DEAR SOUTH AFRICA.co.za

Electricity Sector Market Transformation

Position Paper, 2026

21 August — 20 September 2026

https://dearsouthafrica.co.za/electricity-transformation-paper/

DearSouthAfrica.co.za is an online platform designed to facilitate government and encourage the public to participate in unbiased decision-making processes or policy formation at SOE, municipal, provincial and national levels.

Government Notice Details:	Government Gazette No. 55226, Government Notice No. 7841
Targeted Department & Executive Authority:	Department of Electricity and Energy (DEE), Republic of South Africa, published under the authority of Dr Kgosientsho Ramokgopa, MP, Minister of Electricity and Energy
Designated Statutory Recipient:	The Director-General, Department of Electricity and Energy, marked for the attention of Ms. Vusani Ramuntshi
Compiled by:	Rob Hutchinson, Managing Director, Dear South Africa
Dataset Baseline:	12,412 Authenticated Individual Civic Submissions (electricity-transformation-paper GEM.csv), encompassing 12,412 structured statutory stances and 6,261 custom qualitative written representations
Statutory & Constitutional Mandate:	Facilitated and submitted in accordance with Sections 33 (Just Administrative Action), 152 (Objectives of Local Government), and 195 (Basic Values and Principles Governing Public Administration) of the Constitution of the Republic of South Africa, 1996, read with Sections 3, 4, and 6 of the Promotion of Administrative Justice Act (PAJA), Act No. 3 of 2000, and the Electricity Regulation Amendment Act (ERAA), 2024.

1. Executive Summary

This report delivers a comprehensive, audited, and strictly non-partisan evaluation of the nationwide public participation process facilitated via the Dear South Africa (DearSouthAfrica.co.za) platform in response to the **Electricity Sector Market Transformation Position Paper, 2026**. Gazetted on 21 August 2026 by the Minister of Electricity and Energy, the Position Paper sets out the policy vision and structural blueprint to transition South Africa from a vertically integrated, single-buyer utility model to an unbundled, competitive wholesale market—the **South African Wholesale Electricity Market (SAWEM)**—alongside the legal separation of Eskom into distinct generation, transmission, and distribution businesses.

Over the course of the 65-day active campaign window (running through to 31 October 2026), **12,412 verified South African citizens, residential ratepayers, small and medium enterprise (SMME) owners, energy sector engineers, independent power producers (IPPs), municipal officials, and civil society stakeholders** lodged formal individual representations. Within this verified cohort, **6,261 participants (50.44%)** authored custom qualitative written justifications.

The empirical findings establish a statistically decisive public rejection of the Position Paper's proposed cost-recovery principles, consumer eligibility stratification, and transitional institutional design:

- **89.43% of participants (11,100 individuals)** explicitly rejected the Position Paper in its current form (**"No I do not"**), objecting primarily to the imposition of mandatory fixed network charges on grid-tied solar and low-consumption users under the "anti-free-riding" principle, the division of electricity users into corporate "Eligible Customers" and residential "Captive Customers", and the risk of wholesale price manipulation under continued Eskom Generation dominance.
- **9.10% of participants (1,130 individuals)** registered conditional support (**"I support with amendments"**), endorsing the end of Eskom's single-buyer monopoly and the introduction of competitive private power generation, subject to binding statutory caps on fixed network charges, ring-fenced protection for municipal cross-subsidies, and accelerated legal independence for the National Transmission Company of South Africa (NTCSA).
- **1.47% of participants (182 individuals)** expressed unconditional support (**"Yes I do"**), backing open wholesale competition, supplier choice, and fixed capacity contributions for standby grid access.

Combined, **98.53% of participating stakeholders (12,230 individuals) either reject the Position Paper outright or demand substantive statutory amendments** prior to the finalisation of the forthcoming Market Design Document, Market Code, and Retail Code.

2. Legislative Context & The Public Debate

2.1 Summary of the Proposed Policy Framework

The **Electricity Sector Market Transformation Position Paper** consolidates policy initiatives aimed at addressing South Africa's "energy quadrilemma": balancing security of supply, social equity (affordability), environmental sustainability (decarbonisation), and socio-economic development within severe fiscal constraints. Operationalising the Electricity Regulation Amendment Act (ERAA) of 2024, its core structural pillars include:

- **Unbundling of Eskom Holdings:** Progressive restructuring of Eskom into legally separate companies for Generation, Transmission (via the NTCSA, mandated to become fully independent within five years), and Distribution.
- **Establishment of the South African Wholesale Electricity Market (SAWEM):** A competitive wholesale market featuring a voluntary centralised electronic trading platform for Day-Ahead and Intra-Day trading, bilateral contracts, and a mandatory real-time balancing mechanism.
- **Consolidation within the NTCSA:** The NTCSA is tasked with acting concurrently as Transmission Network Service Provider (TNSP), System Operator (SO), Market Operator (MO), and Central Purchasing Agency (CPA).
- **Separation of Distribution "Wires" and "Retail":** Over the medium term, all distributors must unbundle their regulated physical network ("wires") operations from their separately licensed retail/trading operations.
- **Customer Stratification ("Eligible" vs. "Captive"):** Large power users (indicatively >1 MW) qualify as "Eligible Customers" permitted to purchase directly on SAWEM or from independent traders. Residential households and smaller commercial entities remain "Captive Customers" tied to their incumbent distributor's retail arm under regulated tariffs.
- **The "Anti-Free-Riding" Principle & Fixed Network Charges:** Section 1.2.2 establishes the guiding principle to *"Discourage free riding"*, stipulating that customers relying on the grid for partial backup power or exporting excess energy must pay regulated fixed network charges, regardless of volumetric consumption.

- **Balance Responsibility & Prudential Criteria:** All SAWEM participants carry financial liability for scheduling imbalances and must meet strict prudential creditworthiness criteria.
- **Phased Implementation:** Targeting a soft-launch of market operations in 2026, followed by a phased opening beyond Eskom starting in 2027.

2.2 Condensed Q&A / Key Facts for Laypersons

- **Q: How does this policy affect households and businesses that installed rooftop solar?** The Position Paper targets grid-tied solar users under its "anti-free-riding" principle (Section 1.2.2). Because solar households consume fewer kilowatt-hours (kWh) while remaining connected for backup, the policy mandates shifting tariff design away from volumetric consumption toward mandatory fixed monthly network and capacity charges. Only 100% off-grid properties are exempt.
- **Q: Can ordinary residential consumers choose their electricity provider under this new market?** No. The framework divides consumers. Only large industrial/commercial users (>1 MW) qualify as "Eligible Customers" who can switch to private traders. Ordinary households and small businesses remain "Captive Customers" locked into their local municipal or Eskom distributor.
- **Q: Will unbundling and wholesale competition make household electricity bills cheaper or more expensive?** While generator competition aims to lower wholesale costs long-term, residential households face two immediate upward cost pressures: (1) unbundled fixed network charges; and (2) potential municipal revenue losses if high-margin corporate clients leave municipal retail supply, pressuring municipalities to raise tariffs on captive residential users to fund local cross-subsidies.
- **Q: What prevents Eskom Generation or private cartels from manipulating wholesale market prices?** Eskom Generation supplies most of South Africa's baseload power and possesses substantial market power. The paper proposes mitigating market abuse (such as *economic* or *physical withholding*) through a Market Surveillance Unit (MSU), Competition Commission oversight, transitional vesting contracts, and NERSA bid regulation.

2.3 Perspectives: What is the Debate?

- **Wholesale Competition & Unbundling:** Proponents argue it ends Eskom's single-buyer monopoly, introduces transparent price signals, and attracts private capital. Opponents warn that wholesale spot markets create price volatility, and that Eskom Generation's baseload dominance prevents true competition.

- **Fixed Network Charges ("Anti-Free Riding"):** Supporters state that maintaining grid infrastructure carries high fixed costs, ensuring solar users pay fairly for standby access. Skeptics view this as a punitive "Sun Tax" and administrative bait-and-switch on citizens who invested private savings into solar to rescue the grid during load shedding.
- **Retail Unbundling ("Eligible" vs "Captive"):** Supporters believe separating "wires" from trading enforces regulatory accounting and stops municipalities from hiding inefficiencies. Opponents argue that allowing lucrative industrial users to bypass municipal retailers guts the local cross-subsidy model, risking municipal insolvency and leaving captive households with soaring bills.
- **NTCSA Governance:** Supporters argue that centralising grid expansion, system dispatch, and market clearing under the NTCSA provides coordinated technical oversight. Opponents counter that housing the wires owner (TNSP), market referee (SO/MO), and state buyer (CPA) inside one Eskom subsidiary creates acute conflicts of interest.

3. Context and Methodology (The DearSA Mechanism)

Under South African administrative law, government departments and parliamentary committees routinely bundle traditional online petitions containing thousands of signatures and log them as a single collective representation. Such petitions carry minimal legal weight in judicial review proceedings.

Dear South Africa (DearSouthAfrica.co.za) operates on an **individual statutory mandate model**:

- **Authenticated Individual Statutory Representations:** Every participant inputs verified personal details, specifies their geographic location and socio-economic standing, selects structured policy concern parameters, and lodges an independent qualitative submission.
- **Direct Statutory Delivery:** Each submission is formatted and routed individually to the designated administrative inbox (in this case, the Department of Electricity and Energy).
- **Enforceable Duty under PAJA and the Constitution:** In terms of Section 33 of the Constitution and Sections 3 and 4 of the Promotion of Administrative Justice Act (PAJA), the executive authority is legally obligated to log, evaluate, and substantively consider every distinct representation on the administrative record.

- **Court-Ready Evidentiary Paper Trail:** This compiled report and the accompanying timestamped CSV database establish an unassailable administrative record. If final market rules are promulgated in disregard of overwhelming, rational public evidence, this record provides the evidentiary basis for judicial review in the High Court under Section 6(2) of PAJA.

4. Definitive Quantitative Stance Analysis

Across the **12,412 verified submissions**, participants declared their primary statutory stance on the threshold question: *"Do you support the Electricity Sector Market Transformation Position Paper as published by the Minister?"*

Primary Stance Declared	Total Verified Submissions	Percentage Share (%)	Summary of Administrative Position
No I do not (Object)	**11,100**	**89.43%**	Rejects the Position Paper in its current form, opposing mandatory fixed charges on solar users, the captive consumer class, and municipal revenue destabilisation.
I support with amendments	**1,130**	**9.10%**	Supports wholesale competition but demands binding statutory caps on fixed network fees, protection for captive ratepayers, and immediate NTCSA independence.

Primary Stance Declared	Total Verified Submissions	Percentage Share (%)	Summary of Administrative Position
Yes I do (Support)	**182**	**1.47%**	Endorses the proposed market transformation, open supplier competition, and fixed infrastructure cost-recovery mechanisms.
Total Authenticated Dataset	**12,412**	**100.00%**	**Combined Opposition & Conditional Amendment Mandate: 98.53%**

5. Granular Analysis of Systemic Concerns (Deep Dive)

5.1 The "All of the Above" Deep Dive

In Step 2 of the participation workflow, **6,998 participants (56.38%)** initially selected **"All of the above"**, demonstrating that a majority of citizens view the Position Paper's risks as an interconnected systemic matrix where fixed solar charges, captive consumer exposure, and Eskom market dominance reinforce one another.

To ensure administrative precision, the platform architecture enforced a conditional secondary prompt requiring every "All of the above" respondent to isolate their **single highest-priority concern** (top-concern). Within this 6,998-person cohort, priorities distributed as follows:

1. **Fixed Charges & Solar Penalties:** 4,489 submissions (64.15%)
2. **Market Power & Price Manipulation:** 1,056 submissions (15.09%)
3. **Captive Consumer Tariff Protection:** 1,004 submissions (14.35%)
4. **Municipal Financial Collapse:** 345 submissions (4.93%)
5. **NTCSA Conflicts of Interest:** 57 submissions (0.81%)
6. **Grid Congestion & Transmission Delays:** 47 submissions (0.67%)

5.2 Consolidated Civic Concern Index

Aggregating direct single-issue selections (N = 5,414) with the reallocated "All of the above" priority selections (N = 6,998) produces the **Consolidated Civic Concern Index** across all 12,412 verified submissions:

Rank	Consolidated Primary Concern Category	Direct Selections	Reallocated ("All of the Above")	Consolidated Total	Consolidated Share (%)
1	**Fixed Charges & Solar Penalties ("Sun Tax")**	4,062	4,489	**8,551**	**68.89%**
2	**Captive Consumer Tariff Protection**	603	1,004	**1,607**	**12.95%**
3	**Market Power & Price Manipulation**	462	1,056	**1,518**	**12.23%**
4	**Municipal Financial Collapse**	101	345	**446**	**3.59%**
5	**Other Specific Substantive Grounds**	135	0	**135**	**1.09%**
6	**NTCSA Conflicts of Interest**	19	57	**76**	**0.61%**

Rank	Consolidated Primary Concern Category	Direct Selections	Reallocated ("All of the Above")	Consolidated Total	Consolidated Share (%)
7	**Grid Congestion & Transmission Delays**	8	47	**55**	**0.44%**
8	**No Concern, I Support the Paper**	24	0	**24**	**0.19%**
—	**Total Authenticated Dataset**	**5,414**	**6,998**	**12,412**	**100.00%**

5.3 Qualitative Synthesis of Dominant Issues

1. **Fixed Charges & Solar Penalties (68.89%):** Over two-thirds of participants identified the Section 1.2.2 "anti-free-riding" principle as their primary objection. Respondents emphasised that households and SMMEs invested heavily in private solar arrays during load shedding, frequently driven by government tax incentives (Section 6C) and Eskom SSEG fee waivers. Shifting to high fixed monthly network charges is viewed as an administrative bait-and-switch that penalises energy conservation, extends solar payback periods, and disproportionately harms low-consumption households (such as pensioners).
2. **Captive Consumer Tariff Protection (12.95%) & Municipal Financial Collapse (3.59%) — Combined 16.54%:** The second major cluster targets the stratification of consumers into "Eligible" corporate users and "Captive" residential users. Allowing large industrial users to defect to private traders on SAWEM removes the surplus revenue that municipalities rely on to cross-subsidise Free Basic Electricity (FBE) and local service delivery. Captive households fear they will be forced to absorb these municipal budget deficits through escalated retail tariffs.

3. **Market Power & Price Manipulation (12.23%):** Participants expressed deep scepticism that genuine competition can occur while Eskom Generation controls the vast majority of dispatchable baseload capacity. Without strict statutory bidding caps, respondents fear dominant generators will engage in economic withholding to inflate wholesale prices.

6. Qualitative Evaluation & Verbatim Civic Testimony

The following verbatim extracts from the 6,261 custom written representations illustrate the substantive legal and economic arguments placed on the administrative record.

Theme 1: Economic Impact & The "Bait-and-Switch" on Private Capital

"1. Stop the "Sun Tax": Do not penalise private capital and solar investments with punitive fixed grid fees. 2. Protect Captive Consumers: Bar municipalities from hiking tariffs on non-solar homes to cover lost revenue from industrial and off-grid defection. 3. Transparency First: Ensure wholesale market reforms do not leave everyday households footing the bill for grid infrastructure." — **Ratepayer (Object | Fixed Charges & Solar Penalties)**

"The proposal would be unfair to residents throughout the country and probably lead to more hardships already experienced by many residents in SA. Surely residents should be levied charges in line with usage which has been the norm for many years. Also it appears as though Eskom is planning an option 2 type of scenario to maintain profitability." — **Ratepayer (Object | Fixed Charges & Solar Penalties)**

Theme 2: Constitutional Overreach, Administrative Irrationality & The "Captive Ratepayer"

"I do not agree with a "tax" on a service I do not utilise. Next in line will be a hike in property rates and taxes. Allow private energy suppliers to compete in an open market." — **Ratepayer (Object | Municipal Financial Collapse)**

"I’m not a fan of there being a monopoly on energy supply. However… Private households who’ve been able to install solar panels shouldn’t be penalised for ‘making a plan’ to keep their lights on. Households who don’t have solar shouldn’t be penalised so that the municipalities can make money." — **Ratepayer (Object | Captive Consumer Tariff Protection)**

Theme 3: Practical Implementation & Eskom's Market Dominance

"The only reason people needed/wanted solar power, is because of the failure of Eskom...! Why must we pay again, because of Eskom's appalling failures over the years. Sick and tired of this sickening duplicity...!!!" — **Ratepayer (Object | Market Power & Price Manipulation)**

"Another ANC effort to loot the citizens. It's appalling that this continues when one considers that as a result of decades of unreliable power supply many citizen's 'made a plan' and are now being penalised. What a mess." — **Ratepayer (Object | Market Power & Price Manipulation)**

Theme 4: Constructive Reform Proposals (Support with Amendments)

"Wholesale market reform should proceed only if strict caps are placed on fixed network fees, captive ratepayers are protected, and municipal cross-subsidies are safeguarded. Why should solar users be penalised because Eskom can't provide the service they are paid for? Eskom also shouldn't be able to charge a connection fee, again for a service they cannot provide. We should all: Demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments." — **Ratepayer (I support with amendments | Fixed Charges & Solar Penalties)**

"Wholesale market reform should proceed only if strict caps are placed on fixed network fees, captive ratepayers are protected, and municipal cross-subsidies are safeguarded. Penalising the solar users with fixed fees because of a dilemma that Eskom created with loadshedding is unacceptable and Eskom mustn't underestimate the ability of solar users to go complete off grid if Eskom becomes antagonistic is its revenue policies trying to extract more value from their previous paying customers that they let down." — **Ratepayer (I support with amendments | Captive Consumer Tariff Protection)**

7. Participant Demographics & Stakeholder Profiles

7.1 Breakdown by Employment & Economic Status

Employment / Economic Status	Total Submissions	Share of Dataset (%)	No, I Do Not (%)	Support with Amendments (%)	Yes, I Do (%)
Retired / Pensioner	4,625	37.26%	4,170 (90.16%)	394 (8.52%)	61 (1.32%)
Employed Individual	2,773	22.34%	2,443 (88.10%)	284 (10.24%)	46 (1.66%)
Unspecified / Not Disclosed	2,231	17.97%	2,000 (89.65%)	199 (8.92%)	32 (1.43%)
Self-Employed Professional	1,449	11.67%	1,297 (89.51%)	135 (9.32%)	17 (1.17%)
Business Owner (SMME)	784	6.32%	681 (86.86%)	88 (11.22%)	15 (1.91%)
Unemployed Individual	506	4.08%	473 (93.48%)	25 (4.94%)	8 (1.58%)
Non-Profit Sector	26	0.21%	23 (88.46%)	3 (11.54%)	0 (0.00%)
Student	18	0.15%	13 (72.22%)	2 (11.11%)	3 (16.67%)
Total	**12,412**	**100.00%**	**11,100 (89.43%)**	**1,130 (9.10%)**	**182 (1.47%)**

Analytical Insight: Outright rejection peaked among Unemployed Individuals (93.48% "No") and Retired Citizens (90.16% "No"). For these economically vulnerable cohorts, replacing volumetric consumption charges (which they can control through frugal usage) with high mandatory fixed capacity fees strips them of their ability to manage their monthly living costs.

7.2 Geographic Distribution by Province

Province / Region	Total Submissions	Share of Dataset (%)	No, I Do Not (%)	Support with Amendments (%)	Yes, I Do (%)
Gauteng	5,124	41.28%	4,600 (89.77%)	451 (8.80%)	73 (1.42%)
Western Cape	3,937	31.72%	3,469 (88.11%)	405 (10.29%)	63 (1.60%)
KwaZulu-Natal	1,299	10.47%	1,165 (89.68%)	119 (9.16%)	15 (1.15%)
Eastern Cape	693	5.58%	622 (89.75%)	61 (8.80%)	10 (1.44%)
Mpumalanga	383	3.09%	350 (91.38%)	25 (6.53%)	8 (2.09%)
Free State	310	2.50%	289 (93.23%)	17 (5.48%)	4 (1.29%)
Limpopo	260	2.09%	237 (91.15%)	21 (8.08%)	2 (0.77%)
North West	257	2.07%	235 (91.44%)	18 (7.00%)	4 (1.56%)

Province / Region	Total Submissions	Share of Dataset (%)	No, I Do Not (%)	Support with Amendments (%)	Yes, I Do (%)
Northern Cape	119	0.96%	111 (93.28%)	7 (5.88%)	1 (0.84%)
Outside SA	30	0.24%	22 (73.33%)	6 (20.00%)	2 (6.67%)

Participation concentrated heavily in metropolitan and secondary municipalities facing acute municipal infrastructure failures and where private rooftop solar adoption is highest (e.g., Gauteng and the Western Cape).

8. Alignment with Media, Civil Society, & Experts

The empirical findings of this dataset strongly align with external policy analyses and civic discourse:

- **The Doctrine of Legitimate Expectation (Tax Rebates vs "Free-Riding"):** Civic participants repeatedly cited the contradiction documented in financial media. The state actively incentivised private solar adoption in 2023 via the Section 6C personal income tax rebate (up to R15,000) and Eskom SSEG fee waivers to reduce pressure on the grid. Proposing punitive fixed capacity charges immediately thereafter, labelling compliant households as "free riders", violates the administrative doctrine of legitimate expectation under PAJA.
- **Municipal Insolvency (SALGA):** The public's grave concern regarding the "Captive Ratepayer Trap" aligns with warnings from the South African Local Government Association (SALGA). Allowing lucrative >1 MW corporate users to exit municipal retail supply without reforming the fiscal model threatens to collapse the cross-subsidy system that funds Free Basic Electricity (FBE) and local service delivery.
- **Civil Society & Environmental Justice:** The 93.48% rejection rate among unemployed participants and the 90.16% rejection rate among pensioners reinforces civil society arguments that regressive fixed network charges disproportionately penalise low-income households.

9. Actionable Recommendations for Government

In terms of Section 33 of the Constitution and Sections 3, 4, and 6 of the Promotion of Administrative Justice Act (PAJA), the Department of Electricity and Energy is legally obligated to apply its mind to the evidentiary weight of these **12,412 individual statutory representations**, wherein **98.53% of participants object to or demand critical amendments to the Position Paper**.

Based entirely on the substantive representations placed on the administrative record, Dear South Africa submits the following directives for integration into the final policy and regulatory framework:

1. **Impose Statutory Caps on Fixed Network Fees and Remove Solar Penalties:** The Department must revise Section 1.2.2 to remove the classification of grid-tied solar prosumers and energy-conserving households as "free riders". The Market Design Document and NERSA tariff methodology must impose strict statutory caps on fixed monthly network and capacity charges. Furthermore, low-income and pensioner households must be protected through life-line inclining tariff structures, and residential SSEG owners must be compensated through standardised national feed-in credits permitted to offset network charges.
2. **Establish a Ring-Fenced Municipal Transition & Cross-Subsidy Fund:** Before "Eligible Customers" (commercial and industrial users >1 MW) are permitted to exit municipal retail supply to trade directly on SAWEM or via private traders, the Department, alongside National Treasury and SALGA, must establish a transparent, universally funded cross-subsidy and municipal transition mechanism. Captive residential customers must be statutorily shielded from bearing higher tariffs to compensate municipalities for lost industrial margins.
3. **Mandate a Binding Roadmap to Eliminate the "Captive Customer" Divide:** The forthcoming Market Design Document and secondary legislation on "eligibility" criteria must not permanently lock residential households into municipal retail monopolies. The Department must publish a phased timeline that progressively lowers the retail eligibility threshold, empowering ordinary citizens to eventually purchase electricity from competitive licensed retailers.

4. **Enforce Strict Bid Caps on Dominant Generators (Eskom Generation):** Given Eskom Generation's overwhelming dominance of dispatchable baseload capacity, NERSA must be mandated to enforce hard, audited, cost-reflective bidding caps on any generation entity controlling a dominant share of active capacity. This is required to prevent economic withholding and protect end-users from spot-market price manipulation.
5. **Accelerate Full Legal Separation of the NTCSA:** To eliminate structural conflicts of interest, the statutory window for converting the NTCSA into a fully independent entity outside Eskom Holdings must be fast-tracked and completed prior to opening SAWEM beyond Eskom in 2027. The Central Purchasing Agency (CPA) must be legally and operationally separated from the Market Operator (MO) and System Operator (SO).

	2026-08-26 15:49:17	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	For a number of years we were asked by ESKOM to cut usage and make use of other means. Now they do not have a business. Brilliant! They are taking a chance around grid costs. We have all been paying a monthly infrastructure fee for electricity, so now they want to increase this because they are not making enough money from electricity sales. This is just a new tax they are trying to sneak in.	Arthur	retired
	2026-08-26 15:49:42	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. I insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. I require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households.	Pravine	
	2026-08-26 15:59:01	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Kim	retired
	2026-08-26 16:10:38	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Comment I support the principles of the proposed Electricity Sector Market Transformation Position Paper—particularly greater market competition, the unbundling of Eskom, and open wholesale electricity trading. These reforms are essential to attract private capital, improve efficiency, and ultimately resolve South Africa's energy crisis. However, I strongly object to measures such as mandatory fixed solar charges, increased costs for captive consumers, and mechanisms that shift revenue losses onto municipalities. These measures risk penalising households and small businesses that have invested in alternative energy solutions, while placing further pressure on already constrained consumers. We need genuine market reform—not simply new ways to redistribute the cost of Eskom's inefficiencies onto consumers.	CJ	
	2026-08-26 16:11:53	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	End bulk surcharge for solar use. We installed at high cost due to Eskom's inability to provide electricity.	Gerrit	
	2026-08-26 16:20:11	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Nico	retired
	2026-08-26 16:20:29	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Homeowners who could afford rooftop solar with battery installations invested to firstly ensure that their homes had electrical power when Eskom failed due to load shedding and/or unplanned power outages. Secondly, we invested to reduce the load on the grid to ensure that those who could not afford alternative electrical power could remain connected and thirdly reduced residential demand on Eskom made electrical power available to industrial users to minimize their downtime due to power outages or load shedding. Now Eskom and municipal providers have realized that they've lost income so they want to make residential homes with backup power pay for the privilege of compensating for their incompetence? If this is implemented they can remove their electrical supply connections and we'll go off-grid. Then the small income that they do earn from homes with alternative electrical supply will be lost and they'll be crying for higher charges to those who remain connected - mostly the poor who already cannot afford their exorbitant prices.	John	retired

	2026-08-26 17:28:10	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Our country would still have loadshedding if consumers did not buy solar systems for various applications. Solar installations were done to solve an Eskom problem created by corrupt government officials and Guptas As electricity users it would be easy to expose the shortfall electricity on the generation side if solar users draw from the grid during peak hours in stead of using their solar generation and battery storage Eskom created the "self generation solar user" problem. Government and municipalities can't put fixed fees to "tax" residents that generates solar power. In any other country the residents get subsidies from government to do this. Fixed fees for residential user will also tax residents that generates "green" electricity that is "saving the planet". Will government tax residents for "saving the planet"? Let residents generate the electricity that government can't do and don't tax them to death - IT'S THE RIGHT THING TO DO	Hennie	employed individual

	2026-08-26 17:40:14	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I had no choice to invest considerable amount in Solar power as I am working from home and could not perform my min duties due to a failing grid and severe outages in a period just after covid. The state in the form of Eskom failed to supply a steady and reliable recourse. On top of this the failure of the effective policing . Our area came under attack of vandals and thieves that on a regular bases damages the network further making earning a living very difficult. Setting up solar was not a choice. I tried a generator but this is unreliable and very expensive. Now I still pay a inflated electricity bill as well as paying off the investment in the solar power. Many around us put houses up for sale as they could not afford the costs of living here. Now the state wants to penalize us for taking this step. The only way I see forward if prizes keep increasing and if we are to pay a huge fee to stay connected is to go a little further to completely go off the grid. Then Eskom will not make anything from us. Our right to receive services at fair rates are trampled on and Eskom is not seeking ways to secure cheaper electricity like solar farms and wind/water generation to really help reducing the cost of the supply. Even poor communities are forced to look at solar as they cannot afford the continuous higher prices of electricity supply. Deregulation with free marked competition with 2 - 3 suppliers is the way to go . then these suppliers will compete to supply the best and cheapest electricity. I say NO for even higher prices. YES, for competition and Yes, for alternative supply options.	Nico	employed individual
	2026-08-26 17:43:24	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The government should subsidise and support move to solar by the residents, and not making it more expensive.	Anastasiya	self-employed
	2026-08-26 17:55:16	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This is an unfair burden placed on individuals who helped the government to overcome the energy crisis at huge personal costs.	Harry	retired
	2026-08-26 18:19:14	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	If Eskom tries to impose fixed charges it will just drive consumers to upscale their solar installations and cut off using Eskom/municipal electricity all together. 	2026-08-26 19:38:26	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I'm responding as a rate payer, however I'm a trained Electric&Electronic Engineer. While I get that the cost of using the grid as a backup can create a situation of infrastructure being exposed to freeloading, this doesn't need to be directly transferred to those using the backup simply because they use the backup. Transmission of electricity should still be seen as a transport mechanism of goods procured through a free market. If those goods come at a high price, whether it is because the generation involved costly energy sources or the cost of transmission infrastructure went up, so be it. When those costs come down, also so be it. This is how a free market works! I believe the Swedish socialist economy got it right: you can buy electricity on a month by month rate (very expensive), or you can subscribe to a price per Watt purchase at a completely free market, while you have direct access to that market price - savvy users can purchase power at times when the cost of electricity is lower, which almost invariably causes the market to assist with driving down the cost of generation. This frees up a lot of state capital to spend on transmission and maintenance. In my opinion, by rewarding consumers for participating in the solution, the problems themselves become fewer - something that very rarely gets solved by taxes.	Adriaan	
	2026-08-26 20:00:55	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is said in the paper that high fixed connection are necessary to be paid to cover the cost of the electrical network. However, every Eskom, Tshwane , City Power and many other customers already paid bulk charges when applying for a connection originally, so the cost of the network to them is supposed to be paid already. It would be criminal to charge them on a monthly basis for that again... So the principle as stated is totally wrong. That said, a network needs to be maintained to keep it up to standard and operative. In the past that was done by having a 2-5% maintenance operating budget compared to the replacement value of the network. However, when the current governing party came to power those budgets were reduced to pay for the salaries for the comrades in the new management positions, with the result that the maintenance went haywire causing all the problems in the networks we have now. Cost of living has increased to unbearable levels for the middle man inter alia caused by the high cost of electricity, so many of them had to make a plan to reduce their monthly expenditure. If electricity had been cheaper and more reliable this would not have happened. The only result of "addressing" the "free-riding" of connected solar systems by high fixed rates will be that more and more households will be forced to go off-grid irrespective of the inconvenience thereof. It simply is a step in the wrong direction which will turn the electricity sector as being abandoned by everybody except those on the subsidised rates, in effect killing the sector. Bring back reliable and affordable electricity to SA, only then the electricity sector may have a future. And don't double charge with bulk charges and high fixed monthly rates for the same thing.	Harm	self-employed

	2026-08-26 20:06:47	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Flat rates for grid maintenance is sound in principal, however we residents will bear the brunt of other costs not relevant to us. I support a baseline fixed charge for grid access, but this should be linked to property zoning or maximum foreseeable usage. So the charge does not reflect the the claw-back of lost funds elsewhere, but a fair representation of how much grid I actually use. Thus, businesses and major electricity users should have fixed charges proportionable to their electrical footprint. Solar however, is not a reason to bill me more. As my footprint and usage is lower and thus beneficial for the stability of the whole grid. Usage bills per kWh as a separate line item.	Chad	employed individual

	2026-08-26 21:56:33	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Solar power users must not be penalised as part of a new pricing structure. Most solar power users were forced by the state to invest in alternative solutions to escape the consequences of a failing electricity system. Most of these persons are victims of poor management at Escom and had to take on harsh financial loans in order to fund alternative sources of electricity. Most of these loans need to be paid back over lengthy periods, and it would be unfair to expect such victims to now also start paying effectively for not using electricity as part of a new unfair tariff dispensation. The proliferation of residential solar power systems is one of the main contributors to lower national electricity demand, facilitating a more stable electricity grid that bypasses the need for further load shedding. The remaining users on the grid are thus also benefiting from individuals and companies loaning money to install solar power. Individuals that installed solar power had to calculate return on investment when they decided to install solar panels. In most cases the loans do not make sense if one considers that the solar infrastructure has a very limited life time. The only reason why individuals still went ahead with the installation is mainly because of financial losses suffered as a result of load shedding and unplanned electricity interruptions. The changing of electricity tariffs to penalise low electricity users will thus be extremely unfair and will discriminate against those daring individuals that pursued a change that is benefiting everyone in the country. It will also plunge those individuals in debt that took on a risk to avoid financial losses due to an overburdened electricity system. The decision of government in the above regard will show whether it is people centred, or corruption and extortion centred. Wholesale market reform should proceed only if strict caps are placed on fixed network fees, captive ratepayers are protected, and municipal cross-subsidies are safeguarded.	Andre	retired

	2026-08-27 08:41:54	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I object to the Electricity Sector Market Transformation Position Paper in its current form, particularly the principle that households and small businesses using rooftop solar should be regarded as “free riders” and subjected to increasing unavoidable fixed charges. I am moving to solar because the public electricity supply has not been sufficiently reliable to meet my needs. Citizens who invest their own capital in solar generation, batteries and energy efficiency reduce pressure on the grid, contribute additional generating capacity and support South Africa’s energy-security and decarbonisation objectives. They should not be financially penalised for doing so. Any network charge must be transparent, independently verified and proportionate to the connection capacity actually reserved by the customer. Consumers must be able to select and pay for a lower grid capacity where appropriate. Such charges must not be used to recover municipal revenue shortfalls, inefficient expenditure, electricity theft, excessive network losses, cross-subsidies or stranded legacy costs—particularly when large industrial customers are being permitted to access the competitive electricity market while households remain captive. Before this principle is implemented, government and NERSA must conduct and publish a proper socioeconomic impact assessment; cap fixed charges; protect low-income and low-consumption households; provide fair compensation for electricity exported to the grid; and establish a binding roadmap allowing households and small businesses eventually to choose their electricity suppliers. Energy efficiency and private renewable investment should be encouraged and rewarded, not treated as a convenient new source of revenue.	Jennifer	self-employed
	2026-08-27 08:55:57	I support with amendments	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	A “Sun Tax” on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. The “Captive Ratepayer Trap” and Municipal Insolvency: Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance. Wholesale Price Volatility and Market Power Manipulation: Eskom Generation still controls the overwhelming majority of South Africa’s dispatchable baseload power. In unbundled spot markets worldwide, dominant suppliers have engaged in economic or physical withholding to artificially spike market clearing prices. Without hard statutory bid caps and aggressive oversight, wholesale price volatility will be passed directly down to retail consumers. Severe Conflicts of Interest Within the NTCSA: Consolidating transmission grid ownership (TNSP), system dispatch (SO), market clearing (MO), and legacy state off-take contracts (CPA) within a single entity under Eskom Holdings creates structural conflicts of interest. NTCSA could face internal commercial pressure to favour Eskom assets or delay third-party grid connections. Premature Market Launch Amid Unresolved Municipal Debt: Opening an advanced wholesale market with mandatory imbalance penalties in 2026/2027 while municipal distribution debt to Eskom remains unresolved is premature. Financially distressed municipalities that fail prudential credit requirements will be excluded from trading platforms, creating a divided nation of well-supplied metros and failing, power-starved rural councils. 	2026-08-27 09:19:23	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is immoral to tax individuals' and corporations' self-installed solar power generation capacity because: 1) Both individuals and corporations used already taxed money to pay for equipment to obviate the problem of load shedding, which was caused by poor management and corruption on the part of ESCOM, and is no fault of the individuals or corporations concerned; 2) This amounts to a second and permanent tax on equipment owned by the individual/corporation to avoid the inconveniences and losses incurred by load shedding, purely the fault of ESCOM. Why should the ratepayer pay for ESCOM's shortcomings and lack of foresight? 3) ESCOM is in no position to reduce its carbon footprint without major taxpayer support. Tax-paying individuals and corporations have given ESCOM a major opportunity to claim a reduction in carbon emissions by self-installing solar/wind generation equipment at their own risk and cost, without any assistance from ESCOM. 4) In the case of the individual ratepayer, installing a solar generation system with battery storage costs the equivalent of a small new car. The individual has paid VAT and other taxes on the equipment, and VAT for its installation. The savings in electricity costs will never amortise the cost of the equipment, the cost of its maintenance, or its depreciation over time. ESCOM has made no effort to subsidise the installation of such equipment, except the installation of solar geysers, which involved a long, tortuous path to obtaining the subsidy. SAWEM would be beneficial to the South African economy only if it were a true free marketplace for the purchase of electricity; it should bypass the onerous extra charges levied by municipalities for local distribution, and for possession of solar generation equipment; ESCOM should make a concerted effort to stop illegal connections; ESCOM should be unbundled and replaced by a free electricity/energy market. 	2026-08-27 09:51:29	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I agree with the fixed monthly charges to have access to electricity if and when needed. Spread over ALL the connections countrywide, it makes it affordable and feasable. The infrastructure must be maintained. But I do not agree with some of the charges some Munic's/Eskom is charging already. It must be properly calculated and enforced across the board. With the clear option, without punitive charges, to disconnect from the grid.	Jaco	
	2026-08-27 09:58:55	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	While I do support transformation in the energy sector to make it more competitive, I do not support being billed more should I install solar to protect my home from Escom power outages. I would not even consider solar if the supply from Escom was uninterrupted and the annual pricing increases were in line with inflation rather than an attempt to pay for Escom's inefficiencies. However, if I install solar to help Escom keep it's power grid more stable I do not think it is reasonable to be penalized by higher baseline taxes. If this intention is removed from Escom's proposed restructuring I would be far more likely to support it.	Peter	employed individual
	2026-08-27 10:02:04	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I support an open and competitive electricity market, Eskom unbundling, private-sector participation and greater consumer choice. However, I strongly object to the proposed mandatory fixed charges on households that have invested in rooftop solar and substantially reduced their reliance on the grid. Consumers should pay for the electricity and network services they actually use. I do not support a system in which households are required to pay an unavoidable fixed charge simply because they remain connected to a grid, they may use very little. If a consumer generates their own electricity, they should not be financially penalised for reducing their consumption of electricity supplied by the state. The “anti-free-riding” argument also ignores the reason many South Africans invested heavily in solar and battery systems in the first place. Years of load-shedding, unreliable supply, inadequate infrastructure, maladministration, corruption and poor financial management have forced ordinary households and businesses to find their own solutions. People have spent their own money to achieve energy security and reduce their dependence on a failing public system. It is fundamentally unfair for government or municipalities to then introduce fixed charges that undermine those investments simply because consumers are buying less electricity from them. I am particularly concerned about allowing government-controlled entities to determine and continually recover “fixed” network costs from captive consumers. South Africa's history of corruption, financial mismanagement and failing public infrastructure does not provide sufficient confidence that such charges will remain proportionate, efficiently managed or genuinely connected to the cost of providing a service. A fixed charge can easily become a mechanism for protecting lost municipal or utility revenue rather than fairly charging consumers for services actually provided. If the goal is genuinely an open and competitive electricity market, the policy should encourage private generation, innovation and consumer choice—not create financial disincentives for consumers who invest in alternative generation. Legitimate network costs should be addressed through transparent, competitive and independently accountable mechanisms, while electricity consumed should be charged according to actual usage. Consumers who generate their own electricity should not be treated as a problem to be financially penalised. I therefore support the proposed market transformation in principle, but only with amendments that protect consumers, prevent disproportionate fixed charges on solar users, preserve genuine consumer choice and ensure that the transition to an open electricity market does not simply replace Eskom's monopoly with protected revenue streams for other state-controlled entities.	Warren

	2026-08-27 10:22:55	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The "network and maintenance charges" should be incorporated in the tariff for "electricity used" so if you invested your hard-earned money in solar and draw less from the grid you are not penalized unfairly.	Cornelius	retired
	2026-08-27 10:31:04	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Is South Africa really going to be the only country in the world to PENALISE & tax consumers for going green!!! This proposal will remove any incentive to go solar to help save our planet.! UNBELIEVABLE!!!!!!!!	Jon	self-employed

	2026-08-27 10:46:44	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is unjust for the state to penalise private homeowners who invested in solar infrastructure as a result of the State-owned Electricty provider being unable to supply adequate electricity. Private investment was also encouraged with SARS tax benefits for solar panels. For the State to turn around and penalise the people for the very infrastructure investments it encouraged them to do is deceitful and unjust. Regardless of past events, however, it is also unjust to charge users of the national grid disproportionately to the electricity they consume. This may also incentivise more people to exit the grid and place further pressure on trying to fund it.	William	self-employed
	2026-08-27 10:52:36	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Incompetence theft and mismanagement has brought us to this point. So the paying public once again have to face increased taxation.	Allen	self-employed
	2026-08-27 10:55:02	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I am against being penalised now in arrears for installing my own roofing grid..Its like me being given a boatride....the boat sinks.....i battle to get to shore without help from the boatowner....he now sends me a bill to pay for the boatride No man! Not kosher!	hugh	retired
	2026-08-27 10:58:53	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	As far as I recall when prepaid electricity was introduced in the past, a portion of the tariff was deemed to be for maintenance to the network. So much so that prepaid tariffs were more expensive than other tariffs. Prepaid tariffs saved Eskom and Municipality as they no longer had monthly meter reader expenses and the creation of accounts for every customer etc.	Milton	
	2026-08-27 11:03:15	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Why should those who have invested their own hard earned money into solar be penalised for not using grid power. If Eskom needs to increase its income because of declining sales, it should first and foremost reduce its costs, many of which are the result of massive corruption in the past. Even now, it would appear that Eskom salaries are above what would be regarded as the norm. Should this planned change be implemented, the result will be an even greater reduction in the off-take of Eskom electricity as more current users invest in going totally off grid. Eskom will then be left with supplying LESS electricity to a LARGER percentage of customers unable to pay for the inevitable higher charges. Another secondary aspect: With the current state of infrastructure (due largely through corruption), why should we pay more without guarantees that electricity will be available 100% of the time? In other words, higher fixed costs that are not linked to actual supply.	Michael	retired
	2026-08-27 11:46:53	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Fixed charges must be controlled, so as not to become a municipal cash cow. They do make sense as use of network for free is not a fair costing structure, but need to be kept within reasonable limits	Dennis	retired
	2026-08-27 11:58:39	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Alternate sources for electricity and water should become a requirement not a penalty. How does Eskom and the government guarantee that they will continuously provide the quality and efficiency of electricity without blackouts and water shortages? Not to mention the impact on the climate caused by electricity creation methods and the sustainability.	Natasha	self-employed
	2026-08-27 12:31:18	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The Base load charge needs to be reasonable for the backup use of the grid. In other words, it needs to encourage solar installation and not the opposite.	Doug	retired
	2026-08-27 12:31:58	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Government caused the problem through their wholesale theft and deployment of criminals into Eskom and other various state entities. The public had to contend with years of power failures due to this. The problem was only "resolved" when people left the grid (and companies closed down). This is yet another attempt from the government to extract more money from those who have already been burdened with these extra costs. This money will just get stolen anyway. I agree to kill the monopoly of Eskom.	Karl	business owner
	2026-08-27 12:36:08	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Nicolette	employed individual
	2026-08-27 12:40:40	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Having experienced continual outages due to load shedding - a direct result of corruption and mismanagement by Eskom - and failing municipal infrastructure, which I had/have been paying to support for the 42,5 years that I have owned my own home, also due to corruption and crass mismanagement, I reluctantly spent over R100000 of my own money to provide essentially for the security of having "lights on" at my house overnight. Security was my primary driver, with convenience being a secondary benefit. I was forced into this situation not by my own making and it is grossly unjust and unfair that I (or anyone else who was in the same situation as I found myself in) should now find myself penalised for taking this step. As with e-Tolls (which I incidentally paid faithfully), I believe that a "tax revolt" will become necessary if there is an attempt to implement this. I am already paying a monthly fee to the municipality as part of my pre-paid charges and do not accept that any greater charge is warranted.	Nigel	retired
	2026-08-27 12:42:04	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Daniel	retired

	2026-08-27 12:59:42	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is unfair and unethical to punish residents who had to get alternatives because of failures on Eskom's part to be penalised for Eskom's failures, which is essentially what this is. Eskom finding ways to bully in a way only a monopoly can.	Kagiso	unemployed individual
	2026-08-27 13:05:18	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I support the proposed move towards a more competitive and sustainable electricity market, including greater private investment in electricity generation. However, I have concerns about the increasing reliance on fixed network charges for residential customers who have invested their own money in solar generation and battery storage. Many households made these investments in response to years of unreliable electricity supply and load shedding. These private investments reduce the amount of electricity that households need to purchase from the grid and can therefore contribute to reducing pressure on the electricity system. I accept that a household which remains connected to the grid should make a fair contribution towards the genuine cost of maintaining that connection and the network infrastructure on which it relies. However, fixed charges should be transparent, proportionate and demonstrably related to the actual cost of providing these network services. They should not become a mechanism for recovering lost electricity-sales revenue from households that have reduced their consumption through private investment. South Africa should be encouraging, rather than inadvertently discouraging, investment in rooftop solar, battery storage and other forms of distributed generation. I therefore support the Position Paper subject to appropriate safeguards ensuring that future tariff structures do not disproportionately disadvantage residential customers who have invested in reducing their dependence on the grid.	Carol	business owner
	2026-08-27 13:20:45	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Christo	
	2026-08-27 13:29:04	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I can’t understand why solar use is discouraged and why excess power generated cannot be integrated into the grid as happens in so many other countries. Why, when South Africa has abundant sunshine, is this being discouraged. Surely we should be at the forefront instead of playing catch up and penalising those who are proactive	Jane	retired
	2026-08-27 13:29:39	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The grid charges for rooftop solar punishes citizens for taking steps to ensure reliable power	Anthony	retired
	2026-08-27 13:35:42	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	As a GEPF pensioner who received a 3,5% pension increase for the current tax year I went to considerable expense and sacrifice to have a small scale grid tied rooftop solar system installed. On an annual average this results in my drawing +- 2 kW/h (units) of electricity from the City of Capetown grid per 24 hour period. However, the City of Capetown municipality have already seen fit to impose a fixed charge of +- R368-96c per month, dressed up as Elec HU service & wires charge. Now it would appear that the Min of Electricity has bowed to Eskom demands, ignoring his previous frequently made promises of "cheaper electricity for the domestic consumer", to impose an as yet unknown additional fixed penalty charge on those citizens who installed grid tied solar systems to combat Eskom erratic load shedding. It would appear that Eskom with its overblown/overpaid workforce is now calling the shots for a government who say they are well aware of the disastrous cumulative effects of Eskom's continuous above inflation electricity price increases. It will be interesting to see if the CoCT municipality will be in a position to do anything to alleviate these proposed Eskom fixed charge for their long suffering utility bill paying ratepayers. Longer term end result will almost certainly lead to a considerable increase in electricity theft due to unaffordability, and the more "affluent" going completely off grid.	Ian	retired
	2026-08-27 13:37:52	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Residential electricity users should be rewarded for generating electricity through household solar power and NOT penalized for having solar systems that reduce dependence on fossil fuel electricity and thereby reducing greenhouse gas emissions.	Nicky	unemployed individual
	2026-08-27 13:51:08	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I fully support the unbundling of Eskom and allowing private entities to compete at each level. I also agree that the current pricing structure doesn't match the reality that eskom has fixed transmission costs regardless of how much people consume and that it makes sense to charge people a fixed transmission fee and separate consumption fee. However, it should take care that a high fixed transmission cost will prevent low income households from being able to connect at all. Secondly, by specifically penalising solar users for having solar the govermently will be disincentivising the shift towards environmentally sustainable energy production. It would be a far better approach to incentivise solar/battery owners to pull energy when it is cheap and to push power back to the grid when it is under strain - i.e. levelising the demand and supply. This would allow a substantial reduction in energy production costs. I would suggest that with a reasonable fixed transmission fee, Eskom pay solar/battery owners full energy consumption rates when they push during peak hours (say R3.00/kw) and charge a fraction, say half, if they pull during low demand periods.	Matthew	employed individual
	2026-08-27 13:55:49	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	If the electricty supply is being opened to private enterprises, they would subsidise the network by their lease arrangements. To expect the average residential consumer to subsidise the inefficiency of their local Muncipality is a hard pill to swallow, and is no solution.	Michael	self-employed
	2026-08-27 13:56:32	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		David	self-employed
	2026-08-27 13:58:48	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	After suffering for years of load shedding, with Eskom unable to meet demand, many consumers, individual households and businesses, installed solar installations to reduce demand on the grid, and protect themselves from load shedding. This has resulted in a reduction in demand so that Eskom is able to meet the demands made on it. Having come to the rescue of Eskom, and of government, and lessen the detrimental impact of load shedding on the economy, it is wrong to penalise those individuals who installed solar panels. Far from free riding, they are the reason that there is no load shedding (at the moment). It is positive that Eskom should be unbundled (provided there is protection against corruption by ANC officials), but the provisions in the bill to penalise Eskom's saviours need to be removed.	Andy	retired
	2026-08-27 14:05:15	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Johan	
	2026-08-27 14:31:50	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom and Municipalities are very inefficient regarding allocation of collected funds - concentration is on remuneration of workers - additional income will be wasted as before!	charles	retired
	2026-08-27 14:39:59	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Increase the availability charge fractionally to compensate for reduced consumption. But do it honestly and most people will accept the increase. Don't do it so that corrupt municipalities can cover shortfalls in cash flows.	Eugene	retired

	2026-08-27 15:30:35	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Why are solar users being penalized for having solar power installed because Eskom is unable to generate sufficient power for the country (due to ongoing corruption and ineptitude)? In fact, by installing solar power, we enabled Eskom to address energy demands/constraints and a potential energy collapse of their own making. Whilst I understand/agree that I will be using a small portion of the fixed grid, the cost to me should be proportional to the amount of electricity I use. These charges for the fixed infrastructure shouldn't become vindictive or another "cash cow" for the imploding Eskom. Despite continuous threats regarding non-compliance, it is disconcerting that Eskom fails to provide clear guidelines for its registration requirements. Tabling retaliatory energy legislation against solar users will only further harm our country's fragile economy and constrain already struggling households. Introducing new energy-related constraints will surely not solve South Africa's looming energy collapse.	Jan	retired
	2026-08-27 15:32:31	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	What the Policy Proposes: The position paper establishes the principle to “discourage free riding,” arguing that modern electricity networks have high fixed infrastructure costs and low operational costs. Under this framework, tariffs will shift away from pure volumetric consumption charges (cents per kilowatt-hour) toward mandatory fixed capacity and network charges for all grid-connected customers, regardless of how little electricity they consume. Only consumers who disconnect completely from the national grid will be exempt from these fixed fees. The Underlying Risk: Households and small businesses that invested significant private capital into rooftop solar, batteries, and energy efficiency to protect themselves from load shedding will be forced to pay higher monthly baseline connection fees. This structural shift acts as a financial penalty on private decarbonisation, extending solar payback periods and increasing electricity bills for low-volume and frugal users. Demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. Insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. Require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households.	Lance	self-employed
	2026-08-27 15:32:37	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	While solar was installed in order to ease the burden of load-shedding on my household, I do understand that the existence of a grid and my linking to it would attract a cost. I don’t have a specific issue with that, except to say that the reasonable base charge should apply equally to all, and then a payment based on what power is used. Much like the model used by the old landlines. If only solar installations are “taxed”, then more people would go off-grid, resulting in a bigger burden for people who can’t afford an alternative.	Dieter	

	2026-08-27 15:37:17	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Sean	retired
	2026-08-27 15:48:14	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The installation of solar power saves not only utility generation capacity, but also decreases the demand on the grid. Why should solar powered customers then carry the full cost of maintaining and strengthening the grid when they in fact lessen the demand on it ?	Henri	retired
	2026-08-27 15:56:57	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is incongruous that a government that supported a d encouraged the take up of solar, to the extent of giving tax breaks on solar panels, now wants to charge unsubstantiated amounts to keep a dying business model alive. Nowhere in the documents have they itemized the advantages of solar uptake and are myopically trying to keep any sort of competition to a bloated state owned enterprise away.	David	employed individual
	2026-08-27 16:06:03	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I object to a “Sun Tax” on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. There shouldn't be any fixed monthly network charges. The only charge should be for the consumption of electricity, i.e. consumption-based billing ONLY !	ERIC	retired
	2026-08-27 16:06:04	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I find it distressing that we keep being penalized for the incompetencies and corruption of our government departments, whose job is to serve and provide for us. It is not my responsibility as a citizen to fix the messes they have made because they don't have the ability to run things correctly.	Paula	employed individual
	2026-08-27 16:22:12	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Households who have invested in rooftop solar to alleviate pressure on the power network should be rewarded and not penalised.	Joe-Lin	employed individual
	2026-08-27 16:24:51	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Consumers, who have already paid for the infrastructure and have been penalised by the state's widespread failures, are being penalised again and further for fixing governments massive failures. The State's track record virtually insures that this amendment will be corrupt, punish the wrong people, and be fundamentally unfair and unproductive.	Norbert	business owner
	2026-08-27 16:30:06	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I think that stopping the rule of Eskom is s great thing. There should be more than one electricity provider. I am against charging for solar Remember who paid for the solar. It wasn't the electricity provider. And most of us are not really getting returns yet from the installation. So now you want us to pay for the solar plus electricity. That would be unfair to those who had to invest in solar due to the load shedding.	jonda	self-employed
	2026-08-27 16:49:43	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Private citizens who installed rooftop solar during loadshedding were incentivized by both SARS (rebates) and Eskom's pleas to use less electricity. Eskom actually advertised for consumers to use less electricity. These private citizens invested a considerable amount of capital and the fiscus gained a considerable amount of VAT in the process. Whilst this shielded such citizens from loadshedding, it also significantly benefitted fellow citizens and businesses by removing demand from the grid, thereby lowering the applicable Stages and duration of loadshedding. I support the premise that any grid-tied citizen or entity should pay their fair share of network charges, but to disproportionately penalize citizens who installed rooftop solar, in any manner whatsoever, would be grossly unfair and unjust.	David	business owner
	2026-08-27 16:50:38	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I battle to understand why Eskom and Government encouraged citizens to go solar when they were in trouble. Now they want to penalise us for assisting them. Over and above that, how and who gives the right to anybody to tax in any form free natural light. Solar not only supports Eskom but but is a step in the right direction to a cleaner environment and stable EARTH. The citizens of South Africa are taxed to destruction, soon we will have no economy at all and all the foreign investment will be gone. We need to think clearly of our parth forward. It is no use making a slum out of the whole country to try and save Eskom. Re-invent it instead.	Bryan	retired

	2026-08-27 19:04:58	I support with amendments	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	1. Had Eskom continued to operate efficiently as it did in 1990's, without the rabid inset of corruption and incompetence in the 2000's, the cost of electricity would have remained affordable. 2. As corruption and ineptitude permeated Eskom, it became an unreliable and expensive power producer and introduced load shedding as a consequence. 3. Business's, to continue trading had little option other to reluctantly invest in their own electricity generation assets, instead of using such funding growing their business and create more jobs. 4. This was a FORCED INVESTMENT. 5. Had Eskom provided affordable electricity increasing in price at normal inflation rate and maintained reliability (no load shedding) the majority of businesses would NOT have invested in solar and battery systems. These too have finance and ongoing maintenance cost that we pay for each month. 6. So. this is NO FREE LUNCH! 7. For Eskom to now penalise their own customers for sourcing alternative supply of their product, that they could not supply reliably and increasing in price far higher than normal inflation is disgraceful. 8. Eskom created the current situation themselves and need to cut their own operating costs using electricity costs in China as a benchmark, instead of forcing the businesses and citizens to bail them out again. 9. The SA taxpayer has already bailed out Eskom to the tune of R250 000 000 000. We have already been penalised. 10. I'll give Eskom some FREE advice. Get the Chinese to manage and run the power stations.	Albert	self-employed
	2026-08-27 20:00:46	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	A fixed monthly prepaid meter levy is already charged, regardless of usage. The proposal is flawed. Basically Eskom now intends to penalize those who have installed solar because of their own incompetence.	Jennifer	retired
	2026-08-27 20:22:39	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	In September 2020,After years of Loadshedding, I was forced to invest in an inverter to provide continuous lighting, heating and a reliable Internet for communication in case of a medical emergency. I live in an area which has very poor cell phone reception so I needed a reliable means of contacting services in case of emergencies. The municipality subsequently published a list of permissible inverters and mine wasn’t on the list requiring me to replace it at considerable extra cost. I cannot afford to pay any additional fixed charges imposed by the municipality when I am very careful with the amount of electricity and water I use.	Caroline	retired
	2026-08-27 20:24:21	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is absurd to think that there are penalties on solar IF SUNLIGHT IS FREE ENERGY! Something Eskom will NEVER be able to supply. Unbundle Eskom. If a household produces more energy and pumps surplus back to the grid incentivize them by removing transmission fees. The current Eskom model is failing.. Why can’t Eskom make and sell their own solar systems which the public can purchase, installed by Eskom, pushing surplus energy back onto the local grid. Eskom makes money on sales and installs and stabilizes the whole grid.	Hendrik	
	2026-08-27 21:44:11	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	As a ratepayer in Johannesburg with solar panels because city power can't keep the lights on, I am paying about R1300 per month just to be connected to the grid, we hardly use any electricity from the grid. I understand that a fee is required for maintenance, but the charges are crippling for the average household. There must be some benefit with reduced fixed costs for low consumption households	Brigette

	2026-08-28 09:06:12	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom has failed dismally over many years - even decades. It continues to fail. The Free Market has reacted accordingly and has moved on ... away from Eskom. That is a fundamental right of the consumer in a Free Market Democracy. Eskom failed to foresee the problem years / decades ago. Clearly, it failed to react timeously to the possible loss of custom and then to the actual loss of custom. That IS ESKOM'S PROBLEM ..... not the consumer's problem. The consumer saw the light, so to speak. Eskom did not. In a Free Market Democracy, businesses go out of business when they make such a mistake, when they fail to read the market. Eskom failed to read the market and adjust accordingly. That consumers "made a plan" and moved on can never be something for which they are to be held ransom. That would be an effort to reward failure ..... in a Free Market Democracy ?? Cannot possibly be serious. Its "nuts". Think this one through again - this proposal is "nuts".	clem	retired

	2026-08-28 10:29:42	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Support with Amendments: Wholesale market reform should proceed only if strict caps are placed on fixed network fees, captive ratepayers are protected, and municipal cross-subsidies are safeguarded.	Shere	employed individual
	2026-08-28 10:33:37	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Statutory caps must be in place for fixed charges. NERSA MUST place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. A tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs should be implemented, rather than imposing flat availability taxes. An independent socio-economic impact assessment must be undertaken on how fixed monthly fees affect low-income and energy-conserving households.	Richard	employed individual
	2026-08-28 10:59:50	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	In the Hessequa municipality fixed charges for electricity and water already apply and in any given month these. charges are way above my actual usage. This is typical of the "captive" situation and should not be tolerated. If a municipality is allowed to charge these fees, it should be uniform across all users.	Frans	
	2026-08-28 11:01:53	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	There should only be a fixed charge if a minimum usage is not achieved (each month/ year). Can't have a fixed charge AND a usage charge. There must be strict controls over the size and increases to the fixed charge to prevent abuse. Regulator must take input from residential users and respond to their specific concerns each time an increase is considered	David	retired
	2026-08-28 11:07:50	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Consumers cannot pay for government inefficiency. Use of infrastructure payment is fare but keep it similar to old landline telephone rental which is not more than 10% of the overall bill.	Gerhard Kriel-PVT	business owner
	2026-08-28 11:10:39	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Residential properties who have installed and use solar should not be penalized but should pay toward streetlights and the infrastructure which they have in place to use municipal electricity. These costs have been calculated into normal electricity tariffs so it should not be difficult to get to the amount which other paying customers are contributing on average usage estimates. At the same time consumers cannot pay for continuously vandalized and stolen infrastructure which municipalities and police do little to stop.	Shane	employed individual
	2026-08-28 11:18:55	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	High municipal rates and fixed charges are already negatively impacting the livelihood of ordinary citizens. People should be encouraged to lower their living costs.	Wynand	retired
	2026-08-28 11:44:29	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	When the state, through municipality, fails to provide and private individuals seek alternative forms of power such a solar, these individuals should not be penalised. I understand that staying connected to the grid does mean (a) some consumption of electricity - which we do buy (b) dangers of solar power feedi9ng back into the Eskom lines when maintenance is being performed. I want to see: - a fair and balanced tariff for buying electricity when needed - a set basic charge for being primarily on solar of R200 a month When the state, through municipality, fails in collecting household rubbish and an individual chooses to dispose of rubbish in an alternative and ethical manner, does the stat have the right top charge additional fees for failing to use municipal services? There is no logic in this argument. It clearly shows that state failure leads to punitive measures placed on private initiative	Glen	self-employed
	2026-08-28 11:49:03	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom is a failed entity, the consumer that was able adapted and paid for their own electrical supply when Eskom was unable to provide. Now they want to tax us for that - absolute nonsense! I refuse to pay and will either change my system or disconnect and run a generator than paying tax to a failed system!	GP	business owner
	2026-08-28 12:07:29	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I consider it unfair to be penalised for a standby capacity, just because I have solar. 1. The principle of use only when needed was always there for any private household. Energy usage during any 24-hour period always fluctuated according to demand. The problem is not the fluctuation, but ESCOM's failure to build enough capacity to manage this. Why must I now be penalised? 2. If my local supermarket and garage can keep extra capacity in consumer goods, at their own cost, why is it different for ESCOM?	Sydney	employed individual
	2026-08-28 12:10:36	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Alan	retired
	2026-08-28 12:12:28	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I do not have solar, but using electricity sparingly to avoid high cost of electricity. A fix tariff will penalize me without a having the benefit of alternative electricity supply.	Johan	
	2026-08-28 12:34:26	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	While I understand that there are electricity infrastructure costs that everyone needs to contribute to, I don't believe these should be fixed costs that are the same for everyone. The failures of Eskom and municipalities that forced consumers to secure their own electricity through solar, should not be passed right back to them. There are other avenues that need to be fixed first in terms of revenue collection before something like this is implemented. A charge that is related to the amount of electricity drawn from the Eskom is grid would be fair, but not a fixed amount that is the same for everyone, regardless of consumption. Those that save seem to always get penalised, while those that use big amounts get away with being disproportionate consumers.	Louisa	unemployed individual
	2026-08-28 12:58:24	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This is unfair. Many private households have invested capital into their own rooftop solar systems on recommendation of government during the energy crisis to assist the government. There must therefore be strict statutory caps on fixed network and capacity charges to protect private households. Having penalty charges for renewable energy solutions will have a negative socio economic impact on low cost and renewable energy households, adding more strain onto already stretched disposable incomes.	Dorette	employed individual
	2026-08-28 13:53:06	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I work from home and I had to make a loan to get a solar system so that I can keep working, all due to eskom failures of supplying electricity. I am already paying more just to have kept my job. If they charge additional fees for this, they can come and collect the system and pay the loan to the bank. This is just another indication of failures that have to be carried by the normal citizens.	Aylean	self-employed
	2026-08-28 14:16:13	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I will support no bill that does not REWARD rooftop solar. Australia rewarded rooftop solar in 2000 and in 20 years DECONMISSIONED half its coal power plants. At NO COST to the government. AND SAVED homeowners money by requiring that the providing electrical compony (their Eskom) buy excess solar, so that homeowners do not have to buy batteries, which are BY FAR the most expensive of the tools. They get a credit in the day for excess solar, which they use at night. Peak demand switches from noon to midnight, half (or less) of the old noon demand. Here in South Africa our government is so corrupt that it PUNISHES rooftop solar, in order that Eskom remain the only power producer, even when it cannot cope. President Jacob Zuma banned IPPs in 2013. That's asinine, regressive, and we got load-shedding from it. Yes, we all understand that syndicates make money from this fiasco. Why it's allowed to go on, is an indictment of the government. This isn't rocket science. Copy Australia or I'll not support reform. In the USA I once had a SMART METER. I paid most for electricity in the day, when factories have high demand, and least at night, weekends and holidays, when factories are closed. I installed a timer on that, and used NO electricity during the day. I cut my electric bill by 2/3. And helped the (publicly owned) power company by reducing their daily demand. Eskom instead proposes a STUPID METER. Punishes rooftop solar by making daily electricity cheap, and nightly electricity most expensive, so that excess solar is worthless. Forcing Rooftop solar owners to buy batteries. Which are hellishly expensive and die after a few years. Couple that with the rubbish I've read from the government about why Natural Gas, found offshore, is rejected for producing power, because it violates BEE. I'm slapping my head. Gas has no political opinion. And it burns clean in Coal Fired Power Plants. And if it's good for the consumer and it's good for the environment and i's good economics and it's good engineering then it's good for ALL. I would've long ago installed rooftop solar, but I refuse until our government stops with the corruption and stupidity. Intelligent engineering and smart economics are as prevalent in our Black communities as our White. I repeat, rooftop solar doesn't cost the government a penny. Reward rooftop solar owners. Signed, a proud and intelligent South African.	Barry	retired
	2026-08-28 15:17:29	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Yet another tax to hide the inefficiency of government to supply but equally important recover costs from ALL consumers not only those they track easily i.e. those that actually pay the bills	Karel	retired
	2026-08-28 15:29:44	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I support restructuring the power sector to allow for increased participation by parties other than government, who have proven themselves unable to manage power supply without private market assistance. Individual households, homeowners who have incurred great expense to provide their own power and reduce demand on the national grid, were originally incentivised to do so with a tax rebate made available. To now impose punitive tariffs on households is completely unethical, unfair and will ultimately just lead to homeowners with the means to do so, going entirely off-grid from Eskom's supply. Eskom will ultimately be left selling their power only to municipalities and low volume users. Bad business model, in my opinion.	Amanda	retired
	2026-08-28 15:38:10	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Wholesale market reform should proceed only if strict caps are placed on fixed network fees, captive ratepayers are protected, and municipal cross-subsidies are safeguarded	Gerhardt	self-employed

	2026-08-29 08:27:34	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Private households and small business should not be penalized for investing in solar and battery systems due to the inability of ESKOM and Municipal councils to deliver electricity reliably. ESKOM's implementation of load shedding and the continued inability of ESKOM and Municipal councils to restore power quickly and efficiently are the major factors that forced private property and small business at great expense to invest in their own power sources (generation and backup) to be able to be safe and operate normally during prolonged power outages. Now Government want to penalize these persons and small business due to ESKOM and Municipal council failures. Additionally cost of electricity continue to escalate at a much higher rate than inflation with no measures to curb the spending by ESKOM or any measures to get their cost under control, while the real grid availability experienced by consumers continue to deteriorate. ESKOM must be split up, and competitors must be introduced for all electricity consumers for all services with no monopolies in the ecosystem. The current ESKOM monopoly on generation and distribution are allowing ESKOM to run inefficiently and promoting corrupt practices as there is no incentive to run an efficient and comparative company. Currently ESKOM is overpaying for products and services from preferential service providers rather than the best and lowest costs service and products from so called BBBEE vendors. For private household the requirements for obtaining an occupational certificate should be modified to allow a property owner to sell a property with the requirement for an electrical certificate that requires a connection to an ESKOM or Municipal grid connection. Allowing private households to completely go off grid and avoid all electrical charges from ESKOM and Municipalities.	Kobus	employed individual

	2026-08-29 09:20:21	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I understand the need to pay some sort of fees in order to still benefit from grid connection as this needs to be maintained, why make it potentially punitive? This will force households with higher income to take the off grid option and stop dependency on the municipality. That would also mean the municipality will loose any usage data that could help them with future investments or profiling of their client base.	Frederic	self-employed
	2026-08-29 09:28:14	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Trevor	
	2026-08-29 09:41:57	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I installed solar panels not as a choice but a necessity. Constant load shedding and outages damaged my appliances and comprised my home security leaving me with no option but to install solar. At the same time the price of electricity increased dramatically and I had to turn off under floor heating which had been installed when I built my house as a clean energy source to polluting the air with fossil burning materials.	Wayne	retired
	2026-08-29 09:50:43	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I do not support the fixed monthly network rate. Low income households can't afford such charges with increasing inflation and living cost. If certain income levels or household are excluded why should others carry the burden of the additional cost to make up for the deficit. Current billing of kw/h is sufficient for access to electricity by all citizens.	Leonard	employed individual
	2026-08-29 09:53:31	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	As a residential electricity consumer, I already pay ahead of time, plus a charge for the 'privilege' of doing this. I then pay for what I use, and this is what it should be. If I am supporting the government service by easing their burden, then I should not have to pay for this also by paying yet another charge!	Ann	retired
	2026-08-29 09:54:22	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Yousef	retired
	2026-08-29 10:06:44	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I have used grid tied solar power since 2018. I have 20 kw of battery backup, in a bad weather month I may use a maximum of 60kw from the grid. However most months I have a average solar surplus of 690 kw that I can feed back into the grid. Instead of penalising residents who have invested in their homes, and the country, by installing solar power government should make it mandatory for municipalities to buy this surplus power from residents at wholesale renewable rates. Wholesale renewable rates are far cheaper than Eskom, thus reducing the cost of supply to the municipality. Obviously if a property is grid tied, then there must be a connection charge to cover the infrastructure costs, but connection charges should be based on actual costs of supply infrastructure and not an inflated connection tax. Connection charges should apply equally to all electricity consumers, with indigent consumers receiving connection credits on an individual means tested basis. Residential complexes and industrial/commercial parks must be liberated from the municipal monopoly supply and allowed to purchase bulk power from independent suppliers for resale to their residents and tenants. In line with the objective of separating connection costs and usage charges, municipalities must show separately on their bills the connection charge and the amount of surplus power bought by the municipality from the householder. These should be actual financial transactions and not accounting offsets. If these proposed regulations are enforced any homeowner or business that has installed PV panels will just install extra battery power and go completely off grid. In my case that would mean that the municipality would be deprived of 690kw/month cheap electricity and my current monthly connection fee. The country as a whole would lose the benefit of thousands of MW of already installed PV Solar power. PV that was installed at no cost to government. The bloated and inefficient monopoly that is Eskom has caused trillions of Rands of damage to our economy, and is a major contributor to the unemployment rate. The supply of electricity at the cheapest possible rates to both industry and residents is imperative to turn our economy around. The state monopoly on the price control of electricity must end. Eskom should not only be split up into generation, supply and marketing, it must compete on a commercial basis with independent producers and suppliers. The bumbling and totally incompetent NERSA must be abolished to allow a competitive electricity market Householders and businesses that have invested millions of Rands to install Solar PV should be applauded for their investment in the country and the economy, and not labelled and punished as freeloaders.	Wendy	retired
	2026-08-29 10:13:45	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Why should we pay tax to have solar when we had to use our hard earned money to buy stable electricity when the government couldn't provide it. Now you want to penalise us for your mistakes. The government gets no repercussions for their mistakes. It always falls on the people.	Jason	business owner

	2026-08-29 17:53:15	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I object to additional charges on households with private solar. We invested substantial amounts in solar because years of load shedding and repeated prolonged Eskom outages made reliable electricity impossible. We still pay substantial Eskom accounts and remain dependent on an unreliable grid. It is fundamentally unfair to penalise consumers for using their own money to provide the energy security Eskom failed to provide. Any grid charge should reflect the actual cost of our grid connection—not compensate Eskom for revenue lost because we now buy less electricity.	Daynia	retired
	2026-08-29 19:29:47	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	A "Sun Tax" on Private Capital and Rooftop Solar. The "Captive Ratepayer Trap" and Municipal Insolvency.	Rick	

	2026-08-29 19:56:47	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. We insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. We require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households.	Steve	employed individual
	2026-08-30 12:04:24	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	As pensioners and taxpayers, we have used our hard-earned savings, which has been taxed for our entire working years, to overcome Eskom's inability, in the past, to supply a constant service. We are now in the position where we are strapped for cash and face the prospect of being penalized for being proactive and essentially assisting Eskom. I would welcome a flat rate, as is applied for the pre-paid, rather than an unknown fee which as pensioners would be impossible. Also, as pensioners it would be helpful if there was a subsidized rate. It seems unfair that 7 years down the line we are faced with the issue, having spent the funds at a time when there were no rules, of this new legislation.	Jennifer	retired

	2026-08-31 08:46:27	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I do believe that households and businesses that installed solar electricity should pay for infrastructure upkeep. Even if a premises has gone completely 'off grid', it will still rely on grid power if the solar system fails for any reason. That said these premises should not be punished with high tariffs as they have invested capital to reduce the load on the Eskom grid. The question needs to be asked what will the tariff be and who regulates and makes sure that there are no excessive increases to cover for revenue issues.	Gavin	employed individual
	2026-08-31 09:08:51	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I do not mind partially supporting the fixed infrastructure, but within reason. To be fair when I installed my solar and batteries (my own fixed infrastructure) no one subsidised me.	Caroline	employed individual
	2026-08-31 09:24:05	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I support the objective of creating a more competitive and financially sustainable electricity market but strongly oppose any framework that shifts increasing network and system costs onto captive residential consumers without transparent and demonstrable cost justification. Consumers who have invested substantial private capital in solar generation, batteries and energy efficiency have reduced their dependence on the grid and, in many cases, reduced peak demand. They should not subsequently be penalised through escalating fixed or capacity charges simply because the network remains available to them. If network charges are necessary, Government must demonstrate the actual cost being recovered, ensure that inefficient expenditure, electricity losses, non-payment and existing cross-subsidies are not simply transferred to compliant consumers, and provide a genuine mechanism for consumers who become substantially or completely self-sufficient to reduce or terminate their network obligations. Reform must reduce total consumer costs—not merely reduce the advertised kWh price while increasing unavoidable charges.	David	
	2026-08-31 09:25:05	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Chris	
	2026-08-31 09:34:49	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	To avoid the inevitable death spiral, to increase "grid connection" will be counterintuitive. By increasing the fixed charges Escom will permantly loose customers, because a ultra silent generator will be employed by the public to permanently be disconnected. Thus like any proper business, bear the burden of your bad desisions the last 20 years , any attempt to place the burden on the consumer will just backfire, you will deal with another E - tollgate situation.	Jaco	business owner
	2026-08-31 09:46:12	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I, along with millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. This is totally unacceptable. In S.A. government is squeezing money out of it's citizens in EVERY way. Additional "Fixed monthly network costs" will hurt the people who spent PLENTY of their own money to provide electricity for their families at a time when the government (Eskom) was unable to do so. The growth in home solar systems is one or the reasons that Eskom is no longer loadshedding and damaging the growth of the country. I do not support mandatory, high fixed monthly network charges penalises energy-conscious citizens.	Mark	retired
	2026-08-31 10:42:42	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I think there is a lot of space for comments on all aspect of this roadmap, but I will focus on what is nearest to my concerns: punishing solar power users for having the audacity to make a positive choice for ourselves, our environment and the future of all our children. The math clearly shows private investment in PV power (and battery storage) has, in a VERY large part, contributed to Eskom's ability to curb load shedding. Now it seems those in power want to impose punitive taxes. Add to that, every watt bought from Eskom is dirty, and is contributing to the escalating climate catastrophe. Eskom, meanwhile, is doing their level best to avoid moving to cleaner alternatives. This is not fair, sane or acceptable. On the other side, I accept that infrastructure (that benefits all) does not fall out of the sky for free. Somebody has to pay. Ok - I am willing to contribute (ON TOP OF THE HEAVY TAX BURDEN I ALREADY CARRY). But it has to be strictly regulated, fair, and capped amount for the privilege of having a grid connection and solar. If it mushrooms to crazy amounts, I WILL go offgrid. I am sure others feel the same.	Hendrik	employed individual
	2026-08-31 12:21:50	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	1.) Mathematics: If the so-called "back riders" withdraw all solar supply to their own homes, can Eskom supply the necessary electricity to full fil the need. 2.)Can the muncipalities uphold the requirement of electricity. So many substations and transformers are so neglected that they will blow up if you withdraw solar supply to homes. Many solar home owners have invested in timers to help control demand, sothat you don't have a peak demand, which WILL cause outages. 3.)Few years ago they were willing to subsidise investers in solar installations, now they want to tax you. Make up your mind. 4.) Can they gaurantee a 365 day no power outage, this includes Eskom and the muncipality. Many pople work from home, and if I don't have electricity, what then. 5.) Democracy, then I must have the choice to link up with the grid or go independant. If I go on my own, I don't get TAXED for electricity. 6.) With a network charge, they get money for nothing, even if my electricity supply is down for a week. I want a rebate in a case like that, network charge means delivering the service. 7.) Cable theft and subotage is not an excuse for no service, they must gaurantee it as I am now being taxed and have a right to the service, and in any case, it is the states duty to gaurantee my safety, and being left in the dark, is a great risk. 8.) With an ailing infrastructure, over payed employees, Eskom and the muncipalities are once agaain trying to recover their "losses" from the tax payer, who has made plans to help the "FALLING" South Africa to stay a float. Look back and rectify your mistakes. 9.) Eskom has not solved load shedding, it has just received a new name, and they woke up a little, noticing that load shedding the people who actually do pay for their electricity, bites them in the behind, so now non-payers and illegal connections still get "load shedding" , and the honest citizens who pay, have to be taxed in a different and receive nothing for it. With electricity inflation the past 7 years at 900%, if I have it correct, the person who has installed a solar sysytem, still pays more than enough. With a gross income of R50/m/family: SARS tax deduction, Food costs, Paying your mortage, kids schools, paying your current muncipal bill, nothing is left, but SORRY, its a sosialistic/comunistic government that wants its people poor, uneducated, living in poverty while the fat cats feed from them. Not 1 politician has ever had loadshedding , as the tax payer feeds that bill in some or other way, by means of generators, or they don't get loadshedding, they don't even know what an electricity bill looks like. YOU created the mess, WE help survive the country, the mess is not cleared up, but now you still want to burden us further for YOUR corruption and unableness to govern properly. Show me a state entity which is not in shambles. WELL DONE. They want a revolution.	Nico	retired
	2026-08-31 12:33:49	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Once again these changes are made to suite the Day. When Eskom had Load Shedding we were asked to save Electricity and now that the Problem appears to be fixed you turn around and Penalize to very people that helped you and Eskom. Why don't the people that are stealing the Electricity get stopped and Millions of Rand's could be saved. But NO lets take MORE MONEY from our Loyal Customers that Pay, every Month that's the easier way. The Solutions that are being introduced appear to be formulated to discourage or reduce the number of Loyal Customers while the "Illegal Customers"not paying a CENT for Electricity are not affected in any way because you can not find a solution or its too much trouble. What is being done to reduce the STOLEN ELECTRICITY ? That is where you should START Eskom's first solution to Load Shedding was to build More Power Stations at one hell of a cost and did they help No. Nobody knows how that problem went away with very little cost. Non of this makes any sense !	Nigel	retired
	2026-08-31 12:44:46	I support with amendments	Fixed Charges & Solar Penalties		Municipal Official / Councillor	We need to unbundle Eskom to ensure competition in the generation market, but there should not be a penalty on individuals who have the means to generate their own electricity. Municipalities rely heavily on the income from electricity sales and if this falls away, many more Municipalities will suffer fimnancially.	Hendrik	retired
	2026-08-31 12:48:17	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	For SA to become energy sustainable, consumption must be billed according to the quantity used.	Rudi	self-employed
	2026-08-31 13:32:10	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Residential ratepayers should not be penalized for circumstances beyond their control, particularly when they have had to invest in alternative energy solutions due to the ongoing instability of the national electricity supply. The widespread adoption of residential solar and other backup energy systems has largely been a response to the inability of Eskom and the broader energy sector to consistently provide a stable and reliable power supply. Households have made significant financial investments to maintain basic living standards, protect their assets, and ensure continuity of daily activities during periods of supply disruption. It is important to acknowledge that Eskom's operational and management challenges are only part of the issue. Municipal governance, infrastructure maintenance, and energy distribution management have also played a significant role in the deterioration of service reliability in many areas. These combined shortcomings have contributed directly to the growing dependence on privately funded renewable energy solutions by residential consumers. Consequently, policy and tariff decisions should recognize the substantial investments already made by households to compensate for systemic failures, rather than imposing additional financial burdens on those who have proactively addressed the risks associated with an unreliable electricity supply.	Charl	
	2026-08-31 14:36:18	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	As a renewable energy professional, SAWEM is a great idea. Much of the developed world already operate on this principle. However, as a residential consumer, I have some concerns about the "solar tax". While I understand (and even agree) that it is necessary to recover fixed charges from consumers, the framework setting pricing for this needs to be detailed and carefully controlled. If not, those with the means will simply start defecting from the grid entirely, leaving the rest to pick up the (even higher) bill.	Jacques	
	2026-08-31 15:07:42	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Support with Amendments: Wholesale market reform should proceed only if strict caps are placed on fixed network fees, captive ratepayers are protected, and municipal cross-subsidies are safeguarded.	Caron	retired
	2026-08-31 15:51:30	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We already pay R625 per month for electricity that we don't use. Pre-paid meter customers pay more that post-paid customers which makes no sense at all because pre-paid customers buy the meter and the risk and administration of pre-paid is less than consumption or post paid customers. It is already becoming viable to go completely off grid and to get the connection removed. Essentially the current payment is an "insurance" payment. Increasing this will definitely make going completely off-grid viable. The hassle, damage, cost and risk of registration as a connected customer also makes going completely off-grid attractive. When connected you still get spikes from the grid if the circuit breaker is not off. Selling back to the municipality is unattractive as you lose the control of your own system. the rates are unattractive anyway.	Jeff	retired
	2026-08-31 16:17:02	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	There needs to be amendments	sam	retired

	2026-09-01 10:06:39	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Through your poor management of f our power generation facilities over years, you now need to tax innocent parties to make up for your cash shortfall as a result of your own mismanagement and poor efficiencies. Take ownership, run an efficient power industry and stop penalising others for things only you have control over.	Hugh	
	2026-09-01 10:07:28	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Instead of taxing the poor consumer, why doesn't the government set up surplus solar power buy back legislation. Buy the power at a reduced tariff to cover the grid maintenance costs and the excess power can be sold to neighbouring countries to bring in much needed capital for the national coffers.	Robert	employed individual

	2026-09-01 10:31:11	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	As usual the consumer is paying for government corruption and inefficiency. Solar users should not be penalised for having solar sytems but everyone connect to the grid should bear the cost of maintaining the grid. I support separating the grid maintenance cost from the cost of electricity and capping the rid maintenance cost because it is being done by incompetent and inefficient ESKOM or whoever takes over the physical grid. Separating the generation and distribution is a good idea for transparancy of costs.	Mark	
	2026-09-01 12:11:30	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I oppose the imposition of fixed charges to consumers that have rooftop solar. This is regressive and should not be done. Private solar installations can profitably be used by Eskom to buffer high demand periods by applying a flexible 15min interval price. Then Eskom can draw electricty from consumers' batteries in high stress situations. The tariff paid to consumers for these kWh is lower than it's own production cost. Therefore, Eskom should welcome private rooftop solar, not try to discourage it!	Fabian	self-employed

	2026-09-01 22:08:16	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I totally agree with unbundling Eskom and allowing the private sector to play a much bigger role in carrying South Africa’s electricity load. Competition and private investment are exactly what we need. That said, I vehemently disagree with the idea of penalizing people who have invested their own hard-earned money into solar. For years, Eskom couldn’t reliably provide the electricity we needed, so ordinary South Africans did what they were encouraged to do, we invested hundreds of thousands of rands of our own money into solar to become less dependent on the grid. Now, because we’ve reduced our reliance on Eskom, we’re potentially expected to pay an additional fee to support the very infrastructure we hardly use? That makes absolutely no sense. It reminds me of SANRAL and e-tolls. I paid my e-tolls for years while many others didn’t. When the system ultimately collapsed because of its fundamental flaws, I didn’t get that money back. There seems to be a recurring pattern in South Africa where the people who comply, pay and try to do the right thing end up carrying the cost for a system that doesn’t work. We cannot keep punishing people for solving problems that government and state-owned entities failed to solve. If there is a legitimate cost for maintaining the grid and solar users still rely on it, then charge a fair, transparent connection or infrastructure fee based on actual costs. But don’t disguise it as a punitive measure simply because someone has invested in becoming more energy independent. It’s time for government to stop treating productive, responsible citizens as a source of endless revenue. We need honest people who genuinely want to serve this country, not systems that continually penalize the people who are trying to make it better. South Africa is an extraordinary country with incredible potential. But we need to wake up before we drive even more of our talented, productive people out of it. Catch a wake-up... PLEASE!!! 	2026-09-02 10:10:29	I support with amendments	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	Eskoms unreliability nearly crippled SMMEs who had to spend massively on unbudgeted for solar power to keep the business going and take pressure off the grid. Now SMMEs that barely managed to survive loadshedding are going to be targeted with penalising high fixed tariffs. Disgraceful!	Duncan	business owner
	2026-09-02 11:33:28	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Mandatory Fixed Grid Charges on Rooftop Solar: The policy explicitly targets grid-connected solar and partial-defection users under an “anti-free-riding” principle, shifting tariff structures from volumetric consumption (units used) to high, unavoidable fixed monthly connection fees. The “Captive Ratepayer” Risk: Large industrial and commercial users exceeding set thresholds (e.g., 1 MW) will be allowed to bypass municipal grids to buy cheaper power directly from private traders. Ordinary households and small businesses will remain “captive” to municipal distribution grids, risking higher tariffs to cover municipal revenue deficits and legacy cross-subsidies. Once again the ordinary ratepayer is discriminated against.	Sarah	self-employed
	2026-09-02 12:52:51	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Once again the goverment is trying to get the soft middle class to bail them out of trouble. Taxing the nation into poverty.	Chris	employed individual
	2026-09-02 14:17:05	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	This comes across as another way that households will be penalized for addressing the lack of consistent electricity supply we as a country faced. That investment into solar was not subsidized but now they want to enforce fixed fees despite low usage. Eskom failed the country, municipalities are mismanaged and at the end of the day the consumer needs to pay the price for that on every front.	Liz	
	2026-09-02 14:36:04	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Households and small businesses that invested significant private capital into rooftop solar, batteries, and energy efficiency to protect themselves from load shedding will be forced to pay higher monthly baseline connection fees. This structural shift acts as a financial penalty on private decarbonisation, extending solar payback periods and increasing electricity bills for low-volume and frugal users.	Leigh-Anne	self-employed

	2026-09-03 09:06:12	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I support the privatisation and competition elements of this reform, but I strongly oppose fixed charges that effectively penalise solar users. South Africans invested private capital to solve a problem the state could not. Rewarding dependence while penalising self-reliance is neither fair nor good policy. The government should encourage, not discourage, private investment in energy security. Rather than treating these citizens as partners in solving South Africa's energy crisis, this proposal risks turning them into disgruntled opponents of future reforms. If government punishes those who take initiative and invest in solutions, it will undermine public trust, discourage future private investment, and reduce buy-in for the very reforms needed to secure our energy future.	Mandie

	2026-09-03 22:05:16	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I find it interesting how the Government looks for ways to milk more money out of the already burdened tax payer,. All the while no effort (forming committes to investigate corruption is not effort) is made to curb the rampant scooping of state treasury coffers all in the name of BBBEE. Then to accuse those households who have invested in clean energy, paying VAT for systems the ease the burden on a decepid ESKOM, of free-loading is ludicrous. Connection fees are still paid, providing more than sufficient funding for almost non-existant power grid infrastructure maintenance. The Mininster of Energy and Electricity was praised just last week for improving the electric power generation from 46% to 80%. That is still 20% short of the country's needs. Solar energy is filling that gap, assisting ESKOM in keeping its head above water. To tax solar energy is a double tax and could push that economic sector backwards, loosing jobs and placing aan even larger burden on the electricity supply grid. I do not agree with and will resist any form of punitive measures planned to milk the solar sector.	Rory	employed individual
	2026-09-04 13:13:11	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The councils will rip you off without a cap on the fixed charges. The law should provude for the reduction in electricity cost and aim to protect the consumer insteal of the councils golden goose.	Gerhard	employed individual

	2026-09-04 16:51:20	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Government had an incentive scheme to install rooftop solar. Feeding into the grid would make a connecting fee obsolete, a transparent electricity payback rate would be the better answer and an incentive for private solar installations.	Gerhard	retired
	2026-09-05 07:51:00	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	*Comment: Fixed Charges Penalise Solar Investment* Higher fixed monthly fees will unfairly penalise households and small businesses that invested private capital in rooftop solar, batteries, and energy efficiency during load shedding. Instead of being rewarded for reducing pressure on the grid, they will now pay more through higher baseline charges. This extends solar payback periods, increases bills for low-volume users, and discourages future renewable investment. We ask that NERSA: 1. *Cap fixed charges* to prevent penalising private solar investments. 2. *Provide fair credit* for daytime energy that rooftop solar feeds into the grid, instead of charging a flat fee. 3. *Assess the impact* on low-income and energy-conserving households before approving. This tariff should support, not punish, private efforts to solve the energy crisis and to support the South African energy transition goals.	Jana	self-employed

	2026-09-06 11:24:42	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom (and Municipalities) require reform to address inefficiencies, but not to the determent of households. Individual households invested in solar when the state could not keep the lights on. Now, municipal infrastructure failures, due to years of neglect while funds were looted, leaves us yet again literally in the dark. To expect households to foot the bill once more for state/municipal failures are unacceptable.	Riana	employed individual

	2026-09-06 16:29:26	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Let me help you, I will ask one question, do you own the sun? if no, then why should solar users pay a penalty? They went to solar because your a disgrace to this country because you cannot provide electricity. now a lot of people went solar and businesses closed down and also went solar, now you have to much power and not enough money. I want eskom to collapse so that the government can stop stealing money and charge more for electricity every year.	Henrico	employed individual
	2026-09-06 17:50:18	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Wholesale market reform should proceed only if strict caps are placed on fixed network fees, captive ratepayers are protected, and municipal cross-subsidies are safeguarded.	E

	2026-09-07 12:24:17	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom is in a downward consumption spiral and implementing these additional connectivity fees will see me leaving Eskom 100%. I have been paying for electricity and contributing to infrastructure for over 30 years, thus I have no intention to keep forking out additional money to keep the lights on. In most countries citizens are encouraged to be self sufficient, being subsidized to do so. In ZA, we are taxed, draconian rules thumb sucked to cost more money, charged to be able to sell solar back at less than 30% of consumer pricing - what planet are these rule makers living on? Do they seriously think people will just continue to pay and pay and pay? This is the last straw, a line too far. I am considerate to my fellow citizens and accept that if someone doesn't pay to maintain infrastructure, it will be damned, but I will not take full accountability whilst other areas get electricity for free, without safe and proper connections. So if this changes, I will be the first to notify CoCT to disconnect me.	Laurence	
	2026-09-07 15:28:42	I support with amendments	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	Solar power equipment installed/used reduces ESCOM's and Private Electrical supplier's development costs. Accordingly, an initiative previously rewarded and encouraged, is now proposed to be taxed. Surely this is unacceptable!	Nick	business owner

	2026-09-08 11:36:57	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It’s helpful to open the market but it is unfair to penalise rate payers with fixed charges for solar. The reason we got solar is because eskom could not supply electricity and now the intention is to penalise us. We have invested hugely in getting our own infrastructure because there was not appropriate infrastructure to provide electricity due to state capture at eskom. It is unfair to make residents pay penalities for having solar. We would never have invested in solar if there was a decent supply of state electricity	kate	business owner

	2026-09-08 21:53:43	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I support the proposed transformation of South Africa’s electricity market and the move toward a more competitive, transparent and diversified electricity sector. The current electricity market structure requires reform, and I support measures that encourage private generation, increased competition, improved transmission investment, independent market operation and reduced reliance on a single dominant supplier. However, I believe several aspects of the proposed framework require stronger safeguards to ensure that ordinary residential consumers and small businesses also benefit from the reform. Firstly, I support the principle that grid-connected customers should contribute fairly toward the cost of maintaining transmission and distribution infrastructure. However, fixed network charges must remain reasonable, transparent, cost-reflective and independently regulated. They should not become a mechanism to recover lost electricity sales revenue from customers who have invested in rooftop solar, batteries or energy efficiency. Consumers who reduce their dependence on the grid should continue to receive a meaningful financial benefit for doing so. The regulatory framework should therefore prevent excessive fixed charges from becoming an indirect penalty on private generation or energy efficiency. Secondly, residential consumers and small businesses should not remain captive customers indefinitely while only large electricity users benefit from retail competition. I support a phased introduction of competition, but Government should publish a clear and binding roadmap showing when progressively smaller customers, including households, will be able to choose their electricity supplier. The transition should ultimately result in genuine retail competition for all consumers who wish to participate. Thirdly, customers who export excess rooftop solar electricity to the grid should receive fair and transparent compensation. Export tariffs should be based on clearly defined principles and should not be structured in a way that discourages investment in distributed generation. I also support the separation of electricity generation costs from transmission, distribution and retail costs. Electricity bills should clearly show these components so that consumers can understand what they are paying for and how tariffs are determined. Municipalities and electricity distributors should be entitled to recover reasonable network costs, but electricity tariffs should not be used as an opaque mechanism to subsidise unrelated municipal expenditure. Network charges and electricity infrastructure revenue should be transparent and appropriately regulated. I am also concerned about the continuing market dominance of Eskom Generation during the transition. Strong market surveillance, transparent bidding rules, anti-manipulation measures and effective regulatory enforcement will be essential to ensure that the new market is genuinely competitive. Similarly, the National Transmission Company of South Africa must operate with sufficient independence from Eskom and other market participants. The System Operator and Market Operator must act impartially and should not be placed in a position where conflicts of interest could undermine confidence in the electricity market. I strongly support increased private investment in transmission infrastructure, provided that access to transmission capacity is transparent, fairly regulated and non-discriminatory. Finally, the transition must protect low-income and vulnerable households. Necessary social support mechanisms should be clearly identified and funded transparently rather than being hidden inside increasingly complex electricity tariffs. In summary, I support the proposed electricity market transformation, but request that the final framework include stronger protections for residential consumers, transparent and reasonable network charges, fair treatment of rooftop solar customers, a defined pathway toward household retail competition, effective regulation of dominant market participants and genuine operational independence of the market and system operator. My position is therefore: Support with amendments.	Juan	employed individual

	2026-09-11 19:57:35	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We need a system where the municipality i only one option to buy electricity on a free electricity provider market. Every provider has to pay the grid owner (Eskom) a flat fee for the connection, Basically a kind of fee which we pay already besides the units/kwh we buy. In Germany you can choose between hundreds of electricity providers…The Unit price is between 6-8 Rand. The monthly basic fee for the grid is between 150 and 300 Rand. You can lock for the next 12 or 24 month a price or can cancel every month, but carry the risk that the electricity market price on the Electricity Exchange changes every month to the worse. Where the basic price is on the higher end, the Units are cheaper than the units at the provider with a low basic fee. If you use less units (Gridtied solar) people choose a provider with a low basic fee…If you use a lot units, its better to choose a provider with a higher basic fee, but score on a lower unit price. If you have solar in Germany, everybody can sell units into the network without paying for a bidirectional meters or paying high monthly fees to anybody. That way people get motivated to install solar or wind, which in turn speeds up the extremely important closing of fossil fuel (dirty and global warming) or nuclear (dangerous and to expensive) electricity generation. Eskom should focus on the grid and exchange their coal plants for renewables and sell/offer their electricity to the market/customer like the other independent producers…	Kilian	retired

	2026-09-12 14:38:32	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Their is serious reform required in this sector, but homeowners should not have to foot the bill for government inefficiencies. The recent spike in solar installations helped to keep the country's lights on. There should be a free-market system for the purchase of electricity.	Antoinette	retired
	2026-09-12 14:44:04	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Dane	unemployed individual
	2026-09-12 15:37:28	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom should rather focus and prioritise the prevention of illegal connections which pose a dual risk, i.e. significant risk to infra-structure and significant financial losses resulting from loss of sales as well as costs to remove illegal connections and repair to damaged infrastructure. Focus should also be applied to non paying residents / municipalities. These will yield far more efficient money saving/ income for Eskom than trying to burden households with increased costs due to loss of sales	Riaan	
	2026-09-12 16:09:00	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I agree with the three points made at the end of this message, and I think this issue deserves considerably more attention than it is getting. We have solar ourselves, so I have a direct interest in this. But my concern is not simply about protecting my own investment. It is about whether South Africa chooses an electricity policy that encourages investment, competition and economic growth — or one that ultimately penalises people and businesses for becoming more energy-efficient and self-reliant. There is an important distinction here. The electricity grid costs money to maintain whether I buy 1,000 kWh a month or very little electricity. It is therefore reasonable that consumers who remain connected to the grid should contribute fairly to the cost of maintaining that network. I would not object to a transparent, reasonable network charge based on the actual cost of providing the connection. What concerns me is the possibility of turning that legitimate principle into a punitive "sun tax" which makes investing in solar unattractive. That would be completely the wrong economic signal. The rest of the world is moving in the opposite direction. Solar PV is expanding at extraordinary speed, with distributed solar — on homes, businesses and industrial premises — expected to account for a very large proportion of new solar capacity globally. Battery storage and more flexible electricity markets are developing alongside it. ?cite?turn0search0?turn0search2? South Africa should be taking advantage of this trend, not trying to protect an outdated electricity business model. At the same time, I don't think we should pretend that there is no problem with people leaving the grid. The IEA itself points out that distribution companies still have to recover the cost of maintaining networks, and that poorly designed tariffs can unfairly shift those costs onto consumers who do not have solar. ?cite?turn0search8? So the answer is not "solar owners should pay nothing". The answer is to design a fair, transparent tariff structure which charges everyone appropriately for the network services they actually use. What I believe South Africa must avoid are three particularly dangerous pathways: 1. **Penalising private investment in electricity generation.** We desperately need billions of rands of private capital invested in generation, storage and the grid. If people are encouraged to invest their own money in solar and batteries and then discover that government can subsequently make those investments uneconomic through punitive charges, we will discourage exactly the investment South Africa needs. 2. **Protecting inefficient institutions by making consumers pay more.** Municipalities and electricity distributors have legitimate infrastructure costs, but those costs cannot simply be transferred indefinitely to a shrinking group of captive consumers while efficiency and financial discipline are avoided. The solution must be better management, cost-reflective tariffs, competition and properly maintained infrastructure. 3. **Creating a two-tier electricity economy.** We must not end up with large companies and wealthy households having access to cheap, reliable electricity while ordinary households are effectively trapped on increasingly expensive networks. That would deepen inequality and damage South Africa's competitiveness. There is another danger which concerns me even more: **using electricity policy to preserve the past instead of preparing for the future.** South Africa needs abundant, reliable and increasingly affordable electricity if we are going to grow the economy, create jobs and attract investment. We should therefore welcome competition between Eskom, independent power producers, municipalities, businesses and households — provided that the rules are fair and the grid remains financially sustainable. The government's own stated objective for the proposed market reforms is to reduce reliance on a single electricity supplier, attract investment, improve reliability and ultimately reduce costs. ?cite?turn1search1? I support those objectives. But achieving them requires getting the incentives right. **Don't punish people for generating electricity. Don't protect inefficient systems from competition. Don't make people who cannot afford solar carry an ever-increasing burden. And don't allow the cost of past failures to become an excuse for preventing the investment and innovation needed for the future.** South Africa has enormous advantages in solar energy and private investment. We should be turning those advantages into economic growth rather than treating them as a threat to the existing system. For that reason, I support the three basic principles in this message: **1. Stop punitive "sun taxes" and ensure that network charges are fair and genuinely cost-reflective.** **2. Protect consumers who cannot afford solar from becoming the default source of compensation for declining municipal electricity revenues.** **3. Make the wholesale-market reforms transparent and ensure that ordinary households are not left carrying disproportionate infrastructure costs.** I also believe we should insist on something broader: **South Africa's electricity policy must be judged by whether it produces more reliable electricity at lower real cost, encourages investment and competition, and contributes to economic growth.** That is the standard by which these reforms should ultimately be judged — not whether they protect Eskom, municipalities or any other existing institution. 	2026-09-13 08:17:24	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	When a business loses its revenue due to its own management failures and it's drawing too much income from its business, it can only blame itself and must be prepared to scale back its own remuneration and cut costs in its own business. It cannot and will not recover by charging customers for services it no longer supplies and which it's customers no longer want to or can afford to buy.	Michael	
	2026-09-13 08:22:38	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Loadshedding forced us to buy solar and rebates were paid for the panels. Those who could afford solar enabled a decrease on the grid which benefited the country. Eskom cannot now penalize roof top solar and the country should continue to encourage it for small users. A single ongoing sensibly priced connection fee for the required trickle feed is acceptable, but I am totally against any other 'solar penalty'. This connection fee funding should assist grid maintenance. Funding for the required grid / transmission expansion should not be drawn from domestic users. An alternative plan must be made. Municipalities must be held accountable to pay all due moneys to the power providers. Municipalities should enable smart meters. Many other countries do this. A competitive power market is essential. Domestic and other users should be able to select power sources. Large users should be expanded and an internationally competitive funding model must encourage expansion of industries. Many smelters are closed because electricity was initially not available and now it is too expensive. This must be addressed, and is partially being done. We must encourage large industries to establish and expand assist so that our unemployment situation may be addressed. More people employed means more income for households and thus more money to pay domestic power bills. This more money for grid maintenance. Win- win. Don't be greedy South Africa. Provide power. Collect due monies. Maintain the grid. Expand transmission lines, encourage the growth of the mixed energy supply.	Nikki	employed individual

	2026-09-14 06:41:16	I support with amendments	Fixed Charges & Solar Penalties		Small / Medium Business Owner (SMME)	Wholesale market reform should proceed only if strict caps are placed on fixed network fees, captive ratepayers are protected, and municipal cross-subsidies are safeguarded. Further to the above, households should be allowed to supply electricity back into the grid at a rate per KW added. This would surely solve a large portion of the country's dependency on coal and diesel, and bring the rate of electricity down. Do not penalise those who have invested heavily in solar to assist reduce the load on the grid, but rather reward them with such rebates.	Lizette	self-employed
	2026-09-14 07:06:30	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I do not feel the loss of grid customers should be totally passed onto the grid customers, who's bill also covers those only using the minimum free portion. That free portion users should be discontinued or that sector should be charged access costs ., to ensure ALL WHO USE THE GRID PAY FOR USAGE OF THE GRID.	Christine	
	2026-09-14 07:09:23	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer		Christine	
	2026-09-14 08:25:08	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is crazy to make people who are trying to solve the energy crisis by buying at their own expense solar and generating electricity, reducing the overall load on the grid and then they have to pay for this. This defeats the entire purpose of solar energy. If you want to make the country energy secure, you need to allow people to find alternative means of procuring electricity. If the municipality has set budgets on getting income from electricity and then this drops, that should be ammended and they should restructure their budget to account for this.	Ric	
	2026-09-14 08:27:37	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Residential customers had to move to rooftop solar due to: 1) The inability of Eskom to generate reliable electricity supply 2) The unsustainable price increases requested and approved for electricity It is a severe indictment on Eskom that Residential customers can generate electricity through rooftop solar at a lower price than Eskom, despite huge bail outs by government. Eskom should be ashamed and fix their cost issues, rather than go after Residential customers that HAD to move to rooftop solar. This also goes for Municipalities that does selective credit recoveries on Residential customers, but owes huge amounts to Eskom. You should be ashamed and fix your finances and not go after Residential customers had to move to rooftop solar. Eskom and municipalities should incentivise Residential customers to move to rooftop solar and not tax the sun. If all rooftop solar and battery systems are switched off during peak hours, the grid will collapse. The sad thing is that Eskom needs the rooftop solar electricity that is generated. If they tax this capability, it can be mobilised and used against them.	Hennie	employed individual

	2026-09-14 10:13:57	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom's unbundling has produced tariff restructuring that separates energy from network costs, introducing a proposed Generation Capacity Charge of R5.99 per point of delivery per day and lifting the base fixed connection fee 183%, from R196 to R554/month, rising to R670/month on the popular Homepower 4 tariff by April 2027. Municipal distributors have followed the same logic: in Johannesburg, registering rooftop solar with City Power forces a migration from prepaid (roughly R241.50/month in fixed charges) to postpaid, where fixed charges alone run to R1,070–R1,483/month regardless of consumption — a four-to-six-times increase triggered simply by having solar, not by any change in actual demand. This restructuring is presented as cost-reflective "anti-free-riding" reform, but it rests on shaky premises. First, the historical funding record undercuts the argument that today's low-usage or self-generating customer is dodging their share of infrastructure cost. South Africa's distribution networks were built up over nearly a century, funded mainly through Eskom's internal cross-subsidy from industrial and mining tariffs, national electrification grants, and municipal borrowing serviced by decades of ratepayer revenue — not by any individual household repaying "its" stretch of line. Most legacy infrastructure in established suburbs has long been depreciated and paid off collectively. What these new fixed charges actually recover is a mix of ongoing maintenance and refurbishment backlogs (legitimate) and declining sales revenue as customers self-generate (not a cost-causation argument at all — Eskom's own results presentation admits the intent is to "retain revenue" as customers reduce grid purchases). Second, and more fundamentally, the cost driver of distribution infrastructure is peak demand (kVA), not energy volume (kWh) or the mere presence of solar panels. A transformer and feeder line must be sized for the worst-case coincident peak on that line, not average throughput. A household that has reduced both its daytime and evening peak draw, as many solar + battery systems do, genuinely imposes less cost on the network than a high-consumption household on the same flat tariff, yet under both Eskom's and City Power's proposals it can end up paying the same or more in fixed charges purely because it has solar. Apportioning fixed cost by connection capacity or measured maximum demand, rather than by tariff category or a blanket flat fee, would far more accurately reflect actual cost causation, and would let genuinely low-peak households, solar-equipped or not, pay proportionally less, as they should. There is a legitimate residual argument for utilities: even a low-usage, self-generating customer retains the option to draw full capacity at any moment, and the network must be maintained to serve that possibility. A modest standing charge tied to actual connection size or demand history is defensible on that basis. What is not defensible is (a) charging a fixed fee sized to replace lost energy revenue rather than to recover the actual capacity reserved, (b) using solar registration itself, rather than measured demand, as the trigger for a punitive tariff category change (as City Power does), and (c) doing so against a backdrop where the underlying registration data Eskom relies on is, by its own admission, incomplete and unreliable for the majority of residential systems. Accordingly, this objection calls for: fixed/network charges to be apportioned by measured or contracted capacity (kVA/amp rating) rather than flat per-connection or tariff-category fees; a clear, ring-fenced accounting distinction between maintenance-related recovery and revenue-replacement, with only the former justified as cost-reflective; and removal of solar registration as an automatic trigger for tariff reclassification, in favour of assessment based on actual demand profile.	Andre	employed individual
	2026-09-14 10:27:49	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	AS we try to rebuild the country let us remember it was a political leader who called on the public to help by installing solar. At our expense we saw ourselves helping . Now they want to penalise us. So firstly drop the salaries of Eskom leaders and no bonuses for the bad job they are doing. 2ndly drop the salaries of political leaders to reflect the third world country we are. 3rdly protect the general consumer, the households. If people cant even survive at home how will they become a usable efficient and effective workforce for the country. 4thly. Stop political parties from lying about the truth, they do this just to get into power. (if we drop their salaries they won't want to go into a job where they actually have to work.) 5thly no paid political figure heads in essential roles. 6thly, No by-laws that hurt the consumer. Over policing or over management is creating a control that is become dictatorial. 7thly Start applying the laws we already have, that if applied fix most situations. 8thly stop wasting money on political name changing and BEE. Free market so we can have competitive prices. 9th convict the political leaders who have transgressed and kick them out of the political role. All this will start cleaning up our financial ministries and associated arena's. For The electricity problem does not exist in in a vacuum. It is related to our the whole country's slide into chaos since the ANC took over. The propaganda used to keep themselves in power has kept dark brown and light brown people apart and forced them A-part-ness. A multi faceted approach is needed across the board. and then to top it off. and as an extra Clean up the police.	Robin	Non-profit
	2026-09-14 11:55:22	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Ask Eskom how they will compensate all the businesses that closed down and the people who lost their jobs because of loadshedding. Why has load-shedding quietly disappeared? What will happen if all the solar users go back to using the grid?	Johann	
	2026-09-14 11:57:27	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	The electricity consumer has been abused by Eskom inefficiencies and budget overruns long enough, so free market competition is welcomed. But this move by government cannot have a budget safety net by punishing consumers with high fixed grid and availability fees, or by penalizing those who have used after tax savings to invest in solar. The only fair way is for all homes to pay a reasonable grid availability fee and then be charged per Kwh via the Pay as you go meters which should be installed in al homes.	Nick	self-employed

	2026-09-14 13:12:20	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	It is blackmail to demand payment for not using a service that is utterly unreliable and expensive. Municipal rates and Eskom charges, etc. are simply unaffordable and breaking innocent, compliant, tax-paying individuals and small businesses. I support Eskom unbundling and private sector competition (and no corruption). I do not support a solar tax. Fire half of Eskom and drop salaries of the rest to pay for Eskom's unbundling and revenue loss, and get Soweto and illegals and squatter camps to pay for services they freely use	Z	unemployed individual
	2026-09-14 14:38:15	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Poor management by Eskom led to the introduction of load shedding which caused electricity consumers to spend their own capital to procure PV and other systems to make up for Eskom's failure. Eskom & Municipalities must not now be allowed to charge exorbitant fixed charges, so called grid connection to compensate for lost customers and revenue. More importantly, for customer who move totally off grid with no connection to either Eskom or the municipality cannot be charged a grid fee, as susch users are using the free sun light. This is constitutionally not defendable. This is similar to charging citizens a fee for breathing air which is totally free. Consumers that are totally dependent on the grid must be protected from Eskom or Municipalites from charging them exorbitant electricity charges to make up for lost revenue due to industrial users and solar consumers moving off the grid. All market reforms, Eskom un-bundling, introduction of existing and new private power producers, etc must all lead to users (Industrial, commercial and residential) having to pay less for electricity. Electricity has far exceeded PPI and CPI over the last 20 years and cannot be allowed to continue.	Allan	retired

	2026-09-14 15:08:28	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I accept that grid-connected consumers should make a reasonable contribution towards maintaining the electricity network. However, fixed charges must be fair, transparent and related to the capacity made available to each consumer. I therefore propose that: Fixed network charges must be cost-reflective, transparent and regulated by NERSA, with appropriate limits to prevent excessive charges. The fixed charge should be based on the capacity of the consumer's main circuit breaker, similar to the current-breaker tariffs previously used by municipalities. A 20 A or 40 A connection should therefore attract a lower fixed charge than a 60 A or 80 A connection. Consumers who have installed solar and battery systems should be allowed to reduce their grid capacity and consequently pay a lower fixed charge. Electricity legally exported to the grid should receive fair compensation. Fixed charges should recover the reasonable cost of providing network capacity and must not be used to recover lost electricity sales or municipal profits from solar users. This provides a simple and equitable principle: the greater the grid capacity reserved for a consumer, the higher the fixed charge; the lower the required capacity, the lower the charge. This prevents genuine "free riding" without unfairly penalising consumers who have invested in solar power and energy efficiency.	Sarel	retired
	2026-09-14 16:52:53	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Eskom should be unbundled and private/commercial entities should be allowed to sell back into the system or sell their own generation. The fact that we have solar installations were due to Eskom's inefficiencies and general mismanagement , people were forced to make alternative arrangements. These should not be then penalised either by extra tariffs, registrations or any other mechanism for Eskom to generate money from something they have not paid for or contributed to themselves.	Kim	self-employed
	2026-09-14 16:56:36	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	For years now, we have suffered from above inflation electricity increases. Additional taxes, in the form of these so called fixed charges and network charges have been added to our accounts. This has not occurred with a corresponding drop in the rates we are charged. You can use no electricity and still get charged R1000 per month. This is not affordable for most households, many of whom are experiencing cost of living expenses that are beyond salaries.	Brian	unemployed individual
	2026-09-14 17:07:11	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I support the continued development of South Africa's electricity sector, but I strongly object to policies that would financially penalise households that have invested in solar and reduced their reliance on the electricity grid. I have made a significant private investment in solar in order to reduce my household's demand on the grid and take greater responsibility for my own electricity supply. Residential solar helps reduce pressure on the national grid and contributes to lower electricity demand during periods when the system is under strain. Consumers who have invested their own money in renewable energy should not be treated as a problem or subjected to disproportionate fixed charges simply because they purchase fewer units from the grid. I urge the Department to ensure that any changes to electricity tariffs and market structures are fair, transparent and do not discourage private investment in renewable energy.	Zolene	employed individual
	2026-09-14 17:24:56	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We need to have a framework for unbundling, however it needs to be transparent and not tax users who had to migrate due Eskom's inefficiencies. Unbundling should mean that I can buy electricity from whomever I choose, this means it should remove electricity supply from municipal books and direct to private suppliers. Users should not be penalised for using less electricity.	Douglas	business owner

	2026-09-15 20:16:25	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I support the transition towards a competitive and open electricity market and recognise the need to reform Eskom and attract private investment. However, the transition must protect agricultural, household and small-business consumers who invest in renewable energy and remain dependent on the distribution grid. Fixed network charges should be transparent, cost-reflective and proportionate, with appropriate protections against excessive charges that could undermine private investment in solar and battery systems. Smaller agricultural users should also have fair access to competitive electricity markets, and municipal revenue losses should not simply be recovered through disproportionate fixed charges imposed on captive consumers. The regulatory framework should encourage, rather than discourage, distributed renewable generation, energy storage and greater energy resilience.	Ashleigh

	2026-09-17 21:34:24	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We need a system that is fair .There needs to be movement on illegal power connections that result in unpaid electricity being used .Those who invested in rooftop solar from their own funds because the state could not provide reliable supply should not be penalised - a small grid connection fee would be acceptable. Captive users should not be exploited. - they are those who pay and business should carry their share of the costs as they use large amounts of power ,this is about providing necessary power to all at a reasonable rate so that households can function and that business can be conducted to improve the economy for all - not to extort from either	Sandra	employed individual
	2026-09-18 08:56:32	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	ESKOM has created the problem for itself through decades of non delivery of electricity. It is not reasonable that we are now being punished for ESKOMs incompetence. ESKOM needs to define a future for itself in a deregulated electricity supply industry that excludes abuse of it's monopolistic position to impose penalties on people that have spent hard earned money on solving electricity supply that the monopoly could not do for us.	Clive	retired
	2026-09-18 12:36:00	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. Insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. Require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households.	Paul	unemployed individual
	2026-09-18 14:12:57	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	You can't tax the use of sunlight. South Africans should be able to buy solar panels to mitigate monthly electricity prices without having to pay additional taxes for it--that's just ridiculous! On the other hand, the movement to end Eskom's monopoly is one I support (with heavy amendments).	Jessica	
	2026-09-18 16:50:27	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Over the last 10 months (December 2025 to September 2026) I have tracked my average prepaid electricity purchases. I have a solar installation in my home, which was installed during the height of load shedding, to allow for my child to continuing studying during the load shedding. Currently, it is important to note, that due to the suburb I reside in, I am supplied electricity directly from Eskom and not from City Power (City of Johannesburg). The total value of purchases over this period has been R17,500-00 with an average of 242 units a month. This equates to an average cost of R5-56 per unit, consisting of electricity cost, Connection fees, and VAT. The R5-56 over these three items are on average R3-03 for electricity, R2-07 for Connection fees and R0-46 for VAT per unit. Connection fees and VAT account for approximately 45% of the total spend. If I were supplied by City power, the approximate cost for these items would be R2-53 for electricity, R0-58 for Fees, and R0-47 for VAT per unit. The connection fees and VAT account for approximately 29% of the cost. These assumptions are based on the 2026/2027 City power published rates of 290-46 c/KWh, R70-00 monthly connection fee and R140-00 monthly capacity charge. The lowest rate for electricity has been assumed as the average purchases falls below the 350KWH usage rate. The total value spent with City Power would have been R11,248-91, a saving of R6,200-00 over the 10 months. It is also assumed that the usage would remain consistent across Eskom or City Power, as both would have been on the prepaid usage. Eskom is price gouging prepaid electricity customers, as their connection fees are significantly higher than that of City Power, regardless of the solar installation. The solar installation would have been in place under Eskom or City Power supply, as load shedding was in place for both. I propose that the Eskom connection fees and City Power connection fees be aligned, as I have no choice which entity currently supplies the suburb the live in.	Maurice	self-employed

	2026-09-23 14:43:18	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Stop blaming solar users as free loaders. They aren't. They switched because of your own inability to supply.. Far from being free, the switch cost them millions and cost you nothing. So you have no right to charge them anything for something that has always been there and is not costing you. You gained the generating capacity of another Kusile and Medupi without it costing you a cent. This extra capacity you now sell. That should be enough. Allowing large users to shop around elsewhere just means that Eskom is left supplying the small users i.e. us. We need costs kept down, not the nonsense we have had to endure over the last few decades. To really benefit South Africa, Eskom needs to change its approach. It should not generate large profits and give huge dividends to the govt. (for others to put in their bank accounts), but rather provide cheap electricity for 66M consumers so all benefit.	john	retired

	2026-09-27 06:19:05	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	Green energy should be encouraged, not punished, because the Government can't control it's own finances.	Stacy	employed individual
	2026-09-27 08:50:26	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I object to treating the electricity we generate and use ourselves as a reason to impose an additional fee, or replacing so much of the usage-based bill with fixed charges that reducing our grid consumption brings little benefit. I ask that the Electricity Sector Market Transformation Position Paper expressly require the following principles to govern the new market and the tariff rules developed alongside it: 1. No household should be charged merely for owning or using solar equipment when it does not export electricity. 2. Any fixed grid charge must reflect the connection capacity and grid services the household receives. It must not be based on the size of its solar panels or inverter, or recover a cost already covered by another connection, network or standby charge. 3. Households must be able to reduce their contracted grid capacity, and the related fixed charge, through a practical and affordable process. 4. Residential tariffs must retain a meaningful financial benefit when a household uses less grid electricity through solar power or energy efficiency. 5. The costs of opening the market to large customers, legacy contracts, municipal debt and trading losses must not be shifted onto households that cannot yet choose a competing electricity supplier. Please make these protections express conditions of the market transition. Households that invested in supplying part of their own electricity should be able to remain connected to the grid on fair terms.	Bronwynn	employed individual
	2026-09-27 22:37:22	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	My primary concerns are these two aspects: A “Sun Tax” on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. The “Captive Ratepayer Trap” and Municipal Insolvency: Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance.	Stephen	employed individual
	2026-09-28 07:38:40	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I support a fixed rate as those using more are not using any more infostructure and are paying for what they use infact they should pay a lowere rate for being good customers.	Guy	retired

	2026-10-21 10:07:37	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	We invested in solar power as a clean and affordable alternative to coal-generated electricity. Currently we are unable to shed additional solar energy back into the Eskom grid, which is what other 1st-world countries not only allow but also encourage. If we are going to be taxed for reducing our burden on the already overburdened electricity system, we will simply go off the grid completely, as I think thousands of other solar users will. This will further reduce the available buyers for Eskom. We should rather be supported fro making a contribution towards renewable and sutainable energy, and not be taxed to address government debt and funding of large SOE's which have been fincialiy ruiend by corruption and poor planning, lack of maintenenace and an overall fear of doing the right thing.	Cornel	self-employed
	2026-10-22 11:38:40	I support with amendments	Fixed Charges & Solar Penalties		Residential Electricity Consumer / Ratepayer	I am opposed to the fact that if someone puts a solar system at his home they need to pay reistration fee and other fees. Its like one is being firced to an electricity greed that is unreliable and very costly. Where do we get a break?	Peter	retired

	2026-08-29 10:44:59	I support with amendments	Market Power & Price Manipulation		Residential Electricity Consumer / Ratepayer	As unpalatable as my presupposition is, the household solar user cannot expect to have free back up electricity available for when the sun does not shine. That is totally unfair to all other consumers, who eventually will have to pay more. An option would be to go off the grid, in toto, with own battery back up. Or, have your panels and through a smart meter pay a higher unit rate for your grid offtake, rather than a flat, fixed rate. Rooftop solar owners cannot expect to have their cake and eat it. Having said that, Eskom should be recognised as an essential continuous producer, to ensure 24 h electricity for SA, for now. As such it cannot be operated optimally and the shortfall in efficiency should be paid by the state. It therefore needs to be an SoE, with a specific mandate to ensure 24 h availability and that is the price the country needs to pay. Eskom should have a declining role which can be phased out over a couple of decades while growing the private sector. We will never have proper growth prospects if we do not have energy autonomy.	Quent	retired
	2026-08-29 22:03:49	I support with amendments	Market Power & Price Manipulation		Residential Electricity Consumer / Ratepayer	While it is agreeable that users should contribute towards a system's maintenance, it must be clear what the maintenance costs are and that the rate per user is being fairly calculated to cover the maintenance costs without irregular expenditures. Perhaps a yearly "maintenance expense" report alongside a report on the number of people connected would keep this system transparent and users happy. One can also consider the potential contribution of households to the overall grid. While our system currently does not receive solar power from households, perhaps it could, as it does in many other countries? And if it could, does this not warrant some form of retribution towards the household contributing its power to the grid? Either in the form of credited units, or a reduction in the connection fee? 	2026-09-06 08:02:11	I support with amendments	Market Power & Price Manipulation		Residential Electricity Consumer / Ratepayer	All subsidies should be removed so that all providers supply electricity in free competition, subject to electrical engineering constraints. Electricity generating businesses must finance all connections to the grid and guarantee their constant and continuous stable supply to their customers within engineering norms. Solar generation that cannot be connected to the grid is of no concern to grid suppliers and operators so should not be financially regulated, but must be regulated for safety. Grid connections, whether used or not, need to be paid for at strictly controlled rates. There must be a publicly accessible database of all fires affecting storage devices such as batteries. 	2026-09-14 07:26:42	I support with amendments	Market Power & Price Manipulation		Residential Electricity Consumer / Ratepayer	A "Sun Tax" on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. Once again we have to foot the bill for the incompetent who was appointed - you broke it, you fix it and pay for your own repairs, I don't want to pay for your errors. The "Captive Ratepayer Trap" and Municipal Insolvency: Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance. If you kept up with maintenance and expansion like you should have, we would not be in this situation, reclaim the lost millions from defrauding municipalities and use that to fill the gap that the large corporations leave. 	2026-09-27 17:30:59	I support with amendments	Market Power & Price Manipulation		Residential Electricity Consumer / Ratepayer	Whilst the cost to produce and transmit electricity should be reflected in the cost (ie the cost of the electricity should excess by a reasonable margin the cost to produce it) it should not be per person but rather as a whole, So those who it is cheaper to get electricity to (rich urban dwellers) should subsidize those who it is more expensive to get electricity to (poor rural dwellers). There should be some people who do not pay for electricity (ie there is a guaranteed minimum that if given for free if you stay below this). The rest should subsidize this - via electricity tariff or via taxes. There should be a plan in place proactively if the rich urban go off grid entirely.	Stephen	retired

	2026-08-26 17:16:05	I support with amendments	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	• I demand that a binding transition roadmap be published, which progressively lowers the eligibility threshold. This is to ensure that retail market choice is expanded to ordinary households and SMMEs rather than remaining an exclusive corporate privilege. • I believe it should be a requirement that NERSA should implement mandatory tariff-parity benchmarks ensuring captive customer tariffs do not exceed wholesale-plus-efficient-delivery benchmark prices. • I'm against any mechanism that uses captive household tariffs to recover stranded costs or uncompetitive legacy contract premiums.	Margie	retired
	2026-08-26 18:13:51	I support with amendments	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	While market competition aimed to end Eskom's generation monopoly and encourage private investment is a must for the future of South Africa, to allow Eskom to apply unreasonable and future unrelated charges and keep us tied to the company is defeating the objective, keeping corruption and stealing from the nation.	Marla	unemployed individual
	2026-08-26 19:08:58	I support with amendments	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Market competition, Eskom unbundling, and open wholesale trading are essential to solve South Africa's energy crisis and attract private capital. However, the mandatory fixed solar charges, captive consumer price hikes, and municipal revenue losses will hurt ordinary households and small businesses. Wholesale market reform should proceed only if strict caps are placed on fixed network fees, captive ratepayers are protected, and municipal cross-subsidies are safeguarded.	Jenine	employed individual
	2026-08-26 19:09:14	I support with amendments	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	I am in favour of ending the Eskom monopoly and promoting private generators and an open market. I am opposed to fixed charges and solar penalties; the very people who ended loadshedding through private initiative and personal capital expenditure, are now penalized for their contribution. The infrastructure argument is weak: As an example, the priavte sector invested billions in fibre optic infrastructure for internet and data delivery, yet I get to choose which provider's service I pay for. Just because provider B also installed a fibre line to my home, does not entitle them to an infrastructure fee. I am deeply concerned about the two-tier market system that will come about when the largest consumers are allowed to negotiatie in the open market, leaving residential consumers hostage to fixed tarrifs, in a shrinking pool of payers.	Herman	self-employed
	2026-08-26 19:59:07	I support with amendments	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	1. ESCOM cannot go on like this. BEE producing UNFAIR appointments to people who does NOT have the capacity to be held accountable for a give responsible position. STOP BEE and let people do the job that can accelerate and perform in their work to bring electricity to ordinary citizens at a much cheaper price. 2. Government CANNOT SELL THE SUNLIGHT to its citizens!!! 3. Poor governance produced POOR ENERGY PRODUCTION, not the ordinary citizens! 4. How and what will be the fair allocation of the proposed monthly electricity billing roadmap to the ordinary citizens? We all SUFFER already from an over 300% increase in electricity charges. We cannot take it anymore!!! 5. How will the informal sector pay their fair share for their electricity used? This MUST NOT BE IGNORED! 6. Government MUST gladly welcome private household Solar innovation and rooftop solar. Ordinary citizens immediately started to install expensive back-up solar power systems the moment ESCOM failed to supply. Electricity price sky-rocketed and power supply became totally inadequate. Now, government wants to try to further unfairly burden ordinary citizens again for their INCOMPETENCE and POOR DISITION MAKING, NOW AGAIN AND AS IN THE PAST! ??? 7. Define "FREE RIDE" solar use? What a SICK way of thinking!! 8. Try the truth for a change in GONERMENT THINKING EFFORTS and stop your perception that ordinary citizens, pensioners, must pay for all your stupid ideas! 9. We all deserve fair treatment. 10. Stop BEE and open-up the economy in a fair way. It CANNOT GO ON LIKE THIS!!!	Ockert

	2026-08-28 05:08:18	I support with amendments	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Submission on the Electricity Sector Market Transformation Position Paper I support the objective of creating a more competitive, sustainable and reliable electricity market. However, I strongly object to a market structure in which ordinary residential consumers remain captive customers while increasingly carrying fixed network, capacity and legacy costs, regardless of how much electricity they actually purchase from the grid. This is particularly concerning for households that have invested substantial private capital in solar generation and battery storage. 1. Government encouraged households to reduce their reliance on the grid During the electricity crisis and periods of severe loadshedding, Government actively encouraged households to invest in rooftop solar. In the 2023 Budget, Government introduced a 25% personal income-tax rebate on qualifying rooftop solar PV panels, up to R15,000 per individual. The stated purpose was to encourage individuals to install rooftop solar, increase electricity generation and reduce pressure on the grid. (MDACC	Elizabeth	business owner
	2026-08-28 08:06:33	I support with amendments	All of the above	Captive Consumer Tariff Protection	Small / Medium Business Owner (SMME)	I am a business owner and rate payer. I think we need stronger competition to bring a market balance. At the moment we have to use a provider who can do as they please with no accountability. People have made a choice and installed solar and other power generation solutions, and now we are held captive by the legacy framework and face increased prices without any benefit. Happy with fixed charges, but then we must be allowed choice to select our own provider under free market conditions.	Andre	
	2026-08-28 08:37:27	I support with amendments	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. 	2026-08-28 09:09:21	I support with amendments	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	As a resident within the City of Cape Town we have seen the municipality squeeze the taxpayer for every lost cent of their traditional revenue. As the national electricity infrastructure was collapsing, home owners started to install costly backup measures to keep "the lights on at home". So on the one hand we are forced to make costly capital expenses for our own survival, while on the other hand the city introduces standard charges for the "privilege" of connecting to a grid, that has no relation to actual usage. I understand the need to transform this space and am very aware of the plans independent electricity providers have to solve our country's problems. But to make the ordinary household pay for lost municipal income despite having installed their own, costly, backup process, is completely unfair.	Ohna	self-employed
	2026-08-28 09:50:31	I support with amendments	All of the above	Captive Consumer Tariff Protection	Small / Medium Business Owner (SMME)	Strict caps should be placed on fixed grid charges - purely for network maintenance and NOT municipal profits. Free market principles should apply so that consumers may choose suppliers.	Klaus	business owner
	2026-08-28 09:56:25	I support with amendments	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	I support the transition towards a competitive and open electricity market and recognise the need to reform Eskom and attract private investment. However, the transition must protect agricultural, household and small-business consumers who invest in renewable energy and remain dependent on the distribution grid. Fixed network charges should be transparent, cost-reflective and proportionate, with appropriate protections against excessive charges that could undermine private investment in solar and battery systems. Smaller agricultural users should also have fair access to competitive electricity markets, and municipal revenue losses should not simply be recovered through disproportionate fixed charges imposed on captive consumers. The regulatory framework should encourage, rather than discourage, distributed renewable generation, energy storage and greater energy resilience.	Ashleigh	self-employed

	2026-09-07 10:58:40	I support with amendments	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	The term I am most concerned about is this fairly 'new' term "legacy cross-subsidies". (I heard it first from Zille). This means that the affluent areas (read middle class) are 'helping' poorer areas? No! Why should that happen? Why can't the poorer areas pay a NOMINAL fee each month? The Math is pretty simple and blows the mind. If ALL ADULTS (aged 20yrs to 55yrs) living in an informal settlement - which we can safely assume these 'cross-subsidies' is aimed at - pay R30, maybe R40 per month, it would bring in MILLIONS, NO BILLIONS, EACH MONTH. But, there's a catch - of course - Government and local municipalities will have to provide clean, safe, tarred roads; clean, safe ablutions and/or RDP housing; managed open spaces with trees (watered); provide litter bins and with it education regarding keeping the township tidy; and the animals fed and happy. This is not impossible, but if the masses don't see how their daily actions impact in their long-term futures, then they will forever be given hand-outs and 'help' - never learning to be self-sufficient in any capacity.	Jean	
	2026-09-10 17:11:49	I support with amendments	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance. 	2026-09-13 07:52:30	I support with amendments	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	I support the introduction of genuine competition, Eskom unbundling and an open electricity market, but I support this Position Paper only with substantial consumer-protection amendments. Residential households and small businesses should not remain captive customers while large commercial users obtain access to cheaper competitive supply. A binding roadmap should progressively extend retail choice to households and SMMEs. Fixed network charges must be transparent, independently verified, cost-reflective and capped so that they cannot become a mechanism for recovering municipal inefficiency, historical debt or stranded costs from captive consumers. Customers who invest their own money in solar, batteries and energy efficiency should not be financially penalised for reducing demand, and exported electricity should receive fair compensation. Captive tariffs should be benchmarked against efficient wholesale generation plus reasonable network and retail costs. Consumers who have no choice of supplier must not be required to subsidise losses created when large customers leave municipal retail supply. The NTCSA's market, system, transmission and purchasing functions must also have strong operational independence and conflict-of-interest safeguards. Competition will benefit South Africa only if the market is genuinely competitive and ordinary consumers receive the same long-term benefits as large electricity users.	Petrus	Non-profit

	2026-09-13 09:33:10	I support with amendments	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Protect captive user price hikes and ensure usage costs only passed down to consumer. Limit costs to solar electricity users and set off excess generated and passed back to Eskom against a limited mandatory fee . Penalising any sector of community for using solar is ridiculous - Eskom doesn't own the sun nor does it own the infrastructure used by solar consumers to electrify their homes. Eskom revenue generation should not be the main factor considered in pricing of kwh - affordability of individuals and their usage need to be accommodated. I understand tariff increases are needed but they need to be reasonable and affordable. They currently are not. Solar is here to stay so best to amend the paper now in a way that will make it relevant in the future and not be short sighted.	Vash	employed individual
	2026-09-13 10:15:54	I support with amendments	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	While moving toward a competitive electricity market is a necessary step for South Africa, the current structural roadmap risks penalizing ordinary households and early adopters of private solar. I urge the Department to amend the framework in three critical ways: Cap Fixed Network Fees: Protect rooftop solar users from prohibitive, unavoidable monthly connection fees that undermine private investments in energy security. Protect Captive Ratepayers: Ensure that households and small businesses left on municipal grids do not shoulder the financial burden caused by large industrial users bypassing the system. Safeguard Municipal Revenue: Prevent punishing tariff hikes on vulnerable consumers by developing a fairer mechanism to cover legacy cross-subsidies. Reform must not come at the expense of everyday citizens trying to keep the lights on.	Susan	self-employed
	2026-09-13 10:31:16	I support with amendments	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Breaking up monopoly, but only for some. We demand a binding, published transition roadmap that ensures retail market choice is expanded to ordinary households and SMMEs rather than remaining an exclusive corporate privilege. We require NERSA to implement mandatory tariff-parity benchmarks ensuring captive customer tariffs do not exceed wholesale-plus-efficient-delivery benchmark prices. We oppose any mechanism that uses captive household tariffs to recover debt or uncompetitive legacy contract premiums. Competition is good. The roadmap to get there needs work.	Moya	employed individual
	2026-09-13 11:03:21	I support with amendments	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Free market system calls for pay only for what you consume. Anything else is extortion n slavery.	George T.

	2026-09-13 18:41:43	I support with amendments	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	A “Sun Tax” on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. Wholesale Price Volatility and Market Power Manipulation: Eskom Generation still controls the overwhelming majority of South Africa’s dispatchable baseload power. In unbundled spot markets worldwide, dominant suppliers have engaged in economic or physical withholding to artificially spike market clearing prices. Without hard statutory bid caps and aggressive oversight, wholesale price volatility will be passed directly down to retail consumers. Premature Market Launch Amid Unresolved Municipal Debt: Opening an advanced wholesale market with mandatory imbalance penalties in 2026/2027 while municipal distribution debt to Eskom remains unresolved is premature. Financially distressed municipalities that fail prudential credit requirements will be excluded from trading platforms, creating a divided nation of well-supplied metros and failing, power-starved rural councils. 	2026-09-14 10:24:03	I support with amendments	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	I'm using the same amount of electricity today as I did 7 years ago but I'm paying trippel the amount. I can't afford electricity any more and I'm just running the bare essentials. Why is Eskom punishing it's customers? South Africans need to get out of this abusive relationship.	Koos	employed individual
	2026-09-14 10:44:19	I support with amendments	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Whilst creating a competitive environment related to the generation of power is welcomed, the confusion between owning the infrastructure and also supplying the power to captive users who are unwilling or unable to use alternative power suppliers will lead to abuse. Firstly, the infrastructure should be owned by a SOE. Taxes collected shoud focus on improving the grid. Secondly, the supplier of power (for example Eskom) should compete with other suppliers of power- hence this part of Eskom should be privatised- taxes should not be used to fund Eskom. Those individuals who choose to generate their own electricity or use alternative power suppliers should be encouraged. This encourages employment and improves income and tax generation. It also ensures that the best, most reliable supplier gets supported by users- hence the users benefit and government benefits- the entire country will therefore have an economic benefit. Grid stability should be the first concern of government (not continuing support of a POE such as Eskom which is becoming more bloated and inefficient). Political Party ideologies should not be the first or only determinant of how Electricity demands are managed in the country. Politics will not feed hungry mouths or build a stronger future for all of us!	Ashley	self-employed
	2026-09-14 11:31:26	I support with amendments	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	This government needs to get its house in order and to stop fleecing the citizens of this country to cater for subsidize their corrupt tendencies and incompetence. 	2026-09-15 10:24:30	I support with amendments	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	Using electricity as a major income source is an Apartheid legacy. it is not how all governments raise funds. That said, it's also important to remember that when cars were invented, blacksmiths had to reinvent themselves. Times change. Eskom clearly doesn't have the capacity to manage the current infrastructure, fiscally or practically, never mind shifts in technology. They operate defensively (at best, not proactively. if they did, they would have a) managed the current grid well (they haven't), and planned effectively for the fact that times move on. Such foresight would have included an appreciation for the need for decentralization and a down scaling of their top-heavy structures. And that's putting it politely. It's time to run Eskom properly. If they can't wake up then give the job to people who can.	Lana	self-employed

	2026-10-22 10:38:47	I support with amendments	All of the above	Captive Consumer Tariff Protection	Residential Electricity Consumer / Ratepayer	I support modernising South Africa's electricity sector and introducing greater competition, but I strongly object to penalising households that have invested substantial private capital in solar energy. Countries such as Germany already compensate residential solar users for feeding surplus electricity into the grid. South Africa should be expanding this approach, allowing households to sell their excess electricity at fair rates and offset municipal electricity charges. Cape Town already has such a system, demonstrating that this is entirely achievable locally. Government previously encouraged private solar investment through tax incentives to relieve pressure on the national electricity supply. Introducing higher unavoidable charges that undermine those investments is contradictory and sends precisely the wrong message to people who have used their own money to help address the electricity crisis. I accept that maintaining the electricity grid involves legitimate costs, but those charges must be transparent, independently justified and proportionate. They should not become a means of subsidising municipal inefficiency, poor financial management, electricity losses or outdated administrative structures. Municipalities should instead be required to modernise their operations, reduce unnecessary expenditure, address electricity theft and distribution losses, and become more efficient and accountable. I propose a national framework that allows residential solar owners to sell surplus electricity back into the grid, receive meaningful credits against their electricity bills, including fixed charges, and participate in a more competitive electricity market. **The solution should be to make better use of privately funded electricity generation while reforming inefficient municipal systems, not penalise households for investing in an asset that benefits the wider electricity network.**	Miles	self-employed

	2026-08-26 17:34:21	I support with amendments	All of the above	Grid Congestion & Transmission Delays	Residential Electricity Consumer / Ratepayer	This is a step in the right direction. Ultimately we need to get to a point where residential consumers can buy energy from private energy companies, such as Octopus in the UK. Tariff unbundling should not be seen as a “solar penalty”. It is purely splitting out the grid cost, which solar users benefit from, from energy consumption…which they do not pay for when they are utilizing solar energy. The allocation of the tariff unbundling needs to be closely monitored as Eskom is incentivized to weight more of the cost towards fixed grid costs.	Catherine	employed individual

	2026-08-26 15:10:20	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Wholesale market reform should proceed only if strict caps are placed on fixed network fees, captive ratepayers are protected, and municipal cross-subsidies are safeguarded. Why should solar users be penalised because Eskom can't provide the service they are paid for? Eskom also shouldn't be able to charge a connection fee, again for a service they cannot provide. We should all: Demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. Insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. Require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households.	Fleur	employed individual
	2026-08-26 15:17:29	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This is utter nonsense. With no hwlp from the government we were forced to make a plan for electricity. We were even encouraged to do so with discounts etc. We did so. Simply because Eskom now cannot balance their books thanks to muni's not paying etc, they are coming after the soft target of a paying consumer. This makes me want to take my WHOLE house offgrid so that no Eskom line touches it.	Liz	employed individual

	2026-08-26 16:20:15	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	A “Sun Tax” on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. The “Captive Ratepayer Trap” and Municipal Insolvency: Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance. Wholesale Price Volatility and Market Power Manipulation: Eskom Generation still controls the overwhelming majority of South Africa’s dispatchable baseload power. In unbundled spot markets worldwide, dominant suppliers have engaged in economic or physical withholding to artificially spike market clearing prices. Without hard statutory bid caps and aggressive oversight, wholesale price volatility will be passed directly down to retail consumers. Severe Conflicts of Interest Within the NTCSA: Consolidating transmission grid ownership (TNSP), system dispatch (SO), market clearing (MO), and legacy state off-take contracts (CPA) within a single entity under Eskom Holdings creates structural conflicts of interest. NTCSA could face internal commercial pressure to favour Eskom assets or delay third-party grid connections. Premature Market Launch Amid Unresolved Municipal Debt: Opening an advanced wholesale market with mandatory imbalance penalties in 2026/2027 while municipal distribution debt to Eskom remains unresolved is premature. Financially distressed municipalities that fail prudential credit requirements will be excluded from trading platforms, creating a divided nation of well-supplied metros and failing, power-starved rural councils. 	2026-08-27 10:09:10	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	When Eskom failed to supply efficient electricity to paying customers we installed solar power at own cost. Municipalities now want to penalise us for doing what we supposedly pay for. Also they need paying customers to support all the users who get free electricity. If I pay all should pay. Eskom has proven year on year that management is failing & there are multiple reasons. No private sector business would survive with similar vrot management. As we do not trust the powers that be to not mis-manage & plunder the coffers how can we possibly support them getting their grubby paws on even more money & leaving us more out of pocket because of our efforts to keep the lights on?	Helena	employed individual
	2026-08-27 10:10:52	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	Any Strategy should incentive employed Capital, whether from the larger private sector or small business owners. Individuals and businesses that used own capital to create capacity should be rewarded not penalised. All in all, capital should be respected in all aspects from generation big and small and distribution. The playing field should be level and healthy competition should be facilitated to ensure the end user get the best deal. The goverment has proven itself and its failures are blatant. Why carry on with a model that has proven itself fraught with holes in it. It is time to change and let the private sector do the magic. Competition is self regulatory and by its very nature will spit out corruption if the playing field is level. Accountability should be part of the structure. For instance, those municipalities that mismanage should be held accountable. Not just with consequences for corruption but simply feeling the pain that the constituents vote for performance, by vitue of feeling pain. A focus on sustainability. Just look at our Captains of industry in the private sector and how things are done there where there is a sustainablity focus on the short, medium and long term. And if they dont perform, the investors go somewhere else. Beautiful self regulated sustainable basics.	Jan	business owner
	2026-08-27 10:15:49	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		Alvin	self-employed

						I support the restructuring and unbundling of South Africa's electricity market and the introduction of competition into electricity generation and supply. South Africa urgently needs additional generation capacity, greater private sector participation and an end to the historic dependence on a single dominant electricity supplier. However, the purpose of electricity market reform should not simply be to introduce new suppliers. It should ultimately reduce the cost of electricity, improve efficiency, increase security of supply and make South Africa more economically competitive. South Africa has experienced years of inadequate electricity supply and rapidly escalating electricity prices. This has constrained economic growth, discouraged investment, increased the cost of doing business and placed an increasingly heavy burden on ordinary households. I therefore strongly object to any tariff structure that effectively penalises households and businesses that have invested their own capital in rooftop solar, battery storage and other forms of distributed generation. These consumers have responded directly to South Africa's electricity crisis. They have reduced demand on an already constrained generation system, invested private capital in additional generating capacity and, where appropriate infrastructure exists, have the potential to supply surplus electricity back into the national system. They should be encouraged, not penalised. I recognise that maintaining the distribution network has a cost and that consumers who remain connected to the grid should make a reasonable contribution towards the infrastructure they use. However, there is an important distinction between a reasonable, cost reflective network charge and using high fixed charges to recover lost municipal electricity revenue from consumers who have reduced their electricity purchases. Electricity tariffs should reflect the genuine cost of providing and maintaining the network. They should not be used to protect an outdated municipal revenue model or transfer the financial consequences of historic inefficiency, excessive expenditure or poor management onto consumers who have invested in alternative energy. The proposed reforms should instead create a genuinely competitive electricity market. If large industrial and commercial consumers are permitted to choose between electricity suppliers, households and small businesses should ultimately be afforded the same right. Competition should not be reserved for the largest electricity consumers while ordinary South Africans remain captive customers. A household should be able to choose an electricity supplier in much the same way that consumers can choose other service providers, while paying a transparent and reasonable charge to the distributor responsible for maintaining the physical network. Separating electricity generation, trading and distribution provides precisely the opportunity to make this possible. The same principle should apply to rooftop solar. Households and businesses should be encouraged to feed surplus electricity into the grid through simple and affordable connection arrangements. Electricity exported into the system could be purchased at competitive rates and made available to other consumers, including households that cannot afford to install their own solar systems. This would allow South Africa to mobilise billions of rand of private household and business investment in electricity generation without requiring the State to finance that generation capacity. The objective should therefore be to expand the number of electricity producers, expand the number of consumers connected to the electricity market, reduce electricity prices through competition and make reliable electricity available at the lowest sustainable cost. South Africa cannot restore economic growth by continuously increasing the cost of electricity to households and businesses. Affordable and reliable energy is fundamental infrastructure for economic growth, industrial development, employment and investment. I therefore request that the final electricity market framework incorporate the following principles: 1. Households and small businesses should progressively receive the same freedom to choose electricity suppliers that is proposed for large commercial and industrial consumers. 2. Grid charges should be transparent, reasonable and based on the actual cost of maintaining and providing distribution infrastructure. 3. Fixed grid charges should not be used as a mechanism to penalise consumers for reducing electricity consumption or installing private solar generation. 4. Rooftop solar and distributed generation should be actively encouraged as additional private investment in South Africa's electricity supply. 5. Consumers should be able to sell surplus electricity into the grid through simple, affordable and nationally consistent arrangements. 6. Electricity market reform should prioritise reducing the real cost of electricity through competition rather than preserving existing municipal electricity revenue models. 7. Municipal financial sustainability should be addressed through improvements in efficiency, expenditure control and appropriate municipal funding mechanisms, rather than through punitive electricity charges imposed on consumers who have reduced their dependence on municipal electricity. I support electricity market reform and the introduction of competition. However, it must be genuine competition. South Africa should not replace one electricity monopoly with a system in which large corporations receive access to competitive electricity while households and small businesses remain captive customers required to subsidise an increasingly expensive distribution and municipal revenue structure. The reform represents an opportunity to fundamentally change South Africa's electricity economy: more producers, more private investment, greater consumer choice, lower costs and greater economic growth. That opportunity should not be undermined by penalising the very households and businesses that have already invested their own money in helping to solve South Africa's electricity shortage.

	2026-08-27 10:41:40	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Why should we be penalised for heavily investing in equipment to produce our own electricity when Eskom couldn't keep our lights on, which is a basic right in South Africa. The government doesn't own the sunlight powering our investment into solar. If Eskom had supplied enough electricity at fair prices when we needed it, then we would not have had to heavily invest in solar on which we have already paid tax.	Clinton	business owner
	2026-08-27 10:54:12	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Sun Tax" on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. The "Captive Ratepayer Trap" and Municipal Insolvency: Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance. Wholesale Price Volatility and Market Power Manipulation: Eskom Generation still controls the overwhelming majority of South Africa's dispatchable baseload power. In unbundled spot markets worldwide, dominant suppliers have engaged in economic or physical withholding to artificially spike market clearing prices. Without hard statutory bid caps and aggressive oversight, wholesale price volatility will be passed directly down to retail consumers. Severe Conflicts of Interest Within the NTCSA: Consolidating transmission grid ownership (TNSP), system dispatch (SO), market clearing (MO), and legacy state off-take contracts (CPA) within a single entity under Eskom Holdings creates structural conflicts of interest. NTCSA could face internal commercial pressure to favour Eskom assets or delay third-party grid connections. Premature Market Launch Amid Unresolved Municipal Debt: Opening an advanced wholesale market with mandatory imbalance penalties in 2026/2027 while municipal distribution debt to Eskom remains unresolved is premature. Financially distressed municipalities that fail prudential credit requirements will be excluded from trading platforms, creating a divided nation of well-supplied metros and failing, power-starved rural councils. 	2026-08-27 11:36:17	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. Insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. Demand a binding, published transition roadmap that progressively lowers the eligibility threshold, ensuring retail market choice is expanded to ordinary households and SMMEs rather than remaining an exclusive corporate privilege. Require NERSA to implement mandatory tariff-parity benchmarks ensuring captive customer tariffs do not exceed wholesale-plus-efficient-delivery benchmark prices. Oppose any mechanism that uses captive household tariffs to recover stranded costs or uncompetitive legacy contract premiums.	Tanya	
	2026-08-27 11:43:02	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This government has failed the people of South Africa in all areas of governance. A lot has been due to no maintenance of facilities and infrastructure. Now, because of their inefficiencies, they want to penalise the general public for this and that will not be tolerated. They must collect all the outstanding amounts owed to them, the money "stolen" from them and all other illegal activities. Then they will have more than enough money to pay for all the shortfalls. One of the biggest problems that they have as a government now is dealing with the lies that they spread before 1994, by telling everyone that when they are in power you will not have to pay for these things. This is why the suburb of Soweto alone owes R billions to Eskom for electricity.	Mark	self-employed

	2026-08-27 12:01:15	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Whilst the Principle of the User Pay always applies. The government since 1994 has demonstrated a lack of financial acumen at Provincial and Local levels. Local level is where the consumer interacts directly with government and at this level the failure is evident in our daily experience. Fixed costs is a tax which is subject to annual reviews and becomes another point of rent collection by the government. If this tax is fully ring fenced and is based on actual OPEX requirement and bankable CAPEX projects then it is an honest tax. If it is used to pay salaries of various local over bloated government employees except staff directly involved in the electricity maintenance and projects, then government is being dishonest in the calculation of this cost. The process of tendering is a dismal failure due to the abuse of the processes and the cost of BEE premiums being paid.	Punkaj	unemployed individual

	2026-08-27 12:02:17	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	NERSA must place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. A tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs must be introduced rather than imposing flat availability taxes. An independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households is required. I oppose any mechanism that uses captive household tariffs to recover stranded costs or uncompetitive legacy contract premiums.	John	retired
	2026-08-27 12:44:40	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The government ALWAYS legislates the consequences of their failures to punish the taxpayer. The robbed, raped and pillaged Eskom, oversaw its destruction, breakdown and capture, actively managed its decline to appease their greed and implement their destructive policies. Because of their failures, the taxpayer had to come up with their own solutions to negate their mismanagement. And now the punish the people who helped create the additional capacity with punitive tariffs, rates to pay their bloated workforce, and finance their failures. Electricity and municipal rates are killing every paying resident. It is not sustainable. How about the executives take a serious pay cut, and the workforce is reduced to eliminate the real free riders?	Sandra	retired
	2026-08-27 13:35:12	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Once again, this government has caused the problem. the need for the purchase of solar power by the individual as they failed to actually do anything about it constructively, other than to line their own beds with our hard earnt money .. and now they see what individuals can do, they set about stealing in another way. this legal action of allowing charges to be made on the purchase of units over and above our solar production is nothing short of hostage taking. and who is going to foot the bill once the solar system needs to be refurbished in time, is there any pay back to help with this or will they once again resort to their criminal actions of loadshedding?? we don't buy an item to be charged a fee thereafter to keep using it - because it has caused a shrinkage in income, unless you're the government !!! .. who are the thieves here Mr. government, untrustworthy as always .. stop stealing and start fixing and doing what you promise to do at election times ..	carl	business owner

	2026-08-27 16:47:03	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The Ekurhuleni Municipality has failed their ratepayers across a broad spectrum of services. They are in financial distress and are utilising every possible avenue to generate revenue as they continue to decline. There is no doubt that the fixed charges will be abused. In the case of supply failure there is no recourse unless it is for more than 7 days, with a guaranteed painful experience if one were to attempt to claim a credit due to the failure. Why should the customer accept any electricity interruption albeit for 12 or 18 hours, fixed charges need to be supported by fixed service delivery commitments. Service delivery commitments that are four hours not two days or 48 hours. How can one make reference to high fixed infrastructure costs when maintenance is not carried out in areas that have been established decades ago. There aren't any fixed costs, there aren't any maintenance costs the council is just free riding on the poor consumer because they can't do a thing about. What will the fixed charges be for customers if they are recipients of "free electricity" which is being vocalised presently?	Gavin	employed individual
	2026-08-27 16:48:35	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	During the period of loadshedding, one was left in darkness and without electricity for hours, and sometimes every day. Eskom and the government could not solve the problem nor supply reliable power, which forced me, and many other citizens, to install solar panels and inverter, and a battery to have electric power. It cost me to withdraw my last savings to pay for the installation, and as a retired person, it was a hard blow to cover short fall on my income. Eskom is also suspected of corruption, employing incompetent officials, and signing overcharged contracts. They are responsible for their own downfall, and shortfalls, which they now want consumers, and taxpayers to pay for.	Jacob	retired
	2026-08-27 16:51:45	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Users should only pay for consumption and a reasonable service fee for connection to the grid. Thousands installed solar at great cost to themselves to solve the states energy crisis and the dreadful loadshedding day after day. Totally object to now potentially footing the bill for shortfalls from non payers and subsidising hundreds of illegal connections and social subsidy cases a lot of whom are illegally connected anyway.	Roz	retired

	2026-08-28 07:45:48	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Many South Africans have invested their own money in solar panels, inverters and batteries because of unreliable electricity supply and rising electricity costs. We have paid for this equipment ourselves and continue to pay for installation, maintenance, repairs and replacement. Solar users should not be punished financially for generating their own electricity and using less electricity from the grid. South Africans who have invested in solar are helping reduce pressure on the national electricity system and reducing the demand for electricity generated by Eskom. Introducing additional charges because consumers are using less electricity is unfair and creates a serious disincentive for people to invest in renewable energy. South Africa should be encouraging households and businesses to invest in solar and battery storage, not penalising them after they have already spent their own money doing so. I therefore strongly oppose any additional “solar tax”, fixed charge or other financial penalty specifically targeting households that have invested in renewable energy. We bought solar to reduce our dependence on the grid — not to be punished for doing so. I respectfully request that these proposed charges be rejected and that consumers who have invested in renewable energy are not unfairly targeted.	Jared	self-employed

	2026-08-28 15:00:57	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I submit this objection as a South African electricity consumer who has invested in rooftop solar generation in response to the country’s severe electricity-supply constraints, load shedding and the public encouragement of consumers to reduce demand through self-generation and energy efficiency. I support the objective of establishing a reliable, efficient, transparent and competitive electricity sector. I also accept that grid-connected consumers who use the electricity network for supply, backup, balancing, export or other services should contribute fairly to the efficient cost of maintaining that network. My objection is directed at any proposal or implementation that would impose disproportionate, insufficiently justified, opaque or retrospectively harmful charges on consumers who installed solar in good faith. 1. Consumers must not be retrospectively penalised Many South Africans invested substantial personal or business funds in solar systems because the national electricity system was unable to provide a reliable supply. These investments were undertaken at the consumer’s own risk and helped reduce demand on the national grid, maintain economic activity during outages and support the country’s transition to cleaner and more decentralised electricity generation. It would be unfair and contrary to sound public policy to encourage consumers to invest in solar during a supply crisis and subsequently undermine the economic value of those investments through new charges, restrictive tariff structures or reduced compensation for exported electricity. The reform process should expressly confirm that consumers who lawfully installed solar systems will not be subjected to retrospective economic disadvantage merely because they reduced their electricity consumption or began exporting surplus power. 2. Legitimate network charges must not become a disguised solar penalty The Position Paper contemplates unbundled tariffs and increased reliance on fixed or network-related charges. While cost-reflective pricing may be legitimate, a tariff can be formally “technology-neutral” while operating in practice as a penalty directed disproportionately at solar users. A solar customer may still rely on the grid for backup and other services, but that does not mean that the customer imposes the same costs as a customer who obtains all electricity from the grid. Solar customers may reduce energy purchases, reduce demand during certain periods, supply surplus electricity and contribute to local system resilience. Tariffs must therefore reflect both the costs imposed and the measurable benefits provided. I request an express commitment that: - no charge will be imposed solely because a customer has installed solar, batteries or embedded generation; all network, capacity, service, metering and administrative charges will be linked to a service actually provided; - the methodology and evidence supporting proposed charges will be published; - tariff structures will recognise the system benefits of distributed generation and accepted exports; and charges will not be designed to eliminate the legitimate financial benefit of lawful self-generation. 3. Cost-reflectivity must not protect inefficiency “Cost-reflective” pricing must refer to efficiently incurred and prudently managed costs of providing electricity services. It must not become a mechanism for recovering historical inefficiency, excessive losses, poor maintenance, non-payment, municipal financial problems or unrelated revenue requirements from consumers who have invested in solar. The Department, Eskom, municipalities and NERSA should publish independently reviewable cost-of-supply studies, including the assumptions, customer categories and cost-allocation methods used. The studies should distinguish genuine network costs from costs arising from operational inefficiency or unrelated financial obligations. Before any material tariff changes are implemented, the authorities should publish their projected effect on representative non-solar and solar customers, including households, small businesses, prepaid customers and customers with battery storage. 4. Exported electricity must be treated fairly Where a customer’s surplus electricity is accepted by the network, the customer should receive fair, transparent and predictable compensation or bill credits. The framework should clearly specify: - how export volumes are measured; - how export credits are calculated; - whether the time-of-use or peak-period value of exported electricity is recognised; - which charges may be offset by credits; - how unused credits are treated; and - when monetary compensation, rather than limited bill credits, will be available. The value of exported electricity should not be reduced to zero merely because the customer remains connected to the grid. Nor should fixed charges be structured so that legitimate export credits become practically worthless. 5. Registration and metering requirements must be proportionate Technical standards, registration, appropriate inverter settings and suitable metering may be justified on safety and grid-stability grounds. However, these requirements must be proportionate to the size and risk of the installation, affordable, consistently applied and supported by clear administrative procedures. Registration, inspection, connection or metering costs should not become indirect deterrents to distributed generation. Consumers should receive reasonable notice, practical guidance, accessible processes and sufficient time to comply. Fundamental requirements should also be applied consistently by Eskom and municipal distributors. 6. Transitional protection and meaningful consultation The Position Paper envisages a phased transition involving further market-design documents, revised codes, improved systems and stakeholder consultation. This approach should include specific protection for existing solar customers. I request: - no retrospective adverse tariff changes; - reasonable notice and phased implementation of new charges; - appropriate transitional or grandfathering arrangements for existing systems; - a published impact assessment dealing specifically with rooftop solar and battery customers; - meaningful public consultation on all related tariff rules and market codes; and - an accessible process for disputing incorrect metering, classification, billing or export-credit decisions. Consumers must be given sufficient information to understand the financial consequences of any new tariff before it takes effect. Conclusion South African consumers who invested in solar did not cause the electricity crisis. Many acted responsibly when the national system was severely constrained and helped reduce demand at precisely the time such assistance was most needed. Electricity-market reform should support efficient consumer behaviour, private investment, renewable generation and a just energy transition. It should not treat solar customers as a convenient source of additional revenue or retrospectively penalise them for reducing their dependence on the grid. I therefore object to any aspect of the proposed transformation that would impose disproportionate, opaque, inadequately evidenced or retrospectively harmful charges on grid-connected solar consumers. I request that the Position Paper and all related tariff and regulatory instruments be amended to include the safeguards set out above.	Michael	employed individual
	2026-08-28 16:01:51	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The sector does need to improve, but not at the cost of domestic consumer, particularly if they have invested in alternative solutions due to lack of service provision, prohibitive electricity costs or poor administration. Given how poorly municipalities in South Africa work, their powers in this regard need to be reduced, regulated, monitored and enforced.	Sarah	employed individual

	2026-08-28 16:03:05	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Consider a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. Households and businesses should not be forced to pay higher utility bills to cover old business losses and bad contracts.	Lebo	retired

	2026-08-28 19:45:13	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I dont understand why it has to be split- it seems that the more complex it is, the more people can make money out of electricity and the more likely there is to be problems (eg theft, failure of grid, corruption). It should be mandatory to have solar panels on all buildings in order to get eskom electricity, with the price you get for selling "solar" back to eskom, paying for the panels over decades. Eskom should store the solar in batteries and resell it at night at a much higher rate than during the day to recover the cost of batteries and load balancing equipment. I dont trust the people involved in this scheme to do the right thing, and I dont think the world knows the best way to switch over yet, thus lots of schemes initially, which will need to be modified to work well .	Jean	self-employed
	2026-08-28 19:51:51	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	For the Green Point Cape Town property, we pay fixed basic charges, increased annually, for water/sewerage and electricity. The water fixed charge is based on the CoCT supply pipe diameter, so the basic electricity supply could be based on supply line maximum demand capacity too, but for everyone equally, whether they have solar or not. A 60A 3phase, 230V historical connection can be downgraded to actual maximum demand, but this has not been raised as an issue thus far, should it? As a registered SSEG we are under-compensated (25%) for exporting solar power to the grid, as the PV system owners bear the risk of hardware reliability, not Eskom or the CoCT. The CoCT is also obliged to buffer Eskom's reaction to the revenue loss situation that Eskom knowingly caused. Electricity generation and transmission must be unbundled and I support non-Eskom owned generation and market competition. These models have been proven elsewhere in the world. SA doesn't have to invent solutions as these exist elsewhere, but anti-crony capitalism (corruption) controls must be in place, NERSA?	Dirk	retired
	2026-08-28 23:31:32	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	NERSA must place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments.	Jacques

	2026-08-29 11:10:43	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	While I appreciate that there are costs to maintaining the infrastructure, and that it may be necessary to institute a REASONABLE fixed charge for all consumers - this should include the big businesses. However, if a fixed "maintaince" charge is instituted, there should be a reduction in the charge per KW. Otherwise, if there is no reduction in the cost per unit, it simply means that Escom has now found a way to increase the cost of electricity for the man in the street. Added to this, Escom should pay those for the power they are willing to feed back into the grid, as they are now benefitting from the investment that they have made in solar panels, inverters, batteries, etc.	Trevor	retired

	2026-08-29 16:18:09	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	While users of self-consumption rooftop solar do benefit from power provided by the municipal and national grid infrastructure, the bulk of the power they consume is supplied via infrastructure that they have invested in. In most cases these investments were made to ensure access to electricity where municipal and national suppliers have failed to ensure consistent, reliable supply. The rapid and widespread increase in rooftop solar has resulted in reduced usage of scarce electricity supply which has gone a long way to provide headroom for Eskom and other incumbents to recover and improve in fulfilling their mandates ad publicly owned assets. To extract further rents from these citizens in the form of increases access charges is disrespectful and extortionate.	Stefan	employed individual

	2026-08-29 21:10:29	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The only 'free riding' entity is Eskom that wants to score once again to the detriment of consumers who were left in the dark, then pleaded with to fend for themselves and now will be punished because they did exactly what Eskom couldn't do! Tsêk Eskom!	Marie	
	2026-08-30 00:52:00	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Households and businesses were forced to install solar power because of the unreliability of state-supplies electricity. The result of this inefficiency led to the state-owned electricity provider losing a lot of revenue. It is not lawful to tax people on God-given natural resources, i.e the sun, because the sun is not owned by anyone, therefore free to utilise for solar-power generation. A competitive market is important in this instance because it will provide people with choice and I suspect make the unreliable service more reliable however, I suspect there are already contenders lined up for joining this gravy train and for the wholesale trading market to be owned by precisely the few who can't be trusted to create a fair, honest and transparent market - expanding their monopolies. This can only work if the regulators regulating the process are trustworthy and in possession of a conscience and sound morals, not bribable by the promise of a lot of money to profit themselves.	Erika	
	2026-08-30 10:22:02	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The government and municipalities are looking for new taxation and homeowners invested in solar installation is an easy target. I would suggest the minister should consider private solar installations an asset that could be aggregated and used for network reinforcement. Huge already installed battery capacity can support the network in times of need. Energy stored in private batteries can be put to good use for the public.	Zigmund	
	2026-08-30 11:31:33	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I think it is correct to separate infrastructure and usage costs, but large users must not be exempt from paying for infrastructure costs. This because 'larger' infrastructure had to be put in place for their (possible) use. Infrastructure costs should perhaps be calculated according to supply potential (connection "size" availability). It is also critical that usage charges are measurably LOWERED for all as usage rates will no longer carry infrastructure maintenance costs. It must not be allowed for Eskom or Municipalities to use this as an opportunity for unfair price increases. Government needs to find other methods (including legal attachment of 'perpetrator' assets) to recapitalise ESKOM and other state enterprises looted under their watch.	Zoltan	self-employed
	2026-08-31 09:13:56	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Millions of households and businesses invested their own savings into rooftop solar and batteries to keep their lights on when the state failed to do so. This also helps a lot during load shedding or power outages to have lights in our streets and neighbourhood, when criminals are most opportunities. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. 	2026-08-31 14:19:26	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I do not support the proposed shift towards high fixed grid charges for households that have invested in rooftop solar. Homeowners who generate their own electricity reduce demand on the grid, lessen pressure on public infrastructure, and contribute to South Africa's energy security at their own cost. It would be unfair to penalise these consumers simply because municipalities face declining electricity sales revenue. Instead, municipalities should follow the example of the City of Cape Town or suburbs like Midstream in Gauteng by allowing residents to feed surplus solar energy back into the grid and receive fair credits for the electricity they supply. Consumers who help solve the country's energy challenges should be encouraged and rewarded, not treated as a source of revenue recovery. The focus should be on fair, transparent grid costs and greater consumer choice, not protecting outdated monopoly revenue models at the expense of ratepayers.	Nino	retired
	2026-08-31 14:27:49	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. Insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. Require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households.	Bernard	employed individual
	2026-08-31 19:06:59	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Penalising households who've invested in solar discourages more people from investing in "green" power. Surely the Country wants more households to generate their own power to alleviate the problems of shortages.? It would be unfair not to allow households to choose their own supplier. Allowing competition amongst the independent suppliers would hopefully result in lower prices.	L	retired

	2026-09-11 12:12:03	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	There is already a levy placed on residential homes to cover fixed costs over and above consumption. Reduced consumption is better for the environment. Different households have different numbers of people living them. It simply does not make sense to charge people the same amount regardless of how much power they use - there will definitely be people who will take advantage causing a major surge in power use - which will have an environmental impact as well as potentially put pressure on the whole system from a supply and maintenance point of view and send costs up for everybody.	Briony	self-employed
	2026-09-11 16:28:05	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	Submission on SAWEM and Electricity Tariff Reform To the Department of Electricity and Energy, I support a competitive electricity market that improves efficiency, investment and consumer choice. However, reform must distribute costs fairly, protect smaller consumers and avoid penalising investment in solar generation and battery storage. 1. Fair grid charges and smaller connection options I object to excessive or discriminatory fixed charges based merely on solar ownership. Solar and battery systems can reduce grid demand and provide resilience during load shedding. Customers should benefit financially when they demonstrably reduce their demand on the network. I accept paying a reasonable charge for grid access and backup capacity. However, charges must reflect independently verified service and capacity costs, with comparable customers treated consistently. Distributors must offer affordable connection-capacity tiers. Customers who limit their grid demand through batteries or approved demand-limiting equipment should be able to select a smaller, cheaper connection without paying for capacity they do not require. 2. Time-of-use tariffs and fair peak-demand charges Time-of-use tariffs should encourage consumption when supply is plentiful and discourage it during constrained periods. Customers should benefit from shifting consumption, using batteries during peaks and, where permitted, exporting electricity when it is most valuable. Customers with unusually high peak-power requirements should bear an appropriate share of the additional infrastructure costs they cause. These costs should not be shifted unfairly onto average and below-average-demand users. Above a reasonable basic-capacity allowance, higher demand charges should apply where justified by additional network costs. These should reflect measured peak grid demand and its contribution to local network constraints, rather than monthly electricity consumption alone. Demand should be averaged over a published metering interval, not measured from momentary appliance-starting surges. Customers must be able to reduce these charges by limiting their demand or shifting it away from constrained periods. 3. Higher fixed charges must be accompanied by lower unit charges Where costs previously recovered through per-unit electricity tariffs are transferred into fixed or demand charges, the corresponding cost recovery must be removed from the per-unit tariff at the same time. The reduction must match the revenue being transferred—not necessarily produce an identical bill reduction for every household. Each tariff application must disclose the costs transferred, the resulting reduction per kilowatt-hour and the impact on low-, average- and high-use customers. Restructuring existing cost recovery must be revenue-neutral overall. Any separate revenue increase must be independently justified and disclosed. Fixed, demand and energy charges must not recover the same costs twice. 4. Fair contributions and capped subsidies All grid users, including large customers buying from private suppliers, should contribute fairly to the network services they use and transparently approved social obligations. Households and small businesses must not inherit disproportionate costs simply because larger customers change suppliers. I support limited cross-subsidies from high-density networks to more expensive rural networks, together with targeted support for poor households. These subsidies must be separately disclosed, independently audited and capped at a realistic, regulated percentage of a clearly defined tariff base. Tariff-funded support and tax-funded support must be accounted for together to prevent duplicate recovery for the same expenditure. Subsidies must not conceal inefficiency or unrelated municipal revenue shortfalls. 5. Municipal open access and consumer protection Municipalities must allow authorised alternative suppliers to sell electricity over their networks under transparent, non-discriminatory access rules and fair, regulated network charges. Supplier choice should be made practically accessible to households and small businesses, not reserved for large customers. Bills must clearly distinguish energy, network, capacity and subsidy charges. Municipal control of the network must not be used to preserve a retail monopoly. The wholesale market must also have effective oversight of dominant generators and traders, safeguards against price manipulation, and predictable retail options that protect smaller consumers from uncontrolled wholesale-price exposure. 6. Accountability for remuneration, cost recovery and project overruns While Eskom benefits from taxpayer-funded bailouts or debt relief, or receives tariff increases exceeding CPI plus one percentage point, annual increases in staff remuneration must not exceed CPI. This restriction must cover total remuneration—including salaries, bonuses, allowances and executive benefits—so that the limit cannot be bypassed through alternative forms of payment. Any tariff increase approved to recover historical losses must have an independently verified recovery amount, audited progress and a clear expiry date. Once that amount is recovered, the recovery charge must end immediately. Tariff reductions and, where necessary, subsequent below-CPI increases must remove its remaining effect and return tariffs to the CPI-linked path established before those exceptional recovery increases. Simply applying future CPI increases to a permanently inflated tariff base is unacceptable. Any separately approved new costs must be transparently distinguished from historical recoveries. New projects must have independently assessed budgets, completion schedules and reasonable contingencies approved before commitment. Costs exceeding those approved budgets must be absorbed by Eskom or its contractors, not passed to consumers through additional tariffs or to taxpayers through further bailouts. Budgets must not be retrospectively increased merely to legitimise overruns. Eskom's tariff, remuneration and investment decisions must remain subject to strict independent oversight while it dominates electricity generation. Relaxation of additional dominance-related restrictions should only be considered once genuinely independent generators provide at least 40% of actual electricity supplied—not merely installed capacity—and NERSA confirms that effective competition exists. Reaching that threshold must not automatically remove consumer protections, conditions attached to taxpayer support, or regulation of monopoly network charges. Yours faithfully,	Hanno	business owner
	2026-09-11 16:37:55	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Let's just stop the BS. We were asked to "please help", and now they want to penalise us because we are not paying anything (or very little.). Again, they should go and soak their heads. Why must we the rate payers be held liable because these bastards can't manage a country!	Irate	retired
	2026-09-11 17:12:02	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	As a farming business we were encouraged in 2023 with a tax incentive to install solar to ease the load on the grid and to ensure we could continue farming without interruption. Now as many of us complied to release the strain and Eskom now has enough capacity the government want to change the rules again. I would question the constitutionality of this proposal given the above. I support the unbundling of that ineffective behomoth called Eishkom but agree the poorer users need to be protected from minimum charges. People should be able to choose what they can afford to consume. A minimum charge to support and incompetent business is unfair.	Trevor	self-employed

	2026-09-11 17:12:18	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I support the introduction of genuine competition into South Africa's electricity market. What I do not support is a version of "competition" in which large customers are given meaningful freedom to choose their electricity supplier while ordinary households and small businesses remain captive customers, expected to absorb the residual costs of an increasingly obsolete monopoly model. Competition that I am not permitted to participate in is not consumer choice. If South Africa is serious about creating an open electricity market, then the end state must include a credible path for ordinary consumers to choose who sells them electricity, while paying a fair, transparent and regulated charge to the network operator for the physical infrastructure used to deliver it. I accept that an electricity grid costs money to build, maintain and keep available. A customer with rooftop solar who remains connected to that grid should make a fair contribution towards the network services that customer actually uses. What I strongly reject is the use of unavoidable fixed charges as a mechanism to protect incumbent revenues, compensate for declining electricity sales, preserve historic cross-subsidies indefinitely, or make self-generation economically unattractive. Grid charges must recover the efficient cost of providing grid services. They must not become an exit tax. This is particularly objectionable in the case of rooftop solar. South African households did not suddenly invest substantial amounts of their own money in solar generation, batteries and inverters because of some collective whim. They did so because the electricity system repeatedly failed them. For years, households and businesses were subjected to rolling blackouts and were forced to find ways to keep homes operating, businesses trading, security systems running, communications available and employees productive. Consumers spent their own capital building resilience against a problem they did not create. Those consumers should not now be treated as "free riders" because the investments they were forced to make have reduced the amount of electricity they purchase from the grid. That framing is extraordinarily difficult to accept. Consumers carried the financial consequences of electricity-sector failure once when they bought alternative generation and storage. They should not now be required to carry those consequences a second time through tariff structures designed primarily to recover revenue lost because those investments succeeded. Nor should residential and small-business customers become the financial shock absorbers for electricity-market reform. If large industrial and commercial customers are progressively able to procure electricity competitively, while smaller customers remain captive to Eskom or municipal retailers and are left funding legacy costs and lost cross-subsidies, the reform will have created two electricity markets: one offering choice and competitive pricing to those with sufficient scale, and another requiring everyone else to pay whatever is necessary to keep the old structure financially intact. That is not an acceptable long-term market design. The principle should instead be simple: If competition is being introduced, consumers should progressively gain access to that competition too. The physical electricity network is a natural monopoly and should be regulated accordingly. Electricity retail and generation need not be. Separate the wires from the electricity. Let the network operator charge a transparent, cost-reflective and independently regulated fee for using and maintaining those wires. Then create a practical roadmap under which households and small businesses can choose an electricity retailer or trader, just as larger customers increasingly will. A household choosing another electricity supplier does not make the poles, cables, transformers and substations disappear. The network operator should therefore be paid fairly for providing that infrastructure. But ownership of the wires must not translate into ownership of the customer. Similarly, consumers who invest in rooftop solar should be recognised as participants in a changing electricity system, not treated primarily as a revenue problem to be solved. Tariff design should account not only for the costs imposed by distributed generation, but also for its potential benefits: reduced daytime demand, distributed generation capacity, reduced system strain in appropriate circumstances, and electricity exported back into the network. Any fixed network charge should therefore be demonstrably based on efficient network costs, transparently calculated, subject to regulatory scrutiny, proportionate to the service provided, and applied without discriminating against customers merely because they have reduced their dependence on centrally supplied electricity. Most importantly, electricity-market reform should contain a clear pathway towards retail choice for ordinary South Africans. I therefore support the move away from a vertically integrated monopoly and towards a competitive electricity market, but I strongly object to any model whose practical outcome is: competition for large customers, captivity for everyone else, and higher unavoidable charges for the consumers who invested their own money to protect themselves from years of electricity insecurity. South Africans have already paid an enormous price for failures in the electricity sector. Market reform should give them more choice, not find more sophisticated ways of ensuring that they remain captive. Open the market. Regulate the grid fairly. Charge consumers transparently for the infrastructure they actually use. Allow households and small businesses a realistic path to choose their electricity supplier. And please do not call it competition until the people paying the bill are eventually allowed to participate in it.	Nino	retired

	2026-09-11 18:34:48	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I agree that partially connected users should be subject to an inspection - cheap and improper solar connections can cause harm . I agree that partially connected users should pay a connection fee - but I would argue that everyone should pay a flat connection fee , adjusted only for the amount of potential capacity : ie: Is user single or 3 phase , less than 63a , 63 to 300 a or 630a+ ,etc. There must be no subsidy for those stealing electricity. Completely off grid shouldnt have to pay for any electrical related item. Eskom should reduce connection fee for periods of failure - ie : if connection fee is R100 and downtime was 5% to an area , then that area should only be charged R95 - PERFORMANCE BASED All connections should go direct eskom for any municipality with outstanding / unpaid electricity to Eskom (ie: if a municipality is not up to date with ESKOM then the entire municipalities area should be direct ESKOM billed to make sure eskom gets their money . Good minicipal areas that are up to date or only slightly out can continue with their billing mechanics until they fall out of date by a certain determined percentage / timeframe. 	2026-09-11 19:35:28	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Strict caps must be placed on fixed network fees. Captive ratepayers must be protected and municipal cross-subsidies must safeguarded. The public who installed solar power saved South Africa's electricity industry from disaster caused by the ANC Government. These people who installed solar power are actually the heros in the country, so do not punish them. Get rid of the ANC cadres and such stealing the country bancrupt!	David	retired
	2026-09-11 20:43:49	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I support reform of South Africa's electricity sector where it increases competition, reliability, investment and long-term affordability. I strongly object, however, to the proposed approach to the recovery of system costs where this could result in substantial fixed charges being imposed on residential consumers, particularly households that have invested their own capital in rooftop solar, batteries and energy efficiency. The guiding principle to "discourage free riding" is particularly concerning. Households that have invested in self-generation are not free riders merely because they purchase fewer units of electricity from the grid. They have invested private capital in generating capacity, reduced demand on the national generation system, reduced peak demand in many circumstances, and improved their own energy resilience. A customer who remains connected to a distribution network should reasonably contribute towards the actual efficient cost of providing that network connection and capacity. That is fundamentally different from imposing a fixed charge designed to recover electricity-sales revenue that Eskom or a municipality has lost because the customer consumes less electricity. I therefore object to any tariff structure under which fixed network charges: 1. are used to recover lost electricity-sales revenue rather than demonstrable network costs; 2. become punitive for households that have invested in solar, batteries or energy efficiency; 3. materially weaken the financial incentive for households and businesses to reduce grid consumption or invest in renewable energy; 4. cross-subsidise inefficiency, excessive staffing, electricity losses, non-payment or other costs that are not attributable to the customer's use of the network; or 5. are imposed without transparent evidence showing how the charge has been calculated and what network costs it is intended to recover. I am equally concerned about the position of consumers who cannot afford self-generation. The proposed wholesale market should not result in large electricity users obtaining access to cheaper competitive supply while remaining residential and small-business consumers inherit a progressively larger share of municipal distribution costs and other cross-subsidies. The Position Paper itself commits Government to fair cost allocation and says that end-users should not bear disproportionate costs. That principle should be made enforceable in the subsequent market design and tariff framework. I therefore request that the final policy expressly require: Network charges to be cost-reflective, transparent and independently regulated, based on the efficient cost and capacity of the connection provided. Fixed charges not to be used as a mechanism for recovering revenue lost because customers have reduced their electricity consumption. Solar and battery customers not to be subjected to discriminatory or punitive charges merely because they self-generate. Tariff structures to recognise the benefits distributed generation can provide to the electricity system, including reduced generation demand and, where applicable, exported electricity. Explicit protection for captive residential and small-business consumers against disproportionate increases arising from the migration of large customers to competitive suppliers. Full regulatory impact and affordability assessments before material changes to residential fixed charges are approved. Clear disclosure of the costs allocated to generation, transmission, distribution, retail and cross-subsidisation so that consumers can understand precisely what they are being charged for. South Africa should encourage households and businesses to invest their own capital in additional generation, storage and energy efficiency. The electricity market should recover legitimate network costs fairly, but it should not convert declining electricity sales into an unavoidable fixed charge imposed on those who have invested in reducing their dependence on the grid. I therefore request that the "discourage free riding" principle be revised so that it clearly distinguishes between fair payment for an efficient network service actually provided and recovery of lost utility revenue from consumers who have reduced their electricity consumption. That distinction is essential to a fair, affordable and sustainable electricity market.	Jacques	self-employed
	2026-09-12 04:58:55	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I installed rooftop solar because Eskom could not generate enough and constant electricity - helping the state and removing pressure on my municipality (to the extent that we now have an oversupply). Maladministration and theft (at Eskom and municipality) landed them in financial trouble. The contemplated penalties now simply create another "pot" to be plundered. My taxes should be used to create a reformed electricity grid (since few other services are adequately supplied by state or municipality). Delinquent municipalities should repay debt to Eskom. Eskom should slim down and rid itself of incompetence. Criminals and incompetents should be removed from state structures. This will create the savings from which our electricity infrastructure should be funded.	Johan	retired

Bar municipalities from hiking tariffs on non-solar homes to cover lost revenue from industrial and off-grid defection. Ensure wholesale market reforms do not leave everyday households footing the bill for grid infrastructure.	Michael	retired
	2026-09-13 17:29:46	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	What the Policy Proposes: The position paper establishes the principle to “discourage free riding,” arguing that modern electricity networks have high fixed infrastructure costs and low operational costs. Under this framework, tariffs will shift away from pure volumetric consumption charges (cents per kilowatt-hour) toward mandatory fixed capacity and network charges for all grid-connected customers, regardless of how little electricity they consume. Only consumers who disconnect completely from the national grid will be exempt from these fixed fees. The Underlying Risk: Households and small businesses that invested significant private capital into rooftop solar, batteries, and energy efficiency to protect themselves from load shedding will be forced to pay higher monthly baseline connection fees. This structural shift acts as a financial penalty on private decarbonisation, extending solar payback periods and increasing electricity bills for low-volume and frugal users. What the Policy Proposes: The policy introduces a dual market structure dividing consumers into “Eligible Customers” and “Captive Customers.” Only large commercial and industrial consumers exceeding a specified demand threshold (e.g., 1 MW) will initially have the legal right to purchase directly on the open wholesale market or contract with private traders. All residential households and smaller commercial entities will remain “captive” to incumbent municipal or Eskom distribution retail tariffs. The Underlying Risk: Allowing the largest, highest-paying electricity users to exit municipal supply creates a two-tiered energy economy. As high-volume users migrate to competitive private contracts, the fixed costs of maintaining legacy municipal networks and state-owned infrastructure will be concentrated onto captive residential households, driving up standard retail tariffs. Points to Demand in Your Public Submission: Demand a binding, published transition roadmap that progressively lowers the eligibility threshold, ensuring retail market choice is expanded to ordinary households and SMMEs rather than remaining an exclusive corporate privilege. Require NERSA to implement mandatory tariff-parity benchmarks ensuring captive customer tariffs do not exceed wholesale-plus-efficient-delivery benchmark prices. Oppose any mechanism that uses captive household tariffs to recover stranded costs or uncompetitive legacy contract premiums. Points to Demand in Your Public Submission: Demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. Insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. Require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households. What the Policy Proposes: The position paper mandates the unbundling of electricity distribution businesses into separate regulated network service providers (“wires”) and licensed retail trading businesses. It also enforces strict prudential (creditworthiness) requirements for wholesale market participation, while acknowledging that many municipal distributors currently fail to meet baseline financial viability criteria. The Underlying Risk: Local municipalities rely heavily on the profit margins generated from bulk electricity sales to industrial and commercial clients to cross-subsidise indigent households, free basic electricity (FBE), and municipal service delivery. If large customers bypass local councils to purchase from private traders, municipal distribution revenues could collapse, accelerating local government insolvency and worsening service delivery failures across towns and cities. Points to Demand in Your Public Submission: Demand that the Department of Electricity and Energy, National Treasury, and SALGA establish a ring-fenced National Municipal Transition Mechanism before large commercial users are permitted to bypass municipal distribution accounts. Require municipal electricity distribution entities to ring-fence network maintenance budgets into dedicated accounts to prevent tariff revenue from being diverted into general municipal administrative expenses. Demand a transparent resolution framework for historical municipal bulk electricity debt that does not penalise paying ratepayers through inflated local tariffs. What the Policy Proposes: The position paper mandates the unbundling of electricity distribution businesses into separate regulated network service providers (“wires”) and licensed retail trading businesses. It also enforces strict prudential (creditworthiness) requirements for wholesale market participation, while acknowledging that many municipal distributors currently fail to meet baseline financial viability criteria. The Underlying Risk: Local municipalities rely heavily on the profit margins generated from bulk electricity sales to industrial and commercial clients to cross-subsidise indigent households, free basic electricity (FBE), and municipal service delivery. 	2026-09-14 07:20:04	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Increased fix charges and solar penalties will have the opposite effect and will not ensure more money is available for electricity generation, as it will force solar users to extend their systems, thereby reducing their dependency on Eskom and go totally off the grid. This will have a huge effect on municipalities and poorer households who cannot afford alternative energy sources and are totally dependent on the grid. This, in turn, will probably increase electricity theft and weaken the electric infrastructure even further, putting even more strain on the struggling municipality. Instead of penalizing solar users, they should rather be motivated to buy more electricity. If generator fuel and gas become more cost-effective electricity sources, Eskom and the municipalities will lose more customers.	Hantie	employed individual

	2026-09-14 08:21:10	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	With the suggested changes there is a lot of room for exploiting captive ratepayers. We are already paying enough per month for the connection fee to contribute to the maintenance of the infrastructure and should not be penalised for generating our own power for rooftop solar. Eskom should focus more on cost cutting in other areas of wasteful spending.	Conrad	business owner

						South Africans cannot be expected to finance unreliable supply, purchase their own protection, and then face escalating unavoidable charges because that protection reduced electricity sales. Reform must reward efficiency and restore accountability not make consumers the permanent guarantors of institutional revenue. I object to electricity reforms that recover declining sales and institutional failures through excessive fixed charges on households and small businesses, particularly those that invested in solar. Competition should deliver affordable, reliable electricity not leave ordinary consumers underwriting the transition. 1. Solar investment was a rational response to unreliable supply. During prolonged load shedding, households and businesses paid privately for solar panels, batteries and backup systems to protect livelihoods and maintain essential services. Many took on debt to do so. Characterising these consumers as “free riders” overlooks both their investment and the circumstances that made it necessary. Reduced purchases from Eskom are not, by themselves, evidence of an unfair subsidy. Any claim of underpayment must demonstrate the actual cost of serving these customers, including the measurable benefits their systems provide. 2. Grid charges must reflect efficient costs, not lost electricity sales. A functioning grid has unavoidable costs, and customers who retain access should make a fair contribution. However, that does not justify recovering every rand of lost sales through fixed fees. NERSA should require independently scrutinised cost-of-service studies before approving higher charges. These must distinguish network maintenance, customer administration and genuine backup capacity from inefficient expenditure, legacy debt and unrelated municipal funding requirements. Charges should reflect connection capacity and contribution to peak demand where practical, with affordable options for smaller connections. Owning solar panels should not itself attract a penalty. Separating energy and network charges must also remove the corresponding costs from unit prices, preventing double recovery. 3. Excessive fixed charges undermine the economics of conservation and solar. When a larger share of the bill becomes unavoidable, consumers have less ability to control expenditure by saving electricity. This affects pensioners, low-consumption households and small businesses as well as solar owners. Punitive charges could also encourage customers who can afford it to disconnect completely. That would leave fewer consumers funding the network, increasing pressure on those least able to leave. A better approach is reasonable fixed charges, phased implementation and transparent assessment of total bills across different household types. Existing solar investors should receive a predictable transition period. 4. Municipal financial distress requires financial reform. Municipal arrears should not become an automatic surcharge on consumers who already pay their accounts. Where electricity payments have been collected but not remitted, charging compliant customers more effectively asks them to pay twice. Priorities should include ring-fencing electricity receipts, improving billing and collection, reducing theft and technical losses, and enforcing accountability for diverted funds and failed payment commitments. Any further taxpayer support should be transparent, limited and conditional on independently verified improvements. Moving costs from electricity bills to the national budget does not make them disappear: citizens still pay, directly or through reduced funding for other services. 5. Competition must benefit households and small businesses too. If larger customers gain supplier choice first, government must publish how their departure affects remaining customers. Households should not inherit a disproportionate share of legacy costs and municipal revenue shortfalls. Introduce a clear timetable for smaller user participation through aggregation, community energy schemes and accessible wheeling arrangements. Retain fair network contributions from all users of the wires, including customers buying energy from private suppliers. Support for indigent households must remain explicit, targeted and accountable. Protecting vulnerable consumers should not depend on an ever shrinking pool of captive electricity buyers. 6. Reward useful solar and storage services, and control market power. Offer transparent export payments reflecting the value of electricity when and where it is supplied. Reward batteries and demand reduction that demonstrably reduce evening peaks or network constraints. Solar does not eliminate every grid cost, but its benefits should be valued alongside its costs. Wholesale reform must include independent market oversight, transparent trading rules, monitoring of dominant generators and enforceable action against manipulation. Household default tariffs should protect consumers from unmanaged wholesale price exposure. Eskom needs to revisit and revise the framework to require demonstrably fair network charges, household affordability assessments, protection against double recovery, meaningful municipal accountability and a funded path to broader consumer choice.

	2026-09-14 10:24:55	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Energy Sector Professional / Engineer	Mandatory Fixed Grid Charges on Rooftop Solar: The policy explicitly discourages renewable energy projects and energy saving. Already there are too many unexplained non commodity charges which makes the first kWh most expensive. The more you use, the cheaper the energy becomes. If there are zero non commodity charges the first kWh is as cheap as the last, encouraging less use. As a state industry Eskon should encourage energy conservation, not the reverse. It also encourage Eskoms use of fossil fuels which are harmful to the health of the people and encourages global warming. The “Captive Ratepayer” Risk: The whole market should be open to competition allowing people to choose their supplier. Both the municipalities and Eskom should loose their monopoly supplier/retailer status. Further, with Eskom Generation remaining the dominant producer, risks of market power, pricing manipulation, and trading speculation could translate into retail tariff volatility if regulatory protections are inadequate. Eskom should divest power stations and become the transmission operator. Power generation, distribution and electricity sales (“retail/trading”), should be all open to competition with separate fees. Eskom, as the remaining monopoly, should be under tight financial and system control by the regulator to avoid Rolls Royce operations.	Clementine	business owner

	2026-09-17 15:29:55	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I invested in solar primarily for security reasons. I am retired, in my 70's and was feeling extremely insecure every time I was faced with load shedding. Penalising anyone for mitigating the "supplier's" shortcomings is simply unjust. There should be no concessions for "Luddites" in any event. Eskom needs to build and retain its capacity within the strictures of available technology, not seek the easy way out by penalising the very people that have been forced into this position.	Nigel	retired
	2026-09-17 15:42:57	I support with amendments	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges unfairly penalises energy-conscious citizens, who's country wide investment of millions of Rand in solar solutions to assist Eskom's fragile infrastructure by reducing the demand on the network. It also extends solar payback periods, and discourages private decarbonisation. It punishes legal users of the electricity and leaves ALL illegal connectors unaffected. So private owners of rooftop solar and batteries will endlessly continue to subsidize illegal connections, the resulting damage they cause. It unfairly punishes legal law abiding users for the losses caused by illegal connections and the unabated theft of copper cable.	Michael	retired

	2026-08-29 05:29:01	I support with amendments	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	It is understandable that people who have installed solar are no longer supporting the infrastructure required to get the electricity to their homes. A base provision charge is not a bad idea as long as it is controlled and capped. This could be offset by allowing for those with excess generation capacity to be reimbursed for what they feed back into the grid. Incentivise small scale embedded generation and structure the incentives to support the demand. Eg, pay more for after dark or high demand times than when there is excess. Use excess to charge national storage systems like pump storage schemes. This model incentivises people who are able, to participate in the solution rather than making a plan for themselves to work around it.	Guy	employed individual

	2026-08-29 13:43:01	I support with amendments	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	ESKOM is so inefficient and is looking for ways to recover it's excessive costs in any way. Now Solar users are targeted and they have all the marketing power as a monopoly to set rates without any competition. I know we use the grid as back up and have to conribute to maintaining it but that is where the problem comes in. With ESKOM inefficiency and incompetence which in the first instance made us run to solar power because of their unreliability. Now they are boasting about excess capacity which they only have because of independant power producers like us even though we are dependant on the sun. Over and above that pensioners have invested their lump sums in solar because of this but get no recognition for it in terms of better tariffs.	Zjaan	retired
	2026-08-29 18:44:49	I support with amendments	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	Once again trust in Eskom is betrayed Instead of being a responsible producer of the lifeblood of industry (and a civilised standard of living) they are still trying to suck every last little bit of initiative and self reliance (which they have forced on us!) to enlarge their comfort zone Eskom is uncontrollable and this must change!	Patricia	retired

	2026-09-07 11:43:38	I support with amendments	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	Solar power and all other alternative private power sources should NOT be charged or penalized. When an individual buy and install equipment to generate power, they should NOT be charged a fee to use their own equipment to produce power. It would be a good thing to establish more power providers so that people can have a choice.	Jesica	retired

						e All Images Videos News Maps Books Finance Here are three options for your petition comment, ranging from short to slightly more detailed. They are written from the perspective of an external South African citizen standing in solidarity, ensuring your exact stance is clearly communicated. Option 1: Ultra-short & Punchy (Best for tight character limits) As a fellow South African, I strongly support the progressive welfare steps in the City of Cape Town's Draft Animal Keeping By-law, 2026, specifically the bans on glue traps, the chaining of security dogs, and the abuse of cart horses. However, I completely oppose Sections 2 and 3. Mandatory paid pet permits, unconstitutional warrantless search powers, and arbitrary property quotas are draconian overreaches that will harm compliant owners while failing to stop unpoliced offenders. This sets a dangerous legislative precedent for the rest of our country. Dear South Africa +1 Option 2: Passionate & Balanced (Recommended) While I live outside of Cape Town, this draft by-law sets a critical tone for municipal animal legislation across South Africa. I fully applaud the excellent, overdue protections against animal cruelty, including outlawing glue traps, protecting working equines, and ending the chaining of security dogs. However, I strongly object to the heavy-handed municipal control over private households. Paid permits for every dog and cat over six months old, neighbor sign-offs, and restrictions on backyard food production are completely unfeasible and open to abuse. Worse, granting officials the power to enter and search private premises without a warrant directly tramples on basic privacy rights. Protect animals, but do not criminalise responsible pet owners. Option 3: Short & High-Impact I strongly endorse the draft by-law's historic protections for working cart horses, guard dogs, and the ban on cruel glue traps. But as a South African watching the precedent this sets, I must voice my outright opposition to the over-regulation of private households. Mandatory paid permits, strict property pet quotas, and backyard farming restrictions will heavily penalise law-abiding citizens while remaining completely unpolicable in vulnerable areas. Furthermore, empowering officials with warrantless entry to private properties is a massive overreach prone to corruption and abuse. Fix the over-regulation; keep the welfare advancements! ? Quick Tip for Submitting If you are also pasting this directly onto public participation platforms tracking this draft legislation (like the active campaign hosted on Dear South Africa), you can select the option to "Shape" or "Amend" the policy rather than just a flat "Disapprove" so that the city handles your input constructively. Dear South Africa Would you like me to modify the tone of any of these options, or do you need help drafting a formal email submission to the City of Cape Town instead? AI responses may include mistakes. For legal advice, consult a professional. Learn more		
						Dear South Africa Would you like me to modify the tone of any of these options, or do you need help drafting a formal email submission to the City of Cape Town instead? AI responses may include mistakes. For legal advice, consult a professional. Learn more Here are three options for your petition comment regarding the Department of Basic Education's (DBE) "ECE Toolkit". They are tailored to be short, passionate, and directly highlight your objections to the curriculum's contents, the lack of public consultation, and the infringement on parental rights. Option 1: Ultra-short & High-Impact (Best for character limits) I strongly object to the rollout of the ECE Toolkit for children aged 0 to 9. Children at this foundational stage lack the developmental capacity to understand complex gender ideology; they should simply be allowed to be children without unnecessary ideological confusion. Furthermore, the DBE's refusal to hold a public participation process is completely unacceptable. Education policies must respect parental rights and community values through open, transparent consultation. Option 2: Passionate & Focused on Rights (Recommended) I am entirely against the implementation of the ECE Toolkit in our primary and pre-primary schools. Introducing transgender ideology to children as young as toddlers is entirely inappropriate and amounts to early-childhood brainwashing. I also strongly condemn the Department of Basic Education's attempts to bypass public scrutiny. Parents have the primary right and responsibility to guide their children on these deeply personal matters. The state cannot covertly strip away parental rights and exclude the public from decisions that shape our children's minds. Option 3: Direct & Urging Accountability The DBE's ECE Toolkit is a massive overreach that undermines both parental authority and the innocence of young children. Pre-primary and primary school children need to focus on foundational literacy, numeracy, and play—not confusing gender identity programmes. For the DBE to claim that public participation is not required is an insult to our democracy. I demand that the implementation be halted immediately and that full, transparent public consultation takes place. ? Next Steps for Submission If you are submitting this via the civic portal on Dear South Africa's ECE Toolkit Campaign, your comment will be delivered directly to the relevant decision-makers at the Department of Basic Education. Would you like me to: Draft a formal objection letter to send directly to the school governing body instead? Adjust the phrasing of these options to be more technical or more emotional?		
	2026-09-07 14:42:07	I support with amendments	All of the above	Market Power & Price Manipulation	Residential Electricity Consumer / Ratepayer	Here are three tailored options for your petition comment regarding the SAWEM structural roadmap, specifically focusing on your objections to mandatory fixed solar charges, the burden on captive consumers, and the financial threat to municipalities. Option 1: Ultra-short & High-Impact (Best for tight character limits) While energy reform is necessary, I strongly object to the SAWEM roadmap penalising ordinary households and small businesses. Introducing high, mandatory fixed grid charges on rooftop solar actively discourages clean energy investments and punishes self-generation. Furthermore, allowing large industries to bypass municipal grids will leave everyday citizens as "captive ratepayers," stuck absorbing massive tariff hikes to cover municipal revenue deficits. This transition must not happen at the expense of the working class	Jill	retired

	2026-09-12 19:01:20	I support with amendments	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	This is monopolism of the highest order. It is parasitic in its origins and effects. Only the elites, including the politically connected alongside monopoly capitalist institutions and corporations will benefit from this in its current form. This is neither socialism nor true capitalism, but oligarchic monopolism, which knows no cultural or racial boundaries. A vicious form of parasitism seen no where else in nature - a select group of individuals sucking the energy and blood of its own kind. Im nature such behavior is always subject to counter-balancing. In human society, greed (the desire for unearned income) and which is unique to civilized mankind is what permanently prevents balance unless it is socially regulated for equitable, just and fair outcomes. 	2026-09-21 09:54:03	I support with amendments	All of the above	Municipal Financial Collapse	Energy Sector Professional / Engineer	1. Greenpeace Africa welcomes the opportunity to comment on the draft Electricity Sector Market Transformation Position Paper (the Paper). We support the direction of reform: ending the single-buyer model, opening the grid to new participants and building the institutions of a competitive wholesale market. We also recognise that the Paper arrives after a period in which the electricity system has visibly recovered (SAnews 2026a; Eskom 2026). Our position is one of support with amendments. Our submission is organised around one question: who carries the costs of this transition, and who captures its benefits? South Africa ranks as the most unequal of the 164 economies in the World Bank's inequality database (World Bank 2022). Official unemployment reached 33.6% in the second quarter of 2026, leaving 8.5 million people unemployed, including 5.0 million young people aged 15 to 34 (Stats SA 2026a). Electricity tariffs have risen by more than 900% since 2007, according to the Minister (McLeod 2026). In this context, the design of tariffs, market eligibility and cost-recovery rules is not a technical footnote. It will determine whether electricity remains a shared foundation for dignity and opportunity, or becomes another dividing line between those who can exit the grid and those left to carry its fixed costs. What we welcome: - A market architecture that ends single-buyer dependence and separates the wires from the sale of electricity, creating cost transparency that hidden municipal cross-subsidies have lacked. - A stated commitment to just and inclusive decarbonisation, technology-neutral market rules and regulatory protection for vulnerable end-use customers. - Clarity that fully off-grid customers pay no system charges, and recognition of small-scale embedded generators as market participants. - A legal and institutional foundation, in the form of the Electricity Regulation Amendment Act and a licensed Market Operator, that is already in place. What must be strengthened: - Fixed and network charges must be designed so that low-income and low-consumption households are not penalised for being poor. -The divide between "eligible" and "captive" customers needs a binding, time-bound path to wider choice, and cross-subsidies must move into an explicit, universally funded mechanism. - Free Basic Electricity and social tariffs should be embedded in the market rules and delivered directly, rather than left to municipal discretion. - Households must be insulated from wholesale volatility and market power, drawing on the experience of other markets. - Institutional independence (particularly of the National Transmission Company of South Africa, NTCSA), open contracting and integrity safeguards must precede the entry of private transmission and bilateral deals. - Implementation should be gated by published readiness criteria, with a distributional impact assessment before the market opens beyond Eskom. 2. From a social justice lens: Why distributions matters as much as efficiency? Market reform is usually judged on efficiency: price discovery, investment and reliability. These matter, and we address them below. But in an economy with South Africa's inequality profile, reform must also be judged on incidence. The same policy can lower the average cost of electricity while raising it for those with the least capacity to adapt. Three features of the South African context make this unavoidable. • Adaptive capacity is concentrated. Households and firms with capital can install solar and storage or contract directly; those without cannot. Wealthier customers are more likely to defect, in part or in full, from the grid (BER 2025), leaving municipalities with shrinking revenue bases while they carry the fixed costs of ageing networks (Mail & Guardian 2026). • Municipal cross-subsidies carry part of the social contract. Electricity sales made up about 26% of total municipal revenue in the first half of 2023, and roughly 60% of urban households and small businesses are supplied through municipalities, which add a mark-up that helps fund other services (Polity 2026b). The Constitution makes electricity and gas reticulation a local government function and obliges municipalities to provide services in a sustainable manner (Republic of South Africa 1996, s 152(1)(b) and Schedule 4B). • The generation base is still carbon-intensive. Coal supplied about 83% of electricity generated in 2024, and renewables about 9% (Stats SA 2026b). The workers and communities tied to that system are the ones the Paper says must be protected (DEE 2026; TygerBurger 2026). We propose that every element of the market design be tested against five questions. They are consistent with the goal of affordable, reliable and modern energy for all (United Nations 2015, SDG 7) and are used throughout this submission. Access and affordability - does the design keep a basic supply within reach of every household, including those who cannot pay consistently? Fair cost-sharing - recovering the fixed cost of networks is legitimate, and we accept it. Cost-reflective, however, must not become regressive: allocation should reflect ability to pay. Transparency and accountability - are cross-subsidies, charges and market outcomes visible, contestable and independently overseen? Inclusion in the transition - Can workers, youth, municipalities, cooperatives and small generators take part in the market, not only its largest players? Prudent sequencing - do market functions open only once consumer protections are operational? 3. We wish to be clear that much of the Paper is a positive step. The following shifts deserve to be recognised and preserved in the final policy: - A credible platform after a hard-won recovery - Transparency through unbundling - Commitments to inclusion and protection - Alignment with the energy transition	Siyabonga	employed individual

	2026-09-28 13:04:05	I support with amendments	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	One thing i do know, is that our current ANC government are thieves. They dont care for the greater good, so that is a HUGE problem for me. All i feel is that im pay and pay, then paying extra to get absolutely nothing out of our municipalities. I'm happy to pay, but i want running water in my taps, lights on in our streets and highways at night (not day), potholes fixed grass cut. My are hasn't has water in 2 weeks!!!! Support with Amendments: Wholesale market reform should proceed only if strict caps are placed on fixed network fees, captive ratepayers are protected, and municipal cross-subsidies are safeguarded. 	2026-10-07 20:00:45	I support with amendments	All of the above	Municipal Financial Collapse	Residential Electricity Consumer / Ratepayer	While I believe it is time to dismantle Eskom's dominance and allow for other producers to enter the market, the residential consumer needs to be protected against price hikes to make up municipal deficits and those with solar power should not be penalized as they have taken initiative and have decreased the load on the system. They should not now have to pay excessive fixed fees for the relatively small amount of power they use. Everyday residential users are already carrying a high burden to make up for shortfalls for areas that are unable to contribute to municipal finance, rather the exorbitant salaries of politicians should be decreased in order to, literally, provide power to the people.	Helene	
	2026-10-06 19:22:13	I support with amendments	All of the above	NTCSA Conflicts of Interest	Residential Electricity Consumer / Ratepayer	Eskom has to be unbundled into individual companies as proposed in order to see which division isn't profitable due to being overstaffed and inefficient. Also there must not be barriers to entry for IPP's. Furthermore, qualifying residential solar/PV's should be incentivised to export power into the grid instead of trying to penalise consumers for an issue that was created by Eskom in the first place.	Stephen	self-employed
	2026-10-20 18:32:52	I support with amendments	All of the above	NTCSA Conflicts of Interest	Residential Electricity Consumer / Ratepayer	Searched the web Here's your objection with those points included. I've worded it as opposing the proposed hike and licence disc fee, because my search found neither has been approved. I also read your two foreigner points as (1) charging more to foreign motorists and (2) not paying RAF compensation to foreign nationals, legal or illegal. Tell me if you meant something else. NO, I OBJECT to the proposed R3.00/litre RAF levy increase and the proposed licence disc tax, and I DEMAND the reinstatement of fuel levy relief. South African motorists are already under severe pressure from record fuel prices. Charging us at the pump and again at the annual licence renewal counter is double taxation. I call on National Treasury to immediately reinstate the emergency General Fuel Levy relief that expired on 30 June 2026, to protect households and businesses from further price shocks. I also object to bailing out the Road Accident Fund's administrative waste and multi-billion-rand legal fee leakages. Motorists should not pay more until the RAF fixes its own house and puts accident victims before lawyers. The licence disc tax, justified by electric vehicles, is a blanket penalty on all fuel users and should be rejected. If more money must be raised, it should not come from South African motorists alone. Foreign nationals and foreign-registered vehicles that use our roads should pay more. I also believe RAF compensation should not be paid out to foreign nationals, whether legal or illegal, while South African victims and taxpayers carry the cost. Finally, I call for retail petrol price deregulation into a maximum price cap, so pricing is more competitive and transparent. A few things to know before you submit: The R3.00 hike was pushed back. The RAF proposed it, but Transport Minister Barbara Creecy said that as long as she is in the job, she will not apply to the National Treasury to increase the RAF fuel levy. The licence disc fee is still being considered, and one report says no new RAF licence-renewal fee has been finalised. You may want to say "oppose any" rather than "oppose the" so the comment stays accurate. businesstech capetownetc Part of your foreigner point is already being considered. The RAF's proposals include implementing the levy on all foreign-registered motor vehicles entering South Africa. You could mention that you support that part. businesstech Charging foreigners more is hard at the pump, because fuel is sold to everyone. It works better as a levy on foreign-registered vehicles, so your comment might say that instead of "charge foreigners more" generally. RAF payouts to foreign nationals. I couldn't confirm how the RAF currently treats foreign claimants, so check that before asserting it. If you want, I can look it up. Your RAF waste point has support. The SIU found the RAF has been severely mismanaged for several years. topauto For balance, the RAF argues that its levy was frozen at R2.18 per litre from 2021/22 to 2025/26 and that fuel sales have fallen. Others note that EVs don't pay fuel tax but can still claim from the RAF after accidents. Your comment is stronger if it answers these points, for example by demanding reform before any new charge. topauto briefly I can make it shorter for a comment box or more formal for an official submission. Screenshot_20261020_182618_com_android_chrome_CustomTabActivity.jpg Support with Amendments: Wholesale market reform should proceed only if strict caps are placed on fixed network fees, captive ratepayers are protected, and municipal cross-subsidies are safeguarded. And the government and relevant departments should ensure that the are Mandatory fixed solar charges, captive consumer price hikes, and municipal revenue losses will hurt ordinary households and small businesses. The screenshot has other points that all relevant parties should consider as part of amendment to ensure that no one is left behind especially households and smmes Searched the web Here's a comment that covers your points and every issue listed in the screenshot: I SUPPORT the wholesale electricity market reform WITH AMENDMENTS. Reform should proceed only if strict caps are placed on fixed network and capacity charges, captive ratepayers are protected, and municipal cross-subsidies are safeguarded. A competitive market must not be built on the backs of ordinary households and small businesses. I ask the government and all relevant departments and regulators to address the following: 1. Fixed charges and solar penalties: Mandatory fixed charges must be capped and cost-reflective. They must not punish households and SMMEs that install solar or try to use less electricity. 2. Captive consumer tariff protection: Customers who cannot switch suppliers must be shielded from price hikes, and any transition costs must not be passed on to them. 3. Market power and price manipulation: Strong rules and active monitoring are needed so that large players cannot manipulate prices in the new market. 4. Municipal financial collapse: Many municipalities depend on electricity revenue. Reform must not strip that income and leave communities with failing services, and existing cross-subsidies that support poorer households must be protected. 5. NTCSA conflicts of interest: The market operator and transmission company must be independent, with clear safeguards against conflicts of interest. 6. Grid congestion and transmission delays: Delays in expanding the grid must be resolved, so the market is not undermined and consumers do not pay for constraints they did not cause. Mandatory fixed solar charges, captive consumer price hikes and municipal revenue losses will hurt ordinary households and small businesses. All parties should treat these as essential amendments so no one is left behind, especially households and SMMEs.	Siboniso	unemployed individual
	2026-08-26 15:48:25	I support with amendments	Municipal Financial Collapse		Small / Medium Business Owner (SMME)	I support separation of usage and transmission costs for electricity. I support all users, even if only nominal users, of electricity paying a fair share of transmission costs to ensure proper maintenance of the grid. However, I have two main concerns. 1. Municipalities must be limited in how much can be charged for transmission (or availability) costs. I have a small unit in Johannesburg, where the transmission (availability) cost is R 1050 per month, and the typical electricity usage cost is around R 200 per month. The transmission cost to make electricity available is nowhere close to 5 times the electricity cost. 2. If I pay a fixed transmission cost, I want fixed availability of electricity. If, due to some transmission fault, electricity is not available for any period during a month, the fixed transmission cost must be reduced pro-rata for that month. I also have two questions. 1. If a property is completely off-grid without any electricity connection at all, will the transmission fee still apply? In this case it seems unreasonable to charge a transmission fee. 2. Will the transmission fee replace the existing availability fee charged by many municipalities? It seems to me reasonable that this should be the case because these two fees are covering exactly the same thing.	Geoffrey	business owner
	2026-08-26 18:43:43	I support with amendments	Municipal Financial Collapse		Residential Electricity Consumer / Ratepayer	Municipalities are trying to support costs and theft with steeper costs for the average consumer. Payment for electricity infrastructure by all households using the grid is acceptable I believe, but the rates and costs are already too steep. Unbundling Eskom is just another opportunity for more high salaried senior staff and profiteering.	Coral	employed individual

	2026-09-11 17:16:48	I support with amendments	Municipal Financial Collapse		Residential Electricity Consumer / Ratepayer	Competition is a good thing. If eskom dont learn how to change they will eventually fail. But you CANNOT PUNISH the people because eskom don't want to change. Freedom of choice is part of our democracy. Eskom is a monopoly. It gives you no choice. But things are starting to change. So should eskom.	Darryl	
	2026-09-11 20:58:40	I support with amendments	Municipal Financial Collapse		Residential Electricity Consumer / Ratepayer	While I concede that the current structure penalises Eskom in the sense that it is providing infrastructure etc. to provide electricity when the sun doesn't shine their proposal is unfair. What they should do is apply a significantly higher price structure between 6pm and 6am to encourage people to make use of cheaper power during the day by heating their water geysers and running pool pumps etc. thus helping balance supply and demand. To apply a simple infrastructure levy is unfair for those who have made infrastructure investments to make up for Eskom's deficiencies. It is fining people for defending themselves.	Stuart	retired
	2026-09-12 00:00:15	I support with amendments	Municipal Financial Collapse		Residential Electricity Consumer / Ratepayer	Many municipalities have failed. Why not clean them up to get income again. We can't rely on the small pool of the middle class taxpayers who pay the majority of the tax. It will bleed them drier than it has. I support market reform and not monopolisation of Eskom. These tariffs and fines should have been introduced as soon as people had solar panels installed, not years later. Government has to keep their finger on the pulse and act immediately to deter others from adding them/ its a fast-paced world and government needs to be proactive and not stall. And away should households without solar also a be punished because of municipal incompetence. We need to wake up and look after the taxpayers as more and more are leaving for better life and work conditions. Minister of electricity, with all due respect, this is a shameful, and nonsensical suggestion. Please apply your mind and reconsider. Regards Pam - concerned person on disability looking after physically disabled mother and cannot afford more and more charges without breaking the bank	Pam	retired
	2026-09-12 00:42:54	I support with amendments	Municipal Financial Collapse		Residential Electricity Consumer / Ratepayer	Eskom unbundling, and open wholesale trading are essential. 1. But, as long a inefficient, incapacitated, corrupt municipalities are tasked to "tax" electricity the whole effort is carried out on the back of ordinary consumers. Get electricity out of the hands of municipalities and reinvent how local municipalities are funded / taxes. 2. To let large consumers (industry, mines, etc.) bypass municipal electricity supply is in principle a good move. But, then they need to contribute to the municipal coffers in other ways, otherwise it leads to ordinary consumers having to take up the "slack".	Jürg	retired
	2026-09-14 03:17:35	I support with amendments	Municipal Financial Collapse		Residential Electricity Consumer / Ratepayer	While there are upsides to to some of the reforms, the downsides are that mandatory fixed solar charges, captive consumer price hikes, and municipal revenue losses will hurt ordinary households and small businesses.	nic

	2026-08-27 11:55:23	I support with amendments	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	The policy introduces a dual market structure dividing consumers into “Eligible Customers” and “Captive Customers.” Only large commercial and industrial consumers exceeding a specified demand threshold (e.g., 1 MW) will initially have the legal right to purchase directly on the open wholesale market or contract with private traders. All residential households and smaller commercial entities will remain “captive” to incumbent municipal or Eskom distribution retail tariffs. The Underlying Risk: Allowing the largest, highest-paying electricity users to exit municipal supply creates a two-tiered energy economy. As high-volume users migrate to competitive private contracts, the fixed costs of maintaining legacy municipal networks and state-owned infrastructure will be concentrated onto captive residential households, driving up standard retail tariffs. There is also a third "invisible" market, which is illegal connection users and users that are hundreds of thousands or millions of Rands in arrears. One could argue that in order to accumulate such an arrear amount, the pressure put on the grid is much higher than the average homeowner. Ultimately a move like this will just push more people who can afford it to go completely off-grid, putting even more pressure on those who can't.	Heinrich	employed individual

	2026-08-27 15:59:01	I support with amendments	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	I do not object to an appropriate basic charge to cover the cost of historic infrastructure, but I do fear for it morphing into yet another way to tax the "rich" and "not so rich". It seems non-sensical to offer tax payers an incentive, via limited tax relief, to install solar power to their homes and then, once the crisis is past, enforce them to pay a penalty for cutting their consumption of Escom generated electricity. In my case in a suburb that has had Escom connection for approx 100 years I would imagine that the cost of the original infrastructure has long since been paid off. The standing charge should therefore be capped at the cost of maintenance and replacement where necessary. (Averaged out)	Ian	retired
	2026-08-28 05:27:06	I support with amendments	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	I do not think it fair that individuals or small companies should be penalized for changing to solar at their own expense. Without that, it is more than likely that the grid would have collapsed completely by this time. We owe them at least a debt of gratitude in helping to tide Eskom over a crisis of its own making	Rona	retired

	2026-09-11 16:12:17	I support with amendments	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	I support electricity reform that improves reliability, competition and affordability, but I do have concerns about how ordinary households may be affected as the new system develops. My household is completely off-grid and has never been connected to Eskom or a municipal electricity supply. We rely entirely on our own solar and battery system. I would therefore like the final policy to clearly confirm that households which are fully off-grid and make no use of the national or municipal electricity network will not be subject to network, capacity or connection charges. For households that do remain connected to the grid while using solar, any fixed or network charges should be fair, transparent and based on the actual service being provided. They should not simply become a way of recovering lost electricity sales or municipal revenue from people who have invested in reducing their reliance on the grid. I am also concerned that residential customers may remain captive while larger commercial users are given more freedom to buy electricity elsewhere. There should be safeguards to ensure that any loss of higher-paying customers does not simply result in increased costs being passed on to ordinary households. Consumers should also not have to carry unnecessary costs caused by poor forecasting, administration or inefficient management by municipalities or electricity providers. There are still many important details that appear to be left for future regulations, market rules and tariff structures. These should also be open to proper public consultation, especially where they affect household electricity costs, solar users and consumer choice. I support reform, but it should be implemented in a way that protects ordinary households and does not create new unfair charges for people who are not using the electricity network at all.	Nicolene

	2026-09-12 08:16:07	I support with amendments	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	South Africans must not be expected to bale out Eskom. It caused its own problems and demise by very poor management, poor forward thinking, incompetence and greed. How much did we , the public, have to suffer over the years being left in the dark (figuratively and literally) because Government and Eskom could/would not embrace renewable energy? Why did Government and ESkom allow coal-mining to continue (actively supporting the Guptas).? Why did it not act on blatant theft at all levels, from clerical delinquents to major fraudsters right up to senior management level and in Government? Why didn't the Government and Eskom plan early for the future by extending the power grid across the country, stop coal usage, ensure clean air, and fire incompetents and thieves? I cannot have solar energy (too expensive to put in), and paid my monthly accounts dutifully, even though Eskom was stealing from me by erratic electricity supply. I do not want to find my electricity bills rising (while large companies get discounts) because Eskom and municipalities are now short of money. Instead, Eskom should embrace clean-air energy suppliers, end coal usage, and reduce expenses by major down-sizing, firing thieves and making many positions redundant. Probably also reduce salaries, as they are no doubt inflated. How about finding all the thieves and getting your money back from them? I guess you can say, putting it crudely, I am 'gatfol' of Eskom's delinquents.	Donald	retired
	2026-09-12 08:29:38	I support with amendments	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	I'm not a fan of there being a monopoly on energy supply. However… Private households who've been able to install solar panels shouldn't be penalised for 'making a plan' to keep their lights on. Households who don't have solar shouldn't be penalised so that the municipalities can make money. If the people running the municipalities and country for that matter were doing so without corruption and looting, they wouldn't need to be hiking prices and introducing new taxes etc. to sustain the municipal account. 	2026-09-15 10:24:51	I support with amendments	Captive Consumer Tariff Protection		Residential Electricity Consumer / Ratepayer	While I support the move away from state-owned energy production, with it's inevitable inefficiencies, excessive salary burden, and ingrained corruption, for its demonstrated potential to improve energy security and reduce environmental impact, I am extremely concerned at the possibility of private consumers being charged exorbitant amounts for electricity. 1. If large industries move away from municipal grids, then municipalities will lose that revenue; BUT, the amount of kWh they then have to purchase from Eskom will also reduce, so I can see no reason why they can't just adjust their budgeting to reduce both income and expenditure - other than they are not ring-fencing electricity sales revenue to pay Eskom, it is used for other things like salaries. 2. Municipalities, like SOEs, are grossly inefficient; they have top-heavy organisation structures, weak billing mechanisms, and a politically-motivated willingness to condone widespread electricity theft. I object to having to subsidise this. 3. There needs to be a transparent, logical, and justifiable system to allocate generation and distribution costs across various categories of user; and mark-ups on such costs should be ring-fenced for infrastructure upgrades and maintenance, not for the buying of party loyalty or extravagant lifestyles.	Mike	retired

	2026-09-29 07:27:24	I support with amendments	Captive Consumer Tariff Protection		Small / Medium Business Owner (SMME)	Households and small businesses that invested significant private capital into rooftop solar, batteries, and energy efficiency to protect themselves from load shedding will be forced to pay higher monthly baseline connection fees. This structural shift acts as a financial penalty on private decarbonisation, extending solar payback periods and increasing electricity bills for low-volume and frugal users. NERSA must place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. Fixed costs are much worse than a tax, it's the same business model the mobile network operators used to extract maximum value from society, rather implement a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. The energy dept. must purchase an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households. Private industry should not be subsidised by private rate payers, so that their executives and stakeholders can grow wealthy while tax payers are squeezed and milked.	Robert	business owner

	2026-08-26 18:35:08	I support with amendments	Other		Residential Electricity Consumer / Ratepayer	The normal home owner must not be used to pay the backlog or the lost of income, we must pay our own usage for the units we use. Let the high user pay more, but the little guy at the bottom who tries to save, give him a benefit.	Phillip	retired
	2026-08-27 08:00:27	I support with amendments	Other		Residential Electricity Consumer / Ratepayer	All business and resedential properties connected to the grid should be rated based on a 6/12 mth historical use of power and reted on a score sheet that shows how much one realy use the grid. The score will determine the monthly fee. If a user is completely self sufficient then cut off the availability from the supplier.	Murray	business owner

	2026-08-27 09:17:34	I support with amendments	Other		Residential Electricity Consumer / Ratepayer	I support the principle that all grid-connected electricity customers should make a fair and transparent contribution toward the infrastructure and services they actually use. However, I am concerned that the proposed principle of “discouraging free riding”, if implemented through unavoidable fixed / capacity-based charges, could result in precisely the type of unfair cost allocation that the Position Paper seeks to prevent. Residential solar customers are not “free riders” A household that has invested its own capital in rooftop solar generation and battery storage should not automatically be characterised as a customer avoiding its fair share of electricity-system costs. Many households made these investments during a period in which the national electricity system could not reliably provide the electricity service for which customers were paying. All messaging during load shedding was, reduce electricity usage, turn off unnecessary devices, use electricity sparingly. We reduced the demand through private investment, It would therefore be inappropriate to treat reduced electricity purchases resulting from that private investment in as equivalent to “free riding”. Cost-reflective tariffs should reflect costs in both directions. I accept that maintaining a grid connection has a cost even where a household purchases relatively little electricity. It is therefore reasonable for a genuinely cost-reflective tariff to contain a network component. However, cost reflectivity cannot only be in one direction. If a solar household must pay for the network capacity and services that remain available to it, the same methodology should recognise the costs that the household no longer imposes on the electricity system. It would be inconsistent to recognise the cost imposed by a customer's connection while refusing to recognise measurable costs avoided by that customer's investment. Most importantly fixed network charges must not become a mechanism for recovering lost electricity-sales revenue If fixed network charges are introduced or increased for residential customers, distributors should be required to demonstrate transparently how those charges have been calculated. A residential customer should be able to determine what service is being provided in return for each fixed charge. The term “cost-reflective” should not become justification for transferring historic inefficiencies, excessive operating costs, electricity theft, non-payment or unrelated municipal revenue requirements onto compliant grid-connected customers. We must protect the investment private users made that Government itself created. South Africans responded to years of electricity shortages by investing millions if not billions of rands of private capital in solar generation, inverters and battery storage. These investments added capacity without requiring the State, Eskom or municipalities to finance that capacity. Government policy should not retrospectively undermine the economic basis on which these investments were made. I do not object to paying a reasonable amount for access to a RELIABLE electricity network. I object to the possibility that “cost reflectivity” and “discouraging free riding” could be used to convert revenue previously recovered through electricity consumption into unavoidable fixed charges simply because customers have successfully reduced that consumption. South Africa should encourage households to invest their own capital in generation, storage and energy efficiency. The final policy should therefore ensure that residential solar customers pay fairly for the network services they ACTUALY use, while receiving equally fair recognition for the demand, generation and system costs that their private investments help to avoid. Cost reflectivity should measure cost, not protect historical revenue.	Daniel	employed individual
	2026-08-27 11:03:38	I support with amendments	Other		Residential Electricity Consumer / Ratepayer		Andre	retired
	2026-08-27 12:06:18	I support with amendments	Other		Residential Electricity Consumer / Ratepayer	I object to the principle of separating through a fixed tariff to a customer fixed and variable network or infrastructure maintenance costs. These costs form part the internal operational cost of any enterprise and should be incorporated in determining the price of the product being sold which is electricity in kwh, plain and simple. Not separate fixed tariff fee for maintenance costs being offloaded onto the consumer in addition to the price of the electricity being sold. The retail end customer should be paying a usage fee only because that is the product he is buying.	Martin	retired
	2026-08-28 10:39:39	I support with amendments	Other		Residential Electricity Consumer / Ratepayer	As a direct Eskom customer I am already exposed to charges that are not explained: Service and Admin Charge @ R5.74 per day Network Capacity Charge @ R9.08 per day Generation Capacity Charge @ R0.71 per day Ancillary Service Charge 198 kWh @ R0.0045 /kWh Network Demand Charge 198 kWh @ R0.2868 /kWh And, of course: Energy Charge 198 kWh @ R2.8005 /kWh This means that 39% of my energy bill is a fixed charge. This makes the fitting of solar panels unrealistic. More importantly this means there is little incentive to save energy as the cost per kWh reduces the more I use. So where is the incentive to save energy? This compares very unfavourably with my shopping experience at the local supermarket where there is no added costs for the companies overheads and even the delivery is free. Further, I have a choice of supermarkets so they are forced to compete. So if you want the people of South Africa to save energy Nersa should head towards a pricing model base on my supermarket and introduce competition in municipalities.	Geoff	retired
	2026-08-29 06:54:00	I support with amendments	Other		Residential Electricity Consumer / Ratepayer		Neil	
	2026-09-11 17:59:38	I support with amendments	Other		Residential Electricity Consumer / Ratepayer	Except for those who are fully off-grid, I do think it is reasonable that consumers who rely on Eskom or municipalities to provide part of their energy supply should pay for the fixed costs of delivering that energy. It is not fair that other consumers should subsidise the infra-structure that solar users rely on to top up their needs. However, this fee should be a standardised fee and fairly applied to gird-tied/ hybrid solar users as well as all other consumers, whether commercial, industrial or domestic. The large industrial/commercial consumers should be charged a fair price to use the national grid to deliver their electricity, a fair price meaning that so-called "captive consumers" are not prejudiced, and that the fees charged to all users (domestic, business and industrial users alike) are shared on a fair and reasonable basis. As to those who have the means to generate and transmit electricity completely independently of the national grid, without relying on public infra-structure at any stage of the generation, distribution and consumption of electricity, that could well be considered outside of the remit of the state to prescribe, so long as it is completely independent of and separate from any public resource or infra-structure at any stage of the process.	Charles	
	2026-09-12 10:37:27	I support with amendments	Other		Residential Electricity Consumer / Ratepayer	I cannot see that fixed increased tariffs will be applied to non grid connected systems. Just around the corner is the possibility that solar "Geyser" heating systems (earlier years been promoted and subsidized by ESKOM), also to be found on just about every shanty town and not been even paid for by users. Solar heating elements do not function without sun, so, ESKOM ist still used as a back-up supplier supplier. There again, to adjust the basic delivery tariffs is criminal attempt supported by ANC and still today the very same officials and ministers who where the main persons responsible of the corruptions taken place, non has been taken to book!	pete	retired
	2026-09-13 20:11:54	I support with amendments	Other		Residential Electricity Consumer / Ratepayer	The middle class is already being taxed to death to float the entire country. Meanwhile, big companies like Eskom just vote their bosses higher pay increases - the money does not go into supporting the infrastructure. The middle class (me) cannot hold. Until Eskom and other large companies can prove that they can work within their budgets, they should not be allowed to increase their fees. In addition, taxing sunbeams and raindrops should be declared a crime against humanity.	Kerry	self-employed

	2026-08-26 07:29:42	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	FORMAL PUBLIC COMMENT AND OBJECTION I hereby submit my formal objection to the Electricity Sector Market Transformation Position Paper in its entirety, particularly any provisions that may result in additional fixed network, connection, capacity or other charges being imposed on residential consumers who have invested in solar and battery systems. South African households that have invested in solar have already made a substantial private investment in reducing their dependence on Eskom and the electricity grid. They have paid VAT and other applicable taxes on the purchase and installation of their systems and have undertaken this investment at their own expense. Solar users also continue to pay their existing monthly basic and network-related charges, despite generating a significant portion of their own electricity. These consumers are therefore not simply “free-riding” on the grid. They remain connected, continue contributing financially, and at the same time reduce demand and pressure on the electricity network by generating their own electricity. I strongly object to any policy that effectively penalises consumers for reducing their electricity consumption. Electricity tariffs in South Africa are already excessively high and increasingly unaffordable for ordinary households. The solution cannot continually be to require consumers to pay more. Increasing tariffs or introducing additional fixed charges will not, by itself, resolve the serious concerns surrounding financial management, waste, inefficiency, governance and corruption within the electricity sector. Consumers should not be expected to carry an ever-increasing financial burden while these underlying problems remain unresolved. If government wants South Africans to invest in renewable energy, battery storage and energy independence, it is counterproductive to introduce policies that make these investments financially less viable. I therefore object to any tariff structure that: unfairly penalises residential solar users; uses fixed charges to recover lost electricity-sales revenue; makes electricity increasingly unaffordable; treats solar users as a financial burden rather than part of the solution; or discourages private investment in renewable energy. I accept that maintaining the electricity network has genuine costs. However, any network charge must be transparent, proportionate and based on demonstrable actual costs, rather than being used simply to compensate for reduced electricity sales. Residential consumers should not become a captive source of additional revenue. I therefore formally object to the proposed framework in its entirety and request that the interests of ordinary residential consumers and solar users be fully considered before any such policy or tariff structure is implemented. South Africans who have invested their own money to generate electricity and reduce pressure on the national grid should be encouraged — not financially punished for doing so. 	2026-08-26 15:59:03	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I do not agree. I understand but this is not rhe correct way. Eskom mismanagement is the cause. Solar would have never gotten the attention if the state hasnt failed to provide reasonable price and control over eskom. More and more people cant pay due to the high cost. Municipal fraud is also high and penalize people for doing nothing wrong. Rather focus on job creation than penelizing an already struggling working group of people. This base cause is unethical as we already payed for a connection fee.	Ivan	
	2026-08-26 15:59:46	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The only reason homeowners and businesses invested huge capital amounts in solar systems is because the government was and quite frankly still is unable to provide consistent power to the entire country. The only reason for low or little loadshedding is because these people spent fortunes to supply their own power and now the government wants to penalise them. I am willing to bet that if all the solar systems were switched off at the same time on any given day the grid will collapse because there is insufficient power available. So the government wants to penalise the people who spent fortunes on solar equipment and saved the governments ass, because there is now sufficeint power to service the rest of the country without solar power. So the government is losing revenuse because of the solar systems installed around the country. Whose fault is that? Not the homes and businesses that were and are able to afford solar systems one way or the other. Its the normal way of business, if the supplier can't supply the goods, the buyer will go elsewhere. Exactly what happened here, and now the government is crying "foul". NO! NO! NO! You dont get to screw up and then penalise the people that found alternatives.	Clive	
	2026-08-26 16:03:06	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	ONCE AGAIN GOVERNMENT INTERFERING WHERE THEY SHOULDN'T! 	2026-08-26 16:03:57	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	TOTALLY UNACCEPTABLE for the government to siphoning more funds from private citizens in an unjust manner. Citizens were forced to borrow funds to put up solar as Eskom had failed at their task and we had no power. ENOUGH IS ENOUGH. Paying citizens are once again being penalized so the government can rake in further funds to compensate for their poor performance and lack of abilities in running Eskom. It will force citizens to go off the grid completely	Sally	self-employed
	2026-08-26 16:05:42	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I AM TIRED OF BEING PUNISHED FOR THE GOVERMENTS FAILURES, IF IT WAS NOT FOR ESKOMS FAILURES WE WOULD NEVER HAVE HAD TO PURCHASE SOLAR WITH OUR HARD-EARNED CASH.	ALAN	employed individual

	2026-08-26 16:06:21	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	My objection is based on the following critical points: • Unfair Financial Penalisation: Citizens who invested heavily in private solar infrastructure did so as a direct response to the historic inability of Eskom and City Power to supply reliable electricity. Unbundling tariffs to introduce fixed charges or solar taxes unfairly penalises consumers who stepped up to relieve pressure on the national grid. • Flawed Risk Transfer: The proposed market codes seek to recover system imbalance costs and protect municipal financial cross-subsidies by targeting self-generating consumers. Forcing solar owners to cover municipal distribution shortfalls shifts the financial burden of state operational failures onto private taxpayers. • Disincentivising Green Energy: Imposing punitive pricing mechanisms active investors contradicts national goals of diversifying the energy mix. It deters future private capital investments needed to build a resilient energy economy.	Colin	unemployed individual
	2026-08-26 16:06:33	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	As usual, make the majority pay for the incompetence of government. When you failed yo keep the lights on, people at their own expense jumped in to help themselves. Now you want a cut of that or you want to penalise them. Shame on you! As with all things this government does, it's only focused on increasing it's own coffers. Making people pay a set rate. No matter what their consumption is, is abominable.	Larga	employed individual
	2026-08-26 16:07:24	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	We in Western Cape already pay supply and electricity availability charges that makes up more than what I pay on actual units purchased without solar, now they want to penalise us for trying to not lose work because of no electricity, have our fridges go off because of no electricity, which you can not claim for by your insurance company without incurring hefty increases in your premium? Privatisation is also not an answer as there are too many corrupt 'buddies' of the current state that want to drain whatever little money we have left at the end of a paycheck. Just feels that we are fighting a losing battle does not help how many petitions we sign, they just do whatever they wanna do.	Lisa	self-employed
	2026-08-26 16:07:51	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	What a cheek! Escom has forced home owners to install solar because of their incompetence and theft and we are left holding the cost? What absolute nonsense. If i am forced to install solar because they could not provide a human right why must i pay for the consequences of their incompetence? Absolutely not. This should be faught all the way to the courts and back ENOUGH WITH THE RIPOFF!	greg	
	2026-08-26 16:08:10	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	No, no, no not another way for the government to fleece already stretched tax payers. Enough. If you, government had done your job properly, we wouldn't be in this situation. We pay and pay and pay and get little reprieve when things do NOT work - power, water, roads....take your pick. Enough is enough.	Chantal	self-employed
	2026-08-26 16:11:12	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Erratic electricity supply and continually rising cost has been an ongoing concern for all households. Adding a further cost to penalise installation of back up solar power is totally unfounded.	Hilton	retired
	2026-08-26 16:12:21	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Sunlight is free. I would far rather have used my money for other things but was chased to install solar due to load shedding, now they want me to pay more. That is criminal from a criminally incompetent government.	Alex	employed individual
	2026-08-26 16:12:47	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	People were "forced" into sourcing alternative power. 1. Due to unreliable service and delivery 2. Exorbitant pricing to the consumer 3. Even less fortunate people have resorted to solar powered appliances due to rising costs and unavailability. No longer just a "rich man's" privilege. 4. Target those stealing electricity over those who have legally installed alternative solutions.	Patricia	
	2026-08-26 16:13:02	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	ESKOM initially subsidized homeowners when purchasing solar panels, now they want to penalize us for installing a solar system. This is the logic of stupid and corrupt people. The sooner the current management is replaced with knowledgeable personnel the sooner the better.	Jasper	retired
	2026-08-26 16:14:58	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		Mike	
	2026-08-26 16:15:30	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The government and especially Eskom do not have enough credibility to hold the country to ransom like this. They have a bad track record with corruption and have not proven to have made positive change	Nick	self-employed
	2026-08-26 16:25:55	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This is such an absurd transformation paper! Rife with possibilities for state manipulation and trampling of consumers' rights. And how a government can even contemplate to punish citizens who have helped to keep their broken state entity (Eskom) standing, boggles the mind. If all the solar panels in SA vanish overnight, Eskom will collapse instantly and we'll have regular blackouts again. Because the state did not provide enough dependable power, many South Africans have borrowed huge sums of money to keep their businesses and jobs and families safe and floating. Nobody is helping them pay their monthly down payments on those. To destroy them even further financially while they are assisting the whole system is ridiculous. Solar power is also green energy and the state should welcome all solar conversions. Consumers should pay for the electricity that they use - easy as that.	Pieter	business owner
	2026-08-26 16:26:32	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. Insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. Require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households	Yona	retired
	2026-08-26 16:27:31	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		Michiel	employed individual
	2026-08-26 16:27:47	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The government needs to fix what they broke instead of always expecting the population to foot their bills. We paid good money for out solar because ESCOM could not/would not fix the grid and now we are being punished for being pro active. Enough already!	Sharon	unemployed individual
	2026-08-26 16:28:02	No I do not	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	Being penalized for saving Eskom is disgraceful. We are already charged a connection fee, so calling it something else is disingenuous. Instead Eskom could benefit from all the connected users by buying back excess power into the grid as done in many other countries. Eskom would then have more availability, would make profit off private installations. If I have to pay for this connection, I expect to be refunded for days without power at 10*the connection rate. e.g. if I do not have power for 3 days, I do not have to pay for this "network fees", as Eskom has failed in their supply for the month. Of course the outcome will be more people that have good installations will be leaving Eskom permanently (so Eskom will lose their best customers). Unintended consequences and FAFO will be the demise of Eskom.	PHILIPPE	employed individual
	2026-08-26 16:29:10	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	South African taxpayers are much abused by the incompetent ANC government. They have run Eskom into the ground by no proper maintenance done to power stations/grid; running old power stations hard; corruption on a grand scale in general and in particular on the two new power stations built; raised electricity prices exponentially; burning huge amounts of diesel (not at wholesale prices) to compensate for their ineptitude; pay huge salaries to cadre appointees who are corrupt and clueless; coal tenders that are corrupt - the list goes on! We then take money out of our pockets to install solar systems so we can get on with our lives and not be dependent on bloody Eskom, and then they want to screw us some more! NO, enough now.	J T	retired
	2026-08-26 16:30:00	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Don’t you make enough money out of us to steal? It’s our money that pays for solar and helps the grid not fail, it comes from the sun, you have nothing to do with it. Stop stealing then there would be more than enough money to do everything you want to do.	Barendina	unemployed individual
	2026-08-26 16:34:19	No I do not	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	Typical. Eskom creates the problem, asks everyone to install Solar to meet with world-wide standards, to ease pressure on the grid even offered tax assistance, big deal on R15000. After spending hundreds of thousands to comply and give our guests electricity they now wish to punish us. As a tiny business we are already being penalized with commercial electricity rates, commercial water rates and commercial/business property rates for a residential property that does not use any more services than our neighbours and Air bnb's operate with impunity. Enough is enough so a big fat NO!!	Jane	self-employed

	2026-08-26 17:03:37	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This is yet another Communist grab for power and money from the private sector. State-run electrical grid is, by its nature, counter-productive. Given that we have it, the right thing to do for the people of South Africa would be to incentivize individual solar production, and to pay them to produce into the grid. Rather, the government wants to penalize this and discourage it. This only brings more pain and suffering to the people of SA, who just want reliable and affordable electricity. This bill should be dead on arrival.	M	retired
	2026-08-26 17:04:10	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	We already pay a levy which the government loaded onto our rates invoice to cover their loss of revenue during load shedding and it has stayed there ever since. It is ridiculous that we the citizens must help bail Eskom out with rate payers money repeatedly as well as using our own funds to put in solar to help alleviate the electricity problem. And now we are expected to pay again for helping the government in the first place. All the electricity issues were of the governments making when they chose to forego maintenance in favor of feathering their own nests. It's time they admitted their failings and covered the costs of their mistakes themselves. I hope the rate payers refuse to pay this should it ever come to be implemented. It's about time we stood together against the failing corrupt system.	Cyndy

	2026-08-26 17:04:36	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	We were told not to use electricity. So we used our own money so that we could remain economically active. Now they want to punish us by charging us fixed rates. Electricity is a commodity you purchase for what you need.	Andre	self-employed
	2026-08-26 17:04:48	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The South African public and economy has suffered at the hands of mismanagement and corruption at Eskom and within government. As a result we have endured many years of rolling blackouts which crippled households and businesses. We have also seen electricity tariffs increase many more times that inflation in the last 15 years. Consumers have already paid for infrastructure while simultaneously not having been provided with service (blackouts). Consumers have thus had to also pay for alternative energy sources, such as solar. The proposal now envisages penalising consumers even further instead of addressing the real issues of mismanagement and corruption.	Rowan

	2026-08-26 17:53:50	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I oppose this proposal because households that invested their own money in solar and batteries should not be penalised for becoming less dependent on the grid. South Africans did not turn to solar to “free ride”. We did so because years of load shedding forced us to find our own solutions. We used our savings, carried the financial risk and reduced demand on an unreliable national grid. To now impose substantial unavoidable fixed charges specifically because we buy less electricity undermines the very investment that helped relieve pressure on the system. I accept that maintaining the grid costs money and that a reasonable connection fee is justified. But there is a fundamental difference between paying fairly for access to infrastructure and being charged to compensate utilities for the revenue they lose because we consume less electricity. The proposal also risks creating an unfair two-tier system. Large electricity users may increasingly access alternative suppliers and cheaper power, while ordinary households remain captive to municipal tariffs. Residential consumers should not be left carrying growing network costs and municipal revenue shortfalls simply because they have fewer options. South Africa should be encouraging private investment in solar, batteries and energy efficiency — not reducing the financial benefit of those investments after citizens have already spent their own money. Tariffs should be transparent and genuinely cost-reflective. Any fixed charge should represent the actual cost of maintaining a household’s grid connection, not become a mechanism for recovering lost electricity sales. Citizens who invested their own money to reduce their dependence on a failing electricity system should not now be financially penalised for succeeding. For these reasons, I oppose the proposed framework in its current form.	Barbara	
	2026-08-26 17:54:08	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Once again the public are expected to bail the government out of a situation created by themselves . We had to use our own money because they couldn't provide the service due to their incompetence and inability. The solar top users are still paying for the electricity they use. All this is going to do is force people off grid then Eskom will have even less money.	Claire	
	2026-08-26 17:54:11	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It's disappointing that many households expended their own private capital to install rooftop solar and battery backups to help alleviate Eskom's near-failure of the grid a few years ago. This now represents 2.3-2.5 GW of installed capacity, for which households rarely receive any compensation. It's a slap in the face to now face additional taxes under the proposed "no free riders" policy	Stefan	employed individual

	2026-08-26 17:58:11	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I paid a lot of money to be able to have power when Eskom could not provide it. Now they want to penalise me for that investment. It will probably be cheaper to just go off-grid...	Werner	employed individual
	2026-08-26 17:58:32	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom should sort municipality issues out first and go after those that owe huge sums of money before butchering the everyday person who is just trying to help their family get by. Of course people should be charged for use and not a fixed rate. It is as bad a TV licences where the channels being paid for are not being used. If I have solar I have spent much of my own hard earned cash to fix a problem Eskom caused. If I don't have solar I get penalised for a problem Eskom caused and other people trying to fix a problem Eskom caused. Further, the municipalities that have stolen money from their constituency and wasted money for electricity on corrupt dealing or lunches or etc... are again not punished as they simply hand the cost onto the rate payer because, who else will pay because all the money comes from the rate pater in the long run. Please, please, please may common sense prevail and good, hardworking, honest people have put into the right places of power, the corrupt get booted and jailed/fine to recipe losses at their hands and the tax paying public - which keeps shrinking in size - not be set up to pay again and again for other people's rubbish!	Daine	
	2026-08-26 17:59:21	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It is time the ANC started fixing things and STOPPED penalizing people who got them out of a hole when they collapsed the grid. The reality is that the grid's collapse means that Eskom is no longer viable and should be broken up.	Catherine	business owner
	2026-08-26 18:00:13	No I do not	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	So let me get this straight: the government fails in almost EVERY job including generating enough electricity to make our economy function....and we're not even talking growth! ESKOM is another badly run SOE full of holes where the money has "flowed" freely into comrades pockets for 33 years! When the Apartheid government's infrastructure starts to crumble after 3 decades of neglect (because obviously the money is now gone) and there is no provision made.....we the people had to take OUR savings and ingenuity and install Solar to not go bankrupt trying to run a business while the power is off the whole damn time. NOW the said government wants to make US the villians and charge us more because we couldn't rely on them doing the job in the first place! And to sweeten the deal, they have been getting salaries much larger than any we will ever get, for not doing these jobs. Does this sound about right??	Linda	self-employed
	2026-08-26 18:01:30	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		Taco	retired
	2026-08-26 18:02:19	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	As a residential solar user we have relieved Eskom from it's overall generation capacity thereby reducing the amount of additional capacity Eskom needs to create. If all the household solar was to be removed Eskom would have to run its gas turbines and or reinstate load shedding which would cost consumers significantly more than without household solar. This needs to be recognised in the framework. Additionally Eskom's single biggest expense is coal, i.e. production costs and this needs to be recognised in the billing of consumers and the primary cost should relate to volumetric consumption as this is Eskom's cost driver. Lastly it is irrelevant whether a consumer is supplying there own electricity, grid costs should be equally and equitably split between all grid users with no special exception for consumers who produce or partially produce their own electricity.	Hendrik	self-employed

	2026-08-26 18:21:49	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This is yet another desaprate attemt to extort money from the bery people who have eased the loads on Eskom. This peovces the type of mentality we have ruling this disaster of a country. Free electricity to the tune of 300kw per indigent household is grossly unfair and leaves the load on the very people who have done their damnest to keep the lights on and the country from a complete power collapse. Thrity years have slid by with Eskom and the government ignoring early warnings about the dire path we were likely to follow if drastic measure were not taken to upgrade and oversee the power generation industry. The warnings were laughed off for years until the shit hit the fan then the ratepayers has to carry the can while power thieves did their thing and GOT AWAY with it. We all know who they were and so did Eskom management. It is time to say "go to hell Eskom and your stooge Ramagopa who promised cost cuts but seemingly is now upholding the draft legislation. Little wonder so many ministers are eliminated and whistle bloweres are targeted by the cadres under the speel of CR and his sttoges.	Ian	retired

	2026-08-26 18:38:29	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Where else is the govt going to find a way screw us. What a load of rubbish. We already have stacks of power outages, and now they want a fixed charges that citizens need to pay?? how are the folks in low-cost housing areas going to afford this. The electricity price was increase in July in Johannesburg already.	Erika	employed individual
	2026-08-26 18:39:43	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I am lost for words at the length government will go to to extract our hard earned money and the blatantly steal it without recourse or conscience	Dimitri	business owner
	2026-08-26 18:42:30	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Currently I don’t even have a solar system but would like one in the future. I hate the fact that at every turn when the private sector finds solutions around the governments failures, they turn it into a taxable revenue stream. We already pay way too high tariffs for All services across the board, way to many to name them all here, but it is practically everything that the government controls and the insult is that the services we receive are very very poor. This Government has Failed on all levels to govern these services for the citizens. I could carry on writing another ten pages on this subject, but nothing I will say has not been said before by so many before me. Please - Encourage the citizens of this country to contribute and innovate And stop penalizing those that provide solutions to your failures. This country is filled with super talented people , let us encourage them to help improve things or those that remain will also leave ! Private energy sector must remain private !	Ralf	employed individual
	2026-08-26 18:42:31	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The reason we went for solar is because the electricity providers could not provide sufficient electricity and the result was loadshedding. If enough power could be provided then no solar would have been required. The government even provided tax rebates for installing solar panels to help the grid crisis and now they want to penalize you? If everyone switches off their solar and pull their electricity from the grid, will the grid be able to provide this demand without having to implement loadshedding again. I seriously doubt they will be able to provide enough power. I can almost guarantee that loadshedding will be back in no time. People that spent money on solar should be thanked by government as these individuals and companies are the true solvers of the loadshedding crisis. As I mention, if everyone switch off their solar tonight, the grid will probably collapse the next day or loadshedding will be back immediately.	Philip	unemployed individual

	2026-08-26 18:45:45	No I do not	All of the above	Fixed Charges & Solar Penalties	Energy Sector Professional / Engineer	So now the guys who have always footed the bill have to be penalized for always paying. So who are the free riders here? The guys who pay or the guys that have illegal connections and never pay their electricity usages? So the bill makes it easy as I see it. If you're connected you're a target. If you're not you are not liable. Thus don't connect. Get a system that is not dependent on the grid with alternatives including solar and turbines that can charge when sunlight is lacking and tell the municipality to keep their grid all to themselves and go and extort money from the free riders if you can actually get them to pay. And also bear in mind that water is next so make provision. Also remember that overflying with drones to take footage of the property to show that you have panels impinge on your privacy and action should may could be taken including grounding and confiscating the offending flying object is also an option So thanks for that you're making it easier for us to let go. I know what my options are. Do you?	Ant	employed individual

	2026-08-26 19:47:42	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Government is incapable of providing service, electricity, or accounts that aren't wrong. Now they want to punish those who kept the lights on by funding their own power do to government mismanagement and corruption. I will spend more money to go completely off grid before I pay an extra cent towards the incompetence and cadre corruption	Ruan	employed individual

	2026-08-26 19:51:05	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom has failed to supply constant reliable electricity. As a government the ANC has failed to protect the electrical infrastructure which allows for the constant loss of power due to cable theft. The ANC has stolen all the money to the point that Eskom is bankrupt and the city councils are bankrupt so they cannot do maintenance and upgrades hence the unreliability of the power grid. You asked the consumer to use power sparingly. The less power the consumer uses the less income there is, hence there is less money to steal and even less money for maintenance and upgrades. The consumer has reduced the load on the electrical system by installing solar systems at their expense, for the most you have refused to allow consumers to feed back into the grid any spare power they have from their solar system. Now you want to charge any consumer with solar power a penalty fee to boost your revenue so you can continue abusing the funds you receive. It is wrong on every level and just another government rip off to rape the consumer.	Alan

	2026-08-26 20:44:46	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Government destroys everything they touch. Eskom was on the brink of collapse and citizens of the country did what they had to, to ensure they had electricity. Government even provided tax incentives to encourage solar. Now that eskom has been load shedding free (because of so many people not drawing power from eskom), government is looking for other ways to fill their pockets. Sort out all the corruption and the country will have funds for infrastructure and other services. If every solar power user in SA put off their systems for a month, eskom won't be able to cope and then what??? Beg people to use their solar and tax them for helping out? There is no logic behind governments decisions. Sort out the inefficiencies and over employment at eskom and there will be millions of rands in savings. If government goes ahead and taxes those using solar, people that can afford it will move totally off grid and then what tax are they going to introduce. Some of use did it out of necessity to survive the load shedding, the havoc it caused to households and businesses etc. Already we are overtaxed via SARS, municipalities petrol levy and the list goes on.	Jason	
	2026-08-26 20:45:13	No I do not	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	Our government has failed us dismally. The current public service structures are not capable of controlling or driving a fair market operation. No more control in their hands please	Michael

	2026-08-26 20:53:02	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	We had the cheapest power generation in the 1990's. Eskom destroyed a working system and created the power outages and forced the need to move to solar to save the country. There was a time when old globes were swopped out to LED for free and solar geyser upgrades were encouraged and subsidised to help keep the lights on. Eskom now generates less electricity at an exorbitant rate and claims to be successful.....what a joke ..... but now still wants more money from a captive market. Catch the criminal, cease their assets for destroying Eskom and make them pay	Kevin	retired
	2026-08-26 20:56:57	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The energy sector was happy to let private individuals invest in solar to support them when there was a crisis, but now they want to punish these same individuals!	Andre	

	2026-08-26 20:57:07	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This is the dumbest bill of dumb bills ever to be considered. We already pay for services we don't get, like road maintenance in Gauteng for example. The problem is incompetent people in positions that they don't belong, not taxing those who are using renewable energy. Making everyone pay a fixed rate for electricity, just because Eskom is losing out is such a communistic move. Especially when services aren't available, paying for that is wrong. ANC must wake up to reality and stop milking South Africa!	Greg	
	2026-08-26 20:58:51	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Why must the public be punished for the states failures	Thomas	unemployed individual
	2026-08-26 21:02:02	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I reject any policy that unfairly penalises South Africans who invested their own money in solar and batteries to keep their homes and businesses running. If government wants citizens to invest in reliable energy, it cannot then change the rules and impose charges that undermine those investments. South Africans deserve transparent, fair and affordable electricity pricing—not policies that make ordinary households carry the burden of failures they did not create. I call on government to reconsider any measures that unfairly target grid-connected households with solar, engage meaningfully with the public, and protect the right of South Africans to make responsible private investments in their own energy security. We must reject unfair electricity charges and demand accountability, transparency and value for money.	Herman

	2026-08-26 21:59:12	No I do not	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	Government's inability to maintain an perfect working system they inherited is now leading to penalization of private initiative to keep the wheels turning in South Africa. You as corrupt Government has drained the country's resources and as the cow you are milking is running dry, you are looking elsewhere to find opportunity to steal further. Private initiatives to generate power is actually alleviating the burden on ESCOM to supply electricity - you should thank those who installed systems that help maintain the economy instead of penalizing them.	Frik	business owner
	2026-08-26 22:17:35	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		Charles	retired
	2026-08-26 22:31:10	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		Richard	business owner
	2026-08-26 22:34:59	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	A complete overhaul of the Electricity Sector Market is required, on that I wholly agree. I do not agree that Eskom be split into several state owned companies. This just means there are more CEO's that get over-inflated salaries that are not market related, as well as exorbitant bonuses. Whether they actually do a good job and make a profit, or do a bad job and waster the taxpayer's money. With the proliferation of corruption in the ANC government, these new entities will definitely not disappoint in that department either. The fact that the state wants the ratepayer to pay a high fixed fee because they spent their own money on installing solar, is the stupidest idea that I have ever heard. You, the ANC government, are not doing your job and never did it properly. I will be willing to pay a reasonable fixed monthly cost ONLY if the government FIRST PAY ME EVERY CENT that I spent installing the solar system AND the interest I paid on the loan to be able to do it. It would not have been necessary for me to do it if the government was not is incompetent and corrupt. Making the ratepayer basically 'subsidize' businesses using more than 1MWh of energy is another crazy idea. Yes, the municipalities that can't do their jobs and that think pulling a massive salary while sitting on their fat butts AND stealing more money, SHOULD fail. This way another party, or even the residents, can take over and do a proper job of running the municipalities. Our electricity prices are WAAAYYYY too high already. How can you have an increase of more than 1000% in 10 years while salaries only increased by a third of that, IF that much? Don't be stupid!! Sorry, too late for that one ... No, split Eskom up and sell each entity off to private enterprises. And not to some empty, umbrella company that you or one of your cronies quickly registered yesterday! THAT way the new entities may actually have a chance of making a profit while keeping the lights on and the cost to the consumer in line with the rest of the world.	Werner	
	2026-08-26 22:36:21	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This is another method of the ANC to get the citizens to pay money into an account where ANC members can steal it. There is absolutely NO benefit for the citizens with the implementation of this policy. This is a communist style system to control private individuals and businesses. A very bad suppression of initiative and entrepreneur action will follow.	Jim	retired

	2026-08-26 23:00:39	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	As a homeowner who invested significant personal capital in rooftop solar and battery storage, I find it deeply frustrating that an investment we were actively encouraged to make is now being reframed as “free-riding” and penalised through unavoidable fixed charges. Only a few years ago, homeowners were encouraged through tax incentives and other measures to install solar precisely because it would help reduce the strain on the national electricity grid. Households like mine made that investment at our own expense, reducing our reliance on an already strained Eskom and municipal infrastructure at a time of national crisis. It is therefore incredibly difficult to understand how that same decision can now be treated as a burden on the system rather than the contribution it was intended to be. Had I not invested in solar and battery storage, I would not have had a reliable enough electricity supply to continue working and generating an income. That income has, in turn, allowed me to pay taxes and contribute to the economy. I find it fundamentally unfair that homeowners who responded to the government’s call to invest in renewable energy, and who helped reduce pressure on the national grid at their own expense, are now being penalised for having done exactly what we were encouraged to do. The policy seems to turn a previous incentive into a retrospective penalty, which feels both contradictory and deeply unjust.	Carla	self-employed

	2026-08-27 02:10:47	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom and municipalities are inefficient and corrupt. They alone are responsible for losses and poor service delivery. Now they want to punish us for their incompetence ‘pay us irrespective’ . Can I send you a bill for all my losses/ expenses occurred because of load shedding or power outages? Communistic captivity!!!!Alternatives not allowed!!!	Riaan	unemployed individual
	2026-08-27 02:14:31	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Icosumers should have the right to choose where and how they procure electricity. Where the consumer choose to go on its own so be it. In such instance there should be no fallback Where a fallback is required bsuch a hybrid model should be offered at a cost.	Mogamat Saied	retired
	2026-08-27 02:14:48	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	If Escom wasn't so corrupt and balanced it's books there wouldn't be a need for this crap. They incentivised households to install solar to reduce the risk of load shedding and now they trying to squeeze those by increasing fixed costs. What a sham. We must fight this injustice.	Sean	unemployed individual
	2026-08-27 02:23:55	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The stated purpose of the reform is to end the single-buyer model and introduce competition. The mechanisms proposed, however, deliver competitive access almost exclusively to users above the eligibility threshold. Households and small businesses receive none of the benefit and carry a disproportionate share of the cost. A reform that concentrates its gains in one class of customer and its costs in another is not a competitive market. It is a reallocation. The roadmap applies an “anti-free-riding” principle to grid-connected and partially defected solar customers, shifting recovery from volumetric charges to high fixed monthly connection fees. I object on the following grounds: (a) No cost study has been published demonstrating that these customers imposed network costs equal to the fixed charges proposed. With such evidence being absent, the charge is simply a revenue measure presented as a cost-reflectivity measure. (b) These investments were made in good faith, under a policy framework that actively encouraged embedded generation, and in many cases in direct response to load shedding. Retrospectively altering the economics of those installations undermines the regulatory certainty the Department elsewhere says it wishes to create. (c) Embedded generation reduces peak demand and deferred network investment. The roadmap accounts for the cost these customers allegedly avoid, but not for the value they contribute. Thus we I request for the the roadmap be withdrawn in its current form and mandatory fixed charges on existing grid-connected solar installations be completely removed.	Lux	employed individual
	2026-08-27 02:29:55	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Solar obtains energy from sun. Why should consumer be charged for anything. The electricity used to recharge solar batteries is already paid for when purchasing electricity units (prepaid electricity. No additional charge should be paid whilst consumer uses Solar.	Mahendra	retired

	2026-08-27 04:08:35	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Once again Government has a knee jerk reaction to trying to solve a problem of their creation. While on one hand they are all for green energy production and usage, they give a tax brake on solar panels to help support the Eskom lack of electrical production, then they want to either tax citizens who are fed up with load shedding, which are really revolving blackouts, threaten these citizens if they do not register their systems and then also charge a higher tariff for their electricity. These citizens did not get Eskom into a mess where the infrastructure has collapsed due to neglect and mismanagement and theft. The local municipal network also to blame for blackouts, as the grid in Nelson Mandela Bay collapsed, numerous times leaving citizens to their own devices. Citizens of South Africa will not pay for Governments failures, which as history shows tax monies are often stolen or simply not used for the correct purpose. Governments solution to fix their problem is to tax an already overburdoned shrinking tax base, is nothing short of pathetic. Who in their right mind would pay for an unreliable overpriced product/ service and then be taxed as they took very expensive measures to protect themselves from this State failure, and then be forced to be taxed on those measures, nobody!	Andrew	retired

	2026-08-27 04:13:34	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Renewable, sustainable energy use is crucial to a viable future for us all. Citizens should be encouraged to create solar energy. A fixed fee for grid connection is reasonable but needs to be proportional to what is actually spent in real time. Historic inefficiencies and accumulation of maintainence costs due to poor management should not be passed on to the everyday consumer. There needs to be equitable access to electricity and encouragement of a move away from reliance on fossil fuels. Eskom needs to ensure that & not just charge the soft targets for their own mismanagement.	Louise	self-employed

	2026-08-27 06:38:07	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Cost of solar due to the inability of Eskom to supply cannot be penalised as the current no-loadshedding situation has to thank people who installed solar and saved their face. You cannot penalise the People who saved you when you could not supply de and. Many where forced to install solar for lovedones neebing constant supply to keep mashines running for needed life support.	Marius	employed individual
	2026-08-27 06:39:01	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	South Africans have been forced to make and invest in their own arrangements due to a failed state power system. They cannot be penalised for this. Recover the moneys stolen from Eskom, from those who stole it, not from honest citizens.	Evert	retired
	2026-08-27 06:40:46	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I do not support the Electricity Sector Market Transformation Position Paper in its present form. I support genuine reform of South Africa's electricity sector, greater competition, private generation and a more reliable electricity system. My objection is specifically to those aspects of the Position Paper that risk shifting an increasing proportion of electricity-system costs onto ordinary residential consumers through mandatory fixed charges, particularly households that have invested in rooftop solar, batteries and energy efficiency. I am a South African homeowner with rooftop solar. Like many households, I use solar to reduce my dependence on an electricity system that, for years, could not provide reliable supply. Government itself responded to the electricity crisis by removing barriers to private generation and encouraging private investment. It is therefore deeply concerning that households which responded by reducing their demand on the grid are now potentially characterised under a principle of “discouraging free riding.” Reducing electricity purchased from the grid is not “free riding”. I accept that remaining connected to the grid has a cost and that a consumer who requires grid availability should make a reasonable contribution towards the efficient cost of providing that connection and capacity. However, there is an important distinction between paying the demonstrable cost of the network service I actually require and being required to compensate Eskom, municipalities or other market participants for revenue they lose because I have chosen to generate and store some of my own electricity. The Position Paper states that, as fixed system costs increase, fixed charges will become more important relative to charges based on electricity consumed. It further provides that consumers who rely on the grid for some of their electricity, or who wish to sell excess electricity, will be required to pay network charges. This creates a serious risk that fixed charges become an open-ended mechanism for recovering costs that have little or nothing to do with the actual cost imposed by an individual household on the network. Solar households should not be required through fixed charges to underwrite inefficient expenditure, excessive network losses, electricity theft, bad debt, municipal financial failures, stranded assets or historical cross-subsidies simply because they remain connected to the grid. The principle should be cost causation, not revenue preservation. If a consumer imposes a measurable cost on the network, that cost can reasonably be recovered. Equally, if distributed generation reduces demand, network losses, generation requirements or peak consumption, those benefits should also be recognised. It is inequitable to calculate only the cost a solar household supposedly creates while assigning no value to the benefits that household's private investment provides to the electricity system. There is also a broader issue of investment certainty. South Africans have spent substantial private capital making their homes and businesses more energy resilient. The economic case for these investments was based partly on reducing future electricity purchases. Government should not retrospectively undermine that investment by progressively moving the cost of electricity away from consumption and into unavoidable fixed charges. Such an approach sends precisely the wrong signal for energy efficiency, private renewable investment and decarbonisation. I am also concerned that residential consumers will remain captive customers while larger eligible consumers are progressively given access to competitive electricity markets. Ordinary households should not be left without supplier choice while simultaneously carrying an increasing share of fixed system costs. I therefore request that the Position Paper be amended to: Remove or substantially reformulate the “discourage free riding” principle as it applies to residential embedded generation and energy-efficient consumers. Require all fixed network and capacity charges to be transparent, independently verified, cost-reflective and directly related to the efficient network service and capacity provided to the customer. Prevent fixed charges from being used to recover municipal general expenditure, non-payment by other customers, electricity theft, inefficient expenditure, stranded assets or lost revenue arising merely because consumers have reduced their electricity purchases. Establish appropriate limits or regulatory safeguards on fixed charges so that they cannot be progressively increased to defeat the economic benefit of self-generation. Require the value of distributed generation, reduced demand and exported electricity to be properly quantified and credited against the costs attributed to grid-connected solar customers. Provide appropriate transitional protection for households and businesses that have already invested in solar and storage, so that legitimate investment expectations are not retrospectively undermined. Publish a roadmap for extending genuine retail electricity choice to ordinary households and small businesses rather than permanently treating them as captive customers.	Danie	retired
	2026-08-27 06:40:49	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	South Africa needs electricity reform, but reform should create competition, efficiency and consumer choice. It should not create a new mechanism through which responsible, paying consumers who reduced their dependence on an unreliable electricity system become the convenient source of replacement revenue. I therefore oppose the Position Paper in its current form and request that these provisions be reconsidered before the policy is finalised.	Johan	employed individual
	2026-08-27 06:41:29	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This is becoming a tradition of the government, to try to force people to be subjected to their rule and exploitation. The continued battle to steal more and more on every possible opportunity they get. Why can they not just get rid of the rot and put people in power with common sense and reasonable thoughts. The ripoff is getting annoying. Transformation is the only thing that will save the people of this great country.	Martin	employed individual

	2026-08-27 06:44:09	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Its is so wrong to expect people who used their own capital to fund for solar and expect them to pay more. If the government refund all my money for the solar we can talk then. Until then,they don’t have a case.	Rudi	self-employed
	2026-08-27 06:44:53	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Hell no! Why should we have to pay MORE for Eskom's failures? Our electricity is already significantly more expensive than it should be due to corruption and mismanagement on a grand scale at Eskom. Besides this, Eskom now wants to punish private solar electricity generation that's saved the country from the load shedding crisis caused by Eskom itself. It's a ludicrous proposal and should be rejected by all sensible citizens of SA with the utmost contempt.	John	
	2026-08-27 06:46:52	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Government is just ripping property owners off our hard earned income. Government are a bunch of thieves. First president tells us to install solar and also gives us R15000 rebate and now wants to penalize us. They should just let us be self sufficient	Suresh	retired
	2026-08-27 06:47:03	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	ANC sun tax & captive citizen abuse.	Alan	retired
	2026-08-27 06:47:06	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It is short-sighted in the extreme to try and recoup charges from those who have invested in solar to this point. Getting "off grid" should be being actively encouraged to reduce a/ pressure on the system and b/fossil fuel consumption. Some minor adjustments might be acceptable but taking as a principle that solar users should pay as much as those who passively continue to use the central system whenever they can is simply unjust and will discourage the changes we need as a society and a planet. Also, breaking up a "natural monopoly" state entity may be tempting given the issues with Eskom to date, but I'm not convinced that's the solution needed. Private companies can be very tempted to put profit before provision and that is the central reason why electricity was a state entity in the first place. It would be far better to put measures in place to get the existing system aided by business skills and knowledge rather than simply breaking it up into competitive firms.	Simric	employed individual

	2026-08-27 06:51:37	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The proposal to introduce mandatory high fixed monthly connection fees for rooftop solar users penalizes households that have invested their own capital to mitigate load-shedding and relieve pressure on the national grid. Under the guise of preventing "free-riding," this framework effectively creates a "solar penalty" that destroys the return on investment for small-scale renewable systems, severely disincentivizing green energy adoption. Furthermore, pairing fixed charges with the ability of large commercial users to exit municipal supply creates an unsustainable burden on ordinary households. By leaving small, "captive" ratepayers to absorb both municipal revenue shortfalls and mandatory fixed fees, the policy shifts the cost of grid maintenance onto those least able to afford it while actively suppressing residential transition to clean energy. Fixed charges should instead reflect actual infrastructure maintenance costs rather than serving as a punitive fee on private renewable investment	Jacques	employed individual

	2026-08-27 07:59:23	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Cape Town City paid out mor than R50 m to households and factories for rooftop solar generated electricity and turned consumers into much needed micro enterprises trading in energy, the most precious commodity on earth so beating poverty, klop armoede. Bangladesh and Vietnam citizens trade in rooftop generated electricity and it revolutionised their economies. Eskom was overstaffed by 66% according to the World Bank. The average monthly salary for a cleaner at Eskom Holdings Limited in South Africa ranges from about R5,000 to R14,258, plus pension, housing, medical, sick leave, family leave, etc. Contract cleaners are paid R4 700.	Hein	Non-profit
	2026-08-27 07:59:44	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	When Eskom was in trouble, and could not provide enough electricity to sevice the market, government strongly recomended that households need to install rooftop solar systems to eleviate the problem, they even promoted this, by making available tax relief incentives, for people who were willing to invest in this way. Households are, especially in wintertime, when the need for electricity becomes more, urged to use electicity sparingly. Now the very same government want to tax those who complied to their request. Furthermore, the metro is not able to prevent cable theft and maintain the electricity infrasttucture, and households are often left without electricity, sometimes for days at a time. Electricity tarriffs are increased above yearly inflation figures, because Eskom and the government aer unable to curb corruption, and to plan for future expantion. Funds that needed to be set aside for expantion is used to payexorbatant bonuses to those executives who mismanage the utility. A mechanism should be provided to disconnect from the grid, if a household prefers to supply their own electricity. Furthermore, NERSA should also implement mandatory tariff-parity benchmarks ensuring that households can sell excess solar energy to metros and city councils, thereby offsetting tax on connection to captive consumers. 	2026-08-27 08:12:39	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. If the state had done their job and not pillaged and raped the system for billions we would not have an energy crisis in this country. Why should the hard working user suffer due to corruption and mismanagement and lack of maintenance by the state? Years ago it was encouraged to go "off the grid" to help the system cope with demand and not over stress the system, even offering rebates on those who installed solar etc., now they want to charge those very same people for doing what they were asked to do in the first place. This is just another way of sealing money for services we do not receive!	S	self-employed
	2026-08-27 08:13:03	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	How dare the govt even think of increasing the rates when this mess has been all their fault due to corruption and miss management of govt funds, funds that we as citizens of SA has paid over in taxes and the purchase of electricity. This govt has lost their minds - time for them to go.	Dave	
	2026-08-27 08:13:27	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Already paying monthly "availability costs" for the maintenance and support of electricity. 	2026-08-27 08:20:49	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	As a solar consumer, I have complied with all the requirements demanded by my municipality. In 2022 I needed to install solar system because of my health reasons. My metro then forced me to install pre-paid. I have in my view complied with every legislative requirements as deemed fit by my municipality. I therefore state that in my view it will be unfair for the state to further burden my investment either through taxes or legislative penalties. Let those who use electricity by illegal means and heavy users of electricity pay more for that they consume. We who at our own expense installed solar should actually be compensated by the state for assisting the state with extra electricity to be available for those who can not legally pay for it. It is legally and morally not the consumer who has to maintain infrastructure it is the state 's responsibility.	Louis	retired

	2026-08-27 08:31:08	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The failure of the state owned clown show that is Eskom has driven private home owners to install solar to run their homes and appliances. That is totally the state's own fault because of mismanagement and greed. To now penalize taxpayers who are already heavily burdened by the increase in property rates, fuel and diesel and food prices, not to mention electricity tariffs, is absolutely unacceptable and unethical. When is it ever enough for this failure of a government? I have come to expect such greedy and despicable behaviour from this GNU but I stand firm in my resolve that this step to drain every last penny from home owners because of a failing state owned enterprise will never be acceptable in any way shape or form.	David	employed individual
	2026-08-27 08:31:28	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Market Power & Price Manipulation Why are the honest home owners who pays monthly for there services being penalised when there are so many millions who do not pay, municipalities are broke not paying for the electricity due to mismanagement and theft of the money and we have to pay more and nothing happens to the people who do not pay. Fixed Charges & Solar Penalties Because you the government lack of supply and incapacity to provide what we pay for(through rates and taxes),we had to spend to provide for ourselfs.If you the government and employees did there work(maintaining infrastucture)and government not bullshit the public that you can balance your budget,we the consumer would not have had to pay for your weakness.	Wayne	self-employed
	2026-08-27 08:32:27	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	If the availability charge becomes ridiculous, most people who have solar will enhance their solar and add batteries and go of the grid altogether. This will leave Eskom with a clientele who either can't pay, won't pay, or who are stealing electricity. Not a great business model and will lead to Eskom's collapse.	John	self-employed

	2026-08-27 08:39:13	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Obvious facts: 1) Eskom was and is still mismanaged and ravaged by corruption. 2) This led to Eskom failing in its mandate to provide electricity to SA (loadshedding). 3) Many South Africans invested in solar systems in order to compensate for Eskom's failure. 4) Eskom now faces a reality where they make less revenue due to this. 5) Eskom and the ANC government are squarely to blame, and yet they place the blame on "free riders" (while Eskom itself was begging more South Africans to be "free riders" just a few years ago). If Eskom was a baker, it's logic would mean that you can't just buy a loaf of bread when you want it - you have to pay a monthly fee just to have the option to enter the bakery, whether you want bread or not. And THEN the bread you buy is exorbitantly expensive. Such a bakery would never ever survive. But the ANC has ensured that there are no other competing bakers allowed. Does that seem reasonable? As with everything else under the ANC leadership, the taxpayer has to once again suffer. Those that will not suffer or face consequences for their actions are: - Eskom officials who failed in their duty - ANC government officials who failed in their duty - People who enjoy free electricity via illegal connections - Incompetent municipalities that are woefully in debt to Eskom Punishing law-abiding taxpayers will bring in corrupt revenue, for a short time. But it's obvious that the people who are being abused the most, will simply take a final step away from Eskom (solar + generator as backup). Eskom's revenue will simply shrink even further. 	2026-08-27 08:57:45	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	We paid for electricity and did not get it due to load shedding. We made an alternative plan to self fund our electricity supply in order to have stable electricity supply. Now you want to tax the self sufficient again for something you do not supply. It seems like the consumer is doomed to constantly pay for something they do not get. Townships get electricity for which those residents do not pay. If this issue is resolved, the city councils will have enough money to pay their bills and you do not have to tax the consumers who do pay for their consumption. There is a difference between tax and theft. Tax you pay so that there can be a collective benefit to all taxpayers. Theft is when you take something without returning a benefit, which in Eskom's case is a reality.	Deon	self-employed

	2026-08-27 09:01:01	No I do not	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	I cannot support what is proposed. Eskom needs to stop the use by millions of residents of unpaid and stolen electricity usage, and not further burden the obedient and honest electricity users by unreasonably over-taxing them.	Jan	self-employed
	2026-08-27 09:03:51	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	In Msunduzi municipality, as ratepayers we are already paying a huge fixed charge for just our electricity meters, even before usage. This is a shady policy already, and now they are proposing additional fixed charges for ratepayers like myself who have no solar installations? This is totally unacceptable.	Michael	student
	2026-08-27 09:04:57	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I was forced to seek alternatives during the excessive load shedding period. This was done with my own, after tax, funds to which the authorities have no right to. Even though it appears there is no longer load shedding, there remains constant power outages due to cable theft, sub station issues, etc. Given that households rely heavily on electricity, alternatives are still necessary. Alternative power users are NOT exploiting Eskom, rather we are easing the burden on them (reducing demand on their inadequate system, lowering maintenance requirements, perhaps creating an opening for a more streamlined organisation by lowering their costs - headcount need, etc). These implementations are via individual funds and Eskom must not try to fund their lack of management skills, wastage, inability to collect vast amounts from municipalities, etc from other law abiding citizens who find them an unreliable source of power	Keith	retired
	2026-08-27 09:04:58	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It was due to incompetence & corruption that the grid /Eskom collapsed, if it wasn't for people putting in solar we would still be having power outages	Stephanie	business owner

	2026-08-27 09:05:33	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I have foreseen this move a long time ago. As it is, I pay a monthly availability fee whether I use any electricity or not. There might be a small case for the validity of this fee but it should actually get less as time goes by as the cost of the infrastructure supplied should be paid off over time and a small service fee can then be levied. Supplying own electricity takes revenue away from a rather monolithic, monopolistic very inefficient supplier, also government protected and funded by taxpayers monies makes a business case for said supplier redundant. Their need for funds has been regulated by a body and now even a minister of electricity that probably has no engineering, practical or business acumen pertaining to the generation, transmission, maintenance and business model of electricity. There is no justification for imposing a tax, or whatever they want to call it, on people who saw and could afford to alleviate their reliance on a very poorly run basic service supplier who actually at times contribute towards more electricity supplied. The way to go is to be completely off grid with own backup supply, but even this will probably not stop their need to tax.	Jakobus P H	retired
	2026-08-27 09:07:14	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Households and small businesses that invested significant private capital into rooftop solar, batteries, and energy efficiency to protect themselves from load shedding will be forced to pay higher monthly baseline connection fees. This structural shift acts as a financial penalty on private decarbonisation, extending solar payback periods and increasing electricity bills for low-volume and frugal users.	Daniel

	2026-08-27 09:14:30	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	We were subjected to many years of loadshedding, all caused by the Government. We had to make alternative arrangements to work which included paying for our Solar & Battery installation at a huge cost to keep our homes and Businesses operating. This also helped the Government/Eskom to direct the electricity to others users. We are now being punished for the government's inability to provide electricity, and their ongoing greed, corruption and mismanagement. We who have installed solar, actually allowed the little power Eskom had to be stretched so that the poorer income communities suffered less loadshedding durations. 1. Leave residents alone who have solar as you caused us to do this. 2. Allow residents to pump electricity back into the grid during peak consuming periods and at Daytime.r 3. use smart meters to reduce the usage or demand on residents with solar and batteries during peak periods, thus allowing for a better distribution of load /demand during the day for Eskom without additional cost to Eskom.	Geoff	self-employed
	2026-08-27 09:18:03	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		Paige	employed individual
	2026-08-27 09:18:07	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom has shown that they are incapable of providing stable, reliable, affordable power, and during loadshedding, encouraged residents to go off grid. Now they want those same residents to pay for something that has firstly already been paid for, as well as helping alleviate a dire situation. Why should any solar installations be paid over and above the cost of installation and maintenance. Eskom are not doing their jobs properly. Spend more time stamping out corruption in your own house and make sensible decisions with electricity supply to outsiders at ridiculous rates that require subsidy from the public.	Michael	self-employed
	2026-08-27 09:19:07	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It is unjust to expect people to pay for a service (electricity) not provided by a service provider (Eskom) and yet thousands of people get the service free. Again, the law abiding citizens have to pay for the government's shortfall and mismanagement. Eskom provide cheaper/free electricity to other countries such as Mozambique to run large smelter industries such as Mozal. It is unlawful and unjust that the Taxpayers of South Africa have to suffer while there is people and large industries, making enough money to support the shortfalls. Why should a person pay for a service they do not use, while others use the service for free? I find it unjust for the government to "tax" the energy provided by our God given sun. Will they start taxing the air we breathe as well? This goes against human right's. Hard working, law abiding citizens are being punished while the government protects the rich, people living for free, running unlawful operations oppressing the poor.	Jaco	employed individual
	2026-08-27 09:21:03	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This is extortion. 	2026-08-27 09:21:04	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Having invested in solar to mitigate government inefficiency they want to tax my investment	Andre	retired
	2026-08-27 09:22:11	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	A "Sun Tax" on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. The "Captive Ratepayer Trap" and Municipal Insolvency: Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance. Wholesale Price Volatility and Market Power Manipulation: Eskom Generation still controls the overwhelming majority of South Africa's dispatchable baseload power. In unbundled spot markets worldwide, dominant suppliers have engaged in economic or physical withholding to artificially spike market clearing prices. Without hard statutory bid caps and aggressive oversight, wholesale price volatility will be passed directly down to retail consumers. Severe Conflicts of Interest Within the NTCSA: Consolidating transmission grid ownership (TNSP), system dispatch (SO), market clearing (MO), and legacy state off-take contracts (CPA) within a single entity under Eskom Holdings creates structural conflicts of interest. NTCSA could face internal commercial pressure to favour Eskom assets or delay third-party grid connections. Premature Market Launch Amid Unresolved Municipal Debt: Opening an advanced wholesale market with mandatory imbalance penalties in 2026/2027 while municipal distribution debt to Eskom remains unresolved is premature. Financially distressed municipalities that fail prudential credit requirements will be excluded from trading platforms, creating a divided nation of well-supplied metros and failing, power-starved rural councils.	Pieter	retired
	2026-08-27 09:22:47	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Government and Eskom failed to deliver on its mandate to provide electricity, up to the point that they in fact incentivized individuals to invest in solar power at great expense, now they wish to penalize those very people who saved the country from grid collapse. Completely unacceptable - we cant trust or rely on Government or Eskom so we will once again be forced to increase our investments and reliance on solar and move off grid entirely. Then what ???????	Dorian	self-employed
	2026-08-27 09:23:12	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Splitting Eskom up just proliferates the numbers of public servants at a significant increase in overhead cost which will then be passed on to the consumer.	Michael	self-employed
	2026-08-27 09:23:52	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom and the municipalities failed to give proper electricity and allowed infrastructure to deteriorate. 	2026-08-27 09:25:27	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	What the Policy Proposes: The position paper establishes the principle to "discourage free riding," arguing that modern electricity networks have high fixed infrastructure costs and low operational costs. Under this framework, tariffs will shift away from pure volumetric consumption charges (cents per kilowatt-hour) toward mandatory fixed capacity and network charges for all grid-connected customers, regardless of how little electricity they consume. Only consumers who disconnect completely from the national grid will be exempt from these fixed fees. The Underlying Risk: Households and small businesses that invested significant private capital into rooftop solar, batteries, and energy efficiency to protect themselves from load shedding will be forced to pay higher monthly baseline connection fees. This structural shift acts as a financial penalty on private decarbonisation, extending solar payback periods and increasing electricity bills for low-volume and frugal users. Points to Demand in Your Public Submission: Demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. Insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. Require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households.	Sanele	employed individual

	2026-08-27 09:26:15	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	As a democratic citizens we should have the choice as to how we manage our personal power use. If this means we have spend personal capital to insure we have power, why should we be punished? If we choose to have solar and grid dependency to have enough power why is there now a fight to have us pay additional costs to still use some power from the main grid? We would still be paying for the electricity used is that not what Eskom should be able to offer. The bigger problem is Solar but what they have not been able to offer to the consumer and now they have lost many consumers to solar power and do not have enough money. This should not be the consumers punishment to pay? Why could they not offer a stable Grid as we were patient but nothing got solved? Have they reduced their over employed company? Have they stopped corruption and spend money as it should have been spend on maintenance etc? No now they once again are trying to solve their problem by punishing the good citizens who pay for everything in the country. If they cannot handle their responsibility, other private companies should be allowed into the market to provide electricity. Enough with a monopoly that cannot perform their job effectively and now are looking for escape goats. Welcome to the real capital world. Why do they keep getting get our of jail free cards? 	2026-08-27 09:27:27	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Good morning, there are 2 main concerns 1. If they would look at private sector as a deliverable we would have a competitor to the state who then needs to pull up their socks and work ethically and hard to stay in business rather than looking for others to solve their incompetence. Splitting it over government sectors is just going to cause a bigger nightmare to keep track of what is happening. 2. Once again the government is trying to make easy money by penalising the people who do something to reduce the electricity demand from government and reduce the risks of load shedding. There is no logic in this approach except greed. Why is the state looking at ways to penalise the people add value to our country? Why can government not solve the problems without trying to create nothing scheming by laws to fill their pockets and ghost funding?	Walter	
	2026-08-27 09:28:10	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Cape Town already has a "services & wires charge". Why do I need to pay more?	Ian	retired
	2026-08-27 09:31:04	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	We should all be looking for and using alternatives for power generation. The more people can take care of themselves, the better for the future altogether. The less reliant an individual is on the state, the less the burden on the state.	Jenny	self-employed

	2026-08-27 09:40:56	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The cANCer government are directly and personally responsible for the Eskom fiasco. Now they want the general public to carry the burden of their criminal greed and cadre deployment consequences. Develop another fair and inclusive model and claw back the millions/billions of the privileged recipients of this crime. They are very quick to draft new legislation but are agonisingly slow or never spend any meaningful efforts and resources of unbundling this cancer that is the root cause of this problem.	George	unemployed individual
	2026-08-27 09:41:26	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The main concerns are 1. Splitting between government is not a solution but will worsen the tracking of things happening. 2. You need 2 private sector offers to compete with government supply so that they start to work harder, ethical and smarter to keep in business. Competition is the key. 3. Penalising the individuals or businesses for investing into alternative energies like solar is like cutting of the hand that feeds you. Government should reward the people who have enabled the country to stay on grid. It is part of the reason we no longer have load shedding because people help themselves instead of getting help from the state. 4. Why is the government not looking at compensating the people generating more electricity than they use as a solution? 5. Some businesses only survive because they look for alternative services to continue providing a service or product. Many people have home offices so that they can save fuel and time and the need the solar energy during the day because it is more affordable and reliable than Eskom. 6. This is a risk to people who try to survive and keep going in spite of the lack of service from government.	Ines

	2026-08-27 09:54:11	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I did not install solar as a luxury but as a necessity as Eskom was unable to meet demand. In doing so, along with thousands of other households, we helped alleviate the pressure on Eskom's generating capacity and at the time it was welcomed and encouraged by Eskom. Now we are going to be punished? I also did not ask for a pre-paid meter at my property but was forced by my municipality to have it installed. The essence of this meter is that I can only use what I pay for - if I don't pay, I don't use. Through my investment in rooftop solar I have placed myself in a position where I use less and therefore I consume less from Eskom and therefore have to pay less to Eskom. Again, as I see it, the new law/regulations wants to punish me for this. What is next, taxes on water usage from rain water harvesting? It seems to me that the incompetence of our government needs to be paid for over and over again by the public. I would rather upgrade my solar system and be completely independent from Eskom - have my electrical connection terminated - than support this new paper.	Pieter

	2026-08-27 09:55:54	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	South Africans cannot be expected to keep paying more for a system that repeatedly fails to deliver. We have already been forced to spend enormous amounts of our own money installing rooftop solar simply to keep our homes and businesses functioning. Eskom's failures have cost us in wasted food, damaged businesses, lost productivity and compromised safety when alarms, security systems and essential lighting cannot operate reliably. And now, while South Africans are already heavily taxed and household finances are under enormous pressure, we are being asked to consider yet another charge—regardless of how much electricity we actually receive. That is not a solution. It is a subsidy for inefficiency. I understand that Eskom and the electricity system face serious financial challenges. But the answer cannot continually be to reach deeper into the pockets of already overburdened citizens. If the system is fundamentally structured so that households must pay a fixed amount simply to keep an inefficient grid financially viable, then perhaps it is time to admit that the model itself needs to change. Government and Eskom should be embracing the future, not protecting a failing model. Households investing in solar should be encouraged to feed excess power back into the grid and receive fair credits. The grid should be modernised, professionally managed, technologically upgraded and operated on principles of efficiency, accountability and competition. Stop making consumers pay for poor management. Start fixing the system. Bailouts are the easy way out. They remove the pressure to become efficient, encourage waste and ultimately leave taxpayers carrying the burden. South Africans don't need another bill for failure. We need leadership with the courage, skills and political will to reform the entire electricity system. I believe it can be done. But it will take more than another bailout—it will take accountability, innovation and the willingness to stop doing things the way they have always been done.	Desray	employed individual

	2026-08-27 09:59:07	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	# Objection to the Electricity Sector Market Transformation Position Paper, 2026 I wish to formally object to aspects of the proposed electricity market reforms, particularly the potential introduction of substantial fixed network charges for households and businesses that have invested privately in solar and battery systems. South Africa's electricity crisis was not created by consumers who installed solar. Years of mismanagement, corruption, inadequate maintenance, electricity theft and costly infrastructure failures contributed significantly to the crisis. Many South Africans therefore invested their own money in solar, batteries and alternative generation simply to maintain reliable electricity and reduce their dependence on Eskom. These consumers should not now be financially penalised for doing so. I accept that grid-connected solar users should contribute fairly towards maintaining the network they use. However, network charges must be transparent, proportionate and based on the actual cost of providing that service — not structured simply to recover lost electricity-sales revenue. I further believe that consumers who reduce demand, generate their own electricity, store energy or supply surplus electricity back into the grid should be **rewarded rather than discouraged**. South Africa should incentivise energy efficiency, private generation and battery storage as part of the solution to our electricity crisis. Social electricity subsidies should also be transparently funded rather than disproportionately recovered from remaining paying consumers. I support a competitive electricity market, but it must be **fair, transparent and accountable**. Ordinary households and small businesses must not become captive customers carrying the financial burden of a failing distribution system. **Private investment in solving South Africa's electricity crisis should be encouraged, not punished.**	Liska	employed individual

	2026-08-27 10:25:37	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	NO NO NO NO NO!!! The reason it has become almost essential for private owners to go solar is precisely because of DECADES of unreliable, overpriced, under-maintained Eskom electricity. Loadshedding, power outages, cable theft, power surges destroying expensive appliances... The ANC government has forced us to spend huge amounts to get our own power organised, now they want to penalise us? ABSOLUTELY NOT!! Eskom should be closed down or reorganised as perhaps a corporate/business/industrial electrical supplier, while private homeowners should be subsidised to install their own power systems. I refuse to give these criminals a single penny! Time they were voted out of power.	Anton	self-employed
	2026-08-27 10:26:25	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Formal Submission: Objection to Discriminatory Fixed Grid Charges on Rooftop Solar Users 27 August 2026 To: The Department of Electricity and Energy / Relevant Regulatory Authority Subject: Formal objection to proposed fixed grid charges and discriminatory treatment of rooftop solar users Dear Sir / Madam, I hereby submit this formal objection to the proposed tariff and market reforms described in relation to the South African Wholesale Electricity Market (SAWEM), particularly insofar as they may impose high, unavoidable fixed grid charges on households and small businesses that have installed rooftop solar systems at their own cost. While I recognise the need to reform South Africa's electricity market, improve reliability, encourage investment, and create a more sustainable electricity system, any reform must be implemented in a manner that is fair, transparent, rational, proportionate and non-discriminatory. • Mandatory Fixed Grid Charges on Rooftop Solar: The policy explicitly targets grid-connected solar and partial-defection users under an "anti-free-riding" principle, shifting tariff structures from volumetric consumption (units used) to high, unavoidable fixed monthly connection fees. • The "Captive Ratepayer" Risk: Large industrial and commercial users exceeding set thresholds (e.g., 1 MW) will be allowed to bypass municipal grids to buy cheaper power directly from private traders. Ordinary households and small businesses will remain "captive" to municipal distribution grids, risking higher tariffs to cover municipal revenue deficits and legacy cross-subsidies. • Wholesale Price Volatility & Market Power: With Eskom Generation remaining the dominant producer, risks of market power, pricing manipulation, and trading speculation could translate into retail tariff volatility if regulatory protections are inadequate. • Restructuring the Distribution Value Chain: Municipal and Eskom distributors must separate the physical grid ("wires") from electricity sales ("retail/trading"), introducing separate fees for grid delivery and energy units. My objection is strongest in respect of any proposal that targets or penalises households and small businesses that installed rooftop solar systems because the public electricity supply repeatedly failed them. For many years, South Africans have had to endure severe load shedding, unreliable supply, rising tariffs, and the economic and personal disruption caused by an electricity system that has not been maintained, planned or managed adequately. In these circumstances, rooftop solar users should not be treated as "free-riders". They are citizens and businesses that used their own savings, took on debt, and carried the full private cost of installing, maintaining and insuring alternative energy systems in order to protect their homes, businesses, staff and families from the consequences of repeated power failures. These private investments reduced demand on the grid and contributed to energy resilience at a time when the system was under severe strain. It would be fundamentally unfair and discriminatory to respond to those investments by imposing punitive fixed monthly charges on the very consumers who acted responsibly in the face of prolonged load shedding and grid instability. The costs arising from inadequate maintenance, poor planning, underinvestment and failures in the electricity system should not now be shifted onto households and small businesses that took practical steps to reduce their reliance on that system. I am further concerned that the proposed framework may create an indefensible two-tier electricity market. Large industrial and commercial users may be able to access cheaper private power or bypass municipal distribution channels, while households and small businesses remain captive to municipal grids and are then expected to absorb higher fixed charges to compensate for municipal revenue losses, legacy cross-subsidies or restructuring costs. Such an outcome would be inequitable and unacceptable. I respectfully request that the Department and relevant regulatory authorities reconsider any tariff design that would penalise rooftop solar users through excessive fixed grid charges. If grid access fees are considered necessary, they must be independently justified, cost-reflective, proportionate, transparent and applied equitably across all categories of users. Rooftop solar users should be recognised as contributors to national energy stability, not treated as a convenient replacement revenue source for failures they did not cause. For the reasons set out above, I submit that any policy or tariff reform must protect ordinary consumers, encourage responsible private investment in clean and reliable energy, and avoid discriminatory treatment of households and small businesses that have already borne significant costs as a result of repeated load shedding and grid failure. Yours faithfully, A concerned South African Ratepayer	Sue	unemployed individual
	2026-08-27 10:27:12	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	this is unacceptable, especially when we have to experience these many outages and breakdowns, (which do damage to our appliances), and then will get penalised for making alternative arrangements by installing Solar, (at our own expense), all because of ESKOM not doing their job and maintaining the electrical grid properly and efficently. WE WILL JUST NOT PAY!!!!!!	MIKE	retired

	2026-08-27 10:38:40	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	A "Sun Tax" on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. The "Captive Ratepayer Trap" and Municipal Insolvency: Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance. The burden of ongoing illegal connections into the grid that dominates certain communities and costs billions of Rand annually to municipalities is not addressed, nor is who and how these costs are to be recovered by the relevant municipality. Wholesale Price Volatility and Market Power Manipulation: Eskom Generation still controls the overwhelming majority of South Africa's dispatchable baseload power. In unbundled spot markets worldwide, dominant suppliers have engaged in economic or physical withholding to artificially spike market clearing prices. Without hard statutory bid caps and aggressive oversight, wholesale price volatility will be passed directly down to retail consumers. Severe Conflicts of Interest Within the NTCSA: Consolidating transmission grid ownership (TNSP), system dispatch (SO), market clearing (MO), and legacy state off-take contracts (CPA) within a single entity under Eskom Holdings creates structural conflicts of interest. NTCSA could face internal commercial pressure to favour Eskom assets or delay third-party grid connections. Premature Market Launch Amid Unresolved Municipal Debt: Opening an advanced wholesale market with mandatory imbalance penalties in 2026/2027 while municipal distribution debt to Eskom remains unresolved is premature. Financially distressed municipalities that fail prudential credit requirements will be excluded from trading platforms, creating a divided nation of well-supplied metros and failing, power-starved rural councils.	Mark	business owner
	2026-08-27 10:38:45	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The President said "HELP US, install solar". I borrowed money because the system would eventually pay for itself. If this is implemented, the solar system can't pay for itself and I'm in financial trouble. Can't be right. If the high basic charge is implemented, there should be a penalty system for times without power. It would give the supplier great incentive to fix problems speedily.	Hannes	employed individual

	2026-08-27 10:44:46	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom cannot expect ordinary citizens to be burdened because of wrongdoing such as corruption, inefficiencies and overstaffing. Eskom cannot sustain itself at the expense, and sacrifice of its customers. We were forced into installing solar systems and now we're expected to fund Eskom's "lost revenue"...we've all been forced to make sacrifices, dig into our savings, cut back on essentials and yet Eskom carries on regardless. Now that Eskom is generating a surplus, there is no subsidy for those that helped them out of the load shedding crisis	Eugene	retired
	2026-08-27 10:44:49	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Households and small businesses that invested significant private capital into rooftop solar, batteries, and energy efficiency to protect themselves from load shedding will be forced to pay higher monthly baseline connection fees. This structural shift acts as a financial penalty on private decarbonisation, extending solar payback periods and increasing electricity bills for low-volume and frugal users.	Marion	employed individual
	2026-08-27 10:46:05	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I strongly object to any electricity tariff reform that imposes substantial fixed charges or financial penalties on households that have invested in private solar and battery systems. South Africans were forced to spend significant amounts of their own money on alternative electricity generation because years of load shedding made the public electricity supply unreliable; these households did not cause the electricity crisis and, by reducing demand on the grid, actually helped alleviate it at no capital cost to Eskom, municipalities or the tax payer. It is therefore fundamentally unfair to now penalise these consumers, or regard them as "free-riders", simply because they purchase less electricity from the grid. Charges should be transparent, cost-reflective and not used to recover lost electricity-sales revenue, municipal shortfalls or historical cross-subsidies. Existing solar owners should also receive transitional or grandfathering protection, particulalry as they made substantial investments based on the tariff structures that existed at the time. South Africa should encourage private renewable-energy investment and energy resilience, not punish citizens who invested their own money to help solve an electricity-supply crisis they did not create.	Debbie	
	2026-08-27 10:47:34	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Where is the Competition Commission in this? No competition which makes it very unfair, especially with all the generous increases since 2007. Once cables and circuit breakers are installed, they hardly need any maintenance, so you want to piggy bag on something done long ago in most cases.	Martin	retired

	2026-08-27 10:49:48	No I do not	All of the above	Fixed Charges & Solar Penalties	Independent Power Producer (IPP) / Energy Trader	We borrowed a lot of money (which must be rspaid) to get solar because of grid failures even if solar is not a perfect solution because we still rely and pay for grid electricity. We are not totally free from it and make only a small saving because tariffs are so high. We still pay so there is no free riding involved. Why should we be taxed for taking the initiative to help ourselves. The government does not own the sun and does not make it shine to make solar energy but wants to tax us for it. Utter nonsense! *Ending Monopolies and Unlocking Private Investment: Decades of Eskom's single-buyer monopoly led to catastrophic load shedding, debt bailouts, and stifled innovation. Establishing the South African Wholesale Electricity Market (SAWEM) allows private generators, renewable energy developers, and traders to compete directly, deploying private capital to build generation capacity without burdening national taxpayers. Transparent Price Discovery and Long-Term Cost Reductions: Open day-ahead and intra-day wholesale trading forces generators to bid at competitive, marginal costs. Over time, this market mechanism removes operational inefficiencies, penalises unreliable power stations, and drives down the baseline wholesale cost of electricity for the entire economy. 	2026-08-27 11:51:18	No I do not	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	I strongly disagree with the proposed amendments. The business and home owners should not be penalised for the municipalities lack of services. Instead the municipalities should support the businesses and homeowners who helped lighten the power load that caused load shedding.	Hans	business owner
	2026-08-27 11:51:41	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	In the past long before the current Administration gained power we received our power and water from our local municipality. If you owned property that had water and electricity connection points on your property you paid a "AVAILABILITY FEE" irrespective of whether you used water or power. This fee provided the revenue to maintain the reticulation system. Where municipalities did not have their own power generating plants, Eskom supplied them with a connection to the national grid, and charged an availability fee to cover grid maintenance, plus charge the municipality for power used by the municipal district as a whole. This system was reasonable and equitable. The question extant is how they plan to implement it and how many "GET OUT OF JAIL FREE" cards are squirreled into the fine print.	Rudolph	
	2026-08-27 11:52:35	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The Givernment has FAILED to supply Steady Energy . Thus has forced Household to put themselve in Debt as they could NIT AFFORD TO LISE THE ESSENTIAL FOODS ETC THAT HAS GONE OFF AND THE DOMINO EFFECT OF THE GOVERNMENTS I COMPETENCE. THE SUN IS A GODS GIFT AND COST NOTHING TO THE GOVERNMENT. THE END USE THAT HAS INVESTED THESE FUNDS MUST NIT PAY FOR THE GOVERNMENT PROBLEMS. WE ARE ALREADY TAXES HEAVELY AND CORRUPTION IS ONE IF THE MAIN CAUSES. THE COST OF LIVING IS ESCALATING AND THE PUBLIC CANNIT BE PAYING FOR GOVERNMENT MISTAKES	Ismail	
	2026-08-27 11:53:16	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The reason people invested in solar in the first place was because of governments incompetence and corruption. We cannot now be penalised because the government failed to do their job. Failed to stem the whole-sale theft of our resources. Failed to deal with the corruption, failed to provide while still taking huge salaries comparable to first world successful countries. Failed to hold their own people accountable and continued to give cadres jobs that are almost nothing short of money for votes. The solar installations for many was a survival decision. The government must thin out their ranks and only pay those who actually do work, and not political figure heads who like parading around in ludicrously expensive clothing at wasteful gala's or other events, or further more wasting money on disobeying the law whilst travelling in huge blue light motorcades. The people were forced to carry the electricity production on their own shoulders, many are still paying off the debt incurred in regard to this. This includes many non profit organisations helping the poor and needy. NO! A basic small connection fee, which already has become excessive, only. Then pay as you use. IF the government is short of money take from their excessive salaries and unhelpful and useless events. The unemployment figure is so high we risk economic collapse as a smaller and smaller group are carrying an ever expanding and inflated load.	Robin	Non-profit
	2026-08-27 11:54:15	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Fairness in consumption seems to be left outside the door. Taking responsibility for my own electricity needs are going to be "taxed"??? - How absurd does the government WANT to become? Come on people - nothing you are wanting to do is conducive to progress in our country.	Andrew	employed individual
	2026-08-27 11:55:28	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I have installed Solar because of the states failure to supply uninterrupted electricity to my home. This has cost me a lot of money - if you are thinking of charging me for freeing up electricity for others then you are seriously barking up the wrong tree. I refer to the following statements made recently: Ramokgopa revealed that diligent, paying consumers are forced to subsidize non-paying customers because the current tariff structure bakes unpaid municipal debt into the cost of supply. " - Unveiled in August 2026, the new policy aims to ban Eskom and municipalities from passing these uncollected debts onto compliant users. - Ramokgopa noted that from 2007 to 2024, electricity prices surged by 937%, far outpacing the 155% inflation rate over the same period. - Under the proposed framework, Nersa will enforce transparent, cost-reflective tariffs and a 10-year price forecast to protect consumers and help industrial investors." So, all of the above are just lies masked as promises to placate the desparate public and garner votes whilst taxing the already overburdened tax payer.	Liam	
	2026-08-27 11:56:34	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		Lillian	
	2026-08-27 11:57:23	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I don't see why we should be penalized for providing our own solar energy when, for many years, Eskom could not provide us with energy 24 x 7. If many consumers have opted for solar power, then it is the fault of Eskom and their mismanagement of the coal fired power grid. Eskom must come up with another plan that DOES NOT entail further financially destroying consumers. The government MUST grow the economy so that more people get jobs, who then require more energy. In this way you can earn more money BUT 'taxing' us more will final kill the golden goose!!!	Andrew	retired
	2026-08-27 11:58:52	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	ANC Govt corruption and mismanagement forced citizens to install solar at great personal cost. It is totally unacceptable that the same culprits now want to force higher energy costs and penalties on consumers for their incompetent management and well publicised looting of ESKOM.	Stuart	retired
	2026-08-27 12:00:25	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The unreliability of Eskom power has driven individuals to find alternatives to protect their homes and small businesses from non-supply of electricity. Eskom and the government did not contribute in any way to the cost of installing those systems -- systems which cost individuals a lot of money and for which they sacrificed. It is unjust to impose penalties on those who made a plan when the government and Eskom couldn't. Individuals and businesses that are or have already installed solar or other electricity-self-generating systems should be regarded as benefactors to the country as a whole. Their easing of the burden on the grid has effectively let the government and Eskom off the hook for their miserable performance in long-term planning and providing reliable electricity to more of the country's population.	Heath	self-employed
	2026-08-27 12:00:34	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation	Nadeem	retired
	2026-08-27 12:01:35	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	When ESKOM (the government) was in trouble trying to supply us with the electricity they were bound to supply us, we got on and did something about it. That is we spent large sums of money ensuring that we had what, in previous times, we received without question. Now we are being penalised for being proactive. WHAT UTTER NONSENSE.	Christopher	
	2026-08-27 12:01:56	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Citizens who spent private capital to solve the state's energy crisis will now face steep baseline connection taxes to subsidise legacy grid infrastructure.	frik	retired

	2026-08-27 12:02:32	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		Michael	
	2026-08-27 12:02:52	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	As per two of the previous repondents I agree and state: The reason people invested in solar in the first place was because of governments incompetence and corruption. We cannot now be penalised because the government failed to do their job. Failed to stem the whole-sale theft of our resources. Failed to deal with the corruption, failed to provide while still taking huge salaries comparable to first world successful countries. Failed to hold their own people accountable and continued to give cadres jobs that are almost nothing short of money for votes. The solar installations for many was a survival decision. The government must thin out their ranks and only pay those who actually do work, and not political figure heads who like parading around in ludicrously expensive clothing at wasteful gala's or other events, or further more wasting money on disobeying the law whilst travelling in huge blue light motorcades. The people were forced to carry the electricity production on their own shoulders, many are still paying off the debt incurred in regard to this. This includes many non profit organisations helping the poor and needy. NO! A basic small connection fee, which already has become excessive, only. Then pay as you use. IF the government is short of money take from their excessive salaries and unhelpful and useless events. The unemployment figure is so high we risk economic collapse as a smaller and smaller group are carrying an ever expanding and inflated load. Home owners were urged by Gov to install solar to relieve pressure on Eskom . So much so that if your installation costs more than R 100000 you could apply for 25% Tax relief . Now the Gov want to punish home owners for assisting Eskom as requested . Totally unacceptable	Peter	retired
	2026-08-27 12:03:18	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		Jannie	employed individual
	2026-08-27 12:04:35	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It is the citizens constitutionally right to have access to electricity and water. For what do we pay taxes then???The Gov. was unable to provide sufficient power and implemented loadshedding. We citizens were urged to assist saving electricity and thus installed solar panels using the sun, a natural resource.	Anne	retired
	2026-08-27 12:06:27	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I object to the proposed electricity market reforms in their current form. While increased competition and private investment may benefit South Africa, the transition must not come at the expense of ordinary households, small businesses, solar users, or already overburdened municipal ratepayers. I am particularly concerned about the proposed move toward high fixed network and capacity charges for grid-connected consumers. Households that have invested their own money in rooftop solar, batteries and energy efficiency should not be financially penalised for reducing their dependence on the grid. Any fixed charges must be reasonable, transparent and strictly regulated, with fair credit given for electricity fed back into the network. I also object to creating a two-tier electricity market where large industrial users are allowed to access cheaper competitive electricity while households and small businesses remain captive to municipal or Eskom tariffs. Consumer choice should be progressively extended to ordinary South Africans, and captive customers must be protected against having stranded costs, municipal losses and inefficient legacy expenses shifted onto their accounts. Strong safeguards are also required to prevent wholesale market manipulation. Eskom Generation will remain a dominant producer during the transition, and no participant should be permitted to abuse market power through inflated bidding, capacity withholding, collusion or other practices that increase electricity prices. Market bidding, pricing and dispatch information should be transparent and subject to effective independent oversight and meaningful penalties. The reforms must furthermore address the serious financial risks facing municipalities. Large commercial customers leaving municipal supply could severely reduce electricity revenue and place even greater pressure on residential consumers. Municipal network revenue should be ring-fenced for electricity infrastructure and maintenance, and government must establish a transparent transition mechanism so that paying households are not forced to carry municipal debt, inefficiency or collapsing cross-subsidies. I am also concerned about the concentration of transmission, system-operation, market-operation and purchasing functions within the NTCSA while it remains under Eskom Holdings. The Market Operator must be genuinely independent, conflicts of interest must be strictly ring-fenced, and an independent mechanism should exist to resolve disputes involving grid access, connection queues and dispatch decisions. Finally, South Africa cannot have a functioning competitive electricity market without sufficient transmission capacity. Private investment in Independent Transmission Projects should be enabled urgently through clear, fair and bankable rules. Grid capacity must be allocated transparently, and consumers should not be forced to carry unnecessary congestion and balancing costs caused by delays in expanding or maintaining the transmission network. I therefore call on the Department, NERSA and government to revise the framework to ensure that electricity-market reform delivers genuine competition, lower costs, greater consumer choice and stronger energy security without penalising rooftop solar owners, captive households, small businesses or responsible ratepayers. Consumer protection, regulatory independence, market transparency and affordable electricity must remain central to the transition.	Charl

	2026-08-27 12:11:42	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It is difficult to imagine how far this inept and corrupt government will go to extort money out of their citizens... They (the government and Eskom) could not produce enough electricity and maintain power stations and infrastructure due to mainly AA, BBB-EE, corruption & state capture, which lead to widespread load shedding and electricity price hikes. Citizens who had some money or made loan arrangements, stepped in to fill the shortfall / alleviate the demand, and now that the crises is averted (through small and large consumers going bankrupt or left the economy), they want to further milk the people who tried to maintain a reliable electricity supply to their businesses and / or homes. How destructive can a government get to ruin the foundations of economic growth and everything else to the ground, including trying to kill the few geese left that still lay some golden eggs...? It seems that almost everything / idea / legislation the government hatches out, is aimed to destroy you / bleeds you dry. So like many in the past and most probably 99% of future draft regulations, I oppose and condemn this proposal as well.	Gert	
	2026-08-27 12:12:51	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I have spend a lot of my after tax savings on installing Solar for the good of my family in general and the environment in particular. Being on a pension forced me to review my cost structure and electricity was the area where I could get the most value for my expenditure, so I am am not going to give away control easily. If there is ANY penalty (aka Tax / Levy / Surcharge) then I will go off-grid entirely	David	retired
	2026-08-27 12:13:19	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Households and small businesses that invested significant private capital into rooftop solar, batteries, and energy efficiency to protect themselves from load shedding will be forced to pay higher monthly baseline connection fees. This structural shift acts as a financial penalty on private decarbonisation, extending solar payback periods and increasing electricity bills for low-volume and frugal users. You are punishing people for finding a solution to keep the country running when Eskom failed us. How does that make any sense?	Barbara	retired

	2026-08-27 12:48:56	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It is unacceptable that government wishes to penalise those very entities that are helping alleviate the national energy crisis with these penalising proposals because they are incapable of managing their own finances and allowing government funds to disappear down some rabbit hole through high-level corruption and theft. Allowing the largest, highest-paying electricity consumers (potentially open to corruption) to exit municipal supply, creates a two-tiered energy economy. As high-volume users migrate to competitive private contracts, the cost of maintaining legacy municipal networks and state-owned infrastructure will be concentrated onto captive residential households, driving up standard retail tariffs which are already excessively high due to Eskom and local and national government incompetence severely affecting the average South African household which are already stretched to the limit. Without hard statutory bid caps and aggressive oversight (which this government is historically incapable of and/or unwilling to do, wholesale price volatility will be passed directly down to retail consumer (i.e. hard-pressed households and SMMEs) who are the least able to afford such volatility. Government shall institute and maintain mandatory cost-reflective bidding caps for any single generation entity that controls more than 20% of active dispatchable capacity in the market. Many grid-connected rooftop solar owners in municipalities other than the City of Cape Town currently inject excess daytime energy into the national grid without compensation, effectively supplying municipalities with free energy. Expedite a mandatory tiered tariff model in all municipalities that credits grid-connected rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. Mandate severe, legally enforceable financial penalties and license cancellations for participants found guilty of collusive bidding, capacity withholding, or market manipulation. Government shall implement a transparent resolution framework for historical municipal bulk electricity debt that does not penalise paying ratepayers through inflated local tariffs. Municipal electricity distribution entities must ring-fence network maintenance budgets into dedicated accounts to prevent tariff revenue from being diverted into general municipal administrative expenses or other unscrupulous pockets. The government shall initiate an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households.	Derik	retired

	2026-08-27 13:05:08	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I am shocked that the position paper is planning to penalise us for making a necessary plan to have electricity at all times for emergency medical care. For many years , my invalid husband was cared for at home, using medical equipment. With original load shedding plus numerous and sometimes lengthy power outages, we were forced in invest in some solar, even with our very limited pension. It was not our original choice, but the inefficiency of our government that made this necessary. Additionally, we were told that the many solar installations around the country had eased the load on the grip, which couldn't supply enough power. Lastly, we wont be able to afford the addtional municipal fee.	Liz	retired
	2026-08-27 13:05:28	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This government is prepared to rip of every citizen in the country. The electricity, water & others services pricing are crippling the poor, the pensioner & elderly who are barely making end. The citizens are constantly bailing the SOE's out because of bad decisions of the government & the corruption within these SOE's. Next with regards to those businesses & householders that have solar. We were forced by the government's inability to supply electricity. The cause being bad planning & bad choices made by those involved in the building of the power stations & the vast amount theft & corruption. If they had planned properly this country would never have had load shedding in the first place. Next the government has never owned the sun so they don't have the right to penalize those that went to the cost of installing solar.	Alan	retired
	2026-08-27 13:06:08	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	We are already paying exorbitant fees for electricity that we don't even consume while a number of people aren't paying. It's not only unfair to residents to pay for electricity they don't use but it is rather criminal to force people to pay for services they don't use. If they need money they must cut cost on those exorbitant salaries they pay their CEOs and Managers	Sthembile	self-employed

	2026-08-27 13:14:02	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Why must the person who spent money on solar infrastructure be penalized for making life easier while ridiculous electricity outages is daily ongoing issues in South Africa because of poor maintenance and corruption? I can't afford solar but would like to have solar infrastructure as well. Why must corporations pay less electricity when they use the most...let them pay even more? This is not fare towards anybody owning a residential property. We are sick and tired of the ANC and government stealing from the tax payer to fill their own pockets.	Elsje	retired
	2026-08-27 13:14:12	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	ESKOM cannot provide enough electricity for the whole country. Then people came to solve this problem: they added solar panels and / or batteries to the electricity system! This cost a lot of money. These people are the life savers of enough electricity in the country! Now ESKOM / government want to punish the life savers of electricity! Wasn't it for them, the electricity supply would have collapsed long time ago and the country would have been in total darkness, with no electricity. Instead of thanking these people, and giving everyone who bought solar panels and batteries subsidies and more money and willing to pay part of their solar panel systems, they make the financial burden on these people even more! Now they have to pay for system maintenance of ESKOM, but ESKOM / government is not paying them for installation and maintenance of the solar panels and/or batteries! Instead of asking money, ESKOM should PAY them extra money for the extra panels and/or batteries that they bought and installed to reduce the amount of electricity needed by the whole country. ESKOM / government should support the new development of solar systems and batteries by giving funding to improve it that all the electricity country wide can improve, but instead they just impose more penalties and make the burden worse and more severe on people who already paid themselves for their own solar panels and / or batteries, and now they must pay for ESKOM / government as well. If the people with solar panels and/or batteries should pay ESKOM / government for maintenance of the electricity system, then ESKOM / government should pay all the people who have solar panels and / or batteries for the installation and maintenance of those solar panels and batteries. ESKOM / government block new developments, in stead of supporting it.	Hilde	self-employed
	2026-08-27 13:15:56	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I do not support the proposed framework in its current form. South Africans should not be penalised for investing their own money in solar and battery systems after years of unreliable electricity supply. Many households made these investments precisely because the public electricity system was unable to provide the reliable service that people were paying for. They took on significant personal financial costs to become less dependent on the grid and to keep their homes and businesses functioning. It is therefore deeply concerning to now introduce mandatory fixed charges specifically on grid-connected consumers who have invested in alternative energy. If the objective is to recover legitimate costs associated with maintaining the electricity network, those costs should be addressed transparently and fairly. They should not effectively become a penalty for consumers who have invested privately to reduce their reliance on Eskom. More broadly, the proposed reform raises serious questions about fairness and accountability. South Africa's electricity crisis was not created by households installing solar. Consumers responded to a failing system. It is unreasonable to shift the financial consequences of that failure onto the very people who invested their own capital to protect themselves from it. I support an electricity market that is more efficient and sustainable. However, reform should not simply replace one problem with another by protecting inefficient structures through higher costs for ordinary consumers. If the government wants South Africans to invest in the country's energy future, it should not simultaneously create regulatory uncertainty and financial penalties for those who have already done exactly that. I strongly urge the Department to reconsider the proposed fixed charges and ensure that any new tariff structure is transparent, proportionate and fair to households and small businesses. Consumers who invested in solar should not be treated as the problem when their investment was a response to the country's electricity crisis.	Zanel	employed individual

	2026-08-27 13:28:18	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	First the ANC and their cadres running this sector stuffs it up with mismanagement and corruption, then when we do something to protect out=r livelihoods, they want to penalise us for being intelligent enough to see the mess, and stabilise our standard of living. In Cape Town we ALREADY have a fixed fee for prepaid meters, regardless of solar equipment. In addition, this is purely intentional as A Penalty on Private Initiative: Citizens who spent private capital to solve the state's energy crisis they now want to penalise unfairly; The "Captive Ratepayer" Trap: Ordinary residential homes remain "captive" to local municipal tariffs. This leaves everyday households to foot the bill for municipal revenue shortfalls and cross-subsidies; Wholesale Price Volatility & Market Dominance: With Eskom Generation controlling the vast majority of baseload power, the risks of market power, pricing manipulation, and speculation could spill over into retail tariffs if oversight fails.	Theo	self-employed
	2026-08-27 13:29:18	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I made a significant investment in solar in order to afford the power that we use on a monthly basis. I request that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalizing private renewable investments. A tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes, will be the best way forward. I request that an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households should be done in order to ensure fair practice for consumers. 	2026-08-27 13:39:51	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	To suggest that solar installation is a 'free ride'/'not paying a fair share' is absolutely ludicrous! 1. An installation for a medium/large home will cost several hundreds of thousand Rand 2. This is not an attempt to get electricity for free. It is an attempt to avoid the consequences of mismanagement, very poor maintenance and massive corruption which reduced Eskom to its present state Why should homeowners now be disadvantaged ? 3. With the 'new' pre-paid meters installed in the COCT municipality, it is quite clear that the meter is set up to extract financial benefit without commensurate consumption - the last week of every month registers massive consumption, with no increase in household electricity usage during that period. Another devious way to try to fool ratepayers.	Willie	retired
	2026-08-27 13:41:46	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The companies should be paying the bulk of what they are using not the minimum. The citizen and resident has a fundamental human right to utilization of electricity for living conditions. Thus is opening FURTHER the ONGOING exploitation of these people and rights forcing the nation into poverty, dehumanization and removal of constitutional rights. What are pensioners supposed to pat food and shelter with when the electricity is taking the bulk of the pathetic R2000 they get from SASSA.	Linda	
	2026-08-27 13:42:14	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The ANC government are responsible for the Eskom fiasco. Now they want the general public to carry the burden of their cadre deployment consequences. Hire people on merit and get back the millions/billions of the privileged recipients of these type of policies. As the custodian of public assets the government has caused the systemic decline of that which they were responsible for. Having destroyed the electrical network, consumers had no choice but to install alternatives. These alternatives, generators, inverters, solar panels etc. were subject to import duties, VAT and other taxes that the government was the beneficiary of. Now that same government expects the tax payer to fork out more taxes on top of the new base load tax to compensate for the lack of generation capacity, reliability and to continue paying for their malfeasance. This is entirely unacceptable and morally reprehensible.	Eugene	
	2026-08-27 13:43:32	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom is a government-controlled electricity supplier that has historically occupied a dominant position in the South African electricity market, effectively restricting the development of a genuinely free and competitive energy market. Eskom's concern is to produce and supply electricity. Where, how and when a customer ultimately uses that electricity is the customer's concern, not the supplier's. The customer is entitled to determine its own energy requirements and how best to meet those requirements. If Eskom is unable to provide the quantity, reliability or quality of electricity required by a customer, and that customer therefore chooses to invest its own capital in alternative energy solutions, the consequences of that decision should not be regarded as Eskom's business or concern. The customer has invested its own money, assumed the associated risks and developed an alternative means of meeting its energy requirements. If this results in the customer purchasing less electricity from Eskom, any resulting reduction in Eskom's revenue is a consequence of the customer's legitimate decision to secure an alternative supply—not a loss that the customer should be responsible for compensating Eskom. In a free market, a supplier does not acquire an entitlement to a customer's future expenditure merely because that customer previously purchased its product. If the supplier cannot or does not provide what the customer requires, the customer must be free to seek alternatives, particularly where those alternatives are funded entirely by the customer. Eskom's inability to retain that customer's business is therefore a commercial consequence of the market and of its ability to meet the customer's requirements. It should not become the customer's responsibility simply because the customer has invested its own capital to overcome a failure or limitation in the existing supply.	Jason

	2026-08-27 14:47:45	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	When the state can not provide, the consumer needs to solve the problem out of their own pockets while getting no financial relieve through not being a burden on the national system - electricity, security, education, post office etc etc. The state not only have to supply electricity they need to supply it Green. By taxing the consumer for decreasing the demand on a broken system is similar to telling the EU - No we do not want your grants for green energy, social services etc. This is not rocket sense - no load shedding in 2026 equals lower demand from Escom. why punish the consumer for solving the problem? Put an incentive on the table for every property in the country to have solar on their roofs. escom handed out energy saving light bulbs etc at some stage to decrease the demand some years ago !!!	Andrew	retired
	2026-08-27 14:50:44	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Mandatory Fixed Grid Charges on Rooftop Solar: The policy explicitly targets grid-connected solar and partial-defection users under an “anti-free-riding” principle, shifting tariff structures from volumetric consumption (units used) to high, unavoidable fixed monthly connection fees. The “Captive Ratepayer” Risk: Large industrial and commercial users exceeding set thresholds (e.g., 1 MW) will be allowed to bypass municipal grids to buy cheaper power directly from private traders. Ordinary households and small businesses will remain “captive” to municipal distribution grids, risking higher tariffs to cover municipal revenue deficits and legacy cross-subsidies. Wholesale Price Volatility & Market Power: With Eskom Generation remaining the dominant producer, risks of market power, pricing manipulation, and trading speculation could translate into retail tariff volatility if regulatory protections are inadequate. Restructuring the Distribution Value Chain: Municipal and Eskom distributors must separate the physical grid (“wires”) from electricity sales (“retail/trading”), introducing separate fees for grid delivery and energy units.	Me	employed individual
	2026-08-27 14:51:46	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The reason there is no current load shedding is because private households and private companies have spent a lot of money to invest in solar and battery back-up power due to the incompetence of Eskom. If it were not for this, we still would have load shedding today.	Gideon

	2026-08-27 15:18:57	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Why are solar users being penalized for having solar power installed because Eskom is unable to generate sufficient power for the country (due to ongoing corruption and ineptitude)? In fact, by installing solar power, we enabled Eskom to address energy demands/constraints and a potential energy collapse of their own making. Whilst I understand/agree that controlled safety measures should be implemented, these controls shouldn't become vindictive or another "cash cow" for the imploding Eskom. Despite continuous threats regarding non-compliance, it is disconcerting that Eskom fails to provide clear guidelines for its registration requirements. Tabling retaliatory energy legislation against solar users will only further harm our country's fragile economy and constrain already struggling households. Introducing new energy-related constraints will surely not solve South Africa's looming energy collapse.	Mariana	retired
	2026-08-27 15:23:50	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This is cynical. i installed solar power because of electricity blackouts. We alrady pa a municipal levy for “electricity availability” , ie maintaining the municipal grid/ infrastructure. Why tax us more , on top of that? The “goose” cannot take much more……	oswald	retired

	2026-08-27 15:25:52	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I have installed solar because we had no electricity. The goverment was warned of the consequence of cader deployment, corruption of the elite and plain stupidity. The goverment expected the consumer to install solar energy to help save their incompetence and corruptness by providing contributions to those who spent money to save electricity usage. I have done so at considerable expense to myself with no assistance from municipalities, Eskom or government. Doing my part to help myself and the country in total. My first choice would have been to buy electricity at a fair price and not install solar. I was unable to exercise this option. If they want to penalise me for my solar installation they need to first refund me for the costs of having to do something to not be subject to ANC corruption. This corruption is over and over and over again in all things this corrupt ANC goverment has put their hands to. At some point they have to carry the burden for their incompetence and thievery themselves. Refund me for my system and then do whatever you want. If what you are doing does not suite me I will just move of the grid and be self relient which cost wise will be very small in comparison to what I have already paid.	Peter	retired

	2026-08-27 15:38:14	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	You already rob us blind for the electricity you offer us, and all you want is more pounds of flesh. Go to hell with these extra demands.	Ashley	business owner
	2026-08-27 15:40:05	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This is another tax forced on consumers to prop up a failing service delivery that is a direct result of the government's own lack of infrastructure investment. It also forces households in the minority to financially prop up consumers who do not pay for electricity through various means. Before taxing the shrinking base of consumers who do pay for services, implement better debt collection, change the social attitude toward paying for services rendered and fix the internal processes in local municipalities and govenments instead of fleecing the tax base. Failure to do this will simply result in more customers going completely off the grid and severing ties with the grid in totality to ensure that there is no connection fee or baseload taxes applicable.	Hilton	employed individual
	2026-08-27 15:41:20	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	ESKOM is primarily used as a money making machine so that the people can eat. Municipalities are primarily used as a money making machine so the people can eat. The minority of the people that eat pay taxes so that the Government can eat. The situation as a whole should be studied and remedied that all the people can eat their fair share as intended by our constitution.	Ian	retired
	2026-08-27 15:41:41	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This disincentivizes the public's likelihood of migrating to sustainable power generation. It prevents individuals from taking initiative to meet shortfalls in power supply. It forces more dependence on State and Para-statal solutions.	Steve	self-employed
	2026-08-27 15:42:42	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I am a ratepayer and electricity consumer, and I wish to formally object to the proposed electricity transformation measures, particularly the introduction of mandatory fixed charges for customers with solar installations and the proposed increases affecting captive electricity consumers. These proposals place an unfair additional financial burden on ordinary households and small businesses that have invested in alternative electricity solutions, often at considerable personal expense. Many ratepayers have installed solar and battery systems precisely because of unreliable electricity supply and the increasing cost of electricity. It is unreasonable to penalise consumers who have invested their own money to reduce their dependence on the municipal electricity network. These investments reduce demand on the grid and can contribute to greater energy resilience. Imposing substantial fixed charges regardless of actual electricity consumption risks undermining the financial justification for these investments. I am particularly concerned that such charges will disproportionately affect households and small businesses that cannot simply absorb additional monthly costs. Electricity is an essential service, and tariff structures should be designed to remain fair, transparent and affordable rather than shifting an increasing proportion of the cost onto a smaller group of consumers. I also object to measures that could result in significant losses of municipal revenue without a clear, transparent and equitable plan for addressing those losses. Ratepayers should not be expected to carry the consequences of an electricity pricing model that has failed to adapt to changing patterns of energy generation and consumption. I therefore request that the proposed mandatory fixed solar charges and associated electricity price increases be reconsidered. Any revised tariff structure should: be based on transparent and independently verifiable cost data; fairly reflect the actual costs imposed on the electricity network by each category of consumer; recognise the substantial private investment made by consumers in solar and battery systems; avoid disproportionately penalising households and small businesses; provide meaningful incentives for energy efficiency and renewable generation; and protect the long-term affordability and sustainability of municipal electricity services. As a ratepayer, I expect the Government to manage its electricity infrastructure and revenue model responsibly without unfairly transferring the financial consequences to consumers who have acted to reduce their reliance on the municipal grid. I respectfully request that this objection be recorded and that the proposed measures be reviewed before implementation. I therefore formally object to the proposed mandatory fixed solar charges, captive consumer price increases, and any associated tariff measures that unfairly increase the financial burden on ordinary ratepayers and small businesses.	Jaques	employed individual
	2026-08-27 15:45:41	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The government and Eskom are shifting the financial burden of their own historic failures onto the public. The government is effectively punishing citizens for surviving an energy crisis they created. People did not buy solar panels as a luxury; they bought them as an emergency survival mechanism because the state utility failed to provide a basic service. Forcing these users to now pay extra fees to prop up Eskom is fundamentally unjustified.	Karen	
	2026-08-27 15:49:05	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This endless grabbing of money out of honest ratepayers who choose to use their own finances to use the sun, which is far more reliable that the municipal electric supply are being robbed once again by a municipality that cannot manage their own budgets. What next, paying for Cape Town air?	Rob	employed individual
	2026-08-27 15:50:31	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	A "Sun Tax" on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. They even subsidized household and businesses to invest in solar power as they could not met the demand. Now they want to tax those very same people. It is absurdity in the highest form. Electricity from Eskom and municipalities is not stable or reliable and cost an arm and a leg. I would love to go completely of grid if possible.	Jannie	retired
	2026-08-27 15:50:39	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom, due to its incompetence, corruption, lack of forward planning etc. failed us. This failure to provide electricity led to businesses and livelihoods destroyed and disrupted. Therefore we the end users, at great costs invested in Solar, which collectively eased the pressure and demand on the overloaded grid, therefore helping Eskom getting back on its feet and out of the mess it created. Now it seems as we are being punished. This mindset is bizarre.	Abayomi	retired
	2026-08-27 15:51:19	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Once again the private citizen is expected to pay for state corruption and ineptitude Private citizens have taken steps to both insulate against load shedding, and to contribute to continued sustainability. In a fair number of well run countries, this even allows for private citizens to sell back to the grid. Of course our corrupt and inept ministers are just searching for another purse to plunder with this move. Our grid is only a disaster due to the incumbent government. Although I see that the Western Cape Government is proposing similar cash grabs Are we now going to impose this on the poor in RDP housing, where solar helps bring their cost of living down while providing with a better standard of living? Or is this only aimed at the more affluent? No I think the South African government needs to clean its house, reduce the civil service salary budget, and learn to manage their money. Those with their hands in the cookie jar need to be punished and their plunder recouped. No more golden handshakes and turning a blind eye	Simon

	2026-08-27 16:15:27	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Why should the consumer be penalised for sourcing and funding you own solution for a service that should be provided by the State, for which you pay as you use. Secondly, taxes are collected and should be deployed for a stable electricity grid, policing, schooling, healthcare, water provisioning amongst others and the consumer are to a large extent expected to source and fund these service out of its own pocket and once you do, you pay a penalty so that the state's coffers remain full irrespective of the level (or lack) of service provided. I am 100% against this type of proposal	Fred	

	2026-08-27 16:15:55	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I still remember the night that Mr Ramaphosa encouraged all of the South African citizens to buy their OWN solar because ESKOM CANNOT provide sufficient electricity for South Africa And now? This instruction is ignored by ESKOM and municipalities Totally unacceptable!!!	Kobie	retired
	2026-08-27 16:21:28	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Stop penalising people for saving your bacon. Rather than working against them, work with them.	Gerrit	
	2026-08-27 16:22:26	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	If this ANC government was as clever and efficient in utilising the money from over taxed tax payers, as they are in stealing money, South Africa would be a much better place. They almost daily invent new ways to legalise theft so they can get their claws on everything that does not belong to them.	Tanja	retired
	2026-08-27 16:26:36	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I am just a resident with no solar panels and totally rely on Eskom. The proposals are ridicules and rather stupid. The maim reason for people moving to solar was because Eskom did not have enough power and we had load shedding The secondary reason was because Eskom power was to expensive and they kept putting the rates up. The reason for this , as came out in the Zondo Commission was corruption and poor management . New Power stations were never completed on time and were way over budget . The reason again was poor managent and again corruption. This cost the country millions in lost production and loss of tourists. So people and businesses started to move to solar., not really because they want to but because they had to . So now Eskom has too much power and instead of reducing power costs and stimulation of the economy, in typical Eskom way all they think of is penalising those people who helped them, In summer Eskom has to much power so they should supply the power at cheaper rates . There is nothing wrong with some competition , this stimulates the economy. This is much better than using strong arm tractics. What about supplying cheaper electricity to those who really need it . The focus must be on the country and creating jobs by having cheaper powe and not these stupid fights to make a few peple rich.	Murray	retired

	2026-08-27 19:33:26	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	1. Had Eskom continued to operate efficiently as it did in 1990's, without the rabid inset of corruption and incompetence in the 2000's, the cost of electricity would have remained affordable. 2. As corruption and ineptitude permeated Eskom, it became an unreliable and expensive power producer and introduced load shedding as a consequence. 3. Business's, to continue trading had little option other to reluctantly invest in their own electricity generation assets, instead of using such funding growing their business and create more jobs. 4. This was a FORCED INVESTMENT. 5. Had Eskom provided affordable electricity increasing in price at normal inflation rate and maintained reliability (no load shedding) the majority of businesses would NOT have invested in solar and battery systems. These too have finance and ongoing maintenance cost that we pay for each month. 6. So. this is NO FREE LUNCH! 7. For Eskom to now penalise their own customers for sourcing alternative supply of their product, that they could not supply reliably and increasing in price far higher than normal inflation is disgraceful. 8. Eskom created the current situation themselves and need to cut their own operating costs using electricity costs in China as a benchmark, instead of forcing the businesses and citizens to bail them out again. 9. The SA taxpayer has already bailed out Eskom to the tune of R250 000 000 000. We have already been penalised.	Petrae	self-employed

Lizia	employed individual
	2026-08-27 20:54:30	No I do not	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	I cannot believe that any of this needs to be said. I live in a municipality that is unable to keep the lights on - we have constant cable faults and substations literally catching fire and exploding. I run a medical practice and absolutely cannot run my business without consistent electricity supply. I was basically forced to install a solar system so that I can earn an income. I now need to be able to pay it off, which I will not be able to do if the municipality is allowed to then charge me for a service they do not even provide! It is absolutely preposterous and totally criminal to penalise business owners for just trying to keep the lights on!	Dominique	
	2026-08-27 20:55:04	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The Government is trying everything ton shift their burden onto the public instead of cleaning up their act.	Brian	retired
	2026-08-27 21:04:14	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	We were forced to invest massive capital in solar backups as a result of never ending loadshedding and the pandemic that necessitated us to be able to work from home. Now we're getting penalised for having to find ways to solve yet another government problem that should never have been ours to solve in the first place.	Corne	employed individual
	2026-08-27 21:09:10	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I am wholly against it, as government has made power too expensive, and now they want to tax further because of their mismanagement and failures, is absurd. Their whole agenda is designed to extract maximum money with no service delivery, accountability yet maximum money for doing nothing. This is the sand in the line, and crossing this will have unanticipated future repercussions for everyone involved. We already had this issue in 2026 where the council neglected maintenance, and there was no power for almost 2 weeks, and now we must pay extra cause they can not do basic maintenance. Rubbish.	Emil	unemployed individual
	2026-08-27 21:10:15	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	We were forced to put solar we are pensioners and the cost is to high for electricity. Due to loading alot of consumables were getting spoilt.	DHANASEGREE	retired
	2026-08-27 21:19:11	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	As a resident in the Garden Route, we pay a fixed fee for having electricity at our erf. This more than makes up for the contribution towards maintenance etc. As a homeowner who had to install solar due to the failing electricity grid, I would be extremely angry with the Eskom system if we were to now be penalised by having solar on our roofs! We should actually be getting a thank you in the form of a rebate every month for contributing towards helping keep the electricity flowing by now consuming lots of power. It is an extremely expensive undertaking to install a solar system. No rebates were given when we were forced to install. So no, i do not support your idea of charging me and the rest of us for generating our own "free" electricity. If you were to go the route of penalising us, then I would want the option of disconnecting my electrical input totally (thereby removing the fixed monthly fee), and living off grid.	Simon	self-employed
	2026-08-27 21:19:37	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I am concerned about wholesale Market and price manipulation and even more corruption with this potential ploy. We are already paying so much, why this extra level of fleecing the paying citizens? This was s soooo wrong!	Leigh	
	2026-08-27 21:24:52	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Subject: Objection to Additional Charges Imposed on Households That Have Invested in Private Solar Power Systems We, the undersigned electricity consumers and owners of private solar power systems, respectfully submit this petition to express our concern and objection to charges that effectively require solar users to pay additional fees because they have reduced the amount of electricity they purchase from the grid. Many South Africans invested in solar systems using their own personal funds, without financial assistance from Eskom. We purchased solar panels, inverters, batteries, installation services, electrical protection equipment, and ongoing maintenance at considerable personal expense. We made these investments primarily to secure a more reliable electricity supply, protect our homes and businesses from interruptions, and reduce our dependence on the national electricity grid. We therefore believe that consumers who have invested their own money in alternative energy should not be unfairly financially penalised simply because they now purchase less electricity from Eskom. We fully recognise that Eskom and electricity distributors have legitimate costs associated with maintaining the national grid and providing electricity when customers require it. We also understand the importance of ensuring that solar installations connected to the electricity network comply with appropriate technical and safety requirements. However, any charges imposed on solar customers should be fair, transparent, reasonable and directly related to the actual services provided. Solar ownership itself should not become a reason for imposing an unfair financial burden. A household that has spent substantial personal funds installing solar has already contributed toward reducing its demand on the electricity system. Solar users can help reduce pressure on the national grid, particularly during periods of high electricity demand. We therefore respectfully request that Eskom and the relevant authorities: Clearly explain the purpose and calculation of any additional fixed, network or solar-related charges imposed on customers with solar installations. Ensure that customers are not financially penalised merely for generating and consuming their own electricity. Distinguish fairly between customers who remain dependent on the grid and customers who have substantially reduced their grid consumption through private investment. Consider the benefits that residential solar installations provide to the electricity system, including reduced demand on the national grid. Introduce fair incentives or compensation mechanisms where customers are permitted to export surplus electricity to the grid. Conduct meaningful public consultation with homeowners, solar installers, businesses and other affected consumers before implementing charges that materially affect solar users. Ensure that registration, compliance and safety requirements for residential solar systems are reasonable and are not used simply as another source of revenue. Our Position We are prepared to pay fairly for services that we actually receive from the electricity network. However, we do not believe that South Africans should be punished financially for investing their own money in alternative energy and reducing their dependence on Eskom. We invested in solar because we wanted energy security and because we were prepared to carry the financial responsibility ourselves. If South Africa wishes to encourage investment in renewable energy, households that invest their own money in solar should be encouraged rather than discouraged through additional financial penalties. We therefore respectfully call upon Eskom, municipalities, NERSA and other relevant authorities to review the treatment of residential solar customers and establish a system that is transparent, reasonable and fair to all electricity consumers. Our request is simple: Do not penalise consumers for producing and using electricity that they have generated through equipment purchased and maintained with their own money. Charge us fairly for the grid services we actually use, and recognise the contribution that private solar investment makes to South Africa's electricity system.	Christopher	retired
	2026-08-27 21:46:57	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It cost me most of my savings to have renewable energy installed during the period of ongoing load shedding and unreliable Eskom power supply while my children had online exams and assessments to complete. I still have not recovered a fraction of that cost for Eskom's failure to provide us citizens with reliable power. Hence, this additional loading that this paper purposes will sink me financially. 	2026-08-27 22:01:49	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	For far to long incompetent people are put into municipal positions that then mis manage the funds by payung them selfs massive salaries while doing nothing, not even paying Eskom what it is owed. Its fair to demand clean municipal audits before ever concidering any aditional taxes. People did not install solar beacuse it was cheap or convinent, they had no choice! Now beacuse you took that extra burden on your self now the ANC wants to punich you for that, beacuse they are loosing too much money, to pay Eskom CEO's an 11 million Rand bonus... Same old story, they distroy everthing they touch you find a way and then want to punich you for surviving ... The ANC mayor of our town was taken to court becuse of total mismanagment they lost the case and every appeal and now she simple refuses to leave office... and nothing happens. What was the point? The next step is going completely off grid.	Jacobus Gideon	
	2026-08-27 22:02:45	No I do not	All of the above	Fixed Charges & Solar Penalties	Energy Sector Professional / Engineer	I will not support nor pay for any aspect related to additional charges for solar generated power installed and paid for in a personal capacity, connected or not connected to the grid. That concludes the conversation.	Raymond	employed individual
	2026-08-27 22:02:55	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	There are so many levels that this is wrong, that it can be abused and continue to financially rape homeowners who have simply protected themselves as a result of the ongoing incompetence and failure of Eskom and other Government failures as well as municipal failures that continue to wreak havoc in people's lives. This simply opens up more opportunities for corruption and abuse of power. There are no levels where the government or municipalities can be trusted to look after the law abiding citizens. Homeowners who invested in solar succeeded in reducing the demand and assisted the government to recover from the unbelievable load shedding crisis that the country was exposed to due, again, to incompetence and corruption. The proposed rates are simply not acceptable. Other reasonable and better managed solutions where there is TRUE accountability need to be implemented. Until this accountability is in place the changes are abusive. NERSA must place and communicate strict and fair statutory caps on fixed network and capacity charges to prevent utilities from penalizing private renewable investments. As residents we Insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. With an "Open book" and undefined parameters homeowners are fully exposed to absolute abuse and bullying along with risk of extreme billings. The Department of Electricity and Energy, National Treasury, and SALGA need to establish a ring-fenced National Municipal Transition Mechanism before large commercial users are permitted to bypass municipal distribution accounts. This is a huge impact on revenue and puts regular consumers at risk. Municipal electricity distribution entities must ring-fence network maintenance budgets into dedicated accounts to prevent tariff revenue from being diverted into general municipal administrative expenses. A transparent resolution framework for historical municipal bulk electricity debt that does not penalise paying ratepayers through inflated local tariffs has to be implemented. This is simply the start of the objection.	Michael	business owner

	2026-08-27 23:27:40	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Thanks to people and business moving to solar it has reduced the demand for power from the grid. This was something they did not want to do but HAD to do to survive a failed government organization. We may no longer have load shedding but the poorly run city power, in Johannesburg. The illegal connections, the none existant upgrades of infustructure in cities and suburbs. And the influx of people to urban areas is still a risk to the power grid. service delivery from city power leaves households without power for days sometimes weeks. What other option is there but to have solar. It is not a luxury item it is an essential item for survival. If anything eskom should be subsidizing the investment businesses and residents are making to alleviate the pressure on the grid. Why not target the illegally connected houses and businesses make harsher punishment for people stealing electricity and improve the supply of power that guarantees uninterrupted electricity so people will no longer need to rely on solar. STOP PUNISHING THE PEOPLE TRYING TO SURVIVE LEGALLY AND START BRINGING THE PEOPLE BREAKING THE LAWS TO BOOK.	Caron

	2026-08-28 00:54:19	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The State has failed to provide the citizens with a reliable source of power hence the citizens have to incur additional costs to provide same. This is sheer audacity of the State to again steal from the public.	Gaithree	retired
	2026-08-28 01:54:16	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Hands off our hard earned money!! Electricity prices are already soooo exorbitant that the only way to survive and try to save money is to be VERY CONSERVATIVE with electricity use. NOT every household that uses very little kWH does it through investing in very expensive, widely unaffordable solor power, but through pure personal sacrifice! And now, the government wants to penalize the citizens even for their frugality!! Enough is enough!! It is because of the government's irresponsible & corrupt running of the SOE Eskom utility (among others) that has caused its population such hardships like Loadshedding (imposing mandatory frugality), massively unaffordable inflation and the need to cut expenses to the bone in the first place. DO NOT turn around and 'steal' that money anyway, which we try desperately to save, greedily through your legislative powers just because you can! STOP!!!!! Furthermore, you should be thanking any customer who had the ability and means to install solar, or any alternative means of power generation off the Eskom grid, because it was in great part thanks to them that this government's extensive years of Loadshedding faired as well as it did, via reduced strain and drain from them. They can also be feeding excess unused power back into the national grid for a much lower cost, for which Eskom would not even be incurring any operational nor maintenance expenses. You should be encouraging them, utilizing the mutual benefits (that will help us all) and developing a relationship for this opportunity, NOT penalizing, alienating, and potentially even chasing them off the grid thereby losing out on ALL/ANY contributions of any type that they may make. Everyone loses!	KL	retired
	2026-08-28 02:36:33	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I strongly object to the Department of Electricity and Energy's SAWEM roadmap. Replacing the volumetric consumption model with mandatory fixed grid charges penalises private capital, subsidises municipal inefficiency, and introduces severe market distortions. Core Objections: Destruction of Private Capital: Mandatory fixed connection fees act as a retroactive tax on residential solar investors. Citizens deployed personal capital to stabilise the national grid during chronic load-shedding; penalising this under the guise of "anti-free-riding" destroys our return on investment. The "Captive Ratepayer" Trap: Allowing industrial users to bypass municipal grids while trapping residential users creates an inequitable two-tier market. Households must not be forced to absorb the revenue deficits of mismanaged municipal grids as large corporates exit the revenue pool. Illusory Competition: Unbundling grid delivery from retail introduces administrative bloat and overlapping fees. With Eskom retaining its generation monopoly, this structure merely introduces middleman trading speculation and exposes retail consumers to price volatility. Required Action: Retain a Flat Volumetric Tariff The proposed fixed-charge framework must be abandoned. Tariffs must remain flat and purely volumetric—users should pay strictly for the electricity they draw from the grid. Private citizens will not underwrite municipal revenue shortfalls or Eskom's legacy debt through punitive fixed charges that render private renewable investments financially unviable.	Zavone	retired
	2026-08-28 02:40:07	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Having gone through critical load shedding with a utility that was riddled with corruption and that now needs to recoup the losses sustained from state capture this plan is simply another money grab from those who saved Eskom. Those of us who bought and installed solar systems allowed the corrupt state entity to regain its feet and provide electricity to those who were not able to afford to install solar systems but who still needed electricity. To now retroactively plan to load massive charges onto solar customers is a slap in the face to those of us who actually rescued Eskom. We all still pay for electricity because we are not allowed within cities to remove ourselves from the grid and we all pay the increased line charges. If you wish to make these charges then you need to offer an incentive for all solar customers to feed back their excessive production to the national grid. Taxing us for being innovative and using a free resource smacks of government overreach and a way to pull in monies to fund pet projects and allow further corruption in the system. A person who is only attached to the grid is in fact being subsidized by those of us using solar and wind power because we reduce the load on the grid. If every solar system and wind system was today shut down the Eskom grid would again grind to a halt and load shedding would return with a vengeance.	Christopher	retired
	2026-08-28 02:44:27	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Due to government's complete incompetence, we were compelled to spend hard-earned money to keep the lights on for an aging sick parent. Obviously, this extra cost included tax. Now the government wants to "tax" us even further for their continued incompetence. This is oppressive, financially unsustainable and totally unacceptable!	Lynne	retired
	2026-08-28 02:57:33	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Good day we already pay double rates with zero services - no water even though we have availability charges, we have not used water for 7 years only rain water, and when we tried to use municipal the meter ran backwards, called the municipality they checked came back to me and said another team will have to come out and they never did. We have no sewerage removal as we have septic tanks, no street lights, no garbage removal we have to take our own as we are agricultural. Small part of our property is a workshop and needs electricity to operate otherwise we loose money if we cannot test machines etc. This is a rediculous proposal, we are off grid and pay double our rates so their is no need for more penalties at all.	Raymond	business owner

	2026-08-28 05:41:21	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	So my any individuals and businesses have spent considerable amounts of money in installing solar energy and have protected South Africa from energy crisis and now the government wants to penalize those very people by imposing tariffs to raise funds to maintain an income for Eskom. They created the problem originally and now still expect people who have protected themselves and their power supply to still pay. It will create even more long term problems. People who have been able to afford solar power will find the finances to install equipment to allow them to go totally off the grid thus exacerbating the problem. Eskom will still be left with those who cannot afford to pay and the thieves. And with even less income.	Pamela	retired
	2026-08-28 05:48:57	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It is pathetic that you grasp at straws to recover costs incurred by either crime, corruption and or incompetence. You are becoming outdated as the postal service, the SABC, etc and you cannot adapt to the changing competitive world. If one installs solar, I bet you my bottom dollar that I am contributing positively to the economy and that means I have paid for electricity all these years apart from my solar backup. However when you cannot quantify what is stolen from you by illegal connections and incompetent non-paying municipalities then do not try to recover this from legal citizens contributing to the economy. This country will burn if you attempt this, trust me.	Fernando de Sousa	employed individual

	2026-08-28 06:03:49	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Stop penalising Rate Payers on services where the costs are already heavy. Stop trying to implement Sun tax. Rate payers who invest their own money on Solar, should not be taxed - rather, the State should pay them fairly and buy their excess solar energy. Many Pensioners took loans to invest in Solar because of high tariff rates and the Municipal's inefficiency to assist with these high tariffs and lack of essential electricity. Energy from the Sun is a free gift from God - how can the State charge people for it? Next, we will be taxed on using Oxygen to breath! Stop stealing from your South African people and rather help them to live easier - thats what your people's rates and taxes are paying you for! Recover your costs from those who are stealing your money not innocent rates and tax payers!	Sharon	
	2026-08-28 06:06:50	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	SA must encourage the move away from fossil fuels - any penalties for the use of renewable energy must be outlawed. Eskom should be incentivising solar and allowing consumers to feedback to the grid like other power producers around the world. Solar power that is fed back to the grid could help low income households reduce their electricity costs.	Mike	retired

	2026-08-28 06:27:13	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Due to the in-ability of ESCOM to fulfil their mandate (while being a monopoly) of providing uninterrupted electricity to South African households, small & large businesses, many companies closed down with huge job losses. Households was particularly hard hit as they did not always had the means to caters for hours of being without electricity. Due to incompetence / corruption, electricity prices were yearly increased with absurd percentages, totally out line of the governments own inflation indicators. It was so bad that the government begged ordinary households to install roof-top solar system to help ease load shedding, offering tax break incentives to help ordinary households install rooftop solar systems at great cost! Now they want to punish us ordinary household citizens because we helped stopped load shedding (at huge personal financial cost) and buy less electricity due their inability to provide a reliability electricity supply. The net result will be that more people, the ones that actually pay for their electricity usage, will get totally off the grid.	Heinrich	business owner
	2026-08-28 06:29:04	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Why should I put my language down? Waste of time, I still receive this in another language? Don't mind, just saying!	Salome	retired

	2026-08-28 06:42:49	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	As a retiree, I made the decision to install solar not only to ensure uninterrupted power supply for my own safety and comfort, but also to reduce reliance on the overloaded and aging infrastructure of both Eskom and the City of Tshwane. It is deeply troubling that citizens who take proactive steps to alleviate the burden on the grid are met with punitive measures rather than recognition. By investing our own resources into sustainable energy solutions, we are contributing to the resilience of the broader system. Instead of being penalized, individuals who adopt solar should be rewarded and incentivized for their foresight and contribution to energy stability. Globally, many governments encourage renewable energy adoption through rebates, tax incentives, and fair compensation for feeding excess power back into the grid. South Africa's energy challenges make it even more critical to embrace such measures. Treating solar adopters as partners rather than adversaries would foster a more resilient, decentralized energy system that benefits all. I urge the Department of Electricity, Eskom and the City of Tshwane to reconsider its approach and implement policies that reward, rather than punish, those who invest in rooftop solar. This is not only a matter of fairness, but also of sound energy policy.	Leon	retired

	2026-08-28 07:30:58	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I strongly object to the proposed South African Wholesale Electricity Market (SAWEM) policy framework, specifically the introduction of mandatory fixed grid charges on rooftop solar users and the creation of "captive ratepayers." Rejection of "Anti-Free-Riding" Charges: Citizens invested private capital in solar out of necessity to survive state failure, corruption, and chronic load-shedding. Penalizing self-generation through unavoidable fixed connection fees shifts the cost of historical state failure onto resilient households. Protection of Captive Consumers: Allowing large industrial users to bypass distribution grids while locking residential households into paying high fixed tariffs to cover municipal revenue deficits is discriminatory and economically unjust. Violation of International Legal Standards: Imposing punitive fixed fees on basic energy access breaches the principle of non-retrogression under the UN Covenant on Economic, Social and Cultural Rights (ICESCR, Article 11). Furthermore, under established international law (ex injuria jus non oritur), the state cannot legally profit from or penalize citizens for mitigating a crisis caused by the state's own governance defaults. I demand the removal of mandatory fixed network charges for self-generators and the full protection of residential ratepayers from municipal cross-subsidy shortfalls.	Omesh	employed individual
	2026-08-28 07:33:52	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Stop making the consumer the bad guy, and recouping losses from them. You, the government of ZA are responsible for this mess, as you have not done your job in any way shape or form.	Wouter	
	2026-08-28 07:36:50	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I wish to submit my comments regarding the Electricity Sector Market Transformation Position Paper. I understand that the electricity grid requires ongoing maintenance, upgrades, and investment. However, I am concerned that the proposed fixed network and capacity charges unfairly penalise households that have invested their own money in rooftop solar and battery systems. Many South Africans were forced to make significant financial sacrifices to install solar solutions because of years of load shedding, unreliable electricity supply, and escalating electricity costs. These households acted responsibly, using their own savings to secure a reliable electricity supply while reducing pressure on the national grid. The position paper refers to solar users as potential "free riders". I respectfully disagree with this characterisation. A free rider is someone who benefits from a system without contributing towards it. Solar users are not free riders. They remain connected to the grid, continue purchasing electricity when required, and pay for every unit of electricity they consume. In addition, many have invested substantial personal funds into infrastructure that reduces demand on the national electricity network. Solar households already contribute towards infrastructure and maintenance costs through the electricity tariffs they pay whenever they draw power from the grid. The only difference is that they consume less electricity because they have invested in generating some of their own power. Using less electricity is not the same as avoiding payment. If infrastructure costs are already included in electricity tariffs, then solar users are already contributing their fair share whenever they purchase electricity. Imposing additional fixed charges on these consumers simply because they consume less electricity effectively creates a penalty for reducing demand and improving energy efficiency. In my view, this resembles a tax on being connected to the grid rather than a charge based on actual usage. Consumers are effectively required to pay regardless of how little electricity they use. The principle appears unfair because households using less of the service are expected to contribute more than their actual usage would justify. Furthermore, every unit of electricity generated by a rooftop solar system is a unit that Eskom or a municipality does not have to generate, transmit, and distribute. During years of electricity shortages and load shedding, private solar installations helped reduce pressure on the national grid at no cost to government or taxpayers. These households became part of the solution to South Africa's energy crisis and should not now be financially disadvantaged for their efforts. The proposal also changes the financial assumptions under which many consumers invested in solar. Homeowners made long-term investments based on the expectation that reducing their grid consumption would reduce their electricity costs. Introducing significant fixed charges after these investments have already been made undermines investor confidence and creates uncertainty for future energy investments. South Africa should be encouraging renewable energy adoption, energy efficiency, and reduced demand on the electricity system. Instead, this proposal risks discouraging future investment in rooftop solar and battery storage by reducing the financial benefits of responsible energy choices. Municipal financial challenges should not be resolved by targeting a specific category of consumers who took private action to reduce pressure on the electricity network. If municipalities face infrastructure funding challenges, those issues should be addressed transparently and equitably across the entire customer base, not by imposing additional burdens on households that consume less electricity. The proposal risks creating a situation where consumers are effectively punished for using less electricity while higher-consumption users continue paying primarily according to usage. This does not appear equitable, reasonable, or consistent with the goals of encouraging renewable energy and responsible electricity consumption. I therefore oppose the introduction of excessive mandatory fixed charges for grid-connected households and request that government carefully consider the financial impact on South Africans who have taken personal responsibility for securing their own electricity supply while continuing to contribute towards the electricity network through their ongoing electricity purchases. 	2026-08-28 07:58:43	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Objection to the Electricity Sector Market Transformation Position Paper I reject the proposed Electricity Sector Market Transformation Position Paper in its current form. I accept that South Africa's electricity sector needs reform, greater investment, reliable generation and stronger competition. However, this proposal asks ordinary consumers to accept major structural changes before the protections, safeguards and cost consequences have been properly defined. My first concern is the proposed shift in how network costs are recovered. The paper expressly states that, as fixed system costs increase, fixed charges will matter more, under a principle of discouraging "free riding." This risks unfairly penalising households and small businesses that have used their own money to install solar, batteries or energy-efficient equipment. Many people made these investments because the public electricity system could not provide reliable supply. They should not now face a pricing structure that substantially weakens the savings from using less grid electricity. Any fixed network charge should be demonstrably cost-reflective, independently assessed, transparent and strictly limited so that it does not become a penalty on self-generation or conservation. I am also strongly opposed to a market structure that gives larger customers meaningful choice while ordinary households remain "captive" customers. During the transition, qualifying users may purchase through the wholesale market or traders, while small residential customers remain tied to their existing distributor's retail arm under regulated tariffs. This creates an obvious risk of a two-tier electricity system. If large, profitable customers migrate to alternative suppliers, municipalities could lose important electricity revenue while households are left carrying a greater proportion of network and legacy costs. The paper itself acknowledges that some municipal distributors may not satisfy the prudential requirements needed to participate in the new wholesale market, yet the mechanism for dealing with these non-qualifying distributors is still to be developed. That is a major unresolved issue, not a minor implementation detail. South Africa should not introduce a complex new market before there is a credible solution for municipal financial instability, electricity debt, network maintenance and protection of paying residents. I am further concerned about market concentration and governance. Eskom Generation will remain a dominant producer during the transition, and the paper acknowledges that further regulation may be necessary to limit its ability to exercise market power. At the same time, the NTCSA is envisaged as performing several crucial functions, including transmission network services, system operation, market operation and central purchasing functions. The necessary safeguards against market manipulation, conflicts of interest and discriminatory grid access should be fully designed and legally enforceable before the market is launched, not developed afterwards. Too many important matters are deferred to future market codes, eligibility rules, regulatory frameworks and implementation mechanisms. These details will determine who benefits, who carries the risks and what consumers ultimately pay. For these reasons, I reject the Position Paper in its current form. I request that the Department first produce a detailed consumer-impact assessment, a municipal financial transition plan, binding protections for captive customers, transparent limits on fixed network charges, stronger independence and governance safeguards, and a clear pathway toward genuine retail choice for households and small businesses. Reform is necessary, but it must not transfer disproportionate cost and risk to ordinary South Africans.	Jean-Pierre	business owner

	2026-08-28 08:15:40	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	If we go with simple trade rules, when you use a company for a service and you are not happy with the service they provide, what are your rights. The simple rule is that you find another company to provide good efficient service, if there is no company you can rely on then you fix the problem your self. I find Eskom's tariffs absolutely absurd, they are not tariffs that make sense, they have no bearing on your electrical supply nor is maintenance ever done on the lines. When your service charges, network capacity, network demand, Ancillary service & generation charges come to R 4 917.97 and your electricity usage is R 1 542.42, this is a huge form of bullshit and corruption. These charges have no bearing or meaning nor can they be justified in any form or fashion for the delivery of power to your premises. Eskom is just another form of Gupta capture which is just doing everything possible to hold the people of SA captive, without any rights to do what they need to do to reduce these ridiculous costs to try and live and support themselves. The people of SA should be allowed to do on their property whatever the are required to do to reduce their cost of living and to survive. Sadly the DA who was the party who worked for the SA citizens is now following the same route, captivate and control the people as far as possible in every way possible. People of SA we need to stand up and fight this form of captivity and corruption.	Norman	business owner

	2026-08-28 08:29:26	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom should be privatised, the sun and its power do not belong to any government, the Elites need to fall as all they actually do is fail. I will not pay any cost for having installed solar. Eskom gave discounts to people who installed solar because of their grid collapse. Why do they want to Rip us off again and again. This is not acceptable.	Heather	unemployed individual
	2026-08-28 08:29:44	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Why should the burden fall on household to cover maintennace cost which are only there because of bad governing on Eskom and the Goverments part. No other country in the world charges you a fee because you opt to turn to solar when the government could not give you electricity. Infact you get reductions because your feeding into the grid. There are enough taxes paid on evertthing in this country that could be tapped into instead. Bonuses and eleborate salaries can be looked at first.	Benita	employed individual
	2026-08-28 08:30:13	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	People have lost massive amounts of money due to no service and as a result have needed for alternative solutions. Therefore, unless we the people, are going to be re-imbursed for all the losses - then they can take this morally wrong suggestion and get lost! I don't support corruption and extortion, no matter what form it takes! Enough is enough!	Rex	self-employed

	2026-08-28 08:30:50	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	South Africa should stop treating rooftop solar as a threat to Eskom and start treating it as what it is: a massive, privately funded distributed power-generation resource. Thousands of South Africans have invested their own money in solar panels, inverters and batteries. They have effectively financed generation capacity without Eskom having to build the infrastructure. When these systems produce more electricity than the household or business can immediately consume, that surplus should not be discouraged, penalised or effectively wasted. Eskom should buy it. But the model needs to be smarter than simply paying a flat rate for exported electricity. Create a transparent Distributed Energy Purchase Programme under which registered solar generators can sell surplus electricity to Eskom at rates that reflect the value of that electricity to the grid. Pay less when electricity is plentiful. Pay more when demand is high. And pay a significant premium when the grid is under severe pressure. This would create a powerful incentive for households and businesses to install batteries and make stored electricity available when Eskom needs it most. Imagine thousands of homes receiving a notification: “The grid is under pressure between 17:00 and 19:00. Export electricity now and receive a premium rate.” A battery in a suburban home suddenly becomes part of South Africa's electricity solution. Multiply that across tens or hundreds of thousands of homes and businesses, and Eskom has access to a vast virtual power station, distributed throughout the country and financed largely by private capital. This isn't simply about helping solar owners make money. It is about creating a commercial mechanism that benefits Eskom too. Eskom could obtain additional electricity without financing the construction of every generating asset itself. Locally generated electricity can reduce the need for electricity to travel long distances and can reduce network losses. Consumers remain Eskom customers and continue paying appropriate network and service charges, while being rewarded when they provide something the grid actually needs. Don't make South Africans choose between being Eskom customers and being Eskom's competitors. Give them a reason to be both customers and suppliers. Eskom already has mechanisms for exported generation and credits. The next step should be to make these mechanisms substantially more attractive, dynamic and responsive to the actual needs of the electricity system. The electricity crisis requires us to use every available megawatt. South Africans have already invested billions of rand in distributed generation. Instead of trying to protect Eskom from this investment, Eskom should harness it. Buy the surplus. Reward the batteries. Pay a premium when the grid needs power most. Turn millions of privately funded solar panels into a national distributed power station. That is not a threat to Eskom. It is an opportunity for Eskom—and for South Africa. 	2026-08-28 08:44:37	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I strongly oppose the proposed move towards the South African Wholesale Electricity Market if it results in households and small businesses carrying an increasing share of the cost through mandatory fixed grid charges and higher electricity tariffs. South Africans who have invested their own money in solar and battery systems should be encouraged to reduce their reliance on the grid, not penalised for doing so. Allowing large users to access cheaper private electricity while ordinary households remain tied to increasingly expensive municipal networks risks creating a two-tier system that unfairly burdens the average consumer. The priority should be affordable, reliable electricity, genuine competition and efficient management—not shifting the financial consequences of an inefficient system onto households and small businesses. 	2026-08-28 08:49:05	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	On July 25, 2022 the President of our nation addressed citizens concerning the energy crisis, loadshedding and the implementation of an Energy Action Plan. In his address he urged households to find alternative energy sources to alleviate pressure on the grid, naming solar as an option. It is disingenuous to now want to implement a tax on people who responded to a plea from our Head of State. In addition, to label it as "free riding" is equally devious as we were asked to reduce pressure on the grid. The ESMTP paper deserves contempt for it's unashamed attempts to burden the already overstretched middle class in South Africa!	Paul	employed individual

	2026-08-28 08:56:05	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	There is currently approximately 8.3GW of roof top solar capacity installed in South Africa, which is the primary reason as to why there is not severe load shedding in the country. This has saved the country’s electrical network in two ways, it has added much needed electrical capacity onto the grid, secondly the consumers with batteries have shifted their peak energy consumption from early evenings to later at night, when energy consumption is not high. In short without private installations of solar energy the country would be in perpetual/severe load shedding. Eskom is hardly adding to future power generation capacity, and desperately needs private investment in energy to continue, especially with the planned decommissioning dates of many of the coal fired power stations on the near horizon. The government should therefore incentivise and not tax those who have taken the initiative to install solar systems.	Greg	employed individual

	2026-08-28 09:18:51	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom is corrupt and broken, they have the monopoly on the production of electricity, so they got lazy. No maintenance was done when it could have made a difference. They never spent money on expansion either. They put that money into enormous salaries for top management. The workers followed their superiors' example and did as little as possible to earn their salaries. (Might add the same can be said for a lot(not all) of government employees, they are just there for the salary and benefits.) Now Eskom wants to get greedy, with the permission of the government. I am sorry but it looks like a recipe for an uprising. We save and scrape to buy solar panels, inverters and batteries. Then they want to charge us for their own incompetence. They do not recompense us for our losses in food an appliance's that break due to an unreliable electricity supply. Not many individuals in the private sector get benefits or even a salary that keeps pace with inflation, because most of the private sector is made up of small businesses that can't afford it. As an individual that must search through Best Before shops for food and cleaning supplies to get through a month and can't afford more price hikes, I am sick and tired. We need to take action against corrupt officials and greedy underlings.	Juanita	employed individual
	2026-08-28 09:20:28	No I do not	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	They are penalising people for their failures and robbery of taxpayer money. Not only did their total incompetence and criminal behaviour (corruption and theft) collapse the grid, but now they want people who invest their money privately to resolve the issue to pay those same criminals more to keep stealing. Those crooks are blaming people for releasing ESKOM from overloading, which it cannot handle, and through this shame bill, want to tax residents and businesses.	Didier	business owner
	2026-08-28 09:21:33	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I strongly oppose the introduction of additional mandatory fixed network or capacity charges on grid-connected households that have invested in rooftop solar and battery systems. For years, South Africans endured load shedding, economic losses, damaged appliances, and declining service reliability. In response, many citizens invested substantial amounts of their own savings, often hundreds of thousands of rand, to secure a reliable source of electricity for their families and businesses. These investments were made without government funding and, in many cases, because government and Eskom failed to provide a reliable electricity supply. It is therefore fundamentally unfair to now impose additional fixed charges on those who took responsibility for solving a problem that the state itself was unable to fix. My objections are as follows: 1. Citizens should not be punished for reducing demand on an unreliable system Rooftop solar users are not "free riders." We continue to pay property rates, service charges, and electricity tariffs while simultaneously reducing pressure on the national grid. During periods of peak demand, solar-equipped households reduce the amount of electricity that Eskom and municipalities must generate and distribute. We have effectively subsidised the country's energy resilience through private investment. The proposed fixed fee appears to punish responsible behaviour rather than encourage it. 2. Government and Eskom have not earned public trust on pricing The proposal assumes that fixed charges will be fair and cost reflective. Based on decades of above-inflation tariff increases, ongoing municipal inefficiencies, energy losses, corruption scandals, and operational failures, many citizens have little confidence that new fixed charges will remain reasonable or be used for their stated purpose. There is a legitimate concern that "network charges" will become an open-ended mechanism to recover revenue shortfalls rather than genuine network costs. 3. Households are being forced to carry the cost of systemic failures The financial challenges facing municipalities and Eskom are not primarily the result of rooftop solar adoption. They stem from years of poor planning, maintenance backlogs, electricity theft, non-payment, transmission constraints, governance failures, and operational inefficiencies. It is unjust to transfer the cost of these failures onto households that made responsible investments in alternative energy. 4. The proposal creates a captive customer class Large energy users are increasingly being given options to procure power directly from alternative suppliers. Ordinary households, however, remain locked into municipal electricity systems with limited choice. This effectively creates a situation where residential consumers become the funding source of last resort while larger customers gain access to more competitive energy markets. This is neither equitable nor consistent with the principles of a fair market. 5. The policy will discourage future investment South Africa requires more private investment in distributed generation, not less. If households believe that any savings achieved through solar installations will simply be offset by new fixed charges, many prospective investors will abandon plans to install solar systems. This undermines energy security, environmental objectives, and economic growth. 6. There is insufficient accountability for service delivery Before introducing new mandatory charges, government should first demonstrate: Reliable electricity supply. Improved maintenance outcomes. Reduced energy losses. Transparent financial management. Clear performance standards for distributors. Citizens should not be asked to pay more when service quality and accountability remain inadequate. Conclusion I reject the proposed introduction of additional fixed capacity or network charges for solar-equipped households. The proposal effectively taxes citizens who used their own savings to compensate for failures in the electricity sector. Rather than penalising self-sufficiency, government should encourage private energy investment and focus on improving the efficiency, reliability, and governance of the existing electricity system. South Africans should not be required to pay ever-increasing charges simply because they found a way to reduce their dependence on a failing service.	Natasha	
	2026-08-28 09:22:10	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	God created the earth, the sun, the universe. Firstly, God gave it to man to preserve and use...now because the government cannot keep up with the wasting of funds to maintain essential services, the public/man on the street must still spend hundreds of thousands of rands to enable them to make use of the sun. I do not have solar, cannot afford solar, but pay an astronomical amount for electricity usage in a month for a household of 3. Why is it always the taxpayer's responsiblity to solve the government's financial issues. This is a load of bull and must be stopped in the bud.	Charmaine	employed individual
	2026-08-28 09:23:27	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom forced us into rooftop solar in order to keep food from going rotten etc. Often after loadshedding, when power was returned our transformer used to trip causing extended outages in our area. That is extremely scary after doing a monthly shop with meat etc. We were forced into it by them and them alone. Had to go into major debt in order to finance it and now they want to charge us for assisting them. To hell with them!	Joseph	
	2026-08-28 09:23:32	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The policy to penalise those who have invested in solar is not a fair policy as they will be penalised for helping the country use less energy. It will also discourage new individuals from investing in it, both of which is contrary to the green agenda of encouraging us all to use less energy. It will also have a negative effect on the businesses that instal solar and make the component parts. Ditto with fixed charges where people will want there money's worth if they have to pay for it anyway. Both scenarios will mean more not less draw down from the grid, which will likely mean more electricity outages, which negatively affect the country as a whole. Any perceived additional revenue from these punitive charges and penalties will be wiped out by the massive amount of lost revenue from the downtime that electricity outages create.	Dawn	retired

	2026-08-28 09:58:45	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	STRONG OBJECTION: DO NOT PENALISE SOUTH AFRICANS WHO INVESTED IN SOLAR To: Department of Electricity and Energy Re: Electricity Sector Market Transformation Position Paper, 2026 I strongly object to the proposed policy direction that could result in households with rooftop solar and battery systems carrying increased fixed network and capacity charges simply because they purchase less electricity from the grid. I invested my own hard-earned money in solar and batteries because the South African electricity system was failing me. Load shedding and unreliable electricity supply made it impossible to depend on the grid. I had to spend thousands of rands of my own money to keep my home functioning and, importantly, to ensure that I could continue working and generating an income. I did not create South Africa's electricity crisis. I paid to protect myself from it. It is therefore deeply unfair to now suggest that households like mine are “free riders” because we use less grid electricity. We are not getting electricity for free. We have paid for our own solar panels, batteries, inverters, installation, maintenance and replacement costs. We have taken the financial risk and invested our own capital in energy security. Our investment also benefits the electricity system by reducing our demand on the grid. Government should not punish the solution to a problem it failed to solve. South Africa needs more private investment in renewable energy, more battery storage, greater energy efficiency and less dependence on Eskom. Yet this policy direction risks creating the exact opposite incentive. If a household reduces its electricity consumption through solar, energy efficiency and battery storage, it should be rewarded for reducing pressure on the grid — not penalised through increasingly unavoidable charges. I accept that maintaining the electricity network costs money and that grid-connected consumers benefit from having access to that network. However, any network charge must be transparent, reasonable, cost-reflective and proportionate to the service provided. It must not become a mechanism to recover lost revenue from consumers who have successfully reduced their electricity consumption. There is also a serious fairness issue. Ordinary residential consumers do not have the same electricity procurement options available to large commercial and industrial users. They cannot simply walk away from municipal electricity networks and negotiate wholesale electricity prices. Residential consumers must not become captive ratepayers whose electricity bills increasingly consist of unavoidable charges regardless of how much electricity they actually use. Government must also recognise the enormous contribution made by ordinary South Africans who invested privately in solar during the country's electricity crisis. We were repeatedly told to find solutions. We found solutions. We paid for them ourselves. We reduced our dependence on the grid. We helped keep our homes and businesses operating. We should not now be punished for doing exactly what responsible citizens were forced to do. I therefore call on the Department of Electricity and Energy to: Reject any punitive or disproportionate fixed charges targeting solar and battery owners. Ensure that network charges are transparent, reasonable and genuinely cost-reflective. Protect the value of existing private investments in renewable energy. Recognise rooftop solar and battery storage as part of the solution to South Africa's electricity crisis. Ensure that future electricity tariffs do not discourage energy efficiency or private generation. Conduct proper public consultation before implementing any significant change to the way residential electricity costs are recovered. South Africans cannot be expected to spend their life savings solving an electricity crisis and then be penalised when their solution works. I strongly object to this policy direction. Government should encourage South Africans to generate more of their own clean electricity — not make it increasingly expensive to do so. We are not “free riders”. We are citizens who invested our own money because we had no choice. Do not punish us for taking responsibility for our own energy security.	Rixie	self-employed

	2026-08-28 10:07:03	No I do not	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	10 years ago the government offered a subsidy to homeowners to install solar to get Esscum out of the problem they started with corruption and overpriced tenders, now they want to penalise the very people that sorted the problem out. if they want to go ahead with this policy I will go 100% off grid and they can come disconnect me from Esscum and City power completely, and get R 0.00 from me	Richard	
	2026-08-28 10:07:32	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	We were forced to get our own backup power when Eskom could not provide due to their inefficiencies. My panels, my batteries, installation at my cost using Gods sun. If you want to tax me for your inefficiencies, allow me to go fully of the grid, with no connection fee, which is the only money currently coming to your bankrupt and corrupted municipality..	Etienne	employed individual
	2026-08-28 10:09:05	No I do not	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	During load shedding people were left without electricity because of ESKOM mismanagement, BBEE and corruption, now the public must foot the bill for their stuff ups. Electricity consumers should get a rebate not penalties for their losses incurred while all this corruption was taking place.	Richard	self-employed
	2026-08-28 10:09:06	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	An independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households is required. Households and small businesses that invested significant private capital into rooftop solar, batteries, and energy efficiency to protect themselves from load shedding will be forced to pay higher monthly baseline connection fees. This structural shift acts as a financial penalty on private decarbonisation, extending solar payback periods and increasing electricity bills for low-volume and frugal users. A tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes.	Jacqueline

	2026-08-28 10:36:22	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Whars wrong with these minister of electricity and escom's management First they can't generate power and now they think they can raise a sun tax? They haven't done anything to let the sun rise . And yet they gave the audacity to think they can tax people -whom they have failed - who have taken care of their own electricity needs because of a incompetent escom managment. A management who is still failing to collect their debtors and which was susidiced with our taxpayers money again and again and again. They must just bleddy will start doing thier job an get rid of the corruption in escom and get rid of the incompetent workers and stop paying bonusses for poor performers and there will be enough money. Or do they have the foolish idea that people with solar systems do not pay for the use of escom electricity ? Maybe they want to offend these good paying people even more than they have already done so -with the powercuts and blackouts -to loose them al together as customers by forcing them off the grid. I will not pay a solar tax on my own equipment for which I have paid for and taxed with vat	Johan	
	2026-08-28 10:36:53	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This is grossly unfair on all us citizens who invested in solar power for a viariety of reasons . Eskom's situation of constant lack of power & providing the citizens of S.A. with enough electricity led to many of us installing solar panels - something that was largely encouraged for us to do by our President. We actually believed we were assisting the electrical supply system, by incurring costs for ourselves - how is it possible now that we can be penalised for our actions ? ? ? ?	Kay	
	2026-08-28 10:41:20	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	In my opinion the government has created the situation where middle class people had to find their own way to generate power to provide for their families. It's government ineptitude that created the solar 'problem' they perceive. Proper management and maintenance are what is needed, not another tax to get more money from the dwindling middle class. Municipalities will collapse along with Eskom once people are allowed to decide where they get their services from, the government knows this and are doing everything in their power to prevent the normal tax paying resident from doing so. This is grossly unfair.	Jason	self-employed
	2026-08-28 10:42:41	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The sun does not belong to Eskom, what right do they have to tax for it? Them not having enough funds due to corruption and mismanagement is NOT our problem, they must sort themselves out instead of trying to squeeze us tax payers dry with unreasonable regulations. If people are still connected to the grid, fine a connection fee is understandable. If Eskom is being used to charge an inverter, then the electricity charge is just as applicable as if the power was being used to charge a phone or other device. But any fees beyond that are inexcusable and should not be allowed.	Kelsey	employed individual
	2026-08-28 10:42:43	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	People who pay for their electricity AND add to the amount of available electricity should NOT be penalised.	Helen	unemployed individual

	2026-08-28 10:57:23	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	A “Sun Tax” on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. The “Captive Ratepayer Trap” and Municipal Insolvency: Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance. Wholesale Price Volatility and Market Power Manipulation: Eskom Generation still controls the overwhelming majority of South Africa’s dispatchable baseload power. In unbundled spot markets worldwide, dominant suppliers have engaged in economic or physical withholding to artificially spike market clearing prices. Without hard statutory bid caps and aggressive oversight, wholesale price volatility will be passed directly down to retail consumers. Severe Conflicts of Interest Within the NTCSA: Consolidating transmission grid ownership (TNSP), system dispatch (SO), market clearing (MO), and legacy state off-take contracts (CPA) within a single entity under Eskom Holdings creates structural conflicts of interest. NTCSA could face internal commercial pressure to favour Eskom assets or delay third-party grid connections. Premature Market Launch Amid Unresolved Municipal Debt: Opening an advanced wholesale market with mandatory imbalance penalties in 2026/2027 while municipal distribution debt to Eskom remains unresolved is premature. Financially distressed municipalities that fail prudential credit requirements will be excluded from trading platforms, creating a divided nation of well-supplied metros and failing, power-starved rural councils. 	2026-08-28 11:12:15	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	We were encouraged to invest in solar systems by the government, to help ease the loadsheading and offered a small subsidy for panels, why now are they scheming to penalize solar users with tariffs. The sun is free to anyone that wants to capture it. I don't feed power back into the grid. I save a small amount on my municipal usage by pay as you go, so that I have a bit more cash to help pay other rising bills,like water, fuel, rubbish collection and FOOD. All these items have gone up regularly. I and my wife are on a fixed pension, we invested in solar and paid for it with part of our annuity capital in order to help with our monthly expenditure, we can't afford excessive tariffs that could go up and up. I really can't see why the government keep penalizing residents who pay their bills in full and on time. They need to catch and prosecute the culprits that steal electricity, and put excessive loads on transformers. There will be nobody left for them to keep penalizing, people will go off grid, people are leaving this country for the bad way they are living, and customer services are non existent.	Roger	retired
	2026-08-28 11:14:20	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Private people have had to spend thousands of their hard earned money to make up for the government’s inability to provide consistent electricity at an affordable price. Penalising them by changing from usage to fixed costs is not right. At the same time, for people who use very little electricity even if they don’t have solar backup, they will now be paying the same price as heavier users? This is also not right.	Maria

	2026-08-28 11:49:04	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The state failed to provide what we taxpayers pay for - electricity. This resulted in many businesses closing down, others divesting, and the rest being left with no option but to incur costs to solve the issue the state could not. Now we must be punished for that! It is simply outrageous.	Gavin	business owner
	2026-08-28 11:56:13	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Subject:** Formal Objection to Proposed Fixed Network Charges for Grid-Connected Households To Whom It May Concern, I formally object to the proposed restructuring of electricity billing that would impose mandatory, unavoidable fixed monthly capacity and network charges on all grid-connected households, regardless of actual consumption. 1. Equity and Fairness The proposed framework undermines the principle of proportionality in utility billing. Households that invest in solar generation and energy efficiency reduce their reliance on the grid and lessen strain on infrastructure. Penalizing them with blanket fixed charges disregards their reduced impact and forces low-consumption households to subsidize high-consumption ones. This is regressive and inequitable. 2. Environmental and Policy Contradictions South Africa's energy transition depends on encouraging private investment in renewable energy. Fixed charges erode the financial viability of rooftop solar and efficiency measures, discouraging adoption and slowing progress toward national sustainability goals. This policy contradicts broader commitments to climate resilience and clean energy innovation. 3. Risk of Double Charging Solar households already contribute to grid maintenance through existing tariffs, levies, and taxes. Imposing unavoidable fixed charges risks double-charging them: once for their reduced consumption and again for capacity they may rarely use. Moreover, many solar households export surplus energy, which directly benefits the grid and other consumers — a contribution ignored under the proposed framework. 4. Viable Alternatives Fairer mechanisms exist to balance cost recovery with sustainability: - **Time-of-use tariffs** to encourage consumption when the grid is underutilized. - **Optional capacity-based plans** aligned with actual reliance on the grid. - **Export credits** to recognize the value of clean energy fed back into the system. These approaches ensure fairness without undermining renewable adoption. 5. Social Impact Mandatory fixed charges disproportionately harm vulnerable groups such as pensioners, small households, and low-income families who have invested in efficiency to lower bills. The policy risks public backlash, erodes trust in regulators, and undermines the social license needed for future infrastructure projects. Conclusion Restructuring electricity billing toward unavoidable fixed charges is inequitable, environmentally counterproductive, and socially regressive. A fairer approach would recognize both consumption and contribution, ensuring that households who invest in clean energy are not penalized but encouraged. I respectfully urge reconsideration of this framework in favor of policies that align with long-term sustainability, equity, and resilience goals.	Henrico	retired
	2026-08-28 11:56:15	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It is unjust and corrupt to penalise hardworking citizens because the government has mismanaged funds for decades! Electricity and running water is a BASIC HUMAN RIGHT and as such we should not be penalised be we exercised foresight and wisdom because Eskom was mismanaged and power stations were never maintained. 	2026-08-28 12:23:47	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Not fair to us as citizens.	Tinus	employed individual
	2026-08-28 12:26:01	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I strongly object to any additional fixed grid charge imposed specifically because I have installed solar. I already pay for my meter and for every unit of electricity I use from the grid. If these payments are insufficient to maintain the electricity network, then the tariff structure must be reviewed fairly across all grid-connected consumers. Solar users should not be singled out to carry an additional burden. I sacrificed other spending and diverted money that could have been invested towards my own future to install solar because government could not provide a reliable electricity supply. I used my own, already-taxed income to secure an essential service and, in doing so, reduced demand on the grid and helped alleviate a problem the state was unable to solve. This contribution should be recognised and encouraged, not penalised. If anything, households generating their own renewable energy and easing pressure on the electricity system are providing a benefit for which they should receive credit. I pay for what I use. I therefore object entirely to being charged more simply because I took responsibility for solving a problem I did not create. This proposal is unfair, unreasonable and destructive to private initiative.	Cindy	self-employed
	2026-08-28 12:26:30	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Ratepayers who choose to move away from fossil fuels should be rewarded not penalized. Once again, state capture folk expect us to cover their greed. the system needs to be a new system, not a fixed system. it needs visionary individuals who have the planet and it's people in mind, from the ultra-wealthy to the ultra-poor.	karen	retired
	2026-08-28 12:29:51	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It is not fair that we are being punished for a trying to solve a problem that was out of our hands.	Relebogile	unemployed individual
	2026-08-28 12:35:24	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Yet again they want to turn to those who already pay for the poor and unreliable service that they "supply". Without the rate payer who used his own money to help avoid a nation wide black out where would the country be. So far they have not worked out a way to tax the air we breathe, but I bet they would like to.	Don	retired
	2026-08-28 12:40:18	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		Renier	

	2026-08-28 12:43:19	No I do not	All of the above	Fixed Charges & Solar Penalties	Energy Sector Professional / Engineer	I strongly object to the principle of introducing unavoidable fixed network or capacity charges on households simply because they remain connected to the grid while making substantial private investments in solar generation and battery storage. South African households and businesses have invested their own money in alternative energy largely because the existing electricity system has failed to provide a reliable and affordable service. Those who have reduced their dependence on the grid should not subsequently be treated as a problem that needs to be financially penalised. More broadly, I believe electricity policy should encourage private investment in renewable energy, energy efficiency, battery storage and genuine energy independence—not create additional charges that discourage these investments or force consumers to continue subsidising infrastructure they increasingly do not use. I also believe that consumers should have meaningful freedom to choose how they generate and consume electricity, provided that appropriate safety and technical standards are met. . Government policy should reward innovation and private investment in solving the country's energy challenges, rather than creating new financial penalties for those who have taken responsibility for their own energy supply. I therefore urge the Department to reconsider any measures that would unfairly penalise consumers who have invested in solar, batteries or other forms of independent electricity generation, and to ensure that future electricity-market reforms promote competition, consumer choice, affordability and genuine energy independence.	Tessa	business owner
	2026-08-28 12:43:48	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Electricity users had to resort to Solar in order to have a stable supply of electricity thus reducing the demand and capacity on Eskom at a time when Eskom was struggling to supply electricity and had to resort to LOAD SHEDDING, this at a cost borne by the user with little to no rebate. Now we are expected to pay extra charges when things have somewhat improved at Eskom is basically a form of Double Taxation and is unethical.	Dermot	
	2026-08-28 12:44:15	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Just fix the eskom mess without impacting consumers. Consumers did not create this mess, government did. They need to fix it by cutting all their absurd wastefull expenditure and not expect consumers to pay for it.	Benjamin	retired

	2026-08-28 13:26:40	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The proposed changes are aimed at punishing members of the public who used their own funds and initiative to ensure uninterrupted electricity supply to their private homes/small businesses. There was even a tax rebate in order to encourage the installation of solar panel solutions, which now seems as if it was merely a trap by the government to keep tabs on who actually installed solar solutions. Although there may be a small bit of truth that solar power users are using the grid to their advantage without paying for the upkeep of the grid, this does not actually hold water, as I have never seen any indication on my municipal account that there is a specific amount allocated toward the maintenance of the grid. The issue of "freeloading" is therefore an useful excuse by the government to burden tax payers even more for their pathetic performance in maintaining Eskom properly. If it was not for the load shedding issue, I sincerely doubt whether I would ever consider installing a solar solution, but thanks to the incompetence of the government I had no choice. Further to this, focus is placed on a sector of the public who ACTIVELY tried to alleviate Eskom's supply deficit, but there is NO FOCUS on illegal connections and municipalities who do not pay what they owe Eskom. If these two issues can be addressed and SOLVED, there will be no problem with electricity supply in this country, It is my opinion that addressing this problem will be inconvenient for the Majority ruling party as it will reflect negatively on them at the voting stations. In closing, I am vehemently opposed to the proposed amendments.	TERESA	retired
	2026-08-28 13:34:30	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The reason why South Africa is in this mess It's because Eskom has misused public funds for years. From 1994 they kept shutting down multiple massive power plants That were just recently maintained at the time. Instead of maintaining the architecture that was there Eskom decided to start shutting down a lot of Capacity available to them then after that they introduced load shading and continuous price increases which pushed prices up. By over several 1000 percent pushing out Africa to Become one of the most expensive electricity suppliers in the world Far above any European countries and many other countries with stronger currencies than South Africa. They forced people off the grid due to heavy load shedding and ridiculous price increases year upon year. If anything the people in charge of eskom previously and Currently should all be financially audited to see how they benefited by stealing money from that foundation and any and all people found to have stolen even a R1.00 Should be forced to pay back the money From their personal assets. Any logical person can see that it doesn't take 16 years to fix up a damaged system. They created the problems that exist today.	Naeem	self-employed
	2026-08-28 13:34:34	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Sunlight is our God given blessing. 	2026-08-28 14:57:11	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The same government that asked citizens to assist Eskom by using alternative energy sources to reduce load shedding and pressure on the grid now wants to penalise them. It is outrageous and in bad faith. The basis is that we are free loaders is insulting. If we use less energy, it is logical that we shoulder a proportionately smaller share of the fixed cost. Until we are able to put additional energy generated back into the grid to offset the fixed cost, no fixed cost should be implemented. In addition, the reason advanced is a red herring. Those who could afford alternative energy sources made a plan to ensure the country did not feel the full impact of loadshedding. The reality is that far too many people do not pay for the electricity they use. This is the way in which the ANC keeps the poorest people in this country indebted to them. Instead of dealing with the root of the problem, unemployment, poor education, shocking levels of corruption and criminal activity, the ANC continues to ensure that people remain unemployed, dependent on it, and this enables the grand-scale looting to continue. The ANC's aim is not a better life for all but rather a better life for an elite few, which they achieve through state capture, looting, fruitless and wasteful expenditure, cadre deployment coupled with incompetence. When one realises that the ANC's aim is to loot and enrich an elite few, all their policies and decisions make sense! There would be so much goodwill to address social and economic redress if this were actually what the ANC was doing. I, for one, am tired of paying for corrupt and incompetent ministers that keep getting recycled until each and every portfolio they touch is broken beyond repair! I am so tired of this. I hope and pray that all will exercise their vote wisely in November!	Susan	employed individual

	2026-08-28 18:39:01	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	There is no 'free ride' (structure tarifs as you will) be fair to all consumers. We already penalised multipe times: tax, rates, etc. Do not stupidly force those who can afford to go off grid to do so: reward those who have contributed to saving (and still are) ZA from certain electrical ruin - Eksdom even in CoCT in no way acknowlages this.	ROBERT	retired
	2026-08-28 18:45:16	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I did not install a solar system because I wanted it. I installed it because of ESCOM's inability to provide dependable and afforfable electricity. I could have used the solar expense much better for other expenses but was forced to supply my own dependable electricity to power my fridge and freezer, my TV after I lost one due to voltage spikes that happened every time that the power was switched on, and my computer equipment. ESCOM created this problem for themselves and the public must not be charged any fees because of this.	Stephan	retired
	2026-08-28 18:51:42	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	South Africans have already suffered years of load-shedding, rising electricity costs and poor government management. Consumers who have invested their own money in solar and batteries should not now be punished with additional fixed, network or capacity charges while having little meaningful choice over their electricity supplier. This appears less like genuine consumer-focused reform and more like another way of shifting the cost of government failures onto the public. It is ironic that, despite the ANC government's continued inability to manage the country's basic infrastructure and services effectively, it seems remarkably capable of finding new ways to extract more money from citizens. Electricity is an essential service, not another tax.	Jacobus

	2026-08-28 19:25:03	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Penalising Private Initiative and Capital: During years of severe state-driven load shedding, citizens were forced to spend their own hard-earned savings to secure private solar and battery systems just to keep their homes and businesses running. Shifting the billing structure to mandatory, unavoidable fixed monthly capacity and network charges unfairly penalises the very citizens who stepped up to solve a state-created crisis. Creation of a "Captive Ratepayer" Trap: Allowing large industrial corporations exceeding 1 MW to bypass municipal infrastructure to buy cheaper power directly on the open market, while forcing ordinary households to remain "captive" to local municipal tariffs, is fundamentally unjust. Everyday households cannot and should not be used as a financial buffer to absorb municipal revenue shortfalls and cross-subsidies. Anti-Competitive Practices: Labeling households that consume less grid power as "free riders" is a mischaracterisation. Citizens who have invested in renewable energy still pay for the energy they consume from the grid. Imposing high fixed baseline taxes erodes the financial incentive for clean energy adoption, which directly contradicts South Africa's broader climate change commitments and universal green energy transition goals. In a democratic society, policy should reward innovation and self-reliance rather than protecting legacy inefficiencies and revenue models at the expense of the public. I request that the Department of Electricity and Energy removes the proposed mandatory fixed network charges for rooftop solar users and revises the framework to ensure equitable, usage-based tariffs for all South African ratepayers.	Liza	employed individual

	2026-08-29 06:38:45	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom misappropriated R21 BILLION that was meant for the less fortunate's electricity. Get your house in order before penalizing citizens for your failures. I installed solar because of loadshedding at a time when Eskom encouraged citizens to make their own plans. You can't have it both ways.	Barend	employed individual
	2026-08-29 06:39:40	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Electricity supply must be constant and affordable. Both of these factors are not present where I stay. This forces me to fill this gap. So why must I now be penalized for their inabilities to provide this necessary service at a affordable price while township residence who can pay for electricity but refuse to do so. They should rather focus on non paying residents and illegal connections.	Pieter	retired
	2026-08-29 06:42:19	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The government should be happy people are taking measures to ensure South African homes are powered. Like everything else we're doing it out of our own pockets. The government is not paying for it. By victimizing homeowners who have solar power they are displaying their greed openly. The government is concerned about the grid maintenance start paying for utilities themselves. The are the riches people in the country. Tax them the highest amount and I'm sure Eskoms issues will be sorted out. They have no idea which house is attached to the grid or not. Charging households because of solar panels is unfair and completely incompetent without solid knowledge. There are definitely households that have been off the grid, who are not using electricity at all. Why must they be penalised for a utility they are not using. There are homes where this has been installed for elderly people who can no longer afford the greed driven rates of this government. Without the assistance of solar panels they would be without any form of running their home. Must they be penalised because someone cared enough to fork out of their hard earned, taxed to the hilt earnings? The government is always taking from the people instead of serving. Look to their personal pockets for a solution before they steal more from the elderly, from the poor and from the middle class that can barely feed their family's, and those who are unable to get work because of the racist laws they insist on having. 	2026-08-29 07:47:17	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The residential market did not create the electricity crisis but we are constantly being harassed by our municipalities for fees that is clearly not based any financial ground. A substantial amount of residents and small businesses are already battling to survive as a result of various decisions government took over the years. Now they want the captive customers to pay for their lack of foresight. Moreover Eskom promoted solar energy installations. (I know this as I was head of marketing at Eskom). Then government moved in and installed solar geysers in most of the townships. So the private solar generation is Eskom making. Beside all of this Eskom did not read the residential customer market at all other than moving to solar. Eskom did not think about the long term consequences and the impact of the self generation market. I do not recall a single meeting where this was discussed. Consequently the residential market is made to pay for Eskom executive's lack of business acumen.	Pieter	retired

	2026-08-29 09:06:59	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	As a home owner, I have spent quite a bit on my solar electricity infrastructure to avoid and escape load-shedding, and thus help ease the load on the grid. It is very unfair and completely wrong to punish someone for utilizing natural resources to combat a problem, not created by themselves or a neighbor, but a problem created by the state. Regarding solar electricity users 'not paying their "fair share" of fixed network maintenance.' It is, in fact, completely fair for those that only use the grid for a portion of their electricity use, thus causing less strain on the grid and causing less wear-and-tear on the grid to pay less. What is, in fact, unfair is to punish me, and the thousands of other people helping with the prooblem created by the state. I doubt I would have spent this much on solar electricity infrastructure is the sate's ability to ptovide electricity was reliable and affordable.	Charl	unemployed individual
	2026-08-29 09:07:44	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It is not fair to essentially penalize citizens who had to pay out of pocket to solve electricity problems that government could not. The drop on reliability on tje grid and their loss of revenue is their problem, invest better. If we were able to rely on the grid people would not have been forced to fond alternatives while we suffered through loadshedding to be able to work and eat which is a basic human need. Penalizing people for solving the basic needs problems you caused at their own cost is unconstitutional. Another tax that is drowning us. You failed us.	B	employed individual
	2026-08-29 09:12:14	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Instead of trying to increase income by unfair means, cut running costs/expenses like any private business would do. Stop punishing taxpayers and honest citizens who pay their bills. With the modern technilogy available today, surely Eskom can come up with a solution to illegal connections.	Coralie	
	2026-08-29 09:14:38	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This is pure theft as far as I'm concerned, just another way to take our money. TOTALLY UNFAIR	Joyce

	2026-08-29 09:49:47	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	A Penalty on Private Initiative: Citizens who spent private capital to solve the state's energy crisis will now face steep baseline connection taxes to subsidise legacy grid infrastructure. The "Captive Ratepayer" Trap: While large industrial corporations exceeding 1 MW will be permitted to bypass municipal lines to buy cheaper power directly on an open wholesale market, ordinary residential homes remain "captive" to local municipal tariffs. This leaves everyday households to foot the bill for municipal revenue shortfalls and cross-subsidies. Wholesale Price Volatility & Market Dominance: With Eskom Generation controlling the vast majority of baseload power, the risks of market power, pricing manipulation, and speculation could spill over into retail tariffs if oversight fails.	Sue	
	2026-08-29 09:56:17	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Ridiculous, tax for sunlight! Eskom couldn't supply, now the private sector has taken over. Competition is the key to an affordable economy. Excess private Solar generation fed back into the network should reduce Eskoms generation costs making the system more affordable to all.	Roland	retired

	2026-08-29 10:13:25	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The policy paper appears to just wish to add additional taxes on ratepayers who have already gone out of their way to lessen the burden on the state. The motivation is non-sensitcal, there is no 'free riding' -- that power at night time (assuming people do not have batteries) -- would be used regardless of whether solar was present or not. It is a moot point, as that night time electricity is always used, and now just daytime consumption is much less. This appears to be a highly cynical play to legislate a captive market and force those reducing their reliance on state resources to pay more. I think this is both an unconstitutional framework for charging ratepayers with solar penalties and ramping fixes charges, and mostly a deceptive ploy to keep a captured market that is becoming increasingly self-reliant.	Nigel	self-employed

YVONNE	retired
	2026-08-29 11:45:11	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Mandatory fixed solar charges, captive consumer price hikes, and municipal revenue losses will hurt ordinary households and small businesses. Spiking electricity prices for normal ratepayers for year on year worsening service is unacceptable. Added to this municipalities force ratepayers to subsidise other households. Everyone should pay their fair share, not just the ones who have solar installations. Wholesale market reform should proceed only if strict caps are placed on fixed network fees, captive ratepayers are protected, and municipal cross-subsidies are safeguarded.	Daniel	employed individual
	2026-08-29 11:49:17	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The amount of solar power installed over the last almost-ten years has reduced grid strain and effectively allowed the grid to operate despite insufficient power being produced. This should be seen as a positive economic contribution from everyone that invested private money to achieve this positive outcome. It's positive from both the private and public perspective. Punishing, or "holding accountable" those that reduced grid-strain and provided the time for grid capacity to start correcting can't be the appropriate response. There is already a grid-connection fee, which should more-than cover the fixed-operating costs. Abandoning the principle of pay-for-what-you-use has a strong nett-negative effect on society. Also consider that this bill expects individuals and small entities to pay excessive amounts for infrastructure they've gone to lengths to reduce reliance on. Instead agreeing to pay the excessive amounts, the more likely response will be to spend a bit more and completely sever connection to the grid. Nobody wants this, but it is a likely outcome, which will further reduce the money available for grid maintenance / operation. It comes down to a calculation of: how many months of saving municipal electricity-costs pays for the cost of going off-grid? While this bill started with positive intent, it got turned around along the way. Public infrastructure and services exist to serve society at large. It should never prioritise the freedom of larger entities at the expense of the freedom of citizens. This bill does that.	Barry	employed individual

	2026-08-29 12:48:24	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I installed solar as my husband has an electric machine assisting his breathing at night. I can not rely on Escom to give a continuous supply when it is needed	Bev	retired
	2026-08-29 12:50:12	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I do not support the mandatory fixed charge to households. They argue not paying a fair share, however the reason people added solar in the first place is because the grid couldn't provide the service they needed. Forcing people to pay for a grid that can't support their needs is just an excuse - it would be far more productive to invest in projects to help with power generation on Eskom's side. It is a known fact that people don't mind paying when it is more convenient to just pay and receive a service than to try and find a way to make it work themselves (like with solar power). This rule is a shortcut for them to earn more money without putting in the work and funds to make it convenient for people. I would support the use of private sector providing electricity, but it has to be allowed for all people - not just those who use too much power.	C	employed individual
	2026-08-29 13:01:23	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The principles of an open and competitive free market system excludes all/any statutory competition designed against it. Whereas ESCOM had been one of the world's leading energy manufacturing and supply organisations it had dwindled into an abyss of risks and failure, liabilities and gangsterism. Whilst the South African taxpayer has remained loyal in their commitments towards ESCOM through government taxations, the whole paradigm of ESCOMs reason for existence has been seriously eroded by mismanagement, theft on extreme scales, gangsters and their tactics, mismanagement, quality controls and monitoring, theft of grid electricity supplies, unpoliced and asset managements, controls in the supply chain leading to loss of income and quality of supply. Their current effort to clamp down on the existing loyal and truthful client base which they now realise they have lost reeks of arrogance, intellectual failure and socialistic incompetence, punishing the honest with measures thereof meant for the transgressors, thieves and incompetents .	Dr WP	
	2026-08-29 13:11:54	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Citizens took the initiative and paid large amounts to install solar which alleviated the stress on Eskom. This improved Eskom's ability to "keep the lights on!" Now we are being penalised to allow Eskom's finanances. Totally unacceptable that we now have to pay a levy!!! NO NO NO	Barbara	retired
	2026-08-29 13:23:24	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		Nick	retired
	2026-08-29 13:24:39	No I do not	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	We were forced to invest in Solar when the government and its parastal electric supplier have become totally corrupt and incompetent. Load shedding was destroying my business and also ruining our daily lives at home. When we invested in our solar, the cost was also more than double the current cost meaning we were penalised due to timing because we had no choice. Furthermore, Eskom rates have increaed about 3000% in the last 30 years and are supplying less power for that money. It is an absolute disgrace and not acceptable for the government to think they can penalise us now for their incompetence.	Howard

	2026-08-29 13:28:30	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	First we were encouraged to go solar, as Eskom was collapsing, now they want to penalize us - how bloody absurd!!!!!	Basie	retired
	2026-08-29 13:28:33	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	First we were encouraged to go solar, as Eskom was collapsing, now they want to penalize us - how bloody absurd!!!!!	Basie	retired
	2026-08-29 13:32:04	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I am sick and tired of being treated like the personal ATM of highly paid executives to not do their jobs properly. This is precisely why I will install Solar power to get away from this attitude, but now you want to punish me for using my money to get away from the problems you cause by not properly supervising contracts, handing out over priced tenders to cadres and then allowing the goal posts to shift so the end cost bears little resemblance to the tendered cost. That is obscenely poor project management for which someone gets paid an obscenely high salary.	George	retired
	2026-08-29 13:35:37	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Government must wake up and fix what is broken by doing the WORK and fixing what they broke in the first place. Instead,, it's trying to push paper and legislate their way into cash.	Hennie	
	2026-08-29 13:44:32	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The government encouraged users to go solar as to lessen burden on Eskom. Now they want that same people to pay extra because they used their own money to become less dependent on Eskom. This is unfair and a sign of poor governance. If Eskom stop paying people exorbitant salaries for poor management and planning (do not forget money lost to corruption) then people can pay a fair price for what they use and the money collected will be enough for maintenance and expansion.	Andrieka	
	2026-08-29 13:48:37	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Government's failure to maintain the functional system it inherited is now resulting in private initiative being penalised simply for helping keep South Africa moving. Instead of addressing the consequences of years of mismanagement and resource depletion, government appears to be looking for new ways to extract more from those who are still willing and able to contribute. Private investment in alternative power generation does not undermine Eskom - it reduces the pressure on Eskom to supply electricity and helps keep businesses, households and the broader economy running. Those who have invested their own money to generate power should be recognised for easing the burden on the national grid, not penalised for doing what government has failed to do. Rather than punishing private initiative, government should be encouraging and supporting the very people helping to keep South Africa's economy functioning.	Marise	employed individual
	2026-08-29 13:51:09	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Just another form of illegal taxation to add to consumers already stretched household budgets. This must not be allowed.	Peter	retired
	2026-08-29 13:51:52	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	1) Eskom is owed billions of Rands from municipalities who charge residents for electricity but do not pay Eskom. Getting that sorted should be a priority for Eskom. That deficit should not be subsidized by paying customers. 2) Tenderpreneurship and corruption are known issues at Eskom. Addressing that would also save Eskom billions. 3) It is unacceptable for the people who have invested in solar energy due to Eskom's failure to supply a reliable electricity supply, to now be charged high fees to prop up Eskom. 4) All these extra "roll players" in the transmission section of Eskom raise fears of more corruption and cadre deployment, etc etc.	Anne	retired

	2026-08-29 14:43:44	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This is outrageous, instead of encouraging people to save energy (like it is done in European countries), we get punished for doing exactly this. Millions of households and businesses invested into rooftop solar and batteries to keep the lights on when the state failed to do so. Instead of punishing these people, they should get the possibility to feed clean energy into the grid and get rewarded for that!!!	Eveline	retired
	2026-08-29 14:45:51	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Day light robbery!!!!! A “Sun Tax” on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. A tax cannot be placed in hind-sight. Taxes were paid for the purchase of the solar panels, back-up batteries, upgrades to the property. Property taxes have increased due to the value of the property increase. Insurance costs have increased. Property risks have increase, with solar equipment becoming a target for theft. The “Captive Ratepayer Trap” and Municipal Insolvency: Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance. Wholesale Price Volatility and Market Power Manipulation: Eskom Generation still controls the overwhelming majority of South Africa’s dispatchable baseload power. In unbundled spot markets worldwide, dominant suppliers have engaged in economic or physical withholding to artificially spike market clearing prices. Without hard statutory bid caps and aggressive oversight, wholesale price volatility will be passed directly down to retail consumers. Severe Conflicts of Interest Within the NTCSA: Consolidating transmission grid ownership (TNSP), system dispatch (SO), market clearing (MO), and legacy state off-take contracts (CPA) within a single entity under Eskom Holdings creates structural conflicts of interest. NTCSA could face internal commercial pressure to favour Eskom assets or delay third-party grid connections. Premature Market Launch Amid Unresolved Municipal Debt: Opening an advanced wholesale market with mandatory imbalance penalties in 2026/2027 while municipal distribution debt to Eskom remains unresolved is premature. Financially distressed municipalities that fail prudential credit requirements will be excluded from trading platforms, creating a divided nation of well-supplied metros and failing, power-starved rural councils. 	2026-08-29 15:07:17	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Investment into private renewable energy became essential as a direct result of Govt ineptitude and penalising consumers for installing their own solar systems is unwarranted. I do not approve any proposed fixed network and capacity rates for residential consumers. Govt should be rewarding grid-tied rooftop solar owners for energy injection and sustaining the grid by reducumg fixed network costs rather than impose increased flat network rates. The proposed rates will negatively impact low-income households and all who choose to conserve their electricity usage. The citizens of South Africa are already heavily overtaxed and have a constitutional right to choose how they spend their disposable income. On the other hand Govt has the right to provide households with affordable and efficient electricity supply and should work on rehabilitating bankrupt municipalities before taking steps to increase financial burden on the people!!	Jen	employed individual
	2026-08-29 15:13:20	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Consumers have already been burdened with mandatory network access charge to be connected to the grid. This was not previously the case - only actual electricity consumed was billed and paid for. No we are already paying ever-increasing tariffs and additional charges - the network access charge should then be considered ad the “backup connection” to the grid. STOP TRYING TO SECRETLY GET AWAY WITH OVERTAXING CONSUMERS!! Most households are struggling to put food on the table due to the high cost of living. The sun is not yours - not to tax or use as leverage - you cannot tax consumers for solar power. Is the government going to start charging residents additional rent over and above their rent or mortgage payments? No. Why? Because the properties DO NOT BELONG TO THE GOVERNMENT and they are NOT ENTITLED to any compensation.	Johan

	2026-08-29 16:54:51	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	FORMAL PUBLIC COMMENT — ELECTRICITY SECTOR MARKET TRANSFORMATION POSITION PAPER Subject: Objection to punitive fixed charges and the proposed treatment of residential rooftop solar users I hereby submit my formal objection to any policy, tariff structure or regulatory mechanism that seeks to financially penalise residential electricity consumers for investing in their own electricity-generation capacity, including rooftop solar and battery storage. I am a residential electricity consumer who has invested a substantial amount of my own money in a solar and battery system. I did not make this investment because I wanted to avoid paying my fair share of electricity infrastructure costs. I made it because I needed a reliable electricity supply and could no longer depend entirely on the public electricity system. I have therefore spent my own money to generate and store electricity on my own property, using solar energy that is freely available from the sun. 1. I reject the principle of "anti-free-riding" being used as a justification for punitive solar charges The suggestion that residential solar users are somehow "free riders" requires serious scrutiny. I have invested my own capital in equipment that reduces my demand on the electricity system. I carry the cost of purchasing, installing, maintaining, replacing and financing that equipment. If government wishes to impose a fixed grid or network charge, it must clearly demonstrate: - exactly what service that charge pays for; - the actual cost incurred by the distributor; - how the charge is calculated; - why the charge is necessary; - why the amount is proportionate to the services actually provided; - and why consumers who substantially reduce their electricity consumption should be required to pay substantially the same costs as consumers who remain heavily dependent on the grid. Calling consumers "anti-free-riders" does not constitute an economic justification for a tariff. 2. Consumers should not be punished for solving an infrastructure problem themselves For years South African households have been exposed to unreliable electricity supply, escalating electricity costs and load-shedding. Instead of simply continuing to complain, many households have taken responsibility for their own electricity security. We purchased solar panels, inverters, batteries and associated equipment with our own money. We have effectively invested private capital into reducing our dependence on the national electricity system. It is fundamentally unreasonable to encourage consumers to invest in renewable energy and energy independence while simultaneously creating tariff structures that financially punish them for doing so. Government cannot reasonably say: "Please invest your own money in renewable energy and reduce pressure on the grid" and then subsequently say: "Because you have successfully reduced your dependence on the grid, we will charge you more." That creates a perverse economic incentive. 3. Solar energy is not electricity supplied by Eskom or a municipality There must be a clear distinction between: electricity purchased from the grid, and electricity generated by a household on its own property using privately owned equipment. A household generating electricity from sunlight is not purchasing that energy from Eskom or a municipality. Therefore, any charge relating to privately generated electricity must have a demonstrable and lawful connection to an actual regulated service or network cost. The mere existence of a solar installation cannot, by itself, constitute sufficient justification for imposing an additional financial penalty. 4. Grid costs must be separated from revenue recovery I accept that electricity networks have real costs. Transmission, distribution infrastructure, metering, maintenance, system balancing and network availability all have costs. However, those costs must not become a blank cheque for revenue recovery. If the electricity market is being fundamentally restructured, government and regulators must explain precisely which costs are genuinely fixed, which costs vary according to consumption, and which costs are simply historic revenue requirements being redistributed among customers. NERSA itself has recognised that tariff restructuring involves reallocating costs between fixed and variable components. Its 2026/27 Eskom decision states that the generation-capacity charge represents a reallocation of existing generation revenue rather than an entirely new charge. That makes transparency even more important. Consumers have the right to know whether they are being charged for an actual service or whether costs previously recovered through electricity consumption are simply being shifted onto households through increasingly unavoidable fixed charges. 5. Do not make ordinary households the captive funding mechanism I am also concerned about the potential consequences of allowing large electricity consumers to obtain electricity through alternative suppliers while ordinary residential consumers remain dependent on municipal distribution systems. If large customers leave the traditional revenue base, government must not simply transfer the resulting financial burden onto ordinary households through ever-increasing fixed charges. Residential consumers should not become the financial shock absorber for restructuring the electricity market. 6. Renewable energy should be encouraged, not economically punished South Africa has an enormous renewable-energy resource. Every household that installs solar and battery storage is making a private investment that can: - reduce demand on the grid; - reduce peak demand; - improve household energy security; - reduce dependence on centralised generation; - and contribute to the country's broader energy transition. A tariff system that makes these investments progressively less attractive is economically self-defeating. If government genuinely wants greater private investment in renewable energy, then the regulatory framework must provide certainty and fair treatment—not the fear that consumers who invest today will be subjected to punitive charges tomorrow. 7. I demand transparent justification for every proposed fixed charge I therefore formally request that any proposed fixed solar, network, capacity or connection charge applicable to residential consumers be accompanied by a transparent cost-of-supply analysis demonstrating: 1. The exact cost being recovered. 2. The methodology used to calculate the charge. 3. The portion attributable to generation, transmission, distribution, metering and other services. 4. The extent to which the cost is genuinely fixed. 5. The extent to which the cost is already recovered through existing tariffs. 6. The expected financial impact on low-consumption households. 7. The expected financial impact on households with solar and battery systems. 8. The economic justification for charging consumers who substantially reduce their grid consumption. 9. The alternatives considered before imposing the charge. 10. The mechanism that will prevent the charge from becoming a disguised revenue-recovery mechanism. 8. My position I DO NOT CONSENT to a tariff policy that treats residential solar owners as a problem to be financially penalised. I do not object to paying legitimate, transparent and proportionate costs for services that I actually use. I strongly object, however, to any system under which I am effectively forced to continue paying increasingly large fixed charges simply because I exercised my right to invest my own money in an alternative means of generating and storing electricity. I have already paid for my solar system. I have already accepted the financial risk of that investment. I have already paid for the installation, equipment and maintenance. I am already contributing to the economy and paying the taxes and charges applicable to me. I should not subsequent	Elmarie	unemployed individual

We took from savings and investment to buy solar power for our property as the government are not reliable in their power supply. Now they want to penalise us for using God's instrument for energy.	Terence	self-employed
	2026-08-30 10:05:38	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I support reform of South Africa's electricity market and increased competition. What I object to is a market design that could transfer the financial consequences of inefficient municipal distribution systems onto households that have invested their own money in solar and energy efficiency. Consumers who reduce their dependence on the grid should pay a fair and transparent charge for the network services they actually require, but they should not be penalised through excessive fixed charges simply because they consume less electricity. If large commercial and industrial customers are allowed to migrate to competitive electricity suppliers, the policy must also address the resulting erosion of the municipal revenue base. Otherwise ordinary households could become the captive customers who carry an increasing share of distribution costs. The new market should therefore be designed around cost-reflective tariffs, genuine competition, protection against market power, transparent cross-subsidies, fair treatment of rooftop solar and protection of existing private investment in renewable energy. Electricity-market reform should reward efficiency and innovation—not create a financial incentive for consumers to remain dependent on the traditional grid.	Carla

	2026-08-30 11:26:52	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I do not understand the reasoning of the current Electricity Governance. Overseas, private idividuals are ENCOURAGED to get their own solar. If they generate more than they use, they can feed their excess into the National Grid which the energy company then credits the supplier-consumer for at a lower rate and sells at the normal rate. This is a HUGE saving, as they do not have the generating costs - it is thus 100% profit. The more private individuals and businesses that can generate their own energy requirements and feed excess into the grid, the less the need for new Power Stations. There could even be a minimum number of kws that have to be fed into the grid requirement. That would make far more sense and have a long-term positive economic effect for the entire country. Individuals would be incentivised to install their own solar. The current thinking is apply the stick - penalties - instead of the carrot - incentives - which ALWAYS work better.	Jennifer	retired
	2026-08-30 11:36:08	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	If charges are to be charged for our using our own investment to have a reliable electricity supply, then we should be repaid 100% for the cost of solar system needed. Residents reason for investing in solar power backup is not anything to do with the grid, it is an investment for our own security. If the supply in the past had been reliable then no one would spend money on expensive backup systems. I believe that basically, the consumer was put in a position of using hard earned savings to keep their lights and geysers working.	Jillian	employed individual

	2026-08-30 11:36:45	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	What the Policy Proposes: The position paper establishes the principle to “discourage free riding,” arguing that modern electricity networks have high fixed infrastructure costs and low operational costs. Under this framework, tariffs will shift away from pure volumetric consumption charges (cents per kilowatt-hour) toward mandatory fixed capacity and network charges for all grid-connected customers, regardless of how little electricity they consume. Only consumers who disconnect completely from the national grid will be exempt from these fixed fees. The Underlying Risk: Households and small businesses that invested significant private capital into rooftop solar, batteries, and energy efficiency to protect themselves from load shedding will be forced to pay higher monthly baseline connection fees. This structural shift acts as a financial penalty on private decarbonisation, extending solar payback periods and increasing electricity bills for low-volume and frugal users. Points to Demand in Your Public Submission: Demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. Insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. Require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households.	Gareth	retired

						A Case for Encouraging Private Solar Generation Without Additional Taxation or Penalisation Individual electricity consumers who invest their own money in solar generation should not be subjected to additional taxes, punitive charges or excessive costs simply because they generate electricity and make surplus power available to the national grid. These individuals have already made a substantial private investment in renewable-energy infrastructure. In doing so, they have taken financial responsibility for reducing their dependence on Eskom and have helped address an electricity crisis that was not of their making. It would be fundamentally counterproductive to penalise citizens for contributing to the solution. South Africa should instead recognise privately generated solar electricity as a valuable national resource and an extension of the country's electricity-generation capacity. Private investment is already reducing pressure on the national grid Every household or business that generates electricity from solar reduces the amount of electricity that must be supplied by the national generation system. During daylight hours, when solar generation is at its highest, these installations can supply electricity directly to the consumer and, where surplus electricity is available, feed it into the grid. This reduces demand on Eskom's generation capacity and can also reduce pressure on transmission and distribution infrastructure. It is difficult to justify imposing additional financial burdens on consumers who have invested their own capital to generate cleaner electricity at precisely the time of day when solar power is most readily available. Where surplus solar electricity is fed into the grid, that electricity can also displace electricity that would otherwise have to be generated centrally. In addition, locally generated electricity can reduce the amount of electricity that needs to be transported over the national network. A fair distinction must be made between grid costs and taxation Government and municipalities are, of course, entitled to recover the legitimate costs of maintaining and operating the electricity grid. A household that remains connected to the grid benefits from that infrastructure and should make a fair contribution towards its maintenance. However, there is an important distinction between: a reasonable, transparent charge for the actual grid services used, and a punitive charge, tax or penalty imposed simply because a consumer has invested in solar generation. The former can be justified; the latter should be avoided. Any grid-access or network charge should therefore be cost-reflective, transparent and based on the actual services and infrastructure required, rather than being designed to discourage consumers from generating their own electricity. In particular, government should avoid creating a situation in which a consumer is financially penalised for supplying surplus electricity to the grid. Such a policy would discourage precisely the private investment that South Africa needs to expand its electricity-generation capacity. The electricity tariff structure should encourage daytime consumption South Africa should make much greater use of electricity pricing to influence consumption patterns. Solar electricity is naturally abundant during daylight hours but unavailable at night. Rather than treating this as a disadvantage, the electricity pricing structure should encourage households and industry to shift discretionary consumption towards periods when electricity is most readily available. A rational tariff structure could therefore make daytime electricity comparatively inexpensive while making peak and night-time electricity substantially more expensive. This would create a strong economic incentive for consumers and industry to adapt their electricity consumption patterns. Activities such as water heating, pumping, battery charging, industrial processes and other flexible electricity loads could increasingly be shifted to daylight hours. This would reduce evening peak demand and lessen the requirement for expensive peak-generation capacity. Government should encourage, not discourage, distributed generation South Africa should therefore regard private solar generation as a strategic national asset rather than simply another potential source of revenue. Government policy should: Permit individuals and businesses to generate solar electricity without additional taxation or punitive charges simply because they generate electricity. Allow surplus electricity to be supplied to the national or municipal grid through a fair and transparent feed-in or credit mechanism. Ensure that any grid-access or network charges are reasonable, transparent and cost-reflective, and represent payment for genuine grid services rather than functioning as a disguised tax or penalty on solar generation. Recognise the economic value of electricity generated close to the point of consumption, including the generation, transmission and distribution costs that may be avoided. Introduce electricity tariffs that encourage daytime consumption and discourage unnecessary peak and night-time consumption. Encourage private investment in distributed renewable-energy generation, thereby increasing national generating capacity without requiring the State or taxpayers to fund the entire expansion. The principle should be simple Citizens who invest their own money in solar generation are not the cause of South Africa's electricity crisis. They are investing their personal capital to reduce their reliance on Eskom, reduce demand on the national grid and contribute additional clean electricity. Government policy should therefore not discourage this investment through excessive taxation, punitive charges or artificially low compensation for electricity supplied to the grid. The objective should be to create a partnership between private investment and public infrastructure. A reasonable contribution towards the genuine cost of maintaining the grid is understandable and defensible. A charge whose primary purpose is to penalise or discourage solar generation is not. South Africa cannot afford policies that discourage the very private investment and innovation that can help resolve its electricity challenges. The national interest would be better served by ensuring that every additional privately funded solar installation is recognised for what it represents: additional generating capacity, reduced pressure on Eskom, reduced demand on the national grid, cleaner electricity, private investment and a contribution towards a more resilient and sustainable South African electricity system.		
	2026-08-30 17:27:02	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Citizens who invest their own money to generate additional clean electricity should be encouraged and fairly compensated for helping to strengthen South Africa's electricity system — not taxed or penalised for doing so.	Du Toit	retired
	2026-08-30 17:27:03	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Once again they want penalise the very people who helped relieve loadshedding! What about all the free loaders, stolen power consumers and all the corruption within Eskom? They're targeting the easiest source of income - the same folk who pay income tax, and don't even get a break on their hard-earned pensions!	Cheryl	retired

	2026-08-30 17:56:43	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Why must we pay for big fat salary increases when it takes 5 day to sort out 2 broken wires, why are gov ofcials involved in solar business, big scam and mafia state	Dennis	retired
	2026-08-30 18:30:46	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Mandatory fixed solar charges, captive consumer price hikes, and municipal revenue losses will hurt ordinary households and small businesses. The claim that anyone with solar is "not paying their fair share" is nonsensical. If one is not using the grid as much as someone without solar, that means they should pay for what they do not use. One should not have to pay for someone else's use as well. The cost of using the grid is built into the price of each unit of electricity. Instead of wasting time attempting to tax solar users extra, focus on removing illegal connections, which are a true strain on the grid and a huge loss of revenue. You're targeting the wrong people as always. Those who pay extra to survive your incompetence must now worry about you targeting them even further instead of you fixing the issues that led them to start using solar in the first place.	Abdul-Maalik	employed individual
	2026-08-30 18:34:31	No I do not	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	Households and small businesses that invested significant private capital into rooftop solar, batteries, and energy efficiency to protect themselves from load shedding will be forced to pay higher monthly baseline connection fees. This structural shift acts as a financial penalty on private decarbonisation, extending solar payback periods and increasing electricity bills for low-volume and frugal users. Even without loadshedding we suffer regular power outages due to years of neglected infrastructure, corruption, theft, vandalism, and incompetence. There is no indication that this is likely to change. Hence solar is not a nice to have its a business necessity. There are millions of illegal power connections throughout SA - especially in townships etc. How will those be reigned in, or will this be yet another tax on already over burdened law abiding citizens.	Niel	business owner

	2026-08-31 06:43:14	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Well, can it get worse than this? Eskom already has exorbitant fixed charges for every property where there's a pole holding a transformer. Even if the transformer has no electricity in it, you pay for it, and you also pay an availability fee. Taxing your competition is a crude way to rake in money that you don't earn. No good giving them advice either, it's a pyramid scheme. The more they come up with nonsense and self-serving rules, the more customers will walk away, and then more Eskom schemes will be introduced to rake in not-earned money. In the end Eskom will become irrelevant, unless there is a drastic mindset change. They can't work with their customers, they must punish them, they cannot adapt to a changing energy supply scenario, no they must keep their bullying and immovable viewpoints. Perhaps supermarkets should also have fixed charges. Then you can pay a till availability charge, a fridge capacity charge, an administration charge etc. They can find many examples on an Eskom account. If you have some money left, you can then use that to buy food. Eskom's problem is that they have had no competition, and they don't want any. They want to monopolise power production and supply. The energy world has changed in the last 30 years, so it is time that Eskom wakes up. Participate, don't rule, work together with others including the ordinary citizen, and then you might have a future.	Ludwig	business owner
	2026-08-31 06:50:58	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Another clever way of targeting those who have solar, if they had managed the electricity usage properly in the first place consumers wouldn't have had to get solar. Penalising consumers for getting the job done where they failed. SHAMEFUL ON THEIR PART. Another way of squeezing money out of citizens to line their pockets.	Stephany C	employed individual

	2026-08-31 08:29:35	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	NERSA to place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. Insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. Require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households.	Justus	
	2026-08-31 08:38:52	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I just think that it's ridiculous to penalize people for paying hard earned money to supplement their own home with power as the state could not.	Charles	retired
	2026-08-31 08:39:42	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It is inaccurate to classify citizens who tried to solve the energy crisis via solar energy as "free riders". Since the alleged "free riding" results from Eskom's failure and poor service delivery, I propose that a positive definition will suffice, such as "system relievers". Once we redefine these initiatives we will approach lawmaking in a different light. Water and sunlight belongs to all. The SA lawmaking process in general seems like indoctrination to control these resources which is in fact not produced by the government.	Suria	self-employed
	2026-08-31 08:41:27	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The government caused the electricity problem through poor tax management and theft, which led to Eskom's collapse. SA taxpayers used their own money to find a solution because the government did not have the answer, or cared too little to implement a solution. Now that they 'lose' money, they want to impose additional taxes on expenses they do not incur. Its rediculous.	Jaco	business owner
	2026-08-31 09:05:05	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I paid form my Solar installation and the sun does not belong to Eskom. They have no right to any more of my fund, apart from the amount for power I consume, as a uniform market value.	Michael	employed individual
	2026-08-31 09:10:27	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	We must reframe solar energy users away from a negative definition of "free-riders" and towards a positive definition that reflects grid-relief and environmental sustainability. I agree that there is a base level of municipal infrastructure that solar users enjoy, but this is not enjoyed freely as consumers still pay for the kwh they draw from the grid. A property that is completely "off-grid" and pulls no electricity from the municipality still pays rates and taxes - what are those for if not the maintenance of infrastructure in the area of said property? Furthermore, I wholeheartedly reject the idea that companies, businesses, and factories which pull the most electricity from the grid should enjoy lower costs and be able to opt out of tariffs burdening individuals. We must not reward companies for maximising their use of coal-powered electricity, nor incentivise smaller companies to inflate their electricity usage to meet the 1m kw monthly threshold. These larger consumers, whose main purpose is to turn a profit, should be taxed MORE heavily than household users, and should be the ones shouldering the lion's share of the structural burden. The commercial sector should support and uphold their communities, NOT the other way around. And if they turn away from the grid because solar energy is cheaper, that is a GOOD THING actually, because solar is renewable and much more environmentally friendly than the coal-powered grid we have today. 	2026-08-31 09:31:39	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I support the principle of transforming South Africa's electricity market, increasing competition, encouraging private investment and reducing Eskom's monopoly. However, I do not support reforms that shift disproportionate costs onto ordinary residential consumers who remain captive to municipal electricity providers. Any new tariff structure must be transparent, fair and genuinely cost-reflective, while protecting households from excessive fixed network charges. Consumers who have invested in solar, batteries and energy efficiency should not be unfairly penalised for reducing their reliance on the grid. I also believe that large customers should not simply be allowed to leave municipal networks without a clear mechanism to protect the financial sustainability of those networks. Otherwise, the costs currently recovered from large electricity users could increasingly be transferred to residential consumers. I therefore support the overall move towards a competitive electricity market, but only with strong consumer protections, transparent tariff structures, effective NERSA oversight and a clear plan to prevent residential consumers from carrying an unfair share of the costs. 	2026-08-31 11:01:31	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	People cannot be charged based on fixed monthly charges – it should be strictly pay for your exact usage. No matter where you live you have to pay for the exact usage of the resources you use – nothing more and nothing less – equal and fair treatment for all. The use of natural resources that cannot be depleted by electricity usage (such as sun and wind energy) should be promoted not taxed - people should only be expected to pay for necessary maintenance in order to ensure safe usage – the actual energy supplied by these resources should be free since it is a gift from GOD and does not cost the government anything. What is good for the planet is good for us all. Commercial and domestic use should be calculated separately – the needs of private households differ from the needs of company's making use of 3 phased electricity. If you use more you should pay more. Fix the real problems: Take away monopoly – more suppliers mean more competitive pricing and less struggles to supply in the demand. Proper maintenance of electrical infra-structures and equipment is a must. Address the problems of illegal usage and cable theft leaving honest tax payers in the dark.	Anna-Marie	employed individual

	2026-08-31 11:26:21	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	A failed government is passing the cost of their failures on to the productive part of the society. The ANC government was informed as far back as 1995 that they would face a electricity generation crisis if they do not plan for new generation capacity then already, they then opted to rather spend the available capital elsewhere instead of investing in new generation capacity. Eskom has also been directly involved in the collapse of the economy due to the shortsighted view of the government of the day and because of overspending on contracts due to procurement rules. The general public has had enough of being penalized due to the failures of the government of the day.	Johan	employed individual

	2026-08-31 11:36:41	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It is unacceptable that we have to punished for Eskom and the government's incompetency. We simply do not have spare cash lying around to fix problems coming a long way now, they were warned that this will happen. We are already paying taxes, and are struggling to keep up with municipal increases. The sun does not belong to the government and it should be personal choice if one wants to install solar. We have to install solar in the first instance as Eskom could not deliver, now they want us to carry their incompetence. Totally unacceptable!	Michelle	
	2026-08-31 11:38:39	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Reforms of our South Africa electricity sector is necessary, and long overdue. Eskom as a corrupt and mismanaged entity need to be controlled and cleaned up. These changes will undoubtably translate into more land grab for Eskom, without allowing anyone else, except more corrupt syndicates, to help all of South Africa. Property owners are already inundated with charges and fees, over and above taxes, along with additional taxes.	Tiaan	employed individual
	2026-08-31 11:42:27	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Object: Mandatory fixed solar charges, captive consumer price hikes, and municipal revenue losses from large users receiving discounts that residences do not will hurt ordinary households and small businesses. Large consumers making a lot of money and also providing jobs should not be the only ones to benefit from lower charges. As with any consumption - a resident should only pay for what they use. If residences with solar power need electricity then they should pay for what they use. If Eskom can't make that work the leaders should be criminally followed and locked up for incompetence.	Deirdrie

	2026-08-31 12:02:03	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	NERSA has for the part 20 years been requesting that ESCOM get its house in order and come to the table with a structured plan to decrease all the unnecessary expenditure, starting with corrupt tenders where they pay 3x more for coal than what they should be paying, employment of an excessive number of incompetent and unnecessary number of employees, the majority of which are unqualified, inexperienced and grossly overpaid, the continual use of overpriced consultants to do the actual work that the incompetent employees need to actually do their job. Yet not ONCE in all this time has the incompetent management at ESCOM ever submitted a plan of action to reduce their exorbitant costs, infact instead of decreasing their costs, they have continually increased at above the rate of inflation!!! Secondly the total incompetent ESCOM and the incompetent unnecessary MINISTER OF ENERGY have NOT resolved the loadshedding issue but have instead continued to run the emergency diesel turbines at various sites almost on a full-time basis so that they can state that South Africa has not had loadshedding for the past year!!!! The cost of this ridiculous so-called solution to loadshedding is costing the taxpayer hundreds of billions of Rand, just so that these incompetents can state that they have solved the loadshedding issue, whereas they have solved nothing! The cost of electricity from these diesel turbines is estimated at over R6,000/MWH, whereas the cost of electricity from the standard coal fleet is estimated at approximately R550/MWH, that is at over 1000% higher cost!!!!! Thirdly, the people of South Africa have been forced by this incompetent ESCOM, run by incompetent Managers and staff, to supply their own energy requirements and reduce the load on ESKOM, by fitting SOLAR energy panels and batteries at huge cost to themselves. Now the same corrupt, incompetents that could not supply the required electricity to the people of South Africa, now want to extort more taxes out of the taxpayer by implementing a new tax on solar power!!! Whoever suggested this must be fired immediately!!! Fourthly. ESKOM was the pride of South Africa, supplying one of the cheapest rates of electricity, however after 30 years of mismanagement and corruption, ESKOM is now the laughing stock of South Africa , now suppying one of the most expensive rates of electricity!!! Breaking up ESKOM will NOT solve anything, in fact it will make ESKOM even more expensive to run as you are going to have an overstaffed, overpaid incompetent management spread over 3 or 4 new entities that are just as corrupt, overstaffed, overpaid and incompetent, instead of 1 entity	Remo	
	2026-08-31 12:02:47	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The consumer has had to foot the bill for solar ONLY out of necessity as the grid is so unreliable.	Susan	retired
	2026-08-31 12:03:12	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I am appalled that we helped when Escom could not provide electricity. Now they want to charge us for the sun shining on us. I would rather invest more and go off the grid entirely. It would be better than having Escom and the municipality steal from us.	Alan	employed individual
	2026-08-31 12:15:33	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This is a problem created by the greedy politicians in order to loot funds from Eskom by introducing loadshedding which in real did not exist. Now that rate payers found the solution for energizing their households, the government feel the heat.	Mike	employed individual
	2026-08-31 12:22:23	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Ratepayers should be commended for reducing the extremely poor load capacity of Eskom by this government and associated municipalities. It is absolutely corrupt in the extreme to penalise ratepayers who pay ever increasing funds to support mostly inefficient municipal authorities. Any fixed charges & solar penalties legislation is totally antidemocratic and dictatorial to taxpayers and ratepayers and proves the vast corruption in high places in South Africa. It would be reason to initiate widespread protest action against such traitorous treatment of SA citizens.	Cedric	retired

	2026-08-31 14:20:21	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Residential ratepayers should not be penalized for circumstances beyond their control, particularly when they have had to invest in alternative energy solutions due to the ongoing instability of the national electricity supply. The widespread adoption of residential solar and other backup energy systems has largely been a response to the inability of Eskom and the broader energy sector to consistently provide a stable and reliable power supply. Households have made significant financial investments to maintain basic living standards, protect their assets, and ensure continuity of daily activities during periods of supply disruption. It is important to acknowledge that Eskom's operational and management challenges are only part of the issue. Municipal governance, infrastructure maintenance, and energy distribution management have also played a significant role in the deterioration of service reliability in many areas. These combined shortcomings have contributed directly to the growing dependence on privately funded renewable energy solutions by residential consumers. Consequently, policy and tariff decisions should recognize the substantial investments already made by households to compensate for systemic failures, rather than imposing additional financial burdens on those who have proactively addressed the risks associated with an unreliable electricity supply.	M	employed individual
	2026-08-31 14:35:37	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	One again the government is looking for ways of stealing money from the rate payers. We are already over taxed with our municipal bills and now they "the evil, corrupt, un-repentant scavengers" continue to explore ways of making the residents even poorer. If they continue like like I will have no alternative but to sell my property, because I, as a pensioner, will not be able to afford it. Public friendly, and concerned institutions like Dear SA and Outa, continue to fight against this evil government, who only want to fill their coffers at the expense of the defenseless rate payers. The Sun does not belong to the government, so these bureaucrats must stop trying to play "God". If the government/eskom want to recover their losses they need to tackle those criminal elements who are stealing electricity and to fix up the incompetent municipalities who are losing millions of the residents hard earned money and who are just as corrupt as their leaders. Ramaphosa as the leader of the current corrupt government must stand trial for being complicit in stealing from the loyal, legal and law abiding South African Public. Shame on you Mr. President.	manny	retired

	2026-08-31 14:55:08	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Under Section 33 of the Constitution and the Promotion of Administrative Justice Act (PAJA), state action must be lawful, reasonable, and procedurally fair. Within our jurisprudence lies the established doctrine of substantive and procedural legitimate expectation. When organs of state actively induce private citizens to alter their financial position—through statutory tax incentives, ministerial speeches, and formal utility connection waivers—the state creates a legally binding representation. Citizens acted in good faith on the premise that reducing grid reliance was an officially sanctioned public good that would deliver long-term operational savings. For the Department to turn around while Eskom's SSEG connection fee waivers are still legally active and gazette a policy designed to claw back those household savings via unavoidable fixed fees is the textbook definition of an administrative bait-and-switch. You cannot invite citizens to invest under one set of rules and then retrospectively change the tariff architecture to neutralise the return on that investment.	Pamela	retired
	2026-08-31 15:02:30	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Citizens acted in good faith on the premise that reducing grid reliance was an officially sanctioned public good that would deliver long-term operational savings. Now that they are not generating the funds they used it now becomes the citizens problem. After investing the money, you did to have electricity you are now being penalised.I have no intention of paying for any electricity penalties.	Oliver	employed individual

	2026-08-31 15:25:05	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The decision to begin implementing a personal solar energy supply technology came about as a direct result of an incompetent, corrupt government that proved incapable of maintaining a reliable supply of electricity to the people of S.A. Before the ANC destroyed the S.A. energy supply system, we were content to use and pay for energy off the national grid. We hereby exercise our civil rights to completely reject any pathetic scheme to further destroy our economy by attempting to punish those, who are are now working off the national energy grid, by using solar power to generate their daily energy needs. The government has absolutely no authority or power over the sun as a supplier of energy. The issue of switching to a reliable, load-shedding free system was a very costly exercise. We have already made our contribution to the failed ESKOM system, helping those who are not able to pay the massive costs in providing a private dwelling with daily electricity. The incompetents responsible for the mess, now at least have access to the power we used to consume, to pass onto those unfortunates who are still prisoners of the derelict, corrupt, incompetent national power grid. Any attempt to add levies, taxes or other forms invented to further line the pockets of the evil despots who are bent on totally destroying whatever is left of this poor banana republic can be assured of total refusal to participate in their devious scheming. It will be met with the same strategy we applied to the stupid overhead road-tax system they tried to implement at huge cost and proved to be a complete failure.	Eugene

	2026-08-31 16:09:41	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Many of us had to install solar power because of all the power outages arising form Eskom's inefficiency, incompetence and lack of planning for future power demands, and now we are expected to pay these proposed fixed tariffs unrelated to the amount of power consumed. It is unrealistic and should not be allowed .	Graeme	retired
	2026-08-31 16:29:29	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	**FORMAL OBJECTION TO PROPOSED FIXED NETWORK AND CAPACITY CHARGES** I wish to formally register my objection to any proposed electricity tariff structure that would disproportionately penalise households such as mine that have invested significant private capital in rooftop solar and battery storage. I invested in solar because South Africa's electricity system was unable to provide the reliable and consistent electricity supply that I was paying for. I used my own hard-earned money to protect my home from load shedding and ongoing electricity instability. I paid for the solar panels, batteries, inverter and installation myself, and I continue to carry the costs associated with maintaining and eventually replacing that equipment. I did not make this investment to "free ride" on the electricity system. I made it because I needed a reliable electricity supply and the existing system could not provide one. For this reason, I find the suggestion that solar-equipped consumers should now be discouraged from "free riding" deeply troubling. My investment reduced my reliance on the national grid. It reduced the amount of electricity I consume from the system and, particularly during periods of constrained supply, contributes in a small but meaningful way toward reducing overall demand. That should be encouraged, not penalised. I accept that I remain connected to the electricity network and that maintaining that network has a cost. I therefore have no objection in principle to paying a **fair and reasonable amount for the infrastructure and services I actually use**. What I strongly object to is the introduction of excessive or unavoidable fixed charges designed primarily to recover revenue that municipalities or electricity distributors have lost because consumers like me have reduced our electricity purchases. There is an important difference between paying fairly for access to the grid and being financially penalised for becoming less dependent on it. When I invested in solar, I made a substantial financial decision based partly on the expectation that generating my own electricity would reduce my future electricity costs. If the tariff structure is subsequently changed so that a significant portion of my electricity bill becomes unavoidable regardless of how much electricity I actually consume, government is effectively changing the economics of that investment after I have already committed the capital. That is neither fair nor conducive to public confidence in South Africa's energy transition. For years, South Africans have been encouraged to conserve electricity, improve energy efficiency and invest in alternative generation. Private solar installations have also helped South Africa navigate an extraordinary electricity crisis. It is therefore difficult to understand a policy direction that appears to say: **Please reduce your dependence on the grid — but if you succeed in doing so, we will restructure your bill to recover the revenue we have lost.** That sends precisely the wrong message to citizens considering investing their own money in renewable energy. I am also concerned about the unequal treatment that could emerge as South Africa's electricity market becomes more competitive. If large commercial and industrial electricity users are progressively able to access alternative suppliers and competitive electricity markets, ordinary households should not simultaneously be left captive to municipal electricity structures with increasingly high unavoidable fixed charges. Electricity reform should ultimately create **more competition and more consumer choice for everyone**, not simply for the country's largest electricity users. I therefore ask the Department and NERSA to ensure that any future tariff framework: * protects citizens who have already made substantial private investments in solar and battery systems; * ensures that any network charge is transparent, reasonable and directly related to the actual cost of maintaining my connection to the network; * does not allow fixed charges to become a mechanism for recovering lost electricity sales or municipal revenue shortfalls; * rewards households that reduce demand on the national electricity system; * provides fair compensation for electricity exported back into the grid; * protects low-consumption and energy-efficient households from disproportionate fixed charges; and * ensures that residential consumers ultimately benefit from the competition and consumer choice promised by electricity-market reform. I invested my own money because the electricity system could not provide the reliability I required. I accepted the cost and risk of becoming more energy independent. I reduced my demand on a struggling national electricity system. **I should not now be financially penalised for having done so.** I am willing to pay my fair share for the infrastructure and services I actually use. What I am not willing to accept is being treated as a convenient source of replacement revenue simply because I took responsibility for securing my own electricity supply. South Africans who invested in solar during the country's electricity crisis were part of the solution. Government policy should recognise that contribution rather than punish it.	megan	employed individual
	2026-08-31 16:47:16	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I made a plan to reduce the daily load shedding we were being forced to endure. I sold a vehicle and borrowed money to be able to buy a solar inverter. This relieved the stress greatly, but in overcast weather or during winter, the inverter remains incapable of supplying me with electricity all day. I did not have enough finance available for a unit three times the size I bought. Now that load shedding is much less, I have opted to set it so that it charges the batteries during the day, and at least in the evenings, when we need power, we are able to capitalise on not being billed for electricity usage until much later at night (again only if the sun shines all day). My insurance has increased, and I have already had to fork out money for repairs and maintenance on this unit. I do not see why I should be penalised further purely because the crooked and corrupt Eskom has been sucking the revenue they amassed dry. The money is going to line the pockets of stakeholders and not to running the business as it should. So now they need to satisfy the greed of the dishonest organisation because they are not making the billions they were initially bargaining on. This is their way to try and recoup the income lost by citizens who tried to proactively protect themselves from a corrupt and dishonest State Owned Entity.	Terence	employed individual
	2026-08-31 17:35:59	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Yet another reason for not trusting this ANC government or ESKOM Eskom begged during load shedding to reduce energy demand due to its large-scale corruption, political interference, theft, and broken power utilities that destroyed economic growth, jobs, etc. The National Treasury offered to subsidise private solar-installed generation units solar panels. Again, the general public suffers. The government and Eskom should rather rectify their problems in the rural areas where electricity is being stolen day after day. This is where they seriously lack control.	Gidieon	retired
	2026-08-31 17:55:05	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom failed us, and forced us to endure many hours without electricity. We had no alternative but to seek our own solutions at great expense to ourselves especially as old age pensioners with limited reserves. And now you imagine you can disadvantage and punish us further to maintain your extravagances and failures. What a travesty!	Beverley	retired

	2026-08-31 21:00:09	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	By installing solar power, those households contributed in a tangible financial manner to lessen the burden on the grid. This translates to helping keep that grid infrastructure in place for households that cannot afford solar energy. It helps municipalities to honour their obligations to all the rate payers in its jusridication area. That contribution should be encouraged and not penalised with further fees. Furthermore, a standard 5 kW home solar system cuts carbon dioxide emissions by about 4 to 5 tons every year. South Africa committed to an absolute emissions target range of 350 to 420 megatons of carbon dioxide equivalent ($MtCO_2$-eq) per year by 2030. The country further expanded its international pledges by submitting updated NDCs targeting an emissions range of 320 to 380 million tonnes of CO_2e by 2035, and set a long-term international goal to reach net-zero carbon emissions by 2050 through its Low-Emission Development. Home solar systems contribute to these targets on behalf of all citizens, also those that cannot afford the solar systems. Residential solar systems should be encouraged by not placing extra financial burdens on these households, rather give credits for these contributions.	Inèz	retired
	2026-08-31 21:18:36	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Electricity, water, rates and all bills are continuously increasing and we the consumers are constantly under pressure. Is it even legal to tax us more when the electricity provider has failed to provide us with electricity and we had to find our own solution?	Jay	employed individual
	2026-08-31 21:32:33	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Cambridge dictionary definition of "Wear and tear": The damage that happens to an object/system in ordinary use during a period. Thus, maintenance is coupled to USAGE! The less you use a system, the less it is subject to wear and tear. So, the less electricity you take from the grid, the less is your contribution to the degradation of the grid. This is basic commonsense - clearly something the ANC lacks. The only fair charge for maintenance will be a small levy per unit used, no matter the size of the user. This amount can then be paid over by the power producers for grid maintenance to whomever maintains the grid . Every transaction in this trail can be computer automated to prevent fraud. The free basic electricity handout based on communist ideology can then be phased out as it removes the incentive for people to work and earn a living. Pensioners can be exempt from this levy under a certain usage. I am not against restructuring ESCOM - it should have been privatized and managed a long time ago by competent people. I am against ESCOM being fractured into small pieces so that the ANC can do money laundering and fraud with ease on the back of the consumers . If the ANC continues with this moronic plan it will force consumers to get off the grid completely, albeit with candles and cooking fires. What will you do then? Put a maintenance levy on candles? Ban fires? Wake up, South Africa, and get rid of the ANC!	Fanie	retired

	2026-09-01 07:05:51	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The state should address the source of the financial issues, which is the debt owed by municipalities. By adding an additional tax will not magically get the municipalities to start paying their bills. Only the over-taxed residence will be affected as the municipalities will charge them (under the threat of disconnection and/or legal action), but still not pay Eskom. If a resident has a municipal connection, a basic connection fee is already charged (+/-R160). How will this not be double-taxing? The state / municipality also had no contribution to the localized infrastructure created by private rooftop solar installations added by residence. Hence, the state / municipality should not be able to claim tax on it (already got the VAT, so anything more is just greed and desperation). Pay for what you use seems more than fair considering the yearly >10% increases in tariffs.	Willem

	2026-09-01 12:43:40	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This is yet another way to punish citizens for finding a workaround to infrastructure problems. There is a risk of adding to the tax burden of those who invested great amounts in solar to reduce reliance on the grid due to the power supply problems caused by the government's lack of foresight in planning for population growth. There needs to be a near similar exchange - if we supply 1 kw power we would expect 0.7 - 0.8 kw without additional charges, not a 120% charge as the usage on the grid is low.	Dorothea	employed individual
	2026-09-01 12:58:05	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	1. It penalises the exact behaviour the state spent a decade encouraging. Load shedding pushed households and businesses to self-fund solar and battery backup because the state could not keep the lights on. Recasting that self-reliance as 'free riding' and taxing it via unavoidable fixed charges punishes private citizens for solving a public failure with their own capital. 2. It breaks the basic fairness link between usage and cost. Volumetric billing means you pay for what you draw. Flat capacity charges applied 'regardless of how little grid power you pull' charge people for infrastructure they've actively reduced their reliance on, which is a subsidy from solar adopters to the grid rather than the reverse. 3. It's a two-tier system that protects big users, not small ones. Industrial consumers above 1MW get to bypass municipal distribution and buy directly on the wholesale market, while residential customers stay 'captive' to municipal tariffs. So households with the least market power are the ones locked into paying for shortfalls and cross-subsidies that large corporates can escape. 4. It concentrates market risk rather than reducing it. With Eskom Generation still holding the large majority of baseload capacity, opening a wholesale market without strong, proven oversight creates room for pricing power or manipulation to flow straight into retail tariffs — the very captive residential tariffs households can't opt out of. 5. It risks undermining the investment case for future household resilience. If the payback period on solar/battery systems worsens because fixed charges erode the savings, that discourages exactly the kind of distributed generation the country needs while Eskom's generation fleet remains unreliable. 6. The reform sequencing looks premature. Several commentators have flagged that opening an advanced wholesale market with imbalance penalties while municipal distribution debt to Eskom remains unresolved, and before transmission congestion and Independent Transmission Project frameworks are sorted out, risks landing the cost of that dysfunction on ordinary ratepayers before the market structure is ready to bear it.	ILSETTE	
	2026-09-01 13:54:17	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It is just unfair to have to pay for solar panels to be installed and on top of that you have to pay for electricity too! As a senior I have to be very careful with my pension	ignette	retired
	2026-09-01 14:00:27	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Worldwide homeowners and consumers are encouraged to move to solar power and are rewarded to do by feeding back into the grid, which in South Africa's case could assist in providing electricity to lower income households, government hospitals and schools. Solar is also environmentally a better option. In most countries generation has been split from transmission and distribution and engages private sector participation, which should include homeowners and private enterprises. The concept of governments wanting to control or profit from generation is outdated and the South African needs to radically change its paradigm. My second point is that Eskom being a government entity has a huge monopoly on pricing and availability and to date there has been limited accountability. Sadly, there is also huge corruption and several reports published but little action. In the early 2000s Eskom was the number 1 Utility in the world. But technology and technology has changed significantly. Again Eskom and government need to address today's realities.	Eileen	retired

	2026-09-01 21:24:47	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Local government under the control of national government is trying to milk every rate payer in South Africa for governments own benefit and not giving ratepayers any value for the monthly tariffs they pay, which keep increasing. There is a downward spiral in all government services and not one of them are held accountable.	Lois	retired
	2026-09-01 23:38:46	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This is daylight robbery. We worked hard to invest in solar at a time when electricity supply was at its worst. We were forced to stabilize supply as we (5 of us) worked from home and we needed stable internet for work purposes. We paid a fortune back then. Now you want us to pay an additional tax for network usage. This is preposterous. These have been paid for already. As a pensioner, I cannot afford this and view this move as unconditional and unjust. Please stop. Thanks	Vithagan	retired
	2026-09-02 00:10:21	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I do not support the proposed Electricity Sector Market Transformation Position Paper in any way, shape or form. The proposal places unacceptable financial and operational risks on ordinary households and small businesses while reserving the greatest benefits of competition for large industrial and commercial electricity users. It could leave households and smaller businesses captive to municipal or Eskom tariffs while major customers obtain cheaper electricity elsewhere. I strongly oppose any system that introduces unavoidable fixed network or capacity charges for grid-connected customers, particularly those who have invested their own money in solar panels, batteries and energy efficiency because the existing electricity system failed to provide reliable power. These customers should not now be penalised for reducing their dependence on the grid. The proposed structure could also weaken municipal revenue and result in the remaining customers being forced to cover the shortfall through higher tariffs. At the same time, it creates the risk of electricity-price volatility, market manipulation, additional administrative costs and new layers of bureaucracy without providing firm guarantees that households or small businesses will pay less. The proposal asks the public to accept significant financial risks in exchange for uncertain future benefits. It does not provide adequate protections against excessive fixed charges, municipal tariff increases, market abuse or the passing of system failures and balancing penalties on to consumers. Electricity reform must deliver affordable power, genuine consumer choice, transparent pricing and equal access to the benefits of competition. This proposal does not provide those guarantees. I therefore reject it in its entirety and request that it be withdrawn and fundamentally reconsidered.	Thomas	self-employed

	2026-09-02 06:32:59	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Strong objection to fixed charges on grid-connected solar users I strongly object to any policy that seeks to impose punitive or excessive fixed charges on households and businesses that have invested in rooftop solar while remaining connected to the electricity grid, particularly where those systems do not feed electricity back into the grid. The argument that these customers are “free riders” is fundamentally misleading. A customer with rooftop solar who remains connected to the grid is not receiving electricity from the grid simply because the connection exists. They have invested their own capital to reduce their dependence on Eskom and municipal electricity supply, thereby reducing demand on the national generation system. If a customer uses little or no electricity from the grid during daylight hours because their solar installation supplies their needs, that customer should not be treated as though they are consuming the same electricity service as a conventional customer. There is a legitimate cost associated with maintaining a grid connection. That cost should, however, be transparent, proportionate and based on the actual cost of providing the connection and network service. It should not become a mechanism for recovering lost electricity-sales revenue from customers who have exercised their right to generate their own electricity. The “anti-free-riding” argument cuts both ways If the government's concern is that grid-connected solar customers should contribute toward maintaining the distribution network, I accept that principle in reasonable form. But the solution should be a fair network-access or connection charge, not an artificially inflated fixed tariff designed to penalise people for reducing their electricity consumption. There is an important distinction: Paying a reasonable amount for access to and maintenance of the grid is legitimate. Paying an excessive fixed charge because one has reduced one's reliance on Eskom or the municipality is effectively a penalty on self-generation. That distinction becomes even more important for customers who never export electricity to the grid. Where there is no reverse flow of electricity, claims that such customers are imposing additional generation or balancing costs through feeding power into the network simply do not apply. Their solar installation is primarily reducing their own demand. The policy risks punishing exactly the behaviour South Africa needs South Africa needs enormous private investment in additional electricity generation and reduced pressure on the national grid. Households and businesses that install solar systems are putting their own capital at risk to achieve precisely that. They purchase panels, inverters, batteries and installation services. They maintain the equipment themselves. They assume the equipment's depreciation and replacement costs. And, importantly, they reduce the amount of electricity they need to purchase from the public system. Introducing high unavoidable charges after these investments have been made creates a serious regulatory and investment-confidence problem. It effectively tells citizens: Invest your own money to reduce your dependence on the electricity system, and then we will restructure the tariff so that you continue paying substantially for electricity you no longer consume. That is a dangerous policy signal. The distribution problem must not be disguised as a solar problem There is also a much broader issue in the proposed restructuring. If municipal distributors face declining electricity sales because customers are becoming more energy efficient or generating their own electricity, the answer cannot simply be to make those customers pay increasingly large fixed charges to compensate for lost revenue. That would amount to protecting an incumbent revenue model rather than reforming it. The transition to an open electricity market should instead force distributors to become more efficient and transparent about the actual cost of providing: network infrastructure; connection capacity; metering; maintenance; administration; and electricity itself. These are different services and should be priced accordingly. There is also a serious equity concern The proposed structure could create a two-tier electricity market. Large industrial and commercial consumers may have the ability to negotiate directly with private generators or traders, while ordinary households remain dependent on municipal distribution networks and carry a disproportionate share of network and legacy costs. That creates the possibility that the customers with the least bargaining power become the customers who pay the most. That is not meaningful competition. A genuine electricity-market reform should ensure that competition benefits ordinary consumers rather than merely allowing sophisticated large consumers to escape an increasingly expensive distribution system. What should happen instead? Government should adopt a principle of cost-reflective, technology-neutral and transparent network charges. A household with solar and batteries that remains connected to the grid should pay a reasonable charge for maintaining that connection. But the charge should reflect the cost of the network service actually provided, rather than being used to recover electricity-sales revenue lost because the customer has invested in self-generation. There should also be clear safeguards against: punitive charges specifically targeting rooftop solar; excessive fixed charges that make self-generation uneconomic; discriminatory treatment of customers who generate their own electricity; cross-subsidisation that is hidden inside electricity tariffs; shifting municipal financial problems disproportionately onto solar households; and regulatory changes that undermine the economics of investments already made under previous rules. South Africans who invest their own money in solar should not be treated as a problem to be solved. They are part of the solution to South Africa's electricity crisis. The government should be encouraging private investment in generation, storage and energy efficiency—not creating a regulatory environment in which citizens are financially punished for becoming less dependent on the public electricity system. A fair electricity market should charge consumers for the services they actually receive—not penalise them for consuming less. If the objective of SAWEM is genuinely to create competition, efficiency and private investment, then those principles must apply all the way down to the household level, not just to large industrial consumers and electricity traders.	Piet

						I strongly object to the proposed introduction of mandatory fixed network and capacity charges that would disproportionately affect households and organisations that have invested in rooftop solar and battery systems. It seems fundamentally counterproductive to penalise consumers who have taken responsibility for their own electricity supply and invested their own money in renewable energy, particularly when these investments help reduce dependence on the national grid. Solar users are not simply “free riders”. A household or organisation with solar and battery storage is actively reducing its consumption from the grid, particularly during periods of peak demand. In many cases, these investments were made precisely because the electricity system was unreliable and consumers needed to find their own solutions. Penalising those who have invested in energy efficiency and renewable generation sends the wrong message and risks discouraging further private investment in clean energy. This is particularly concerning for non-profit organisations and ordinary homeowners who have made significant financial sacrifices to install solar systems. These are not large commercial enterprises seeking to avoid their responsibilities to the electricity system. They are individuals and community organisations trying to reduce their electricity consumption, manage costs and contribute to a more sustainable energy future. If there are genuine costs associated with maintaining the electricity network, these costs should be determined transparently and fairly. However, the proposed shift towards unavoidable fixed charges raises an important question: **what exactly will these additional charges fund, and how will the money collected be accounted for?** There should be a clear, transparent explanation of the purpose of these charges, how they will be calculated, where the revenue will go, and how consumers will benefit from paying them. It is difficult to see how imposing additional charges on solar users will address Eskom's fundamental financial problems. Additional revenue from households and small organisations cannot, by itself, solve the structural financial challenges created by years of inefficiency, mismanagement and financial leakage. Before asking ordinary citizens to pay more, there needs to be far greater accountability for how existing funds are managed and how wastage, inefficiency and corruption are being addressed. There is also a strong principle of fairness at stake. Consumers who use less electricity should not automatically be treated as though they are failing to contribute simply because their consumption-based bill is lower. Energy conservation should be encouraged, not penalised. If the objective is to ensure everyone makes a fair contribution to the electricity network, the system should recognise the benefits distributed renewable generation provides to that network. Rooftop solar can reduce demand on the grid, lessen pressure during periods of high demand and reduce the amount of electricity that needs to be generated centrally. Grid-connected solar owners should therefore be appropriately recognised and credited for the value they provide, rather than being subjected to charges that effectively undermine the financial benefit of their investment. I therefore urge the Department of Electricity and Energy and the relevant regulatory authorities to reconsider this approach and to ensure that any future tariff structure: * Does not unfairly penalise households, non-profit organisations and small businesses that have invested in rooftop solar and batteries. * Properly recognises the contribution of distributed renewable energy to reducing pressure on the grid. * Includes fair and transparent mechanisms for crediting energy supplied to the grid. * Places reasonable limits on fixed network and capacity charges. * Provides a clear explanation of the purpose and use of all additional revenue collected. * Includes a transparent socio-economic impact assessment, particularly on households and smaller organisations. * Addresses inefficiency, financial mismanagement and revenue leakage within the electricity sector before placing additional financial burdens on consumers. South Africans should not be punished for trying to solve an energy crisis with their own resources. If government wants greater private investment in renewable energy and a more resilient electricity system, it should create incentives for consumers to invest in solar, batteries and energy efficiency, not introduce measures that make those investments less attractive. The people and organisations who have invested in solar have already put their own money into helping themselves and, indirectly, reducing pressure on the national electricity system. They should not now be treated as a source of additional revenue simply because they have done so. I respectfully urge that the proposed fixed charges be reconsidered and that a fairer, more transparent and genuinely cost-reflective approach be developed.		
	2026-09-02 09:21:25	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		Aleya	Non-profit
	2026-09-02 09:25:24	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The government caused the problem. People had to make a plan so that they could be self sufficient. This helped the strain on the grid. Now the government wants to steal money from people who had to make a plan because they the government lost income. We the tax payers have already bailed out Eskom and other government entities a number of times. Now the government thinks they are owed something. All we ever do is pay for government mess ups while receiving less and less services. We are already overburdened with all the new taxes the government keeps adding. We have already beeb penalised with load shedding. We don't need to be further penalised for having to make a plan.	Lyle	employed individual
	2026-09-02 09:56:35	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Nothing but thieving by an incompetent ANC government who does not have the skills to run a country let alone a once thriving Electricity producer. If ordinary residents and businesses had NOT gone to Solar energy the country energy supply would have collapsed. WE BAILED ESKOM out and now they wany to punish us. Get rid of all the surplus , no good, useless employees and save a huge amount of SALARY money and then ESKOM would not have to resort to punishing us ordinary citizens	Neil	retired
	2026-09-02 09:57:49	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Why penalise people who made a plan to solve a problem?	Lynette	
	2026-09-02 10:19:21	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	There are no more words for what the ANC lead government has already done to this once beautiful country and all the SOE's that USED TO function. So, my answer is simply, NO, I do not support this. You cannot punish the ones who found a solution. So now, that Eskom loses revenue from those who use solar, this is the way to get back that lost revenue?? Or is this a way to secure more funds for back pockets, lavish spending, holidays and over inflated salaries?? While the minority of middle class, try to keep afloat and support the majority of citizens who are starving and live in poverty? NO ! NO MORE !	Brigitte	employed individual

	2026-09-02 11:07:06	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Scandalous to require people to pay for electricity they have not used. And then to penalise people who have had to spend thousands in order to function without having to rely on Eskom's corrupt practices!!!	Lynne	
	2026-09-02 11:12:22	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	SA is being taxed to death as it is, especially the poor and pensioners. Eskom and the state has been a poor show over the past few years with increases well over the CPI targets. They should have a price structure whereby the more you use, the cheaper the unit cost becomes - not the current penalty price structures.	Henri	retired
	2026-09-02 11:17:45	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom supplies power direct to our farm in Midvaal (no municipal supply). Eskom is already charging Network Capacity Charge (per day), Generation Capacity Charge (per day), Network Demand Charge and Ancillary Service Charge, on our account. This is totally unacceptable as we do not have solar panels and batteries. The reason why companies and individuals are spending their own money for solar panels etc is because Eskom is unable to supply the electricity resulting in a lot of down time in production. Therefore I do not support this proposal.	HEIDI	retired
	2026-09-02 11:26:35	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I strongly oppose any tariff structure that penalises households and small businesses for investing in solar power. People who install solar have already invested their own money to reduce their dependence on Eskom and the national grid. They should pay a fair and reasonable charge for using the grid, but they should not be subjected to excessive fixed fees simply because they are using less Eskom electricity. At the same time, if large businesses are allowed to bypass municipal electricity networks and purchase cheaper power privately, ordinary households should not be left behind to carry the costs of maintaining those networks. The more South Africans invest in solar, batteries and energy efficiency, the less pressure there is on Eskom. Government should encourage this, not make it financially unattractive through ever-increasing fixed charges. Electricity charges should therefore be fair, transparent and based on the actual cost of providing the service—not used to recover lost revenue from consumers who have successfully reduced their electricity consumption.	candice	employed individual

	2026-09-02 14:25:07	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	FIXED GRID CHARGE FOR ROOFTOP SOLAR OPPOSED: Millions of households and businesses were forced, by government/Eskom ineptitude, to invest private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. THE "CAPTIVE RATEPAYER TRAP" AND MUNICIPAL INSOLVENCY: Large industrial and commercial users exceeding demand thresholds will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance. WHOLESALE PRICE VOLATILITY AND MARKET POWER MANIPULATION: Eskom Generation still controls the overwhelming majority of South Africa's dispatchable baseload power. In unbundled spot markets worldwide, dominant suppliers have engaged in economic or physical withholding to artificially spike market clearing prices. Without hard statutory bid caps and aggressive oversight, wholesale price volatility will be passed directly down to retail consumers. SEVERE CONFLICTS OF INTEREST WITHIN NTCSA: Consolidating transmission grid ownership (TNSP), system dispatch (SO), market clearing (MO), and legacy state off-take contracts (CPA) within a single entity under Eskom Holdings creates structural conflicts of interest. NTCSA could face internal commercial pressure to favour Eskom assets or delay third-party grid connections. PREMATURE MARKET LAUNCH AMID UNRESOLVED MUNICIPAL DEBT: Opening an advanced wholesale market with mandatory imbalance penalties in 2026/2027 while municipal distribution debt to Eskom remains unresolved is premature. Financially distressed municipalities that fail prudential credit requirements will be excluded from trading platforms, creating a divided nation of well-supplied metros and failing, power-starved rural councils. 	2026-09-02 15:49:38	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom did not keep up with the booming population by expanding infrastructure to be able to provide power to the whole of the population 24 hours a day seven days a week. The fullscale corruption in Eskom is also one of the main reasons why Eskom could not provide 24/7 power to all as well as exorbitant pricing increases forced on the user. For that reason clients went solar and actually saved Eskoms bacon to ease the load for Eskom to provide to users easier. Nobody owns the sun, solar owners already paid a fortune to go off the grid or almost off the grid, why must they be punished for making Eskoms task easier and that AFTER THE GOVERNMENT encouraged homeowners to install solar by getting an amount back on tax returns. That is not fair and it is moving the goalposts after the match has already started!!	Lynette	retired
	2026-09-02 15:53:24	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It is completely absurd to expect rate payers to foot the bill for governmental failures. The reason for installing solar power was because of the failed ability from Eskom and the government to provide enough electricity. Now citizens are being expected to pay over and above the exorbitant fees already paid to add solar power to their homes, to bail out the short comings of Eskom. What's more, why are citizens being penalised for reducing general load on the grid? Should they not be instead rewarded for helping to reduce the energy crisis? This is absolute nonsense. 	2026-09-02 18:29:47	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Demand: that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. Insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. Require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households. Demand: a binding, published transition roadmap that progressively lowers the eligibility threshold, ensuring retail market choice is expanded to ordinary households and SMMEs rather than remaining an exclusive corporate privilege. Require NERSA to implement mandatory tariff-parity benchmarks ensuring captive customer tariffs do not exceed wholesale-plus-efficient-delivery benchmark prices. Oppose any mechanism that uses captive household tariffs to recover stranded costs or uncompetitive legacy contract premiums. Demand mandatory cost-reflective bidding caps for any single generation entity that controls more than 20% of active dispatchable capacity in the market. Require full public transparency and real-time reporting of day-ahead and intra-day market bidding data to enable independent civil oversight. Mandate severe, legally enforceable financial penalties and license cancellations for participants found guilty of collusive bidding, capacity withholding, or market manipulation.	Chris	retired

	2026-09-02 19:52:53	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I strongly oppose the proposed restructuring of electricity billing that introduces mandatory fixed monthly capacity and network charges for all grid-connected households. This framework unfairly penalises citizens who invested private capital in rooftop solar and batteries to mitigate load shedding. Instead of rewarding initiative and supporting renewable adoption, the policy imposes unavoidable baseline charges that undermine household affordability. Furthermore, the Position Paper entrenches inequality by allowing large industrial users (exceeding 1 MW) to bypass municipal tariffs and access cheaper wholesale markets, while ordinary households remain captive to municipal billing structures. This leaves everyday ratepayers to subsidise municipal revenue shortfalls. The risk of market power and speculative pricing also remains high, given Eskom Generation's dominance over baseload supply. Without robust oversight, volatility in wholesale markets will spill into retail tariffs, eroding affordability for households. I urge the Department to revise the framework to ensure fairness, protect renewable investment, and align billing reforms with constitutional principles and national energy policy. 	2026-09-03 12:25:03	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom is not capable/able to supply electricity 24/7 - mainly due to internal fraud, theft and looting by politicians - consumers were asked to go over to solar to assist the grid. Government did not stop the looting and stealing of money - now users must once again be penalised. As with the tolls - greediness got the upper hand of politicians. If government/Eskom from the start added a very low amount to fixed charges in order to compensate for the usage money loss - process could have worked. But no, they always have to go overboard and try and get the most money from taxpayers to ensure further looting money is available	Suzette	retired
	2026-09-03 12:34:44	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I can not see why must I / the public pay fixed charges and solar penalties when I / the public use our own hard earned money to make our lifes easier by installing a solar system on our private homes and or businesses. The lack of the availability of electricity was not my or the general public's fault. It was bad management and theft from the supplier of electricity. Fix your own problems and leave the people who worked for their money that could pay for their solar that they installed on the private residence and own businesses.	At	retired
	2026-09-03 12:56:40	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I object in the strongest terms of being called a "Free Loader" or any similar term. Many Municipalities have a sliding scale for electricity. The more you buy the more you pay per KW. I understood the purpose for this was to cover the maintenance costs of the grid. Street Lights which don't work. There is a separate Residential Electricity Basic charge which is the 'availability' charge. Thaba Chweu Municipality have now introduced a 'Capacity' charge for Residential properties. This differentiates between users with 20Amp, 40Amp and Single or 3 Phase feed. Most houses are 40Amp to carry the combined load required to power a normal house. For the 2026/7 Tariff year Thaba Chweu increased the Rand/Amp/Phase/Month Rate by 63,52% from R6.90 to R11.29. Result is a 40Amp Single Phase Residential building now pays R 451.60 plus R238.97 Basic Charge. R690.57 before one Kw is bought. The Grid in Sabie is in a poor state of repair due to lack of maintenance over many years. Currently sections have been without power for 10 days. Why must the consumer be made to pay for gross negligence from the various government entities. These charges are similar to the charges Eskom are proposing. Be warned. I am about 80% off the grid and buy between R100.00 and R 200.00 worth of electricity per month. Why would I not become fully independent?	Rupert	retired

	2026-09-04 10:09:01	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Many households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so, and were encouraged to do this by government. These citizens would now be unfairly penalized if consumption-based billing was replaced with mandatory, high fixed monthly network charges.	Brenda	retired
	2026-09-04 10:23:55	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	When one purchase a service from for example a mobile operator, the fee you pay for the airtime/data already has the fixed cost build in. If you decided to use airtime/data, you might pay slightly more for the less airtime/data, to cover the fixed cost component of the operator. You however don't get charged a separate fixed charge for using less units. The same should apply to electricity units purchased. If you do not have rooftop solar and you buy a lot of units, the price per unit should be less as the fixed charge reduce for every extra unit brought. Where you have roof top solar resulting in a lower number of units used, the cost per unit should be higher to account for the fixed costs.	Dieter	employed individual

	2026-09-04 18:22:14	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom is a bully. Poor planning, unrealistic pricing and lack of citizen input has lead to a revolt and independence of electricity solutions. Eskom, their highly overpaid staff and mutual indifference to the normal citizen, retirees and unemployed has pushed people to the brink. Is the government taking notice of the increased suicide rate and rising crime rates from unemployment?	Malcolm	retired
	2026-09-04 18:47:17	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	If the electricity issue were addressed back in the early 2000's, we wouldn't be here now. Because of government's failures, those that could became self sufficient. We will not tolerate being penilised because of government failure!	Mateen	
	2026-09-04 19:02:15	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	We were asked, if we had the means, to reduce our reliance on the grid system by the powers at be due to the mismanagement and blatant corruption consequences of Eskom. Now that we have done our part and stepped up to the task, the government is in effect, blaming us for the lower revenue and attempting to recoup the costs that would have been spent anyway on electricity through these tarriffs? Eskom is slowly becoming another thieving institution with this proposed legislation One should only pay what they use from the grid regardless if they have solar or not. This proposed legislation is going to force people to illegally connect to the grid as it seems it is legal to do so for specific communities Yet nothing is done about those illegally connecting to the grid and stealing electricity.	kevin	employed individual
	2026-09-04 20:29:09	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom was unable to provide a reliable electricity supply due to its own mismanagement of funds and years of inadequate maintenance. It then actively encouraged the public to invest in alternative power sources to help reduce the pressure on the grid. Now that many of us have done exactly that, Eskom wants to penalise us further by imposing fixed charges. I would hazard a guess that if every solar user switched off their IPP systems tomorrow and reverted entirely to Eskom supply, load shedding would soon return. Rather than penalising consumers who have invested their own money to reduce their reliance on the grid, Eskom should recognise the contribution these consumers are making. Before imposing additional costs on consumers, perhaps Eskom should first focus on putting its own house in order, addressing the mismanagement, inefficiencies and maintenance failures that created this situation in the first place. 	2026-09-05 10:15:37	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	You stole the money, mow we have to pay it back. The ANC corrupt govt policies, cronie deployment and incompetence has landed uz in this mess. You caused the problems and now when people makd alternative plans, you want to tax us to get you out the mess you created. Lets fix the politics, get rid of the ANC and appoint qualified people to adres the problems at grassroots. If you dont want me to use the grid, Fine! Im happy to ho off completely. At present i do t need any power from you and how dare you even consider a Sun tax!! This is criminal!	Thomas	business owner
	2026-09-05 10:53:30	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Every South African has the right to power supply. With good stewardship and management, this can be achieved through working with the public, and not against it. To increase tariffs for solar owners, are perceived as a penalty for investing in their own infrastructure. These solar panels were installed in reaction to the inability of the state to provide stable, reliable electricity. The public should be seen as partners in solving the electricity crisis, not enemies of the state. Municipalities should be called to step into their responsibility towards the public. Non-paying users are a huge, pressing problem, calling for sustainable steps!	Almarie	employed individual
	2026-09-05 11:16:32	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The Government incentivized citizens to install solar when the Eskom grid was under pressure and all were experiencing load shedding. Now that the pressure is off Eskom (for various reasons) the government wants to penalize those that assisted the Government in their time of need. Eskom should rather focus their attention on improving plant efficiency, collecting outstanding municipal debts due to them and eliminating illegal connections, which cost the country R billions every year. It is disgraceful that the Eskom senior management continue to receive huge bonuses despite them not achieving their KPI's.	Brian	
	2026-09-05 11:22:36	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Due to the collapse of Eskom, we had to seek alternate ways of generating electricity. 	2026-09-05 15:24:44	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	First off...why should home users be penalized for making sure their properties are set up to be resistant to the failing networks of the government. It's not their fault the government failed to maintain the power grid and upgrade it, choosing to rather milk the crap out of it through corruption for personal gain. I can understand the soreness of Eskom saying that people treat them as a battery, but they are forgetting that the power used to charge those batteries on the users properties are still coming from them, and its paid for in ful. If a user chooses to do a split system on his property and run the basic house functions like lights and electronics off solar instead, then it should not be of concern to Eskom at all, as it's literally none of their business what homeowners are doing on their property. What I feel is fair for them to ask for is a CoC that only states the solar system is not able to push power back onto the grid - what that solar system entails is none of their business. When/If the law changes to allow homeowners to push power back onto the grid for compensation - then, and only then are the allowed to ask questions regarding generation capacity. So NO - they should NOT be allowed to impose any mandatory charges, because that will only hurt the residents that can't afford solar more. If you tick the solar guys off enough, they will completely disconnect from the grid causing Eskom to lose even more of their paying customers (that subsidise the non paying ones), making the issue even worse. So get rid of whomever is pushing this agenda as that person clearly doesn't understand economics and basic human psychology - that person is causing a problem that will progressively get worse because they seemingly can't think further than the end of their nose. Finally, they should be severely limited to hike power prices, and only allowed to do so after showing they got their spending under control. It's unfair for the average household to foot the bill for their incompetence.	Marius	employed individual
	2026-09-05 15:37:56	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Encourage the use of the solar energy from households into the grid, while focusing on the development of base power for the grid. There should be a continual drive to develop infrastructure and capacity for electrical energy as there will be a need for this in the coming years, especially for the support of water resources (filtering and pumping) which is going to require a lot of energy.	Geoffrey	employed individual
	2026-09-05 16:29:22	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I Support Market competition, Eskom unbundling, and open wholesale trading, which are essential to solve South Africa's energy crisis and attract private capital. I Object to Mandatory fixed solar charges, captive consumer price hikes, and municipal revenue losses will hurt ordinary households and small businesses. Wholesale market reform should proceed only if strict caps are placed on fixed network fees, captive ratepayers are protected, and municipal cross-subsidies are safeguarded. Mandatory Fixed Grid Charges on Rooftop Solar: The policy explicitly targets grid-connected solar and partial-defection users under an "anti-free-riding" principle, shifting tariff structures from volumetric consumption (units used) to high, unavoidable fixed monthly connection fees. The "Captive Ratepayer" Risk: Large industrial and commercial users exceeding set thresholds (e.g., 1 MW) will be allowed to bypass municipal grids to buy cheaper power directly from private traders. Ordinary households and small businesses will remain "captive" to municipal distribution grids, risking higher tariffs to cover municipal revenue deficits and legacy cross-subsidies. Wholesale Price Volatility & Market Power: With Eskom Generation remaining the dominant producer, risks of market power, pricing manipulation, and trading speculation could translate into retail tariff volatility if regulatory protections are inadequate. Restructuring the Distribution Value Chain: Municipal and Eskom distributors must separate the physical grid ("wires") from electricity sales ("retail/trading"), introducing separate fees for grid delivery and energy units.	GRAHAM

	2026-09-06 11:48:21	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The government should not penalise those residents who have made the shift to solar. Moving to solar reduces the dependence on the already strained national grid. Instead the government and municipalities should incentivise residences to make the move towards solar. Look at Pakistan and their recent implementation of solar, which is not perfect but which can be learned from and lessons can be learned from their implementation. Data Centers should be mandated to move toward 90% usage of solar and should be charged a higher tariff than residences for their operations when using government provided electricity. Other big businesses including properties being built specifically for business use, should be mandated to include at least 40% of solar for their electricity usage. Residences who want to make the move towards solar should receive guidance from registered and accredited solar installers and maintainers. This should especially be implemented in the townships as well. For this, lean into trade schools to have students in this field be part of this process.	Riyaad

	2026-09-06 19:40:44	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	So let me get this straight… First, residents were encouraged to invest their own hard-earned money in solar panels to reduce pressure on the grid and embrace renewable energy. Many of us listened, spent a small fortune, and did exactly that. And now the municipality wants to penalise us for doing what they encouraged us to do? Make it make sense. Since when does the municipality own the SUN? Because unless there's been a very recent transfer of ownership that we somehow missed, I'm pretty sure sunlight is still free. How on earth do you justify penalising residents for generating clean, renewable energy and reducing their reliance on an increasingly unreliable electricity supply? If anything, solar users should be compensated for the investment they have made in supporting the energy transition and reducing demand on the grid, not punished for it. This isn't innovative policy. It's daylight robbery… quite literally. Go back to the drawing board and come back with something that actually makes sense. Because this proposal is not only nonsensical, it completely undermines the very behaviour residents were previously encouraged to adopt. Punishing people for going green? What a spectacular way to discourage exactly the behaviour you should be encouraging.	Pauline	employed individual
	2026-09-06 20:06:34	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Why make people pay for Sun power now. It has been around for ever, but now it needs to be taxed. This is a result of these exact people running the grid into the ground and now can not accept that they will no longer be able to control the citizens with the control of electricity. It is not their Sun. It belongs to all on earth. Make better decisions and run a proper company, just like we need to do, then you would not have to charge us for what is not yours to chage in any case	Werner

	2026-09-06 22:18:21	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	We have a delinquent electricity supplier unable to maintain a stable and reliable service. People, myself included, were forced to at great cost secure a stable and reliable electricity supply due to the undisputed fact that Eskom could not provide this. Now you want to claw back money lost due to you alienating customers due to your bad management of infrastructure? This is not acceptable.	Abrham	employed individual
	2026-09-06 22:35:58	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This is typical action that we have come to expect from the ANC. First they give tax incentives to get people to take up solar to save their collective ars*s and once they've stabilized things slightly at Eskom they stab you in the back. Besides which, if a person is a low energy user then they're putting less strain on the network and therefore should pay less costs not more. I moved from Electricity to gas just to get past the fact that I couldn't continually afford takeaways when the power went down. I'm in fact now paying more due to the costs of LPG	Richard	employed individual
	2026-09-06 22:44:18	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		Cyril	unemployed individual
	2026-09-06 23:09:59	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I have been forced to invest in solar power to keep my business afloat thereby paying tax on my earnings and not becoming a burden on the state. I am tired of being the cow milked for all they are worth to keep a government and system in place. People who are energy conscious to not overstretch the grid, reduce environmental damage and continue earning enough to finance taxation are being disadvantaged at every turn, taxed into oblivion and 'fined' for spending their own hard earned money to assist the country when energy problems were at their worst and where we WILL return again under the current dispensation. I demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private investments in renewable energy. I further insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection and not increasing the energy load, offsetting fixed network costs rather than imposing flat availability taxes. Require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households.	Denise	business owner
	2026-09-07 02:33:36	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	So law abiding citizens that are already paying WAY TOO MUCH for electricity having to cover the masses that don't pay anything, are having to pay more for Those who have solar??? They spent thousands having to change to solar as Eskom Was not able to Supply electricity.... In what normal Logical world does that compute????? Just the government trying to get money from tax payers to refill the stolen millions????	Marlize	business owner

	2026-09-07 10:54:40	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This whole thing is to cover up or recover from the governments own incompetence. All of this is due to the government inability to keep the lights on. The ANCaner government inherited a stable and functioning electrical system with expansion plans, but through incompetence, corruption, fraud and blatant theft the public was left to make a plan in order to have reliable electricity and now you want to punish the public for your own short comings and greed.	Steven	
	2026-09-07 11:13:20	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	We've been plagued with load shedding. The municipal billing system cannot be explained by the municipality. I have been billed ridiculous amounts with no explanation for electricity and water. I am currently having difficulty with a very high bill despite submitting meter readings religiously. High electricity billing is explained away with average usage billing over three months. I live on a pension and barely make ends meet. Given this contemplated new system, I believe there will be further exaggerated billing even if it by a private entity. The department failed to keep an obligation in providing electricity, hence loadshedding. Having taken the initiative to ensure electricity security, which ultimately puts less pressure on the electricity grid at great cost, I am now being punished further with higher bills. Whom is it that benefits from this? I guess it will be tenderpreneurs in cahoots with the suppliers and municipalities generating wealth at the expense of you and I. Looting, only this time it is legal. We have already paid for service delivery with no services delivered.	Bhavesh	unemployed individual

Annelise	retired
	2026-09-07 19:23:00	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This whole notion of taxing solar users is so ridiculous, I really wonder if I even need to waste words on it – nevertheless I will: 1 The "free-rider" label: what total rubbish! Solar households cut peak demand, defer grid upgrades, and lower wholesale prices, yet the policy ignores these benefits while penalising lower volumetric usage. 2 The fact that municipalities and Eskom have, and largely still continue, to mismanage funds received for electricity and infrastructure should not lead to government trying to penalise existing or future homeowners who invest in solar to protect themselves 3 Solar users should not be subjected to any fixed or special charges as they have incurred them already in investing in solar and have aided the country in adding to renewable power 4 Solar power equipment installed/used reduces ESCOM's and Private Electrical supplier's development costs 5 Private citizens installed solar to counteract the inefficiencies in Eskom's supply chain and for environmental reasons 6 We were forced to get our own power as the municipality and Eskom could not provide - so we invested in the planet and to reduce our own cost, which can be done in a free market 7 Ultimately this is all caused by the Governments inability to provide basic services at a fair cost 8 Last but probably the most important: only 2 taxyears ago, SA citizens were encouraged by Government to go solar. How? By tax incentives given that year! Hallo Government, can you remember that??? What idiots are we dealing with here? Why do you waste the time and energy of thousands of citizens with this garbage idea??	Gert	retired

	2026-09-08 01:05:22	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The government first encourages the implementation of solar systems by householders and then wants to punish them financially. Disgraceful. This paper encourages corrupt and inept municipalities to treat residents in their towns and cities like an ATM. Solar power implementation blossomed because of Eskom and Municipal failures to keep the lights on. Additionally, the disgusting increases in electricity tariffs that Eskom was allowed to force onto South Africans, mainly to cover the failures of a bloated and overpaid staff, drove solar implementation. Now, to keep gouging electricity users, the floodgates will open and additional taxes will punish those who were almost forced into rooftop solar. No no but he'll no!	Johan	retired

	2026-09-08 08:11:06	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	1. A "Sun Tax" on Private Capital and Rooftop Solar The Paper proposes shifting network cost recovery away from volumetric (cents-per-kWh) billing toward mandatory, high fixed monthly capacity and connection charges applied to all grid-connected customers, under an "anti-free-riding" rationale. Only customers who disconnect entirely from the grid would escape these charges. Over the past decade, millions of households and businesses committed private savings to rooftop solar and batteries specifically because the state-run grid failed to keep the lights on. Converting the tariff structure to heavy fixed charges penalises exactly the customers who invested in self-generation and energy efficiency to reduce their draw on that grid. It lengthens solar payback periods, discourages further private decarbonisation, and falls hardest on low-volume and frugal households who have the least capacity to absorb a large fixed bill regardless of consumption. 2. The "Captive Ratepayer Trap" and Municipal Insolvency The Paper creates a dual consumer structure: "eligible customers" — initially large industrial and commercial users above a demand threshold such as 1 MW — will be free to buy directly from the wholesale market or from private traders, while all other households and small businesses remain "captive" to incumbent municipal or Eskom distribution tariffs. Municipalities currently rely heavily on the margin earned from bulk sales to their largest commercial and industrial customers to cross-subsidise indigent households, free basic electricity, and other services. If those customers are permitted to exit municipal supply while ordinary ratepayers cannot, municipal revenue will fall sharply just as the fixed costs of maintaining ageing distribution networks remain unchanged. The result will be concentrated onto captive residential ratepayers in the form of higher tariffs, degraded maintenance, and accelerated municipal financial distress — on top of the municipal Eskom-debt crisis that already exists. 3. Wholesale Price Volatility and Market Power Manipulation Under the Paper, Eskom Generation will participate in SAWEM as a legally separate commercial entity, but it will continue to control the large majority of the country's dispatchable baseload generation capacity for the foreseeable future. The proposed safeguards — transitional vesting contracts, NERSA bid oversight, and a Market Surveillance Unit — are reasonable in principle but have not yet been demonstrated to be adequate against a dominant incumbent. International experience with unbundled electricity markets shows that dominant generators and speculative trading desks can exploit dispatch and bidding rules to engage in economic withholding (bidding above cost to force higher clearing prices) or physical withholding (holding back capacity to trigger scarcity pricing). Where this has occurred elsewhere, the resulting price spikes have been passed straight through to retail consumers via pass-through tariff mechanisms. 4. Severe Conflicts of Interest Within the NTCSA The National Transmission Company of South Africa (NTCSA) is designated under the Paper to simultaneously perform four roles: Transmission Network Service Provider, System Operator, Market Operator, and Central Purchasing Agency (holding legacy state off-take contracts). While the Electricity Regulation Amendment Act envisages full independence from Eskom Holdings within five years, the NTCSA will remain an Eskom Holdings subsidiary throughout the market's launch and early operation. Concentrating grid ownership, system dispatch, market clearing, and legacy contract administration inside one entity that is still owned by Eskom Holdings creates a structural conflict of interest at the heart of the new market. The NTCSA could face internal commercial pressure — whether or not it is ever acted upon — to favour Eskom Generation's dispatch, protect legacy IPP off-take arrangements, or delay third-party grid connections relative to competitors. A market cannot be regarded as genuinely competitive while its referee remains a subsidiary of one of the largest players. 5. Premature Market Launch Amid Unresolved Municipal Debt The Paper anticipates launching an advanced wholesale market — including mandatory imbalance and settlement penalties — within the 2026/2027 timeframe, while municipal distribution debt owed to Eskom remains unresolved and many municipal distributors do not currently meet baseline creditworthiness and prudential requirements for market participation. Financially distressed municipalities that fail these prudential tests risk being excluded from the new trading platforms altogether. This would entrench a two-tier electricity system: well-supplied metros and eligible customers trading competitively on one side, and power-starved, financially failing rural and smaller municipalities left behind on the other — worsening exactly the service-delivery inequality the reform is meant to address.	Pieter	retired
	2026-09-08 08:43:03	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I do not agree with shifting network cost recovery to billing toward mandatory, high fixed monthly capacity and connection charges applied to all grid-connected customers, under an "anti-free-riding" rationale. This will simply make more customers disconnect from the grid . Many households and businesses committed private savings to rooftop solar and batteries due to state run entity (Eskom) failure and were inadvertently forced into another form of taxation. Now that thats been achieved the state wants to double dip becuase of the unintented consequence of its maladmisntration of the electricy sector, namely less consumption by ts formerly best consumers. This is penalizing this group of customers twice for something that was not in their contrl but in the States control, hardly fair ane equitable treatment! Converting the tariff structure tofixed charges penalises those who invested in self-generation reducing their draw on that grid and actually saved eskom. These tarrifs will lengthen solar payback periods, and impacts frugal / amrginal households the most.	Grant	employed individual

	2026-09-10 10:35:08	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom has South Africans in a stranglehold. We are paying more and more for electricity while the entity posts obscene annual profits. It doesn't exist to make profits and pay its staff enormous salaries. Its purpose is to provide cheap and abundant electricity to us, the South Africans who live and work here (if they are lucky enough to find employment). Eskom has long since lost sight of its mandate. To add insult to injury Eskom now wants to punish those who were forced to install solar power to take care of their needs because of its own abject failure to do so. The only reason there are not solar panels on every house in the country is that the owners can 't afford it and have no alternative but to pay Eskom's extortionate rates for a supply of electricity that, in many parts of the country is unreliable to the point of being non-existent. How much more proof do we need that Eskom is not the solution to our energy needs because it has no wish to serve South Africans but only to entrench its dominion over us and make money for itself and the state.	Rosemar	retired
	2026-09-10 11:13:18	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Solar investment is the direct consequence of the years of underpermance of Eskom who seemingly turned profit. This thanks to ongoing solar usage hiding its supply inadequacy. Also, the state encouraged solar take on through subsidies & even solar geyser installation to rdp housing. Shouldn't such users now have recourse to Eskom instead? Further, it hasn't resolved illegal consumption or answered & resolved its administrative, labour & operational incompetence distorting revenue projections. It's incomprehensible that a state utility boasts a profit then seeking to increase its unit costs to the detriment of residents standard of living & subsistence.	Anil

	2026-09-11 10:58:51	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The Department seeks to alter the status quo retrospectively which is not within its powers. I installed my solar system a few years back at great cost. I also went onto prepaid electricity for which privilege I had to pay City Power R2 150.00. This was to save money and to have a system that worked when City Power did not. By way of example: I bought a Toyota Landcruiser years ago which I operate with my EB code (light duty) driver's licence. Years later the authorities tell me that I must now get a heavy duty vehicle licence for which I must go to an approved driving school for a dozen lessons at my cost. This is "not on" and is retrospective in nature. One cannot legislate retrospectively. This direction is permissible only in respect of future/new Landcruiser drivers.	David	retired
	2026-09-11 11:29:57	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I strongly object to the principle of imposing unavoidable fixed electricity or network charges on consumers irrespective of the amount of electricity they actually consume. I accept that electricity infrastructure has to be maintained and that consumers who make substantial use of the electricity network should contribute fairly towards the cost of providing that service. However, it is fundamentally unfair to penalise consumers who have invested their own money in solar generation, batteries and energy efficiency in order to reduce their reliance on the national grid. These consumers have already invested substantial private capital in reducing their demand on the electricity system. Their reduced consumption should be recognised as a positive contribution to energy security and the reduction of pressure on the national grid, rather than being characterised as "free riding". I particularly reject the principle that a consumer should be compelled to pay for a service or infrastructure that they make little or no use of, simply because that service remains available to them. Should any fixed connection or network charge ultimately be considered necessary, such a charge must not be an arbitrary amount determined by Government, a municipality or a state-owned utility without demonstrable justification. Any such charge should be independently regulated and transparently calculated on the basis of the actual and efficiently incurred cost of providing the relevant service or maintaining the relevant network capacity. The methodology, assumptions and underlying costs should be publicly disclosed and subject to meaningful public and regulatory scrutiny. There must also be clear safeguards against such charges becoming a mechanism for recovering the costs of inefficiency, wasteful expenditure, poor management, excessive staffing, inappropriate procurement or other costs that are not reasonably attributable to providing the service to the consumer. Consumers should not be required to fund inefficiency simply because the service provider has the ability to impose a charge. South African consumers have experienced repeated increases in the cost of essential services while being expected to accept that those increases are necessary to sustain financially inefficient systems. The answer to declining electricity consumption cannot simply be to transfer the resulting revenue shortfall onto consumers through ever-increasing fixed charges. Government and state-owned utilities should instead be required to demonstrate that their costs are efficient, necessary and properly managed before those costs are recovered from the public. I therefore reject any policy that effectively makes consumers financially liable for electricity they do not consume, particularly where they have invested their own resources to reduce their dependence on the grid. If a charge is imposed, it must be demonstrably necessary, proportionate, transparent, independently regulated and based on efficiently incurred costs — not an amount determined at the discretion of the service provider or Government to compensate for its own inefficiency or revenue shortfalls. The policy should encourage energy independence, private investment in renewable energy and reduced demand, rather than creating financial disincentives for precisely the behavior South Africa should be encouraging.	Gina

	2026-09-11 15:46:57	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It is simply unconscionable that Eskom seeks to punish consumers who were able to assist the power utility reduce and eventually eliminate "load shedding" (itself a deceitful and self-serving name for rolling blackouts) by installing private rooftop solar SSEG systems. This punishment, in the form of vastly increased cost overhead, has significantly increased the fixed portion of the power tariff for such users, resulting in net increases in excess of 35%, far above the 12.8% approved by NERSA for 2024/2025. Such users put *LESS* strain on the grid, not *MORE*, and they help reduce demand and also protect the grid, so the whole "Fixed charges" narrative is deceitful. Moreover, Eskom is significantly overstaffed (recent estimates say by around 60%) compared to other similar power utilities around the globe, but instead of earnestly pursuing organisational efficiency, Eskom chooses the easy route, namely squeezing conscientious consumers for more money. This approach will likely see an increasing number of such consumers go off grid completely, and Eskom will consequently collect even less revenue, and have increased electricity theft and illegal connections. All in all, the downsides for Eskom of the proposals contained in this document far outweigh the positives it is intended to achieve. The law of unintended consequences will quickly scupper these plans and a radical rethink is therefore required.	Patrick	employed individual

	2026-09-11 15:53:15	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Before government looks at yet another way of extracting more money from electricity consumers, perhaps Eskom, municipalities and the ANC-led government should first get their own finances and organisations in order. The answer to years of financial mismanagement cannot continually be to make ordinary consumers pay more. Eskom and municipalities need to address the fundamentals: eliminate corruption and wasteful expenditure, improve productivity, hold management and non-performing employees accountable, and ensure that staffing levels, salaries and benefits are justified by actual performance and operational requirements. The Auditor-General's latest reports continue to show serious problems with municipal financial management, accountability, consequence management and financial sustainability. Eskom itself continues to carry substantial employee costs while acknowledging the need to improve workforce productivity and organisational performance. It is hardly reasonable to expect households and businesses to carry an ever-increasing financial burden while state entities and municipalities continue to struggle with poor management, weak accountability and financial inefficiencies. If government wants consumers to contribute more towards maintaining the electricity grid, it should first demonstrate that the money already being collected is being managed efficiently and responsibly. Fix the management, corruption, waste and accountability problems first. Then come back and ask consumers for more money.	Theron	employed individual

	2026-09-11 16:30:42	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	If the government wants a fight with public ratepayers over this, they will get one, and it will prove to be very expensive for the government. Solutions have been proposed to resolve the situation involving ESKOM and its financial issues, involving unbundling and private sector funding. Explore that and get it moving. Try to bill us for your incompetence and you expect a battle royal that will end badly for ESKOM & the government of the day.	Donovan	retired
	2026-09-11 16:32:46	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I strongly oppose the proposed Electricity Sector Market Transformation Position Paper, particularly the apparent policy direction of penalising households and businesses that have invested their own money in solar generation to reduce their dependence on Eskom and the national grid. South Africans were repeatedly encouraged to invest privately in alternative electricity generation because government and Eskom failed to provide a reliable electricity supply, with load shedding causing enormous financial losses, disruption and damage to households and businesses. Citizens responded by investing hundreds of thousands of rands of their own money in solar panels, inverters and batteries, thereby reducing demand on the very grid that Eskom had failed to maintain. It is therefore fundamentally unjust, economically irrational and ethically unacceptable to now characterise these consumers as “free riders” and seek to recover Eskom’s lost revenue from them through increased fixed network or capacity charges. Consumers should not be made financially responsible for the consequences of years of state-owned utility mismanagement, inadequate planning, corruption, operational failures and unsustainable governance. The proposed framework effectively risks socialising the consequences of Eskom’s failures while privatising the cost of fixing them onto citizens who have already paid to protect themselves from those failures. It also creates a deeply troubling regulatory precedent: government encouraged citizens to invest in self-generation, and after those investments reduced electricity consumption, the regulatory framework now seeks to restructure charges to recover the revenue that those very investments displaced. Such a retrospective change in the regulatory bargain raises serious concerns regarding rationality, proportionality, legitimate expectations, procedural fairness and the constitutional requirement that exercises of public power be lawful, reasonable and procedurally fair. The ethical problem is equally serious: households that acted responsibly, invested their own capital and helped stabilise the electricity system should be incentivised, not punished. Before imposing additional costs on consumers, government should first demonstrate that Eskom and the relevant public institutions have exhausted reasonable measures to address inefficiency, financial mismanagement, municipal debt, corruption, poor procurement, operational failures and high administrative costs. A policy that protects the financial position of an inefficient state monopoly by increasing the financial burden on citizens who have invested in energy independence is not genuine market transformation; it is effectively a mechanism for transferring the consequences of institutional failure onto the very people who have been forced to compensate for it. I therefore believe the proposed approach should be fundamentally reconsidered and that any future electricity-market framework must prioritise accountability, genuine competition, consumer choice, cost efficiency, and protection of consumers who have independently invested in electricity generation.	Dewald	employed individual
	2026-09-11 16:33:15	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	So i spent a fortune on a Solar system to help Eskom cope with load shedding. 	2026-09-11 16:42:53	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This sounds rather alarmist to me. Saying that households without solar will be “trapped” into paying skyrocketing tariffs is a prediction, not a fact. Before accepting that claim, I would like to see the actual figures and evidence showing that this is what will happen.	Alton	retired
	2026-09-11 16:44:43	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Households and small businesses that invested significant private capital into rooftop solar, batteries, and energy efficiency to protect themselves from load shedding will be forced to pay higher monthly baseline connection fees. This structural shift acts as a financial penalty on private decarbonisation, extending solar payback periods and increasing electricity bills for low-volume and frugal users. Allowing the largest, highest-paying electricity users to exit municipal supply creates a two-tiered energy economy. As high-volume users migrate to competitive private contracts, the fixed costs of maintaining legacy municipal networks and state-owned infrastructure will be concentrated onto captive residential households, driving up standard retail tariffs. Require municipal electricity distribution entities to ring-fence network maintenance budgets into dedicated accounts to prevent tariff revenue from being diverted into general municipal administrative expenses. I demand a transparent resolution framework for historical municipal bulk electricity debt that does not penalise paying ratepayers through inflated local tariffs. Without a clear, bankable, and expedited regulatory framework for private transmission investment (ITPs), transmission bottlenecks will persist for years, causing market congestion costs and higher balancing fees to be passed onto end-users.	Pieter	self-employed
	2026-09-11 16:46:28	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The sun does not belong to the ANC, the only things the.ANC can claim as theirs is chaos, fraud and corruption.	Francois	retired

	2026-09-11 16:51:26	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The concepts of this proposed bill are in direct conflict with the basic principles of free market, support for the poor and citizens rights to choose how to ensure that they have access to contineous electricity. By allowing large consumers to bypass municipal electricity supplies put these municipalities at risk of not being able to reover their costs, which will result in higher rates for ordinary citizens who are already struggling with the increased costs of living - primarily because of the states failure to ensure that South Africa can refine crude oil.	Patrick	self-employed
	2026-09-11 16:52:05	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I don't want to pay for Eskom theft, waste and mismanagement.	Helen	retired

	2026-09-11 17:00:27	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	As usual, if one applies any normal logic of fairness to the proposals, it comes up far short . Also as usual, soak those who they can for as much as they can.	Trevor	
	2026-09-11 17:01:19	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		Rita	retired
	2026-09-11 17:01:41	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The proposals are too absurd for words. Eskom's incompetence in failing to provide power and absurd charges for electricity to consumers via Municipal power charges over the years, resulted in either not receiving sufficient power or , in desperation, having to instal solar panels to obtain some input of power to their households, businesses etc. To expect unfortunate consumers to "share" the (increased cost?) of Eskom power is too ludicrous for words. Is it not apparent to the public at large that the ESKOM recently announced publicly with much great fuss that it had made the biggest profit in its history!! This announcement was made despite the staggering accumulated capital losses over many years!! Do its board and accountants not understand the principles applicable in such cases? Like everything else in SA, cadre deployment as opposed to qualifications & skills apply!	David	Non-profit
	2026-09-11 17:03:44	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The governent needs to break away from monopoly and privatize eskom	Hamish	
	2026-09-11 17:05:04	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		MJ	self-employed
	2026-09-11 17:05:14	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Again, we were forced to solar due to Eskom's inability to consistently produce electricity. Now we are forced to pay yet again for their incompetence and corruption, where their salaries and bonuses outperforms our very small salary increases. This remains unfair	Bert	retired

	2026-09-11 17:06:57	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	There is NO right to charge a sun tax! We, the 'people' did not cause the problem. Eskom thieves did that. When we had loads heading, there was no proportional rebate for hours/days on non delivery My insurance policy was raised due to the probability of electronic equipment damages Solar residents and businesses 'rescued' Eskom when they could not provide enough power. We reduced the overload by not using power. We are individuals/ corporations should jot have to pay extra, not have to pay access fees. Charge me a fee to permanently disconnect me from the grid but then I need not pay eskom or a municipality an access fee. They stole us blind and now want us to pay again. The ANC must get the hell out of our lives and the government. What would Mr Nelson Mandela say about this .... I am positive he would be so ashamed of the ANC and the corruption and theives	Richard	unemployed individual

	2026-09-11 17:25:57	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The state created the problem by forcing the entire nation into hours and hours of loadshedding thst crippled the nation. Forcing citizens to make other plans to keep their lights on. Now you want to penalize the same population you harassed before. You generate less power, charge massive tariffs still crippling people but want to make up your behavior with charging for sun use now. Set charges is not morally acceptable as before we even use power you bind people into your corrupt web. We reject outright as we would never had been put in the position to implement expensive solar options had you fulfilled your mandate to provide cost effective power.	Krystella	unemployed individual
	2026-09-11 17:28:12	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I object to the Electricity Sector Market Transformation Position Paper. Opening a wholesale market while Eskom still dominates generation, and while households stay “captive” to municipal grids, is not reform, it is a two-tier system. Large users will buy cheaper power; ordinary households and small businesses will pay the residual grid costs, plus high fixed network charges that punish rooftop solar. That is an anti-free-riding tax on people who invested their own money to keep the lights on. Municipalities will lose industrial sales that fund free basic electricity and local services. Until NTCSA is fully independent, fixed charges are capped, and retail choice is extended beyond big industry, this paper will raise bills, not reliability.	Jaime	self-employed
	2026-09-11 17:28:36	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The proposed tariffs are there to fund a dysfunctional electricity provider. I shall not pay for ineffective and inefficient business practices. I've already paid for my solar and will not pay for anyone else's mismanagement.	Mariette	employed individual
	2026-09-11 17:28:45	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Always interfering with individuals positive initiatives.You can't tax the suns energy. I will get off the grid and use an inverter generator to supplement my electricity if need arises. Increase pv and battery bank. Then no need to interact with thieves who want to generate more income to plunder blatantly	Vijay	retired
	2026-09-11 17:29:42	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		Colette	retired
	2026-09-11 17:29:52	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom broke its service delivery contract with the consumer long ago. They were supposed to provide a necessary, affordable service to the public as one of the largest electricity generators and providers in Africa. In a service contract, the client pays for services delivered. Eskom failed to deliver reliable, necessary and affordable electricity to its clients when it failed to maintain the power plants, build new power generation capacity as they were warned to do, and allowed corruption to take over. When a contract's terms have been breached, the client has the right to source alternative services. Which is exactly what we as a country have done. If we provide our own power due to non-performance and contract breach, we have NO FURTHER OBLIGATION to Eskom. Therefore they have no right to fine/ bill/ or whatever they want to call it, the public for anything. You pay for the service you use. If you don't use, you do not pay. It is a logical and accepted business principle!	Annalize	self-employed
	2026-09-11 17:30:28	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom have an absolute cheek to want to implement this. They needed help when they could not provide. Government encouraged people to get Solar to ease strain on the grid and now want to penalize those same people for helping!	Kerry	employed individual
	2026-09-11 17:31:18	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom, screwed up, up until 1994, S.A. had one of the cheapest electricity rates in the world, then the A.N.C came along & screwed every state owned enterprise up, expecting the tax payers to foot the bill. This proposed bill is unconstitutional, not fit for purpose.	John	retired
	2026-09-11 17:32:29	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom caused this problem not the consumer. No power for hours/days forcing consumers to seek alternative power. I have paid vat on my solar, the sun is free and doesn’t belong to Eskom. Eskom and Goverment need to STOP stealing our hard earned money.	Jackie	retired

	2026-09-11 18:37:08	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I am told by people living in nearby townships that they are paying nothing for electricity, water or rates. That means an Eskom employee, innumerate and illiterate, who sweeps the floors, on a starting salary of about r20000 a month has electricity for free, whilst a poor person on minimum wage or unemployed or state pensioner, living in a previously white area, has to subsidise them. Obviously there needs to be at least a basic rates tax implemented in every township for every household, even if it is only about r150 per month. Multiply that by 40,000,000 and some income becomes available for expanding the grid, without an intolerable burden on low earners. Since the ANC has only one interest, getting votes, this will not be a popular decision. You can fool most of the people some of the time and some of the people most of the time, but you cannot fool all of the people all of the time. Huge numbers of skilled people are leaving the country right now, the goose that lays the golden eggs is leaving. The cash cow is shrinking. Time to face reality	Jane	retired

	2026-09-11 18:53:39	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	While restructuring the energy market is vital for South Africa's energy future, the current trajectory outlined in this document places an unfair, dual-pronged financial burden on ordinary South African households. Reconfiguring tariffs to impose heavy fixed connection levies regardless of usage disincentivizes clean energy adoption and penalizes proactive investment in energy security. Grid cost-recovery mechanisms must be fair, transparent, and balanced, rather than functioning as a punitive tax on self-generation. Ordinary citizens cannot serve as the default safety net to keep failing municipal distribution networks afloat through skyrocketing tariffs, inflated basic service charges, and heavier cross-subsidies. The Department and NERSA must institute strict regulatory controls to guarantee that wholesale trading, wheeling, and market restructuring do not leave everyday households footing the bill for shared grid infrastructure. A transformed energy market must encourage private initiative while protecting vulnerable and non-solar households. Taxing rooftop solar to protect outdated revenue models while allowing industrial users to exit municipal networks without safeguarding residential consumers will lead to severe socio-economic strain. 	2026-09-11 19:26:21	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	A "Sun Tax" on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. The "Captive Ratepayer Trap" and Municipal Insolvency: Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance. Wholesale Price Volatility and Market Power Manipulation: Eskom Generation still controls the overwhelming majority of South Africa's dispatchable baseload power. In unbundled spot markets worldwide, dominant suppliers have engaged in economic or physical withholding to artificially spike market clearing prices. Without hard statutory bid caps and aggressive oversight, wholesale price volatility will be passed directly down to retail consumers. Severe Conflicts of Interest Within the NTCSA: Consolidating transmission grid ownership (TNSP), system dispatch (SO), market clearing (MO), and legacy state off-take contracts (CPA) within a single entity under Eskom Holdings creates structural conflicts of interest. NTCSA could face internal commercial pressure to favour Eskom assets or delay third-party grid connections. Premature Market Launch Amid Unresolved Municipal Debt: Opening an advanced wholesale market with mandatory imbalance penalties in 2026/2027 while municipal distribution debt to Eskom remains unresolved is premature. Financially distressed municipalities that fail prudential credit requirements will be excluded from trading platforms, creating a divided nation of well-supplied metros and failing, power-starved rural councils. 	2026-09-11 20:03:21	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The cadres who are proposing these charges are the ones that destroyed one of the world's best electricity producers before they came to power and would have supplied electricity for the entire nation as cheaply as Eskom had been doing. They inherited a world class electricity supplier and destroyed through short-sighted, uneducated and criminal intent.	Chris	self-employed
	2026-09-11 20:04:50	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The sun is free. I paid for my own solar. I do not need Eskom. Personal choice. The second reason is I was forced due to corruption and degeneration of our state entities to use solar because of blackouts. We were encouraged to do so and could apply for a rebate.	Beverley	
	2026-09-11 20:06:37	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	ESKOM could not supply us with electricity. Tax breaks were given to those who installed solar. Now they want to punish us?	Rudene	retired
	2026-09-11 20:08:12	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Thank you for the opportunity to comment on yet another scapegoat ESKOM wants to use manipulating consumers, over taxed consumers because of their religion. " Load shedding" wether true or not, forced many consumers and businesses making alternative arrangements as a way of survival. Many had to install solar systems because many people are working from home, business had to either install solar systems or generators as a way of survival because we are the engine of the economy, the taxpayers, and not the public sector including the SOE's and SOC's financed by our money. Government are not in the position of manufacturing of any good's apart from the poor service delivery for many years. Municipalities are part of the non manufacturing sector and also ESKOM who suppose to supply the services required which they could not do. It is not the performance of ESKOM that prevented the total collapsing of the grid, wether load shedding true or not, but the investments of private sector that must bear the weight of both the Public and Private sector. The recent profit declared by ESKOM is not because of better management but because of private investment. ESKOM, as with the ANC terrorists movement lied to the people of South Africa for many years about service delivery because of, as we all know, corruption and lawlessness where current legislation was never adhered to by the incompetent politicians because they think they are Engineers! It all bounce back to one truth, incompetent employee's including the CEO's because they are all political appointments! The only reason why this proposal are been tabled is just to waste more taxes by claiming more taxes. The taxes on the fuel price, licences for various "services", taxes on several food and agriculture products, like water and boreholes, VAT, property taxes, income taxes, business taxes, etc. must be relook because surely somehow somebody are playing a very dangerous game known as the looting of our taxes where our money just disappears between politicians. Considering the fact that elderly people must survive with a R 2400.00 grant compares to the luxurious vehicle and mansions politicians own, plus their salaries and perks, the people of South Africa will no longer be fooled. It is time to get a new government, wise leaders and not wicked politicians who are lying to us, the people of South Africa! I always conclude my comments with the Truth the Word of God. Daniël chapter 12, the seal's to be kept sealed till the times of the end. The seals are opened in Revelation chapter 6, the four horse's, death, violence, slavery and poverty, lies, lies as explained in 2 Thessalonians chapter 2, the Apostasy. The fifth seal Revelation chapter 19! The black horse in Revelation chapter 6 is the current ANC apartheids movement who allowed the other three horse's into our country and the people are no longer blind. No to any additional taxes or any more laws forcing the people into severe economical pressure because of mismanaged, looting of God's money and crime within the SOE's and SOC's!	Derek	business owner

Everything in this country are just becoming nothing… we are starting to pay heavy rates for something that should be for all available… but we need to pay the feeding government…	Francois	self-employed
	2026-09-11 20:45:39	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I strongly object to any proposal that effectively introduces a “sun tax” on households that have invested in solar power. How ridiculous is it that South Africans who have spent their own hard-earned money on solar and batteries — often because we could no longer rely on Eskom — could now be penalised for using less electricity from the grid? We made a significant private investment to generate our own electricity, reduce our reliance on Eskom and reduce our demand on the national grid. We did this at our own expense and without asking government to pay for it. I understand that a grid-connected household still uses the network and that reasonable network costs must be recovered. But there is a massive difference between a fair network charge and punitive fixed charges designed to recover revenue from people who have reduced their electricity consumption. It is completely backwards to encourage South Africans to invest in renewable energy and then penalise them once they actually do it. We should not be punished for becoming more self-sufficient. If anything, households investing in solar should be encouraged. We are helping reduce pressure on the electricity system — not creating the problem. I therefore strongly object to any tariff structure that unfairly targets solar households or shifts excessive costs onto ordinary residential consumers. We have already paid for our solar systems. We should not now be punished for using them. Please record my submission as a formal objection to any proposed measures that would unfairly penalise residential solar users. 	2026-09-11 21:02:51	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Why charge people for electricity they organize/produce from another source e. g. The sun. Maybe it's time to let eskom pay for their own inefficiency. If they, that is government and eskom didn't steal so much, weren't so very corrupt, didn't mismanage so badly. Eskom would deliver proper fulltime electricity, then nobody would have to find alternatives to keep the economy going. That's what government should be doing but hasn't for the past many years. So the question is, when will the government, eskom etc. start paying for the bad situations and stop making the people pay for it?	Dion

	2026-09-11 21:09:32	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I’m concerned this change should not be implemented because it effectively punishes people who invested in rooftop solar to reduce pressure on the grid and lower their electricity costs. If fixed charges keep rising, households can do everything right by generating their own power and still face almost the same bill, which undermines the whole point of encouraging solar. This approach also feels unfair to ordinary users because it shifts costs away from heavy grid users and onto everyone else, including families trying to become more self-sufficient. Instead of supporting energy security and private investment, it risks slowing down rooftop solar adoption and making electricity even less affordable.	Jon	employed individual

	2026-09-11 22:22:49	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I strongly oppose Eskom's proposed solar tax / fixed network charges for rooftop solar users. South Africans didn't install solar to avoid paying their fair share - we installed it because Eskom failed to keep the lights on. We spent our own after-tax money, often R100k+, to keep our homes and businesses running during loadshedding, which actually helped reduce pressure on the grid for everyone. Now to be punished with extra daily fixed charges, expensive engineer sign-offs, and a R9,000+ smart meter just to stay connected is backwards. It is not a "compliance fee" - it is a tax on self-reliance. This will not save Eskom. It will push more households and businesses to go fully off-grid, which means even less revenue for Eskom, which means even higher tariffs for those who cannot afford solar at all. You will be squeezing the poorest customers hardest. If Eskom wants grid stability, make registration simple, free, and permanent - a basic CoC from a qualified electrician and a simple online registration. Don't add a monthly penalty for people who solved a problem Eskom created. We should be accelerating rooftop solar, not taxing it.	Charl

	2026-09-12 03:05:17	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It is not fair to put all this charges on taxpayers, already as a middle class citizen, we can't barely make it until month end. We can't even afford to keep our geysers on the whole day. Where else most of township houses and informal settlements are connected illegally and nothing is done about it. It is not fair for a honest South African citizen who pays all their municipality bills and even buy this already expensive electricity. By imposing high chargers, it doesn't help because now the government is forcing people to have other means of helping themselves by going off the grid because they couldn't keep the grid on. This will push the same customers away and to connect illegally because they can't afford to buy electricity. Eskom and municipality should fix illegally cconnections first and have a standard rate for everyone that is affordable for every household and stop sucking from taxpayers who can't even afford anymore. 	2026-09-12 06:03:12	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Many consumers were forced into debt by encouraging them to convert to Solar. Consumers previously had a well established and functional electricity network that could keep up with demand. Then the new Government came into power and the electricity network collapsed, having a huge detrimental impact by stunting economic growth. Consumers were forced to plunge themselves into debt, which many of us are still in the process of paying of. The majority of consumers could not go off the grid completely as their households are not that affluent to cover the costs, so they remained grid tied. Now the Government and Eskom have realised they shot themselves in the foot. Eskom is the only company in the world that encouraged consumers to use less of the product they sell. Of course, as a result their revenue has shrunk significantly. In a desperate effort to recover lost income and sustain the gravy train, consumers must now be punished severely for Government and Eskom’s failure to render sufficient energy services. So whether consumers had to take on a huge amount of extra debt in an effort to supplement and sustain their energy needs or whether consumers just could not afford the transition to a grid tied system and chose to stay on Eskom supplied power, consumers have no escape. We are trapped in a corner from where we cannot escape those looting our hard earned money by all kinds of new taxes they impose on the consumer. It seems their creativity of thinking out new taxes to burden and exploit an already crippling population under a preposterous tax burden seems without limits and boundless. If they only use their creative skills to implement measures to cut down on their own luxury lifestyles and curb corruption. But like always, the consumer stands at the end of the line; the consumer SHALL pay.	Rienie	unemployed individual

They tell us to get off the grid which ao many have and now they want to charge them for something they cant control.	Heidi	employed individual
	2026-09-12 06:14:43	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	There are 2 issues at stake. I live in an old suburb where the electricity infrastructure is old and we have many power failures as the infrastructure has not been upgraded. Thus when there is a power failure, we may sit without electricity for a minimum of one day and even longer over weekends. Tshwane has also stopped paying overtime and this also contributed to longer not having electricity. Another issue was the impact of load shedding on the old and outdated infrastructure in the area. The second issue was load shedding and therefore had to install a basic solar system. I am retired and is working from home to make a living and is struggling financially. The consequence of not having electricity is that I can't generate income.	Matthew	retired

	2026-09-12 06:44:38	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I strongly object to the Department of Electricity and Energy's roadmap for the South African Wholesale Electricity Market. While framed as competition, it imposes punitive fixed grid charges on rooftop solar owners under an "anti-free-riding" pretext, punishing households who invested in clean energy and shifting costs from consumption to unavoidable monthly fees. Large industrial users above 1 MW may exit municipal grids for cheaper private power, leaving ordinary households and small businesses as captive ratepayers forced to absorb municipal revenue shortfalls and legacy cross-subsidies through higher tariffs. Separating wires from retail further layers costs without guaranteed benefits. With Eskom Generation still dominant, market power and wholesale volatility risk unstable retail prices for those least able to protect themselves. This is not genuine reform—it is a regressive transfer of risk onto solar investors and ordinary consumers. Protect households, preserve fair volumetric pricing, and reject policies that privatise gains while socialising losses.	Deon	employed individual

	2026-09-12 07:16:47	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	When Eskom, due to internal corruption and mismanagement, could no longer provide enough electricity to meet demand (which led to many businesses closing and great personnel loss to citizens) , consumers and businesses were encouraged by Eskom to install solar systems to alleviate pressure on the grid. This was done at great personal cost to consumers and businesses. Now, when Eskom is struggling to maintain its exhorbitant profits, it wants to penalize solar users, while the equally useless and complicit NERSA does nothing to protect consumers. We demand that NERSA and government place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. We insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. And we require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households. If ESKOM and NERSA continue along this route of penalizing consumers, two thing will happen. Solar users will disconnect from the grid and Eskom will receive zero revenue, and normal, non solar electricity consumers will simply stop paying their bills as they become too unaffordable , as we have seen with the enourmous electricity debts experienced in areas like Soweto etc. What then will Eskom and municipalities do when they are receiving no money from their cash cows?	Chris	business owner
	2026-09-12 07:18:57	No I do not	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	This is a absolute joke. Whys have we installed Solar in the first instance - because the Goverment and Eskom failed to supply power, leading to load shedding and leaving us losing clients . Now all of a sudden they want to penalise us????	Andre	
	2026-09-12 07:19:38	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom's incompetence forced us to help ourselves dish out huge capital expenditures. They cannot keep on pressurizing the overburdened man in the street. All buck stop in our pockets and it becomes unbearable. It raises alarms if this is the only way the Department structure their income. They are killing us financially, a disgrace!	Elize	retired
	2026-09-12 07:19:41	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	"Sun Tax" on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. The "Captive Ratepayer Trap" and Municipal Insolvency: Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance. Wholesale Price Volatility and Market Power Manipulation: Eskom Generation still controls the overwhelming majority of South Africa's dispatchable baseload power. In unbundled spot markets worldwide, dominant suppliers have engaged in economic or physical withholding to artificially spike market clearing prices. Without hard statutory bid caps and aggressive oversight, wholesale price volatility will be passed directly down to retail consumers. Severe Conflicts of Interest Within the NTCSA: Consolidating transmission grid ownership (TNSP), system dispatch (SO), market clearing (MO), and legacy state off-take contracts (CPA) within a single entity under Eskom Holdings creates structural conflicts of interest. NTCSA could face internal commercial pressure to favour Eskom assets or delay third-party grid connections. Premature Market Launch Amid Unresolved Municipal Debt: Opening an advanced wholesale market with mandatory imbalance penalties in 2026/2027 while municipal distribution debt to Eskom remains unresolved is premature. Financially distressed municipalities that fail prudential credit requirements will be excluded from trading platforms, creating a divided nation of well-supplied metros and failing, power-starved rural councils. 	2026-09-12 08:06:08	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This move by Eskom has been long foreseen by me and is a direct consequence of allowing municipalities to boost their income by a product where they operate as a middleman, which is actually a criminal act in my view. This whole electricity/energy generation problem in the world at this stage except China and India, is because of a incredible fraud run by governments, NGOs , so-called "climate scientists" and influencers like Al Gore and Greta Turnberg fooling people and being believed religiously as the truth about carbon dioxide. We basically have only ourselves to blame for this foolishness and being exploited by it from all sides.	Jakobus P H	retired
	2026-09-12 08:07:03	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Stop the "Sun Tax": Do not punish private solar investments with high, fixed monthly grid fees. Going green to help the country should be rewarded, not penalized.Protect Everyday Consumers: Do not let municipalities hike electricity tariffs on non-solar homes to make up for lost revenue when big industries move off the grid. Ordinary households must be legally protected from footing the bill for municipal financial losses. Transparency First: Ensure that wholesale market trading rules are completely transparent. Everyday families must not be forced to cross-subsidize major corporations or absorb hidden grid costs.	Diane

	2026-09-12 08:09:12	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I am not sure what this will accomplish, as in the Overberg district, we already pay massive amounts for availability of electricity, water availability.... This is killing most of the residents trying to make a honest living. We are paying more than we should, we are subsidising debts written off amounting to millions of rands... Signing the petition, but feel it will not change anything	Lisa	self-employed
	2026-09-12 08:09:27	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I do not support the bullying of the anc and it hate towards orrinary south africans and their ways to steel from the community who they stollen to the brim through corruption and looting the tax payers money. Also their poor abillity to build but only destroy what they got for free.. 32 yesrs of black apartheid forced me to look out and provide for myself. So i do not support the anc or their constructive ways of corruption and theft of South Afircans of all walk of life. You can't encourage South Africans to be energy sufficient because Eskom couldn't keep the lights on, and now that people are energy sufficient and don't need to rely on the grid, you want to penalise them. Makes no sense, you need to reform the entire energy sector and make it fair and equitable for all, the prices we pay already are sky high and ludicrous. There are reports that Eskom has too much electricity than what is needed, and yet we still need to pay exorbitant prices.	johan	retired
	2026-09-12 08:09:41	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I was a diligent payer of e toll and came short. SA today is lies, lies , lies. Eskom could not provide and we had out of desperation, to look after ourself. Now they wish to penalise the population. It simply is not right. May i use stronger words? Bunch of crooks!	Isak	retired

	2026-09-12 08:14:04	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This is so typical of this corrupt and inefficient ANC Government of ours. They and Eskom caused the so called "Solar problem" and now they want to penalise the people who have been forward thinking and have made plans to provide their own energy. This has come at great cost to these people, and many have had to take out loans to get a solar system up and running so as to improve the quality of their lives which were being disrupted by the lack of constant electricity. We are a big part of the reason as to why the ESKOM grid is now stable - ESKOM consumption is down significantly as Solar Power increases and it is totally unfair to expect the remaining consumers to pay for the mistakes and dishonesty of the people who created the problem.	Roberto	retired
	2026-09-12 08:14:32	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	We as Residents & as Pensioners are really struggling with people at Eskom that are keep on looking for increasing Electricity prices. We are on pre-paid AND we getting less & less UNITS when we purchase with all the Eskom AND City Power increases.	Ebrahim	retired

	2026-09-12 08:42:53	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Households and small businesses that invested significant private capital into rooftop solar, batteries, and energy efficiency to protect themselves from load shedding will be forced to pay higher monthly baseline connection fees. This structural shift acts as a financial penalty on private decarbonisation, extending solar payback periods and increasing electricity bills for low-volume and frugal users. The public should not be held liable for Eskom's corruption and lack of planning. Solar users were encouraged to buy solar (of their own expense) to help lessen the loadshedding and now are being asked to pay again for helping eskom in the first place. NERSA must place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. A tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes must be put in place (without starting the bottom tier price at the current top price as eskom has been pushing through extra price increases over the last few years by alternating these price plans). An independent socio-economic impact assessment must be done on how fixed monthly fees affect low-income and energy-conserving households.	Tanya

	2026-09-12 10:47:14	No I do not	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	The concept of forcing consumers to invest in solar, on account of non-delivery by ESKOM, and then penalizing them on a 'no free ride' principle is, at best, totally disingenuous. Where is the 'free ride' in a significant investment in solar? It will also not achieve anything, those who can will continue to invest and leave the grid entirely. The fact that retail consumers will not be able to partake in a competitive market, in contrast to large industrial users, clearly demonstrates the total disregard that the government has for its citizens. That should lose them elections!	Alexander	business owner

	2026-09-12 12:16:57	No I do not	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	Due to the corruption and bad management I have had to install solar panels as the breakdowns of the grid which is almost a daily occurance, and sometimes takes 2 or 3 days to restore. Firstly, Eskom must root out corruption and use the money saving to do proper maintenace. Impossible to run a business with pathetic power supply whic causes me to lose money and which in turn gives the government less tax for me to pay. Unfortunately half of my tax payments will also be stolen.	Christopher	self-employed
	2026-09-12 12:21:43	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Mandatory Fixed Grid Charges on Rooftop Solar: The policy explicitly targets grid-connected solar and partial-defection users under an “anti-free-riding” principle, shifting tariff structures from volumetric consumption (units used) to high, unavoidable fixed monthly connection fees. The “Captive Ratepayer” Risk: Large industrial and commercial users exceeding set thresholds (e.g., 1 MW) will be allowed to bypass municipal grids to buy cheaper power directly from private traders. Ordinary households and small businesses will remain “captive” to municipal distribution grids, risking higher tariffs to cover municipal revenue deficits and legacy cross-subsidies. Wholesale Price Volatility & Market Power: With Eskom Generation remaining the dominant producer, risks of market power, pricing manipulation, and trading speculation could translate into retail tariff volatility if regulatory protections are inadequate. Restructuring the Distribution Value Chain: Municipal and Eskom distributors must separate the physical grid (“wires”) from electricity sales (“retail/trading”), introducing separate fees for grid delivery and energy units. 	2026-09-12 12:38:39	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I am a residential solar owner and I stand fully opposed to this Position Paper, particularly the proposed "anti-free-riding" fixed capacity charges — the so-called Sun Tax. I invested a significant amount of my own money to install solar. That was not a choice made to dodge grid costs; it was a direct response to Eskom and the government's own failure to guarantee reliable electricity. I took on that cost and risk entirely myself, with no subsidy or support from the state. To now be penalised for it, through heavy fixed charges I cannot avoid regardless of how little power I draw, is unacceptable. No one has the right to tax the sun. It belongs to no one and it is free — taxing households for using it is no different from taxing us for the air we breathe. Solar households already carry the full cost of maintaining, repairing, and eventually replacing their own systems. We don't ask Eskom to contribute a cent toward that upkeep, despite reducing the load we place on the grid. Framing that reduced usage as something to be "recovered" from us is neither fair nor logical. 1. Stop the Sun Tax — Do not penalise private investment in solar with punitive fixed grid fees. This investment fills a gap the state itself created. 2. Protect captive consumers — Municipalities must be barred from hiking tariffs on non-solar households to claw back revenue lost to industrial or off-grid defection. Ordinary households have no alternative supplier and shouldn't be left to absorb costs created by others' decisions or by the state's failure to keep up with demand. 3. Transparency first — Electricity is already unaffordable, and property rates and municipal charges keep climbing with little to show for it in service delivery. Any reform of the wholesale market needs to be transparent about exactly who is paying for grid infrastructure, and not quietly shift that burden onto ordinary households, solar or not. Households who invested their own capital to compensate for a supply crisis they did not create should be supported, not punished. I call on the Department to withdraw the proposed fixed capacity charges, explicitly prevent municipalities from shifting recovered costs onto captive consumers, and commit to full transparency before any tariff reform goes ahead. 	2026-09-12 12:54:44	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	A grid tied residential solar installation was only necessary because the government (they are still all SOE's and I include the local municipalities) could not provide or transmit reliable electricity. This despite having had my contributions for more than 20 years. To penalise a grid tied solar residence now would be kicking citizens after pushing them to the floor. Come up with a more equitable solution that doesn't penalise citizens for being less of a burden to the state - no one in government seems to acknowledge that the only reason that Eskom is in its current operational state is because they have to supply less electricity due to all the large and small solar installation Stop pretending that there is "free electricity", it has to be generated at a cost. Cross subsidies for indigent/poorer households should not be managed by incompetent municipalities trying to fleece their tax base and should rather be ring fenced finance separate from any commercial operation. Our problems are not unique, look to the rest of the world for best practice and stop the binary myopic view of South Africa through a political lens.	Eduard

	2026-09-12 13:42:21	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	So sick and tired of the government bleeding the consumers dry, no money avaiable to repair anything in this country, but they have money for parties, nonsensical celebrations and individuals travelling all over the world on our dime.	Maria	retired
	2026-09-12 13:44:01	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Why must I who has purchased solar panels at a big expense because of loadshedding must now be penalized. Eskom must become a private enterprise and be able to dictate their prices by what the market will dictate. They have taken our tax money for too long. They must take their chances on the open market and sink or swim. There will be others that will be able to provide at a competitive price.	stella	
	2026-09-12 13:44:52	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		Lance	retired
	2026-09-12 13:44:58	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The counter-argument (which many solar owners share) It feels like a penalty for reducing your dependence on a failing utility. It undermines the financial case for solar that government previously encouraged. It hits middle-class households that invested their own money to solve load-shedding and high prices, while cross-subsidies and inefficiencies elsewhere remain largely unaddressed. In some municipalities the fixed charges appear disproportionate to the actual incremental cost of serving a low-usage solar customer. The new electricity pricing policy and the move toward SAWEM are supposed to create cleaner cost-reflective tariffs, but the transition is messy and, for many residential solar owners, painful right now.	Ben	employed individual
	2026-09-12 13:45:51	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	How typical!!! Can't be trusted to provide a continual supply of electricity, but want to charge everyone exorbitant prices for doing so! WHAT IS BEING DONE FOR FUTURE EXPANSION?? If you can hardly produce enough electricity NOW to keep up with demand, what is happening in regard to future supply, with ever increasing housing needed for the burgeoning population, and new businesses??? Oh .... and I almost forgot the vast power required to supply upcoming data center(s)??!!! For anyone with more than two brain cells, its quite clear to see that there is no apparent planning for any future expansion by ESKOM!! So before you start ripping off the public again with these dumb ideas, get off your stupid fat asses and tell us what your future plans are, because load shedding will become a reality once again, much worse than before, even with the constant stealing of our money that pays your exorbitant salaries and unnecessary bonuses!	Carol	retired

	2026-09-12 13:46:27	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This represents extreme economic discrimination. People are not to be punished for investing their own, hard-earned money in solar.	Deon	retired

	2026-09-12 13:59:24	No I do not	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	I installed solar due to Eskom being unable to deliver reliable power. I have yet to recover this investment. Now there is a proposal to tax me based on a sunk cost i have not recovered from to ostensibly maintain their own infrastructure regardless of how much i use. Wear and tear is use driven not expansion driven. User pays principle should still apply. If this continues i will move completely off-grid.	Etienne	business owner
	2026-09-12 14:00:54	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I reject any “sun tax,” punitive fixed charges targeted at solar users, or registration regimes that function as barriers or revenue grabs. The sun belongs to no one. South Africans who invested in solar did so because Eskom failed them. Stop punishing private solutions to a public failure. Focus on fixing generation, transmission, and governance instead of extracting more from those who adapted. Legitimate, non-discriminatory network charges for actual use of the grid are one thing; taxing sunlight and self-reliance is another.	Norman	
	2026-09-12 14:02:17	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	After state-failure in the energy generation sector, it’s clear that regulated privatisation of the market needs to occur. Many private consumers have helped to reduce demand on the system through expensive installations of solar power. It seems very unjust that these private individuals should now be penalised for their investment through high fixed charges. Moreover, penalising the remaining non-solar consumers because of Eskom’s inefficiency is also unjust.	Richard	employed individual

	2026-09-12 15:04:51	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom and our government are milking the consumer in place of taking accountability for their own incomitance. The private sector is filling that space with solar from their own pocket to survive. In this case I support ZERO tariffs, increased base charges or additional taxes on those citizens who has put in place solar solutions. Instead, we should actually be thanked.	Naas	
	2026-09-12 15:05:18	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It is absurd to expect consumers to pay Eskom for their inadequacy, corruption and abnormally high salaries for some of their employees. Most solar users started using solar energy because they saw no alternative option since they could not rely on Eskom's grid. They spent a fortune (and many people probably borrowed the money!) to sustain themselves through difficult times. Had they not done that, Eskom would have struggled more with even more downtime of the grid. They could only provide what they did because solar users lifted the burden for Eskom. Let everyone pay for exactly what they use of the grid. And do not let major companies (who can probably afford the expense!) get away with paying less than the average home user. A vast majority of home users do their best to save electricity, because of the expense. Why do they now have to be 'penalized'? People should rather be given incentives to use electricity sparingly, like it used to be. And let those that don't care a hoot, and use it without restriction, then pay more per unit, like it used to be.	Riana

	2026-09-12 21:48:39	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I’m against this approach. People who invest their own money in solar are not the problem, they are actually reducing pressure on an already struggling electricity system and taking some responsibility for their own energy needs. If the grid needs sustainable funding, then the solution should be a fair, transparent tariff model that reflects the actual cost of maintaining the network, not punitive charges that effectively punish people for generating their own electricity. And the answer cannot be to make ordinary households who cannot afford solar carry an ever increasing burden either. We need an energy system that encourages investment, competition and reliable supply, while protecting consumers. I’m all for paying a fair share for infrastructure I actually use. I’m just not in favour of turning private investment in alternative energy into another revenue-raising mechanism. Fix the system, make the costs transparent, and don’t punish people for trying to become less dependent on it.	Kulie	self-employed
	2026-09-12 21:48:46	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It is disturbing that the government can go this far...one would think that by having solar we could actually help to lessen the load on the grid, but this yet again shows the extreme of the incompetence	Tsepo	employed individual

	2026-09-12 23:02:25	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I object to any tariff or policy that imposes disproportionate fixed or network charges on households and small businesses that invested in rooftop solar or battery storage. These consumers did not cause South Africa's electricity crisis. They responded to load shedding and unreliable supply by investing their own money in private generation. Their investments added capacity, reduced demand on Eskom and helped keep homes and businesses operating. Any tariff change must therefore be evidence-based, rational, proportionate, non-discriminatory and subject to meaningful public participation. It must comply with the Constitution, applicable electricity legislation, PAJA, NERSA procedures and relevant municipal legislation. Fixed charges and cost causation A fixed charge may be justified only to recover the efficiently incurred cost of maintaining a connection and providing network services. It should not be used primarily to replace lost electricity-sales revenue. Tariffs must distinguish between: • customer and metering costs; • demand and capacity costs; • energy and bulk-purchase costs; and • separately identified social or municipal policy costs. Each cost should be recovered through an appropriate and transparent charge. A blanket fixed charge that ignores actual usage and network demand may unfairly penalise solar users, low-use households and small businesses. Costs and benefits of solar Any cost-of-supply study must consider both the costs and benefits of distributed generation. Solar and batteries may reduce bulk-energy purchases, technical losses, peak demand, emergency procurement and pressure on the grid. These benefits must be quantified rather than ignored. Before approving a new charge, NERSA or the relevant municipality should publish: 1. A cost-of-supply and cost-allocation study. 2. The proposed revenue requirement and network costs. 3. The methodology used to allocate costs between customer classes. 4. The impact on solar, non-solar, low-use, prepaid and small-business customers. 5. The extent to which the charge replaces lost revenue rather than recovering network costs. 6. The avoided energy, capacity and network costs resulting from private generation. 7. The treatment of municipal surpluses, cross-subsidies, losses and unrelated expenditure. 8. An affordability, investment and socio-economic impact assessment. Fairness and private investment Large customers increasingly have access to private generation, wheeling and bilateral procurement, while households and small businesses generally have fewer alternatives. Costs must not simply be shifted to these more captive consumers. Consumers were encouraged to reduce reliance on Eskom and participate in electricity generation. A tariff that materially undermines the value of their lawful investments risks discouraging future investment in solar, batteries, energy efficiency and demand response. Any new tariff should therefore be technology-neutral, based on objective costs and phased in gradually. Existing investments should receive transitional protection where necessary. Objection and alternatives I object to any charge that: • is designed to neutralise the financial benefit of solar or batteries; • recovers lost municipal revenue rather than legitimate network costs; • shifts costs from large customers to captive consumers; • ignores the benefits of distributed generation; • conceals unrelated municipal expenditure in electricity tariffs; or • is introduced without adequate disclosure and consultation. Legitimate network costs should be recovered transparently and fairly from all network users. Less punitive alternatives include properly designed capacity or demand charges, time-of-use tariffs, transparent service charges, fair export compensation, incentives for batteries and demand response, and separately funded social subsidies. Conclusion South Africa does not have a solar-user problem. It has an electricity-system and municipal-finance problem. Households and businesses that invested in solar did not cause the crisis. They used their own capital to protect themselves from unreliable supply, add generation capacity and reduce pressure on the national grid. They should not be punished for doing what public policy sought to encourage. Any proposed charge that is not demonstrably cost-reflective, transparent, rational, proportionate and non-discriminatory should be rejected. References 1. 	2026-09-13 00:10:51	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. I insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes.	Sijabule	employed individual
	2026-09-13 00:53:38	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		Shane	

	2026-09-13 01:25:11	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I strongly object to the direction of this policy. South Africa needs electricity-sector reform. Eskom's generation monopoly needs to end, private investment must be encouraged, and genuine competition should be welcomed. But reform cannot mean allowing large consumers to escape the system while ordinary households are left carrying the costs. My biggest concern is the treatment of residential consumers and those who have invested their own money in solar. Solar should be incentivised, not penalised. A household that generates its own electricity is reducing demand on Eskom and the national grid. Where possible, surplus power should be fed back into the grid. Calling this "free-riding" and recovering costs through increasingly unavoidable fixed charges sends exactly the wrong message. Government should be encouraging South Africans to invest in renewable energy, not making that investment financially unattractive. There is also a serious risk that ordinary middle-class households become the "captive" consumers left to carry the cost when large commercial and industrial customers obtain cheaper electricity outside municipal systems. The middle class is particularly vulnerable. Many households earn too much to receive meaningful assistance but cannot afford to become completely independent of the grid through solar, batteries and other infrastructure. If municipalities lose revenue from large customers, the answer cannot simply be higher tariffs and fixed charges for households that have nowhere else to go. Municipal electricity distribution requires structural and financial reform. And while we debate how to extract more money from consumers, South Africa continues to underutilise its enormous renewable-energy potential. We have abundant solar and wind resources, including significant offshore wind potential identified through research dating back years. We need more generation, better infrastructure, better management and genuine competition. We do not need another mechanism for consumers to pay for systemic failure. I support electricity-market reform, competition and the unbundling of Eskom. But I strongly oppose any implementation that penalises private renewable generation or leaves ordinary residential consumers carrying the financial consequences of municipal and electricity-sector failures. The citizen generating their own electricity should not be treated as a problem. They should be treated as part of the solution.	Robbyn	unemployed individual

Stop over charging people on basics..that already battle to keep head above the water!!!	Bonita	retired
	2026-09-13 06:36:52	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I strongly object to any proposal that would impose additional fixed monthly charges, tariffs, or levies on households because they have installed solar energy and consequently use less electricity from the grid. For years, South African households experienced an unreliable electricity supply and load shedding, forcing many to invest their own money in solar panels, batteries, and other renewable-energy solutions to secure a reliable supply. These households did not cause the electricity crisis; they responded to it. It is therefore unfair to penalise households for becoming more energy independent. Solar energy reduces pressure on the national grid, reduces reliance on fossil fuels, and contributes to addressing the global climate crisis. Government policy should be encouraging this transition, not creating financial disincentives for households that have proactively invested in renewable energy. Households already pay charges associated with having a grid connection. If additional charges are proposed, government should clearly demonstrate what additional costs they represent and why existing charges are insufficient. Reduced electricity consumption should not become a reason to impose higher unavoidable monthly costs. The principle is also simple: a business should not penalise customers because they buy less of its product. It should improve its service, control its costs, and remain competitive. Electricity providers should likewise focus on efficiency, reliability, transparency, and competitiveness rather than recovering lost revenue by imposing additional costs on consumers. I therefore call upon the Department of Electricity and Energy to: 1. Reject punitive fixed charges on households that generate their own solar electricity. 2. Reject additional tariffs designed primarily to recover revenue from households using less grid electricity. 3. Recognise and encourage household investment in renewable energy. 4. Prevent households from being subjected to multiple or escalating charges for maintaining an electricity connection. 5. Ensure that electricity-sector reform does not unfairly transfer systemic costs onto ordinary households. South Africans who invested in solar energy should not be punished because their investment has enabled them to use less electricity from the grid. Renewable energy should be encouraged as part of the solution, not treated as a threat to revenue.	Phadiel	employed individual

	2026-09-13 07:02:28	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Corruption and poor governance forced the implementation of solar power. Solar power was actually promoted when there was load shedding. They get totally unwarranted fat bonuses , they should limit the bonuses as the management does not warrant it. Now that there is no more load shedding most definitely not because Eskom has come to the the party but because solar has been implemented at consumers costs,. They now make a complete turnaround and punish the very same people that got them out of trouble. The very same people that they are targeting will now go off grid and they will be left with non payers mainly. Their incompetence doesnt alow them to see further than their nose. Privatize Eskom and you will see the dead wood being thrown out	Temmy	retired
	2026-09-13 07:03:00	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Stop the "Sun Tax": Do not penalise private capital and solar investments with punitive fixed grid fees. Individuals have used their own money to build infrastructure because Eskom failed because of bad management. Rather than taxing people more they should do what all other struggling businesses do, cut unnecessary costs and increase efficiency. Protect Captive Consumers: Bar municipalities from hiking tariffs on non-solar homes to cover lost revenue from industrial and off-grid defection. People are already struggling to pay the current costs of electricity. This will just make the cost of living higher and push more people into poverty. Transparency First: Ensure wholesale market reforms do not leave everyday households footing the bill for grid infrastructure. Companies can claim electricity costs as a deduction but everyday households have no relief from high costs as above, this will push more people into poverty.	Leanne	business owner

	2026-09-13 08:43:44	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	As an individual earning only commission and or fees it is difficult to budget as your income fluctuates. So increasing electricity rates leaves a burden. No power leaves a burden of not being able to work and having more fees on top of higher fees runs you to the ground and not having money to live. Solar started due to eskom not being able to deliver. Yet we paid more somehow even when we had no power for days on end. How did that work and where did that surplus go. Not our fault. Solar was for energy security. It still is die to break downs. Thus not providing should also be illegal then as we pay more in those times as well. We cannot continue to meep paying and not have power to work or even people employing people and cannot operate. Charging other continuously without supplying is also a crime. People reverted to energy security for non supply and high rates being unsustainable. This is just another way to govern steel and tax more for not being able to provide cheap energy yet you want the economy to boom but fail to see if you deliver on cheaper running costs people will have more to spend, businesses can thrive and employers can employ more and generate more taxes automatically. Wake up government! Your killing your own steeling pool even further	Jaco	self-employed

	2026-09-13 09:26:46	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Government turned SA into a failed state on all departments. As a result the lawlessness at the Union Buildings filtered down to grass root level. Solar systems were installed at huge costs to literally keep the lights on in South Africa, including the Union Buildings. Now this same lawless regime want to punish those who kept the lights on. Eskom falsely claim to have been turned around and is again a reliable electricity supplier, whilst still generating less power than 15 years ago. The lawlessness at Eskom resulted in vast networks trading in stolen power cables, so no matter what Eskom generate, the distribution network is becoming more and more unreliable. Punishing those who kept the lights on is the same as biting the hand that feeds you. It is well documented that the bloated staff compliment at Eskom earn about 30% more in wages compared to anywhere else in the private sector. Eskom must reduce staff and have all employees reapply for their positions, at a 30% reduced wage. If Eskom want to compete it should do so on equal footing with competitors.	Leon	retired

	2026-09-13 09:54:19	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Stop the "Sun Tax": I strongly object to the introduction of punitive fixed grid fees targeting households and businesses that have invested in rooftop solar. This policy penalises private capital investment in clean energy, undermining national climate commitments. By imposing unavoidable capacity charges, the state discourages innovation, energy independence, and resilience. The Constitution guarantees the right to property and freedom of trade; punitive levies on lawful private investment violate these principles. Requested Relief: Remove all proposals for fixed monthly "anti-free-riding" charges. Instead, incentivise distributed generation through fair net-metering and transparent grid maintenance contributions. Protect Captive Consumers: The Position Paper's framework unfairly burdens ordinary households who cannot afford solar or off-grid systems. Allowing large industrial users to bypass municipal distributors while shifting costs onto residential consumers entrenches inequality. Municipalities should not be permitted to balance their books by hiking tariffs on captive households. This approach risks deepening energy poverty, contradicting the constitutional obligation to provide affordable basic services. Requested Relief: Explicitly bar municipalities from passing industrial revenue losses onto non-solar households. Establish equitable cost-sharing mechanisms that protect vulnerable consumers. Transparency First: Wholesale market reforms must not proceed without clear safeguards for everyday households. The Position Paper lacks transparency on how grid infrastructure costs will be allocated. Without explicit protections, households risk becoming the default payers of last resort for systemic inefficiencies. Constitutional public participation requires that reforms be explained in plain language, with full disclosure of financial impacts on ordinary consumers. Requested Relief: Mandate transparent tariff methodologies, publish detailed cost allocation models, and ensure independent regulatory oversight before implementation. Therefore, in conclusion: The proposed reforms, if enacted without amendment, will: - Penalise clean energy investment, - Entrench inequality between industrial and household consumers, and - Expose ordinary South Africans to unaffordable electricity costs. I therefore request that the Department withdraw or amend the Position Paper to align with constitutional principles of fairness, transparency, and public participation.	Duncan	retired

	2026-09-13 12:16:46	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I write in my capacity as a private citizen and paying electricity customer to register my objection to the Draft Revised Electricity Pricing Policy in its current form, and to set out the grounds on which I believe it fails the people it is meant to serve. 1. The context in which this policy is being introduced Electricity tariffs in South Africa have risen by more than 900% since 2007, against cumulative inflation of a small fraction of that figure. Over the same period, the reliability of supply collapsed, and households and businesses were left to fund their own solutions to a crisis they did not create. Any policy that proposes a further move towards "cost-reflective" pricing over five years must begin by acknowledging that citizens have already paid, repeatedly and heavily, for costs that were not efficiently or prudently incurred. The draft does not adequately acknowledge this, and it offers no assurance that the trajectory of the past two decades will not simply continue under a new label. 2. Municipal debt and the burden on compliant customers The Minister has stated publicly that between one and 2.5 percentage points of the tariff paid by compliant customers currently exists only because Eskom cannot recover what municipalities owe it. In other words, households who pay their accounts in full have for years been made to underwrite the failures of municipalities that do not. The draft policy states that bad debt, theft and inefficiency will no longer be recoverable through tariffs. I welcome that principle. But a stated principle is not a safeguard. I therefore submit that the final policy must: prohibit, in binding and enforceable terms, the inclusion of any municipal arrears or unrecovered debt in any tariff approved by NERSA, with an explicit obligation on the Regulator to reject applications that include it; require that the removal of this component be reflected as a visible reduction in the next tariff determination, not absorbed elsewhere in the tariff; make the ring-fencing of municipal electricity revenue a legal requirement with consequences for non-compliance, rather than an aspiration. A citizen pays for the electricity they consume. What a municipality does with that revenue is a matter between the municipality and the State. It is not, and must never again become, the paying customer's liability. 3. Households that invested in their own generation Hundreds of thousands of households installed solar and battery systems at considerable personal expense. They did so not as a lifestyle choice but because the national utility could not keep the lights on. These households reduced demand on a failing grid at precisely the moment it was most needed, and in doing so they did the State a service. The draft proposes that such customers "contribute towards the cost of maintaining the network" through network charges, alongside net-billing arrangements. I object to any structure that, in practice, penalises self-generation through fixed or capacity charges that recover from solar households the revenue lost because they no longer buy as much electricity. To ask people to pay a premium for having solved a problem the utility created would be manifestly unjust. I ask that the final policy: guarantee that network charges for prosumers are strictly limited to the demonstrable, audited cost of the grid services they actually use; prohibit fixed charges designed to recover lost sales volume from self-generating customers; set export credits under net billing at a rate that reflects the genuine value of that electricity to the system. 4. The impact on poor and vulnerable households The years of load-shedding fell hardest on those who could least afford alternatives. The Minister has now conceded in Parliament that no targeted study has measured the impact of tariff increases on poor households. It is not acceptable to move towards cost-reflective pricing without that evidence. The proposed increase in the Free Basic Electricity allocation is welcome, but it has not been costed, and the existing allocation is widely diverted by municipalities away from its intended recipients. I request that the policy be finalised only after a published affordability impact assessment, and that the delivery of Free Basic Electricity be made auditable and enforceable. 5. Accountability The decline of an electricity system that was once among the most reliable in the world is the result of identifiable decisions by identifiable people. No pricing policy can be credible while the cost of that decline continues to be socialised onto customers and no meaningful accountability follows. I ask that the policy explicitly exclude from recoverable costs any expenditure arising from mismanagement, irregular procurement or negligence, and that the Department report publicly on the consequences imposed for such conduct. Conclusion I do not oppose transparency, nor do I oppose the principle that tariffs should reflect only efficient and prudent costs. I oppose a policy that states these principles while leaving the mechanisms to enforce them undefined, and that risks shifting yet more cost onto the citizens who have already borne the consequences of the sector's failure. I respectfully request that the draft be revised in line with the points above before it is finalised. I would welcome written acknowledgement of this submission. Thanks.	Daniel	self-employed

	2026-09-13 12:21:48	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Mandatory Fixed Grid Charges on Rooftop Solar: The policy explicitly targets grid-connected solar and partial-defection users under an “anti-free-riding” principle, shifting tariff structures from volumetric consumption (units used) to high, unavoidable fixed monthly connection fees. The “Captive Ratepayer” Risk: Large industrial and commercial users exceeding set thresholds (e.g., 1 MW) will be allowed to bypass municipal grids to buy cheaper power directly from private traders. Ordinary households and small businesses will remain “captive” to municipal distribution grids, risking higher tariffs to cover municipal revenue deficits and legacy cross-subsidies. Wholesale Price Volatility & Market Power: With Eskom Generation remaining the dominant producer, risks of market power, pricing manipulation, and trading speculation could translate into retail tariff volatility if regulatory protections are inadequate. Restructuring the Distribution Value Chain: Municipal and Eskom distributors must separate the physical grid (“wires”) from electricity sales (“retail/trading”), introducing separate fees for grid delivery and energy units. 	2026-09-13 13:03:39	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The undersigned strongly opposes the measures outlined in the Position Paper, specifically regarding the introduction of fixed capacity charges and so-called "anti-free-riding" mechanisms targeting distributed photovoltaic generation. Policies designed to penalize self-consumption through punitive fixed fees present severe technical, legal, and economic flaws, as evidenced by regulatory failures observed in international markets. 1. The Fallacy of the "Anti-Free-Riding" Narrative and Systemic Benefits of Distributed Generation Classifying prosumers as agents avoiding network costs ("free riders") ignores the net, measurable benefits that distributed generation provides to the electrical grid: Capital Expenditure (CapEx) Deferral: Localized generation reduces congestion on transmission and transformation lines during daytime peak loads. As demonstrated by empirical studies in liberalized markets (such as Australia and various US states like California), distributed solar defers the need for costly peak-capacity grid upgrades. Reduction of Transmission Losses: Energy consumed in situ eliminates the line losses associated with long-distance transport from centralized power plants. 2. The Regulatory Error of Fixed Capacity Charges (International Precedents) Imposing heavy fixed capacity charges to recover utility revenue shortfalls caused by lower volumetric consumption creates perverse incentives and undermines the energy transition: Price Signal Distortion: A high proportion of fixed costs decouples the utility bill from actual consumption behavior. This destroys the economic incentive for energy efficiency, demand flexibility, and the adoption of energy storage systems (batteries), which are critical pillars for future grid stability. The California and Australian Precedents: Similar attempts to impose punitive fixed fees or retroactive penalties on residential solar (such as the Net Energy Metering reforms in California or debates over residential demand charges in Australia) triggered intense consumer backlash, legal challenges, and a severe slowdown in private investments in clean energy, frequently forcing regulators to backtrack in the face of economic inefficiency. 3. Retroactive Effect and Violation of Legal Certainty Many consumers planned and executed substantial capital investments (CapEx) relying on a regulatory and tariff framework based on volumetric consumption. Altering the tariff structure punitively post-facto violates the principle of legal certainty and legitimate expectation, penalizing retroactively those who proactively advanced national decarbonization targets. Conclusion We urgently request the complete removal of any punitive measures or discriminatory fixed tariffs targeting photovoltaic system owners. Grid sustainability must not be pursued by penalizing efficiency and energy autonomy; rather, it requires market evolution centered on flexibility, the remuneration of balancing services provided by storage systems, and an efficient rationalization of traditional operators' operational expenditures (OpEx). 	2026-09-13 13:32:13	No I do not	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	**PUBLIC COMMENT: PROPOSED ELECTRICITY MARKET REFORM AND THE TREATMENT OF ROOFTOP SOLAR CUSTOMERS** I support the development of a reliable, competitive and financially sustainable South African electricity system. However, I strongly object to any tariff structure that effectively penalises residential and small-business consumers for investing their own money in rooftop solar and reducing the amount of electricity they purchase from the grid. I accept that a customer who remains connected to the electricity network should make a reasonable contribution toward the genuine cost of maintaining that connection and the distribution infrastructure used by that customer. However, there is an important distinction between paying a fair grid-access charge and imposing large fixed charges on solar customers in order to replace revenue that Eskom or municipalities have lost because those customers now purchase less electricity. **Consumers should pay for services they receive, not compensate electricity suppliers for electricity they no longer need to purchase.** A household that purchases and installs solar panels, batteries and an inverter has invested private capital to reduce its dependence on the electricity system. That household has also reduced demand on the national generation system, particularly during periods when its solar system is generating electricity. Government policy should encourage such private investment rather than financially penalise it. 1. Fixed charges must be demonstrably cost-reflective If a grid-connected household creates an identifiable cost for the distributor, that cost should be transparently calculated and recovered fairly. A fixed charge should therefore reflect the reasonable cost of providing and maintaining the customer's connection, metering and network capacity. It should not become a mechanism for recovering historical losses, inefficient expenditure, municipal revenue shortfalls, cross-subsidies unrelated to that customer's grid usage, or revenue lost because consumers have reduced their electricity purchases. If the proposed tariff is genuinely based on the cost of providing the grid connection, Government and NERSA should be required to publish the calculation demonstrating this. 2. Solar customers should not be treated as "free riders" Describing households that have invested substantial amounts of their own money in alternative generation as "free riders" is inappropriate unless those customers are actually receiving grid services without contributing toward them. Many solar customers continue paying connection charges and purchasing electricity from the grid when required. They have simply reduced the quantity of electricity they purchase. Reducing consumption is not free riding. A consumer who installs more efficient lighting, a solar geyser, insulation or energy-efficient appliances also reduces electricity purchases. A solar installation is another form of private investment that reduces demand. Consumers should not be penalised simply because their investment has been particularly effective. 3. The policy risks creating a perverse incentive South Africa has spent years encouraging additional private generation because the country has experienced severe electricity shortages and load shedding. Thousands of households and businesses responded by spending their own capital on solar generation and battery storage. Introducing substantial unavoidable charges after consumers have made those investments sends the wrong message: **Invest in reducing pressure on the electricity system, and once enough people do so, the tariff structure will be changed to recover the revenue that the electricity supplier has lost.** That creates regulatory uncertainty and damages public confidence in future government energy initiatives. 4. Electricity distributors should not be guaranteed their previous sales revenue The transition to distributed generation inevitably changes the traditional electricity business model. The solution cannot simply be to transfer the distributor's declining electricity-sales revenue onto consumers through ever-increasing fixed charges. In virtually every industry, technological change requires businesses and institutions to adapt. Electricity distributors should likewise become more efficient and restructure their operations rather than being protected indefinitely from changing consumer behaviour. A regulated monopoly should not effectively be guaranteed the same revenue regardless of how much of its product consumers actually purchase. ### 5. Households must not become captive ratepayers I am particularly concerned about a future market in which large industrial customers are increasingly able to procure electricity competitively while ordinary households and small businesses remain captive to municipal or Eskom distribution networks. If large electricity users are permitted to leave or substantially reduce their contribution to the traditional electricity supply model, the resulting revenue shortfall should not simply be transferred to residential consumers and small businesses through escalating fixed charges. That would socialise the financial consequences of market reform onto the customers with the least bargaining power. 6. Rooftop solar provides benefits to the electricity system The tariff methodology should recognise not only the costs associated with solar customers but also the benefits they can provide. Distributed solar can reduce daytime demand, reduce generation requirements, reduce transmission of electricity over long distances and potentially defer certain network investments. Where customers export electricity into the grid, there should furthermore be a transparent and reasonable mechanism for compensating them for electricity supplied to the system. Any cost-of-service study used to justify solar tariffs should therefore calculate **both the costs and benefits of distributed generation**. 7. Consumers should have the right to genuine energy independence A household generating electricity entirely behind its own meter, using privately owned equipment on private property, should not be charged for electricity that it generates and consumes itself. Government and regulators should clearly establish the principle that: **Electricity generated and consumed behind a customer's meter is not electricity supplied by Eskom or a municipality and should not attract an energy charge.** Where the customer uses the public network, reasonable network charges may apply. The distinction is fundamental. 8. Proposed safeguards I therefore request that the final Electricity Pricing Policy and electricity-market framework expressly provide that: 1. Fixed network charges must be independently demonstrated to be cost-reflective. 2. Solar customers may not be subjected to punitive charges merely because they purchase less electricity. 3. Behind-the-meter generation and consumption must not attract an electricity energy charge. 4. Tariffs must recognise both the costs and benefits that distributed generation creates for the electricity system. 5. NERSA should require distributors to publish the methodology and calculations supporting fixed charges. 6. Residential and small-business customers should be protected from being forced to absorb revenue lost when large customers migrate to private electricity traders. 7. Feed-in/export tariffs should be transparent, fair and periodically reviewed. 8. Consumers should be permitted to reduce their reliance on the grid without being financially penalised for doing so. Conclusion South Africa needs a financially sustainable electricity grid, and consumers who use that grid should contribute fairly toward its genuine costs. However, **cost recovery must not become revenue protection**. Households that have invested their own savings in solar generation should not be used as a new r	RICHARD	business owner

	2026-09-13 14:10:56	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I reject the proposed Electricity Sector Market Transformation Position Paper in its entirety. This policy is not reform—it is exploitation. The government seeks control, and unfair policies that strip citizens of free will. It is a corrupt attempt to penalise households for solving a problem the state itself failed to fix. It is simply another way for government to be corrupt and steal money from ordinary citizens. We needed solar because the government could not provide reliable electricity. Families invested their own money to secure power when the grid collapsed. Now, instead of supporting self-reliance, the government wants to punish those who made alternative plans with punitive fixed grid fees and capacity charges. I specifically reject: 1. The Sun Tax: unavoidable monthly levies on solar households, penalising private capital and discouraging clean energy adoption. 2. Tariff hikes that trap non-solar households as captive consumers, forced to subsidise industrial defection and municipal mismanagement. 3. Market unbundling that allows large mines and factories to bypass municipalities, leaving ordinary homes to carry the financial burden. 4. The erosion of household budgets through unavoidable fixed charges, regardless of consumption. 5. The lack of transparency in wholesale reforms, which risks leaving everyday citizens footing the bill for failing infrastructure. This Position Paper is an overreach. It discourages clean energy, undermines private investment, and traps households in spiralling costs. It is fundamentally unjust to penalise citizens for taking initiative when government failed to deliver electricity in the first place. I therefore call on the Department of Electricity and Energy to: 1. Stop the Sun Tax and protect private solar investment. 2. Protect captive consumers from unfair tariff hikes. 3. Ensure transparency so reforms do not burden ordinary households. The government has become a burden, seeking only to extract money and consolidate power. Citizens do not need more bureaucracy and penalties—we need fair, transparent policies that protect households and encourage clean energy adoption.	Natasha	business owner

	2026-09-13 15:12:45	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I reject the proposed Electricity Sector Market Transformation Position Paper completely. This policy is exploitative and rob consumers of their freedom. Instead of rewarding forward thinking households, they are punished, exploited and faced with governmental corruption. Over-extended households that are trying to make their lives liveable amidst massive governmental failures are faced with a corrupt, over-reaching, unhelpful government. To compensate for the failures of our government to provide affordable, reliable electricity, citizens must to be allowed to harness free, natural solar energy to survive and get on with their lives. Households use their own hard-earned cash to harness energy from the sun (the only reliable source of energy in South Africa) and should be allowed to do so without penalty. It is a basic human right on this planet to have access to sunlight – no government, elite cabal or trillionaire – owns the sun! I fully reject any sun tax in any shape or form or any levies and penalties to households that exercise their god-given right to harness energy from the sun. The burden of living in this collapsing, exploited country and the capital outlay for solar are punishment enough. I fully reject tariff hikes that trap non-solar households as captive consumers, who are forced to subsidise government corruption, industrial defection and municipal mismanagement. I fully reject any bypassing of municipalities by mines, companies and factories that leaves the financial burden to ordinary households. I reject the erosion of household budgets through unavoidable fixed charges, regardless of consumption. I fully reject the lack of transparency within wholesale reforms that leaves everyday citizens to it the bill for failing infrastructure. This Position Paper is governmental overreach and highly exploitative. It discourages the use of clean and sustainable energy, undermines private investment, and hold households captive in a loop of ever-increasing costs. It is fundamentally unjust and inhumane to penalise citizens for being forward thinking and for taking the initiative to fill the gaps left by and ineffective and corrupt government that fails to provide electricity to tax payers and citizens. I call on the Department of Electricity and Energy to: 1. Stop the Sun Tax and protect private solar investment. 2. Protect captive consumers from unfair tariff hikes. 3. Reform in a transparent and affordable way that will not further burden ordinary households. The government is a liability and a burden to citizens. They only care about their own pockets and ways to extract money and to control citizens. We do not need more bureaucracy and penalties—we need fair, affordable and transparent policies that will protect households and encourage clean energy adoption.	Marne

	2026-09-13 16:20:58	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	1. Objection to Unfair Financial Burden on Households (Anti-Free-Riding Policy)I strongly object to the proposed "anti-free-riding" policy and the shift toward high, unavoidable fixed monthly capacity charges.Unfair Penalization: Citizens who invested their own hard-earned capital into rooftop solar did so to secure reliable energy during a crisis. Forcing a heavy connection levy on solar owners regardless of consumption is a punitive tax on self-sustainability and green energy transition.Paying for Mismanagement: These high fixed charges appear to be an attempt to force captive consumers to subsidize years of state utility mismanagement and infrastructure neglect, rather than creating a fair, efficiency-driven energy market. 2. Objection to the Unfair Protection of Heavy Users at the Expense of CommunitiesThe policy to accelerate market unbundling by allowing large industrial consumers (1 MW+) to bypass local councils and buy cheap wholesale power is highly discriminatory.Exploitation of Vulnerable Consumers: Allowing mines and factories to leave the municipal grid strips local councils of their primary revenue "cash cows."Socio-Economic Injustice: Ordinary households who cannot afford solar or off-grid systems will be trapped. Municipalities will inevitably increase basic service charges and skyrocketing tariffs on lower-income and middle-class communities to balance their books. It is entirely unfair that large corporations get cheaper power while ordinary citizens bear the financial deficit. 3. Objection to Tariff Disparities Across MunicipalitiesThe current and proposed structures fail to address the gross inequities in how tariffs are applied across different communities.Lack of Standardization: It is unjust that different communities pay vastly different rates for the exact same basic human need—electricity.Inefficient Municipal Overheads: Forcing households to pay heavy cross-subsidies to keep failing, mismanaged municipal distribution networks afloat without addressing corruption, billing errors, and technical losses within those municipalities is unsustainable and legally indefensible.Conclusion & DemandThe Department of Electricity and Energy must revise this paper to ensure equitable access to affordable electricity for all South Africans. Energy market transformation must not happen on the backs of struggling, captive household consumers while shielding major industrial polluters and mismanaged institutions from financial accountability	Liza	employed individual

	2026-09-13 18:25:32	No I do not	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	A “Sun Tax” on Private Capital and Rooftop Solar: Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation. The “Captive Ratepayer Trap” and Municipal Insolvency: Large industrial and commercial users exceeding demand thresholds (e.g., 1 MW) will be allowed to exit municipal supply to buy cheaper wholesale or private power. This strips municipalities of high-margin corporate revenue used to cross-subsidise indigent households and basic services, leaving captive residential ratepayers to shoulder skyrocketing local tariffs and degraded grid maintenance. Outragous that citizens continue to be penalized and burdened with the incompetent managment of state-owned enterprizes. The private sector's investment into SOLAR directly impacted and alleviated Load-shedding, that saved ESKOM's dismal failure. Now they turn around and punish those who bailed them out. The audacity is astonishing. This bill cannot be allowed to go forward as it flies directly in the face of boni mores, and the government's "position" of serving its citizens. First audit, and account for aggregious expenditure within state structures, that lost money can fund the energy grid gap.	CHRISTO	employed individual
	2026-09-13 18:37:28	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The harder Eskom pushes to increase tariffs or penalties, the harder the public and private sector will push to become completely independent. Eskom will lose more customers. No business or service provider can survive losing chasing away more and more customers and putting higher burdens on the remaining customers. Think this through. One step forward, 1000 steps backwards... Stop trying to fool the public.	Rian	self-employed
	2026-09-13 18:45:01	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	If the tax payers money was used effectively, over the years, and not squandered and unaudited, we would not be in this crisis today. Basic human rights have been violated across the board where the municipalities cannot provide basic utility needs (ie: water and power). Experienced town planners were pushed aside years ago to "train" upcoming tradesmen thus not effectively planning for the underprivileged communities. The public had no choice but to provide for their families. Borehole water and solar power were born. These installations are not without a hefty price leaving millions of citizens at the hands of the poorly managed grid and water outages. If common sense prevailed (a few years back), the municipalities could have funded solar and borehole service providing companies. They could have still enjoyed funds coming in while helping millions of families. They just took the easy way out and stole the tax payers money. China and private entities scored billions of rands by selling these services. I rest my case.	Michelle	employed individual

	2026-09-13 21:54:11	No I do not	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	Our businesses can not stand the unprecedented price hikes and fixed tariffs that are being imposed and increased at exorbitant rates. This is causing the consumer to search for alternative electricity supply, gisting the consumer hundreds of thousands of rands, as the eskom is failing to deliver a basic service such as uninterrupted electrical supply at a reasonable price. Eskom has urged consumers for years to reduce electricity usage. When consumers were unable to reduce their electricity usage any further, consumers had to find alternative means to run their homes and businesses. Now Eskom wants to charge excessive fixed rates and electricity prices to increase revenue to fund maintenance etc. While Eskom begged consumers to use less to save the grid. Consumers effectively saved the grid by having massive financial expenses to support the grid and now Eskom wants to penalise consumers for saving the grid. In what world does that make any sense.	Anodi	business owner

	2026-09-13 22:11:26	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Only consumers who disconnect completely from the national grid will be exempt from these fixed fees. Fees are astronomically high already. Increasing Tariffs at this rate will bankrupt those who can't afford these fees. Leaving them unable to pay in the future in any case. Then what? Who's going to pay then? Households and small businesses that invested significant private capital into rooftop solar, batteries, and energy efficiency to protect themselves from load shedding will be forced to pay higher monthly baseline connection fees. This structural shift acts as a financial penalty on private decarbonisation, extending solar payback periods and increasing electricity bills for low-volume and frugal users. Points to Demand in Your Public Submission: Demand that NERSA place strict statutory caps on fixed network and capacity charges to prevent utilities from penalising private renewable investments. Insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. Require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households.	Amanda	employed individual

	2026-09-13 23:41:20	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This is where I struggle with the argument that solar users now need to “contribute their fair share”. Most solar households are not completely off-grid. We remain connected, we still buy electricity when needed, and we already pay towards the system in various ways. On top of that, homeowners pay rates and taxes, water, sanitation, refuse removal and numerous other charges — while fuel and the general cost of living continue to climb. Then remember how we got here. South Africans were actively encouraged to install solar. Government even introduced a SARS rebate specifically to encourage rooftop solar, reduce pressure on the grid and help ease loadshedding. So households took their own money — often hundreds of thousands of rands — and invested in systems that reduced their dependence on Eskom and reduced demand on an already struggling grid. Of course, if we remain connected to the grid, there should be a reasonable contribution towards maintaining that infrastructure. But there has to be a point where enough is enough. You cannot fail to provide reliable electricity, encourage citizens to spend their own money solving the problem, benefit from the reduced pressure those households place on the grid, and then progressively change the tariff structure because those same customers are now buying less electricity from you. We didn't stop contributing. We simply invested our own money so that we wouldn't have to depend on a system that couldn't reliably supply us in the first place. At some point the question has to be: how much more is the ordinary South African taxpayer expected to carry?	Cindy	employed individual
	2026-09-13 23:44:25	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Instead of trying to keep hold of their monopoly, Eskom should rather take hands with the people of SA who can help themselves and also the community by generating their own electricity as well as surplus that can be put back into the grid for others to use. Spend time and money to rather develop a solid solar feedback system in all municipalities rather than all these other political / greedy games.	Charl	self-employed
	2026-09-14 00:49:21	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This is my private property, I have the right to decide how I want to generate my electricity. We cannot support a company that wants to force us to make use if their low budget electricity supply. Fraud is ESCOM's main financial income. Now they want to penalties us because they won't be able to steal our money. We don't want your electricity.	Ansie	retired

	2026-09-14 04:05:42	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I am a pensioner on a fixed pension. Thanks to the unreliability of the energy supply in NMBM, I would love to buy a split fridge (with a small solar panel for the frequent days that the electricity is off). However, I really cannot afford to do so if these proposed charges kick in. I'm only worried about ensuring food doesn't deteriorate, but what about diabetics whose insulin has to be stored in a fridge? Please consider all of us - the "little people" - who vote politicians into power supposedly to look after OUR interests (not your personal agendas) - when you are introducing new legislation. READ THE BILLS and THINK about the effect on us - don't just rubber stamp it for your party. SHOW US YOU CARE!!!	Rona	retired
	2026-09-14 04:07:16	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Utter nonsense, the goverment wants to make the ordinary residents suffer for their mismanaged of funds.	Collin	unemployed individual
	2026-09-14 04:28:05	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	As in the past, thee ANC has too much say about what happens to electricity generated. The public must have more say about the subject.	Vic	unemployed individual
	2026-09-14 04:36:09	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I strongly object to the Electricity Sector Market Transformation Position Paper in its current form. South Africans have already endured years of load shedding, rapidly increasing electricity prices and unreliable service. Many households and businesses responded by spending their own money on solar, batteries and energy-efficient systems because the state and electricity providers could not provide a reliable service. It is completely unacceptable to now introduce a structure that can effectively penalise those same people through high mandatory fixed network charges simply because they remain connected to the grid. If a customer consumes less electricity because they invested in their own generation, their bill should reflect that. A fixed-charge model that removes much of the financial benefit of reducing consumption turns private investment and efficiency into something that is punished rather than encouraged. I am equally opposed to creating a system where large industrial and commercial customers can access competitive electricity markets while ordinary households and small businesses remain captive customers. If competition is genuinely intended to reduce electricity costs, then that competition and consumer choice should ultimately be available to everyone — not primarily to the largest electricity users while residential consumers are left behind to carry an increasing share of municipal and network costs. Municipal financial problems must also not simply be transferred onto responsible, paying electricity customers. Electricity tariffs should pay for the efficient generation, transmission and distribution of electricity. They should not become an open-ended mechanism for recovering municipal revenue losses, historical debt, inefficiency or failures elsewhere in local government. I support genuine competition, private generation, investment in the grid and breaking the dependence on a single electricity supplier. What I do not support is calling something “market reform” while protecting captive customers from competition and shifting more unavoidable costs onto households and small businesses. Any reform should guarantee reasonable limits on fixed network charges, transparent and independently regulated tariffs, fair compensation for electricity exported to the grid, protection against stranded costs being dumped onto residential customers, and a clear path allowing households and small businesses to benefit from electricity market competition as well. South Africans should not once again be expected to pay for the failures of the electricity system after already paying out of their own pockets to protect themselves from those failures. I therefore object to the proposal in its current form and believe it should not proceed without substantial amendments protecting ordinary consumers, small businesses and private renewable-energy investment.	Jacques	
	2026-09-14 04:43:31	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Stop the "Sun Tax": Do not penalise private capital and solar investments with punitive fixed grid fees. 	2026-09-14 05:54:00	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Initially residential homeowners were given a tax incentive if they installed solar panels due to Eskom desperately needing to ease load shedding, now that we have all gone ahead and spent the money and they are no longer getting their cut, now it is a problem. The sun does not belong to the government and it is a substantial capital outlay to install a residential installation, with many owners having financed their systems. Eskom wants their cake, the bakery and the flour mill, when it is their complete and utter mismanagement that landed them in this situation in the first place. My own municipality has already changed their fee structure so just to have access to the grid costs me over R500.00 per month, luckily I put a prepaid meter in, so they cannot suddenly change my unit charges because I have solar. I run my system as optimally as I can so R1000.00 worth of prepaid electricity can last me up to 3 months, particularly in the summer months. However, my capital outlay was close to R500 000.00, now essentially they want to punish us, when they couldn't wait to during the loadshedding years for us to help ease the pressure on the grid. The inflationary costs of the price of units from Eskom is having a profound effect on household budgets and municipalities, in our case, the salary and wage bill accounts for more than 52% of revenue earned, perhaps that is where most municipalities should start to cut costs, same can be said about Eskom	Suzanne	retired

	2026-09-14 06:09:22	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I as I believe many ordinary South Africans feel that because of miss management of municipalities we are in this situation. I understand that here is a lot of electricity theft also happening which doesn’t help but this is a result of the president set by the government. We need to have leaders we can trust and that deal my action. Electricity has gone up so drastically over the last decade in this country and yet we are still in this mess. By charging more money you won’t save this sinking ship.	Simeon	self-employed
	2026-09-14 06:13:21	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Private capital and household solar investments should not be penalised through punitive fixed grid fees. Such measures discourage innovation and undermine the very transition we need. Municipalities must be barred from hiking tariffs on non-solar homes simply to offset lost revenue from industrial defection or off-grid adoption. Ordinary households should not be forced to subsidise structural inefficiencies. Wholesale market reforms must be designed with clarity and accountability, ensuring that everyday households are not left footing the bill for grid infrastructure through hidden charges. These principles are essential to building a fair, sustainable, and inclusive energy future. I urge policymakers to adopt reforms that balance municipal revenue needs with consumer protection and investment incentives.	Leon	retired
	2026-09-14 06:24:20	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	A binding, published transition roadmap must be issued that progressively lowers the eligibility threshold, ensuring retail market choice is expanded to ordinary households and SMMEs rather than remaining an exclusive corporate privilege. NERSA must implement mandatory tariff-parity benchmarks ensuring captive customer tariffs do not exceed wholesale-plus-efficient-delivery benchmark prices. I oppose any mechanism that uses captive household tariffs to recover stranded costs or uncompetitive legacy contract premiums. I demand mandatory cost-reflective bidding caps for any single generation entity that controls more than 20% of active dispatchable capacity in the market. There must be full public transparency and real-time reporting of day-ahead and intra-day market bidding data to enable independent civil oversight. Mandate severe, legally enforceable financial penalties and license cancellations for participants found guilty of collusive bidding, capacity withholding, or market manipulation. A clear, standardized licensing and remuneration framework capital for grid expansion nust immediately be published.. I require transparent, non-discriminatory grid allocation rules that prevent transmission capacity hoarding by non-performing projects. Insist that re-dispatching and congestion management costs caused by network delays be borne by network service providers rather than passed on to retail consumers through balancing surcharges.	Yvonne-Ann	unemployed individual

	2026-09-14 06:29:06	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	We were forced to look into alternatives for electricity due to mismanagement in Eskom. 	2026-09-14 08:01:30	No I do not	All of the above	Fixed Charges & Solar Penalties	Small / Medium Business Owner (SMME)	I wonder what the position.is in terms of solar systems feeding back into the grid. Will that be compensated or allowed? Surely it cannot be accepted but not compensated? Perhaps it should be a legislated tariff buy back (as opposed to municipallities dictating as they olease) ? Perhaps that can offset the fixed grid-tie fee.	Louis	self-employed
	2026-09-14 08:01:35	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		Paul	self-employed
	2026-09-14 08:03:31	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I honestly think this is abuse from Eskom and the government. All their services are unreliable and costly to natural persons. When people try to find alternatives, this is seen as another way to introduce new tax to fund a failing state. These people MUST, allow at least for excess generation from solar to be exported to the grid, generate excess electricity, and attract investors who have no confidence, just like millions of South Africans, on reliable energy production. Quite frankly, this is ANNOYING to say the least. Under this government, the cost of living, even for the middle class and high income earners is an issue. We pay taxes to fund a broken government that continues to borrow money without accountability, and non of them feel the pressure of just a natural persons, because, they use our funds for their own benefit. It's a messed up state of affairs, and actually does not consider millions of South Africans. We are tired of speeches, but want accountability and consideration from the people that hold power.	Siyabonga	employed individual
	2026-09-14 08:04:02	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	We spent a lot of money buying solar systems because Eskom couldn't provide us with electricity. Now that a lot of people & businesses have solar and system can cope, we are being punished with extra charges. What will Eskom do if all the solar systems are switched off and Eskom has to supply electricity to everyone again. A total collapse of electricity again. What's wrong with these people, they just want more money for corruption	Glynis	self-employed
	2026-09-14 08:06:17	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Will the government subsidize the consumers where solar systems have been procured and installed at the cost of the consumer? I doubt it. Consumers have installed solar due to a failing Eskom infrastructure and their failing management. I wonder how many of the top Eskom board and management members have solar systems? My tax money well spent, I think not. Eskom is unable to supply reliable power. SSEG installations give the consumer back the same lifestyle they had before the power issues. Ability to heat water, run lights, power to work from home and bring in an income. Everytime there is a power failure or load shedding, consumers are forced to travel and pay for meals while their uncooked meals at home spoil. Then there are the elderly and sick that rely on power to run medical appliances that supply oxygen. Others may rely on power to supply machines for sleep apnea. Many homes reply on power for security systems as we live in a country where some of our cities are listed as the most dangerous cities in the world. People rely on power to deliver water from tanks as we live in a country with unreliable water systems. Water leaks, droughts, lack of maintenance etc. SSEG systems also offer protection against power dips and power surges that have damaged many homes and appliances in Port Elizabeth in the past, and other cities too I am sure. In my suburb the power is very erratic and can't be relied on due to frequent phase issues. Phase issues damage appliances with motors. Again, SSEG installations offers protection against phase issues. The local NMBM are slow to react and many times, people are left with out power from a day to three days. We are experience power issues when the winds affect the power lines. We tend to have high wind speeds at the coast.	Tim	employed individual
	2026-09-14 08:07:42	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Stop the "Sun Tax"! Stop penalising individuals for your own shortcomings and insufficient services! Do not penalise private capital and solar investments with punitive fixed grid fees! 	2026-09-14 08:53:38	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	ESCOM has not kept abreast with the growing demand due to infrastructure growth, has had many failures due to negligence, lack of maintenance, and allowing syndicates and criminals to pillage the Parastatal. The imposing of a Tarriff/Penalty on consumers, who really have little option of maintaining a consistent supply of electricity, and a means to curb the effects of price hikes which are way beyond any inflation figures, is not only unfair, but also downright illegal, and I would believe against the constitution in some way.	John	business owner
	2026-09-14 08:55:09	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	When will this stop? Once we get one thing blocked, they create another loop hole to tax us. And all of this because of their own incompetence, and the corruption in the system. The only thing that will bring an end to this is if we vote them out. And even then it will take years to rectify the more than 30 years of destruction.	Gerda	
	2026-09-14 08:57:03	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This will have the effect of driving more customers completely off-grid, thereby placing more strain on Eskom, state finances and, ultimately the poorer people. If you have this, so-called pro-poor policy, this is the wrong way to go about implementing it.	Charl	unemployed individual
	2026-09-14 08:57:57	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Stop trying to suck everything and everyone dry. You, ESKOM, broke everything, it is not the consumer that needs to pay for this. Everything is always apartheid's fault. Its not. You cannot provide a decent consistent service, so people need to make a plan to keep living. Fix your crap.	Wouter

	2026-09-14 09:10:37	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Stop the "Sun Tax": Do not penalise private capital and solar investments with punitive fixed grid fees. Protect Captive Consumers: Bar municipalities from hiking tariffs on non-solar homes to cover lost revenue from industrial and off-grid defection. Transparency First: Ensure wholesale market reforms do not leave everyday households footing the bill for grid infrastructure. A few years ago you offered households tax incentives to go solar because Eskom could not produce sufficient power, now you want to penalise those people that did so. There is absolutely no logic in it and we should not get penalised because Eskom did not think this through properly.	Neville	retired
	2026-09-14 09:10:49	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The crux of the problem is the extortionate pricing by Escom. The basic input costs of Escom have been progressively increased on an artificial basis to fund various failures by government, Bee and the Coal Mafia. All this is state sanctioned. These costs are then passed down to consumers who are captive by definition. Additionally the various electricity suppliers (municipalities and Escom) write off Billions of unpaid (indigent) electricity bills and the funding once again comes from the few electricity users that actually pay their electricity accounts. So the proposed fixed charge is really only a corrupt method to fund more corruption. It will become cheaper to disconnect completely from the grid and then how will the municipalities and Escom fund the corruption and cross subsidise the indigent? The solution is to produce electricity cheaply (yes, it is possible to actually more than halve the price of electricity) by eliminating the corruption. My guess is that this will stop the large scale move to solar PV.	Warren	self-employed
	2026-09-14 09:11:37	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		Andre	
	2026-09-14 09:11:43	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Absolutely ridiculous that Eskom should be allowed to charge the public extra because they installed solar systems. The public only installed solar because the Government allowed Eskom to be raped by individuals so that they could increase their personnel wealth. Government should look at how other countries run their national grid, Australia actually refunds house owners who generate more power and is this additional power is fed back into their national grid. If this was done Government could phase out coal fired power stations. I fail to see how this is going to be implemented and monitored because 99% of municipalities are to incompetent. Again, it's the rich get richer and the poor get poorer. Remove the ANC from Government.	Andy	retired
	2026-09-14 09:12:24	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Insist on a tiered tariff model that credits grid-tied rooftop solar owners for daytime energy injection, offsetting fixed network costs rather than imposing flat availability taxes. Require an independent socio-economic impact assessment on how fixed monthly fees affect low-income and energy-conserving households.	Andrew	retired

	2026-09-14 09:13:29	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	When Eskom was unable to provide the very reason for their existence and had loadshedding, they were offering specials and promoting private purchase of solar to go off grid. At enormous expense, we did this and in our case, we are totally off grid, so don't even use Eskom as a "battery back up" like most cases. Regardless, people spent money trying to work around Eskoms failures and are being penalised for it. Eskom needs to start by stamping out the cartels and internal corruption, where they could save a lot of money. They could also charge users reasonably and have an insanely high average salary for pretty poor performance, Solar users should not have to pay a penalty for Eskoms shortcomings	Michael	self-employed

	2026-09-14 10:13:08	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I strongly object to any provisions or implementation measures under this policy that would impose punitive fixed electricity charges, undermine household investment in solar power, or shift the financial burden of electricity market restructuring onto ordinary consumers. Electricity reform must deliver affordable, reliable power and accountable service providers. It must not become a mechanism for protecting Eskom and municipal revenue at the expense of households already struggling with the cost of living. My objection rests on the following grounds: 1. Do not penalise solar investment or electricity savings. Households and businesses that invest their own money in solar generation, batteries and energy efficiency should retain a meaningful financial benefit from reducing their electricity consumption. I reject any approach that treats reduced consumption as misconduct or automatically characterises solar users as “free riders”. A legitimate contribution to maintaining an available grid connection must be transparently calculated, independently scrutinised and proportionate to the service and capacity provided. It must not become a disguised penalty for buying less electricity. 2. Protect households that cannot afford alternatives. Consumers who depend entirely on Eskom or municipal electricity must not become the default source of replacement revenue when large customers move to other suppliers. I object to tariff increases, basic service charges or additional cross-subsidies imposed simply to recover revenue lost through customer migration. Government must establish enforceable affordability protections, particularly for low-income households, pensioners and other vulnerable consumers, before implementing changes that expose them to higher costs. 3. Require evidence before approving additional charges. Before any new tariff structure is adopted, the public must receive clear, independently assessed calculations showing its effect on actual monthly household bills across different income levels and consumption patterns, including homes with and without solar. Every proposed charge must identify the costs it recovers, explain how those costs were allocated and demonstrate that consumers are not being charged twice for the same service. General claims about “cost reflectivity” or “financial sustainability” are insufficient. 4. Make Eskom and municipalities accountable. Consumers must not be treated as an unlimited source of funding for avoidable losses, inefficient procurement, poor revenue collection or mismanagement. Any request for additional revenue must be accompanied by measurable efficiency improvements, transparent expenditure reporting and consequences for financial failures. Municipal funding challenges require a credible funding plan. They must not be resolved through unaffordable electricity bills imposed on households with nowhere else to turn. 5. Ensure that competition benefits ordinary consumers. Market reform must include a clear, measurable pathway for households and small businesses to benefit from competition. It is unacceptable for large buyers to gain access to cheaper supply while ordinary consumers face escalating charges and diminishing choice. I therefore call on the Department to revise the paper to include explicit safeguards against punitive solar-related charges, unjustified revenue replacement levies and disproportionate cost transfers to captive consumers. These safeguards must guide subsequent tariff decisions and implementation, with transparent regulatory oversight and meaningful public consultation. Record this submission as a formal objection to proceeding without these protections, and publish a reasoned response explaining how these concerns have been addressed. South Africans deserve electricity reform that improves affordability and rewards responsible investment. I reject any outcome that protects institutional revenue by making households pay more regardless of how responsibly they use electricity.	Ricardo	business owner
	2026-09-14 10:15:05	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Find better ways to make the non-payers using electricity to pay their share instead of penalising the payers. 	2026-09-14 11:02:55	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom should not have monopoly, and should not dictate the price of electricity that they frequently increase due to their poor management. I support alternative suppliers like Solaref that can supply power for less than two Rand per kilowatt-hour. It will force Eskom to get their act together. Consumers should not pay for the distribution grid if not used, it should be part of Eskom running cost. Municipalities must not find a way to recover distribution costs in their monthly levies. There must be free competition between Eskom and alternative clean suppliers.	Louis	retired
	2026-09-14 11:05:29	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		Dawid	employed individual
	2026-09-14 11:09:45	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	We are already taxed to death, subsiding the numerous informal settlements in our area. We're barely surviving with the cost of our amenities, poor service delivery are adding to our woes, with constantly being without electricity and water. Eskom showed a huge profit in the last financial year, so should compromise instead of burdening the small percentage of taxpayers who pay for services.	KRISHNAN	employed individual
	2026-09-14 11:11:07	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom has made a lot of money this year. There is no need to raise prices any further or introduce new taxes and levies. They are penalising the ordinary man in the street. Their staff have had several consecutive years of above inflation pay increases and bonuses, putting them way above other sector salaries. This needs to be stopped. Further the massive corruption and fraud taking place in the sector must be stopped. Then there will be sufficient and affordable electricity for everyone.	Debbie	
	2026-09-14 11:12:05	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	This is a case of double jeopardy. We in fact did Eskom a favour .we were forced to go the solar route because Eskom was not in a position to generate enough power & we were experiencing numerous outages. We had to make provision for the solar/ inverter route at our own expense & now we are being punished for doing so. Eskom would have been in a much worse position if so many people did not install solar panels to take the pressure of it. Eskom should in fact be paying us for literally bailing them out of the predicament which was created of their own making, to start with. There is no justification for charging solar panel users. Any excess generated & being fed back to the grid is also a bonus for Eskom in terms of easing the pressure on it.	Aatmaram	retired

	2026-09-14 11:26:28	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I strongly object to any provisions or implementation measures under this policy that would impose punitive fixed electricity charges, undermine household investment in solar power, or shift the financial burden of electricity market restructuring onto ordinary consumers. Electricity reform must deliver affordable, reliable power and accountable service providers. It must not become a mechanism for protecting Eskom and municipal revenue at the expense of households already struggling with the cost of living. My objection rests on the following grounds: 1. Do not penalise solar investment or electricity savings. Households and businesses that invest their own money in solar generation, batteries and energy efficiency should retain a meaningful financial benefit from reducing their electricity consumption. I reject any approach that treats reduced consumption as misconduct or automatically characterises solar users as “free riders”. A legitimate contribution to maintaining an available grid connection must be transparently calculated, independently scrutinised and proportionate to the service and capacity provided. It must not become a disguised penalty for buying less electricity. 2. Protect households that cannot afford alternatives. Consumers who depend entirely on Eskom or municipal electricity must not become the default source of replacement revenue when large customers move to other suppliers. I object to tariff increases, basic service charges or additional cross-subsidies imposed simply to recover revenue lost through customer migration. Government must establish enforceable affordability protections, particularly for low-income households, pensioners and other vulnerable consumers, before implementing changes that expose them to higher costs. 3. Require evidence before approving additional charges. Before any new tariff structure is adopted, the public must receive clear, independently assessed calculations showing its effect on actual monthly household bills across different income levels and consumption patterns, including homes with and without solar. Every proposed charge must identify the costs it recovers, explain how those costs were allocated and demonstrate that consumers are not being charged twice for the same service. General claims about “cost reflectivity” or “financial sustainability” are insufficient. 4. Make Eskom and municipalities accountable. Consumers must not be treated as an unlimited source of funding for avoidable losses, inefficient procurement, poor revenue collection or mismanagement. Any request for additional revenue must be accompanied by measurable efficiency improvements, transparent expenditure reporting and consequences for financial failures. Municipal funding challenges require a credible funding plan. They must not be resolved through unaffordable electricity bills imposed on households with nowhere else to turn. 5. Ensure that competition benefits ordinary consumers. Market reform must include a clear, measurable pathway for households and small businesses to benefit from competition. It is unacceptable for large buyers to gain access to cheaper supply while ordinary consumers face escalating charges and diminishing choice. I therefore call on the Department to revise the paper to include explicit safeguards against punitive solar-related charges, unjustified revenue replacement levies and disproportionate cost transfers to captive consumers. These safeguards must guide subsequent tariff decisions and implementation, with transparent regulatory oversight and meaningful public consultation. Record this submission as a formal objection to proceeding without these protections, and publish a reasoned response explaining how these concerns have been addressed. South Africans deserve electricity reform that improves affordability and rewards responsible investment. I reject any outcome that protects institutional revenue by making households pay more regardless of how responsibly they use electricity.	MORNE	employed individual

	2026-09-14 11:39:14	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Electricity Sector Market Transformation Position Paper - Thank you for sharing this. From a consumer and business perspective, it is concerning that we cannot rely on Eskom to provide a consistent and reliable electricity supply. If a reliable service and electricity supply had been available at reasonable, market-related pricing, many consumers and businesses would not have needed to invest in alternative solutions such as solar. It is therefore concerning that consumers who have taken proactive steps to secure their own electricity supply and reduce their reliance on the grid could now face additional charges or financial penalties as a result. I do not believe this is fair or justified, particularly given the circumstances that have driven consumers and businesses to invest in alternative energy solutions in the first place.	Sadia	employed individual
	2026-09-14 11:39:36	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Whether captive residential consumers are genuinely protected will depend not simply on NERSA's regulatory mandate, but on its willingness, independence and capacity to enforce meaningful limits on municipal charges. The Position Paper does not yet provide that guarantee	Robert	retired

	2026-09-14 11:48:28	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It took three years to have my solar system registered by Eskom. What was not quite clear to me was how this 'Time Of Use' tariff (Homeflex) would be worked out and invoiced by Eskom. I get credited ONLY that portion of energy exported (pushed back to the grid) that is equal to what I imported (used from the grid), the energy exported above that amount Eskom gets for free. On top of this there are now a number of additional charges that were never charged on the HomePower tariff. Here they are: - Service and Admin charge @ R5.74 per day. -Network Capacity Charge @R9.08 per day. -Generation Capacity Charge @R0.71 per day. -Ancillary Service Charge @R0.20045/kWh. -Network Demand Charge Charge (yes, the word charge is twice) @R0.2868/kWh. -Legacy Charge @R0.2478. Compared to the fixed charges I used to pay with the HomePower tariff the HomeFlex fixed charges are four to five times higher and sometimes come 80% of my monthly bill. This is made worse with the way the 'Time Of Use' tariff is divided in the day. There are 'Peak', 'Standard' and 'Off-peak' hours in the day which also fall either into 'High Season' (Winter) or 'Low Season' (Summer). The times are such that it is almost impossible to export energy for which one gets credit. The biggest portion of energy exported Eskom gets for free! Needless to say that I am highly dissatisfied with the way renewable energy generators who are grid tied are treated. I am going as far as saying that this practice is unethical, unequal, complete lack of transparency, opportunistic and potentially unconstitutional.	Manfred	self-employed
	2026-09-14 11:49:57	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer		FRANCOIS JOHANNES	
	2026-09-14 11:51:42	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	It sounds like desperate cries for survival. Or is it simply greed? The only problem with the proposals is that more and more people are being driven away from the Eskom system. In the long run, there will be no support left for Eskom. You should have started looking at lowering your tariffs long ago to survive in this environment. Solar Power is here to stay.	Jag

	2026-09-14 11:54:04	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Time has come to admit were the problem is. We can not run a country with the ANC in charge they have proven over 35 years they are only there to put there incomitance in place and put the burden on the tax payer and the paying clients. They tell all it is Positive transformation but it is stealing and putting our beautiful Country as one of the worst in the world. All the state run institutions are bankrupt. What happen with Spoornet, SAL, Denel, Iscore, Eskom, Airforce, Amy.... ? Just to name a few. Not one Municipality is in the green from budget point of few in South Africa. I remember growing up how my Town public places was looking nice and clean. Playing in playparks in my residential area good maintained and green grass. Now it looks like dump sites no one cares to maintain it but we pay much higher rates and taxes s way back. We have 10 times more workers getting 10x more money as before but our service delivery is in "shit to say it bland" We do not build anything in South Africa anymore nothing. We have the mineral recourses but we export that at cheap rates and get all the bad products back from places like China. Not the quality we were able to build was at much higher quality. 30 Year Nissan build cars in South Africa and then they closed down permanently. I can see a lot more closing down. Big Business (exc Nestle) - closing doors in South Africa because it is not worth keeping it here (No power and big cost to run it in South Africa). Labor is to expensive. Government say they created more work only in the government instances. So allot of workers not being efficient is not work creation. Once being a Country to be recon with when it comes to military is now the laughing stock of the word. Rase Laws and the so call BEEE is killing our country faster than ever before. The money coffer is running empty they stole in 35 years more that what was made in 150 years. Det per household is the highest every. Government get more for every rand I am working for but they want more. I earn less every year but they want more. If only the real tax payer was able to vote then we would have a much better Goverment. Goverment should be run by the business trying to bring growth to South Africa not by people trying to transform. What are they transforming from a country that everyone was proud of to a Second Zimbabwe. Speak to the people the realy people that was part of the struggel and they will tell you they wish they can go back. Why is that..... Where in the word do you have a country with a government as big as South Africa. Not even USA with nearly double our amount of people and we are having a bigger government sector. So the issue is we have to many people in the government and state owned companies. Eskom was in 1995 nearly on top of the list of power generation capable country in the word. With Sanctions against us like no other country, but we were self sufficient and even giving power and fuel cheaper to our neighbouring countries now we can not even sustain ourself. Why because we have 3 x more employees and 3 times less capacity capable. Sasol on of the best ground braking in the word. Can not produce our own we import like all other countries, Pay more but do less. that is the ANC moto. Then they still turn around and say the privilege group is suppressing the masses. Sorry this is a lie and they know it. The ANC privilege few is stealing on daily bases and the so call commission of inquiry that comes to spending money to investigate corruption for months on end to prove, Money that we as a country do not have from each hardworking person that are only trying to make a living for themself and there children. Small businesses employing millions of people closing down and becoming part of the lower class as the ANC wanted and then we still being treated as the privilege group. Stop laying to the masses and start doing the right stuff. Creating our own products in South Africa that are cost effective as it was in the Sanction times. Export our products (Like the G5 and G6 and Rooivalk, Ratel and much more). We had the capabilities and know how and then we change the goverment. All Schools and Universities is under ANC control and we have the highest drop outs in years. Less competent workers as ever before. Work less people are the highest ever and can I say it... less tax paying people ever but we the big expensive Goverment want more because the money is running out now. So they run after the Class C shools because they want the get there hands on the School boards and the money. They want us the people that are trying to keep out Country afloat to pay now heavy fees to have electricity after they forced us to go solar. to safe the grid from collapsing. Now they have 30000 people that need salaries but doing nothing to still get paid every month doing nothing more efficiently. I want someone in control that does not make policies to benefit anyone except benefit growth in this country. With Economic growth comes work for people and with hard work comes growth for each and every one. Question that should be ask why was cities working and growing in the 70 80 and early 90. Now it looks like Cities are part of scatter cambs. Inter Citie bussiness are moved out and Cities look old and abandent. Damage and broken. No parks for Children. Grass is long and not maintained. Roads look better if it was ground scraped. But we pay for all of these to be maintained. So we pay for someone elses salarie to sit and do nothing every single day..... 	2026-09-14 12:08:20	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	When Eskom had loadshedding, they did not pay us any compensation for out inconvenience. We had load shedding of up to 12hrs a day in Midrand when we had stage 6 (and Higher). We could not keep our freezer frozen to keep food for long periods. Eskom did not reimburse us for our losses we incurred. We took out a loan to install solar, and yes, it made our lives a bit easier during the dark stages. In this light we also contributed to Eskom by alleviating the burden for them to supply. Now barely one year later, when Eskom celebrates their 365 days without loadshedding, now they want to recover their clients. Sorry Eskom, you were unfaithful and not trustworthy since 2006. That means for 15 years we were inconvenienced and had to suffer under Eskoms inability to maintain their infrastructure. Eskom need to make friends not enemies. Eskom need to make use of this opportunity to partner with solar users, and us stored battery capacity for peak periods to lessen the peak demands on Eskoms generation capacity. Smart meter technology can be used to "buy" power from the residents or reduce the KW/h used from the grid with the KW/hrs supplied to the grid.	Gehard	
	2026-09-14 12:11:44	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	ESKOM's incompetence and the biased allocation of contracts have caused ESKOM to loose billions as well as non-reliable power provision. Now the ANC government wants to punish us for still using their broken electricity provider or for being pro-active with solar. An ABSOLUTE NO to this ill adviced piece of legislation. I cannot see how the government are going to enforce this in the townships where they had installed thousands of solar geysers a few years ago. As it is they are unable to collect payment for electricity use in these areas.	L T	self-employed
	2026-09-14 12:13:24	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I di not wish to pay a penalty for having installed solar. Escom was unable to supply electricity and forced consumers to alternative energy solutions.	Jacob	retired

They don't control the sun further more Excom is not reliable anymore as they cause our appliances to blow and therefore insurance do not cover if something goes wrong. Also we get all of cut offs. Also criminal always steeling the cables and there we suffer. Going of the grid is a lot better than to trust Excom. The never guarante when power comes back on and many people are suffering because they cut power. They only restore power back on when the feel like it. I don't support this nonsense what they are doing	Brian	unemployed individual
	2026-09-14 12:43:25	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom exists, ultimately, to serve South Africa's population and economy. Part of that role should be to provide affordable, abundant and reliable electricity to households and industry, supporting economic growth and improving living conditions. If the electricity market has fundamentally changed, then Eskom's model must change with it. The answer should not simply be to impose additional taxes, levies or charges on the population to preserve a model that technology and the market are already changing. Government policy should encourage people and businesses who can reduce their reliance on the state to do so, while using the resulting capacity and resources to improve electricity access and affordability for those who cannot. South Africa already has significant rooftop solar generation. Why are we not investing aggressively in the grid, metering and technology required to allow this excess capacity to be used efficiently and cheaply? For example, if I generate surplus electricity at my home or business, why should I not be able to allocate or sell that electricity through the grid directly to my domestic staff or other nominated households? The technology should increasingly make this possible. Policy and regulation should facilitate it rather than stand in its way. Instead of treating distributed generation as a threat to the existing model, South Africa should use it as an opportunity: allow those who can generate electricity to do so, create an efficient market for their surplus capacity, and use the national grid to extend the benefit of cheaper electricity to those who need it most.	Garth	self-employed
	2026-09-14 12:53:02	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	I object to the "anti free riding" principle and the shift from consumption based billing to mandatory fixed network charges. These charges are not cost reflective, they are targeted. In City Power's area a residential prepaid customer pays R241.50 a month in fixed charges from 1 July 2026, while a postpaid customer on a single phase 80 amp connection pays R1,483. Same street, same transformer, same wires, six times the fixed charge. A household that installs grid tied solar is not allowed to stay on prepaid and is moved to the higher structure automatically. The charge follows the meter, not the cost of the network. Ratepayers have paid above inflation increases for years while infrastructure visibly deteriorates, and no licensee is required to prove that network revenue was spent on the network. Rooftop solar owners are not free riders. They reduce peak demand and losses, and they funded their own generation out of taxed income because the state could not supply them. I ask for three things. A statutory cap on fixed charges based on an independently audited cost of supply study. Removal of any rule that forces customers with own generation onto a higher fixed charge tariff. Ring fenced network revenue with published annual maintenance spend, so that no increase is granted without proof of what the last one bought. I support competition and unbundling. I object to a reform that gives choice to the largest users and sends the bill to households.	An	self-employed
	2026-09-14 13:00:10	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom is riding the wave and saying they are doing so well, it was actually due to the private solar installation's that the lights are staying on as Eskom could not cater for the needs of the people and the supply needed. you cannot "tax" or charge or even fine people for finding alternatives if Eskom could not keep up and supply, and now you want to charge them for using the Sun. stop the looting and theft and recover your costs from there, not from tax payers	Pieter	employed individual

	2026-09-14 13:13:58	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Millions of households and businesses invested private savings into rooftop solar and batteries to keep their lights on when the state failed to do so. Replacing consumption-based billing with mandatory, high fixed monthly network charges penalises energy-conscious citizens, extends solar payback periods, and discourages private decarbonisation	Ina	retired
	2026-09-14 13:16:27	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The fixed charges and solar penalties are absurd for several reasons, the most ridiculous of this been 1) The "free rider" term used for ratepayers that used their own capital to mitigate the total collapse of Eskom by this corrupt regime is absurd, given who created this mess. The "free riders" are the deployed cadres of this regime, who looted, pillaged, destroyed and annihilated a world class entity handed to them. The looters, miscreants and criminals who destroyed Eskom have to this day not been brought to book. Now we the ratepayers who made a plan, and are contributing to the stability of the grid due to the pressure that has been removed from the grid, must now be punished and pay for your theft. 2) As ratepayers we already pay fees for access to a grid that is vandalised every other day. We are taxed to death so that you can keep on guzzling at the (money) trough. You are destroying the paying citizens by a thousand financial blows every single day. Eskom is just a continuation of the state capture, you carry on regardless, you just not care. This is NOT sustainable, as Andre de Ruyter so rightly said.	Sandra	retired
	2026-09-14 13:19:18	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The sun is provided for free by nature. Are we going to be taxed for the rain water we harvest? Provide a proper, working, affordable service. Then people will not have to find alternative power sources.	Corlene	
	2026-09-14 13:26:00	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The government is once again passing the buck!! If businesses and private citizens had not installed solar panels when the energy grid was overloaded -due to disastrous management - and taken pressure off the grid it would have collapsed.	Kerry	retired

	2026-09-14 13:29:10	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Eskom is violating people's right to basic services. During the periods when Eskom repeatedly failed to provide a reliable electricity supply, South Africans were strongly encouraged to invest in solar power, become more energy independent, and, in some cases, feed excess electricity back into the grid. Now, there appears to be a double standard: people who took that advice, invested their own money in alternative energy, and reduced their dependence on Eskom are seemingly being penalised for doing exactly what they were encouraged to do. That raises a serious constitutional question. If citizens have invested in their own energy security because the public electricity provider could not reliably meet their needs, should they now be financially punished for becoming less dependent on the grid? Eskom's policies should be scrutinised carefully against the constitutional principles of access to basic services, fairness, and equality. Perhaps it is time for this matter to be tested in the Constitutional Court. South Africans deserve clarity on whether an entity that failed to provide a reliable basic service can then penalise citizens for finding their own solutions.	Lynni	employed individual

	2026-09-14 14:33:10	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	Die argument teen "sonbelasting" en gedwonge netwerkkoste Sonkrag-eienaars het reeds vir hul eie stelsels betaal. Dit is onbillik om hulle daarna met ekstra vaste heffings te straf omdat hulle minder van die netwerk gebruik. 'n Vaste netwerkfooi kan selfopwekking ontmoedig. Huishoudings wat bereid is om in sonpanele, batterye en omsetters te belê, verminder druk op die nasionale netwerk. Straf hulle, en die aansporing om van die netwerk af te beweeg verdwyn. Die koste van swak netwerkbestuur moet nie op gewone huishoudings afgeskuif word nie. As Eskom en munisipaliteite inkomste verloor omdat groot verbruikers en huishoudings hulself van die netwerk begin losmaak, moet die oplossing nie wees om die oorblywende "gevange" verbruikers al hoe meer te laat betaal nie. Dit skep 'n bose kringloop: hoe duurder elektrisiteit word, hoe meer mense probeer hulself van die netwerk losmaak. Hoe minder mense betaal, hoe hoër word die koste vir dié wat oorbly. Die armes en middelklas word die swaarste geraak. Huishoudings wat nie tienduisende rande vir sonkrag en batterye kan bekostig nie, het geen maklike uitweg nie. Hulle word dus die gevange verbruikers wat toenemend vir die netwerk betaal. Groothandelmarkhervorming moet nie huishoudings die rekening laat betaal nie. Meer mededinging in elektrisiteitsopwekking kan positief wees, maar netwerk- en infrastruktuurkoste moet billik versprei word en nie hoofsaaklik op gewone huishoudings afgewentel word nie. Private investering in sonkrag behoort aangemoedig, nie gepenaliseer, te word nie. Elke huishouding wat self in energievoorsiening belê, neem 'n deel van die las van die bestaande stelsel af.	Sonja	retired

	2026-09-14 14:34:54	No I do not	All of the above	Fixed Charges & Solar Penalties	Residential Electricity Consumer / Ratepayer	The President of South Africa on National Television during the 2023 load shedding debacle of Eskom that citizens must stop complaining about it and rather find their own solutions, and the Government even paid a once off R18 000.00 or allowed it as a tax deduction to encourage homeowners to install solar. Now a lot of people did just that and many businesses to and now Eskom suddenly sit with to much capacity and therefore no load shedding, but also less income and money to squander and steal. If all solar installation get switched off South Africa would face an immediate electricity blackout. The story about fix grid charges for rooftop solar properties is also a joke, as it are these that helped Eskom to go from skunks to smelly all rosy again. Everyone that ever build a home knows that you had to pay to get electricity, water, sewerage and telephones lines to your property. It was not a free service. Furthermore Eskom has not in 30 years clean a single high voltage transmission tower or line as all those assets in the form of Helicopters and specialised equipment most probably where sold, so why do they now suddenly worry about an anti-free-riding principle, if they have not done any maintenance and upkeep since not long after the 1994 elections. They had massive increases in electricity charges over the last 30 years , and South Africa is quite possibly in the top 10 countries in the world faced with dramatic electricity cost increases to such an extend that a lot of heavy industry had closed down. Yet when they were the sole electricity supplier they could not care less about grids and maintenance but now that people start to use alternatives that reduce demand for their over prices electricity they want to penalise those who did exactly as President Ramaposha told them to do under the previous load shedding. People will just go off grid and tell them to remove their electricity connections if they implement a monthly grid connection fee. It will be more sensible to invest in a small generator for those days your solar is struggling due to bad weather to top up your batteries than pay the thieves in charge a grid connection fee.	Jasper
