE. Why can larger solar users bypass the fixed fee, but residential solar users must pay. Again another unfair system to penalise the individual taxpayer.	David	retired

	2026-08-29 16:52:43	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The development of my solar and storage batteries were taken as a long term investment to provide power state could not and I need time for this investment to pay back the costs plus interest. State failure made my solar installation nessessry and to punish the consumer is ridiculous.	Johan	retired
	2026-08-29 16:58:35	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Has the government and eskom corrupt officials not "stolen enough from the citizens". If cituzens cannot support their lives and that of their loved ones without corrupt government officials wanting to capitalize on their greed, we have no hope left for Siurh Africa.	Moegamat	self-employed
	2026-08-29 17:00:58	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I am totally against the solar roof-top users being charged extra monthly charges. The electricity charges have already been priced for all users in the country to include the infrastructure required to supply the electricity. This has always been the practice since the inception of Eskom. Don't bring about "Solar Apartheid" into the country. We South Africans can't be held ransom to Eskom Looting and mis-management.	Mathew	employed individual
	2026-08-29 17:10:49	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I do not have solar for power generation. Surely Eskom has no one to blame but itself for this state of affairs. We had one of the finest power generating systems in the world when viewed from any aspect yet it was allowed to fall into disrepair and become unreliable. Even before that, people were encouraged by Eskom to install solar years ago and gave many incentives to people to do so. In the light of this, I would have thought such an Eskom decision could be challenged in the Constitutional Court. I must concede however that it does seem tough on the power supplier when the solar consumer expects the power to be there if things go wrong. If one wants to go completely off grid then that should be a cost free option.	Rosemary	retired

	2026-08-29 20:59:31	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Government is not in a position to service the public, with so many residents turning to solar it's relieved the pressure from the grid, therefore, assisting those to have use of the network on a more frequent basis. We are, therefore contributing by not utilizing the grid on an ongoing basis. If these taxes are imposed, I will and I am sure others will be requested to be removed from the grid entirely. Which will indirectly mean that the government will loose any form of income for power, whereas if we utilize the minimal electricity there will be funds coming in. I will not support this tax. Stop corruption, pay less in salaries, start creating job opportunities .	Chris	retired

	2026-08-29 21:27:55	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Do Not Make Ordinary South Africans Pay for the Failures of the Electricity System I support genuine competition in South Africa's electricity market. I do not support a new system that allows large electricity users to benefit from competition while ordinary households remain captive customers and are then burdened with increasing fixed charges. South Africans did not install solar because they wanted to "free ride" on the electricity grid. We installed solar because the electricity system failed us. For years we endured load shedding, unreliable supply and rapidly increasing electricity prices. Government and Eskom could not provide the reliable electricity service South Africans were paying for. Hundreds of thousands of households and businesses therefore spent their own after-tax money on solar panels, inverters and batteries. In doing so, private citizens added generating capacity at their own expense, reduced demand on Eskom and helped South Africa through an electricity crisis. It is therefore deeply concerning that the proposed electricity-market framework refers to "discouraging free riding" and anticipates a greater role for fixed charges. A household that remains connected to the grid should certainly pay a fair contribution towards the actual cost of providing and maintaining that connection. But there is a fundamental difference between paying for the grid service you use and being charged additional fixed fees simply because the electricity supplier is losing revenue when you buy fewer units. Solar owners must not become a convenient new source of revenue to compensate Eskom or municipalities for declining electricity sales. There is an equally serious concern about the proposed competitive market. Large qualifying electricity consumers may gain access to competing generators and electricity traders, while households and smaller businesses remain captive customers of Eskom or municipal distributors. That risks creating two electricity systems: Competition and choice for large consumers; monopoly pricing and increasing fixed charges for ordinary South Africans. If large commercial and industrial customers progressively move away from municipal electricity purchases, government must not simply transfer the resulting revenue shortfall onto households and small businesses that have no equivalent freedom to choose their electricity supplier. Nor should responsible, paying customers continually be expected to absorb the financial consequences of electricity theft, illegal connections, municipal non-payment, deteriorating infrastructure and decades of poor management. Poor and vulnerable South Africans must have access to affordable basic electricity. But that social responsibility should be funded transparently and fairly — not hidden inside ever-increasing charges imposed on compliant ratepayers. I therefore object to any electricity-market structure that: penalises households for generating their own electricity; uses fixed grid charges to recover lost electricity-sales revenue rather than the reasonable cost of providing grid services; gives large electricity consumers access to competition while permanently keeping households and small businesses captive; transfers the costs of electricity theft, non-payment and institutional failures onto compliant customers; or makes remaining connected to the electricity grid deliberately expensive for households that have invested in solar. South Africans who invested in solar should not be treated as the problem. They invested their own money because government and Eskom failed to provide reliable electricity. They reduced pressure on the national grid and privately funded generation that the country desperately needed. Electricity reform should reward efficiency, investment and responsible behaviour — not punish it. My position is therefore simple: I will pay a fair price for the electricity I consume and a fair, transparent price for the grid services I actually use. I should not be forced to pay for electricity I do not consume, compensate electricity suppliers for revenue they have lost because I invested in solar, or carry an unfair share of the financial consequences of a system that failed in the first place. South Africa needs electricity reform. But reform must bring competition, choice, efficiency and accountability for everyone — not competition for large users and another protected monopoly for ordinary South Africans.	Izak	retired
	2026-08-29 21:42:34	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	NERSA should place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. There must be a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. An independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households should be carried out	Cheyenne

	2026-08-30 07:52:28	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	To Whom It May Concern, I am writing to formally object to the proposed increase in electricity rates for households with solar installations. As a solar owner, I invested my own money to install and maintain a system that reduces demand on the grid. This investment directly benefits the broader network by lowering the strain during peak periods and reducing the risk of load shedding for everyone, including non-solar users. Penalizing solar owners with higher rates when we do draw from the grid undermines the very behavior that keeps the system stable, and discourages further investment in solar adoption at a time when the grid needs it most. I would also like to raise the issue of non-payment. I understand that a significant amount, are not paying for their electricity usage at all. It is difficult to understand how compliant, paying customers who have invested in reducing grid dependency are being asked to shoulder higher costs, while non-paying users face no apparent consequence. This creates a clear inequity: those who follow the rules and invest in solutions are penalized, while non-compliance goes unaddressed.	Penelope	retired

	2026-08-30 10:47:17	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is only our insufficient hard-earned savings that ensured that we could survive the failing Eskom operational viability. And it should be emphasized that our President Ramaphosa publicly promoted rooftop solar as the only solution to overcome the dire failure of Eskom and saving grace of the South African economy. Without the contribution of rooftop solar Eskom would still have struggled to meet their legal responsibilities towards the South African citizens and economy. And now Eskom and the government plan to institude legal acts and regulations as punitive measures just because the very people that saved Eskoms skin are utilizing less electricity from the grid and save money on the ridiculously high electricity tariff in some attempt to repay the rooftop solar installation cost. Shame on Eskom and our government that made a u-turn on previous public pleas to the citizens of South Africa.	JC	retired

	2026-08-30 11:53:09	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is rediculous to tax people who use their own money to put up panels and relieving the burden form Eskom in the process.	Johann	employed individual

	2026-08-30 12:11:43	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I strongly oppose the direction proposed in the Electricity Sector Market Transformation Position Paper, particularly the principle of “discouraging free riding” and any move that results in households and businesses that invested in solar energy being subjected to increasingly punitive fixed or network charges. South Africans need to ask a very simple question: How did the people who spent their own hard-earned money to solve South Africa's electricity crisis become the problem? For years, ordinary South Africans were told that load shedding was necessary because Eskom could not reliably supply electricity. Businesses lost production. Small businesses lost income. Families endured darkness. Food spoiled. Security systems failed. Schools and hospitals were disrupted. People were forced to purchase generators, batteries, inverters and solar panels simply to maintain a normal life. We did not install solar because we wanted to undermine Eskom. We installed solar because Eskom could not reliably supply us with electricity. We invested our own money because we were repeatedly told that the electricity crisis would take years to resolve. We took financial responsibility for protecting our homes and businesses from a failure of the national electricity system. And now, having done exactly what responsible citizens were encouraged—or effectively forced—to do, we are being told that we must pay more because we use less electricity from the grid. That is fundamentally unfair. Do not make responsible citizens pay for systemic failure. The proposed transformation of the electricity market is being presented as necessary modernisation and a move towards a more competitive and sustainable electricity sector. Those objectives may be worthy. But transformation cannot simply mean finding new ways to extract more money from the citizens who have already paid for solutions themselves. The government itself acknowledges that the rapid growth in rooftop solar was accelerated by load shedding. In fact, government reports that the number of South African households with solar panels increased by 86% over three years, reaching approximately 675,000 households in 2025. These households and businesses made substantial private investments in the national interest. Every solar panel, inverter and battery purchased by a citizen represented private capital being invested into South Africa's energy resilience without the taxpayer having to fund it. These people reduced their dependence on Eskom. They reduced demand on the grid. They reduced pressure during peak periods. They created their own backup electricity. They invested in renewable energy. And they did it with their own money. That should be encouraged—not punished. The real problem is not the solar customer. If Eskom and municipalities are struggling financially because electricity sales are declining, the answer cannot simply be to make electricity more expensive for the people who consume less of it. The underlying financial and governance problems must be confronted. Parliament has acknowledged that municipal electricity debt owed to Eskom has exceeded R110 billion. National Treasury has also reported extraordinarily serious municipal financial-management problems: since 2021/22, municipalities have incurred R24.12 billion in fruitless and wasteful expenditure, R145.21 billion in irregular expenditure and R118.13 billion in unauthorised expenditure. In 2024/25 alone, 116 municipalities adopted unfunded budgets. These are not problems created by the homeowner who installed solar. They are not problems created by the small business that purchased an inverter. They are not problems created by the pensioner who spent their savings on batteries because their electricity supply could not be trusted. They are problems of governance, financial management, revenue collection, infrastructure maintenance, electricity losses, debt, maladministration and, where proven, corruption and criminal conduct. Government itself has acknowledged that illegal connections, meter bypasses, tampering and vandalism have placed enormous pressure on local electricity infrastructure. In March 2026, the Department of Electricity and Energy stated that approximately 971 feeders affecting about 1.69 million customers had been placed under load reduction because of overloaded and damaged distribution infrastructure. Yet the compliant citizen is expected to carry an ever-increasing financial burden. Why? The taxpayer cannot be the bottomless pit. There is a dangerous principle developing here: When government-controlled institutions fail financially, the solution appears increasingly to be to find another way to charge the people who are still paying. This cannot continue indefinitely. South Africans already pay for electricity. We pay taxes. We pay municipal rates. We pay service charges. We pay VAT. We pay connection fees. We pay increasingly expensive electricity tariffs. And many of us have additionally spent hundreds of thousands of rand of our own money installing solar panels, batteries and inverters because the electricity system was not reliable. Now we are potentially expected to pay again for remaining connected to a grid that we use substantially less precisely because we invested in alternatives. If there is a legitimate cost to maintaining a grid connection, I accept that. The electricity grid is valuable infrastructure and it must be maintained. But there is an enormous difference between fairly recovering the legitimate cost of maintaining infrastructure and using fixed charges as a mechanism to recover lost municipal revenue or protect an inefficient business model. The two must not be confused. Do not turn solar owners into a captive revenue source. A household that invested in solar remains connected to its municipality or distributor and that household can potentially face increased fixed charges because it has reduced the amount of electricity it purchases. Where is the incentive for citizens to invest in renewable energy? If I spend my own money reducing my dependence on the national grid, only to have government increase the cost of remaining connected to that grid, the message is very clear: Don't become energy independent. That is precisely the wrong message for South Africa. Government now says that secure, reliable and affordable electricity is essential to economic growth—and that the energy transition should ultimately make electricity cheaper for consumers. I agree. But then the policy must be consistent with that objective. You cannot simultaneously celebrate private investment in solar and design a tariff structure that makes that investment financially unattractive. You cannot tell citizens that they must become part of the solution and then treat the solution they created as a threat to municipal revenue. You cannot ask people to carry the financial burden of the country's electricity crisis and subsequently penalise them because their investment has reduced their electricity consumption. That is not transformation. That is shifting the consequences of institutional failure onto the citizens who behaved responsibly. If municipalities are losing electricity revenue, then we need to examine why. National Treasury has already demonstrated that municipal financial mismanagement is a serious and measurable problem. In July 2026, it took the extraordinary step of withholding equitable-share transfers from selected municipalities because of persistent failures in financial management and compliance. 	2026-08-30 12:25:16	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I don't support the proposed changes. As long as my system behind the meter is compliant and safe, the state, Eskom and the municipality may not penalise me for the measures that I have taken to ensure that I have a safe and reliable electricity supply. Also, I cannot be penalised for any energy saving measures that I have taken (such as installing LED bulbs, energy saving fridge, installing heat pumps on my geysers, etc.) I can even decide to switch off my geysers and rely on cold water only to save electricity. The authorities may not penalise met for that. I can't be forced to pay for years of neglect, incompetence, corruption and fraud. The authorities can't encourage the ratepayers to measures to save electricity and even pay subsidies and then turn around and penalise ratepayers because they that.	Jat	retired
	2026-08-30 12:30:30	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Having been taxed for our entire working years, & to overcome Eskom's inability, in the past to supply a constant service, we used part ofvour Retirement Funds to install a Solar power supply. We now face the prospect of being penalized for being proactive and essentially assisting Eskom by buying & paying for Solar Electricity systems, by the inefficient Government now wanting the General Public to pay for its inefficiency!! It is a travesty of justice that 7 years down the line, the Consumers are faced with this issue, having spent the funds to assist ESKOM out of its supply dilemma, that the Government now wants to penalize the very prople who stepped up to solve the supply problem. To now consider implementing Fixed Charges & Solar Penalties to tax people who used their own money to put up panels, thereby relieving the burden frorlm Eskom in the process criminal!	Anne	retired
	2026-08-30 12:33:50	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Once again the residents , pensioners who have paid taxes our whole working lives and in retirement who used valuable retirement funds when our so called service provider could not keep the lights on!!! Eskom also helped fund some of the solar panels for the rooftop systems. If they want to persist with this unreasonable idea then a class action lawsuit should be considered!	Clive	retired

	2026-08-30 12:58:10	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Dear sir, I oppose the implimentation of any additional charges on households that have invested in private solar energy utility. Households and small businesses that invested significant private capital into rooftop solar, batteries, and energy efficiency to protect themselves from load shedding will be forced to pay higher monthly baseline connection fees. This structural shift acts as a financial penalty on private decarbonisation, extending solar payback periods and increasing electricity bills for low-volume and frugal users. - I demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. - I insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. - I want to see a required independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households. Thank you for your kind attention. A concerned South African rates and taxes payer	Edith	
	2026-08-30 13:21:43	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I decided to increase my house loan so that I can aquire a solar system that can give me independence from soaring electricity tarrifs so that I can have more available cash to pay my bills (my historical monthly electricity bill was very high, higher than the additional interest on my home loan). I'm a pensioner so I am trying everything in my power to reduce my ongoing monthly bills. Introducing a penalty for the intallation and use of solar electricity, means there will be no incentive for consumers to change from the use of fossil fuels/diesel to "cleaner" energy (solar panels). This will not be a good strategy if South Africa wants to move towards "Clean" energy to "save the planet".	Marcel	retired
	2026-08-30 14:06:23	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	My Escom / municipal power is randomly taken away from me and I cannot do anything. Congratulations, live in the dark. Really. Suffer the consequences. I seek a self grown solution. No, you cannot. Okay, you can, we will offer an incentive for solar, then congratulations, we will punish you for doing that. The trust deficit is to large. I don't trust your intentions. I'll put up a few more solar panels & get my PrePaid disconnected. Then what, you will come with a new Street Tax ? Get your act together ASAP, remove corruption, get service delivery going. That in itself will make millions. Enact the By Laws, then try and get fancy. NO to another TAX.	Richard	unemployed individual
	2026-08-30 14:11:59	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The infra stucture is paid for many years ago. The maintanance is a small amount of the income generated by Escom. Escom should rather focus on elecrticity thiefs that amount to bilions. Municipalities that doesnt pay and ilegsl private stealing power. Get De Ryuter back and Escom will be far better off. Also is Escom staff over paid. Cut the sallaries by at least 30% and no bonusses for the next 10 years.	Deon	business owner
	2026-08-30 14:14:20	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We used a substantial amount of our capital (as pensioners) to install solar panels to help Eskom by reducing the load they need to supply and when they could not meet demand & now Eskom/the Government wants to punish us for doing so. This is so not fair. We have done everything we can to help & at the same time look after ourselves. We conserve water as much as we can too as we are upstanding citizens and this is the thanks we get. I totally object to the proposed tariffs.	Lesley	retired

	2026-08-30 17:12:50	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I am a pensioner , I took my hard earned and already taxed pension fund to purchase rooftop solar because our government couldn't supply reliability power and load shed us every year for a few years They forced us to look after ourselves and become at least partly self sufficient in energy. Now the grid is more stable they want to penalize us with high fixed tariff etc. I'm sick of paying for Government inefficiency and as a pensioner they give us No relief and continue to bleed us dry till we die !!	Bruce	retired
	2026-08-30 17:35:07	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is unfair to charge users for a fixed connection when it will be difficult to downrate our connections because local municipalities or service providers are not mandated to give us this opportunity. In reality, I only need a very small backup power requirement from the network. A much better solution will be to implement a Time of Use charge across the board... users will then be incentivized to invest in batteries for peak periods and the generation and transmission overhead cost that Eskom is worried about will be mitigated. I would immediately invest in more batteries, using solar power for the evening peak and then recharging on grid power for the morning peak if my battery levels were low. This would flatten Eskoms demand curve which would be advantageous to them. Many businesses also use most of their power during the day and do not operate in peak times. They would be unfairly penalized by this wholesale pay for capacity approach. For larger industrial users, a continual shift to more accentuated TOU tariffs would also strongly incentivize the investment in batteries and load shifting.	JP	employed individual
	2026-08-30 17:36:09	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	South Africans should not be forced to pay a penalty for making a plan to survive inspite of government failures. Instead, independence and self-sufficiency should be encouraged for a healthy society that doesn't rely on government structures to survive and function. Government is there to serve the people, not the other way around.	Louise	employed individual

	2026-08-31 07:10:09	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Private solar investment ended loadshedding. No National blackout due to private solar investment. Not right to punish private solar. Rather incentivize extensive investment with subsidies and encourage renewable energy production.	Mike	
	2026-08-31 07:19:02	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The Eskom power crises caused a significant loss of power sales by the Municipalities and created significant problems for electricity consumers. At the behest of Eskom and the government and for electricity needs a major drive was created for consumers to install alternative energy sources. At significant expense this took place. As a Municipal consumer in JHB I pay monthly service and network fees since JHB removed my Pre-paid ability when they changed a faulty meter. My home is connected and I pay a Service Fee to maintain that connection. I pay the normal JHB electricity fees for my consumption. My solar system has the ability to feed surplus electricity back into the Municipal system but JHB don't currently allow this. JHB are very poor on electricity efficiency and cost recovery. Once JHB get their inefficiencies sorted out then they can consider other means of cost recovery.	Kevin	retired

	2026-08-31 09:12:43	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	### A "Sun Tax" on Private Capital and Rooftop Solar **This is nothing less than a penalty on citizens who invested their own money to keep South Africa's electricity system functioning when the state failed to do so.** Millions of households and businesses were **encouraged—and in many cases incentivised through tax rebates and other measures—to invest their own private capital in rooftop solar, batteries and energy efficiency.** They did so not because they wanted to undermine Eskom, but because **Eskom's own incompetence, mismanagement and failure to provide a reliable electricity supply left them with no practical alternative.** These citizens took the financial risk. They borrowed or spent their savings. They purchased solar panels, batteries and inverters. They reduced their demand on the national grid and, in doing so, **helped Eskom by reducing pressure on an already failing electricity system.** Now, instead of recognising and rewarding this investment, consumers are being confronted with **ever-increasing fixed network charges—a de facto "Sun Tax"—designed to recover revenue lost because people are buying less electricity from the grid.** That is fundamentally unfair. **You cannot incentivise citizens to invest billions of rands of their own money in solving a national infrastructure crisis and then change the rules afterwards to punish them for doing exactly what they were encouraged to do.** Replacing consumption-based electricity charges with mandatory, high fixed monthly network charges effectively means that the more successful a household is at reducing its electricity consumption, the less benefit it receives from its investment. It **extends the payback period of solar and battery systems, undermines the economics of private investment, and sends a deeply damaging message to future investors:** > **Do not invest your own money to solve a problem created by government—because once you have done so, the rules can simply be changed to make your investment less valuable.** This is not merely a tariff issue. It is a matter of **trust, economic fairness and policy credibility.** South Africa desperately needs private capital to participate in infrastructure investment. Citizens who invest their own money in renewable energy should be **partners in the country's energy transition—not treated as a revenue problem to be punished when they become less dependent on the grid.** If Eskom and municipalities have legitimate costs associated with maintaining the electricity network, those costs should be addressed **transparently, efficiently and fairly**, not through punitive charges specifically structured to neutralise the financial benefit of private solar investment. **Citizens did not cause Eskom's crisis. They invested their own money to protect themselves from it—and, in the process, reduced the burden on the very system that failed them.** **Punishing them now with a "Sun Tax" is not energy policy. It is a penalty for self-reliance.**	Roux	self-employed

	2026-08-31 09:23:57	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	To: The Department of Electricity and Energy I strongly object to any proposal to impose additional or punitive fixed charges on households and businesses that generate their own electricity through solar and battery systems. South Africans invested their own money in solar because the national electricity system repeatedly failed to provide reliable electricity. It is therefore deeply unjust to now penalise those same citizens for reducing their reliance on Eskom. Generating your own electricity is not "free riding". It is private investment in energy security that reduces demand on the national grid. Government should be encouraging this, not attempting to recover lost revenue by making self-generation increasingly expensive. If charges are genuinely required to recover the cost of maintaining access to the grid, they must be reasonable, transparent and directly related to those costs. They must not become a disguised tax designed to discourage energy independence. Such a policy also raises serious constitutional concerns, particularly regarding the rational and non-arbitrary exercise of public power and the protection of property rights. The message this proposal sends is unacceptable: When the electricity system fails, citizens must pay to provide their own solution. When they succeed, government wants to charge them for no longer depending on that system. I therefore call for the withdrawal of any measures that unfairly or disproportionately penalise private electricity generation. South Africans should be rewarded not punished for taking responsibility for their own energy security.	Arran	employed individual
	2026-08-31 09:26:18	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Skelm bly skelm. Die regering moet ophou dink dat die son aan hulle behoort. Dit gaan my verstand tebowe?	Anita Magdalena

	2026-08-31 09:35:35	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I added solar to my house to reduce my CO2 consumption, becuase the government policies do not consider this. I also connected my Solar to the grid and pay a minimum connection fee, my feed back to the grid seldom covers this cost. We penalise those that take the initiative to assist the environent and a grid that cannot sustain the power needed in the country. This is just another way to tax those that are relieving the burden on the average South Africa. Having solar has assisted my wife, my daughter and I to work from home. We do not apply for any kick backs from that we are adding to the economy.	Warren	self-employed
	2026-08-31 09:36:04	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		carol	employed individual
	2026-08-31 09:37:50	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Further / increased charges on solar are making it unfeasible for residential embedded generators / residential installations and must stop. These charges prevent residents from taking independent measures and control of their carbon footprint and force them back to reliance on the Eskom or municipal grid. A free market is not really free when regulations force them down a certain path. Furthermore, Demand charges already exist for customers to compensate the network operator to have access to their connection, so I do not agree with the principle of "free riding" for embedded generators.	Matthew	
	2026-08-31 09:39:37	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		JG	
	2026-08-31 09:40:34	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Solar supply is only created with the application of large amounts of private capital - in the order of R150,000.00 - which came out of PRIVATEC INDIVIDUALS POCKETS. These private investments took a lot of strain of Eskom's grid and that was a huge benefit to Eskom. Making us pay additional fixed charges for a service we barely use is outragous.	Caro

	2026-08-31 09:52:41	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	ESKOM now has extra power available (because more people use alternate sources), ESKOM should therefore charge less and sell more	Mark	employed individual
	2026-08-31 09:53:21	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Working from my house, I was forced by power sharing caused by ESCOM to get eitther a generator or a limited solar system to assure comtinuous internet contect . The latter solution was obvious given the extra carbon footprint , noise pollution and increasing fuel and maintenance cost of a generator. It is absolutely insane of the government to change laws to force honest (in our case limited income pensioners) retepayers to bear the cost of their feilures.	David	retired
	2026-08-31 09:53:37	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I object to the proposed shift from volumetric to mandatory, high fixed monthly grid charges targeting rooftop solar and partial-defection users. I invested tens of thousands of rand of my own, already-taxed income into solar precisely because Eskom failed to keep the lights on — and that private investment has been one of the reasons load shedding has eased and the country's growth has been protected. Penalising energy-conscious households with unavoidable fixed charges simply because our consumption has dropped punishes us for solving a problem the state itself created, extends the payback period on our investment, and discourages further private decarbonisation. Meanwhile, large industrial users above 1MW will be permitted to bypass municipal grids entirely for cheaper private power, leaving ordinary "captive" households to absorb municipal revenue shortfalls and legacy cross-subsidies through higher fixed fees. This is neither fair nor proportionate. I do not support mandatory, high fixed monthly network charges, and I urge the Department to protect volumetric, usage-based billing so that households who have taken on the cost and risk of self-generation are not further penalised for the state's own shortcomings. 	2026-08-31 11:30:07	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	1. I use an retuculation system that is more than 40 years old and where the capital has already been reovered by municipal taxes and current maintenance is also covered by property tax and the services billed. 2. I can run the whole hiouse on solar only and do not need Eskom / Municipality supply. 3. I should be allowed to disconnect from the grid - something which is not allowed yet. 4. I should be allowed to apply for a reduced supply current / load. I have a 60A circuite breaker, but cannot use more than 25A and I CAN EVEN SET THIS LOWER. I need not pay for a large network if I cannot and do not want to use it. 5. If I have surplus enery and the municipality wants is, the MUN CIPALITY shall install a meter at THEIR cost to accept feedback into the grid. My system is signed off by a registered person and I shall NOT be required to have expenses for further conformity inspections. If I choose and the system stays connected, it should be MY CHOICE whether I feed back excess in to grid.	Pieter	retired
	2026-08-31 11:30:07	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	How pathetic has this government and Eskom become. Not only did they screw a well-managed, competent electrical supply system, but they still choose to blame everyone but themselves. They should welcome private enterprise that has spent its own capital to obviate the problems caused by this government and Eskom in particular. Instead of punishing individuals, they should welcome them. Already the consumption on grid power has been reduced, thus allowing for less down-time on this critical infrastructure. What they should be doing is welcoming excess power production by solar panels during the day and start to feed it into the grid. What the planned changes may well do, instead of getting funds from persons that have solar power and grid power, many people will simply increase the number of batteries and solar panel and cut off grid supply completely. That will totally defeat the object. Good luck with your proposal if it is passed. I can see it backfiring in your face.	David	retired

	2026-08-31 12:44:35	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	One assumes that transforming the electricity sector should provide each and every household the option to choose their electricity service provider based on competitiveness. It implies this opportunity will be provided to large industries only, whilst Governments plan (ANC) is to provide more free electricity. This will mean that households will be locked in to covering the expense gap at Eskom which is going to get larger and larger unless Eskom start shutting down aged Power Stations. The more costly it is to use Eskom as the backup electricity provider for Solar, the more cost effective it is going to be for households with Solar and batteries to go off the grid. The smaller the consumer base will be for Eskom which in turn will mean more expensive for those left. It's a spiral of death of Eskom. Wake up and smell the coffee. Government needs to ensure what wheeling is allowed for large industries is also available to households. Also they need to encourage households to actively be part of the solution by offering financial credits for pumping electricity back into the grid.	Simon	business owner
	2026-08-31 12:45:51	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	During load shedding Eskom subsidised the intallation of Solar Power to relieve the presure on Eskom. 	2026-08-31 14:19:20	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	ESKOM's failures forced private enterprises plus people to protect themselves from ESKOM by installing solar. Eskom deserves NO Subsidisation or opportunity to offset their costs, by imposing on private solar investors. If they cannot produce at competitive prices - let them sell and allow private enterprise to do a better job.	Glynn	self-employed
	2026-08-31 14:26:05	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I do not support a tariff structure that unfairly penalises residential consumers who invest their own money in rooftop solar and battery systems to reduce their reliance on the grid. Electricity costs are already extremely high for ordinary households. Consumers who invest in alternative energy are reducing demand on the electricity system, improving their own energy security and contributing private capital towards South Africa’s energy transition. They should not subsequently be penalised through excessive fixed or capacity charges simply because their electricity consumption from the grid has decreased. I accept that grid infrastructure has real costs and that consumers who remain connected should make a reasonable contribution towards maintaining that infrastructure. However, any fixed network charge should be transparent, cost-reflective and proportionate to the actual cost of providing grid access. It should not be designed to recover lost electricity-sales revenue from households that have become more energy efficient or installed solar. The proposed framework should preserve a genuine financial incentive for households to invest in solar, batteries and energy efficiency. Otherwise, consumers who use their own capital to reduce pressure on the national electricity system may effectively be punished for doing exactly what South Africa’s energy transition should encourage. I therefore recommend that residential fixed charges be kept reasonable and subject to regulatory limits, that solar households not be subjected to punitive or discriminatory charges, and that tariff structures continue to reward consumers for reducing grid consumption and investing in cleaner, decentralised generation. 	2026-08-31 15:15:49	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The proposed restructuring of electricity billing introduces mandatory fixed monthly capacity and network charges for all grid-connected households and businesses, regardless of actual consumption. While intended to “discourage free riding,” this framework unfairly penalises citizens who have invested in rooftop solar and battery storage to reduce reliance on Eskom and mitigate load shedding. Key Objections: Penalty on Private Initiative: Households and businesses that invested private capital to support energy resilience are punished with unavoidable baseline charges. Captive Ratepayer Trap: Large industrial users (>1 MW) gain access to cheaper wholesale markets, while ordinary households remain captive to municipal tariffs, bearing the burden of revenue shortfalls. Risk of Market Abuse: Eskom Generation’s dominance over baseload supply creates risks of price manipulation and volatility in retail tariffs without strong oversight. Requested Relief: Withdraw or amend the proposed billing framework to exclude punitive fixed charges on solar-equipped households. Ensure equitable treatment between residential and industrial consumers. Establish transparent oversight to prevent market abuse and protect ratepayers.	George	self-employed
	2026-08-31 15:22:28	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Once again Eskom want to claw back revenue that they lost through their incompetence, lack of maintenance and theft, by penalising those of us who invested in solar systems during load shedding. I could use a few choice words to register my disgust and opposition to the proposals...	Lesley

	2026-08-31 15:38:41	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom told/urged residents of SA to install Solar for their residential purposes under constant load shedding for over more than a decade. Today we are being punished by Eskom, in the form of punitive tariffs, for having installed Solar at great cost to myself and my family! We have not yet begun to reap benefits from the fact that we installed expensive Solar to try and reduce our Eskom derived astronomical electricity bill. Poor putrid planning over the years, couples to horrendous Corruption, at Eskom & government itself, being the cause of electricity shortages that have not completely subsided to this day! Will all these wind turbines dotted around this Eastern Cape also be levied for their existence? Surely this is not the way to build a country that will be for the people by the people!	Denzyl	retired
	2026-08-31 15:39:11	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Our decision to invest in solar energy was not taken lightly. It was a costly response to years of unreliable electricity supply and load-shedding. Before that, we were perfectly willing to purchase and pay for electricity from the national grid. We therefore strongly object to any proposal to impose additional levies or taxes on households that have invested their own money in securing a reliable alternative. By reducing our dependence on the grid, we have also reduced demand on an already strained national electricity system. There is a fundamental issue of fairness here. Citizens who have responded responsibly to the failure of essential infrastructure should not subsequently be penalised for finding their own solution. We recognise the need for a sustainable national electricity system. However, any new charges on private solar users must be transparent, reasonable and properly justified. South Africans have already carried a significant financial burden as a result of the electricity crisis. Those who have invested in alternative energy should not now be expected to pay an additional price for doing so.	Aletta	self-employed

	2026-08-31 16:21:30	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Many of us had to install solar power because of all the power outages arising from Eskom's inefficiency, incompetence and lack of planning for future power demands, and now we are expected to pay these proposed fixed tariffs unrelated to the amount of power consumed. Several years back Eskom would give you a rebate if you installed solar etc. They even offered free geyser blankets and energy saving light bulbs. It is unrealistic and should not be allowed. Plus, all the money that Eskom has lost or stolen with all the corruption and all the big bonuses that they pay out etc. etc. With all the billions lost by Eskom and the government, it is definitely a NO	Patrick	retired
	2026-08-31 16:36:30	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	Penalizing home owners or small business owners by applying fixed costs for those who installed solar during Eskom's failure to provide consistent power (load shedding periods), is discouraging and suppresses freedom of sourcing power. Eskom should itself look to installing solar to supplement their power supply and encourage those who have extra solar generated power, to sell it into the grid. Eskom should rather concentrate their efforts to stop all illegal connections which is clearly theft instead penalized those who helped keep the wheels of industry turning when Eskom failed to do so.	Colleen	business owner
	2026-08-31 16:47:52	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Yet another reason for not trusting this ANC government!! When we were begged by Eskom during load shedding to reduce energy demand because grand scale corruption, political interference and theft had broken the power utility's ability to provide continuity of power and so doing destroyed economic growth, jobs etc, national treasury offered to subsidise private solar intalled generation units solar panels . I paid out R135 000 for an installation for which I will be sole maintainer cost wise for running costs and replacement of units st end of life, but I am also paying for increased monthly household insurance to protect the installation against damage. Government gets vat out of that too. So if Eskom pays me out (R 150 000) plus interest I have lost on that amount over3 years and increased insurance costs they can have my solar system abd do what they like with it. If not I will go all the way and disengage my system from the grid completely. Never in the history of South Africa has there been do much greed and disception levelled by a government aimed at the very people who came willingly of their own accord to the rescue during our power crisis. This government doesn't understand the value of hard earned money. It treats the electorate with contemp?	Norman	retired
	2026-08-31 17:25:55	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	If Eskom supplied reliable electricity at a realistic price my investment in solar would not have been necessary. We have been forced to invest in an alternative source because of Eskom's criminal and corrupt activities. Added to this the state has allowed the theft of electricity through illegal connections. It is immoral to expect us to pay for Eskom's criminal, corrupt and negligent activities.	Michael	retired
	2026-08-31 17:55:26	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Alan	retired
	2026-08-31 18:12:39	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Baseline connection tax is a ripoff, especially where households are not 100% off the grid. Private Capital has been incurred to assist the State when it was in a load shedding crisis and rebates than taxes would have been an appropriate gesture by the State. The least that can be done is to charge per amount drawn from the grid.	Lefadi	retired
	2026-08-31 18:44:07	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The City of Cape Town on their website (https://www.capetown.gov.za/Family%20and%20home/greener-living/saving-electricity-at-home/going-solar) declares that "Homes or businesses that have onsite renewable energy generation will benefit from lower electricity costs and contribute to a more secure and sustainable future for Cape Town." This acts an encouragement for properties to install solar panes and it is due to this statement that solar panels have been installed. It would have been obvious that electricity suppliers would loose revenue from properties that use solar panels when solar panels were encouraged by government. If this bill goes through, properties with solar panels will be penalised on top of the heavy expense they have had. Hence we oppose this bill and call out the electricity suppliers to honour the initial encouragements made.	Volker	
	2026-08-31 18:58:23	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	There is alteady a connection charge, if we choose to feed the grid we are paid under market value. All this will do is encourage use to get off the grid 100% and then the guys unablr yo implement solar are left with a larger burden. Giving the energy producer a larger aupppprt burden for less income. Thos driving a wedge between consumer and government	Carey	employed individual

	2026-08-31 22:26:59	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Ursula	retired
	2026-08-31 22:44:01	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	So here we go again! Some years ago the Government was urging us all to invest in solar panels etc. to "rescue" Eskom from "falling down the financial & incompetent rabbit hole" and those who could, some even using all their hard earned savings, complied and avoided the threat of load-shedding uptil now. Then low and behold, at a time when all we see around us are natural disasters, wars and a general sense of depression with AI gradually robbing many of their employment and livelihoods, what does one hear, the Government comes along with these ridiculous laws & tariffs to protect ESKOM once again!!	Cathy	retired
	2026-08-31 22:44:55	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Eugene	retired
	2026-09-01 00:36:02	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)		Monique	
	2026-09-01 04:36:36	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This bill raises concerns in terms of practical and logical application. There are countless families that do not exceed certain parameters of income and in all likeliness won't be able to pay the "standard" or "set" quota. Thus they will be penalized for factors outside their control. Furthermore, if property owners have Eskom poles on their property, they already pay a baseline fee. It is illogical that Eskom is able to exercise Municipal privileges over citizens. Eskom is a company that provides goods for a price, let the price be determined by the quantity of what is consumed. I demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments.	Amy	
	2026-09-01 06:12:01	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		LUNGILE

	2026-09-01 12:52:18	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The legislation in the current format is penalising individual consumers for seeking alternatives for constitutionally enshired rights (Bill of Rights) to access electricity when the state has failed to do this. The justification of not having paid sunk costs for infrustructure is laughable - that is the same as telling a person who crosses the street that they should pay for the sunken costs for building that road, because they decided to walk instead of drive a car. The sunken costs are already paid for via Income Taxes; fuel levies, property taxes, business taxes ect. To ask consumers to prop-up any short-fall is brazen and insulting. State entities should look to the blatant criminal and corruptive processes within their organisations. Address these instead of squeezing the very last drop from the general public - this only fuels the cycle and not address the problem of corruption. As a consumer we already pay a network charge for access to the grid on our monthly rates together with our billing for consumption - now this will increase because state thinks that paying for what you use is some how unfair and a blanket rate is better? Once again only the poor and small middle class with suffer from this ACT if implemented.	Dylan	employed individual
	2026-09-01 13:22:47	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Consumers should only pay for electricity use age. Maintenance of existing infrastructure to be done out of profit from customer use age.	Petrus Stefanus	retired
	2026-09-01 13:50:49	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	jUST LIKE THE pOST oFFICE SOME YEARS AGO, ESKOM WANT TO ALSO COMMIT SUICIDE .... THE NETT RESULT WILL SIMPLY BE THAT THE PRIVATE USERS WITH SOLAR WILL SIMPLY GO TOTALLY GO OFFGRID.	RUDI	retired
	2026-09-01 14:03:12	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The proposal would be unfair to residents throughout the country and probably lead to more hardships already experienced by many residents in SA. Surely residents should be levied charges in line with usage which has been the norm for many years. Also it appears as though Eskom is planning an option 2 type of scenario to maintain profitability.	Mark	retired

	2026-09-01 15:36:26	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	When load shedding reached new heights we were encouraged by government to install solar power. We got messages on our TV screen every night asking us to use less power because the grid was under pressure. The newspapers were full of corruption happening at Eskom. Now we read of the enormous salaries earned by Eskom employees and the massive bonusses earned by top management. It seems as though they are bragging with their big salaries. Why must the public always pay for the incompetence of people managing SOE's. Why must solar users be targeted and penalised for spending their own hard earned money to make sure their lights don't go out. We are now using less electricity like you asked us to do and now you are also not happy about that. So I say no.	Fanie	retired
	2026-09-01 16:05:39	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Uma	retired
	2026-09-01 16:14:13	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Its simple - penalise solar users to such an extent, then we go offgrid and zero revenue for Eskom. A fair charge for solar users is acceptable. There are millions of township users connected illegally. Overcharge the solar users, then you will be left with all the non paying customers.	Verona	retired
	2026-09-01 16:15:34	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The labelling of renewable energy use as "free-riding" is the most obnoxious thing I've heard in a long time. We (residents who put solar-PV on our roofs) were encouraged by municipalities to put solar PV on our roofs so that there would be less pressure on the grid to help Eskom to provide enough power to industry and to help Eskom to reduce rolling blackouts for all South Africans. To turn around now and make out as if we are the cause of a problem, or are getting something for free is appalling, disgusting, expected from politicians, and incorrect (we are all paying off our rooftop PV installations - IT IS NOT FOR FREE - so the term "free-riding" does not apply. Municipalities need to stop cross-subsidising electricity and need to apply for funds from central government to pay for free electricity for poor people (i.e. government needs to raise taxes from everyone, or they need to divert funds from other projects). Do not expect people who have invested large amounts of money in rooftop PV to be responsible for constitutional requirements that are directly the responsibility of central government.	Howard	employed individual
	2026-09-01 16:30:17	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The labelling of renewable energy use as "free-riding" is the most obnoxious thing I've heard! We (residents who put solar-PV on our roofs) were encouraged to put solar PV on our roofs so that there would be less pressure on the grid to help Eskom to provide enough power to industry and to help Eskom to reduce rolling blackouts for all South Africans. During 'load-shedding, who else except ourselves, were there to help us when there was no power!? To turn around now and make out as if we are the cause of a problem, or are getting something for free is appalling to say the least, disgusting, expected from politicians, and incorrect (we are all paying off our rooftop PV installations - IT IS NOT FOR FREE!!! So the term "free-riding" does not apply! Municipalities need to stop cross-subsidising electricity and need to apply for funds from central government to pay for free electricity for poor people (i.e. government needs to raise taxes from everyone, or they need to divert funds from other projects). 	2026-09-02 15:08:35	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	As a 75 year old with no pension and still working to survive, I can not be bullied into tariffs that was never supposed to have been. I did invest in a solar installation when the country was suffering. I should now be compensated for my part to relieve the failing Eskom when they needed help finzncually rather than being bullied .	Eugene	retired
	2026-09-02 15:33:20	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	As a 64 year old pensioner, I can not be bullied into tariffs that was never supposed to have been. I did invest in a solar installation when the country was suffering. It is very unfair to punshish those who support Eskom to through installing solar systems to ease the load from Eskom and through that assisting them to supply electricity to South Africa.	Bill	retired
	2026-09-02 16:22:43	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	At first eskom could not provide. We as consumer have to make a plan again. Now that there is a small chance that they can provide we are penalise again.	Johan	retired
	2026-09-02 16:23:53	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Installing a solar grid system has to be a financial decision. Introducing factors after the financial decision is made is completely unfair. Cape Town has announced it will move away from Eskom completely in the future and rely completely on other suppliers of energy. This becomes another consideration for relocating to Cape Town. It also becomes a disincentive for leaving Cape Town. I can understand Eskom wanting to load new solar systems going forward but the management of such a proposal would be complex so rather take the easy route and penalise everyone. The whole need to get into solar was brought about by Eskom's inability to provide a consistant supply, so for those working from home it became close to complusory to invest in solar. This is just wrong on so many levels it could probably be the basis for a full blown thesis.	Nigel	retired
	2026-09-02 17:08:40	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I strongly object to the proposed approach to fixed network charges where it results in households with privately funded solar being financially penalised. I did not install solar because I wanted to avoid paying my fair share of a functioning electricity system. I installed it because Eskom was unable to provide a reliable electricity supply. During years of load shedding, my family had to spend a substantial amount of our own after-tax money on solar panels, batteries and inverters simply to obtain the basic reliability that the electricity system was supposed to provide. It is therefore fundamentally unfair to now describe households like mine as “free riders” or to introduce high fixed charges which effectively penalise us for solving, at our own expense, a problem we did not create. Private solar owners have also benefited the electricity system. We reduced our demand on the grid, particularly during periods when generation capacity was under severe pressure, and we funded that additional generating capacity ourselves rather than requiring Eskom or the taxpayer to fund it. I accept that maintaining an electricity network has a genuine cost and that a customer who remains connected to the grid can reasonably be expected to contribute towards that cost. However, any network charge must be transparent, independently justified, proportionate to the actual network capacity and service provided, and must not be designed to recover lost electricity-sales revenue from customers who have reduced their consumption. Solar customers who export electricity to the grid should also receive a fair credit for the electricity and system value they provide. Government should be encouraging households and businesses to invest private capital in generation, storage and energy efficiency — not changing the rules afterwards and reducing the value of investments people were effectively forced to make because of load shedding. I therefore request that the policy be amended to prohibit punitive or excessive fixed charges on solar users, require NERSA to justify and cap network charges based on actual efficient network costs, and ensure fair compensation for exported electricity. South Africans should not be penalised for spending their own money to solve an electricity-supply failure that was outside their control.	Jean	
	2026-09-02 17:14:39	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The present electrical supply grid was paid for by taxpayers money. The current challenges that Eskom is experiencing is mainly due to corruption/mismanagement by the politicians as well within Eskom. The main reason for people to instal solar power is the unreliable power supply. Residential power consumers should not be placed at a disadvantage when compared to businesses who are already paying a lower rate when compared to residential consumers.	Sabelo	retired
	2026-09-02 17:35:29	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Hey, listen. I am a pensioner. Look what Burkina Faso did because of their pensioners! We cannot keep up anymore!!! Eskom did not keep up with the booming population by expanding infrastructure to be able to provide power to the whole of the population 24 hours a day seven days a week. The full-scale corruption in Eskom is also one of the main reasons why Eskom could not provide 24/7 power to all as well as exorbitant pricing increases forced on the user. For that reason clients went solar and actually saved Eskom's bacon to ease the load for Eskom to provide to users easier. Nobody owns the sun; solar owners already paid a fortune to go off the grid or almost off the grid. Why must they be punished for making Eskom's task easier and that AFTER THE GOVERNMENT encouraged homeowners to install solar by getting an amount back on tax returns? That is not fair, and it is moving the goalposts after the match has already started!!	Daniel	retired
	2026-09-02 17:56:15	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The rising eskom charges for electricity and their non-performance and use of expensive diesel to produce electricity has forced the consumer to make other plans we install solar panels at considerable personal cost ,making use of clean power production and taking pressure off the grid we should be incentivised and not penalised !! we therefore demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. Insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. Require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households.	Lizelle	self-employed
	2026-09-02 18:40:46	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I strongly object to the fact that you want to punish people who have taken it upon themselves to relive your useless power network from the burden of loadshedding. People like myself that own businesses and need a reliable source of energy in order to keep our business at home going and families free from your introduced decay, should not be penalised for thinking out of the box. This stinks of communism. I would rather invest in completely going off your useless grid than pay exhorbitant money so you and your chronies can keep on living in luxury. Stop screwing over the paying segment of the population and start looking at the non paying masses that are choking the life out of us. I demand the following: That NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. I demand a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. I demand an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households.	Tiny	self-employed
	2026-09-02 20:27:23	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Marita	
	2026-09-02 21:17:18	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)		Tshilidzi Robert	business owner
	2026-09-02 22:12:01	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We installed solar because Eskom was unreliable in providing the service we are paying them to provide. Working from home made it more difficult to sustain power as it was erratic. We should not be paying for their mismanagement and short-sightedness. Businesses get reduced rates, but hardworking citizens are overcharged for usage. This is discrimination against Working class citizens.	LD	student
	2026-09-03 05:31:13	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	As Eskom was in total collapse with serious stolen financial issues, not to mention the Gupta/ Zuma debacle- South Africans were asked to ease the grid by find alternative electrical sources. We have done so successfully- with solar now we must be charged for using the sun. The wholesome board and staff are all over paid, they lack business knowledge on a numbers game by lowering tariffs and getting people to pay something and not stealing it. Secondly the municipalities are equally guilting in not hading monies over. From a world class company to collapse under the ANC cadre regime.	Gavin	business owner
	2026-09-03 08:06:47	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Arthur	employed individual
	2026-09-03 09:24:15	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This policy is self defeating. It accelerates grid disconnections and burdens remaining users in a loop. Currently Eskom has excess power they cannot sell and it seems, they are not looking at their own data. General population should not be subject to the whims of a single organization.	Dzidzai	employed individual
	2026-09-03 09:30:08	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The government should be encouraging everyone to install solar power to reduce carbon emissions. Home solar is much better than installing huge solar farms. . Putting a fixed charge on solar users will disincentivize households to install solar power. Thé alternative of going completely off grid is very difficult. Separate grid costs and charge for that through rates, along with charges for roads, street lights, etc Also people should be encouraged to be frugal with scarce resources like electricity. Paying according to use NOT fixed charges encourages responsible consumption.	Judy	retired
	2026-09-03 09:43:42	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I was assisted (Subsidize) by Escom to install solar assisted geysers. Now they are penalising for doing this? This will reduce the incentive to control electricity usage	Arie	retired
	2026-09-03 09:50:03	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		David	retired
	2026-09-03 09:50:27	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Totaly unfair. At the time when I got solar, we were actively encouraged to make the investment in solar and even received a tax rebate. Now we are getting penalised for saving ESCOM.	Horst	retired
	2026-09-03 10:08:02	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Totaly unfair. People were actively encouraged to make the investment in solar and even received a tax rebate. Now they are getting penalised for saving ESCOM. It is manipulation of paying citizens to cover the ones not paying!	Lorinda	
	2026-09-03 10:21:57	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Since 1994, this government has come up with ideas that doesn't work and we the citizens had to carry the brunt of their incompetence. It is time that they admit that they have no idea how to run a country, because the hard working citizens are being punished for their incompetence. If they don't change the direction of their trajectory then South Africa will be the next Zimbabwe.	Paul	retired

	2026-09-03 10:54:21	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This is totally unacceptable. Due to Eskom's incompetence we were encouraged to, or should I say, had little alternative but to lay out vast sums of money to install solar. Furthermore we are already being charged Electricity HU service and wire charge each month, and should we need Eskom's electricity we pay for it at an exorbitant charge.	Joanna	self-employed

	2026-09-03 14:53:47	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	How is it fair or in fact right when we had to spend our hard earned money to keep our lights on and our businesses going because the excessive corruption in the Government left them without enough money to keep our lights on. Now Eskom wants to penalise these same people for doing what they had no choice in doing!! And the same corrupt people are doing the same corrupt things!! I ask again, is this right?	Carol	retired
	2026-09-03 15:27:31	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Hands off private property. If I run a solar system with its own DB board, own wiring that doesn't touch your precious unstable grid, what is it of your business? Its like having a diesel generator and I am free to choose what appliances I run from your grid and what from my generator. Any rational thinking person that are by his full senses can see what you are busy with. You ran out of money a long time ago because of all the theft and corruption over many years. You are looking for a place to plug your huge financial hole, so you probably thought that solar users are rich we can penalize them. Surprise...every single person I know that got solar took out huge amounts of loans to subsidize the equipment, as it is really very expensive. We are still paying off this loans. If you ran the grid responsibly with constant power supply at affordable prices nobody would have even looked at solar power. ITS ALL THANKS TO YOU...and now? Now we must pay for your incompetence? How can this reasonably be right?	M	employed individual
	2026-09-03 15:33:58	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We have to get a choice to use or been connected to the current grid of the country or to be disconnected of the current grid. That will then apply that if you are disconnected, no basic electrical rates to be paid and you have to maintain your own electrical supply. The covermount must give the SA people a fair deal to decide for themselves and not don't caring people how want to get more and steel more. How is it fair or in fact right when we had to spend our hard-earned money to keep our lights on and our businesses going because the excessive corruption in the Government left them without enough money to keep our lights on. Now Eskom wants to penalise these same people for doing what they had no choice in doing!! And the same corrupt people are doing the same corrupt things!! I ask again, is this right?	Sophia	employed individual
	2026-09-03 15:37:38	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	When you couldn't keep the lights on you begged from homeowners to put up solar to help stabilize the grid as it was on the brink of collapse. We did what you asked as South Africa couldn't afford a total grid collapse. So I invested in a small inverter just to keep my food fresh and wifi running. Now you really have the arrogance to come and want to impose penalties after we helped saving the grid. Even your own people are tired of your corruption and poor service delivery. I am going to contribute to the first organisation that take this matter to court for sure. How can you reasonably justify this? Its just immoral and arrogant from Nersa, Eskom and of course the ANC. Scrap that proposal. I do support IPP's as suggested in your paper. Stop targeting solar users, we will not be bullied.	Matt	employed individual
	2026-09-03 16:06:00	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	As much as there are solar users that are using less power from the grid, most new appliances use less electricity than older versions (energy efficiency) and also residences living a frugal lifestyle will all be punished under this new plan!	Johannes	
	2026-09-03 17:12:47	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The Taxation merry go round just keeps on spinning faster and faster. At every turn we are being Penalised for what SOE's have destroyed and are expected to bail them out once again without any improvement in Service Delivery. The Peter Principal has brought about all the Governments woes, for which We are expected to simply accept the tirade of hot air and Incomprehensible reasons as to why SOE's Have to be Propped Up by Taxing Everyone who are already Taxed to Death. We are battling to Survive instead of being able to Thrive. Fix the Problem and not the Symptom, get rid Of Dead Wood, Cut Outrageous Salaries By Two Thirds and guess what - surplus money will Miraculously Appear.	Greg	self-employed

	2026-09-05 22:10:34	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is absolutely terrible how the govt and Eskom have at first encouraged us private households to install solar power in our houses and now they are punishing us for having done just that! In Germany, which has much less sunshine than we in SA, the govt encourages solar power installations by private households by various means: For quite some time, it gave private households a subsidy of up to 10200 Euro (about R193000!) to install a solar system, and to date they still give tax advantages for solar syatems, like no VAT when buying the components of the system, income tax relief and a very good price for households which sell surplus solar power to the network. Eskom and Govt, your NOT doing it right here in SA! We should definitely not have to pay a monthly fee just for being connected to Eskom power, we should only pay for the power we USE from Eskom!	Rolf	retired
	2026-09-06 07:36:37	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Chagring fixed fees for grid connection for off-grid homestead energy generators is nothing but forced revenue theft. Electricity use should have the same cost for every one, and if a grid-connected homeowner uses grid power to suppelment their solar demand should be of no concern to the government. It is in fact saying that people who use less electricity should be punished for it, rather than incentivised, which is completely backward planning. What we need instead is subsidies in the form of VAT and rates reductions for anyone generating their own electricity, not penalties. This is just more revenue theft, plain and simple.	Kent	self-employed
	2026-09-06 08:24:26	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Aaron	retired
	2026-09-06 10:32:09	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Wholesale Price Volatility and Market Power Manipulation: Eskom Generation still controls the overwhelming majority of South Africa’s dispatchable baseload power. In unbundled spot markets worldwide, dominant suppliers have engaged in economic or physical withholding to artificially spike market clearing prices. Without hard statutory bid caps and aggressive oversight, wholesale price volatility will be passed directly down to retail consumers.	Adrian	retired
	2026-09-06 11:43:28	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Tax payer initiative at penalty for government lack of future capacity expansion. 	2026-09-06 17:52:19	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We just have to look at the current profit that Eskom made to understand what is going on. It is samefull to event suggest that people that use solar should be taxed.	Francois	
	2026-09-06 18:01:38	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		James	retired
	2026-09-06 18:16:59	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is due to the improper handling of our country that we as a consumer had to look for alternative ways to sustain our life styles and now that the government is not making money of off us they are trying to put tax onto our improvements where they fell short	Johannes	retired

	2026-09-06 18:32:28	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Stop punishing people for having solar due to the lack of this country's ability to supply affordable, continuous electricity. Electricity is unaffordable, and we should only pay for what we use.	Lynette	retired
	2026-09-06 18:50:56	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Once again, the financial burden is being placed on the regular citizen whilst the responsibility has been shrugged by the government. The initial problem was caused by the government, which private citizens helped solve by reducing the load on the grid. Now that this has been achieved, the government has woken up and realised that they, once again, cannot manage the problem.	Kirstin	employed individual
	2026-09-06 19:18:42	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	You cannot people for alternatives when we went through major load shedding. If we're not for roof top solar the country would still be facing cuts.	Imraan	
	2026-09-06 19:47:59	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I am currently involved in an almost year long battle of paying for "the network/grid", but with no support or technical assistance with a problem where I have had no supply to my property, but still got billed for almost a year. Why should we pay if we get NOTHING at all as consumers who have been left no choice but to install a multi-hundred-thousand Rand system to be able to live a normal life? I absolutely reject this penalty tax on residents with solar installations (forced to be installed at our cost due to complete inefficiency and corruption!!)	Andrew	self-employed
	2026-09-06 21:08:24	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	What the actual!!! Make us pay for the sun?! Get lost! This government has destroyed this country systematically and I will pay no more than I should.	Wayne	
	2026-09-06 21:39:49	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Marli	self-employed
	2026-09-06 22:28:16	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Dear Sirs, The price increases at Eskom are equivalent to "a war on consumers." A 10 - 15% cost overrun on Medupi and Kusile Power Stations would be acceptable but +300% cost overruns are totally ridiculous and indicate a loss of qualified personnel or large scale mismanagement or corruption. An electricity grid is a sine qua non of power production and I don't believe it warrants separate payments. Escom should welcome consumers to their grid and pay them for their excess capacity. An ex South African in California sells all his excess power to the grid at exactly the same price that they charge him at night. He has no need of any batteries. South Africans are forced to buy very expensive batteries. Consumers with solar systems are regarded as "the enemy" by Escom rather than as potential partners. Escom needs a grid to utilise excess power received from consumers. The situation at present created by Escom forces consumers to try & be self-sufficient to protect themselves from the highest electrical power price increases in the World. Kind Regards Andrew	Andrew	retired
	2026-09-06 23:28:36	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	First we were offered a refund on solar panels installed and now we have to pay taxes on those same solar panels that we were asked to install to prevent the grid from crashing …. That just shows the extent of the greed in ESCOM ….	Linda	retired
	2026-09-06 23:32:40	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Just another devious way to steal money from residents. It's thanks to everyone's savings that went into installing solar in houses that the grid hasn't crashed yet and nobody can appreciate that …. Instead it's just pay more so that everyone working in government and Eskom can steal more	Linda	self-employed
	2026-09-07 00:23:43	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	South Africa benefits greatly from the investments of the middle and upper class households and businesses in solar energy. Many more South Africans would like to do the same, but are prohibited by the large outlay and admin burdens of a rooftop installation. Many more would contribute to a more stable grid if we were to facilitate balcony solar or "plug-in solar" technology. The costs are significantly lower, and within reach of most citizens. Consider the deferred maintenance that the service provider saves when their load now provides energy instead of consuming it. The steps to facilitate balcony solar can be summarised in the white paper available for download on: https://solarunitedneighbors.org/wp-content/uploads/2026/01/BrightSaver-WhitePaper-DemocratizingSolar.pdf 1. Define a new class of small photovoltaic systems no larger than 1,200 watts. 2. Exempt these small systems from utility interconnection requirements. 3. Exempt these small systems from net metering.	Fabian

	2026-09-07 09:31:38	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The public has expended huge costs to be less reliant on Eskom electricity by taking the initiative of installing solar panels, etc. That was because Eskom failed to supply regular and reliable electricity. Having done so, now Eskom wants the users to again pay more to bail out Eskom in spite of their failure. No fair or equitable.	EGON	self-employed
	2026-09-07 09:35:31	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Pay for what you use. Domestic solar power owners still pay for what they use, there is no FREE RIDING. Illegal connections are FREE RIDERS. Easier to bill the honest person than the illegal parasite. WARNING: Have they thought about it that if Domestic solar power owners decide to disconnect from the grid, how much they are going to receive then, much less than what they will in with "sun tax". Watch out for the revolution. Eskom made so much profit in the last 2 years, why do they want more money, the ANC is bankrupt, we channel the money to them to keep them alive, a "bail out" as they are so good with seen in all state entities. How many qualified skilled people do the muncipalities have, in the case of a break down, how many days will people be without power, with DSO we keep things running.	Nico	retired
	2026-09-07 09:37:25	No I do not	Fixed Charges & Solar Penalties		Energy Sector Professional / Engineer	It is unfortunately unacceptable that tax and rates paying individuals need to be held liable for maladministration of state institutions The fact that this artificial charge needs to be introduced is simply bad business planning AND picking the fruit of poor decision making.	Robert	employed individual
	2026-09-07 09:38:47	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The Government requested citizens to assist Eskom (incompetent monopoly which led to blackouts) by using less electricity to reduce blackouts. Citizens were motivated by Government and Eskom to consider installing solar energy systems as an alternative source. To penalize the residents (now that the blackouts are under control) who reacted positively to the requests, is absurd. If we are not allowed a so-called "free-ride" on the municipality's network, we will simply detach ourselves totally from the network and generate our own electricity. We will NOT pay for the Government or Eskom's incompetence.	Louis	self-employed
	2026-09-07 09:50:39	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Graeme	retired
	2026-09-07 09:54:23	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	As a small usage domestic user, I am being penalized by both Eskom and Ekurhuleni Municipality for installing embedded roof top solar. Ekurhuleni introduced a monthly admin fee and moved small households to a higher tariff. Solar users have to register their systems with Ekurhuleni in order to be moved to the higher rate. This is just an additional form of tax on solar users and is unfair as it targets smaller users. (less than 600 units per month). Eskom is using their monopoly to manipulate users. Eskom's ridiculously high rate of tariff increases is making electricity unaffordable. Furthermore, Municipality's inability to manage their financial commitments towards Eskom adds to the problem.	Danie	retired
	2026-09-07 10:04:44	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Just another way for government to charge individuals who have found a solution for a problem and paid for it out of their own pockets. Rather get rid of the corrupt, overpaid & under qualified people at eskom & cut off all illegal connections. Clamp down hard on cable theft, with harsh enforced punishment & the government needs to look at installing solar operating systems themselves	Lynn	
	2026-09-07 10:08:50	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Justin	retired
	2026-09-07 10:21:09	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	As Escom could not supply households with electricity, we as home owners had to make another plan and now we are getting penalized? How is that fair? It is unacceptable to now charge homeowners for your poor management decisions. Escom should be penalized instead and Escom should not be the only electricity supplier. It is time that Escom gets competition.	Liezel	employed individual
	2026-09-07 10:41:12	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		gail	retired
	2026-09-07 10:41:44	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	When it was loadshedding Eskom forced the businesses and the public to find their own way to supply electricity for themselves. Eskom even requested the public sector who had the mean to do so, should supply Eskom with extra electricity for the grid, which many people did by putting up huge panels in open secured fields so as to aid themselves and Eskom. Now Eskom wants us to pay them monthly for using these resources!!!! You will not win this cause because enough is enough.	G	
	2026-09-07 10:58:27	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Bongani	
	2026-09-07 12:03:01	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I am paying ridiculously high fixed charges already. I have been a customer for decades. The fixed charges are unjustifiable. Also, many of the maintenance costs incurred in our semi rural area are due to faults in Eskom's own system because it is not properly managed. In addition, we should not have to pay for bad management and defaulting customers. If I don't pay, or Eskom subcontractors read my meters wrongly, I am immediately cut off. Why should I pay for other's million rands of defaults?	Tawheda	

	2026-09-07 12:14:36	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Your incompetence has forced ys t9 spend money we couldn't afford on our own electricity production. This is already a shame on ESKOM. Now you want to penalise us for solving your crisis while you gloat over producing "too much" electricity. This after you completely destroyed countless businesses and industries because of the unteliable electricity supply.and high costs. Go jump in the sea. NO!!!!	Gerrit	Non-profit
	2026-09-07 12:18:18	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The already overcharged consumers should not be penalized for Eskom personnel's incompetence	Gideon	employed individual

	2026-09-07 13:01:27	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	A small percentage of electricity generated by Eskom can be considered clean energy. Coal-fired stations provide the backbone of Eskom's electricity generations. It is a known fact that coal-fired power causes respiratory diseases resulting in hundreds of thousands of deaths worldwide. The impact it has on global warming is well known. The rest of the world must take notice that South Africa intends to raise more revenue for the generation of dirty energy at the cost of clean energy. Paying for what you consume is a great incentive for consumers to use a product such as electricity sparingly. Moving to a fixed monthly capacity and network charge model nullifies the incentive. What will prevent consumers to use a much electricity as they please.? This idea is not fair and is simply another socialist principle forced down on us.	Tinus	self-employed
	2026-09-07 13:08:23	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom has been mis-managed for years and therefore failed and fallen into disrepair and cannot provide electricity to the country as a whole due to corruption and management using Eskom as a cash cow. As a result, the price of electricity has become unaffordable, and the people actually paying their bills and are subsidising the people not paying their bills due to illegal connecting, informal settlements, etc, Now the Municipalities are trying to recover some of these funds by taxing those who can afford solar, who are moving away from Eskom because it has become unaffordable. this is not a sustainable solution and completely unfair to expect people to pay a tax on a product that they have already paid tax in installing. Again good abiding citizen are suffering due to the governments incompetence and corruption for years and years.	Marianne	
	2026-09-07 13:14:42	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	All I can say is how much more does the useless government what to steal from the people of this country.	Donald	employed individual

	2026-09-07 14:55:48	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Just because Eskom has been mismanaged and the government can't recover costs from certain sectors why should those already paying for services pay more. Totally disagree with solar users or owners being taxed at all. What value add service is this paying for. Should be free market managed by demand and supply and proper management of Eskom and other electricity services. Pay for what we use and not penalities where we already installed solar at time of load shedding. Accountability must be where it should be in this situation. Not penalizing the man in the street or any business.	Diane	employed individual
	2026-09-07 15:07:05	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The "free-rider" label is false: solar households cut peak demand, defer grid upgrades, and lower wholesale prices, yet the policy ignores these benefits while penalising lower volumetric usage. Higher fixed charges are regressive. A flat mandatory fee hits low-consumption households hardest (renters, low-income families) and kills the price signal for conservation and off-peak shifting. It undermines clean energy adoption. Eroding solar's financial return discourages renewable investment.	Tiaan	employed individual
	2026-09-07 15:26:10	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Caro	employed individual
	2026-09-07 15:26:25	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Gated communities will be unfairly targeted by Eskom while individual properties in suburbs will potentially skip assessment. Eskom should focus on cutting illegal connections rather than focusing on people who are legally connected and installed solar to counteract the inefficiencies in Eskom's supply stream and for environmental reasons.	Krisha	retired

	2026-09-08 08:06:06	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	In principle, I have no problem having my electricity tarrif split into fixed and variable costs, AS LONG AS THAT IS DONE CONSISTENTLY TO ALL WHO USE THE INFRASTRUCTURE. The infrastructure cost to a solar producer is no different to the indigent user (unless the solar user feeds back into the grid, in which case there are other ways in which the infrastructure cost is recovered). The difference is that they (solar user) no longer contribute to the variable use to the same extent as before, but that is the point... they don't use (as much) grid power and therefore shouldn't have to pay for it. At their OWN expense they provided alternative electricity production mechanisms and they should not be penelised for that, especially when you consider the inability of the State to provide reliable electricity and that independent producers are a big reason why we no longer have loadshedding. If you want to remain connected to the grid, by all means an infrastructure fee is in order (you are using it). But then you should be charged as much for its use as the ordinary electricity user, and indigent electricity user. You pay for what you use! May the court cases against The Cities of Tswane and Cape Town be a warning regarding the law's view on unfairly charging some users.	Hannah	unemployed individual
	2026-09-08 08:25:04	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Tom	retired
	2026-09-08 08:33:02	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Anyone who has solar panels on their roofs has invested own money to alliviate the electricity problem while governments have slept on the job to provide electricity for their people (for whatever reason). Punishing them with a tax now is targeting the wrong people.	Gina	retired
	2026-09-08 08:41:51	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Marietha	

	2026-09-08 09:12:03	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Bottomline: I don't see why those who pay for solar at their own expense, largely motivated by unstable supply and ever-increasing rates, should be penalised. They invested, they carry the maintenance, they have to meet compliance. The municipalities are only seeking to find ways to capture funding sources and penalize those who seek to invest to stabilize their power supply at affordable. It's time the state, at all levels, remove themselves from all things power-related. It can be sold to independent power producers who through legislation can be kept competitive. Even here, the state would still get funds through VAT for example. Easy money, don't get hands dirty.	Grant	business owner
	2026-09-08 09:17:50	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Flip	
	2026-09-08 09:25:11	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Opposed to yet another tax. Authorities should allow people to be off-grid without charges.	Jean-Michel	self-employed

	2026-09-08 09:53:20	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I FULLY DISAGREE WITH THE Mandatory Fixed Grid Charges on Rooftop Solar!! As a taxpayer and consumer of electricity I have seem your 10s of % increases over so many years, the utter corruption of Eskom and the ANC regime and everything it touches, and the endless loadshedding of years ago. We are not asking nicely, we WILL remove ourselves from the electricity grid due to SOE failures and the complete hatred of the idolatrous State against its citizens, who it treats as chattel slaves.	Doug	self-employed
	2026-09-08 09:57:51	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It must be accepted that income for infrastructure maintenance and capital expenditure costs come from a combination of billing consumers for user costs (user pays principle) and the state/fiscus. Now the state gets money to pay over to SOE's from the tax payer. I'm a tax payer. Now, given that I am a user of electricity, irrespective of the amount I use and importantly that I'm billed for the use AND that i pay various forms of tax on my income and investments PLUS many other taxes I pay, it is extortionist on the part of the State to wish to levy on me an additional 'tax'. It is important that the State generally, but Eskom specifically instead of merely increasing the financial burden on citizens reduce its costs by, amongst other things, being prudent with the number of employees and more importantly stop being so overly generous with reward and remuneration of its employees.	Wayne	retired

	2026-09-08 21:46:07	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I strongly object to the proposed electricity transformation paper. The introduction of mandatory fixed solar charges unfairly penalizes households and small businesses that have invested in renewable energy solutions. Instead of encouraging energy independence and sustainability, these charges will trap consumers in a system that raises costs without offering meaningful choice. Furthermore, the captive consumer price hikes embedded in this proposal will disproportionately hurt ordinary households and small enterprises already struggling with rising living expenses. This approach undermines affordability and risks widening inequality in access to reliable electricity. Lastly, the paper fails to address the severe municipal revenue losses that will result from these measures. Municipalities rely on electricity sales to fund essential services. Stripping away this revenue without a viable replacement strategy will destabilize local governance and reduce service delivery, directly harming communities. This proposal prioritizes institutional revenue protection over consumer welfare and sustainable energy growth. I urge policymakers to reject these measures and instead pursue reforms that promote affordability, transparency, and genuine support for renewable energy adoption.	Andre	employed individual

	2026-09-09 08:06:14	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Under this framework, tariffs will shift away from pure volumetric consumption charges (cents per kilowatt-hour) toward mandatory fixed capacity and network charges for all grid-connected customers, regardless of how little electricity they consume. Only consumers who disconnect completely from the national grid will be exempt from these fixed fees. Households and small businesses that invested significant private capital into rooftop solar, batteries, and energy efficiency to protect themselves from load shedding will be forced to pay higher monthly baseline connection fees. This structural shift acts as a financial penalty on private decarbonisation, extending solar payback periods and increasing electricity bills for low-volume and frugal users.	Adele	employed individual

	2026-09-11 08:18:05	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Who OWNS the sun??? What a cheek for a government to want to place yet another TAX on consumers who make use of natural resources (which can never be controlled by them), at their OWN cost to establish. We PAID out of our own hard earned income to install solar panels etc.. What right does the government have to place a TAX on solar and a regular one at that?? We, as pensioners, who barely scrape by trying to stay in our own homes without disruptions and the danger that comes with blackouts, already face hikes in electricity every year, plus water hikes... essential life needs, never mind another thing to pay! Life in SA is already difficult for ALL citizens - with roads and infrastructure falling apart at the seams, broken down hospitals, one can go on and on regarding what we USED to have!	Alli	retired
	2026-09-11 10:16:23	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I strongly object to the principle of imposing unavoidable fixed electricity or network charges on consumers irrespective of the amount of electricity they actually consume. I accept that electricity infrastructure has to be maintained and that consumers who make substantial use of the electricity network should contribute fairly towards the cost of providing that service. However, it is fundamentally unfair to penalise consumers who have invested their own money in solar generation, batteries and energy efficiency in order to reduce their reliance on the national grid. These consumers have already invested substantial private capital in reducing their demand on the electricity system. Their reduced consumption should be recognised as a positive contribution to energy security and the reduction of pressure on the national grid, rather than being characterised as "free riding". I particularly reject the principle that a consumer should be compelled to pay for a service or infrastructure that they make little or no use of, simply because that service remains available to them. Should any fixed connection or network charge ultimately be considered necessary, such a charge must not be an arbitrary amount determined by Government, a municipality or a state-owned utility without demonstrable justification. Any such charge should be independently regulated and transparently calculated on the basis of the actual and efficiently incurred cost of providing the relevant service or maintaining the relevant network capacity. The methodology, assumptions and underlying costs should be publicly disclosed and subject to meaningful public and regulatory scrutiny. There must also be clear safeguards against such charges becoming a mechanism for recovering the costs of inefficiency, wasteful expenditure, poor management, excessive staffing, inappropriate procurement or other costs that are not reasonably attributable to providing the service to the consumer. Consumers should not be required to fund inefficiency simply because the service provider has the ability to impose a charge. South African consumers have experienced repeated increases in the cost of essential services while being expected to accept that those increases are necessary to sustain financially inefficient systems. The answer to declining electricity consumption cannot simply be to transfer the resulting revenue shortfall onto consumers through ever-increasing fixed charges. Government and state-owned utilities should instead be required to demonstrate that their costs are efficient, necessary and properly managed before those costs are recovered from the public. I therefore reject any policy that effectively makes consumers financially liable for electricity they do not consume, particularly where they have invested their own resources to reduce their dependence on the grid. If a charge is imposed, it must be demonstrably necessary, proportionate, transparent, independently regulated and based on efficiently incurred costs — not an amount determined at the discretion of the service provider or Government to compensate for its own inefficiency or revenue shortfalls. The policy should encourage energy independence, private investment in renewable energy and reduced demand, rather than creating financial disincentives for precisely the behaviour South Africa should be encouraging.	David

	2026-09-11 15:56:10	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Many South Africans spent large amounts of capital to sustain living and survival as a result of the government and Eskom failing their people and rate payers once again throughout the load shedding season. The issue was lack of supply. People starting finding their own solutions due to your supply issues. Now suddenly it has become a "riding the system" issue, because real rate payers consume less of the unstable electricity grid supply. While many are still paying off excessive loans for their solar investments the ones that allowed the system to decay, want taxes from those that took the load off their decayed supply system. Completely unconstitutional!	D	employed individual
	2026-09-11 15:58:40	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Originally Eskom subsided the purchase of solar panels. Now they want solar users to register even though they are not downloading to the grid, failing which they will penalize us. It's as bad as CoJ charging residents R210 per month irrespective of being off the grid. Another case of ripping South Africans off. More money to steal.	Jasper	retired
	2026-09-11 15:59:13	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	During the many years of loadshedding , we as electricity consumers, were encouraged and sometimes begged by Eskom and our Municipality to reduce our electricity usage to protect the grid from collapse. Many households and businesses responded by installing solar electricity systems. This was done at our own cost with zero subsidies offered and zero tax breaks offered. This selfless action by households and businesses was a large contributing factor to the ending of loadshedding for the whole of South Africa. I find it immoral and disgusting that Eskom and the Municipalities are now considering punishing already overtaxed citizens and companies who took the initiative to help reduce the load on the electricity grid. This grid was severely compromised by years of poor governance, poor planning and lack of maintenance by the relevant bodies which were tasked with managing it.	Ray	retired

	2026-09-11 16:36:36	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Effectively yet another form of 'wealth tax' where those who are actually keeping the country running are being burdened to breaking point with the rising cost of living in SA. Sad that if tax were utilised effectively and without theft and corruption this conversation would not be being had.	Willie	
	2026-09-11 16:38:17	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I am both a homeowner and a small business owner. Yet again the tax paying public bear the burden of an overinflated, Inefficient, cadre run entity. If it had not been for the like of me and property owners (both commercial and private) buying solar energy, the country would have collapsed at the height of load shedding, I can't even suggest privatising Eskom as it will be sold to a connected cadre. God help the people of SA.	Larry	business owner
	2026-09-11 16:39:09	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Ernst	
	2026-09-11 16:40:47	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Stop the "Sun Tax": Do not penalise private capital and solar investments with punitive fixed grid fees. Protect Captive Consumers: Bar municipalities from hiking tariffs on non-solar homes to cover lost revenue from industrial and off-grid defection. Transparency First: Ensure wholesale market reforms do not leave everyday households footing the bill for grid infrastructure.	Michael	retired
	2026-09-11 16:42:56	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	South Africa needs reliable, affordable electricity — not another costly market restructuring that risks putting profit ahead of security of supply and ordinary consumers. Fix Eskom, strengthen generation and the grid, and put reliable electricity first. Stop the Corruption !!!	Martin	employed individual
	2026-09-11 16:44:13	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	ESCOM must reprioritise it stategies by reducing over inflated bonusus and salaries and by reducing tbe excessive amount of ANC cadre employees, the majority of whom do not earn and deserve their salaries.	Fred	self-employed
	2026-09-11 16:45:56	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The government and municipalities must stope fleecing the public to pay for their extravagant lifestyles. This is just another way to fund the corruption.	Sharron	
	2026-09-11 16:47:04	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	There is a legitimate concern about municipalities losing revenue as more customers generate their own electricity, but that doesn’t automatically mean ordinary households must carry the whole burden. Municipalities also need to control waste, improve collection and manage their finances properly. Blaming solar owners is too simplistic.	Curtis	employed individual
	2026-09-11 16:47:57	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Again, we were forced to solar due to Eskom's inability to consistently produce electricity. Now we are forced to pay yet again for their incompetence and corruption, where their salaries and bonuses outperforms our very small salary increases. This remains unfair	John	employed individual
	2026-09-11 16:51:15	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Stop the "Sun Tax": Do not penalise private capital and solar investments with punitive fixed grid fees. Protect Captive Consumers: Bar municipalities from hiking tariffs on non-solar homes to cover lost revenue from industrial and off-grid defection. Transparency First: Ensure wholesale market reforms do not leave everyday households footing the bill for grid infrastructure.	Yu

	2026-09-11 17:06:30	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Some people got solar as they have family on oxygen machines, and needed backup during loadshedding and power outages. People were asked by the president to invest in solar, to ease the pressure on the grid. Some people used their last savings to install solar for the above reasons, and they are unemployed or pensioners with income below R9000. 00 or R20000. 00, but with a lot of expenses. There IS no more money to pay high fixed costs or penalties.	Elna	employed individual
	2026-09-11 17:08:01	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Gail	employed individual
	2026-09-11 17:09:13	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Disgusting! Eskom systematically failed to provide a basic service, owing to ineptitude and corruption. The economy was tanking, and it was left to citizens to fork out for our own solution, which most of us could not afford. Yet we went ahead, to everyone's benefit, as this greatly reduced demand on the grid. We were even offered a tax incentive to be part of the solution - only to now be slapped with R400 a month in fixed electricity charges for absolutely nothing. Now you propose to penalise us further. This is SO on brand for SA's govt - squeeze every cent out of citizens, for non-delivery of services. You should be deeply ashamed.	Erica	
	2026-09-11 17:11:07	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom veg om sy monopolie te behou. Volgehoue nonkompeterende bestuur (oormaat oorbetaalde werkers, swak bestuur, korrupsie, diefstal swak onderhoud ens.) deur etlike jare het Eskom se winsgewendheid ondermyn. Hulle moet hulle besigheid verbeter en kompeterend raak. Intussen bestaan hulle net planne om die kompetisie te smoor terwyl hulle net slegter raak.	Johan	employed individual

	2026-09-11 18:55:43	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	When Eskom could not supply power I took the burden of installing solar to keep on working. It cost me dearly and now they want me to pay because they don't make enough money. Sorry I am not your cash cow to milk till I am dry.	Fra cois	
	2026-09-11 19:01:34	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Mary	
	2026-09-11 19:03:10	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I have Solar and it does benefit me, but I got it because Eskom couldn't produce enough power and we had all the loadshedding issues, now they want to penalise the people that essentially helped to lighten the load.	Dirk	employed individual
	2026-09-11 19:04:02	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom announced it made a big profit (30.3 Billion) but is producing less electricity and sales have dropped. The public went to great expense to become semi- independent because of load shedding, cable theft and vandalism and helped Eskom with reducing load shedding are now being punished FOR USING THE SUN WHICH IS FREE AND DOES NOT BELONG TO THE ANC. This is just another government scheme to exhort money from paying customers to sponsor their corruption. The CEO & CFO get a massive bonuses and for doing nothing. Go to the squatter camps and you will find the free-riders with the illegal connections.	Brian	retired
	2026-09-11 19:05:13	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I have a few issues. First of all to single out rooftop solar as the cause of diminished electricity sales . I remember installing a solar geyser with Escom subsidy. Most homes now have a solar geyser and as a geyser is the single greatest consumer of electricity in the average home, solar geysers contribute alongside rooftop solar to reduced electricity sales. Secondly it is common cause that rooftop solar generates enough electricity to avoid permanent loadshedding. Thus those with rooftop solar facilitate uninterrupted electricity to those who cannot install this. Thereby reducing reducing pressure on Escom to use diesel and or gas. So for generating this saving we would be punished with higher availability charges . I can imagine a civil disobedience campaign whereby all rooftop solar owners switch their panels of at short notice, creating a huge spike in demand.	Eric

	2026-09-11 20:10:30	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Let escom recover their monies from corrupt current and past employees, cut down on salaries and workforce, heavy panalties for electricity theft and vandalism. Cut power on non paying municipalities. Create strong competition by opening the market.	Alexander	self-employed
	2026-09-11 20:10:56	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		David	
	2026-09-11 20:13:30	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I strongly disagree with the notion that it is the fault of private persons who were forced to find alternative energy sources because of Eskoms failure to provide reliable energy. Therefore it is totally unfair to penalise solar investments with punitive fixed grid fees. The government and all departments, including suppliers of electricity and water were voted in to serve the inhabitants of this country and not to push us into suffering, unfair billing and for some, bankruptcy.	Liz	
	2026-09-11 20:14:33	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I have spent my hard earned money to acquire solar and inverter facilities. The country suffered the loss of use of electricity through Escom's power cuts while having to still pay our accounts at the Municipality. We made our own plans and paid for solar and inverter facilities. I'm done paying to assist Escom and all their mentioned above plans for the general public to pay anything pay more.	Erna	retired
	2026-09-11 20:17:47	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom can't expect people to be taxed for investing in their own energy solutions due to their failure on 2 fronts. 1 front being supplying electricity and the other being affordable electricity. Citizens have invested to take that "load" off Eskom and the ever spiralling of tariffs . They are also running at a surplus of energy and generated a profit of R30billion which means they can't drop their charges since they have too much power and too little consumers	Caleb	employed individual
	2026-09-11 20:19:26	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	It is absurd and againts our constitution to tax those that help themselves especially if their contribution help lift the country out of economic poverty that corruption in Escom has been relentlessly leading us towards.	teo	business owner

	2026-09-12 00:00:07	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Firstly, to tax individuals on something such as free sunlight is about absurd as taxing us for the air that we breath or drinking rainwater. The municipality has no right to penalize individuals for having solar systems especially since a vast majority had to install solar power to counteract the irregular mains power and load shedding caused by Eskom. There was no compensation to individuals or companies from any government department for the loss in revenue due to load shedding for the many years that we had it. The increase price of electricity each year shows a total disregard and is like a slap in the face to the consumers particularly now that Eskom has a surplus of power. Any increase in a connection fee continues to show how municipalities do not have any consideration for consumers. As it stands now, the municipalities are employing bullying tactics as they know that most of us must have electricity and a lot of us don't have solar systems. Municipalities are a disgrace to this country and are making us suffer for a problem which was originally caused by Eskom almost 20 years ago.	IAN	retired
	2026-09-12 00:22:20	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I strongly object to the direction set out in the Electricity Sector Market Transformation Position Paper. Framing solar households as "free-riders" and shifting costs toward punitive fixed capacity charges penalises private citizens for investing in their own energy resilience, investment the state has consistently failed to provide at scale. At the same time, allowing large industrial users to bypass municipal networks while leaving ordinary "captive consumers" to absorb the resulting revenue shortfall is not restructuring, it is cost-shifting from those with the power to leave onto those who have no choice but to stay. I call on the Department to: 1. Reject the "Sun Tax", do not impose punitive fixed grid fees that penalise solar investment. 2. Protect captive consumers, prohibit municipalities from recovering lost industrial and solar revenue through higher tariffs on ordinary households. 3. Commit to transparency, ensure any market reform process publishes clear modelling of who bears the cost before implementation, not after. This policy will affect every household's monthly budget, solar or not. I ask that this objection be recorded as part of the formal public participation process.	Karl	employed individual

	2026-09-12 06:33:17	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I am strongly opposed to imposing high fixed grid tariffs on households that invest in rooftop solar. Homeowners who generate their own electricity have already invested their own money to reduce demand on the grid, and they should not be penalised through unavoidable monthly charges simply because they use less electricity from the grid. While grid infrastructure must be maintained and fairly funded, the solution should be transparent, cost-reflective and proportionate—not a punitive "anti-free-riding" charge that undermines the incentive to invest in renewable energy. Such fixed charges could discourage private solar investment, shift more costs onto households that remain dependent on the grid, and ultimately slow South Africa's transition towards cleaner, more decentralised electricity generation. 	2026-09-12 06:59:00	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. I insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. I require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households.	Annemarie	retired
	2026-09-12 07:01:12	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		F	business owner
	2026-09-12 07:05:32	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Mathew	employed individual

	2026-09-12 07:05:39	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	There can only be ione driving force behind this...Ramagopa who has promised lower powewr charges over the past several months ...presumabbly to all but now clearly becoming only for the poor with the electricity grant of no payment for the first 300kw/h of use while everyone e;lse coughs up heavy amounts to pay for the free electicity others (above) gain. Equality is the clarion call of the ANC and other parties that work with the ANC in particular the EFF and PA et al. The government has brought on poverty in the extreme in SA and now loads those who live by their wits and careful financial management of their often meagre income (as in my case) as a pensioner relying on an inadequate pension form the State , whome I served loyally for over 45 years and who was rewarded with a 3% increase in March 2026 while inflation was well above this. I oppose these draconian measures to stabilise an inefficiently run municipality and an Eskom which hikes electricity prices by 8,8% while their top management granyts itsel huge increases while doing F-all othere than bask in the glow of what they claim led to the stabilisation of the grid when in fact it was hugely thanks to the people who invested in solar which resulted in the reduction on the load on the grid ...not the leadership of Eskom's so called "fine planning" while feeding at the trough.	Ian	
	2026-09-12 07:09:23	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The proposed policy completely ignores the massive benefits that local solar generation provides in reducing grid strain and preventing blackouts. Ultimately, it serves as a protective shield for outdated utility monopolies at the expense of regular consumers and environmental progress.	Mildre	employed individual
	2026-09-12 07:09:24	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Hana	retired
	2026-09-12 07:10:10	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is heinous to pile charges on domestic users. Those who have tried to manage their electricity consumption now get lumbered with no free ride fees. Wealthy users will get off grid completely. What happens then? It is equally heinous to allow municipalities to make up their losses from large industrial users by charging huge costs to ratepayers. Transparency and fairness should be the essence of any new regulations.	Eileen	self-employed
	2026-09-12 07:11:25	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It seems state institutions want a full on tax revolt. Keep on messing with us and find out.	Philip	business owner

	2026-09-12 09:14:19	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	What the Policy Proposes: The position paper establishes the principle to “discourage free riding,” arguing that modern electricity networks have high fixed infrastructure costs and low operational costs. Under this framework, tariffs will shift away from pure volumetric consumption charges (cents per kilowatt-hour) toward mandatory fixed capacity and network charges for all grid-connected customers, regardless of how little electricity they consume. Only consumers who disconnect completely from the national grid will be exempt from these fixed fees.	Steve	retired
	2026-09-12 09:15:47	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The price of electricity is becoming unaffordable. We have spent so much money putting in solar and now I have to pay an expensive connection fee and equally expensive electricity when I use it. Eskom has wasted/lost so much money through incompetence and mismanagement but now the general public has to make up for this. This is totally unacceptable.	Margaret	retired
	2026-09-12 09:17:28	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	No sun tax	Estelle	
	2026-09-12 09:22:56	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This bill proposal is punitive and unjust. The government does not own the sun. It is a free gift from God to all.	Justine	employed individual
	2026-09-12 09:25:22	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom is now trying to cope with daily energy surpluses. As a result of events in the past which resulted from load shedding, Transformation Policies and State Capture many large users such as steel makers have closed down their operations and moved to other countries. Eskom in the meantime has resolved a number of their operational problems and now finds that their customer base has shrunk considerably. Eskom now require this vastly reduced customer base to fund their current operation. Unfortunately the captive customer base, those who cannot afford to migrate to other power sources, will be expected to bear Eskoms costs. The CUSTOMERS CANNOT AFFORD THIS!! This bill is not the solution!!!! Eskom will find that many will band together and form Stockvels to provide for their electricity needs. Escoms customer will be reduced even further. Anothe effect will be that many Municipalities will not have suffiecient funds to be able to fullfill their obligations.	John	retired
	2026-09-12 09:26:48	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	City of Cape Town misuse their captive solar users with extreme fixed monthly fees, and there is "no way out" that i could find. Real "mafia" power in action.	Johan	business owner
	2026-09-12 09:28:48	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The solar penalties & fixed charges are a real scam from the government. Why should we pay them especially when they are corrupt & fail to fulfil our needs due to "load shedding". If Electricity Minister claims that he has done al ot to avoid "load shedding", in recent years, then he has been lying to us as all he did was replacing the electricity shortfall with diesel productions. In fact, there was also a diesel scandal in Eskom where they paid for diesel that were not delivered at all - Corruption! Here it concerns more than 700 million litres of diesel that were paid but not delivered - refer to an article from Daily Maverick which can give you elaborate details on this matter. Being an honest citizen trying to help out by installing solar cells on our roofs, get penalised by the government who is fully committed to Green world. Fully unacceptable!	Leong	retired

	2026-09-12 09:45:41	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	When Government through Escom could not deliver through incompetence, cadre deployment, corruption and sheer mismanagement, we were left to our own devices to ensure a reasonable standard of living, whilst Ministers were provided with generators for free. Now, after us spending huge amounts, they want to penalise the honest rate- and taxpayer for taking initiative (and our money) to do what Escom cannot, will not and could not do - provide electricity at reasonable prices. This is a socialist state with communist thinking and bullying tactics. Rather than deal with the deep structural issues at Escom costing the public billions every year, they want to cover it up by extorting more money from a public already driven to the wall by cost of living increases, a recession on out hands, imported inflation and highest ever petrol and diesel prices	Theo	
	2026-09-12 09:46:15	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Zero point energy period.	Mychel	
	2026-09-12 09:46:56	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Because of crippling corruption, Eskom is a disaster. Don't penalise the consumer; the Govt must address corruption and clean up state enterprises. Don't penalise the little people for finding alternative ways of getting by when the government lacks the will to be efficient.	Anne	self-employed

	2026-09-12 10:09:28	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I am writing to object to key elements of the draft Electricity Sector Market Transformation Position Paper. This paper is being sold as a modernisation effort, but for ordinary households it functions as a cost-shifting exercise. If I invested my own money in solar to reduce my dependence on a failing grid, I should not be punished with a mandatory fixed "anti-free-riding" charge designed to claw back revenue the state feels entitled to. That is not fair market reform. It is penalising self-reliance because it's inconvenient for government revenue models. At the same time, households who cannot afford solar are being set up to absorb the fallout as large industrial users get to buy power directly and bypass municipalities altogether. When the big users leave and the wealthy defect to solar, municipalities lose their strongest paying customers, and the plan, as written, lets that shortfall be passed straight down to "captive consumers" who have no alternative. That is not shared sacrifice. That is the people with the least negotiating power being left to fund a system that has already failed them for over a decade through load-shedding, mismanagement, and tariff hikes running well above inflation. Before consumers are asked to pay more, whichever way they're squeezed, government and Eskom need to account for existing infrastructure failures and municipal debt, not restructure the market to guarantee revenue regardless of service delivery. I am not opposed to reform. I am opposed to reform that protects institutional revenue before it protects the people funding it. I ask the Department to: 1. Drop the fixed "anti-free-riding" charges on solar households. 2. Legally prevent municipalities from passing industrial-defection losses onto captive residential consumers. 3. Publish a transparent accounting of where existing electricity revenue and infrastructure budgets have actually gone before asking for more.	Robin	employed individual
	2026-09-12 10:09:44	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	House owners have spent a lot of money to install solar after it became evident that Eskom could not keep the lights on 24/7 for everybody, residential and businesses. Owners also dod so after the Government gave the incentives that an amount can be reclaimed from tax as a rebate. The goal posts cannot be changed now because Eskom and the Government failed to prioritise the expansion of electrical infrastructure due to the population explosion that the Government encouraged. The Sun is nobody's property, why should responsible citizens be penelised in choosing the better and cleaner electricity option. The Government is already taxing the ordinary citizens to death - siesa man. Enough!!	Rico	retired

	2026-09-12 13:32:29	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom has messed up the whole supply system. Now they want the consumer to pay for their mistakes. This is robbery and not ethical.	Bryan	retired
	2026-09-12 13:38:02	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We reject any “sun tax,” punitive fixed charges targeted at solar users, or registration regimes that function as barriers or revenue grabs. The sun belongs to no one. South Africans who invested in solar did so because Eskom failed them. Stop punishing private solutions to a public failure. Focus on fixing generation, transmission, and governance instead of extracting more from those who adapted. Legitimate, non-discriminatory network charges for actual use of the grid are one thing; taxing sunlight and self-reliance is another.	Bettina	
	2026-09-12 13:43:20	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is disgusting to not provide proper power and then demand that people pay a silly tariff when they’ve been forced to take their power into their own hands. Government, leave the people alone, dangit!	Matt	
	2026-09-12 13:44:53	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I bought a solar power system so as to eradicate the threat of load shedding, often without notice. This stopped power surges damaging electrical equipment as well as giving us the opportunity to maintain our lifestyle, while the Government were unable to give us any guarantees as to when the load shedding crisis, caused by corruption, fraud, illegal procurement practices, putting unqualified people with no experience of the energy sector and poorly maintained infrastructure. To blame solar power users for the lack of usage upon the grid and make us financially responsible for your abject governance is unacceptable. It is a better alternative to reduce the cost of electricity, have all of the non paying municipalities pay their monumental bad debts and enforce illegal use rather than thinking you can keep going to the same well to repair the financial holes in the discuss created by the ANC in Government.	Tim	retired
	2026-09-12 13:46:23	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	I think that the government cannot charge people who install solar anything. It is also not fair to charge people who remain on the grid more because so many people have found alternative forms of energy. Eskom's inability to supply enough power over the past years has caused so many people and businesses to invest into solar. It is not right now to punish anyone with higher rates. The rates should come down because there is less demand.	Gerda	business owner
	2026-09-12 13:47:15	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I reject any “sun tax,” punitive fixed charges targeted at solar users, or registration regimes that function as barriers or revenue grabs. The sun belongs to no one. South Africans who invested in solar did so because Eskom failed them. Stop punishing private solutions to a public failure. Focus on fixing generation, transmission, and governance instead of extracting more from those who adapted. Legitimate, non-discriminatory network charges for actual use of the grid are one thing; taxing sunlight and self-reliance is another.	Ana	retired
	2026-09-12 13:54:44	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Escom needs to generate electricity efficiently. Get red of at least 50% of the bloated oayroll. I think we are currently producing less electricity than pre 1994 with more than double the workforce at significantly higher salaries/wages than have been justified by cost-of-living increases. the time for gouging the taxpayers has come to an end. Employees must understand that holding consumers and the Kleptocracy to ransom has come to an end! The MEC for Infrastructure in KZN has done this with the Taxi controlled Business Forums and produced the first clean Audit O[inion from Treasury in the past 20 years plus. That is how we need to ron Government - as a business and not as a private bank.	John	retired
	2026-09-12 14:02:03	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	You can NOT BE CHARGED for the inability of S.A.'s power suppliers, i.e. Eksdom and municipalities., to supply continous and un-underbroken power which forces consumers to install solar back-up systems. We live in an area with repeated power interruptions and very slow repairs action by Eksdom, thus back-ip power bwcomes essential for us, so why must ww be penelised even more and more for the powe suppliers inefficiency !!!!!	Fanie	retired
	2026-09-12 14:03:01	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	When times were bad and load shedding was constant those who could afford to sought alternative power solutions, now that Eskom has recovered they now want to punish solar users for use of the sun! which was forced upon consumers due to Eskom negligence.	Graham	retired
	2026-09-12 14:05:46	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	Eskom and the defunct municipalities caused this problem. You can’t bill your way out of it and retain poor service delivery, corruption and overinflated salaries. In what world do you either bill someone for not using your product or overcharge those that do. This is merely another form of tax and you risk the honest few that remain from turning their backs on their integrity. Clean up your house and fall on your corrupt swords, else the next generation will pay the price of a failed state.	Dean	business owner

	2026-09-12 14:28:04	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom allowed load shedding to happen To keep on making a living we had to invest in solar and generators Now that we have installed all of this, they want to penalize us If they took action long ago then all of us would have been in a different satiation, but no they allowed overspending, corruption and mis management and inflated salaries to continue When our homes and business lost income, they did not care Now that they have forced the public down this road and they are losing income they want to force us to subsidize them again	Dawie	self-employed
	2026-09-12 14:37:17	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom on death spiral due to escalating costs and not real cost management or worker efficiency. Costs escalating out of control. Eskom does not incentivised to cut costs as they can pass laws to cover costs. Just another form of taxation. Paying again for something already paid by taxpayers.	Reuben	business owner
	2026-09-12 14:38:41	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom was not able to keep the lights on in2023.So It was invest in Solar or live in the dark. We were encouraged to install Solors at the time and were even given a Tax refund . It was very expensive to install and before we will see any savings from the Installation it will take many years. So actually we are already paying a very high price for my electricity. Take this into account.	Cynthia	retired
	2026-09-12 14:49:01	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Leon	retired
	2026-09-12 14:50:42	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We were encouraged to install Solar and were even given a Tax refund. The installation was costly and will take years to realise any savings from the outlay. Now the proposed changes will punish all those who helped ' keep the lights on' in SA.	Garth	retired
	2026-09-12 14:52:06	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The incapacity of Eskom to supply us with power supply to allow us to continue working forced us to invest in solar energy. This is an expensive initial step to take as a business. My husband and I are both healthcare providers: having uninterrupted solar supported power supply allows us to serve the community in our positions as healthcare workers. Without this, this would not be possible. How can we be penalised for this, just because of greedy government organisations? Makes no sense	Ischen	self-employed

	2026-09-12 14:53:28	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	1. Stop the "Sun Tax": Do not penalise private capital and solar investments with punitive fixed grid fees. 2. Protect Captive Consumers: Bar municipalities from hiking tariffs on non-solar homes to cover lost revenue from industrial and off-grid defection. 3. Transparency First: Ensure wholesale market reforms do not leave everyday households footing the bill for grid infrastructure.	Roy Botha	employed individual
	2026-09-12 14:54:30	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We were forced to invest in Solar due to Eskom's failure to supply us with electricity. The rolling blackouts was due to their inefficiency and Eskom's budget problems are a direct result of over staffing and inflated salaries. Enough is enough.	Guy	retired
	2026-09-12 14:57:18	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Solar energy is free energy, however sloar instalations are costly with pay back periods in exess of 12 to 15 years depending on the extent of solar power installed. Eskom is a hopeless energy supplier, top heavy with the gravy train passengers who contribute absolutely zero. If is wasn't for the initiatives of homeowners installing solar, Eskom would have plunged this country into the laughingstock of the developed world. eskom has degenerated from the world's cheaper energy supplier to one the most expensive in the past 30 years due to corruption and lack of senior management skills/	Ian	retired
	2026-09-12 14:57:49	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I pay the fixed charges in my business which accounts for approximately 70% of my monthly bill. I could easily create more jobs if that was not the case. The impact of fixed charges will further destroy household income. It is a unavoidable charge and will be the biggest part of the electricity bill. So a user cannot opt to save on electricity usage in times of financial constraint because a fixed usage charge will be drawing the funds from the household. Electricity generation should be left to the private sector going forward.	Harry	self-employed
	2026-09-12 15:01:16	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We support the reform of South Africa's electricity market, including greater competition, Eskom unbundling, and the development of an open wholesale electricity market. These reforms are necessary to improve energy security, attract private investment, and reduce the structural weaknesses that have contributed to the country's prolonged electricity crisis. However, such reform should not proceed at the expense of ordinary households, small businesses, municipalities, or consumers who have no practical alternative to remaining connected to the grid. Mandatory fixed charges on solar users, disproportionate increases for captive consumers, and measures that materially erode municipal electricity revenues risk undermining both public support for reform and the financial sustainability of local government. We therefore support electricity market reform subject to appropriate amendments and safeguards. In particular, fixed network charges should be transparent, cost-reflective and subject to reasonable limits; captive consumers should be protected from unfair or excessive tariff increases; and municipal revenue structures and legitimate cross-subsidies should be preserved during the transition to a competitive electricity market. South Africa needs meaningful electricity reform, but it must be implemented in a manner that is fair, economically sustainable, and protective of consumers who are least able to absorb additional costs.	Frans	business owner
	2026-09-12 15:01:58	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It was not my fault I had to install Solar because Eskom was so captured and destroyed. Why must I pay for our corrupt government??????	Darryl	retired
	2026-09-12 15:08:44	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom,s inability to provide regular power resulted in 16 years of loadshedding for industry and residential users. Now business and residents have been permitted to install Solar which many jumped on to prevent loadshedding. Eskom, which for many years told us to switch off consumers, effectively telling us to use less of their product. Now that policy has bitten them in a sore spot and being Govt owned the Minister has simply decided to charge every Energy user a fee to be linked to a monopolistic Govt supplier. Residential Solar is expensive and almost all users did so to avoid loadshedding. So why are we that went to such expense now being charged a "Grid" fee, effectively to permit the Monopolistic supplier to earn income from "OUR INVESTMENTS". The point that we only se the grid to recharge at night is not fully correct, as many systems are coded to minimize recharging and use the battery backup. Remember, we also pay for what we use from the grid, so any "recharging" is paid for energy. It is time the IPP,s are allowed to generate & sell energy to any user, so that Eskom will have to compete on a fair and equal bases.	David	retired

	2026-09-12 19:01:15	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Life is getting too expensive to keep the lights on	Otto	business owner
	2026-09-12 19:03:14	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	As a retired person it is important to have access to electricity at all times. So because one tries to help yourself you are now being penalised. Eskom used to be one of the cheapest and best run suppliers that was before the rot set in and the thieves took over. Now the honest ratepayers have to pay. A tax on using solar power is criminal.	Liz	retired
	2026-09-12 19:03:35	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	When Eskom couldn’t supply us with power we invested our own money on solar, now they want to penalise us for their incompetence, I don’t think so	Lin	retired

	2026-09-12 19:06:26	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The obedient citizens already paying ludicrous tariffs for the mere convenience of just having the now becoming a no longer affordable luxury electric connection, are financially already caught between granite and hardship. It seems that the government and especially NERSA, Eskom and local authorities does expect already dry blead customers to some way or another keep footing their expectations and mismanagement. Several others also want their cut from citizen's income i. e. SARS, ever rising medical aid funds, cell phone contracts, internet services, fuel and food, school fees, etc, etc. Eskom already reaching a point from which otherwise prinsibled law abiding citizens will be forced to all become thieves in desperation to survive. We as so-called low income and middle class citizens, already long gone forced by especially Eskom beyond the affordability tipping point, miracolously regarded and expected still having exceptional wealth from an inexhaustible source of income. This outright now comes down to continue kicking the already dying horse.	Julius	retired
	2026-09-12 19:09:22	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	The paper is wrong headed. Eskom and municipalities must invest in grid scale solar and storage which is now much cheaper than coal. Charge for that. Import batteries at scale from China and give poor household just 5kw of domestic storage. Way cheaper than complex underground cables. For grid stabilisation we probably have to accept a certain amount of nuclear. Solving the eskom problem requires more than one approach. While this is happening, Eskom and government must ACCEPT decommissioning end of life coal powerd stations and drastic reduction over say 5 years of eskom head count.	Jack	self-employed

	2026-09-13 01:49:54	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This drive to fine solar power users is just another tax on people already paying too much. If the government did not have such stupid BBEEE rules, it would be able to attract data centres which use massive amounts of electricty. Instead the attempts to increase revenues by taxing solar power users (who at the height of lead shedding were encouraged by the President to use the sun) is the only way this corrupt government can think of the keep a sinking ship afloat. Ditto all the extra charges *taxes) on people who could not afford solar and have had to put up with load shedding (called 'outages') these days. A country's growth relies on electricity and all the efforts to tax everybody to keep Eskom afloat after years of stealing is typical of the government of the day. The current charges and healthy profits of Eskom with declining usage says it all. My response to all of this and to bankruptcy Citypower after years of theft is..'get lost' . More money to steal?	Elizabeth	business owner
	2026-09-13 02:58:52	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)		Nico	
	2026-09-13 04:37:42	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. Insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. Require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households.	Johann	retired
	2026-09-13 04:48:53	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Why do the same goverment try to take money from us. The problem with the goverment they are getting too much of say in this and we as the people needs to stand together and get rid of the goverment with these money making sceems then only will the politicians see that when you touch one south africans pocket you touch all south africans pockets.	Willem

	2026-09-13 08:29:44	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Follow-up comment: While we end up paying more and more for "kak" services, our president is currently in Delhi (Inmdia) for a BRICS meeting with all the other dictators, enjoying the lavish life of a traveling millionaire.	Frank	self-employed
	2026-09-13 08:31:51	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I used my own cash to buy my solar system. If Eskom / government supported in any way they can claim some money from me now, but actually Eskom was super happy when I installed my solar as I helped them with their supply-demand problem when Loadshedding was a daily issue. Eskom should start their own renewabales projects, which will then require less continued funding. In essence - my solar, my gain! If Eskom was not overcharging and better managed, we would not even have this debate. It is clear that Eskom’s decades of full control led us to this point, giving Eskom now again control over privately owned solar systems is just giving Eskom full control again - and nothing will change. I ask only one question - why can other countries do this right, and South Africa with an abundance of sunshine cannot - the answer is mismanagement and corruption. Start with laws and procedures to ensure the root causes of corruption and mismanagement are controlled rather than trying to pass laws to protect Eskom income!	Desire	employed individual
	2026-09-13 08:34:52	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	If you make connection to the grid very expensive for people with solar, they will disconnect entirely. That will make it even harder for you to generate revenue, and an even higher burden will fall on people who cannot disconnect. The system will ultimately collapse. A fair fixed cost base will keep more homes connected and sustain the system.	Bradley

	2026-09-13 08:58:18	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The proposed legislation punishes those that can least afford more costs and overall higher electricity charges. Additionally, this proposed legislation removes any incentive for people and businesses to adopt balance energy supply e.g. fossil fuel + solar energy basket and will destroy further investment. Poor management and inefficiency can’t be protected through faulty bad legislation.	André	employed individual
	2026-09-13 09:00:37	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I strongly and unequivocally oppose any proposal that allows Eskom to impose excessive electricity tariffs on South African households and businesses in an attempt to recover declining revenue. For years, South Africans endured rolling blackouts, unreliable supply and enormous economic disruption. Families and businesses were effectively forced to find their own solutions. They spent billions of rand of their own money installing solar panels, batteries, inverters and generators because Eskom could not provide the reliable electricity service for which consumers were already paying. It is therefore outrageous that those same consumers should now be expected to pay substantially higher tariffs because their efforts to become less dependent on Eskom have reduced its electricity sales. This creates a completely perverse incentive: Eskom fails to provide a reliable service; consumers invest their own capital to protect themselves from that failure; Eskom's revenue subsequently declines; and consumers are then expected to compensate Eskom through higher charges. South Africans should not be financially punished for becoming more energy-efficient and self-sufficient. Continuously increasing electricity prices will also damage businesses, discourage investment, increase the cost of manufacturing and food production, and ultimately raise the cost of living for every South African. The solution to Eskom's financial challenges cannot simply be to extract ever-increasing amounts from an already heavily burdened population. The focus should instead be on efficiency, accountability, reducing unnecessary costs, combating corruption and electricity theft, and building a competitive, reliable and sustainable electricity market. South Africans deserve affordable and dependable electricity—not another financial penalty for solving a crisis they did not create.	Jeff	employed individual
	2026-09-13 09:01:32	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	If this government had any brains they would do as many of the other countries where residents & companies have had to use solar power for different reasons. Possibly unlike South Africa where citizens & businesses were left without electricity supply for days even weeks because of incompetence, theft, corruption & even incorrect or substandard equipment used at the power stations causing breakdowns. The citizens & the businesses had to find alternative electricity sources. Again unlike the South African government, these governments turned to their citizens & businesses to add the additional power that was produced back into the municipal grid. These governments actually paid the citizens & businesses for the electricity they generated. Instead the South African government are a greedy bunch with little thought of it citizens or the economy & want to take the easy way out by increase tariffs & taxation. This government that we have had in power over the last 30 odd years have crippled the citizens & our economy. Lastly, we were forced to install solar panels because the ANC, like everything else in the country has collapsed. At no time did any country own the power produced by the sun & nor will the ANC. The power of the sun is free to all creation.	Alan	retired

	2026-09-13 13:16:43	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Those who invested in solar when Eskom couldn't supply should not be penalized because of it. And those who don't have solar shouldn't be penalized because there are those who have. Instead, Eskom should fix their own house by taking salary cuts.	Raymond	employed individual
	2026-09-13 13:17:21	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The ANC does not own the sun. God let the Sun's rays fall an this earth to benefit all living beings. How can they do an unlawful thing to charge us for using those free solar rays? Escom is responsible for the situation they are in. Let them sort it out as any other company that ended up in disarray. They have no right to claim their losses from the public. If Escom must shut down due to mismanagement, let them eat their fruits alone. Keep us, the public, out of it.	Kobus	self-employed
	2026-09-13 13:17:42	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Firstly doesn't this just smell like another way to rob the tax payer to provide for the leaches of society who make babies they cannot but the cANCer party holds those same imbeciles accountable. This government stole from every South African to fund its criminality and now wants to steal a little more. Eskom made a profit by forcing households to pay for its employees theft and criminality and not one employee has been held accountable. Now we pay a Minister of electricity who is not there to support the South Africans but to find new ways to penalise and rob South Africans.	Ashok	employed individual
	2026-09-13 13:18:45	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The City of Cape Town already has a R368.96 per month "connection" charge before you use one unit of electricity!	John	retired
	2026-09-13 13:20:27	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I strongly oppose any tariff structure that effectively penalises households and businesses for investing their own money in solar power, battery storage, and energy efficiency. Many South Africans invested in alternative energy because the electricity supply was unreliable and because we wanted to reduce our dependence on the grid. It is fundamentally unfair to now increase fixed charges simply because those customers have successfully reduced their electricity consumption. I accept that maintaining the electricity network has a cost and that grid-connected customers should contribute fairly toward that infrastructure. However, there must be a clear distinction between paying a reasonable network connection charge and imposing disproportionately high fixed fees designed to recover revenue lost because consumers use less electricity. Energy efficiency should be encouraged, not punished. Solar households still use the grid, but many also reduce pressure on the system during daylight hours and may export electricity back into it. A fair tariff structure should recognise that contribution rather than treating these customers as "free riders." I therefore oppose uncapped or excessive fixed network and capacity charges and support: • Reasonable, regulated limits on fixed charges. • Fair compensation or credits for electricity exported to the grid. • Tariffs that do not penalise households for reducing consumption. • A proper socio-economic impact assessment before such changes are implemented. South Africans should not be encouraged to invest in renewable energy and energy efficiency, only to have the financial benefit taken away through higher fixed charges once they do so. A sustainable electricity system requires customers to pay their fair share. It should not require efficient customers to subsidise inefficiency.	Johannes	employed individual
	2026-09-13 13:22:13	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Anita	
	2026-09-13 13:26:55	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	SA's sky rocketing cost of electrical energy is very largely due to the mismanagement of Eskom. It is public knowledge that Eskom is overstaffed and many salaries are inflated. The outsourcing of core areas along with appointment of staff on race-based criteria rather than competency is at the core of this mismanagement. Restructuring the organization is only a ploy to extract more revenue from the captive households to support the status quo. Municipalities who don't pay Eskom for their power are not held to account. These changes on structure are designed to unfairly extract money from those who do pay rather than adress the root causes of the escalating cost of power.	Shirley	retired

	2026-09-13 13:55:36	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	After years of not being able to supply the consumers with power, the consumer took action at great cost by installing solar to ensure they have power. Now Eskom wants to recoup some of the lost revenue by charging fixed fees and penalties. This is totally unacceptable!! The fact that there has been so much less loadshedding is more due to the fact that so many households and companies have installed solar. It's not that Eskom has increased capacity or is actually maintaining the infrastructure. Just like the EToll saga a quick easy way to make some cash without actually doing anything!! Should they be successful with this legislation I'm sure most will go totally off-grid and remove their Eskom connection!! They will then loose even more revenue. Municipalities should also tighten their own belts and stop looking for money from the residents. A good start would be to stop burning street lights during the day!!	Linda	retired

	2026-09-13 15:19:13	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	14 years of load shedding caused average South African resident to reshift their spending or borrow money to buy into solar solutions. This was out of necessity, not luxury. This was encouraged by Eskom and helped to reduce overall demand to meet Eskom's lower level of supply. This also helped to reduce and now remove load shedding and has given Eskom the capacity to invest into regular maintenance. The government and Eskom cannot punish these consumers via introducing extra tarriffs and penalties, because they are buying at a lower volume than before load shedding. Also Eskom took on exceptional levels of debts to finance corruption of building new power generation and switching coal transport to expensive methods. Eskom needs to re-design and run their operation at a much lower cost with much less people they have and not pass their inefficiency and high cost model onto a tax base that is already under exceptional strain.	Tamas	
	2026-09-13 15:23:28	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I reject the proposed Electricity Sector Market Transformation Position Paper completely. This policy is exploitative and rob consumers of their freedom. Instead of rewarding forward thinking households, they are punished, exploited and faced with governmental corruption. Over-extended households that are trying to make their lives liveable amidst massive governmental failures are faced with a corrupt, over-reaching, unhelpful government. To compensate for the failures of our government to provide affordable, reliable electricity, citizens must to be allowed to harness free, natural solar energy to survive and get on with their lives. Households use their own hard-earned cash to harness energy from the sun (the only reliable source of energy in South Africa) and should be allowed to do so without penalty. It is a basic human right on this planet to have access to sunlight – no government, elite cabal or trillionaire – owns the sun! I fully reject any sun tax in any shape or form or any levies and penalties to households that exercise their god-given right to harness energy from the sun. The burden of living in this collapsing, exploited country and the capital outlay for solar are punishment enough. I fully reject tariff hikes that trap non-solar households as captive consumers, who are forced to subsidise government corruption, industrial defection and municipal mismanagement. I fully reject any bypassing of municipalities by mines, companies and factories that leaves the financial burden to ordinary households. I reject the erosion of household budgets through unavoidable fixed charges, regardless of consumption. I fully reject the lack of transparency within wholesale reforms that leaves everyday citizens to it the bill for failing infrastructure. This Position Paper is governmental overreach and highly exploitative. It discourages the use of clean and sustainable energy, undermines private investment, and hold households captive in a loop of ever-increasing costs. It is fundamentally unjust and inhumane to penalise citizens for being forward thinking and for taking the initiative to fill the gaps left by and ineffective and corrupt government that fails to provide electricity to tax payers and citizens. I call on the Department of Electricity and Energy to: 1. Stop the Sun Tax and protect private solar investment. 2. Protect captive consumers from unfair tariff hikes. 3. Reform in a transparent and affordable way that will not further burden ordinary households. The government is a liability and a burden to citizens. They only care about their own pockets and ways to extract money and to control citizens. We do not need more bureaucracy and penalties—we need fair, affordable and transparent policies that will protect households and encourage clean energy adoption.	Mada

	2026-09-13 17:32:36	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I hereby submit my formal objection and comments regarding the Electricity Sector Market Transformation Position Paper, 2026, published under Government Notice 7841 in Government Gazette No. 55226. I support the objectives of improving electricity security, encouraging private investment, increasing competition and building a more reliable electricity system. However, I object to any reform that may unfairly transfer electricity-system costs to ordinary residential consumers. My main concerns are as follows: 1. Fixed charges for solar households Households that have invested their own money in solar energy should not be penalised through excessive or unavoidable fixed monthly charges. These investments reduce pressure on the national grid, support environmental goals and improve energy security. Any grid-connection charge should: * Reflect the actual and reasonable cost of providing grid access. * Be approved transparently by NERSA. * Be supported by independently verified cost information. * Not be used to recover unrelated municipal losses. * Consider the benefits that private solar generation provides to the electricity system. 2. Protection of non-solar households Households that cannot afford solar systems are especially vulnerable. They should not carry an increasing share of electricity costs when large commercial and industrial customers purchase electricity elsewhere or when wealthier households reduce their grid consumption. Government should introduce clear protections against: * Excessive tariff increases. * Unfair basic or capacity charges. * Poorly explained cross-subsidies. * Municipalities transferring inefficiency, electricity losses or unpaid debt to responsible customers. 3. Municipal accountability Consumers should not be required to fund electricity theft, poor maintenance, administrative failures or uncontrolled municipal expenditure through higher electricity charges. Municipalities should be required to publish: * The actual cost of electricity distribution. * Network-maintenance expenditure. * Technical and non-technical electricity losses. * Income received from fixed charges. * The method used to calculate residential tariffs. 4. Fair treatment during market reform Large customers should not receive the benefits of cheaper wholesale electricity while ordinary households are left responsible for an unfair share of the distribution network. Before customers are allowed to bypass municipal supply arrangements, government should conduct and publish an independent assessment of the likely effect on household tariffs and municipal sustainability. 5. Meaningful public participation Any proposed tariff structure, fixed charge or new levy affecting households should be published with clear examples showing its monthly effect on: * Low-income households. * Pensioners and other fixed-income consumers. * Average residential consumers. * Households with rooftop solar. * Households with solar and battery storage. * Households without access to alternative energy. The public should receive sufficient time to study and comment on these calculations before implementation. I therefore request that the final policy include binding consumer protections that: * Prevent punitive charges against solar owners. * Protect vulnerable and non-solar households from unfair cost increases. * Require tariffs and fixed charges to be reasonable, transparent and cost-reflective. * Prevent residential consumers from carrying municipal inefficiencies or the cost of losing large customers. * Require independent impact assessments and meaningful public consultation before new charges are introduced. * Establish a simple process through which consumers may challenge unreasonable charges. Electricity is an essential service. Market reform should improve affordability and reliability for all South Africans—not create new financial burdens for households already struggling with the cost of living.	Michiel	retired

	2026-09-13 23:38:31	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I don't agree with paying a tax for not using the grid. They charge you for using power and now they want to charge you for not using the power as well. That's not logical. They have done next to nothing to maintain the infrastructure, so why should they get paid for work not done? However, I wholeheartedly agree that everyone (including high-energy businesses) should have the option to buy electricity from private suppliers. The failing grid supply is too weak to keep supplying high energy users by itself alone. But if we only give those large businesses access to the private energy market, then costs will disproportionately hurt regular households small businesses, and will likely do so with similar consequences to increasing petrol/diesel prices. Hence, everyone should be allowed to access the private energy market.	Stephen	student

	2026-09-14 06:01:38	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	People had to find money to install solar as backup as Eskom could not always supply. Eskom even assisted solar installation. They do not own the sun. I would rather find a way to go off grid than pay tax because I have solar.	Lincey	retired
	2026-09-14 06:06:15	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	South Africans invested their own money in solar panels, batteries and inverters because Eskom’s unreliable electricity supply, load shedding, corruption and state capture made it necessary to find alternative sources of power. It is unjust for government to now penalise these homeowners with heavy fixed monthly charges simply because they have reduced their dependence on the grid. The unfairness lies in the fact that citizens are being charged for making the electricity system more reliable for themselves after government failed to do so. They took financial responsibility for securing their own electricity, and are now being asked to pay additional charges to compensate for using less of a service they can no longer rely on.	Pandelis	employed individual
	2026-09-14 06:07:36	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I don't support this proposed solar system policy of the government as it will hurt ordinary households who are already struggling under high taxes	Isaac	retired
	2026-09-14 06:09:16	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The proposed “sun tax” is unjust because it penalises South African citizens for taking responsibility for their own electricity needs after years of government failure, corruption and state capture left them with no reliable alternative. Homeowners who invested their hard-earned money in solar did so to protect their families and businesses from load shedding —not to avoid paying their fair share. Government should not be allowed to shift the financial consequences of its own failures onto the very citizens who have spent their own money solving the problem.	Susan	employed individual
	2026-09-14 06:12:05	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	this latest development is scandalous and we as ratepayers are yet again loaded with additional expenses due to bungling for years by Escom and its so-called efficient management departments not to mention the failing municipalities who are also scrambling to squeeze all they can from consumers and rate payers. Enough is enough. The trough feeders need to be disciplined through severe punishment and ratepayers and electricity consumers need to stop saying "oh what can we do?' and stand together against rampant inefficiency and incompetence . There is a way...just resist paying until the government wakes up or face or faces the consequences. We are tired of ineptitude and extortion and all in charge should be dismissed and heavily fined for their lack of competence.	ian

	2026-09-14 07:31:13	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Can government not get anything right? You're holding the consumer hostage with every price hike due to corruption! What's next...a tax on sunbathing?	Duane	employed individual
	2026-09-14 07:33:21	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	You useless corrupt things stole your way into setting up ESKOMS demise. We sat in the dark for years while you fat over fed things ate all you could and sabotaged ESKOM so that your tenderproneurs could become wealthy. That should be deemed as treason. You increased tariffs at will (and still do) until no one can afford the price!! You killed businesses and livelihoods without remorse. Yet in spite of the ridiculous tariff increases you still did not provide power...we are paying a fortune for what.!!! You burnt billions in diesel while your buddies became wealthy. You maintained nothing!!! We with our own money, (TAXED MONEY) spent a fortune installing solar. Did you get this...WITH OUR OWN MONEY!!! We as South Africans, as usual were ingenious and rose to the occasion and saved the day, while you sat on one side stealing the place blind!! We thwarted your sabotage of the country....and now we mused be punished for that. Go to hell ! You have not fixed load shedding. You now give it different names like maintenance (what a laugh). "Local Load Reduction" is the new buzz word to fuzz the same shit.... You paid your buddies to stop sabotaging the infrastructure. You burnt billions in diesel, that we have to pay for....(while half of the fuel was never even delivered to ESKOM by your cronies!!) Those that installed solar power have reduced load shedding!!! Not you!!! This constant terrorism is enough to make decent people livid to degrees not experienced before!! Get the damn money from all the free loaders...all the electricity thieves, all those that contribute to nothing but drain society of all the have built and created!!!!!	Roland	employed individual

	2026-09-14 07:39:33	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	At first we were encouraged to lift stress off the grid by going solar. Now Eskom (who asked us to generate alternative power) is also the authority who wants us to pay more into the grid. Seems unfair that we can try and alleviate pressure by investing personal funds but when the situation changes Eskom can just call the shots as they please. Will this law also apply within the rural communities and high density population of squatter camps? If everybody in South Africa is lawfully paying for the electricity they are using - we can have a chat again. But we can't keep subsidizing millions. The small percentage of people who can afford solar can't be a train smash to the whole grid IF ALL SA citizens actually paid for electricity… fix the obvious leak first please.	Shirne	self-employed

	2026-09-14 07:46:07	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	1. Stop the "Sun Tax": Do not penalize private capital and solar investments with punitive fixed grid fees. 2. Protect Captive Consumers: Bar municipalities from hiking tariffs on non-solar homes to cover lost revenue from industrial and off-grid defection. 3. Transparency First: Ensure wholesale market reforms do not leave everyday households footing the bill for grid infrastructure	Petra	self-employed

	2026-09-14 07:47:36	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	As an ordinary South African residential ratepayer and taxpayer, I support reforms that create a more efficient, competitive and reliable electricity sector. However, I strongly oppose any reform that ultimately shifts an increasing share of the cost of the electricity system onto ordinary households. Residential consumers should not become the default source of revenue when large industrial users move to alternative suppliers, municipalities lose electricity income, or households invest their own money in solar and energy efficiency. People who install solar should not be penalised through excessive fixed charges simply because they have reduced their electricity consumption. These households have invested private capital in reducing demand on an already constrained electricity system and should not be treated as "free riders". At the same time, households that cannot afford solar must also be protected. They should not be left as captive customers facing ever-higher electricity tariffs and fixed charges to compensate for declining municipal electricity sales. South African households already carry a substantial burden through taxation, municipal rates, electricity tariffs and other service charges. Electricity reform should focus on improving efficiency, reducing losses, increasing competition and ensuring that the actual cost of maintaining the network is transparent and fairly shared. I therefore ask that the final policy include strong protections for residential consumers, transparent and independently regulated network charges, and safeguards preventing municipalities or distributors from simply recovering lost revenue through disproportionate increases in fixed charges or residential tariffs. I support electricity market reform, but it must result in a more efficient and affordable system for ordinary South Africans, not simply redistribute the existing financial burden onto those consumers who have the least ability to avoid it. 	2026-09-14 07:53:42	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	When Eskom was unable to supply electricity and we were loosing equipment and food as a result thereof, we invested unforeseen money in our own systems. These solar systems saved Eskom some face as there was less complains of no power from those who invested in a UPS or solar system. Now Eskom and Municipalities want to put a penalty on those who are willing and do have the means to help themself and put less stress on the supply authority. Instead Eskom and the Municipalities should rather encourage houseowners and businesses to install solar where all export electricity can be bought at a fraction of what they sell it for. " NO BRAINER" Stop being a total boreoarctic insufficient entity and move forward with the inevitable. With Eskom's ongoing strive to make profits without working for it, more and more homeowners systems will be installed and cause a runaway effect on their income as it is already in progress. Rather subsidies , regulate and gain without making enemies.	Piet	employed individual
	2026-09-14 07:54:08	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The President asked us to put Solar in at a huge cost not they want to tax it. Does the President not count.?? Cost of Electricity is so high already. We also HAVE TO PAY A MONTHLY LEVY FOR SUPPLY.?? This was never taken into consideration. P.E. Name changed,has now won a court battle on this additional levey payment.WHY NOT EVERY ONE.!!! ALL AREAS.!!	Joan	retired

	2026-09-14 08:19:56	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This government is so corrupt and bringing the country to its knees with taxes and charges. We need more solar in our country to catch up to the rest of the world, why must anybody pay for the use of solar which has nothing to do with the government. This is a Massive NO from me, leave the people to get on with cleaner air, rather than supporting a corrupt, greedy government.	JEFFREY	business owner
	2026-09-14 08:21:00	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	It's such a pity that this current government did not tell us at the time that they had these audacious plans to kick the resident and business owners in the teeth again, when their corruption caused loadshedding. During the height of loadshedding, you as a government asked businesses and residents to reduce electricity consumption as you could not keep the lights on. How do people continue running their households and business - they make a plan, they paid for solar installations. Now you want to penalise them for helping you out during the bad times because you are loosing out on income. Where in the world, sorry only in South Africa, does a governement believe it is their right to once again, charge for solar installation because of their corruption. Let's get down to economic facts ... No business can continue operating by charging their customers for their own mismanagement, this applies to this corrupt government as well. So NO, I do not agree with this and hope that this is kicked to the curb where it deserves to be.	Heather	business owner

	2026-09-14 08:58:39	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Installing solar infrastructure requires a significant financial investment. However, households and businesses that adopt solar are not only shielding themselves from loadshedding — they are actively reducing pressure on the national grid. Every kilowatt generated privately is a kilowatt Eskom does not need to supply, which directly assists government in keeping the lights on. Penalising owners who have invested in solar makes little sense. These systems decrease demand, improve grid stability, and contribute to national energy resilience. Policy measures should encourage private generation, not discourage it, especially in a context where Eskom continues to struggle to meet demand.	CATHARINA	business owner

	2026-09-14 09:01:18	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I honestly don't know how Eskom get away with the constant increase in electricity - Consumers are strapped for cash and are battling financially to make ends meet. Dear Mr Rhamaposa - HELP ! I don't believe that Consumers should be penalised for going off the grid - and neither should those who are unable to go off the grid pay more to cover the cost of the loss of income herein to Eskom - because that is basically what is happening here I think - Something seriously needs to be done to STOP all of this corruption , We are struggling to live in South Africa -	Debby	employed individual
	2026-09-14 09:02:50	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Unfortunately, municipalities are by their very nature socialist constructs. This is entrenched in, inter alia, the rates and taxes cost formulations of municipalities. Those that invest heavily in their property (thereby creating further employment prospects and placing capital into circulation) are penalised by large, on-going rates charges. Payments are not linked to the actual costs of services provided, but are manipulated to "rob Peter to pay Paul", i.e. sunsidise services for those who do not invest in property. The advent and proliferation of solar power generation has introduced a perhaps previously unappreciated issue - loss of municipal (and other) income. The captive market is by far the most vulnerable. Large users may be able to permanently go completely off-grid and thus avoid all charges, fixed and consumption. Affluent households and estates may be able to do the same. The costing structures of municipalities needs to be based on realistic issues, not the antiquated, over simplified model of what is now a bygone era.	Ian	retired
	2026-09-14 09:03:11	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	In our case , we use solar purely as a back up when we have power interruptions. we still rely on the grid for our electricity and don't see why Solar uses should be penalized due to the greed of the Electricity suppliers. Who see this as an opportunity to profit more. Solar uses help to keep the wheels of the economy turning , when the power goes down and should be encouraged and applauded.	Kevin	self-employed

	2026-09-14 09:42:06	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Strong objection to Eskom tariff hikes✓ The Consumer Must Not Be Punished for Eskom's Failures Why must the consumer always bear the brunt of the supplier's incompetence, poor management, unlawful connections and electricity theft? Consumers are not responsible for Eskom's operational failures, its historic mismanagement, inadequate infrastructure maintenance, illegal electricity connections, electricity theft, or the failure to enforce payment from those who consume electricity without paying for it. Yet the recurring solution appears to be the same: increase the tariff and make the law-abiding consumer pay more. That is fundamentally unfair. A household that pays its electricity account every month, uses electricity responsibly and complies with the rules should not be treated as the financial shock absorber for losses caused by theft, illegal connections, non-payment, inefficiency and poor governance. The principle is particularly troubling when legitimate consumers who invest their own money in solar power are effectively portrayed as "free riders" because they purchase fewer units from the grid. These households have invested private capital to reduce their dependence on an unreliable electricity supply and, in many cases, to protect themselves against escalating electricity costs and load-shedding. They should not subsequently be punished with punitive fixed charges simply because their investment has reduced their consumption from the grid. Nor should consumers who cannot afford solar be turned into captive revenue sources to compensate for customers who leave the grid, industries that obtain cheaper electricity elsewhere, or revenue lost through electricity theft and illegal connections. **The solution to revenue leakage cannot simply be to squeeze the consumers who remain.** If Eskom and municipalities are losing revenue because electricity is being stolen, the priority must be to stop the theft. If revenue is being lost through illegal connections, those connections must be disconnected and the perpetrators held accountable. If infrastructure is failing, the causes of that failure must be addressed. If there is financial mismanagement or operational inefficiency, consumers should not be presented with an ever-increasing bill as the default remedy. There must be a clear distinction between **legitimate cost recovery** and **making compliant consumers compensate for systemic failure**. Tariff increases should therefore not be approved merely because an electricity supplier or municipality claims that additional revenue is required. Consumers deserve to know precisely: - How much electricity revenue is lost annually through theft and illegal connections? - How much is lost through non-payment? - What steps have been taken to recover that money? - What portion of proposed tariff increases is attributable to legitimate electricity supply costs? - What portion is intended to compensate for revenue lost because customers have reduced consumption through solar or energy efficiency? - Why should consumers who remain compliant and connected be forced to subsidise failures they did not cause? - What measurable improvements will consumers receive in return for every additional rand charged? **A tariff increase must not become a substitute for accountability.** Consumers cannot continually be told that electricity prices must rise because the system is under financial pressure while the underlying causes of that pressure remain unresolved. The message to Eskom and the relevant authorities should be unequivocal: **Do not punish the paying consumer for the failure to stop the non-paying consumer. Do not punish solar owners for reducing their dependence on an unreliable grid. And do not turn households that remain connected to the grid into a permanent revenue source for an electricity system that has failed to deal effectively with theft, illegal connections, non-payment and inefficiency.** Before asking compliant consumers to pay more, Eskom and municipalities must demonstrate that they have exhausted every reasonable measure to eliminate theft, illegal connections, waste, inefficiency and avoidable losses. **Consumers should pay a fair price for electricity they legitimately consume—not an ever-increasing penalty for somebody else's theft, incompetence or failure to manage the electricity system.**	Piet	retired

	2026-09-14 10:43:21	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Solar users who invested in these systems should not be penalised for helping to reduce the reliance on grid-power during the load shedding crisis. Most consumers are still paying off these systems and cannot afford further increases on grid power.	Joe-Lin	employed individual
	2026-09-14 10:44:37	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Mandatory fixed solar charges, captive consumer price hikes, and municipal revenue losses will hurt ordinary households and small businesses.	Owen	unemployed individual
	2026-09-14 10:44:47	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	As someone who is looking to add solar to the home - to have a smaller impact on our environment - being charged because I am lowering the problem seems counter intuitive and quite frankly overextending. Imagine SPAR and CHECKERS asking a levy to enter their stores for those who have cows or chickens since their milk and egg supply is a backup to these community members? If you think someone who spent 150k rand or more on a solar installation is ever going to go back to using more of the grid then you are misunderstanding the customer. This new draft law is unashamedly trying to increase revenue streams for Eskom. So next up if you are not connected at all to the grid you should pay a not connected fee ?? where does this end and make sense. Why not rather add more laws and support to Eskom from being targeted by actual bad actors to help them with corruption - e.g copper cable theft which is a way bigger issue than even being reported.	Harold	
	2026-09-14 10:45:42	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	1. Electricity is for all, the poor must also be able to afford it. I don't believe in freebees, then you don't know the value. At the current rate, the poor cannot afford it, and increasing it, still less affordable, making those who can, trijecting them into the poorer sector. They (the ANC) want to create poverty, then they can remain in power. It's not about the SA citizen, it's about the stinking rich elite ANC's to remain in their "stolen" wealth. 2. Eskom has enough money, look at the "so called" profit they have made over the past 2 years, when is enough enough, plough back into those who have carried the country the last 3 decades while they were stealing themselves rich. 3. The ANC wants to remove the the ability of income for muncipalities from electricity and centralise it, they're losing the muncipalities, so they will loose that income, and for the incoming party to be able to be successful, they need money to produce services. Courts have to think logical, about the future of the country, not of a bunch of idiotic money grabbing politicians. I say, we need a business man for a president, a business man for a mayor, one who thinks business, not politics, but how can I grow the country, the town.	Nico	retired
	2026-09-14 10:47:56	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It’s nonsensical to charge people on solar energy consumption because the electricity supplier needs to balance their books. We’re so tired of talking at this point.	Andile	self-employed
	2026-09-14 10:49:12	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We will not accept national and local government tricking us, and abusing us as their cash cows. The sun is free, and if we pay huge amounts on solar and backup systems to alleviate pressure on the national grid and have power security, because government encouraged us to and incentivised us to, as the government structure failed, why must we pay for government structures being mismanaged over years and for corruption, with government civil servants lining their pocket and getting fat off us the citizen that voted them in. We will revolt and vote you out. Beware ANC, EFF, DA and the likes, we don't need you, you need us.	Brett	
	2026-09-14 10:52:20	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is inconceivable that Eskom continue to increase electricity tariffs for households that actually pay their electricity accounts. The increases are a simple way for them to get the consumer to pay for their total incompetence over the last 30 years, bringing a once proud and capable organization to its knees!! Most of us who installed solar systems to alleviate load shedding issues are still paying those systems off while continuing to pay our ever - increasing electricity bills!! No way we can accept this new "plan " of theirs.	Michael	retired
	2026-09-14 10:53:37	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It's the Sun... Nobody has the right to tax users for using a free resource that will be around for 100's of generations.	Micheal

	2026-09-14 11:07:32	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Electricity is the real prime mover behind economic development. We need plenty of it and it must be cheaper. Let those who can cultivate it for themselves do so and support them, not penalize them. Government can subsidies Eskom to make electricity cheaper for communities who are not working. End corruption and we will "always" have more to produce electricity for the benefit of the country. Let no people subsidies incompetence, corruption....Tackle corruption and all will be good.	Daniel	retired
	2026-09-14 11:07:43	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The middle class will pay the most for electricity/electricity availability. Big business will go off-grid and the poor will get it for free. This is ridicules, as we are getting milked for Eskom inefficiency	Ronald	employed individual
	2026-09-14 11:12:31	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	“Sun Tax” on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep South Africa's lights on. These households and businesses allowed fellow South African who could not afford rooftop solar to at least have much less load shedding when Eskom failed to generate enough electricity. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalizes energy-conscious citizens and inevitably will lead to more households exiting the Municipal Grid , further staining municipalities financially. Kill the Golden Goose with your shortsightedness (ANC)	Quinton	employed individual

	2026-09-14 12:31:49	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I think its absolute robbery to charge for sun tax -NO TO SUN TAX OR ANY OTHER ADDITIONAL CHARGERS, we pay exorbitant prices for Eskom power already. Eskom must pay their management and Directors less.	CHARLES	retired
	2026-09-14 12:35:22	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I object to the proposed framework in its current form because it risks placing an unfair financial burden on ordinary households and small businesses that have invested in rooftop solar and battery systems. Residential solar users, have made a significant private investments to reduce their reliance on the grid, lessen demand on South Africa's electricity infrastructure, and improve energy security for households. The introduction of mandatory fixed network charges that are disconnected from actual electricity consumption would undermine the financial viability of these investments and effectively penalize consumers who have acted responsibly. While I support efforts to modernize South Africa's electricity sector and encourage competition, I am concerned that the proposed market structure could create a situation where large industrial and commercial customers gain access to cheaper electricity options while ordinary residential customers remain captive to municipal distribution networks. If municipalities lose revenue from their largest consumers, there is a real risk that the resulting shortfall will be recovered from households through increased fixed charges and higher tariffs. I am also concerned that separating network charges from energy charges may lead to escalating fixed costs that consumers cannot avoid, regardless of how much electricity they generate themselves. This reduces the incentive for private investment in renewable energy and energy efficiency, which is contrary to South Africa's broader energy transition goals. Any market reform should ensure that: Residential solar users are not unfairly penalized through excessive fixed charges. Network fees are cost-reflective, transparent, and subject to strict regulatory oversight. Ordinary households are protected from bearing the financial consequences of municipal revenue losses. Consumers who invest in rooftop solar, batteries, and energy efficiency continue to receive a fair return on their investment. Municipalities are encouraged to adapt their business models without transferring disproportionate costs to residential customers. South Africa needs electricity reform, but it must be implemented in a way that is fair, transparent, and does not discourage citizens from investing their own money in renewable energy solutions that ultimately benefit the country as a whole. 	2026-09-14 13:49:30	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The whole reason we got solar panel was to assist Eskom with capacity limitations. If Eskom could provide consistent electricity without interruptions other than occasional maintained I would never have needed solar panel. Solar panels is not necessarily the cheaper option to Eskom. It comes with great cost. Plus, it has a 10-year life span so this is something that will come at great cost again in 10 years. It hasn't reduced my electricity bill as we have to pay a R 267 odd amount. Before Solar panels my bill was about R 500 during the summer and R 1200. Currently with solar panels we paying about R 850 in summer and about R 1800 in winter. So to say I am not paying my fair share is not exactly accurate. Please also understand solar panels are helping reduce strain on the grid especially in trying times and so you should encourage alternative and green alternatives. The country loses too much money when there is load shedding. I am in the film and Television sector and SABC definitely has number reduction in load shedding period with effect the sales enormously. I feel if Eskom needs to recover funds, they shouldn't only push the cost on end user, it's a government entity it's supposed to be making is more affordable, more accessible to all, this is a basic human right. Instead of simply just charging a solar tax and punish people that are assisting the grid. Diversify. Create jobs. Make solar panels in SA. Install them in SA. So that you have to use and ESKOM certified technician to put in solar panels. This will ensure that our solar panels are correctly installed increase funding on your side as well as create jobs and hopefully also create skills. Then if there is excess power sell it to other countries	Aimee	business owner

	2026-09-14 14:17:10	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	As indicated by others, we bought solar, changed to LED lighting that is not cheap, changed to gas appliances, considering a solar geyser - all at a cost where we pay VAT, so government is getting more than our am savings!!! All of these interventions are to use and pay less for a product that we all need and to "help" Eskom overcome their inability to supply power to all - with a focus on consistent supply, every time there is an outage I have to worry about our frozen and refrigerated food spoiling before we can eat it. I use less power because of the above interventions - Yet we are all being punished for using less - be it solar owners or not!!! Another thieving ANC entity that the consumer has bailed out year after year and now reflects a very healthy income statement at the cost on the everyday person - totally corrupt organization	Sally-Anne	self-employed
	2026-09-14 14:19:17	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Solar was encouraged by the government even going so far as to offer tax breaks to install solar. Now they want to tax that. If the Eskom had been able to supply electricity no one would have installed solar. Solar became a necessity when the government couldn't supply electricity and we had to make our own plans. At some stage government needs to take responsibility for their incompetence, you can't just keep taxing people there is no more money	Dave	
	2026-09-14 14:23:04	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	When ESCOM was in trouble, we the rate payers, with our own money installed Solar panels, inverters and batteries so helped ESCOM with their problem in the 2020's. They did not pay a cent to help us (the tax rebate come after most people already installed their Solar system). Now they want to tax us - that is a slap the face! If ESCOM did the preventative maintenance - as they should have done - none of this taxing people would have been necessary. Now we must pay for their mismanagement!	Kalie	retired
	2026-09-14 14:24:30	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Stop the Sun Tax. Do not penalize private capital and solar investments by imposing fixed grid fees. Protect captive consumers. Stop municipalities from hiking tariffs on non solar to cover lost revenue due to industrial and off-grid defection. Ensure whole sale market reforms do not leave everyday households to cough up for grid infrastructure. Electricity must remain affordable for the average household.	Tinie	
	2026-09-14 14:26:10	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Keith	retired

	2026-09-14 14:37:25	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The government requested private householders to assist Escom when they could not produce enough electricity. We received a small tax rebate as a reward for doing so. Now it wants to punish us for the very same thing? We still have to expensive electricity. We had to cover the high capital cost of installing solar power. Hay cost needs to be recovered. Having to pay a high fixer fee for the grid which has already been paid for by our taxes and usage charges is absolutely unfair and unconstitutional. We will fight this proposal just as we did the Sanral Toll costs forced on us in Johannesburg and Tshwane.	Keith	
	2026-09-14 14:37:40	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)		Bongani	
	2026-09-14 14:38:38	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I'm "happy" to pay for electricity that I use from the grid at a fair price. Eskom's corruption and incompetence is not to be made another tax on citisens.	Pieter	business owner
	2026-09-14 14:38:40	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Do not penalize private capital and solar investments by imposing fixed grid fees. Stop the Sun Tax. Stop municipalities from hiking tariffs on non solar homes to cover lost revenue due to industrial and off-grid defection. Protect captive consumers. Ensure whole sale market reforms. Do not leave everyday households to pay the bill for grid infrastructure.	Riaan	
	2026-09-14 14:42:55	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I am not against the registration of SSEG's but am against the taxing of those who have put solar on their rooftops. I am effectively off the grid as a registered SSEG, reducing loadshedding and should not be taxed for this,	John	
	2026-09-14 14:43:57	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Kevin	retired
	2026-09-14 14:46:59	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I'm against the taxing of those who have put solar on their rooftops. Plus it won't achieve what the want to achieve because those with solar will just buy a few more panels and disconnect from the grid completely.	Johann	employed individual
	2026-09-14 14:52:05	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Load shedding was the reason I installed solar. Load shedding was not my fault and should not be penalised for making the best out of a bad government situation due to corruption and state capture. Recover the funds from the looters, not the consumers. I also support green energy which should be commended, not penalised.	Mark	self-employed
	2026-09-14 14:55:16	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I demand that • NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. • no mandatory fixed network charges on solar and low volume users. • tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes.	Sheena	retired
	2026-09-14 14:55:33	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	At great expense we installed solar during load-shedding. It is unfair to tax us because we used our initiative to solve a problem with Eskom.	Sarah	retired
	2026-09-14 15:03:34	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	Just where do you expect us to get more money from?	Adriaan	retired
	2026-09-14 15:05:01	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Michiel	retired
	2026-09-14 15:08:23	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The taxpayer is already over taxed. Eskom failed the consumer and failed to supply electricity to the country, the consumers then made a plan to have electricity and now Eskom wish to punish the consumers further.	Don	retired
	2026-09-14 15:10:45	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I invested private savings into rooftop solar and batteries to keep my lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious rate-paying citizens, extends solar payback periods, and discourages private decarbonisation.	Riaan	
	2026-09-14 15:12:00	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Double pain for us who invested in solar energy to compensate the inefficiency of Eskom with long years of heavy load shedding phases, while still paying this atrocity of electricity bills!!! THIS IS A SCANDALE, one more on the account of this government.	Alex	self-employed
	2026-09-14 15:19:46	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Am concerned that this will place an increased burden on me with the already heavy burden of electricity charges and municipal rates. As a fully paid-up ratepayer, who had also invested in the cost of solar, I do not appreciate any extra charges that may be imposed.	ELEANOR-MARY	retired
	2026-09-14 15:20:52	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		nick	retired
	2026-09-14 15:22:01	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom is supposed to deliver a service, which they cannot because of corruption, mismangement etc. Yet we, the public, pay premium prices for solar systems so that we can maintain our standard of living. With that, we also lighten the load on the grid, which should be a good thing. Yet they punish us for doing it? This is a disgrace.	Annalien	retired
	2026-09-14 15:31:11	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom did this shortage and not reliable by them selves Stealing and over paid, lazy staff Eskom forced normal households to do something to survive Eskom should be punished for not delivering	William	retired
	2026-09-14 15:39:00	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Martin	retired
	2026-09-14 15:44:50	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom's inability to provide adequate electricity (along with over the top tariff increases) was the main reason for households installing solar PV. It was even encouraged in order to cover the country's electrical requirement. Its madness that these households now are penalised for being part of the solution.	Craig	self-employed
	2026-09-14 15:53:29	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)		Francois	business owner

	2026-09-14 16:08:28	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Next thing is that the government will tax sunbathing! Wherever they can extort money to corrupt and steal, they want to lay their hands on!	Gerrit	
	2026-09-14 16:10:44	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The goal posts continue to shift. We cant afford eskom electricity, our businesses are about to close and 100's of employees left without a monthly income from job losses. We use our last savings for 2 pot pension pot to save jobs and keep businesses alive by installing solar. Now we need to pay a solar tax. NO!!!! goverment must stop this bullying tactic. i will never invest in SA ever again if this solar tax happens	craig	
	2026-09-14 16:13:42	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Because of the incompetence of Escom and the extremely high personnel cost at Escom and most municipalities they keep on just passing the cost to the consumer. How about reducing your overheads?	Cobus	retired
	2026-09-14 16:14:24	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Households and businesses using solar power have invested in this alternative power supply at their own cost to ensure their own power supply when the municipality is unable to deliver. As a result, the demand on the municipal grid is alleviated, rendering greater capacity for the municipality to provide power to homes and businesses without solar power. This lightens the load for Eskom, rather than adding to it. It therefore doesn't make sense, and is exploitative for solar power users to be penalised for being part of the solution towards alleviating the power crisis.	Candice	self-employed
	2026-09-14 16:16:10	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Andries	
	2026-09-14 16:16:39	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	There has been no proper forethought into these Electricity regulations. Eskom has forgotten why so many people , Companies, and organisations changed to Solar. It was all due to Eskom incompetence, constant increase in tariffs, that instigated people to install solar, and discovering how much money could be saved. To now bully the public who have So invested in Solar with massive increases in fixed charges is unacceptable. If we had not installed Solar we would still have load shedding. I therefore support competition, Wholesale trading, and methods to invest in cheaper forms of supply I object very strongly to fixed price increases and mandatory supply. As solutions and amendments should be provided. Those with Solar should be rewarded, by allowing them to feed back into the grid , that excess power alone would compensate Eskom for the fixed charges that they are considering. In addition the use of Solar is green. It's clean power, and Solar users should be rewarded with carbon credits that could be used by the consumers to offset the cost of operating the grid. All these threats are if no assistance to the general public. The arrogance of Eskom management to punish us Solar users is neither helpful, nor in the long run going to solve the cost issues. After all as a solar investor, if I consider it necessary, I will invest a little more, and go off the grid completely., That will give me a saving of currently R 10,000 a month if not more.	Perry	business owner
	2026-09-14 16:17:49	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	After living through the nightmare of loadshedding and avoiding it by paying a substantial amount on solar, I must now continue to fund Eskom's inefficiency and corruption? No!	Shelley	
	2026-09-14 16:18:26	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I am a property owner and resident (and a pensioner) who responsibly installed solar panels at a significant cost to myself to ensure the delivery of electricity and to assist the state in its desire to supply electricity to all its people. My own security and comfort dictated my decision not to be completely reliant on a power system that is erratic. I shouldn't be penalized in any way for being a responsible citizen who is on the grid and paying for this, and having sufficient solar power to protect my family from State inefficiency (much of it corruption, inferior coal, coal theft, using diesel and overpaying Eskom board members).	Stirling	retired

	2026-09-14 17:40:35	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Penalizing and charging consumers extra for utilizing solar is both immoral and against growth. The bill would penalize and burden responsible citizens who wish to reduce the burden on the state electricity suppliers and invest their own capital in energy production. Dis-incentivising such independence from the state is clearly immoral and should never be considered. Further, such financial penalties on citizen's capital investment in energy generation is extremely anti-growth. Quite literally the bill would make it harder for people to increase their energy production, and energy is the basis of all economic activity.	Nigel	self-employed

	2026-09-15 08:21:10	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Municipal rates are becoming unaffordable to the average citizen, whilst at the same time service levels are non-existent. The lack of service delivery in SA is well documented, yet rates and tariffs continue to increase beyond affordable levels. At the same time the state monopoly on electricity supply via Eskom and the municipalities failed us during the recent past, and citizens had to resort to their own supply arrangements [mostly solar powered / off grid solutions] to still have electricity, which is essential in a modern economy and society in general, e.g. hospitals and schools as but one example. Now the state wants to claw back its monopoly income via all sorts of punitive tariffs, and once again the citizens of the country must pay for the state's inefficiency and lack of foresight. The state in the form of the ANC led government is South Africa's biggest growth inhibitor and must be fought by every democratic means possible.	Casper	self-employed

	2026-09-15 08:51:25	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom could not supply the country with electricity so we, the already heavily taxed citizens, paid to install solar. This alleviated the pressure on the national grid, which helped Eskom. Now we are being penalised for their ineptitude and bad management!! It is preposterous!! We already pay a service charge and a network charge every month - where is that money going? It is time for the privatisation of Eskom!! Enough is enough!!	Amanda	retired
	2026-09-15 08:54:18	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is unfair to target legal taxpaying citizens for the lack of accountability in the rural areas where power is almost completely free- There is random residents that do pay electricity, but most does not pay and feed off illegal connections. People go off the grid for financial reasons and stability on the power supply that prevents damage to equipment. The real culprits that are causing ESKOM to suffer is the people who does not pay ESKOM after receiving payment from their residents and not paying ESKOM. WE had a beautiful shopping centre for almost 30 years and suddenly it had to close for the new owners used their rent and utility bill money for cars and housing for themselves!! Let all that use electricity pay a fair affordable amount, so that they are able to pay their electricity and thus reduce the pressure on the small percentage in the country that does pay their bills honestly. This way economy will stabilise regarding many other things and people will not feel forced to leave the ESKOM GRID due to unreasonable demand from the honest paying citizens while the majority of the country demand free services and ride on the backs of the 10-15 % that already pays for their free health clinics grants and SASSA. 	2026-09-15 09:36:22	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	A "Sun Tax" on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. Wholesale Price Volatility and Market Power Manipulation: Eskom Generation still controls the overwhelming majority of South Africa's dispatchable baseload power. In unbundled spot markets worldwide, dominant suppliers have engaged in economic or physical withholding to artificially spike market clearing prices. Without hard statutory bid caps and aggressive oversight, wholesale price volatility will be passed directly down to retail consumers. Severe Conflicts of Interest Within the NTCSA: Consolidating transmission grid ownership (TNSP), system dispatch (SO), market clearing (MO), and legacy state off-take contracts (CPA) within a single entity under Eskom Holdings creates structural conflicts of interest. NTCSA could face internal commercial pressure to favour Eskom assets or delay third-party grid connections.	Werner	employed individual
	2026-09-15 09:51:38	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I am at a loss of words as to the cunning skill deployed to rob hard working middle class citizens when the original shift from Eskom power consumption to renewable energy sources such as solar, was Eskom and the municipalities' doing in the first place! Why did you not deploy that same energy and cunning to maintaining operations and generation capacity? The immoral stance of a monopoly state-owned, mismanaged entity on "protecting" its own profits and super bonus pay-outs only communicates one thing, communism at its worst form is alive and well in the thinking of those in power. There is no freedom here. No freedom of choice, no free market economy where participation and competition is welcomed to allow everyone a place under the sun. The statement that poor will suffer the most, is rather erroneous. The poor and destitute in the townships already do not pay for electricity with their discounts and even illegal connections. It is the working class that pays taxes and keeps this country going that suffers at the hand of cunning profiteering. You should all be ashamed of yourselves. Stop this nonsense of fleecing the goose that lays the golden eggs (working, taxpaying citizens) to fund the small elite's way of life. Start by "tightening the executives' belts" financially and refuse to pay out huge dividends to the shareholders (ANC). Show the people of South Africa, that the country comes first, by being responsible and hard working, seeking to serve, not to self-indulge. If all the thieves and robbers of South Africa would employ the same amount of skill and energy to construction, nation building, and community service, South Africa would be a beacon of light to the world!	Alick	

	2026-09-15 10:12:03	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Jacques	employed individual
	2026-09-15 10:27:00	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Sun Tax - When ESKOM and the government could not provide stable, continuous electricity, tens of thousands of citizens and businesses invested private capital or hard earned savings deploying solar energy around the country. Government even rewarded those who did so with a financial incentive. Now, that same government wants to penalise those whom it previously commended by adding an even greater financial burden onto those who are already shouldering the bulk of SA's taxation. This is unacceptable and will only drive people to disconnect entirely from the grid or simply fail to pay their municipal bills, adding to an already catastrophic breakdown of municipalities. Captive Consumers - Big business already has the greatest number of tax loopholes available to it. Now you want to give them cheaper electricity too? Who do you think is going to have to make up that shortfall within municipalities? The residents, of course, who have no option but to buy energy at vastly overinflated prices to make up the difference. Transparency - All over the world we've seen firsthand the impact of privatising things like energy. You're putting a constitutional obligation of government in the hands of people whose ONLY goal is to get rich(er). This will benefit no one except those who get these lucrative contracts and their corrupt cronies in government. If government put as much energy and effort into proper governance as it does into fleecing its citizens of everything they have then this would be a first world country.	Richard	retired

	2026-09-15 13:51:21	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	With respect to The ANC-controlled Eskom Electricity Sector Market Transformation Position Paper, I must politely object to the proposed legislation: it looks less like a fair tariff and more like a bait-and-switch, where one escapes the grid only to find Eskom still billing you for a relationship you’ve ended. It like charging rent for a house you no longer live in, or a “fresh air levy” for opening a window; if the goal is to encourage self-reliance and clean energy, penalising people for not buying your product is a curious way to say “please stay,” and it risks making Eskom’s name synonymous with paying for nothing - which during load-shedding was somewhat ironic.	David	retired
	2026-09-15 13:58:38	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	1. 	2026-09-15 14:09:15	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	In the first instance, with prolonged loadshedding, consumers had no alternative but to find alternative power supplies. These alternative power supplies were, and are, expensive. They simply substituted the supplier and did / do not reduce the overall cost of power provision. While fewer Eskom units may be used, the solar plant (inverter, batteries, panels etc.) Costs the end user. It is not free. If amortized over it's useful life, it remains a cost to the consumer. Worse still, when Eskom was failing to meet a reduced demand, & remained unreliable, consumers were encouraged by tax incentives on solar panels to relieve the pressure on Eskom. Now they bite back? Many businesses might have failed without alternative power supply. Solar power is NOT free!! There is a significant cost to installing the necessary equipment and it does not last forever. It requires maintenance and replacement components at the customers cost, not Eskom's.	Ursula	retired
	2026-09-15 14:23:38	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	For too long we have been manipulated into paying extremely high electricity costs. The manipulation of consumers rights and pockets needs to stop. Electricity rates should be standardised and transparent. Taxes are paid to maintain the country and its people - less theft and corruption means more money to spend. Solar users should not be punished. People only invested in solar as Eskom could not supply constant electricity. Indigents should perhaps all receive solar systems to lessen the burden on the rest of the country.	Kathy	self-employed
	2026-09-15 14:34:30	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Stop penalising private solar investments with mandatory fixed grid charges. • Protect non-solar households from shouldering the cost of municipal revenue shortfalls. • Ensure wholesale market restructuring doesn't leave ordinary citizens paying the bill.	Cathrine	employed individual
	2026-09-15 14:36:07	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	the ANC-led government is, again, attempting to cover its own failures by penalising tax-paying and law-abiding SA citizens	Jacki	self-employed
	2026-09-15 14:42:44	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Levies and taxes on owners of solar, are unfair, and probably unlawful to let people pay while no extra service is rendered. We paid for our solar ourselves with no support from anybody else	Jannie	retired
	2026-09-15 15:05:03	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	ESKOM have requested the public to invest in alternative energy resources when they could not supply enough electricity to the grid a few years ago = loadshedding. ESKOM also requested RIDICOLOUS tariff increases to fund their mismanagement of the utility. This is STILL continuing. Last year they changed their billing structure to force down levies whether you use 10 kW or 500 kW in a month. Now they are FORCING down laws to enrich themselves while their Senior Managent earns RIDICOLOUSLY high salaries. To "fine" people who spent thousands of Rands on solar is CRAZY!	Carel	retired

	2026-09-15 15:33:27	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	When individuals put in solar, they are trying to achieve two things mainly - regular electricity supply, and also taking a load of the main grid, so the government can provide electricity in a better and effective way for others. To now be penalised for this aspect is not encouraging citizens to find solutions to government problems that the government should have resolved but could not.	Favoured	
	2026-09-15 15:41:02	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		D	retired
	2026-09-15 15:49:27	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Punitive fixed tarrifs for ordinary consumers who have installed their own power generation systems is surely not constitutionally correct or allowable. Municipalities must also be forced to bolster their electricity supply systems to ensure that illegal connections (which use electricity with out paying anything) are not only discovered and disconnected but that reasonable reparation is recovered from the freeloaders, to alleviate the substantial debts owed to ESKOM?	Will	retired
	2026-09-15 15:53:16	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Absolutely unbelievable that municipalities want to now charge us for not having solar! Just so that they can use it! This must be stopped! Enough looting of ordinary hard-working citizens! We have been forced to pay exorbitant increases for years. We have paid enough!	gina	self-employed
	2026-09-15 15:53:41	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I installed solar at high cost to counter load shedding, caused by the government, with no subsidy from government. Now they want me to pay more for what I have already paid. That is just criminal.	Jobert	employed individual
	2026-09-15 17:07:40	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Totally object to fixed charges for those who installed solar to help Eskom out. Should not be punished for this at all. Why should one pay if awayfor a month or 2 and using a little? Everyone is finding life expensive and if one can save on something then why not electricity that cost lot of money to install in the first place, loadshedding was terrible , no one got a reduction on monthly supply charges when no supply was being provided for 11 hours plus a day. And this went on for years.	Roz	retired
	2026-09-15 17:27:45	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Matthew	self-employed
	2026-09-15 17:28:45	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom used to produce electricity for not only our country but most of Southern Africa, and was extremely affordable to the taxpayer and well run. They were also producing about 65,000-70,000 megawatts of power. Since the ANC has taken over, electricity has gone up on average about 20%-30% per annum over the last 20 years or more, megawatts produced down to circa 40,000 mega watts, mass fraud and corruption, more than doubled the headcount at salaries the private sector wouldn't pay, rolling blackouts, burning diesel to keep the lights on and so it goes on. Incompetence, corruption and fraud seem to rein at Eskom, which the innocent tax payer has been unfairly burdened with. Charge for Solar, absolutely not, based on what I said above, the taxpayer paid out of their own pocket to protect themselves against the incompetence of Eskom, not you want to charge them for having done that, NO. I agree with privatizing the production of power, cos if done correctly, should actually see the cost of electricity decrease as the private companies root out overstaffing, corruption, inflated salaries etc. However, if privatization is going to lead to cadres getting power plants, this will definitely become a gateway to future unsustainable increases, as nothing will be done to fix the underlying problems. All these changes the ANC tries to implement only has themselves in mind and what they can score from it, not us taxpayers.	Michael	business owner

	2026-09-15 18:44:05	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	When Eskom was unable to supply power to South Africans, we were encouraged to assist the government on reducing demand to the grid. The government was even prepared to subsidise us to look for alternative power. What they are are now doing, is punishing us for helping us them in the past. They didn't even tell us that once the grid stabilizes we're going to pay for using power from the sun. I feel that Eskom and the government withheld crucial information. Why am I now the bad guy for trying to help out when there was an electricity crisis. I'm still paying off a loan I took for solar installation. This is plain unfair. Eskom and municipalities must look for revenue from people who are stealing electricity and leave us alone!	Nomhle Constance	employed individual
	2026-09-15 19:11:31	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom want to punish people because of their bad management practices, and we will not allow them to do this anymore. Eskom knows they are at the end of their excitants.	Jacques	employed individual

	2026-09-15 19:42:58	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I object to any legislation that will force consumers to pay any sort of connection fee. I have installed solar energy to be independent of continual power breaks and surges, and believe that everyone should have the right to be independent if they so choose. This country is a democracy which means that everyone has a free choice and should not be penalised for that choice. Electricity has been relatively unreliable for years, and we have been taxed to pay for Eskom's losses. It is double taxation to tax us to pay for Eskom losses and then to tax us again for generating our own electricity. This is a constitutional matter - will I amongst others will make sure that it gets there.	Gareth	retired

	2026-09-16 16:36:41	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The supply grid had an initial cost which Escom bore and borrowed money to cover its cost. Escom must recover that cost in the long term but surely that recovery can't be a forever liability for individual households. After 10 years say the individual household must have fulfilled its liability to Escom. Connection to the property from the municipal grid is paid for when the original connection fee is paid. Long established properties can not be expected to pay indefinitely for old infrastructure. A small fee for upkeep and maintenance is acceptable but any effort by Escom or a Municipality to cover their expenditure shortfalls by milking electricity end-users is banditry.	Mike

	2026-09-17 06:52:23	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	There should not be penalties for people who become independent from a system which corrupt and cannot function properly. Small consumers shouldn't be punished for big companies and consumers leaving the grid due to the incompetence of ESKOM and their reliability.	Frederick	
	2026-09-17 07:00:18	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Its very simple and I will stick to the principle: Pay for what you get. What do I get? I get very little to no basic services. What will I pay? A payment that should match these poor inhumane "services". I went through lots of stress and hard earned money to get myself solar so I can avoid all these criminals from Escom and Municipalities (yes criminals). I had to spend lots of cash to get a Jojo tank to collect water for the bad days which happens a lot. They (service providers) only focus to enrich themselves and its nothing to do about service delivery. If you were so honourable you would cut all government positions and affected 3rd party positions' salaries at least by half to fund the shortcomings that was caused by prior criminals that stole the service money. Putting the burden on loyal paying customers is unethical and just a plain criminal act hiding behind "legal" excuses. So for me I will not foot the bill of corruption and will not pay even higher fees	Marc	employed individual

	2026-09-17 08:38:10	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I recognise that Eskom must recover the legitimate costs associated with maintaining a safe, reliable and sustainable electricity network. Residential solar customers who remain connected to that network should therefore make a reasonable contribution towards those costs. However, cost recovery must be balanced against South Africa's equally important objectives of increasing private electricity generation, improving energy security, encouraging energy efficiency and accelerating investment in renewable energy. Consumers who use their own capital to generate clean electricity should not be placed in a position where escalating fixed charges substantially neutralise the financial benefits of doing so. I therefore request that Eskom and NERSA continually review the residential solar tariff framework to ensure that: * fixed charges are demonstrably cost-reflective, transparent and proportionate; * households are not effectively penalised for reducing grid consumption; * customers receive fair value for electricity exported to the grid; * tariffs continue to provide meaningful incentives for renewable-energy investment; * low-consumption solar households are not disproportionately affected; and * the long-term tariff framework provides sufficient certainty for consumers making substantial investments in renewable-energy systems. The electricity tariff framework should achieve a fair balance: customers should contribute reasonably towards the grid services they use, while households that invest their own resources in reducing pressure on the electricity system should continue to receive a meaningful economic benefit from that investment.	Nhlamulo	employed individual

	2026-09-17 08:44:15	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	To Whom It May Concern, I hereby submit my objection to aspects of the proposed Electricity Sector Market Transformation Position Paper due to concerns regarding fairness, affordability, and the potential unintended consequences for South African electricity consumers. 1. Opposition to Punitive Fixed Charges on Solar Users The proposal's "anti-free-riding" approach appears to unfairly penalise households and businesses that have invested significant private capital in rooftop solar systems. These investments have helped reduce pressure on the national grid, contributed to energy security, and supported South Africa's transition to cleaner energy sources. Introducing excessive fixed capacity or connection charges that are largely unrelated to actual electricity consumption undermines the economic viability of these investments and discourages future private sector participation in renewable energy development. Consumers who have invested in solar should not be subjected to punitive charges simply because they consume less grid electricity. 2. Protection of Non-Solar and Low-Income Consumers I am deeply concerned that electricity market restructuring may result in a shrinking revenue base for municipalities as large industrial customers gain access to alternative electricity procurement options. If municipalities respond by increasing tariffs and fixed charges for residential consumers, the burden will fall disproportionately on households that are unable to afford solar installations or alternative energy solutions. The Department should ensure that vulnerable consumers are protected from tariff increases that arise primarily from revenue shortfalls rather than actual service delivery costs. 3. Transparency and Cost Allocation Any restructuring of the electricity market must be accompanied by transparent and independently verifiable cost allocation models. Consumers deserve clarity regarding: The actual cost of maintaining distribution networks. How fixed charges are calculated. The impact of industrial customer migration on municipal finances. Measures to prevent cross-subsidisation from becoming excessive or unfair. Without full transparency, consumers cannot meaningfully assess whether proposed tariff structures are justified. 4. Encouraging, Not Discouraging, Energy Investment South Africa requires substantial investment in electricity infrastructure and generation capacity. Policies that create uncertainty or reduce the financial benefits of solar adoption may discourage future investment by households and businesses. The Department should develop a framework that recognises the value distributed generation brings to the grid while ensuring that network maintenance costs are recovered fairly and proportionately. Requested Action I respectfully request that the Department: Reconsider any policy measures that impose disproportionate fixed charges on solar users. Introduce safeguards preventing municipalities from transferring lost revenue burdens onto ordinary residential customers. Publish transparent cost studies and impact assessments before implementing tariff reforms. Ensure that market transformation promotes affordability, fairness, and investment in clean energy rather than penalising consumers who have acted to improve their energy resilience. Thank you for considering this submission.	Ashish	employed individual

	2026-09-17 09:34:13	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Stop the "Sun Tax": Do not penalise private capital and solar investments with punitive fixed grid fees. A short while ago, government was subsidizing domestic installation and use of solar infrastructure, in order to lighten the load on the electricity grid. Now government wants to take punitive action against those that have conformed to this policy and all because it allowed decades of corruption, theft and treasonous self-sabotage within Eskom! The Constitution requires policy to be consistent, logical and fair. This new phase of government energy policy cannot be seen in isolation - it is clearly a dangerous mutation of the same thread of policy, which will undermine the evolution of South Africa's path towards the adoption of sustainable, non-polluting energy sources. It is not logical, it is not consistent (since it marks a reversal of a sound evolutionary path) and is therefore unfair, which brings it into conflict with the Constitution. Protect Captive Consumers: Bar municipalities from hiking tariffs on non-solar homes to cover lost revenue from industrial and off-grid defection. Transparency First: Ensure wholesale market reforms do not leave everyday households footing the bill for grid infrastructure.	Barry	retired
	2026-09-17 09:40:02	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Escom pleaded with the ever patient citizens of RSA to reduce electricity usage. The citizens responded by spending their overtaxed earnings on solar systems to help Escom out of its perilous state of affairs. The citizens paid even more tax in the form of VAT to install solar systems !! Now Escom want to REPAY the citizens by taxing them again. Inflated electricity charges are already far to high. As a pensioner living on a fixed income we were already battling to stay warm during the past winter, now Escom want to freeze us. Were is their gratitude for everything that that citizens did in an attempt to help Escom out of the hole that it had dug itself by not maintaining generating equipment ??	Malcolm	retired

	2026-09-17 16:30:31	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We, the South African citizens who have to make a plan for rooftop solar due to the incompetence of the ANC Government, as well as corrupt State-Owned Enterprises, WE are now being labelled, as “free riders” with an “anti-free riding” principle! What is SOWETO if not free riding? Why are they not paying for their electricity? Why have corrupt people in the municipalities who have stolen funds paid for electricity, by us the consumers, not in jail? Now you want to punish the consumer for your incompetence and corruption. This is unacceptable and as corrupt as Zuma and the ANC!	Brian	employed individual
	2026-09-17 16:45:49	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The sun is a resource that is free for all living beings of the world. No entity has the right to tax or levy any fee for generating power from the sun. If the state, municipalities and Eskom has failed to supply affordable energy without the fear of loadshedding then the installation of solar power would not have been needed by ordinary citizens. Trying to punish citizens with solar tax and fees for not using the grid fully or completely going off grid, are unreasonable and unconstitutional. They failed South Africans and have no business interfering with solar power. They did not pay for the solar systems so they have no say.	Zel-marie

	2026-09-17 20:21:41	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	https://www.facebook.com/share/p/19RuN7zVbR/ Did Eskom really back down on solar? Or did we just fall for a massive regulatory distraction? Over the past week, headlines celebrated Eskom supposedly "retreating" on threats to fine solar households up to R30,000. Here is what the victory laps didn't tell you: Eskom never had the legal authority under the Electricity Regulation Act to fine you in the first place. While public attention was fixed on an unenforceable phantom fine, the Department of Electricity and Energy gazetted a far more dangerous policy that introduces a direct "Sun Tax" on South African homes: the Electricity Sector Market Transformation Position Paper. Here is how this policy impacts your pocket—whether you have solar or not: ☀️ If You Have Solar: The policy paper introduces an explicit "anti-free-riding" rule. Because solar owners buy fewer units (kWh) while staying connected to the grid for backup, the state plans to shift billing away from usage toward punitive, mandatory fixed monthly network charges. You will be forced to pay high fixed connection fees every month just for having solar on your roof, regardless of how little grid electricity you draw. ? If You Do NOT Have Solar: You stand to take the hardest hit. The paper deregulates large industrial consumers (1 MW+), letting mines and factories bypass local municipal grids entirely to buy cheap wholesale power. As big business leaves and affluent homes switch to solar, municipalities lose their biggest revenue streams. Under this policy, those shortfalls will be dumped squarely onto "captive consumers"—everyday households who rely on the grid—through skyrocketing tariffs and basic service charges. A press release celebrating unenforceable Eskom claims will not stop this policy from becoming binding regulation. Under South African administrative law, the only record the Minister is legally required to consider is formal public participation on the gazetted document. ⏳ Written comments close on 20 September 2026. Have your say directly on the official record via the DearSouthAfrica platform in under 60 seconds: ? https://dearsouthafrica.co.za/electricity-transformation-paper/ Tell the Department: • Stop penalising private solar investments with mandatory fixed grid charges. • Protect non-solar households from shouldering the cost of municipal revenue shortfalls. • Ensure wholesale market restructuring doesn't leave ordinary citizens paying the bill. 	2026-09-18 09:42:53	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Most of the residents who now have paid large sums to install solar at their homes did so exactly because Eskom was not able to reliably supply electricity. One of the reasons my own son gave for deciding to emigrate was that we had too many blackouts, in addition to the discriminatory BEE laws and violent crime he had been subjected to. To now try to force those same residents who took the onerous financial decision to install solar so as to avoid blackouts, for Eskom, and, or, municipalities, to try to penalise those same residents is obscene. I reject this. In addition, investing in solar is the right green choice to make for a sustainable future. The government, Eskom and municipalities should be supporting this not penalising residents in a position to help themselves, Eskom, and the country, by installing solar.	Roland	employed individual

	2026-09-19 04:57:57	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom is unable to provide the necessary electricity, as individuals we have had to invest in solar and also have to pay our fixed electricity charges. Barries to supplying into the grid are still steep. Fixed charges for solar seem like an excessive measure to keep a monopoly on the market	Jenny	employed individual
	2026-09-19 05:38:31	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Solar is free energy we helping a collapsed grid and the government at our cost we should be given the right to the cheapest options available	Rajeev	employed individual
	2026-09-19 10:09:49	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I do not support this bill. Mandatory fixed solar charges, captive consumer price hikes, and municipal revenue losses will hurt ordinary households and small businesses. Many household have gone over to solar out of necessity and lack of financial capacity to pay for the climbing prices of electricity. To have an affixed price for electricity would cause countless small, low income households to go bankrupt. Furthermore, ordinary consumers will become captive ratepayers. If large users above the threshold can leave municipal grids, households and small businesses will be left to carry municipal revenue gaps and legacy cross-subsidies. That risks a spiral of rising tariffs for those least able to pay.	Amy	
	2026-09-19 10:19:17	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The government is crazy do they own the sun? How can they introduce sun tax for something that is completely free. They failed to provide sustainable electricity to community now that we found an alternative source of electricity they want to legislate and take it away. We spend thousands of rands to install solar in our homes without government assistance now they want to tax us, it’s crazy even to think about it let alone gazette it. I will not not pay any tax or penalty I refuse to be bullied by this incompetent government.	Mzi	self-employed

	2026-09-19 23:40:15	No I do not	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	A “Sun Tax” on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. The “Captive Ratepayer Trap” and Municipal Insolvency: Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance. Wholesale Price Volatility and Market Power Manipulation: Eskom Generation still controls the overwhelming majority of South Africa’s dispatchable baseload power. In unbundled spot markets worldwide, dominant suppliers have engaged in economic or physical withholding to artificially spike market clearing prices. Without hard statutory bid caps and aggressive oversight, wholesale price volatility will be passed directly down to retail consumers. Severe Conflicts of Interest Within the NTCSA: Consolidating transmission grid ownership (TNSP), system dispatch (SO), market clearing (MO), and legacy state off-take contracts (CPA) within a single entity under Eskom Holdings creates structural conflicts of interest. NTCSA could face internal commercial pressure to favour Eskom assets or delay third-party grid connections. Premature Market Launch Amid Unresolved Municipal Debt: Opening an advanced wholesale market with mandatory imbalance penalties in 2026/2027 while municipal distribution debt to Eskom remains unresolved is premature. Financially distressed municipalities that fail prudential credit requirements will be excluded from trading platforms, creating a divided nation of well-supplied metros and failing, power-starved rural councils. Discover	Jacques	self-employed

						This sneak policy is iniquitous! It also directly contradicts Eskom's advocation of rooftop solar and for small businesses, only to deceitfully turn around and bite the hand that fed them at steep cost to those who had to install solar PV systems to keep their businesses afloat for the simple reason that Eskom had screwed up since ten years before 2007 when they failed to start building new power stations to prevent the need for load shedding! Yes, this was indeed the direct result of the point blanc refusal of the then PV and later President of South Africa, Mbeki. But since the government is the only shareholder of Eskom, they are essentially an integral part of Eskom, since Eskom is the state's plaything! Eskom is the state and the state is Eskom. Irrespective of how you look at it Eskom was the direct unworthy beneficiary, promoter and the cause of the need for all the all the solar PV installation in the first place! Eskom is directly responsible for not having the guts to make public Mbeki's damning stupidity at the very start to force his hand in sanctioning the commencement of the urgently needed new power station build. As such I and countless others should present Eskom with bills for the generators that we first installed, with hugely excessive fuel bills. When these failed, we had to replace them with Inverters and deep cycle batteries, only to see the batteries fail within a year as the inevitable long predicted (and ignored) load shedding increased. When PV systems became more viable we had to install solar PV systems. The cost of all of this was directly caused by Eskom's failure to make public Government's massive economy stalling blunder! But the above only the tip of the iceberg of the costs that Eskom has knowingly imposed on South African businesses and the public! 18 years of load shedding since 2007 with concomitant stalled economic growth has forced several small and large commercial and industrial business to cut production and staffing just to survive two long decades of seriously curtailed economic growth. On top of that many businesses were forced to shut down entirely, causing job losses for entire staff compliments. All of this directly caused the national GDP growth to collapse, with enormous economic loss to our nation. Moreover, there is a very strong relationship between GDP and life expectancy due to impoverishment of breadwinners and their desperate families. (Had this been taken into consideration it would also have been obvious that the premature and protracted harsh lockdown during the COVID-19 fiasco would have caused many more unnecessary that ugly slow deaths through extreme poverty than those that were medically saved by the lockdown. You see letting a few medical practitioners mange the pandemic led to the obsession to minimise COVID-19 deaths to the exclusion of the deaths that would ensue from the harsh lockdown. They were trying to minimise the wrong variable! The objective should have been to minimise the TOTAL number of deaths (the sum of the medical deaths PLUS the economic deaths). If I, as a hydrological and water quality modelling expert engineer could identify this while watching the blur of graphs presented on TV and that I confirmed a couple of hours later that night, the why couldn't the medically let government team do it? the answer is simple - they could not see beyond the medical problem and the desire to minimise the number of medical deaths, the control of which failed entirely anyway as soon as infections spread from the international travel sector to the crowded townships. I am not an actuary, but was pleased to find that a competent team of actuaries had taken up the cudgels and produced a more detailed analysis that showed results very close to those of my simple calculations. Listening to actuaries more attentively would have made this obvious in a very short time.) The above example is included to point out the foolishness of a blinkered approach to a major problem of resulting in the stubborn (arrogant?) focus on their own area of expertise, thereby failing to recognise the wisdom residing in the expertise available in an even more important field. With regard to Eskom we could also benefit from a team of actuaries and economists calculating just what Eskom owes the South African public as a result of their KNOWING delict that caused and later prolonged the load shedding. Maybe a group of lawyers could enter a class action ton see justice done? Perhaps those of us who face economic loss due to Eskom's outrageously unjust planned action now, could counter sue Eskom for the losses that have been imposed on them due to Eskom's catastrophic delict. A landslide of invoices for their criminal delict in failing to authorise the commencement of a new build of essential power stations until it was already too late? Not to mention the following long litany of blunders that caused massive cost over-runs and extraordinary delays in getting Medupi and Kusile Power station to actually work. If I were Eskom I would drop this indefensible scheme right now to avoid facing embarrassing and very costly court orders arising from their criminal delict that has cost both us as individuals and our nation so much. There s also the matter of all the poverty driven deaths that have already occurred and will continue to plague our land for years to come. Stirring this hornet's nest could prove to be extremely uncomfortable for both Eskom and the ANC that has presided over this mess. At the end of the day the Government will be the biggest loser, along with a number of past and present top officials and managers within Eskom and managers and top office holders within government who would find themselves co-respondents who could be held personally responsible. This could really mess up the hoped for comfort of their retirement.

	2026-09-20 11:55:42	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I have invested in solar due to your inability to supply continuous power to my home . Be it through ageing infrastructure, vandalism , theft or bad maintenance. You are only able to generate enough power now that thousands of homes are producing their own power and thus not taxing the grid supply. I have already paid an exorbitant amount just to ensure 100% power and will not pay additional taxes as a result	Athol	retired
	2026-09-20 13:42:22	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		PEET	retired
	2026-09-20 18:22:22	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	What is crazy to me is that the ANC government does not understand basic market economics. When a product becomes scarcer the price would increase. When the product is readily available the price would drop! Not so with Eskom....they are not selling enough product because of "oversupply", so they up the price to make it even more unaffordable! "only in South-Africa!	Hugo	retired
	2026-09-20 18:29:33	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I object to being penalised because I have installed my own solar system so that my household did not have to be totally reliant on the failing Eskom infrastructure. The current % of fixed charges is already ridiculous without it being increased again.....	Michael	retired
	2026-09-20 19:14:10	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	To the current (and future) leaders of the Electricity and Energy Sectors in South Africa All the proposed transformations for the electricity sector ignore the fundamental reasons for arriving at this point in time (and the proposed Electricity Sector Transformation Position Paper). Addressing the fundamental / core concerns would be far more effective and beneficial for South Africa and everyone living and doing business here. In brief:- the immense political interference in the management of Escom and the coal supply have cost South Africa an enormous amount. The deliberate release of competent staff, appointment of less competent staff, cadre deployments, inappropriate and even lack of (preventative) maintenance, and tolerating corruption through various means (without adequate support from crime prevention units / entities) are factors that contributed to the so-called need for transformation. The solutions proposed are not in the best interest of South Africa, its residents, and business. You are instructed to address all the core concerns (as you have already started doing in some instances), and stop wasting time on transformation initiatives that are mainly geared to suit the interests of a few local and globalist people and interests. Electricity should have remained (and still be) very cost effective in South Africa. You are also instructed not to introduce any form of a taxation (by whatever name you want to call it) at any stage of the use of solar energy (as subtly proposed with this Electricity Sector Transformation Position Paper). 	2026-09-20 20:04:31	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	No-one owns the sun, so if you don’t own it, you have no right to charge people for it!!!Whats next? Are you going to charge us for the full moon?	Clarina	employed individual
	2026-09-20 23:08:50	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	1.) Eskom has become extremely inefficient, with more staff than ever, yet generating less electricity than before. First it begged people to use less of its increasingly unreliable and expensive electricity, so people invested in more efficient appliances, switched to gas for cooking and installed solar panels. Punishing people for doing what it asked smacks of Eskom wanting to have its cake and eat it too, by not generating electricity but still getting paid. 2.) Now after its customers are using less of the product, which it asked them to conserve, it realises that it can no longer cover its bloated cost structure, nor can it compete on cost with alternative power, for example, solar panels and batteries. It boggles the mind that Eskom is being outcompeted by private industry who had a standing start. Eskom needs to go on a serious cost-cutting exercise and become far more efficient so that it can drop its fixed charges. The only way I can see that happening is by introducing competition. If people could pick a private company to take over administration of their account, then Eskom would likely be forced to streamline its administration and decrease that large yearly charge for administration. 3.) Eskom sees fixed charges as a way out of the mess that it has created. It now has administration charges and network access charges and other fixed charges. Instead of laying off the surplus staff members and cutting overpriced suppliers like a private company would have to, it simply behaves like a monopoly and passes on the costs to customers. Without significant pushback from the regulator, Eskom will behave like a monopoly and price gouge its customers. The City of Cape Town now offers cheaper network connection charges than Eskom. while delivering a superior service. 4.) Fairness: the user pays the principle; if you use the grid, you should pay. If you don't use it, you should not pay. If you use it more, then you should pay more, and if you use it less, then you should pay less. Imagine everyone had to pay for the upkeep of fuel stations and refineries; thankfully, they are not an Eskom monopoly. 5.) Fixed costs for network connection and generation charges should be based on the measured (not estimated, notified, or deemed) maximum current drawn per month or quarter. This could be done more cleverly by factoring in time of use. I.e., measure the current draw during peak times of the day and not penalise use in the times of lowest demand, for example, between midnight and 05:00. This would encourage load shifting from peak to off-peak times by anyone with batteries or even just geysers (hot water heaters). People would willingly run off their batteries during peak demand and charge them during lowest demand; similarly, people would use a simple timer to heat their water during the same low-demand period. 6.) The more money that goes to Eskom, the less there is to spend on other goods and services. Starving the other sectors of the economy to feed an already overweight Eskom is hardly thinking of the bigger picture. Not to mention the negative impact that it will have on small businesses that have to pay ever more to Eskom.	Liam	employed individual

	2026-09-27 19:40:31	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Following years of bad operational, financial, and capacity management by the government and Eskom (through government overreach, interference), this policy seeks to recover additional revenue from an already small pool of over-taxed rate payers, who not only aided in Eskom's recovery by lessening the load on the demand through self-funded solar installations, but also lowered the country's carbon footprint by increasing our proportional renewable generation. Solar users are effectively being punished for being part of the solution (at their own cost). Furthermore, apart from the latter, solar users were in most part forced to become self-reliant in the face of years of unreliable electricity supply due to load-shedding. It is not sustainable for the government to continue shifting the burden of their responsibility to the minority of economically active and constructive rate-and tax-payers and private sector businesses. Instead, the government should look inward for recovery solutions and hold officials and SOE's accountable for poor performance and insufficient planning and management, while focussing on cost-savings as opposed to questionable tactics to increase electricity revenue to return Eskom to a viable sovereign power supply platform. 	2026-09-28 07:51:44	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	What the Policy Proposes: The position paper establishes the principle to “discourage free riding,” arguing that modern electricity networks have high fixed infrastructure costs and low operational costs. Under this framework, tariffs will shift away from pure volumetric consumption charges (cents per kilowatt-hour) toward mandatory fixed capacity and network charges for all grid-connected customers, regardless of how little electricity they consume. Only consumers who disconnect completely from the national grid will be exempt from these fixed fees. The Underlying Risk: Households and small businesses that invested significant private capital into rooftop solar, batteries, and energy efficiency to protect themselves from load shedding will be forced to pay higher monthly baseline connection fees. This structural shift acts as a financial penalty on private decarbonisation, extending solar payback periods and increasing electricity bills for low-volume and frugal users. Points to Demand in Your Public Submission: Demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. Insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. Require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households.	Jan	employed individual

	2026-09-28 09:07:43	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I do not support this proposal in its current form. While I understand the need to reform South Africa’s electricity system and reduce Eskom’s monopoly, I am concerned that ordinary households and small businesses will end up paying more while large industrial users are allowed to access cheaper power directly. I strongly object to mandatory fixed grid charges aimed at rooftop solar users and low-usage households. Many people invested in solar because Eskom failed to provide reliable electricity, and government encouraged the public to reduce demand on the grid. It is unfair to now treat those same people as “free riders” and penalise them with unavoidable monthly charges. I am also concerned that households and small businesses could become captive ratepayers, left behind on municipal grids while larger users bypass the system. This could force ordinary consumers to carry municipal revenue shortfalls, cross-subsidies, and legacy costs. Any electricity market reform must protect households, small businesses, and private renewable energy investors from higher fixed charges, unfair solar penalties, and tariff volatility. Competition should lower costs and improve reliability, not create a new system where ordinary consumers pay more.	Kim	employed individual
	2026-09-28 09:09:01	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The goverment recieved large sums of money from europe to be more green, but then they want to punish people who are green make that make sense. ESKOM could not provide and when people made plans they want to punish them, because the paying population reduced. They brag about how much money they made, but then still want to take more!	Ann-Marie	employed individual
	2026-09-28 09:17:48	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom, encouraged people to move to solar to help with demand, Now Eskom don't have the money to keep things running so they want to charge more and more to keep the lights on, the tariffs and mandatory fees have already doubled my monthly costs with out any additional usage on my side, in fact I'm using less than before, but being charged more for less, go figure. the only option is to go completely off grid, which is ridiculously expensive. "sun tax" will be introduced when government realize they have broken everything in S.A.	Johann

	2026-09-29 10:26:46	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I Do not support this document. It is completely irrational since the municipality cannot supply essential needs, so the consumer goes elsewhere for the supply and now we get levied on it. Stop wasting money with corruption and cut off power from those stealing it. Really, you just keep on milking the your customers but you don't start with yourself. Your own corruption within.	Joharine	employed individual
	2026-09-29 11:10:07	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I support the principle of opening South Africa's electricity market to competition. The single-buyer model has failed us comprehensively, and private investment in generation is overdue. But I object, absolutely and without qualification, to the imposition of high fixed monthly connection charges on households and businesses with rooftop solar installations. Let us be honest about what happened in this country. During the worst years of load-shedding, the state could not keep the lights on. Ordinary citizens and small businesses responded by investing billions of rand of after-tax private money — often financed against their homes — into rooftop solar. That private investment did what Eskom could not: it reduced demand on a collapsing grid, freed up capacity for those who could not afford alternatives, and materially helped end load-shedding. Government at the time actively encouraged this, with the President himself calling on citizens to install solar and offering tax incentives to do so. To now brand those same citizens "free riders" and target them with unavoidable fixed charges is a retrospective punishment for having done exactly what the country asked of them. It is a breach of the most basic principle of investment certainty: people made 10–20 year investment decisions based on volumetric tariffs, and the state now proposes to change the rules after the money is spent. If government does this to households over solar panels, why would any investor — domestic or foreign — trust the tariff assumptions underpinning the very private generation investment this reform claims to attract? The "anti-free-riding" framing is also simply wrong on the facts. Solar households still buy electricity from the grid — at night, in winter, in cloudy weather — and pay the full tariff for every unit, a tariff that already contains distribution margins. They have not defected; they have reduced consumption, exactly as any energy-efficient customer does. Nobody proposes a fixed penalty for installing a gas stove or LED lighting. A fixed charge aimed specifically at solar owners is not cost-recovery; it is revenue protection for a broken municipal financing model, dressed up as fairness — and the roadmap admits as much by pairing it with the "captive ratepayer" structure, in which large users may escape to cheaper traders while households are locked in to fund the deficit. If grid costs must be recovered more explicitly as the market unbundles, there are honest ways to do it: cost-reflective, capacity-based network charges applied equally to all connection sizes, phased in with grandfathering for existing installations; time-of-use tariffs that price actual grid usage; and fair compensation for the energy and grid-support services rooftop systems export. What is not acceptable is a punitive fixed levy that singles out the one group of citizens who solved a national crisis at their own cost. Reform the market. Do not tax the people who kept it alive.	Gerrit	self-employed
	2026-09-29 12:31:18	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The main reason for opting for solar installation was due to loadshedding. The government stated that loadshedding is necessary to reduce the burden on the electricity supply grid. Since we installed solar panels, the load on the supply grid has been solved, so government's problem has been solved at no cost to the government, but at the cost of the individual tax payer for solar installation. Now government want to impose a grid levy/ tax due to the use of solar panels. This constitutes theft, because you will tax for a service which is not rendered.	Deon	self-employed

	2026-10-01 08:10:47	No I do not	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The below section which punish solar users after the very same government pleaded with the public to go solar to assist the grid due to the lack of government supply is the worst way to say thanks for the help. The problem is that the municipalities have lost their paying customers due to the solar installations and the remaining users are not paying their bills or just stealing. Stop all the corruption and then table new plans that actually benefit all not continually screw us over. "The position paper explicitly identifies grid-tied rooftop solar households under its "anti-free-riding" principle (Section 1.2.2). Because solar users consume fewer kilowatt-hours from the grid while still relying on it at night or during overcast weather, the policy argues they are not paying their fair share of fixed infrastructure costs. To address this, the framework mandates a shift away from pure per-unit consumption billing toward higher mandatory fixed monthly capacity and network charges for all grid-connected users, regardless of how much electricity they actually draw." 	2026-08-29 17:50:33	No I do not	Municipal Financial Collapse		Residential Electricity Consumer / Ratepayer	The only outcome will be to force even more residential consumers to move off grid, and this will end in the establishment of micro grids controlled by the people using them. You cannot have carbon taxes on vehicle sales, talk about green economy and take green loans from European funders for the purpose of reducing CO2 and at the same time charge residents that spent their own capital for solar and wind with grid connectivity that was built by their and previous generations tax money. Build your own new grid/s without using tax money and charge as much as you like but allow the private sector to do that as well and contract with residential consumers for electricity delivery and maintenance. Eskom has been proven to be less than efficient and to force its tenuous existence down to the few paying customers with price increases that are well beyond any inflationary measure or benchmark. This road ends with everyone that is able establishing an alternative that includes private networks, off grid installations and simply not paying any longer as they are not able to afford the forever increasing demands in a country with low growth and plenty unemployment. 	2026-09-12 08:30:26	No I do not	Municipal Financial Collapse		Residential Electricity Consumer / Ratepayer	What the Policy Proposes: The policy introduces a dual market structure dividing consumers into “Eligible Customers” and “Captive Customers.” Only large commercial and industrial consumers exceeding a specified demand threshold (e.g., 1 MW) will initially have the legal right to purchase directly on the open wholesale market or contract with private traders. All residential households and smaller commercial entities will remain “captive” to incumbent municipal or Eskom distribution retail tariffs. The Underlying Risk: Allowing the largest, highest-paying electricity users to exit municipal supply creates a two-tiered energy economy. As high-volume users migrate to competitive private contracts, the fixed costs of maintaining legacy municipal networks and state-owned infrastructure will be concentrated onto captive residential households, driving up standard retail tariffs. Points to Demand in Your Public Submission: Demand a binding, published transition roadmap that progressively lowers the eligibility threshold, ensuring retail market choice is expanded to ordinary households and SMMEs rather than remaining an exclusive corporate privilege. Require NERSA to implement mandatory tariff-parity benchmarks ensuring captive customer tariffs do not exceed wholesale-plus-efficient-delivery benchmark prices. Oppose any mechanism that uses captive household tariffs to recover stranded costs or uncompetitive legacy contract premiums.	Fatima M I	employed individual

	2026-09-14 15:39:32	No I do not	Municipal Financial Collapse		Residential Electricity Consumer / Ratepayer	The cascading energy/ cost problem has been years in the making: The Government Minister /s over years failed Eskom Eskom: (by Government appointees Management) raped the business which resulted in disasterous under supply. The Public responded by seeking alternatives at great expense. (Power generators, solar power, wind turbines etc,) In other words the public bailed out Eskom. As a result of public outcry Eskom were forced to respond and they now need paying(!) customers. Municipalities who have been the collectors of public energy bills are finding less revenue than previously and their wasteful (corrupt) entities are largely bankrupt. The Government/Eskom/ Municipalities now seek to impose further costs on the paying (!) public to rescue themselves again. The Government/Eskom/ Municipalities should look at themselves for resolution. I oppose any increase.	JOHN	retired

	2026-09-17 10:02:37	No I do not	Municipal Financial Collapse		Residential Electricity Consumer / Ratepayer	The consumer cannot be expected to continue to fund looting and incompetence. If the money the municipality needs to pay its bills has been stolen, it needs to institute criminal proceedings to recover it. Creating a law that allows for the limitless transfer of the burden of payment to the consumer is unethical. Such consumers are already under extreme pressure as tax paying citizens and citizens who fund the majority of other government revenue streams (vehicle licensing, purchasers of luxury goods with higher VAT etc.) and should not be forced to continually bail out the municipalities because of poor planning and inadequate oversight. Municipalities need to be forced to work with what they have and ministers should be held accountable in their personal capacities.	Tamsin	unemployed individual

	2026-08-26 16:53:29	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	I support opening the market to end Eskom's monopoly, but home owners with a solar set-up that is not attached to the national grid should completely be left alone to generate their own power and NOT BE TAXED! If someone chooses not to buy power from either Eskom or another provider and makes their own on site, that should be their choice without any penalties. Am I going to be charged next if I put a windpump up on my property for the friggen air???? Anyone who is off grid should pay ZERO. If I make fertilizer with my own poop are you going to tax me on that too???? Anyone with a solar set-up that feeds back into the national grid could reasonably be charged for upkeep of the entire grid. But reasonably, like no more than R200pm for a 3 bed house. Similar to the fixed fee we already pay for Eskom power. But the pencil really has to be sharp here, as that money should go for maintaining infrastructure, not profit for failing municipalities. 	2026-08-27 09:55:42	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	The policy introduces a dual market structure dividing consumers into "Eligible Customers" and "Captive Customers." Only large commercial and industrial consumers exceeding a specified demand threshold (e.g., 1 MW) will initially have the legal right to purchase directly on the open wholesale market or contract with private traders. All residential households and smaller commercial entities will remain "captive" to incumbent municipal or Eskom distribution retail tariffs. The Underlying Risk: Allowing the largest, highest-paying electricity users to exit municipal supply creates a two-tiered energy economy. As high-volume users migrate to competitive private contracts, the fixed costs of maintaining legacy municipal networks and state-owned infrastructure will be concentrated onto captive residential households, driving up standard retail tariffs. Points to Demand in Your Public Submission: Demand a binding, published transition roadmap that progressively lowers the eligibility threshold, ensuring retail market choice is expanded to ordinary households and SMMEs rather than remaining an exclusive corporate privilege. Require NERSA to implement mandatory tariff-parity benchmarks ensuring captive customer tariffs do not exceed wholesale-plus-efficient-delivery benchmark prices. Oppose any mechanism that uses captive household tariffs to recover stranded costs or uncompetitive legacy contract premiums.	michael	retired

	2026-08-27 10:54:19	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	For years, we have been told that South Africa's electricity system was under enormous pressure and that we needed to reduce our electricity consumption. Load shedding was introduced because there was not enough generation capacity to meet demand. Many South Africans spent money on alternate systems so that they could reduce the pressure on the national supply and keep their homes and businesses operational. It feels like a contradiction; when we were using too much electricity, we were told to use less. We responded by investing our own money to use less grid electricity, and now we are being told that we may have to pay more because we use too little. With residential usage required for keeping food safe with reliable refrigeration, Homes safe from the fact that the state can't and being able to operate businesses reliably while not having electricity. The unstable and poor quality of supply causes costs to rise due to insurers increases cover costs and claimants having excess charges for damages. These costs are not recoverable just as the costs for Eskom due to the installation of self-supply to overcome the shortcomings of the grid supply.	Jonathan	retired

	2026-08-28 06:46:13	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	The advance of solar systems in the country amongst homes was due to the shocking raping of Eskom by the Cadres. This lead to unbelievable outages seen only in 3rd world countries. Why would I pay more for incompetence. Furthermore, the public could increase the size of their installation that already exists and go off-grid totally which is what I would do.	Mike	retired
	2026-08-28 07:02:25	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	The state encouraged and (albeit moderately) incentivized us to install solar systems. It is irrational, unfair and therefore unconstitutional to punish those who installed these systems. It also goes against decarbonisation imperatives.	Mark	
	2026-08-28 07:06:41	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	I strongly object to the introduction of mandatory fixed charges for solar users and further tariff increases imposed on so-called “captive consumers.” I live in an area where we already pay a fixed monthly charge for electricity availability. In reality, that availability is anything but reliable. Our electricity supply is repeatedly interrupted—sometimes for days and, in severe cases, for weeks at a time. The explanations are always plentiful: failing infrastructure, inadequate maintenance, trees falling on power lines, tripped substation switches, vandalism, rain, wind and numerous other recurring problems. What remains absent is a dependable electricity service. During these prolonged outages, households and small businesses must spend enormous amounts of their own money on generators, fuel, solar systems, batteries and other backup solutions. We do this to prevent food from rotting, protect appliances and equipment, keep water systems running and stop our businesses from collapsing. No one compensates us for these expenses or for the losses caused by failed municipal and state-owned infrastructure. Our electricity accounts, municipal rates and taxes are nevertheless expected to be paid in full and on time—regardless of whether the promised service is actually available. Residents who invest in solar power are not abandoning the electricity system merely to avoid paying their fair share. Many have been forced to become partially self-sufficient because the electricity provider has repeatedly failed to deliver a stable and reliable service. Solar installations reduce pressure on an already strained grid and require substantial private investment. Penalising people for making that investment is fundamentally unfair. These proposed charges create a perverse situation: consumers must first pay for an unreliable electricity supply, then pay privately for an alternative when that supply fails, and finally pay an additional penalty for needing that alternative. Municipal revenue losses cannot simply be transferred to a shrinking group of captive consumers through increasingly unaffordable tariffs and fixed charges. This approach will place further pressure on ordinary households, pensioners, low- and middle-income residents and small businesses already struggling with the cost of living. It may also encourage more consumers who can afford to do so to disconnect from the grid entirely, further reducing the municipality’s revenue base. The solution to declining electricity revenue is not to punish responsible consumers or trap those without alternatives in an endless cycle of price increases. The solution is to improve reliability, maintain infrastructure properly, reduce electricity losses, address illegal connections and vandalism, improve billing and financial management, and restore public confidence in the service being provided. Any fixed charge should be reasonable, transparent and directly related to a reliable service. It should also take account of the actual availability and quality of that service. Consumers should not be forced to pay an “availability” charge during prolonged periods when electricity is demonstrably unavailable. I therefore call for: The proposed mandatory solar and fixed charges to be withdrawn or substantially reconsidered. A transparent breakdown of how the charges were calculated and what services they are intended to fund. Proper public consultation and a full assessment of the impact on households and small businesses. Service-level protections, rebates or account credits where electricity remains unavailable for prolonged periods. Fair tariffs that reflect actual consumption and do not penalise residents for investing in alternative energy. Meaningful accountability for infrastructure maintenance, outage response times and municipal service failures. Consumers cannot continue to carry every consequence of institutional failure. We cannot be expected to pay for the service, pay again when the service fails, and then be penalised for providing the solution ourselves. I respectfully request that this objection be formally recorded and that the proposed charges be reconsidered in the interests of fairness, affordability and sustainable municipal electricity provision.	Lise	self-employed
	2026-08-28 07:27:15	No I do not	Captive Consumer Tariff Protection		Small / Medium Business Owner (SMME)	Please tell me how the informal settlements are going to be included in the Solar registration and fixed rate costs. It seems like the real free riders are not paying a cent. As long as eskom is giving away free electricity it has no right to try and captivate those who are struggling to make ends meet as an overtaxed citizen and business owner.	Bruce	self-employed
	2026-08-28 07:32:30	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	Stop wasteful spending and employ knowledgeable people to do the work. Not the incompetent highly paid ones. Stop penalising the consumer for your incompetence. We pay enough with LESS income. We cannot AND WILL NOT pay anymore.	Tracy

	2026-08-28 13:46:58	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	How can any government department charge for a service not consumed. In the same vein, should the Post Office put a levy on citizens who don't use their services as dictated, by whom. Maybe Transnet should levy travelers not using their rail service.	Victor	retired
	2026-08-28 13:58:40	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	The reasoning is illogical for a resident who alleviates strain on the grid in general and when a trusted provider, Eskom, or any of its associated suppliers, have failed the public and business more than once. The onus is not on individuals, residents in this case, to be liable for failed infrastructure and its electrical supply, or lack thereof. The government, including Eskom and all its sectors, are failing to protect their electrical network for example; illegal connections, down time, long hours or days of no supply, etc. Residents who have provided themselves with an alternative for power supply should not be considered as a 'threat' or free riders as their policy dictates. These same residents that have sourced alternatives are guaranteed to be the same individuals who pay and paid their bills on time with their electricity supplier. The focus should be solely on the communities and groups that are receiving electricity free or at reduced rates due to political race policies. No individual should be penalized for innovations to further their own sustainability and personal growth as the problem is not with them, but the corrupt mentality of South Africa. Again they want to milk those few who aren't involved in destroying the economy or the safety of South Africans. There should be a massive mirror lifted and faced directly to those individuals who are pushing for this, whilst looting the funds of our country to line their pockets further. They should work on developing the country and not milk the few 7 million tax payers (less than a quarter of the RSA population) to further their foolish greedy ideals. I do not support this proposal in any form.	Evan	employed individual
	2026-08-28 14:44:01	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	Die groot meerderheid verbruikers het sonkrag installasies ingesit om die gereëlde onderbrekings in verskaffing uit te skakel en nie om verbruik uit die netwerk te verminder nie. Wanneer die krag af was, was daar in elk geval nie verbruik nie en die sonkrag stelsel het ongerief uitgeskakel. Dit sou onbillik wees om nou diegene wat hulle self beskerm het te benadeel.	FG	retired
	2026-08-28 15:40:34	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	Because Tshwane Metro encourage citizens to install solar panels and even was prepared to subsidise them with R15 000. Therefore I have installed solar panels at the cost of R100 000 plus and was thinking it also helps escom, but instead Escom now wants to tax me/us. I think it is very unjust. The Afrikaans sayin goes "om die hand te byt wat jou voed". (To bit the hand that feeds you)	Dr Pieter	retired
	2026-08-28 18:53:48	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	People who are on off-grid should only be charged for usage. They should buy prepaid for their backup and not get it for free. They should also not be charged a flat rate from Municipalities.	Lerato	employed individual
	2026-08-29 00:33:22	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	Eskom does not carry the installation, maintenance, or upgrade costs of privately installed solar, but somehow wants to tax consumers for a situation it created. Where does the bailout money come from when Eskom fails as a business? Instead of preying on tax payers who help to alleviate the pressure on the grid, why not reward and encourage further investment in solar to the benefit of all? Creating storage capacity to capture excess energy from homes with solar that are still connected to the grid, seems like the most obvious win win scenario. Instead these charges are just further encouragement to disconnect from the grid, exasperbating the cost concerns for those unable to disconnect.	Bys

	2026-09-06 13:46:23	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer		Lizette	employed individual
	2026-09-08 09:53:21	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	Ridiculous - now we, the tax payers, once again are being slaughtered - fix the damn corruption and get rid of all the illegal connections - and make them pay their fair share - we are already subsidizing all the damn crooks who have illegal connections and the crooks in the government and Eskom who steal all the money. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens and discourages private decarbonisation. Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance.	winnie	
	2026-09-09 00:16:41	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	It is unfair to charge consumers for services they do not receive from government, but from natural sunlight. Citizens who go off-grid reduce pressure on the national grid and increase available capacity for Eskom. Government should therefore consider incentivising consumers for investing in solar energy rather than charging them while they contribute to solving the energy crisis in the country.	Moate	employed individual
	2026-09-09 06:20:19	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	Ons betaal al klaar geweldig baie vir bitter min. 	2026-09-12 08:15:51	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	By allowing large consumers to bypass municipal electricity supply, it is likely that the municipalities will hike prices to captive consumers. in order to make up for lost revenue. Consumers are already overburdened by high electricity charges and cannot afford to pay more. Municipalities may actually face collapse unless they hike prices, so this is a very badly thought out plan. Captive consumers must be protected, and a plan made to assist municipalities with finances. Do not pass this law	Hillary	business owner
	2026-09-12 08:18:06	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	Normal house holds can simply not afford the tariff increases.	Lelania	employed individual
	2026-09-12 08:32:11	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	Another tariff increase from Escom even though they are bragging about a 20 billion profit. Yet ordinary citizens are feeling the brunt of this increase every other month!!! I have a gas heater and gas stove and still my bill is astronomical.	Ruth	retired
	2026-09-12 08:34:48	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer		Abdul Hamid	retired
	2026-09-12 08:40:17	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	This is a perverse engineering of laws to cover up for governance and foresight failures. It is treasonous and anti-poor. This legislation undermines the outcomes of the National Democratic Revolution.	Henning	
	2026-09-12 08:40:29	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	The government of the day should rather start at its own front door and lead by example. The fat cats in government should be down sized dramatically to start balancing this very unequal equation. It is a disgrace to the country that they be allowed to have everything for free. I'm a pensioner by no fault on my side and have pre-paid electricity, but I struggle each month to recharge my pre-paid account. All of this chaos started with the first so called "democratic" elections in 1994 where the notion of stealing and being corrupt to the core entered the society, whether rich or not. Instead of planning ahead people thought that everything came for free as if there was no tomorrow. Now that the country is on the verge of almost collapse, the leaders still do what they've been doing since 1994, thinking that all can be made to go away with their nice speeches, drastic measures and lehislation, etc. Typical ostrich syndrome of sticking its head in the sand and then all will be fine	Christa	retired
	2026-09-12 08:42:54	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	With a world wide energy crisis which affects 3rd world countries hugely local councils and Eskom should invest in green solar energy installations that would meet demands and create jobs! Government is totally asleep when it comes to long term solutions that have to include large scale and domestic Solar controlled by councils which would increase revenue	Gillian	employed individual
	2026-09-12 08:44:34	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	As usual this government is intent on theft.	Douglas	retired
	2026-09-12 08:46:17	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	Continual rates, water and electricity increases are driving residential home owners closer to insolvency. Eskom and the government will eventually kill the cash cow, i.e. responsible rate paying home owners. There will be a time when 40% will become 20%, unable to support the other 60 to 80% that depend on insufficient taxpayer funded handouts.	Edward	retired

	2026-09-12 15:04:33	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	You could NOT provide enough electricity and we were forced alternative ways...now you want to tax us because of your incompetence to provide electricity..start cutting the staffs salaries and the chiefs too... then you will be able to balance your credit sheets...with a profit!!!!	Martie	retired
	2026-09-12 15:14:20	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	As a 76 year old pensioner I spent a sizeable chunk of my pension savings to protect myself during load shedding. I certainly did not want to fall and break my hip stumbling around in the dark looking for a torch (the possibility of this happening was brought home to me when I had a bad fall - fortunately I didn’t break anything and was able to get up though I was very sore for quite a while!) Another very real concern was that at my age with the whole neighbourhood in darkness - with the times this would occur being published for all criminals to see - I was extremely vulnerable! I am on B prepaid power snd already pay a service fee of R210 a month - this effectively doubles the amount I psy for power as I only use about 80 kWh a month from the grid! As a pensioner pn my own i simply cannot afford the proposed tariffs and would be force to sell my home of over 20 years where I had hoped to live out my life snd enjoy my little garden and move! I feel it is very unfair that for the very little strain that I place on the grid i should be force to subsidise the heavy users who do strain the grid. The proposed charges would equate to something in the region on R15 a kWh !!	Kathy

	2026-09-12 17:19:07	No I do not	Captive Consumer Tariff Protection		Small / Medium Business Owner (SMME)	The policy introduces a dual market structure dividing consumers into “Eligible Customers” and “Captive Customers.” Only large commercial and industrial consumers exceeding a specified demand threshold (e.g., 1 MW) will initially have the legal right to purchase directly on the open wholesale market or contract with private traders. All residential households and smaller commercial entities will remain “captive” to incumbent municipal or Eskom distribution retail tariffs. The Underlying Risk: Allowing the largest, highest-paying electricity users to exit municipal supply creates a two-tiered energy economy. As high-volume users migrate to competitive private contracts, the fixed costs of maintaining legacy municipal networks and state-owned infrastructure will be concentrated onto captive residential households, driving up standard retail tariffs. Solution: 1. Publish transition roadmap that progressively lowers the eligibility threshold, ensuring retail market choice is expanded to ordinary households and SMMEs rather than remaining an exclusive corporate privilege. 2. Require NERSA to implement mandatory tariff-parity benchmarks ensuring captive customer tariffs do not exceed wholesale-plus-efficient-delivery benchmark prices. 3. Oppose any mechanism that uses captive household tariffs to recover stranded costs or uncompetitive legacy contract premiums.	Quintin	Non-profit
	2026-09-12 17:25:51	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	Fundamentally hopelessly flawed blurring and confusing of honest household municipal connections, consumption, solar solutions and small businesses consumption with that of corporate and industrial consumption, mismanagement and abuse….and the market needs that are more complex than this simplistic and unfair “solution”.. back to the drawing board please!!..	Robert	retired
	2026-09-12 17:30:50	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	It's time Eskom stopped funding its incompetence through just raising electricity tariffs by as much as it suits them. It's not as though we can move to another supplier - Eskom has captive consumers who have no choice. Our only defence is to use less electricity - so prices are just raised further. There is no regard for affordability, nor for inflation-based increases. It's time Eskom started plugging the holes caused by their own incompetence and stopped just increasing prices.	Annie	retired
	2026-09-12 17:40:55	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	This is an unfair burden on the general electricity consumer, as it penalises those who are already struggling. Just because they do not have the finances for solar. Their reliance on electricity is being impacted. Eskom must act fairly and not abuse their monopoly on an electricity by users who rely on it and cannot obtain alternative means of power to live.	John	
	2026-09-12 18:00:12	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	I am 75 years old and all I have to say is that the people that put up theses increases will one day get old too and they don’t pay for electricity as the tax payers do and they live for free but they must remember the children children will one day cause them when there children can’t afford it. And that is another recipe for increasing of crime.	Rashid	retired

	2026-09-13 08:41:59	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	Open Letter / Public Submission To: The Department of Electricity and Energy Subject: Public Objection to Proposed Fixed Grid Tariffs and Solar Cost-Shifting Reforms I am writing to formally submit my opposition to the proposed electricity tariff restructuring and grid-use fee framework. Energy policies must balance system maintenance with fairness, innovation, and consumer protection. The current trajectory threatens to penalize clean energy investments while failing to protect vulnerable households. I urge the Department to address three critical priorities: Stop the "Sun Tax": Do not penalize private capital and rooftop solar investments with punitive fixed grid fees. Households and businesses that invest their own resources to reduce strain on the national grid should be incentivized, not burdened with penalty charges designed to suppress self-generation. Protect Captive Consumers: Bar municipalities and local distributors from hiking retail tariffs on non-solar homes to compensate for lost revenue caused by industrial off-grid defection. Disincentivizing energy independence for some must not lead to artificial price hikes for captive consumers who cannot afford solar installations. Ensure Transparency First: Guarantee that wholesale market reforms and transmission network cost allocations do not leave everyday households footing the bill for legacy grid infrastructure and expansion costs. Tariff structures must be unbundled transparently, reflecting true operational costs rather than arbitrary cost-recovery margins. Whether a household generates its own power or purchases every kilowatt-hour directly from the local municipality, these regulatory decisions directly impact monthly living expenses. Energy policy must encourage private resilience while keeping electricity affordable for all.	Alan	retired
	2026-09-13 09:11:59	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	Do not penalise private capital and solar investments with punitive fixed grid fees. 	2026-09-13 11:30:46	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	No, I do not support the proposed Electricity Sector Market Transformation Position Paper, because mandatory fixed solar charges, captive consumer price hikes, and municipal revenue losses will hurt ordinary households and small businesses. Captive Consumer Protections & Two-Tiered Tariff Risks: What the Policy Proposes: The policy introduces a dual market structure dividing consumers into “Eligible Customers” and “Captive Customers.” Only large commercial and industrial consumers exceeding a specified demand threshold (e.g., 1 MW) will initially have the legal right to purchase directly on the open wholesale market or contract with private traders. All residential households and smaller commercial entities will remain “captive” to incumbent municipal or Eskom distribution retail tariffs. The Underlying Risk: Allowing the largest, highest-paying electricity users to exit municipal supply creates a two-tiered energy economy. As high-volume users migrate to competitive private contracts, the fixed costs of maintaining legacy municipal networks and state-owned infrastructure will be concentrated onto captive residential households, driving up standard retail tariffs. Points to Demand: * Demand a binding, published transition roadmap that progressively lowers the eligibility threshold, ensuring retail market choice is expanded to ordinary households and SMMEs rather than remaining an exclusive corporate privilege. * Require NERSA to implement mandatory tariff-parity benchmarks ensuring captive customer tariffs do not exceed wholesale-plus-efficient-delivery benchmark prices. * Oppose any mechanism that uses captive household tariffs to recover stranded costs or uncompetitive legacy contract premiums. The “Captive Ratepayer Trap” and Municipal Insolvency: Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance.	Daniel	self-employed
	2026-09-13 11:35:59	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	It is clear that, ultimately, ESKOM owning transmission and generation capacity (functional or not), will justify the general public to pay for such even if not drawing any service (ie bills with zero service delivery). If a medical doctor invests in some expensive equipment, society as a whole does not owe him/her any payment unless the equipment is used, so why should ESKOM be any different. ESKOM is a company, like all others. ESKOM does no longer serve the national purpose it once did - there are many alternatives. Hence, ESKOM SHOULD BE ALOWED TO GO BROKE, LIKE ANY OTHER POORLY MANAGED COMPANY. Of note: the average annual pay at ESKOM (about R1.1 million) exceeds the average salary of the wealthiest country in Europe - Luxembourg salaries average are Euro 55000 annually, that is R990k. Yet in that country, services work, problems are fixed within a day or two, by staff, not external contractors. If ESKOM is allowed to go broke, South Africa will benefit greatly , as efficient private companies are wiling and capable to fill the gap! Just need legislative foresight, which is similarly totally absent in South African leadership. Under socialist rule, South Arica will be the ONLY country in the world (that I am aware of - please correct me if I am wrong) that punishes residents for installing renewable energy. Cry my beloved country.	Gerhard	retired

	2026-09-14 10:00:50	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	Object: Mandatory fixed solar charges, captive consumer price hikes, and municipal revenue losses will hurt ordinary households and small businesses.	Mpho	business owner
	2026-09-14 10:03:28	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	I do not have solar as I cannot afford the cost to acquire it, even when held captive by loadshedding. My household does its best to use electricity sparingly, especially due to the above inflation price increases as the cost is high - now I'm forced to pay a connection fee on top of the electricity I use which is 50% of my monthly usage. This is highly disgusting that I'm forced to pay so much when I do not benefit from free sun power, and so many households get free electricity that I must now cover...	Gareth	
	2026-09-14 10:05:31	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	Taxpayers should not be paying for the mistakes made by government's mismanagement of ESKOM and the supply of electricity - one of our national assets. If there are cheaper alternatives, then the whole grid should be moving towards that while keeping a robust back-up supply in Eskom. Any excess capacity should be sold to our neighbours who are experiencing an energy deficit. Make sure the grid is maintained and lease it to any independent power producers who make use of it. Legislate that independent power producers are always linked to the main grid.	Roy	
	2026-09-14 10:18:24	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	Why should consumers carry the burden? Ordinary households and small businesses will remain “captive” to municipal distribution grids, risking higher tariffs to cover municipal revenue deficits and legacy cross-subsidies.	Derick	
	2026-09-14 10:18:36	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer		S	retired
	2026-09-14 10:20:00	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	I am suffering already with financial burdens of water & electricity as it is, I cannot afford anymore increases in anything. They must rather focus on the people that overload the sub stations by stealing electricity, focus on having those people arrested for that. Us that pay our accounts monthly have to suffer the consequences for these thieves. Leave the laws as it is & concentrate in fixed the city's roads, lights, etc instead. People pay a fortune to go off grid because of the high fees nowadays just to have power, why make them pay more now because of solar that they paid for. In that case then eskom has to pay for people to get solar instead if they want to enforce a high penalty monthly fee.	Marlie	employed individual
	2026-09-14 10:28:53	No I do not	Captive Consumer Tariff Protection		Small / Medium Business Owner (SMME)	We are experiencing high electricity pricing. A fixed connection fees acts as a punitive "solar tax." This penalizes us who invested our own money to ease pressure on the strained national grid to help ease load shedding. Eskom needs to eradicate corruption, downsize staffing and lower electricity prices	PETER	business owner

	2026-09-14 11:05:01	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	Itis unfair and wrong to allow the largest, highest-paying electricity users to exit municipal supply. This creates a two-tiered energy economy. As high-volume users migrate to competitive private contracts, the fixed costs of maintaining legacy municipal networks and state-owned infrastructure will be concentrated onto captive residential households, driving up standard retail tariffs. In other words the ordinary, hardworking South Africans will be penalized with unaffordable tarrifs while the big rich companies get cheap rates Its just plain wrong	Joan	retired
	2026-09-14 11:10:50	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	They are the biggest scammers trying to extort money from ordinary people already battling to make a living with high food and fuel prices!	Keith	retired
	2026-09-14 11:18:30	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	The paying consumers have been obedient and constructive and now are being punished . There are too many free loaders and maybe we need to look at what the nonexecutive board members of Eskom are being paid - I believe an annual increase from 5 million a year to 29 million ??? i s this true ? not acceptable !!!!	Sue	employed individual
	2026-09-14 11:25:59	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	Residents have opted for Solar for two reasons: - To overcome Eskom's inability to provide consistent power - To reduce the exorbitant cost of electricity charged by Eskom To now levy a charge on residents who have solved their electricity problems at their own cost is totally unjustified and is tantamount to theft.	Sydney	retired
	2026-09-14 11:33:46	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	The homeowner is being run into the ground	Shaun	
	2026-09-14 11:36:53	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer		LUNGILE	

	2026-09-14 11:40:16	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	Eskom needs to find other funding alternatives and not punish those who paid costly fees to install solar (because of Eskom's inability to supply consistent electricity supply) as well as those consumers who now are captive to their incidental price hikes & creative methods to create income. As a consumer you're dammed if you don't and your dammed if you do. Seems like Eskom needs senior management who are capable of thinking ahead - in other words know how to set future strategy as its sadly lacking! They should have known to plan for the reduction in electricity use as businesses and consumers were forced to find alternatives during the load-shedding era!	Sandy

	2026-09-14 12:41:52	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	I support reforms that improve the reliability, affordability and sustainability of South Africa's electricity system. However, I am concerned that the proposed market changes could shift additional financial burdens onto ordinary residential consumers. In particular, I request that the Department: 1. Protect households that invest in solar. Residential consumers who reduce their dependence on the grid through private investment in renewable energy should not be subjected to disproportionate fixed charges that undermine the financial benefit of that investment. 2. Protect consumers who cannot afford solar. Market reforms should not result in households without alternative energy sources carrying an increasing share of municipal distribution costs as higher-consumption customers reduce their grid usage or purchase electricity elsewhere. 3. Ensure that tariffs remain fair and transparent. Any fixed, capacity or network charges should be demonstrably cost-reflective, reasonable and subject to proper regulatory scrutiny. Electricity-market reform is necessary, but it should not unintentionally penalise either households that invest in their own generation or those who cannot afford to do so. I respectfully request that you take these consumer-protection concerns into account before the policy is finalised.	Myra	retired
	2026-09-14 12:49:09	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	The fixed charges are already a rip off and should be abolished.	Graham	unemployed individual

	2026-09-14 15:16:04	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	The cost of electricity is ballooning every year. People are voting with their investments to invest in solar, and now the same revenue is expected to be sourced from a decreased customer base. If people want to go off grid and escape the high fixed rates being set up they must be free to do so. Those who dont have solar and are dependant on the grid for power must pay a fair rate and not an exorbitant one. Taxes for other services by greedy municipalities should not be gleaned from power payments.	Daniel	employed individual
	2026-09-14 15:25:09	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	People that want to go off the grid must be free to do so without being charged extra fees/exorbitant fees. People that don't have or want to use solar and are dependant on the grid for power should be able to pay a fair rate - not ballooned/ exorbitant fees. It's not ok if people get punished - those that use solar and also the ones without. fair rates need to be applied for everyone Monies collected also need to be used to keep the infrastructure maintained, not abused and wasted by municipalities.	Tanja

	2026-09-15 15:33:47	No I do not	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	The audacity of the Department of Energy to set up the consumer (solar or dependent on the grid) for even more price hikes is unbelievable, especially after years of economic damage done by loadshedding and corruption. Healthy competition is supposed to benefit the consumer, not cripple it. It is due to massive government corruption, huge government salaries, poorly maintained infrastructure and a government with weak policies that has failed its people leaving them without employment, that South Africa sits in this economic situation. Change the leaders. Insist on integrity and substance in what politician and governments say, not window dressing statements. Furthermore industry - often owned by the wealthy - should not be favoured in the electrical tariffs it receives compared with the average household. And if we are trying encourage people to work from home, how is this tariff that will hit captive consumers the hardest, not going to damage small home based industries and lower employment even more. Furthermore, why are solar users penalised - for thinking ahead?	Matthew

	2026-08-27 00:15:55	No I do not	Market Power & Price Manipulation		Residential Electricity Consumer / Ratepayer	I object to the proposal to "discourage free riding" by imposing mandatory fixed monthly capacity and network charges on homes with solar. We invested private savings to keep the lights on during load shedding when the State could not. This is a penalty on self-reliance. It creates a captive ratepayer trap where big business can buy cheaper power directly while ordinary households are forced to pay more to cover municipal shortfalls. This will kill the solar industry, hurt jobs, and make electricity unaffordable. Remove this punitive principle. - Umhlanga	Theresa	retired

	2026-08-27 07:06:28	No I do not	Market Power & Price Manipulation		Residential Electricity Consumer / Ratepayer	If I understand correctly, which I may not, I am against power becoming owned by a few rich people and not managed by the state. Yes we are tired of state capture and state corruption but that is what we need to fix. The gap between rich and poor will widen even further if we keep allowing the right to own all the property, water, intelligence and power, until not even middle-class people can afford to buy property or run their own businesses. So I support state run basic services and focusing on abolishing theft and corruption, rather than corporate takeover where the rich get richer and the poor get poorer.	Merran	
	2026-08-27 07:14:36	No I do not	Market Power & Price Manipulation		Residential Electricity Consumer / Ratepayer	Electricity prices are currently high, if the government charge for the solar power they will manipulate the prices. 	2026-08-27 07:29:01	No I do not	Market Power & Price Manipulation		Residential Electricity Consumer / Ratepayer	This will be just another failed ANC Government policy. The only reason why ESKOM is looking so reliable over the past 2-3 years is because such a big percentage of the South African population (businesses & residence) was forced to make their own plans (as usual) and spend huge amounts of hard-earned money to be able to continue having energy. This has made ESKOM look good and that they are running things properly. If they were to "withdraw" all privately owned solar and other systems off the grid, our electricity supply would collapse again. So how can the Government even consider charging solar users a levy for having invested and using solar power - where in the World would this happen?? Again, just inventing another way of extracting monies from the poor South African tax-payer	Glen	retired

	2026-08-28 08:10:00	No I do not	Market Power & Price Manipulation		Residential Electricity Consumer / Ratepayer	I do not support the proposed changes to the legislation. Consumers have already been forced to spend enormous amounts of money to secure a stable and reliable electricity supply because the government and Eskom failed to provide one. For years, South Africans experienced load shedding and ongoing problems with the electricity infrastructure. As consumers, we had no choice but to find our own solutions. Many people invested heavily in solar systems, batteries, inverters and other alternative power solutions simply so that they could continue living and working normally. These solutions were not free. They were an additional financial burden placed on consumers because the basic service we were paying for was not reliable. It is therefore extremely frustrating that the government now wants to change the legislation in a way that could allow them to financially benefit from the very solutions consumers were forced to invest in because of their failure to provide a stable electricity supply. If the government wanted to ensure a consistent income from Eskom and electricity supply, the focus should have been on maintaining and upgrading the existing infrastructure, employing qualified and competent people, and ensuring that Eskom was properly managed. Had this been done, South Africans would not have been subjected to years of continuous load shedding and would not have had to spend their own money to keep the lights on. As consumers, we have become accustomed to having to “make a plan” whenever the government fails to deliver. But making a plan comes at a cost. We already pay extremely high taxes, while inflation and the cost of living continue to rise. Despite this, it seems that consumers are continually being expected to pay more and more. There has to be a point where the government recognises that consumers cannot simply be treated as an endless source of additional revenue. We should not be financially penalised for taking responsibility and investing our own money to secure a basic service that the government failed to provide reliably in the first place. 	2026-08-28 11:54:13	No I do not	Market Power & Price Manipulation		Residential Electricity Consumer / Ratepayer	I strongly object to any law, regulation, or tariff that requires members of the public to continue paying for an electricity grid that the state has failed to maintain, protect, or reliably provide. Where government failure has resulted in prolonged energy insecurity and the collapse of reliable supply, citizens have been forced—at their own expense—to invest in alternative energy solutions simply to maintain basic services and economic activity. It is fundamentally unfair for the state to create or permit this failure, compel the public to carry the financial burden of finding alternatives, and then seek to impose additional charges for continued access to a system that it has failed to provide adequately. Government cannot reasonably expect the public to finance both the replacement of a failed service and the continued revenue stream of that same failed system. Such an approach places an unjust and disproportionate burden on citizens who have already paid for the infrastructure through taxation and electricity charges. The principle is simply that a government that fails to provide an essential public service should not be permitted to penalise citizens for taking reasonable steps to provide that service for themselves. 	2026-09-06 16:03:37	No I do not	Market Power & Price Manipulation		Residential Electricity Consumer / Ratepayer	I object to this Electricity Transformation Paper. Opening a wholesale market is not the same as protecting households. Large users will be allowed to buy cheaper power directly. Ordinary families and small businesses stay captive on municipal grids and will be left to fund the leftover costs, the old subsidies, and the failing municipal books. Worse, the paper treats rooftop solar as "free-riding." People who spent their own money to keep the lights on during load-shedding now face high, unavoidable fixed grid charges even when they draw almost nothing. That punishes self-reliance and stretches payback periods. Until there are hard caps on fixed charges, a clear path for households to get market choice, and a funded plan so municipalities do not collapse, this reform shifts risk onto the people least able to carry it. Competition without protection is just a two-tier electricity system.	Jaime	self-employed
	2026-09-06 19:30:57	No I do not	Market Power & Price Manipulation		Residential Electricity Consumer / Ratepayer		Sonja	unemployed individual
	2026-09-07 12:20:12	No I do not	Market Power & Price Manipulation		Residential Electricity Consumer / Ratepayer	This is and absolute JOKE!!!! The requested a couple of years ago please don't use so much power now that we do now it is a problem. What does out Rates and Taxes pay for. Is that not for service delivery and infrastructure. Do you know how many people will just invest a bit more and tell ESKOM to please remove there connection then completely. I will be one of them. SO rather get some money in every month than just Pissing off even more people and loosing even more Millions due to being Greedy and Stupid. We just showed them with Etolls we will not PAY!!! Our area is so bad if we don't have solar we will be without power probably about 200 days a year. We are in WARD25. Every time it rains the power is off. We also have so much cable theft in the area, and nothing is done about it.	Donavan	self-employed
	2026-09-07 14:18:03	No I do not	Market Power & Price Manipulation		Residential Electricity Consumer / Ratepayer	The government cannot guarantee a sustainable uninterrupted electricity supply and now that we have made alternative arrangements they want to penalise us.	Peter	employed individual
	2026-09-08 15:31:13	No I do not	Market Power & Price Manipulation		Residential Electricity Consumer / Ratepayer	I feel that ESKOM executives are concerned that the days of continued looting will come to an end Furthermore, if NERSA was not so biased against consumers we would be paying a lot less for our electricity. Do they represent consumers or are they protecting ESKOM?	Peter	retired
	2026-09-08 21:20:51	No I do not	Market Power & Price Manipulation		Residential Electricity Consumer / Ratepayer	Why tax us on a capital expense of our own because SA can't deliver electricity. If you did your job, we would've bought solar in the first place.	Johannes

	2026-09-13 08:39:40	No I do not	Market Power & Price Manipulation		Residential Electricity Consumer / Ratepayer	What the Policy Proposes: Eskom Generation will participate in the South African Wholesale Electricity Market (SAWEM) as a legally separate commercial entity competing against independent power producers (IPPs). To prevent the abuse of market power—such as economic withholding (bidding at artificially inflated rates) or physical withholding (restricting supply to force price spikes)—the policy relies on transitional “vesting contracts,” NERSA bid oversight, and a Market Surveillance Unit (MSU). The Underlying Risk: Because Eskom Generation continues to control the vast majority of national baseload generating capacity, market surveillance alone may be inadequate to prevent pricing distortions. In unbundled spot markets worldwide, dominant generators and speculative trading desks have exploited dispatch rules to artificially inflate clearing prices, costs that are ultimately passed down to retail consumers.	Colin

	2026-09-13 14:11:43	No I do not	Market Power & Price Manipulation		Residential Electricity Consumer / Ratepayer	I reject the proposed Electricity Sector Market Transformation Position Paper in its entirety. This policy is not reform—it is exploitation. The government seeks control, and unfair policies that strip citizens of free will. It is a corrupt attempt to penalise households for solving a problem the state itself failed to fix. It is simply another way for government to be corrupt and steal money from ordinary citizens. We needed solar because the government could not provide reliable electricity. Families invested their own money to secure power when the grid collapsed. Now, instead of supporting self-reliance, the government wants to punish those who made alternative plans with punitive fixed grid fees and capacity charges. I specifically reject: 1. The Sun Tax: unavoidable monthly levies on solar households, penalising private capital and discouraging clean energy adoption. 2. Tariff hikes that trap non-solar households as captive consumers, forced to subsidise industrial defection and municipal mismanagement. 3. Market unbundling that allows large mines and factories to bypass municipalities, leaving ordinary homes to carry the financial burden. 4. The erosion of household budgets through unavoidable fixed charges, regardless of consumption. 5. The lack of transparency in wholesale reforms, which risks leaving everyday citizens footing the bill for failing infrastructure. This Position Paper is an overreach. It discourages clean energy, undermines private investment, and traps households in spiralling costs. It is fundamentally unjust to penalise citizens for taking initiative when government failed to deliver electricity in the first place. I therefore call on the Department of Electricity and Energy to: 1. Stop the Sun Tax and protect private solar investment. 2. Protect captive consumers from unfair tariff hikes. 3. Ensure transparency so reforms do not burden ordinary households. The government has become a burden, seeking only to extract money and consolidate power. Citizens do not need more bureaucracy and penalties—we need fair, transparent policies that protect households and encourage clean energy adoption.	Jade	employed individual
	2026-09-13 15:01:37	No I do not	Market Power & Price Manipulation		Residential Electricity Consumer / Ratepayer	The reason we don’t have enough electricity it not Eskom or solar panels. It’s the huge international conglomerates who each consume more than the whole of the rest of SA electricity in one day. Amazon International companies: Huge number use South Africa for electricity supply. I list the companies from across the globe , Fir many there main presence/facility in South Africa SA Main location for companies from abroad Amazon / AWS	F

	2026-09-19 11:47:41	No I do not	Market Power & Price Manipulation		Residential Electricity Consumer / Ratepayer	In 2009, when load shedding srarted to be common, and roof solar power wasr growing, i forecasted a "loss of revenue levy" charged to all types of used power resources, other than Eskom, from solar electricity and hot water, wind for water pumping in farms, mini hydro power, etc., to be inforced to all users of energy. The levy woud be based for every kW generated and used. Whe have reached that forecast, wit solar electric power generation, what will follow? And what about the unproportionl Eskom power price increases? Already stated to cover to compensate for lower sales, higher costs. Now they want more. You and I are not in the position to claim compensation from Eskom, in relation to our finantial losses when power was unavailable. Is power shedding really gone? It' not called Eskom power shedding. It has been pushe at municipal level, with different names, like "power load distribuition plan", power distribuition strategy, etc. While Eskom shines efficiency, with a high portion of diesel generated power, at highly inflated costs.	Walter	retired

	2026-08-26 21:48:24	No I do not	Other		Residential Electricity Consumer / Ratepayer	I think that the government should thank the people & even incentives them for taking up the initiative to install solar-power. THIS HELPS EVERYBODY, THE COUNTY, THE TREES THAT ARE SAVED & THE AMOUNT OF COAL SAVED. Why now penalize the people that are HELPING!!!!!	Corne	unemployed individual
	2026-08-27 07:25:33	No I do not	Other		Residential Electricity Consumer / Ratepayer	I do not support this. People have spent their money to assist Eskom.	David	employed individual
	2026-08-27 07:46:18	No I do not	Other		Residential Electricity Consumer / Ratepayer	This regulation is a "poison-pill" trick to soothe citizens into supporting an atrocity. While everyone wants monopolies to end, the regulation deftly hides the "poison" namely VICIOUS action against all grid-connected properties with solar power, regardless of how little grid power you pull. This is a Penalty on Private Initiative: Citizens who spent private capital to solve the state's energy crisis which persisted for more than a decade, will now face steep baseline connection taxes to subsidise legacy grid infrastructure. That content is unconstitutional and the technique of using something completely different, demonopolizing Eskom, as "sugar" to get people to swallow the "poison pill" in this regulation, is an unconstitutional method. This regulatory PROCESS as a whole will just, after spending a lot of resources to get it passed, be challenged in court the first time a penalty is levied. Just separate the two issues, transformation and Eskom's power to levy fines on solar, in two bills like honesty requires, and then get the REAL response from citizens rather than being sued for dishonesty.	Wynand	business owner
	2026-08-27 08:24:32	No I do not	Other		Residential Electricity Consumer / Ratepayer	Apart from agreeing with the objections listed above, I want to point out that Eskom initially encouraged, and subsidised, measures to reduce the load on the system, such as solar water heating system, and heat pump systems. The current proposal makes as if there is no commensurate benefit to the system from all the solar systems later installed - without receiving subsidies from Eskom. I these had been subsidised Eskom would have leg to stand on for their proposal, but a proposal that does not credit the investments made by users that has public benefit, is morally unjustified.	Peter	
	2026-08-27 08:30:22	No I do not	Other		Residential Electricity Consumer / Ratepayer	My concern is for sectional title units that is unable to be disconnected from the grid and individual owners that will have to fork out heavy fees as owners and have no joice. We are already paying higher fees as we have to use 3rd party prepaid suppliers and may not use Coj prepaid. Another fee will be to expensive as many are already not affording the fees as is. O hear every day that owners can't afford to use tumble dryer and geysers to be switched off as it is just too expensive.	Heidi	self-employed
	2026-08-27 09:50:50	No I do not	Other		Residential Electricity Consumer / Ratepayer	Taxing homeowners who had NO ALTERNATIVE other that to install home solar systems, at great expense (with after Tax money), to maintain a decent standard of living after ESKOM/Power Stations/Government failed to supply power during years of load shedding is, quite frankly ludicrous and passing the buck and negating responsibility. THE FACT OF THE MATTER is that if there were no power outages and load shedding, then private homeowners did not need to install solar. So read this and then explain to me who is at fault in this instance??? It fairly obvious it is not the taxpayer who is at fault.	Andre	business owner
	2026-08-27 10:09:03	No I do not	Other		Residential Electricity Consumer / Ratepayer	This is just another Money making machine for the gov to steal more money. Other muncipal services does not use this sly method of collecting money. Eskom and the government is losing more and more money with people installing solar, taking about 10-15 years to recoup the investment. Now you want to "TAX" them again because they use eskom as a backup, ie the original investment will never be paid off. I DO NOT SUPPORT THIS MONEY MAKING BILL !	Andre	retired
	2026-08-27 10:20:32	No I do not	Other		Residential Electricity Consumer / Ratepayer	I consider this new idea to be nothing more than Hi-way robbery! When there was no electricity, people went to a lot of expense to install solar power which prevented a total collapse of the electrical system as we knew it. Now, the aim is to punish those people who did so. This is totally not fair!	Sally-Ann	retired
	2026-08-27 11:06:15	No I do not	Other		Residential Electricity Consumer / Ratepayer	Another scheme for the anc and their friends and families to continue stealing. There is no benefit to the country only to themselves Get rid of these looters By time we took these corrupt people down for once and for all in order to save this country A question, when the anc have been over thrown, will everything that they have changed be able to be set back as it was?	James	retired
	2026-08-27 11:23:20	No I do not	Other		Residential Electricity Consumer / Ratepayer	To state the obvious, there would have been NO need for private individuals to invest in their own solar electricity generation if the state had not allowed Eskom to degenerate, causing major electrical shortages, euphemistically called "load-shedding" Also to state the obvious, Eskom now appears to be congratulating itself for the fact that "load-shedding" appears to be something of the past, whereas it is common knowledge that this is precisely because private individuals have been forced to look after themselves. There are other countries which have encouraged private investment into electrical generation, and in addition, have allowed excess electricity to be fed back into the grid. Besides a number of other reasons why South Africans have emigrated, this will end up being another reason to consider leaving the country. In conclusion, should this solar taxation become a reality, I would very strongly consider upgrading my existing system, and getting off the grid completely.	Bernhard	retired
	2026-08-27 12:30:02	No I do not	Other		Residential Electricity Consumer / Ratepayer	Eskom dropped the ball with the Load Shedding, so people made alternative arrangements & now they are upset & want to penalise people. It's like Checkers imposing a penalty for us shopping at Pick 'n Pay when they didn't have the product in stock..	Dawn	self-employed
	2026-08-27 13:29:35	No I do not	Other		Residential Electricity Consumer / Ratepayer	If it was not for the incompetence of the ANC leaded government and municipalities, we as consumers would all be still using 24/7 Escom elect. It is because of them we had to go over to solar. Five yrs later the grid collapse again and then what? If you enforce this law, we will disconnect from ESCOM.	Dirk	retired
	2026-08-27 13:41:34	No I do not	Other		Residential Electricity Consumer / Ratepayer	I disagree with the proposed additional tax on private solar installations. The reason Eskom needs more income is because its expenses and debt are too high. But a large part of that problem comes from years of mismanagement, theft, corruption and financial losses. These losses are well documented, yet very little of the money appears to have been recovered. Instead, those losses have become part of Eskom's debt, which consumers are now expected to help pay for. At the same time, I have seen very little meaningful effort to reduce Eskom's cost base. The workforce and salary bill remain substantial, while the solution repeatedly seems to be finding ways to collect more money from consumers. Many of us installed solar using our own after-tax money because Eskom could not provide a reliable electricity supply. In doing so, we reduced our dependence on Eskom and reduced the amount of electricity we buy from the grid. It does not seem fair that because we took responsibility for our own electricity needs, we should now be charged an additional tax to make up for the revenue Eskom has lost. Before asking solar users to pay more, Eskom should first show that it has done everything possible to cut unnecessary costs, recover stolen money and address the financial problems that created its debt in the first place.	Peter	
	2026-08-27 14:23:10	No I do not	Other		Residential Electricity Consumer / Ratepayer	government mismanages services, forcing citizens to look to alternative methods, so government adds more tax to cover the shortfall that they created. splitting eskom just creates more cost centres that more people can steal from. Parasitic politicians are a class of people that are completely irrelevant and the entire political class should be disbanded. it's 2026 and governments should be completely obsolete.	marc	unemployed individual

	2026-08-27 15:11:42	No I do not	Other		Residential Electricity Consumer / Ratepayer	I hereby formally object to and reject any policy, tariff structure, levy, charge or regulatory mechanism arising from the Electricity Sector Market Transformation Position Paper that would penalise, financially disincentivise or disproportionately burden households and businesses because they have privately invested in rooftop solar, battery storage or other distributed electricity-generation technologies. South Africans invested their own after-tax income, savings and borrowed capital in solar generation largely because the public electricity system became increasingly expensive and unreliable. These citizens did not cause the electricity crisis. They responded to it. They reduced their demand on the electricity network. They financed their own generation capacity. They purchased and installed equipment at their own cost. They assumed the financial and technological risk. They reduced their reliance on Eskom. They reduced exposure to load shedding. They reduced electricity consumption from the grid. And, in many cases, they remain connected to the grid and continue paying for electricity and network services when those services are actually used. It is therefore deeply concerning that the proposed policy expressly advances an “anti-free-riding” principle and contemplates increasing the proportion of electricity-system costs recovered through fixed network and capacity charges. I reject the characterisation of a privately funded solar customer as a “free rider” without compelling evidence demonstrating precisely what costs that customer imposes on the network, what costs that customer saves the network, and why the proposed charges are proportionate to the actual services provided. A customer who has reduced their consumption of publicly supplied electricity is not automatically a free rider. If Government considers that grid-connected customers must contribute toward unavoidable network costs, then those costs must be transparently identified, objectively calculated and fairly allocated. The Department must therefore publish the evidence, methodology and cost model supporting this policy. In particular, I request a clear answer to the following: What precise network costs are imposed by a household with rooftop solar compared with an equivalent household without solar? What costs are saved by reduced grid consumption? How have these costs and savings been calculated? Why should a consumer who has privately financed electricity-generation capacity be financially penalised for reducing consumption from the public grid? What less restrictive pricing mechanisms were considered? Why should the fixed component of electricity tariffs be increased rather than addressing the underlying inefficiencies, losses, debt, corruption, procurement failures and operational costs within the electricity value chain? What independent economic impact assessment has been conducted on the effect of the proposed tariff structure on household solar investment? What assessment has been made of the constitutional right to property under section 25? What assessment has been made under section 36 concerning proportionality and less restrictive means? How does the proposal comply with section 195 of the Constitution, particularly the requirements of efficient, economic and effective use of public resources, accountability, transparency and responsiveness to public needs? How does the proposal advance, rather than undermine, the constitutional environmental objectives contained in section 24? What consideration has been given to South Africa's applicable international-law obligations concerning property, environmental sustainability, human dignity, adequate living conditions and access to essential services? Most importantly: Government must not be permitted to create a financial incentive for citizens to remain dependent upon an electricity system from which they have legitimately attempted to become less dependent. If the electricity network genuinely requires a fair contribution toward unavoidable network infrastructure, then charge consumers transparently for the network service actually provided. Do not disguise revenue recovery as an “anti-free-riding” measure. Do not punish citizens for reducing consumption. Do not retrospectively undermine the economic assumptions upon which private citizens invested their own capital. Do not convert an electricity market reform into a mechanism for protecting declining utility revenues at the expense of consumers who have invested in alternative generation. The South African Constitution binds the State and requires that public administration be efficient, economic, effective, accountable, transparent and responsive to people's needs: https://www.justice.gov.za/legislation/constitution/chp02.html I therefore call upon the Department to: WITHDRAW any proposal that imposes disproportionate or punitive charges upon privately funded distributed generation; CONDUCT AND PUBLISH A FULL REGULATORY, ECONOMIC AND CONSTITUTIONAL IMPACT ASSESSMENT; PUBLISH THE ACTUAL NETWORK-COST EVIDENCE ON WHICH THE “FREE-RIDING” CLAIM IS BASED; PROTECT EXISTING AND FUTURE PRIVATE INVESTMENT IN RENEWABLE ENERGY; ENSURE THAT TARIFFS REFLECT ACTUAL COSTS RATHER THAN REPLACE LOST REVENUE; and GUARANTEE THAT SOUTH AFRICANS WHO INVEST IN THEIR OWN ELECTRICITY GENERATION ARE NOT FINANCIALLY PUNISHED FOR DOING SO. I formally object to the proposed policy in its present form and request that this objection be recorded as part of the official public-comment process and considered in full before any final policy or regulatory instrument is adopted. I do not consent to the imposition of any arbitrary, punitive or disproportionate charge upon privately owned renewable-energy assets or upon consumers solely because they have reduced their dependence upon publicly supplied electricity. The State cannot reasonably expect citizens to spend their own money solving a crisis created by the failure of the public electricity system and then seek to penalise those same citizens when their investment succeeds	Cheri	employed individual

	2026-08-27 15:13:06	No I do not	Other		Residential Electricity Consumer / Ratepayer	I hereby formally object to and reject any policy, tariff structure, levy, charge or regulatory mechanism arising from the Electricity Sector Market Transformation Position Paper that would penalise, financially disincentivise or disproportionately burden households and businesses because they have privately invested in rooftop solar, battery storage or other distributed electricity-generation technologies. South Africans invested their own after-tax income, savings and borrowed capital in solar generation largely because the public electricity system became increasingly expensive and unreliable. These citizens did not cause the electricity crisis. They responded to it. They reduced their demand on the electricity network. They financed their own generation capacity. They purchased and installed equipment at their own cost. They assumed the financial and technological risk. They reduced their reliance on Eskom. They reduced exposure to load shedding. They reduced electricity consumption from the grid. And, in many cases, they remain connected to the grid and continue paying for electricity and network services when those services are actually used. It is therefore deeply concerning that the proposed policy expressly advances an “anti-free-riding” principle and contemplates increasing the proportion of electricity-system costs recovered through fixed network and capacity charges. I reject the characterisation of a privately funded solar customer as a “free rider” without compelling evidence demonstrating precisely what costs that customer imposes on the network, what costs that customer saves the network, and why the proposed charges are proportionate to the actual services provided. A customer who has reduced their consumption of publicly supplied electricity is not automatically a free rider. If Government considers that grid-connected customers must contribute toward unavoidable network costs, then those costs must be transparently identified, objectively calculated and fairly allocated. The Department must therefore publish the evidence, methodology and cost model supporting this policy. In particular, I request a clear answer to the following: What precise network costs are imposed by a household with rooftop solar compared with an equivalent household without solar? What costs are saved by reduced grid consumption? How have these costs and savings been calculated? Why should a consumer who has privately financed electricity-generation capacity be financially penalised for reducing consumption from the public grid? What less restrictive pricing mechanisms were considered? Why should the fixed component of electricity tariffs be increased rather than addressing the underlying inefficiencies, losses, debt, corruption, procurement failures and operational costs within the electricity value chain? What independent economic impact assessment has been conducted on the effect of the proposed tariff structure on household solar investment? What assessment has been made of the constitutional right to property under section 25? What assessment has been made under section 36 concerning proportionality and less restrictive means? How does the proposal comply with section 195 of the Constitution, particularly the requirements of efficient, economic and effective use of public resources, accountability, transparency and responsiveness to public needs? How does the proposal advance, rather than undermine, the constitutional environmental objectives contained in section 24? What consideration has been given to South Africa's applicable international-law obligations concerning property, environmental sustainability, human dignity, adequate living conditions and access to essential services? Most importantly: Government must not be permitted to create a financial incentive for citizens to remain dependent upon an electricity system from which they have legitimately attempted to become less dependent. If the electricity network genuinely requires a fair contribution toward unavoidable network infrastructure, then charge consumers transparently for the network service actually provided. Do not disguise revenue recovery as an “anti-free-riding” measure. Do not punish citizens for reducing consumption. Do not retrospectively undermine the economic assumptions upon which private citizens invested their own capital. Do not convert an electricity market reform into a mechanism for protecting declining utility revenues at the expense of consumers who have invested in alternative generation. The South African Constitution binds the State and requires that public administration be efficient, economic, effective, accountable, transparent and responsive to people's needs: https://www.justice.gov.za/legislation/constitution/chp02.html I therefore call upon the Department to: WITHDRAW any proposal that imposes disproportionate or punitive charges upon privately funded distributed generation; CONDUCT AND PUBLISH A FULL REGULATORY, ECONOMIC AND CONSTITUTIONAL IMPACT ASSESSMENT; PUBLISH THE ACTUAL NETWORK-COST EVIDENCE ON WHICH THE “FREE-RIDING” CLAIM IS BASED; PROTECT EXISTING AND FUTURE PRIVATE INVESTMENT IN RENEWABLE ENERGY; ENSURE THAT TARIFFS REFLECT ACTUAL COSTS RATHER THAN REPLACE LOST REVENUE; and GUARANTEE THAT SOUTH AFRICANS WHO INVEST IN THEIR OWN ELECTRICITY GENERATION ARE NOT FINANCIALLY PUNISHED FOR DOING SO. I formally object to the proposed policy in its present form and request that this objection be recorded as part of the official public-comment process and considered in full before any final policy or regulatory instrument is adopted. I do not consent to the imposition of any arbitrary, punitive or disproportionate charge upon privately owned renewable-energy assets or upon consumers solely because they have reduced their dependence upon publicly supplied electricity. The State cannot reasonably expect citizens to spend their own money solving a crisis created by the failure of the public electricity system and then seek to penalise those same citizens when their investment succeeds	Wayne	employed individual

	2026-08-27 19:21:28	No I do not	Other		Residential Electricity Consumer / Ratepayer	Mandatory fixed solar charges, captive consumer price hikes, and municipal revenue losses will hurt ordinary households and small businesses who are already and still suffocating irrespective of of having solarpanels the breather is very not so visible. For how long should we continue subsidizing these criminals calling ourselves middle class while we are of poor citizens.	Noma	employed individual
	2026-08-27 19:54:25	No I do not	Other		Residential Electricity Consumer / Ratepayer	What about consumers who are on prepaid electricity? They already pay surcharges/admin fees. Then top it with this new tax. They'll pay more in tax than the electricity they consume. Municipalities have already shown that they cannot manage money, people cannot rely on the grid given its instability, and now when people solve the problem they did not cause, they are being penalised. It's rubbish. Just because the state is without funds for whatever reason be it corruption or mismanagement of funds, why should the people pay for it. Employ better people that actually know what they are doing and who do it with integrity. At this rate, it's better to go entirely off the grid and run of solar and generator.	Audrey	employed individual
	2026-08-27 20:19:24	No I do not	Other		Small / Medium Business Owner (SMME)	The electricity commission or ESKOM as it is not know was deliberately conglomerated in order to control the price of electricity as a lever in the economy of South Africa. Operating Eskom at no-profit no-loss basis, kept electricity prices very low and attracted international operations to South Africa, attracted by cheap energy prices. Privatising the system operator will not make electricity cheaper, there is no organisation that can produce electricity cheaper than Eskom. The current independent producers, without an exception, all sell electricity to Eskom more expensive than the price Eskom is selling to the public. This is a move supported by private individuals wanting to make money in the energy space, none of this is in the interest of the country or the public.	Mthokozisi	business owner
	2026-08-28 07:57:28	No I do not	Other		Residential Electricity Consumer / Ratepayer	The Government urged residents to use less elecricity and is directly responsible for people moving to solar. They even subsidised certain users, now just to tax them, even those who are completely off grit? Buch of cleptocrats.	Alex	self-employed
	2026-08-28 08:16:07	No I do not	Other		Residential Electricity Consumer / Ratepayer	If I buy a loaf of bread once a week from the baker, instead of once a day, should I now be penalised by the baker for having had to bake bread every day?	Martin	employed individual
	2026-08-28 10:27:37	No I do not	Other		Residential Electricity Consumer / Ratepayer	Our RSA president asked all consumers to assist Eskom and to install solars. He even given us a TAX rebate if we do so.	Rinus	retired
	2026-08-28 11:01:05	No I do not	Other		Residential Electricity Consumer / Ratepayer	How is it possible that the government is able to continue with there poor and insufficient service delivery , force the public to adjust to methods them self to counter this unacceptable service and then force the citizens to still feeding the bill . This have two objections , 1. To make criminals out of the public. 2. To extort money from the public. They are no better than the Extortion mafia render SA lawless. SA government is an kleptomaniac government that stole from the public and can not behave them self from that.	Sarel	employed individual
	2026-08-28 11:15:42	No I do not	Other		Residential Electricity Consumer / Ratepayer	If every household is paying the same standard rates for having municipal electricity, I support matter. If only solar households and renewable energy businesses are penalized, I am against it and personaly I will go off-grid.	Michiel	retired
	2026-08-28 12:15:12	No I do not	Other		Residential Electricity Consumer / Ratepayer	The proposition, or the planned "fixed chargers" for rooftop solar that is beyond the Municipal / Eskom supply box is totally and completely absurd. But forgive me a bit of digression if I may! The fact that Eskom gives free ride to majority of Municipalities, keeps supplying Electricity apparently without regard for the ever increasing debt burden. In my municipality of Moqhaka the estimated arears to Eskom is greater than R2billion, this despite the Municipality charges its consumers / customers a full rate of Electricity charges + Block and consumptive increases when certain thresholds are met! Nil payment/s for years, at least 6 (Six) agreements were breached or never made applicable by Eskom or the Moqhaka Municipality. In essence then Eskom is complicit and active proponent of "Free Loading" allowing unpaid electricity to be delivered and or consumed. This raises an interesting legal question; 1) Is the fact that Moqhaka and many, many other Municipalities in South Africa are "purveying stolen", illegally obtained electricity and the possible criminality involved therein? 2) Fraud and Theft and or by False pretenses, is or should be the and ONLY major concern. 3) Eskom has repeatedly stated, as far as I am aware that "grid feed into" from such consumers would not generate any payment and would be classified "free power generation" Thank you very much "into kamahala" for free! 4) The announcement of Minister Ramokgopa, yesterday published by Moneyweb, that Eskom needs protection from competition is as above is totally and completely absurd! 5) Finally, recent statistics published from Eskom's own figures that present power generation and consumption thereof is equivalent to 2006 - twenty years ago! And still the Eskom as an organisation, complete with new Board, new Minister etcetera have still accepted or are denying that that Eskom without a real financial business plan, "business rescue" if you will is doomed to collapse.	anton	self-employed

	2026-08-28 16:53:56	No I do not	Other		Residential Electricity Consumer / Ratepayer	Since before 2019 we have had no water,electricity or both off at same time. No sewerage for a whole year due to one broken Municipal pipe which they would not let us fix. One month we had 27consecutive days with no water and no access to water tankers. It has cost us thousands in buying water. Even though I had 5 surgeries in two years I still had to bucket bath and wash my hair in a bucket. After one operation doctors told me it was too risky to go home from hospital because of possibility of infection. I had to go to Humana by ambulance and a huge amount of money which the medical Aid would not pay. If we did not have the water and sewerage problems we would not have had to put ourselves in debt and pay off thousands. Because of this and because of our ages (I am 78 years old) we had to try and find money to give ourselves solar to survive. Therefore installed solar. The Municipality was notified. There was usually no notice and power would go off sometimes for days. I would be left sitting with candles and not be able to cook, open our gate or arm our security alarm. This is ongoing weekly. Lack of Managerial management, lack of supervision, workers deliberately making sure they returned for overtime pay fixing the same places every time. No progress at all . It is now 2026 and the last few weeks no water and electricity.For these reasons I strongly object.	Rosemary	retired
	2026-08-28 17:29:23	No I do not	Other		Residential Electricity Consumer / Ratepayer	This is bordering extortion. The government cannot reliably provide electricity and so the people take it into their own hands, providing relief to the grid and so benefits the government. Whilst the rest of the world's citizens are applauded and rewarded for switching over to solar. We South Africans are punished.	Joel	employed individual

	2026-08-29 06:04:29	No I do not	Other		Residential Electricity Consumer / Ratepayer	Given the global warming problem and the urgent need to reduce/stop use of fossil fuels, the public should be encouraged, not discouraged, to install as much renewable energy (solar) as possible. The introduction of any proposed charges for such installations will have a very negative effect on this and will also affect the transition to electric vehicles that would be partly charged by the residential solar energy thereby reducing future diesel and petrol consumption. It would be positive to require the installation of a related size of batteries with the installed solar panels to smooth the effect that day/night fluctuations would have on the electricity grid.	Richard	retired
	2026-08-29 06:19:58	No I do not	Other		Residential Electricity Consumer / Ratepayer	Citizens invest in solar systems to avoid the shortfall and failure from the department/state to provide us with electricity or do the necessary repairs when needed with our tax money and now you want to come and make even more money out of citizens and STILL not fix the issues i.e. load-shedding, substations blowing up, etc.	Maggie	employed individual

	2026-09-09 18:34:24	No I do not	Other		Residential Electricity Consumer / Ratepayer	My observation is that the paper refelects ideology and protection of the status quo. The first point is that the unbundling of Eskom results in 3 entities controled by one holding company. Is this properly independent? Probably not. The second point is that while one can understand the need to provide suitable income for peak period power usage when solar fitted entities are low users of power during the day, different types of users need to be treated differently. The main case in point is complexes or other multiple occupied properties where some have solar some do not. It does not make sense to apply a unifrom penalty to these types of properties. One wonders if a property strategic analysis has been done or whether this paper is the result of political rhetoric. A full analysis would reveal the numerous categories of power users and the extent to which they pay for their power. It is all very well to protect the vulnerable but what is the proportion of that category that actually paya for its power? Much more needs to be done to fully understand the complexities facing power propvision in the future, and defining options on how to manage and charge for it.	Digby	
	2026-09-11 14:17:21	No I do not	Other		Residential Electricity Consumer / Ratepayer	How can you charge us for sun energy that was given to us free from God. I had to save hard and long to get solar because I cannot keep up with the raising electricity costs.	Elaine	self-employed

	2026-09-12 13:06:28	No I do not	Other		Residential Electricity Consumer / Ratepayer	Dear policy makers - We see through the facade. You have been fleecing the SA public with charges for electricity to finance a corrupt cabal of evil, avoiding coal, supplying electricity by burning more expensive diesel, murdering the economy with self imposed, truly unnecessary and unjustified load shedding (which was an ATTACK on the citizens of SA) and you seek to do more of the same with flowery language to hide it. Get you OWN HOUSE IN ORDER before you try to rape the citizens of SA financially. Curtail the organised CRIME and CORRUPTION in the electricity sector. For goodness sake you have the whole government apparatus at your disposal! Invest in COAL, it's in our earth, and burn it efficiently, don't just try fleece the public anymore. Your actions are not lost in a mirage, they are seen by us Sincerely, Steve G (patriot)	Steve G	employed individual
	2026-09-12 17:16:23	No I do not	Other		Residential Electricity Consumer / Ratepayer	Allow me to buy electricity from any independent provider or state provider as I can buy fibre. Stop trying to make me pay for services I don't receive.	Klaus	
	2026-09-13 00:20:45	No I do not	Other		Residential Electricity Consumer / Ratepayer	Escom cannot produce enpugh electricity. It has broken the world record for longest time to complete and the most expensive power station i.e Kusile. Why not allow S.Afican's to assist by feeding their excess electricity created by solar back into the grid at a reduced tarrif? This is good business for developed countries i.e Germany. They have far less sun hours than S.Africa .All who have solar are very happy . Their capital outlay is covered in a few years plus they get money back for assisting the grid. Little thought of new power stations! A win, win situation.	Hilda	retired
	2026-09-13 00:53:25	No I do not	Other		Residential Electricity Consumer / Ratepayer	The basic problem is unreliable supply. Solutions are :- alternative sources of supply and claims or no pay policy against conventional suppliers (ESKOM and the Municipalities), for their inability to deliver. Solar power or own generator power may become the only economically viable sources of power if the conventional sources get worse.	Austenh	retired
	2026-09-13 06:27:09	No I do not	Other		Residential Electricity Consumer / Ratepayer	Eskom must stop making their corruption the problem of the consumer! For how many years Eskom has a problem with loadshedding ect, pushing the electricity increase from 2007 to 900%!! Now you have to pay for the sun also because they're going to loose out on paid customers now! How unethical this is to tax you for generating your own electricity as Eskom had many years to solve the problem of generating electricity for South Africa but charging unfair prices for electricity and wanting to tax you putting sun panels on your roof! Those taxes must be stop as the sun do not belong to any person to make a unlawful law! Stop Eskom!	Casper	self-employed
	2026-09-13 07:10:13	No I do not	Other		Residential Electricity Consumer / Ratepayer	From past experience and almost daily proposals, new laws, regulations and whatever, the ordinary citizen must necessarily come to the conclusion that whenever such proposals surface, there is always some hidden agenda. Electricity consumers are paying premium plus rates while Eskom boasts with a profit of billions. Something does not add up. Then there are the obvious differential tariffs being levied on local consumption which equally does not add up and due to the lack of transparency cannot be readily investigated. Sun panels and infrastructure costs the consumer who chooses this method - due to Eskom high tariffs - are installed at high costs. The government does not own the sunlight, not the rain water and air that people breathe and cannot seek to tax this basic need by forcing levies and fees on consumers. No, any new proposal I reject as it has always been proven to aim at fleecing the consumer more and more.	Nico

	2026-09-13 14:37:03	No I do not	Other		Residential Electricity Consumer / Ratepayer	Dear South Africa, 1)To put this proposed this Amendment into Perspective, know from whence it comes, or more accurately from whom, Minister of Electricity and Energy Kgosientsho Ramokgopa was linked to a multi-billion rand smart electricity meter tender controversy during his tenure as the Mayor of Tshwane from 2010 to 2016! 2) The PEU Smart Meter ScandalThe Deal: Under Ramokgopa's leadership, the City of Tshwane entered into a contract with PEU Capital Partners to install smart electricity meters. 3)www.sakeliga.org.za/insight/sakeliga-warns-about-ramokgopa-in-light-of-electricity-meter-tender-scandal-that-cost-taxpayers-billions), 3.1) Additional references [2] (https://mybroadband.co.za/news/investing/485231-south-africas-new-electricity-ministers-skeletons.html) 3.2) The Cost: Civil organization Sakeliga and other groups challenged the contract in court, pointing out that the city could run the project much cheaper itself, but instead paid massive commissions (19.5 cents per rand of electricity sold) and saddled the municipality with hundreds of millions in irregular costs and a R2-billion debt burden. 3.3) NB! but instead paid massive commissions (19.5 cents per rand of electricity sold), (The favoured ANC acolytes, Cadre Deployee and Tripartite Alliance "partners" link in with Prof William Gumede's unchallenged assertion that BEE etcetera is "Daylight Robbery and part of an ANC's criminal enterprise", the favoured ones within the ANC NEC etcetera!) 3.4) The so-called Tender was eventually declared invalid, the caveat is or was, the Vast Amounts of Monies paid to PEU never recovered by all accounts! 4) Minister of Electricity and Energy Kgosientsho Ramokgopa, was despite serious questions about his Competence / Incompetence promoted from Mayor of Tshwane to Ramaphosa's Cabinet, which critics call Musical Chairs, questionable effectivity is "rewarded"! Forgive the digression of above, now to the Eskom's Management, arrogance, no other word applies. ESKOM situation at 13 September 2026! 1) The recent surge in Eskom's executive salaries and worker bonuses has sparked intense public backlash, coming right after massive South African government financial interventions. Critics point out that Eskom's reported "recovery" and profitability are largely a statistical mirage, considering the power utility relied heavily on a R64 billion taxpayer-funded debt relief package to offset what would have otherwise been a multi-billion-rand loss. 2) Eskom board fees increased from R5.9 million to R22.4 million in 5 years, By Newsday as published on 28 August 2026. 3) Now a copy and paste job, see below! Eskom promised to cut costs to make electricity more affordable, but the people managing the company increased their own pay by 277% over 5 years. This was revealed by Eskom's annual reports over the last five years, which showed the fees paid to non-executive directors. Eskom explained that its non-executive directors receive a fixed monthly fee, guided by its shareholder, the government. The non-executive directors of the board are also reimbursed for expenses incurred in fulfilling their duties. In 2021, the total remuneration for non-executive directors on the Eskom board was R5.945 million. It declined to R5.274 million in 2022. On 1 October 2022, former Public Enterprises Minister Pravin Gordhan reconstituted the Eskom board to restore governance, operational stability, and strategic direction. "The new Eskom board brings broad experience, expertise and skills that will provide stability and strategic direction to the entity," Gordhan said. The new Eskom board was tasked with addressing loadshedding issues, procurement, eliminating corruption, and ensuring a reliable energy supply. Mteto Nyati was appointed as the chairman of the Eskom board on 1 November 2023, succeeding Mpho Makwana. Between the 2022 and 2025 financial years, the total remuneration for non-executive directors increased significantly. In 2022, the directors were paid R5.3 million. This increased to R7.9 million in 2023 and to R12.2 million in 2024. The biggest increase came in the 2025 financial year, when payments to non-executive directors rose to R22.4 million. This means that over the last four years, remuneration for Eskom's board members has increased from R5.3 million to R22.4 million. Go figure then that illegal intrusion into the populations use of electricity is vital to feed their insatiable appetite for the "Rich Life"! 4) South Africans as per meme or two, have vicariously described the ANC Tripartite Alliance ELITE as Hyenas, opportunist feeders of South African "pestilence". 5) The ESKOM Management power-grab is typical of an organisation that is above the Law, and is a deliberate strategy to re-assert its Monopolistic function at all costs, despite the clear and present danger it presents to the SA Economy, unemployment and potential civil unrest, ala an Arab Type Spring", "let them eat cake' from the French Revolution. 6) That Eskom is reliant on a questionable Minister Kgosientsho Ramokgopa, who by the way with his many recent announcement/s is direct conflict with a GNU Cabinet Decision, Ramaphosa's admonishments aside! 7) Dear South Africa, your intro clearly highlighted the FACT that ESKOM does not have the Legal Power to introduce "levies" on individuals or companies, 8) This has however empowered opportunistic bankrupt Municipalities (ANC mostly) to charge Electricity Consumers a fixed monthly Levy! Also blatantly Illegal and extortion and or intimidation. Criminal offense/s.	anton	self-employed
	2026-09-13 15:11:02	No I do not	Other		Residential Electricity Consumer / Ratepayer	Stop the "Sun Tax": Do not penalise private capital and solar investments with punitive fixed grid fees. Protect Captive Consumers: Bar municipalities from hiking tariffs on non-solar homes to cover lost revenue from industrial and off-grid defection. Transparency First: Ensure wholesale market reforms do not leave everyday households footing the bill for grid infrastructure.	Wesley	employed individual
	2026-09-13 15:23:23	No I do not	Other		Residential Electricity Consumer / Ratepayer	I am making this statement based on what I feel about this subject. I don't feel there is a energy shortage. I feel it is manufactured. One you should never penalize anyone from trying to get around this strong hold. I just drove 2000 miles through the mountains and saw just how capable someone or something is. They are highly capable of getting energy to places in need. Those grids walked through mountains up hills through the tickets and trees. Something I do now realize. People are forced do things they would not ordinarily do just be able to survive. Their are basic human needs and Thankfully we have made great improvements on the comforts that make life more pleasant. Let's make life more pleasant and stop the Manufacturered crisis. We share this place. Our admission ticket to earth is our entitlement.	Lori	self-employed

	2026-08-29 13:43:01	Yes I do	No concern, I Support the paper		Energy Sector Professional / Engineer	If you have solar and batteries you have a choice, pay the capacity tax or go off grid. The electricity supplier has to reserve capacity for you when you want it which may be very occasionally, so how do they cover the cost of maintaining the physical infrastructure when you are a low kWhr user? This is not just a South Africa problem, it has existed elsewhere for a very long time for people using the utility for standby power only. As noted, people not consuming are not paying any standing costs which must be recovered through other users, thus pushing up their costs. If you think this is unfair, go off grid with no external connection to anyone else and maintaining your own backup supply for when the sun doesn't shine or your demand exceeds your production.	Eric	retired
	2026-09-07 07:52:25	Yes I do	No concern, I Support the paper		Residential Electricity Consumer / Ratepayer	Fear of change is how progress is stopped. When we face a challenge we deal with it. We fix it. Sitting and hoping is not going to move us out of our problems, taking action will. It is well know that competition and the free-market system is the way to improve any economy. People come up with ideas and implementation of the ideas revives decay and death. The fear of the unknown is only there to stop you from taking action. We are a courageous people. The laws and rules stop us from being the light we once were shining brightly in the world.	Charmaine

	2026-08-31 21:01:31	Yes I do	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	There is a serious lack of accountability in government. As a result, local municipalities may continue increasing fixed electricity charges to cover their expenses. This places an unfair financial burden on middle-class consumers who already pay their accounts. The real solution is to ensure that everyone pays for the electricity they consume. In many areas, utility bills remain unpaid, electricity is stolen through illegal connections, and non-payment is allowed to continue without consequences. This is one of the biggest challenges facing local government, yet many municipalities appear unwilling to address it properly. Instead of repeatedly charging paying customers more, municipalities must improve revenue collection, deal firmly with illegal connections, reduce electricity theft, and apply the same rules fairly to everyone. 	2026-09-13 09:17:05	Yes I do	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	As South African citizens, we are already struggling to keep up with the ever-increasing cost of food, fuel, school fees, water tariffs, and just about everything else. Now electricity costs continue to increase year after year. Enough is enough. Ordinary South Africans simply cannot afford to keep carrying the burden of endless increases. Government is supposed to serve and protect its people—not make life harder for them. We deserve accountability, responsible leadership, and a government that puts its citizens first. There is a reason countries like Switzerland consistently rank among the best in the world: strong institutions, accountability, and a focus on the wellbeing of their people. South Africans deserve better. ?? #ANCmustfall #SouthAfrica #EnoughIsEnough #Accountability #SouthAfricansDeserveBetter	Charles	employed individual
	2026-09-13 10:55:52	Yes I do	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I object strongley to the fixed Charges & Solar Penalties. In most European Countries you get encouraged and sponsored to have Solar Power Systems installed. So to meet the 2030 deadline for the Earth warming , signed by most countries, "International rules" . Europeans get a fixed % of the costs of the Solar installation and refunded after you have the system installed. It helps We in South Africa get penaliesed for doing good and keeping the sinking Ship (Eskom) afloat. Department of Electricity and Energy: Stop the "Sun Tax": Do not penalise private capital and solar investments with punitive fixed grid fees. Protect Captive Consumers: Bar municipalities from hiking tariffs on non-solar homes to cover lost revenue from industrial and off-grid defection. Transparency First: Ensure wholesale market reforms do not leave everyday households footing the bill for grid infrastructure. Help to do the correct thing by encouraging the people of South Africa to have a Solar System installed without adding new tariffs.	Horst	retired
	2026-09-13 20:17:03	Yes I do	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		Roger	retired
	2026-09-14 07:30:45	Yes I do	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Dear Sirs, I object to fees that penalise solar power users. People have added solar because 1) they needed to provide electricity due to an unreliable supply, i.e., loadshedding and 2) to offset above-inflation increases in the cost of electricity. They should not be punished with exorbitant fees for doing so. Furthermore, those producing excess electricity from their household or business solar systems should be permitted to sell it back to the grid. I support the unbundling of the energy market, including generation and distribution. Additional renewable energy in the form of solar and wind (as well as wave energy and geothermal, where possible) should be added wherever possible as this is now typically the cheapest form of electricity and also assists in off-setting our carbon emissions, which is extremely critical and urgent. By the same token, aging coal-fired power stations should be taken offline as soon as possible. I am also opposed to any further above-inflation increases in electricity tariffs. South Africans have already been unduly punished with above-inflation increases for many years now and, in fact, the price of electricity has increased 937% between 2007 and 2024, which is SIX TIMES the rate of inflation. This has to stop. The emphasis going forward needs to be on creating a free market for energy in order to foster the creation of reliable and AFFORDABLE power for everyone.	Mark	self-employed
	2026-09-14 07:57:19	Yes I do	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Unlike Europe, we seem to be doing the opposite. 	2026-08-27 08:37:59	Yes I do	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	Government should victimise peoples choice of solar usage	cheryl	
	2026-08-27 09:59:00	Yes I do	Captive Consumer Tariff Protection		Independent Power Producer (IPP) / Energy Trader		johan	self-employed
	2026-08-28 13:44:26	Yes I do	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	I do not have an issue in principle with the proposals but experience with municipalities is a point of concern. The grid needs build out and the municipal systems updating so having to pay for the upkeep and updating is to everyone benefit. My system is designed to support our household and not to go off grid, a far more expensive route where the payback period can be very long.	Rudd	self-employed
	2026-09-08 12:45:22	Yes I do	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	Eskom must face other/ outside competition.Much too cosy as is.	Antonius	retired
	2026-09-11 17:14:17	Yes I do	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer		Teresa	retired
	2026-09-13 07:47:12	Yes I do	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	Eskom was mismanaged and lack of planning and maintenance has resulted in where we are. Total greed will destroy the rest . No deeper understanding of working with others and finding solutions.	Avryl	retired
	2026-09-14 08:25:43	Yes I do	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer		Nicholaas	self-employed
	2026-09-14 11:58:26	Yes I do	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	We as solar panel users saved your butt for future load shedding now you want to penalize us for that. You should be grateful .	Brian	retired
	2026-09-14 17:32:59	Yes I do	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer		Ted	
	2026-08-27 09:40:10	Yes I do	Municipal Financial Collapse		Residential Electricity Consumer / Ratepayer	The Department of Electricity and Energy, National Treasury, and SALGA must establish a ring-fenced National Municipal Transition Mechanism before large commercial users are permitted to bypass municipal distribution accounts. Municipal electricity distribution entities must ring-fence network maintenance budgets into dedicated accounts to prevent tariff revenue from being diverted into general municipal administrative expenses. A transparent resolution framework for historical municipal bulk electricity debt that does not penalise paying ratepayers through inflated local tariffs.	Natalie	employed individual
	2026-08-29 13:14:43	Yes I do	Municipal Financial Collapse		Residential Electricity Consumer / Ratepayer		Naledi	self-employed
	2026-09-12 08:12:05	Yes I do	Municipal Financial Collapse		Residential Electricity Consumer / Ratepayer		LLANDAFF	business owner
	2026-09-14 17:20:33	Yes I do	Municipal Financial Collapse		Residential Electricity Consumer / Ratepayer	Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation.	Antonio	retired

	2026-08-29 13:00:10	Yes I do	Other		Energy Sector Professional / Engineer	Ideallly ESCOM should be semi-privatized. However, the grid cannot suffer, because people are generating a portion of their electricity privately. It adds costs to the grid and to the system, which is kept running night and day.	Werner	student

	2026-08-29 19:56:30	Yes I do	Other		Residential Electricity Consumer / Ratepayer	No solar tarriff or any govt/iinstitution, may charge for a God given power	Hester	retired
	2026-09-13 20:22:51	Yes I do	Other		Residential Electricity Consumer / Ratepayer		Giulia	
	2026-09-14 19:33:14	Yes I do	Other		Residential Electricity Consumer / Ratepayer		Nell	
	2026-10-07 07:58:05	Yes I do	Other		Residential Electricity Consumer / Ratepayer	Why is government so greedy. Why not encourage solar power so that like other countries, unlike South Africa, forward thinking has the solar guys feed their extra electricity to the grid to help support the grid. There by getting credits. To help & benefit all, not greed...	Wayne	employed individual
