	2026-05-25 11:51:29	No I do not	Centralised Economic Kill-Switch Risks		I write to formally object to the Draft Amendment of Identification Regulations as gazetted by the Department of Home Affairs for public comment until 6 June 2026. While I acknowledge the intent to modernise identity infrastructure, the draft as written introduces serious, unresolved risks that are constitutionally, structurally, and socially unacceptable. My objections are as follows: 1. Centralised Cyber & Security Risk The draft consolidates biometric, civic, and identity data into a single, centralised population register integrated with the MyMzansi platform. South Africa's public sector has historically suffered from severe data breaches, ransomware disruptions, and weak digital infrastructure defences. Centralising this volume of sensitive biometric data creates a single, high-value target for identity syndicates and state-level cyber actors. The draft provides no binding minimum cybersecurity standards, independent audit requirements, or enforceable breach notification timelines. This is a structural risk, not a theoretical one. 2. The Ten-Year Physical Queue Trap The draft regulations declare that a digital ID will completely lapse if a citizen does not perform an in-person enrolment or verification at a DHA office or accredited partner within a rolling ten-year period — even if that citizen uses the app daily. This forces citizens back into the very physical queues the system claims to eliminate. Citizens who are elderly, rural, disabled, or living abroad are disproportionately penalised by a bureaucratic rule that serves no legitimate security purpose once digital identity is already established. 3. Corporate Interoperability & Privacy Creep The draft introduces an interconnected database network that allows the Director-General to broadcast near real-time update notifications to every private company — including banks and telecommunications providers — with whom a citizen has a recorded "Verified Relationship." While POPIA compliance is cited, distributing live identity data across multiple corporate APIs fundamentally expands the attack surface for interception and misuse. This architecture normalises the seamless flow of personal data between state and private entities in a manner that exceeds what is necessary, proportionate, or consented to by citizens. 4. The 30-Day Address Notification Penalty The regulations place a legal duty on all citizens to notify Home Affairs of any permanent change to their physical address, phone number, or email within 30 days. Failing to do so will drop a citizen's "Identity Assurance Level," which may restrict their ability to execute high-security online transactions or open accounts. This creates a coercive compliance mechanism that penalises ordinary life events — moving house, changing numbers — with degraded access to essential financial services. It is administratively burdensome and disproportionate. 5. Structural Function Creep & Tracking The draft allows the state to rank identity profiles through an internal scoring mechanism called an "Identity Assurance Level." Combined with real-time synchronisation across government and corporate systems, this creates the structural foundation for behavioural tracking and tiered citizenship — even if that is not the stated intent today. The absence of hard legislative limits on how this scoring system may evolve leaves the door open for function creep into surveillance infrastructure. Future administrations are not bound by today's political assurances. 6. Centralised Economic Kill-Switch Risks The architecture creates a single point of failure for civic and economic participation. If a citizen's digital credential is suspended, revoked, or subject to a technical error, they may simultaneously lose access to banking, government services, and legal identity verification. Because the digital ID relies on strict cryptographic device binding to a single physical smartphone, access to a citizen's legal identity token is entirely dependent on maintaining active ownership and operation of that specific device. No government system — particularly one with South Africa's track record of load shedding, network instability, and administrative backlogs — should have the ability to effectively freeze a citizen's economic existence through a single technical or bureaucratic failure. 7. Soft Discrimination & Digital Exclusion While transitional arrangements mandate that the system must not unreasonably exclude citizens without smartphones or reliable internet, real-world implementation tells a different story: if private companies and state departments find it cheaper to process citizens via the MyMzansi app, those relying on physical documents could face longer queues, slower turnarounds, and systemic soft discrimination when accessing essential services. The protections in the draft are aspirational, not binding. South Africa's deep inequality in smartphone ownership, digital literacy, and connectivity means this framework, as written, will structurally disadvantage the poor, the elderly, and rural communities. Conclusion I do not oppose digital modernisation in principle. I oppose this draft as it stands, because it concentrates extraordinary power over citizens' civic and economic lives in a single system without adequate safeguards, independent oversight, or enforceable protections. I call on the Department to substantially revise the regulations to include binding cybersecurity standards, hard limits on data sharing, removal of the assurance-level penalty mechanism, and robust, legally enforceable digital inclusion guarantees before any further implementation proceeds. My Identity will not be safe and this if pursued will lead to more fraud, money laundering and identity theft.	Niekie	Eastern Cape		employed individual

					Formal Submission: Comments on the Draft Identification Regulations, 2026 (Government Gazette No. 54610) To: The Chief Director: Legal Services, Adv A M Malakate Attention: Department of Home Affairs Submission Category: Technical, Security, and Administrative Objections Dear Advocate Malakate, I am writing to submit my formal comments and objections regarding the draft Identification Regulations, 2026. While the modernization of the national identity framework through the "Home Affairs @ home" initiative is a commendable objective, several structural, architectural, and logical mechanisms within the current draft text present critical vulnerabilities to state security, individual privacy, and corporate continuity. I request that the following technical and operational objections be explicitly considered and addressed before these regulations are finalized. 1. Objection to Bi-directional Interoperability with Private Entities (Draft Framework on "Trusted Entities") The Issue: The proposed creation of real-time, bi-directional data pipelines between the state registry and private "trusted entities" (such as banking institutions and telecommunications networks) creates an unacceptably broad cyber-attack surface. Technical Impact: Merging or syncing public civic registries with private corporate databases creates a distributed network vulnerability. A cybersecurity breach at a single private partner could compromise the integrity of the central national identity registry. Furthermore, automated cross-population of data (e.g., syncing address changes without explicit, single-use consumer consent per transaction) bypasses core data sovereignty principles established under the Protection of Personal Information Act (POPIA). Proposed Remedy: Interoperability must be strictly unidirectional and verification-based only (e.g., cryptographic zero-knowledge proofs or "Yes/No" token validation requests), rather than continuous data synchronization. 2. Objection to Algorithmic "Identity Assurance Level" (Social Credit / Tiering Loops) The Issue: The mechanism to automatically downgrade a citizen's "Identity Assurance Level" for failing to report routine administrative updates (such as a change of physical address or email) within 30 days is punitive, arbitrary, and operationally dangerous. Operational Impact: In a fluid economic environment, automated algorithmic tiering introduces massive administrative friction. A sudden, automated downgrade without human intervention, prior notification, or a right of reply could instantly freeze a professional's access to corporate banking, regulatory filing portals, or critical telecom infrastructure. This constitutes an infringement on the right to lawful, reasonable, and procedurally fair administrative action under PAJA. Proposed Remedy: The "Identity Assurance Level" must never be used as an automated penalty mechanism. Downgrades or restrictions on an identity credential must require human oversight, prior notification, and a clear, rapid appeals process. 3. Objection to Cryptographic Device Binding Without a Defined Remote Recovery Protocol The Issue: Cryptographically locking a digital identity token to a single, specific smartphone device completely ignores the socioeconomic and security realities of South Africa, where device theft and muggings are highly prevalent. Operational Impact: If a device is stolen, frozen, or destroyed, the current draft leaves the citizen in a state of immediate "administrative paralysis." Without a legally mandated, secure, and decentralized remote recovery protocol, the citizen is left unable to prove their identity at the precise moment they need to lock bank accounts, cancel SIM cards, or report the crime. Proposed Remedy: The regulations must explicitly define a secure, multi-factor, out-of-band remote recovery path (such as utilizing accredited secondary physical touchpoints or secure cloud-based biometric escrow) to instantly restore identity access on a replacement device without requiring an immediate physical trip to a Home Affairs office. 4. Objection to the 10-Year In-Person "Touchpoint Trap" The Issue: The regulation requiring a mandatory, physical, in-person biometric verification every 10 years—failing which the credential completely lapses—neutralizes the efficiency gains of a digital ID system. Operational Impact: This requirement preserves the legacy bottleneck of overburdened physical Home Affairs infrastructure. For citizens working remotely, internationally, or in high-demand operational environments, a total lapse of credentials creates severe operational and legal risks. Proposed Remedy: Secure, app-based biometric verification (utilizing live-detection facial and fingerprint scanning via high-resolution smartphone sensors) must be legally sufficient to renew the credential indefinitely, provided the biometric data matches the underlying state baseline database. Summary of Demands for Amendment: Mandatory Independent Audits: Insert a clause requiring independent, third-party penetration testing and cybersecurity audits of the MyMzansi application architecture and all private entity APIs before any live implementation. Elimination of Automated Downgrades: Remove the 30-day algorithmic penalty loop that triggers automated "Identity Assurance Level" drops. Statutory Recovery Framework: Embed a clear, secure, and remote device-recovery protocol directly into the regulations to protect victims of crime from administrative exclusion. Thank you for ensuring that active citizenship and technical oversight are integrated into this legislative process. Sincerely,

	2026-05-25 10:04:51	No I do not	Centralised Cyber & Security Risk		Government departments and major banks have already been hacked. Putting all your eggs in one basket is asking for trouble. Old people and poor people often don't have phones, chargers or data. What happens if your phone is lost, broken or stolen? Furthermore, authoritarian states use this kind of system for surveillance of private citizens, which is unconstitutional.	Beryl	Gauteng		employed individual
	2026-05-25 10:03:30	No I do not	The 30-Day Address Notification Penalty		we are supposed to be free and have rights the government can not and should not be allowed to track us with out a court of law order. we fought apartheid to be free now the same government want to ensave us again	steph	Gauteng		retired
	2026-05-25 10:03:23	No I do not	Centralised Cyber & Security Risk		No website is safe from hackers. Making Identification Digital is opening a whole new door to identity theft which cannot be managed or controlled or prevented. not to mention all the legal ramifications.	Wayne	Gauteng		unemployed individual
	2026-05-25 10:03:00	No I do not	Centralised Cyber & Security Risk		Not a chance - in the age of AI where we hear and see how much hacking and extracting/exploitation of individuals and business's information is becoming, I'm not convinced that the state can set this up with security top of mind - not only that, but sorry, I don't really trust all my data to be housed in one spot - I understand that it would make things easier and more centralized, but if that comes at the cost of my personal data safety, then I don't want it. At this point in time while hacking and infiltrating systems is rife because of AI, I wouldn't entertain this idea at all right now. Give it some more years until AI is properly controlled/dust has settled, then we can rethink this implementation.	Justin	Western Cape		
	2026-05-25 10:02:57	No I do not	Centralised Cyber & Security Risk		There have been many times when a government site is down. They are not able to guarantee 100% uptime. Systems have been down due to none payment of maintenance. People are then locked out. There is a severe risk of facing "soft discrimination". Excluding people from the essential public utilities and services. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination"—including longer processing delays, reduced human customer support, and slower access to essential public utilities and services	ROBERT	Gauteng		self-employed
	2026-05-25 10:02:36	No I do not	Other		Why change the excisting	jan	Western Cape		retired
	2026-05-25 10:02:20	No I do not	Other		Its ALL OF THE ABOVE ....plus, we all know digi ID is all a part of the globalist authoritarian new world order - the one world govt. All sounds wonderfully convenient for the masses BUT..... we who dig down the rabbit holes know that Digi ID will lead to digi currency, social credit systems , total lack of privacy , complete facial recognition monitoring, smart cities, controlled movement , controlled and mandated vaccinations....etc. Once this nwo world govt is in place, there will be no stopping them expanding this convenience to full on control. Controlling your bank account , full knowledge of your health status, your whereabouts.... Speak out against them and you lose social credit points and/or limit your movement further, jail or even ....elimination (to put it mildly). So, NO i do NOT support this authoritarian plan which would be initiated by Digi ID. And remember, SA govt is " owned " by globalists incl Georg Soros , Bill Gates and co..... 	2026-05-25 09:25:02	No I do not	The 10-Year Physical Queue Trap		A proper digital ID system will have the citizens control and own their own data, and only share the necessary data with a relevant party on an as-needed basis. The proposed system is far away from this goal. Again, this government wants to control its citizens down to such things as spending patterns. Such a system will lead to social credit penalties down the line. This encroaches on individual freedoms.	Conrad	Gauteng		business owner
	2026-05-25 09:24:34	No I do not	Structural Function Creep & Tracking		Places control in the hands of the authorities.	Peter	Eastern Cape		retired
	2026-05-25 09:24:00	No I do not	Centralised Cyber & Security Risk		This is risky and dangerous to have your identity attached to a device that can be hacked or stolen considering all the theft of cellphones. Some people don't have a cellphone , especially smart cellphones that older people do not know how to use, so how will they get a new identity. This is unconstitutional. Government do not need to worry about crime in the normal sector, but they should stop being criminals themselves and concentrate on fixing this broken South Africa. New laws with not fix out country!	Gail	Eastern Cape		
	2026-05-25 09:22:35	No I do not	Structural Function Creep & Tracking		This is absolute rubbish, it is a non startwer. I am no commie, and will not give a commie state any chanvcers to track, and determine any status to me what so ever. You can take this shambles of a new law and app, and shove it where it fits best. The majority of us, are not commies, and do not require or want the state to have any apparatus, in order to govern our lives. We have a free will, and will do as we please. No organ of state, will ever be accepted by the population to be invasive in our lives in any way shape or form. Again, take it and shove it were the sun does not shine, and throw it in file 13. 	2026-05-25 09:21:15	No I do not	Other		The banks and numerous other institutions are developing cell phone Apps, which all sound fantastic and convenient. However, with the amount of cell phone theft prevalent in the country, I think that having any confidential data like banking and ID on your cell phone is a ticket to disaster. It amazes me that some banks only allow access to your accounts for certain transactions via a cell phone App. In my opinion this is like so many of the new government laws, it just encourages theft and dishonesty. It just makes fraud easier for the dishonest in a country where fraud is rife and the banking fraud departments seem to do little to stop it.	Michael	Gauteng		retired
	2026-05-25 09:21:03	No I do not	Centralised Cyber & Security Risk		Economic Kill-Switch Risks As a pensioner and I am very aware of ageing and how it affects us. People get dementia and live for years thereafter. If they are unable to get access to a Home Affairs office for in-person reactivation, ultimately possibly activating the kill-switch, it can cause huge problems for their care, their finances and ultimately their estate. This has not been thought through, nor any solutions given for how this could be overcome. Many pensioners are not cellphone wise at all and this poses a huge problem. Also theft in this country is out of hand and cellphones get stolen all the time. A HUGE NO from me.	Ana	Gauteng		retired
	2026-05-25 09:18:39	No I do not	Soft Discrimination & Digital Exclusion		There is nothing wrong with the current ID cards, rather focus energy on other thing that are going wrong and fix those. This just becomes government overreach.	Kenneth	Gauteng

	2026-05-25 08:52:39	No I do not	Centralised Cyber & Security Risk		this is the first subtle step to control the countries people ...COMMUNISM. IT is apparent before the next election desperate attempts are being made to introduce new laws . Also delaying tactics in enforcing the law on criminals like Ramaposa , Malema Zuma etc.	ANGUS	Western Cape		retired
	2026-05-25 08:52:32	No I do not	Other		I am concerned that several provisions in the draft Identification Regulations introduce practical and constitutional risks without enough safeguards. The proposed “identity assurance” scoring system appears unrealistic in practice, as ordinary administrative updates are often not synchronised correctly across institutions. In my own experience, even when submitting correct and updated information, discrepancies persist between systems for extended periods. Penalising citizens for failures largely outside their control could lead to unfair exclusion from essential services. Equally worrying is the reliance on a single smartphone-based identity. Given the high prevalence of mobile theft, tying a person’s legal identity to one physical device creates a significant vulnerability. The absence of a clear, secure recovery mechanism raises the risk of sudden loss of access to critical services. I strongly believe that a physical ID must remain the primary form of identification, with digital options serving only as a voluntary backup. Finally, the requirement for periodic physical revalidation and the potential for future expansion of the system raise concerns about accessibility and overreach. For individuals living in remote areas, repeated in-person verification creates financial and logistical burdens. More importantly, the centralisation of identity data could allow for gradual expansion of conditions attached to identity use, effectively limiting freedoms over time. Any such system must prioritise citizen choice, accessibility, and strong protections against function creep.	WIKUS	Western Cape

Msokoli	Free State		employed individual
	2026-05-25 08:16:14	No I do not	Other		It makes totalitarian government control not only possible but a reality. This is highly dangerous and places way too much power in the hands of politicians. It infringes on the individual's privacy and freedom. It makes private institutions agents of the state which is wrong and does not belong in a democracy. It also certainly is going to lead to function creep and further infringements on freedom and privacy. It also creates an "economic kil switch" - a politician can prevent someone from being economical active with the press of a button - which is nothing else but totalitarian control. This whole idea is legally and morally wrong and highly dangerous!!	CJ	Gauteng		self-employed

	2026-05-25 07:41:12	No I do not	Centralised Economic Kill-Switch Risks		Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis.	Hill	Limpopo

	2026-05-25 07:03:06	No I do not	Centralised Cyber & Security Risk		South Africa's public sector has often struggled with serious data leaks and ransomware attacks. Building one large digital identity system that connects people's personal information directly to private companies greatly increases the number of ways hackers can attack the system. If criminals manage to break into this central database, it could lead to large-scale identity theft happening quickly and automatically. Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office.	Jan	Gauteng		
	2026-05-25 07:01:55	No I do not	Centralised Economic Kill-Switch Risks		This will invade our privacy, give the government too much power into our lives… cut us off from things.. especially the already vulnerable black people who can't afford smartphones or anything else.. 	2026-05-25 06:45:17	No I do not	Centralised Economic Kill-Switch Risks		I am extremely concerned about South Africa’s proposed centralised digital ID system and the dangerous level of control it could place in the hands of the state. While modernisation has benefits, concentrating personal, biometric and financial information into a single system creates serious risks around privacy, surveillance, cyber security and potential political abuse. My greatest concern is the possibility of a future “kill switch” capability, where individuals could effectively be locked out of essential services, banking, travel or communication through a centralised digital platform. In a country already struggling with corruption and declining institutional trust, any such system must be treated with extreme caution and subjected to strict independent oversight and constitutional safeguards.	Jeff	Western Cape		employed individual

	2026-05-25 04:10:56	No I do not	Centralised Cyber & Security Risk		This system can be introduced once the country has dealt with other matters that will allow this system to be a success. The issue of cyber crime and the crime that is forever committed by the government officials will cause countless problems to the system. The issue of unemployment, inequality, poverty and illiteracy will render the system serving only the few. The border and immigration control that is currently a thorny issue within the country. This is a good system for a well developed country not South Africa. It will take us another 10 to 20 years to implement successful systems like this one, for now let's continue with how we are operating.	Sfiso	KwaZulu-Natal		unemployed individual

	2026-05-25 03:07:39	No I do not	Structural Function Creep & Tracking		This type of system cannot truly be monitored by an individual to ascertain how and where your data is distributed. Government IT systems have been shown to be weak with respect to security and integrity. Hackers are always ahead of the game an te potential rewards are enormous. There is too much reliance on smart phones and transfer of data from smart phones. Some people's entire lives and home security plus financial access all resides on their cellphone. It makes the cellphone any criminals single most desirable item. That said, many are stolen already and people are killed to steal them. This will only make that worse. You can get access to everything through the one device. The risk is simply too great and the controls too weak. It is a system just begging to be abused by nefarious government officials. The most risky part is during data transfer. Bluetooth is totally exposed and dangerous. WiFi is only slightly better. Nice idea but there is much work to be done.	Jeff	Western Cape		retired

	2026-05-25 00:26:16	No I do not	Centralised Cyber & Security Risk		This is a honey pot, creating any kind of central database of personal information is a treasure trove for bad actors to attack, this will get compromised, the data will get leaked and we will all feel pain for it.	Matthew	Gauteng		unemployed individual

	2026-05-25 00:12:07	No I do not	Centralised Cyber & Security Risk		Given the widespread hacking of personal information on the internet, there is no guaranteed protection of our personal information. The scope and penalties of this framework, and its benefits, are about control, not our well-being as citizens of South Africa. The scope of access to this information should be limited to government and citizens, not corporate entities. The framework fails to take into account any alternative should a citizen not have access to their mobile phone. Too much reliance on digital technology is a major risk. Change the framework to allow personally held ID cards as we have at the moment - in other words, the choice to "opt out" of a mobile phone based application. Make the rules for continued recognition more realistic, for example: a disabled person unable to appear in person, similarly for citizens working abroad.	Ken	Western Cape		retired

	2026-05-24 23:26:28	No I do not	The 10-Year Physical Queue Trap		I do not completely agree with the proposal in its current form. South Africa is still struggling with corruption, weak accountability, cybercrime, leaked databases, SIM swap fraud, poor service delivery, and unstable infrastructure. A highly centralized digital identity system in such an environment carries serious risks if governance and cybersecurity are not first strengthened properly. My concern is not modernization itself. Modernization is necessary. My concern is that the country currently has no institutional discipline, technical capacity, cybersecurity resilience, and consequence management needed to protect millions of citizens' biometric and identity data safely at national scale. In a country where people already struggle with identity theft, fraudulent documents, banking scams, and administrative failures, placing identity, authentication, and sensitive personal information into one deeply centralized digital ecosystem could create vulnerabilities that ordinary citizens may pay for first when systems fail or are abused. Before rolling out systems of this magnitude, South Africa must first prove that it can secure citizens' information, respond rapidly to breaches, hold officials accountable, and maintain reliable digital infrastructure consistently. Otherwise modernization without institutional readiness can easily become digitized dysfunction.	Nthabiseng	Gauteng		self-employed
	2026-05-24 23:26:11	No I do not	Centralised Cyber & Security Risk		The state has no right to hold us hostage with this nonsense. 	2026-05-24 21:00:12	No I do not	Centralised Cyber & Security Risk		South Africa's ability to secure such a system is questionable. The country has near-universal ID coverage and has rolled out biometric Smart Cards, yet it suffers persistent challenges: major historical data breaches (e.g., the massive 2017 Master Deeds leak exposing tens of millions of records), corruption scandals in Home Affairs (including fraudulent ID issuance), weak cybersecurity in government entities, and high rates of identity theft/fraud. corbado.com Centralized biometric databases and digital wallets create high-value targets for hackers, state actors, or insiders. POPIA provides a privacy framework, but enforcement gaps, procurement controversies, and infrastructure vulnerabilities (e.g., SITA issues) raise risks of mass surveillance, exclusion, or breaches that could undermine trust. While the system promises convenience and reduced fraud, success hinges on robust, transparent implementation, independent oversight, and addressing historical governance failures. Without these, it risks amplifying existing insecurities rather than resolving them. I just do not believe that you have the ability to manage and implement such a system. Maybe fix what we do have first before experimenting with technology that is a leap forward.	André	Gauteng		unemployed individual

	2026-05-24 20:27:40	No I do not	Centralised Cyber & Security Risk		This suggestion is a serious red flag. In no way, even in the next 100 years in South Africa should this be entertained. Having full understanding of the history in our country, is nothing in comparison to the understanding to what is happening on this planet. We need to protect our country and how FAR we have come over the last 50 years! We need to protect our people from those outside seekers who would sacrifice our people for their own momentary-pleasure of perceived gain of power over our land. South Africa is a special place, and we are growing as a nation and as a people, and we can show the rest of the world HOW Ubuntu CAN become realised. Giving up our identities to an online platform is a stupid move. Period. DO NOT RISK our people to online power-thieving sick hackers who would mess us up just for the fun of it. Please let sanity prevail. Please DO NOT make this online. QUESTION: Have you even considered that the majority of our people do not have phones, have money for even a bank account, let alone their ID's. Making this decision would be extremely selfish and inconsiderate of our entire people in the same way systems are going 'cashless' immediately putting heaps of our population into an even worse suffering. Come on leaders. Have a sanity check, a heart check, bring God into your decisions and pause for a moment and be realistic. Are you a part of the solution for ALL of our people? Are you really taking stock of what is happening in our country. No 'quick fix' to anything ever solved anything. True change needs to be with the people and for the people at their level - NOT an overarching bullying system that sacrifices their fellow brothers and sisters. Where is your head at!? Get real. 	2026-05-24 20:00:12	No I do not	Corporate Interoperability & Privacy Creep		While I acknowledge the Department of Home Affairs' objective to modernise identity verification systems, reduce fraud, and improve administrative efficiency, I believe the proposed framework presents serious constitutional, practical, and civil liberty concerns that require substantial reconsideration before implementation. My objections are as follows: 1. Excessive Centralisation of Personal Information The proposal appears to consolidate highly sensitive personal identity data into a centralised digital platform linked to multiple state and private-sector systems. Such concentration of information significantly increases the risk of cyberattacks, data breaches, unauthorised surveillance, and identity theft. A single compromised platform could expose millions of citizens to severe harm. 2. Risk of Mass Surveillance and Function Creep The proposed integration of real-time data synchronisation between government and private entities creates the potential for continuous monitoring of citizens' activities. There is insufficient clarity regarding limits on data sharing, retention periods, oversight mechanisms, or protections against future expansion of the system beyond its original purpose. 3. Smartphone Dependency and Digital Exclusion A smartphone-based identity system risks excluding vulnerable citizens who cannot afford smartphones, stable internet access, electricity, or digital literacy training. Many South Africans — especially elderly persons, rural communities, low-income households, and persons with disabilities — may struggle to access essential services if digital identity becomes the primary or preferred form of identification. 4. Potential Restriction of Fundamental Rights Because identity verification directly affects access to banking, employment, healthcare, travel, voting, and public services, any technical malfunction, account suspension, connectivity failure, or administrative error could effectively deny a citizen access to constitutional rights and daily necessities. 5. Automated Profiling and Tiering Concerns The proposed framework references profile-tiering and rolling validation systems. Automated classification systems can lead to discrimination, administrative bias, and unequal treatment without sufficient human oversight or accessible appeal mechanisms. Citizens should never be subjected to opaque algorithmic decisions affecting their legal status or service access. 6. Insufficient Safeguards and Independent Oversight The regulations do not appear to provide sufficiently detailed guarantees regarding: * independent cybersecurity audits, * judicial oversight, * limitations on private-sector access, * protections against unauthorised data sharing, * mandatory breach notifications, * offline alternatives, * or citizen remedies in the event of wrongful denial of services. 7. Need for Voluntary Participation and Physical Alternatives Physical identity documents must remain permanently available and fully functional as equal alternatives. No citizen should be compelled — directly or indirectly — to adopt a smartphone-based digital identity system in order to fully participate in society. 8. Constitutional and Privacy Implications The proposed system raises concerns relating to the constitutional rights to privacy, dignity, equality, freedom of movement, and access to essential services. Any digital identity framework should undergo rigorous constitutional review, public consultation, and independent technical assessment before implementation. I respectfully request that: * the proposed amendments be reconsidered and substantially revised; * broader public consultation be conducted; * independent cybersecurity and constitutional experts be involved; * and explicit legal protections be inserted to prevent abuse, exclusion, or coercive implementation. Modernisation should not come at the expense of civil liberties, accessibility, privacy, and democratic accountability. This smacks of utter CONTROL of one's life, its draconian and is wrong! 	2026-05-24 19:58:45	No I do not	Centralised Cyber & Security Risk		Biometric information constitutes "special personal information" in terms of the Protection of Personal Information Act (POPIA) of 2013 and should only be processed lawfully, securely, and for a clearly defined purpose, with free, informed, and specific consent from individuals. The proposed system raises serious concerns regarding privacy, identity theft, fraud, cybercrime, data breaches, and the potential for unlawful surveillance if implemented without stringent safeguards and independent oversight. Any amendments must fully comply with Section 14 of the Constitution of South Africa, which guarantees the right to privacy, together with the common law right to privacy, the Promotion of Access to Information Act (PAIA) 2000, the Identification Act 1997, and the Electronic Communications and Transactions Act 2005. I respectfully request that no such system be implemented without: • Independent oversight and accountability mechanisms; • Strict limitations on access to personal and biometric data; • Robust cybersecurity and encryption protections; and • The explicit right for individuals to opt out of biometric data collection and storage. 	2026-05-24 18:15:54	No I do not	Centralised Cyber & Security Risk		My first concern is the centralised cyber and security risk. The government has already failed to protect my private information at least once, as far as I am aware. Everything in the country is falling apart. How do the government propose to protect my personal information when they haven't been able to do so before? The best predictor of future behaviour is past behaviour. Furthermore, applying for a driver's license every five years is already a mess. Now we will be required to queue every ten years for something else? Really? We're a third-world country and regressing economically every year. Yet we want to give over control to a government that cannot ensure economic growth. Not to mention the total control we'll be giving the government and corporations over our private affairs. It reeks of World Economic Forum control. The entire endeavour is insidious.	Maristi	Gauteng		employed individual

	2026-05-24 17:16:49	No I do not	Structural Function Creep & Tracking		Cybersecurity Readiness & “Leapfrogging” Vulnerabilities While the draft regulations introduce highly sophisticated cryptographic measures, including asymmetric elliptic-curve cryptography and encrypted database storage, they create an unprecedentedly dense web of database interfaces. This leapfrogges global legacy models by connecting the state’s population register directly to corporate networks via secure APIs. The Concern: South Africa’s public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic “attack surface.” If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. 	2026-05-24 16:36:48	No I do not	Centralised Economic Kill-Switch Risks		I vote NO against the draft Identification Regulations, 2026. I do NOT support the introduction of the dual-track digital identity system, including the MyMzansi smartphone application and the Digital Identity Credential. I am concerned about the risks this poses to privacy, personal security, and constitutional rights. Key reasons for my opposition include: • The proposed real-time data sharing with private entities and the creation of an interoperable network between state and corporate databases. • The introduction of an “Identity Assurance” scoring system that could penalise citizens for everyday life changes. • The device-locking of digital identity and the lack of clear, secure recovery processes in a country with high rates of phone theft. • The risk of function creep and potential for increased surveillance or exclusion. • The requirement for periodic physical verification, which may create new barriers instead of removing them. I believe these changes represent an unnecessary and risky overhaul of our national identity system that could compromise citizens’ freedoms and security rather than genuinely improve service delivery. I request that my NO vote and these concerns be formally recorded as part of the public participation process.	Eloise	Western Cape		
	2026-05-24 16:36:16	No I do not	Soft Discrimination & Digital Exclusion		The draft policy features transitional arrangements declaring that the system must be phased in a way that does not unreasonably exclude individuals who do not own smartphones, lack internet access, or are unable to use digital services without help. Physical IDs will also remain completely valid. The Concern: Despite these progressive legal promises, the practical reality of modern service delivery is that digital pathways are quickly prioritized because they save money. As government systems and corporate partners inevitably optimize their systems for the MyMzansi app, citizens relying exclusively on physical IDs could face longer delays, reduced support, and systemic “soft discrimination” when trying to access basic societal resources.	Carina	Limpopo

	2026-05-24 16:21:46	No I do not	Centralised Cyber & Security Risk		With the introduction of generative systems (aka "AI") we've seen many flaws in computer systems come to light. This is a clear indication of how newer technologies can easily be used for nefarious means which government is ill equip to protect sensitive information. Aslo the fact that banks have been hacked and did not inform their clients for fear of negative investors responce. Another clear sign that private data is not their top priority. So if even banks can't keep their clients safe amd they deal more with online systems than government, there is 0 reasons to think government will be able to protect such data. With our goverment corruption as rampent as it is when the president can't even be trusted thanks to the Phala Phala scandle there is NO REASON to trust government will keep us safe and will take down a bad route where we will be under an oppressive goverment like China where if you do something as small as j-walk they do not even follow due course and deduct money from your account without representation. 	2026-05-24 16:16:12	No I do not	Structural Function Creep & Tracking		As freedom of religion is one of South Africa's fundamental civil rights, this amendment of the digital id comes perfectly in time with the false religious revival worldwide that preludes the "no buy no sell" without acceptance of forced Sunday observance which is being implemented in the USA, and according to the book Revelation in the Bible will be implemented worldwide. This type of social encompassing structure has been mandatory in China through the Sesame social credit system and has proved to violate all basic human rights and promote social discrimination, social policeing without accountability by the government. The passing of any such digital monitoring system is therfore a direct undermining of all civil, religious and freedom rights, even when allowed under the guise of advancement, the greater good, or most probably, due to a national/ international state of disaster like the coming of the well orchastrated world financial criseswhich will also usher in the global digital currency. 	2026-05-24 15:17:24	No I do not	Centralised Cyber & Security Risk		Increasingly, we see state authorities adopting methodologies observed in other countries, whether through case studies or international visits by delegates, then attempting to impose them in South Africa without due consideration for our unique environment, culture, diversity and challenges. Firstly, there is a well-established lack of public trust in the ability of state-owned departments to manage efficient, long-term operations. Secondly, repeated incidents have demonstrated that the state's cybersecurity readiness is inadequate, leaving citizens vulnerable to the consequences of data breaches. Thirdly, the Department of Home Affairs is already unable to cope with its existing workload, as evidenced by the long queues and poor service delivery. Yet this amendment proposes to increase that burden further by requiring citizens to report in person every 5 to 10 years. Or more frequently with theft or replacement of cellular phones. Government should be trying to improve our security first, as the unintended consequence could be an increase in murder for a cell phone. South Africans living abroad will face an additional, unnecessary hardship in keeping their identity documents current. As a citizen, I view this proposal as another revenue-generating scheme by the government, placing yet another financial and administrative burden on the public. It is also unrealistic to expect that banks and other institutions will continue to accept the current identity card for any meaningful period once this amendment is enacted. Before government ventures into costly new IT projects, likely amounting to millions of rands in taxpayer money being paid over to some B-BBEE approved organisation where the IT does not stand the test of time, government should first ensure that existing government departments are capable of delivering dignified, efficient service to us citizens. For these reasons, I formally object to this amendment in its entirety.	Nushreen	Western Cape		business owner
	2026-05-24 15:16:34	No I do not	Centralised Cyber & Security Risk			Linda	Western Cape		retired
	2026-05-24 15:14:55	No I do not	Centralised Cyber & Security Risk		The concern as described below says it all. In this time of increased cyber crimes, AI, etc I do not feel comfortable with my ID being on an electronic device that could easily be stolen and abused.	Pamela	KwaZulu-Natal		retired

	2026-05-24 13:53:51	No I do not	Other		I strongly oppose the proposed Identification Regulations, 2026 (Gazette 54610) and the MyMzansi Digital ID framework. These regulations create the legal and technical foundations for centralised biometric identity control, real-time state/private-sector data sharing, smartphone dependency and potentially exclusionary digital governance systems that threaten constitutional freedoms and privacy rights. The framework raises serious concerns under: • Section 10 (Human Dignity), • Section 14 (Right to Privacy), • Section 9 (Equality), • Section 21 (Freedom of Movement), • Section 33 (Just Administrative Action), • POPIA, • PAJA, • Article 12 of the Universal Declaration of Human Rights, • and the African Charter on Human and Peoples' Rights. South Africa's history should make us extremely cautious of any system capable of centralised monitoring, profiling, categorisation, or restricting access to services through digital identity infrastructure. The proposed interoperability between government, banks, telecoms, and "trusted entities" dangerously blurs the line between public governance and corporate surveillance. No democratic government should possess the technical ability to centrally monitor or potentially control a citizen's identity authentication, financial participation, or access to society through programmable digital systems. The regulations also fail to adequately address cybersecurity threats, identity theft risks, device loss, digital exclusion, and abuse of biometric data. Millions of vulnerable South Africans without stable internet, smartphones or digital literacy risk marginalisation. What is introduced as "convenience" today can rapidly evolve into coercive digital governance tomorrow. I call for the immediate withdrawal or complete constitutional redrafting of these regulations, including explicit legal prohibitions against social-credit-style systems, behavioural scoring, mandatory digital identity dependency and excessive state/private-sector data integration. Freedom, privacy and human dignity must never be surrendered in exchange for administrative convenience.	Cheri	Eastern Cape		employed individual

	2026-05-24 13:41:12	No I do not	Corporate Interoperability & Privacy Creep		As a software developer in the industry, I strongly oppose the draft Identification Regulations and the centralized "MyMzansi" application because the technical framework introduces profound threats to our constitutional rights, privacy, and digital security under the guise of convenience. While the government claims data will be governed by the Protection of Personal Information Act (POPIA), my professional experience highlights that this broad legislation was not designed to firewall the specific vulnerabilities of a state-mandated, real-time biometric tracking app. To function, MyMzansi requires deep device permissions, including live facial capture and fingerprint biometric deduplication, which inherently maps a user's digital footprint and location metadata during every verification. Furthermore, storing these biometric templates in a single, centralized population register creates an unprecedented cybersecurity honeypot; unlike a compromised password, stolen biometric data cannot simply be reset or changed. By establishing an interoperable network that pushes "near real-time" data updates to private corporate entities like banks and telecoms, the system exponentially expands the attack surface for hackers and blurs the line between public civic data and private corporate surveillance. The reliance on remote biometric liveness detection also opens the door to sophisticated spoofing and deepfake identity theft. Practically, cryptographically "binding" a digital ID to a single smartphone in a country with high rates of mobile theft risks immediate administrative paralysis if my phone is stolen. Ultimately, the mandatory 10-year physical queue trap defeats the promise of digital convenience, while the centralized biometric repository creates a highly vulnerable blueprint for systemic function creep and mass data exclusion. Andrew	KwaZulu-Natal		unemployed individual
	2026-05-24 13:13:02	No I do not	Centralised Cyber & Security Risk		It is a path to a host of dangerous outcomes to a holder of such id. An id should be issued for life , reapplication if lost or if person features are no longer recognized. The minister must note that hackers are generally smarter than ordinary programmers. There is enough evidence verify that anything computer/ software related is packable. A physical card is the best option. Application can be fast tracked. After all during the nationalist rule in approximately 2 weeks one had the id book ready for you. All that needed is efficient workers and functioning machines to print these cards. Phones are the biggest risk items and have your id and bank apps on the device opens up another can of worms. It seems that as in Rica the state led by this minister is trying to monitor ,track and control the lives of citizens. It is frightening and totally unnecessary. The fact that one has to renew every five years makes mo sense as death registration should tell you if person is dead or alive. Currently the new id cards are frustrating for banking. If you walk in to a bank with book of life [a more robust document than the easily damaged plastic id] the bank will boot you out because their link with home affairs suddenly in their opinion renders the green book obsolete. What issues will we face when there is a glitch in your phone or you reboot your phone etc. I am an electronics tech with almost 50 years experience. Nothing electronic is infallible , even the multibillion dollar space shuttle blew up. So don't tell us about safety measures please. Why fix something that is not broken . Fix the workforce / minister.	Jeeva	KwaZulu-Natal		retired
	2026-05-24 13:12:42	No I do not	Other		Infringement of my constitutional rights to freedom and personal sovereignty. 	2026-05-24 12:32:14	No I do not	Centralised Cyber & Security Risk		While this is of benefit to the total monitoring of everybody in the country for centralised control, it immediately introduces the high risk of security breeches and the intervention in the freedom of individuals to make their own selective decisions in many cases while also allowing for control to be exercised centrally on any unwilling to accept certain constraints foreign to ther situation.	Don	Western Cape		retired
	2026-05-24 12:32:14	No I do not	Centralised Economic Kill-Switch Risks		I do not want the state to have the power to block my identity if I do not obey to their rules if they implement religious or other social rules I do not agree to	Michael	Gauteng		
	2026-05-24 12:30:58	No I do not	Centralised Cyber & Security Risk		Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector’s history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation’s “attack surface.” Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically “lapse” triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual’s legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating “near real-time” data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic “soft discrimination” —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services.	leata	Mpumalanga		retired

	2026-05-24 12:17:47	No I do not	Centralised Cyber & Security Risk		I submit my objection to the Draft Amendment of the Identification Regulations, 1998, published under Government Gazette No. 54610 on 4 May 2026. My objection is not to digitisation in principle. It is to specific clauses that defer the hardest questions to future ministerial discretion, do not adequately constrain how the system can be used once operational, and create a path toward de facto compulsion despite the voluntary framing. 1. Voluntary access is not durable Regulation 49(5) commits to non-exclusion during phased implementation only. The Department has separately announced the phase-out of green ID books by 2029. Once paper is discontinued and service providers optimise for digital verification, the voluntary character of the system erodes regardless of what the regulation says. I request a permanent statutory guarantee that all Home Affairs functions and all accredited trusted entity functions remain available through a fully serviced non-digital channel, with no time limit and no penalty applied to the user. 2. Director-General instructions need oversight before implementation The draft defers cryptographic standards (Reg 39), device security (Reg 42), assurance level criteria (Reg 24), biometric standards (Regs 27 and 28), personnel vetting (Reg 45), and real-time verification conditions (Reg 35) to instructions issued by the Director-General. These determine how the system actually works and who is locked out. The regulation legalises a system whose actual rules do not yet exist. I request that any instruction issued under these clauses be subject to Information Regulator review and a 30-day public comment window before it takes effect. 3. Identity Assurance Levels need defined limits Regulation 24 allows a citizen's assurance level to rise and fall based on private-sector verification activity and notification compliance. The draft does not define what consequences flow from a lower assurance level. In practice banks and telecommunications providers can refuse or downgrade services based on a tier the citizen may not know exists, set by criteria the Director-General can change at any time. I request that the final regulations define the maximum permissible consequences of any assurance level, require that the level be visible to the holder, and prohibit denial of any essential service or statutory right on the basis of assurance level alone. 4. Centralised infrastructure with weak institutional capacity The Department's own 2026/27 Annual Performance Plan acknowledges that its cybersecurity maturity remains low. The Information Regulator operates on approximately R110 million per year with fewer than 120 staff across all functions. The system will hold biometric templates and verification logs for the entire population. I request an annual independent cybersecurity audit of the hosting infrastructure with the executive summary published, and that the Information Regulator be properly resourced before the system goes live. 5. Single-wallet architecture is the wrong design choice The draft names MyMzansi as the sole distribution mechanism. The EU eIDAS 2.0 framework, the ISO mobile driver's licence specification, and twelve US states use open certified ecosystems that allow third-party wallets to hold government credentials. A single state-controlled wallet concentrates risk, removes user choice, and locks the country into one vendor. I request an open certification process for compliant wallet implementations, with citizens permitted to choose between certified wallets including non-government options. 6. Citizens have no visibility into verified relationships Regulation 38A allows the Department to record verified relationships between citizens and accredited trusted entities, and to send near real-time update notifications when particulars change. The citizen has no visibility into which entities hold a verified relationship to them, no log of what was sent, and no ability to revoke the relationship. I request that every citizen have access through the MyMzansi application to a complete list of entities with a current verified relationship to them, a log of notifications sent on their behalf, and a mechanism to revoke a relationship. I do not support the regulations in their current form. I would support a revised version that addresses the six points above.	Adrienne	Gauteng		
	2026-05-24 12:16:04	No I do not	Centralised Cyber & Security Risk		The basic idea is good and will/do work in any country where the necessary systems/mechanisms are in place to ensure protection of personal information/property. SA's lawlesness and high levels of criminality, however, cripples success of any such an initiative. We also have a large number of citizens who do not have access or the knowledge to reap the benefits.	Lynette	Gauteng		retired

	2026-05-24 11:07:32	No I do not	Centralised Cyber & Security Risk		SA is one of the few countries on earth where people are still experience freedom and an available space to create into, The digitalization of personal data is a big risk to this living experience. South Africa's economy is encouraging entrepreneurship to built income streams for the people. Digital surveillance kills that. We can not afford the beginnings of that. Let’s preserve what we have, even if it brings other logistical problems. I trust that South Africans are creative enough to find real African solutions to distress processes around home affairs. Don’t copy the world, the world is in a mess. Let’s find solutions that inspire the world to become different.	Angela	Western Cape		Non-profit
	2026-05-24 11:07:15	No I do not	Other		I object to the digital ID, as this grants the state access to all your personal information and tracking. This is moving South Africa towards a communistic regime and is against that which South Africans faught so hard to achieve pre 1994 - Freedom.	Merle	Western Cape

	2026-05-24 10:58:44	No I do not	Other		1. Smartphone dependency creates structural exclusion The digital identity credential is delivered exclusively through the MyMzansi application on a smartphone or tablet. This effectively conditions access to a legal identity instrument on ownership of a qualifying device and reliable internet connectivity. This is constitutionally problematic for the millions of South Africans — including rural communities, the elderly, and low-income households — who do not own smartphones. Regulation 49(5) acknowledges this risk but provides no enforceable remedy. The regulations must specify concrete alternative access mechanisms with binding implementation timelines. 2. “Voluntary” participation will become de facto compulsory The regulations state that the digital credential is optional and that physical identity cards remain valid. However, the trusted entity framework enables banks, telecoms, insurers, and licensing authorities to integrate directly with the population register. Institutional preference for digital verification will, over time, create structural compulsion without legal mandate. The regulations must include enforceable prohibitions against any public or private entity disadvantaging persons who choose to use physical identity documents. 3. POPIA is not being enforced — this system relies on it Regulation 33(2) correctly states that POPIA prevails in any conflict. However, POPIA compliance in the private sector remains widely inadequate, and the Information Regulator lacks the capacity and enforcement culture to hold large institutions accountable. The proposed data-sharing architecture — which allows accredited trusted entities to receive near real-time identity updates on South Africans — cannot be safely built on a regulatory foundation that is demonstrably not being upheld. Independent enforcement capacity must be legislated as a prerequisite, not an assumption. 4. Automated data sharing without per-instance consent (Regulation 38A) The “verified relationship” mechanism allows trusted entities to receive automatic updates on a person’s mandatory particulars — address, contact details, and other registered information — whenever those particulars change. Consent is given once at onboarding. Citizens cannot selectively withdraw from update flows without terminating the underlying relationship. This is incompatible with the data minimisation and purpose limitation principles in POPIA, and with the right to privacy under section 14 of the Constitution. 5. Centralised biometric register presents catastrophic risk The regulations require that facial photographs, fingerprints, and liveness detection markers be stored centrally in the population register. The Department’s own Annual Performance Plan for 2026/27 acknowledges that Home Affairs’ cybersecurity maturity “remains low” and that a fully implemented disaster recovery strategy is absent. Centralising the biometric data of the entire South African population in a system with acknowledged low cybersecurity maturity is an unacceptable risk. Biometric data, once compromised, cannot be reissued. Distributed or decentralised storage models must be considered. 6. The Director-General holds excessive and unchecked discretionary power Throughout the regulations, the Director-General is empowered to determine standards, issue instructions, set identity assurance levels, grant and withdraw accreditation, and define mandatory particulars — largely without requiring parliamentary oversight, public consultation, or independent review. This concentration of power over a system touching every South African’s legal identity requires structural accountability mechanisms including an independent oversight body and mandatory parliamentary reporting. 7. Identity assurance levels create a tiered citizenship The identity assurance level framework means that citizens who interact less frequently with the formal corporate economy — including rural communities, those living off-grid, and those choosing deliberate simplicity — will hold lower-trust identities and face reduced access to services. This structurally entrenches existing inequality and will disproportionately affect African communities already marginalised by the formal system. 8. Children aged 16 can be enrolled without meaningful informed consent Regulation 18(1) permits enrolment from age 16. A 16-year-old enrolling in this system commits their biometric data to permanent state storage and consents to data-sharing relationships with institutional actors. The regulations must require parental or guardian co-consent for minors, and must include robust rights for young people to review, amend, or withdraw from the system upon reaching adulthood. 9. Seven-year audit logs held by private entities Every identity verification interaction is logged and must be retained for seven years — not only by the state, but by every accredited trusted entity. The regulations do not adequately constrain how those logs may be used, analysed, or potentially commercialised by private actors. This creates a distributed surveillance trail that is impossible for any citizen to monitor or challenge. 10. No independent oversight body or citizen redress mechanism The regulations create no independent oversight structure for the digital identity system as a whole. Citizens who believe their data has been misused, their assurance level unfairly set, or their credential wrongly suspended have no accessible redress mechanism beyond the courts. An independent Digital Identity Ombudsman or equivalent body must be established as part of the regulatory framework before this system is activated. The following are alternatives worth exploring before this invasive system. 1. Fix the population register first The existing National Identity Register is riddled with errors, duplications, and ghost entries. No digital credential system built on a corrupted data foundation will be trustworthy. The government should be mandated to clean, audit, and verify the register before any new credential system is layered on top of it. This alone would dramatically reduce identity fraud without any new surveillance infrastructure. 2. Upgrade the physical Smart ID card The current Smart ID card already contains a chip. That chip is underutilised. A far less invasive approach would be to enhance the existing card with stronger cryptographic capabilities, enabling offline verification without biometric central storage, without smartphone dependency, and without real-time data sharing. Estonia’s ID card system does exactly this and is considered one of the most secure in the world — and it does not require a smartphone. 3. Decentralised identity — the citizen holds their own credential The most privacy-respecting architecture is one where the citizen holds their own cryptographic credential on their own device, and verification happens peer-to-peer without the state or a trusted entity being a party to every transaction. The W3C Decentralised Identifiers standard and Verifiable Credentials framework already exist for this purpose. The state issues the credential once; after that, the citizen controls it entirely. No central database of who verified whom and when. No real-time update flows. No surveillance trail. 4. Sector-specific verification improvements Most of the use cases cited as justifications — FICA compliance, social grant verification, tax administration — already have sector-specific legislation and verification mechanisms. Rather than building a single unified identity infrastructure that all sectors plug into, those sectors should be required to improve their own verification systems under existing law. SARS has its own authentication infrastructure. SASSA has biometric verification at grant payment points. These don’t need to be unified into one system that creates a single point of failure and control. 5. Strengthen POPIA enforcement before expanding data sharing No new data-sharing archite	Grace	Gauteng		business owner

	2026-05-24 10:52:33	No I do not	Other		Power attracts the worst of us. Those in power have never demonstrated they have anything but their own (or their puppet masters) interests at heart. The more control we give them the more we surrender our lives and freedoms to those who want that power for themselves. History demonstrates us this is the rule not the exception. Every time one of these rights removing proposals is tabled it is always with the fear about our security from the criminal element (when the largest criminal syndicate sits in public office) - and offers us a solution that on paper seems to address these threats but hidden in the policy are the real mechanics of how to gain absolute control - and we fall for it every time. This time will be no different. It does not matter if we object to this process it is a fete accompli. Just by participating in this survey we are "part of the public participation" process rubber stamping the eventual outcome. When we vote we do the same thing. There is one thing power fears more than anything - solidarity. The united rising / dissent / disobedience of the majority - which is why the campaigns to divide and conquer are so prolific. You want to beat this thing - stop falling for the traps that are designed for us to hate each other.	Bengine	Western Cape

	2026-05-24 10:32:49	No I do not	Centralised Cyber & Security Risk		I don't trust the government with such sensitive information. I don't believe that they can safeguard this information. From previous experience with Home Affairs I think that their systems will need a complete overhaul before being able to reliably support this initiative. Government do not have the funding to spend.	Kim	Gauteng		employed individual

	2026-05-24 10:32:37	No I do not	Corporate Interoperability & Privacy Creep		I refuse to let government interfere with my privacy and to be monitored and controlled through a communist system.	Etrecia	Gauteng		
	2026-05-24 10:32:37	No I do not	Corporate Interoperability & Privacy Creep		I refuse to let government interfere with my privacy and to be monitored and controlled through a communist system.	Etrecia	Gauteng		
	2026-05-24 10:31:56	No I do not	The 30-Day Address Notification Penalty		Not enough time & consideration given to these all encompassing regulations.	Antonius	Western Cape		retired
	2026-05-24 10:31:43	No I do not	Centralised Economic Kill-Switch Risks		I oppose the draft Identification Regulations because they introduce excessive centralisation of personal data, create new risks for privacy and security, and place an unreasonable administrative burden on ordinary citizens. While digital convenience is important, this framework goes far beyond modernisation and instead opens the door to corporate overreach, state surveillance, and digital exclusion. The proposed real-time data-sharing network between government and private corporations blurs constitutional boundaries and undermines citizens' control over their own information. The "Identity Assurance Level" scoring system effectively creates a punitive mechanism that can restrict access to essential services if a person fails to update minor personal details within 30 days. This is disproportionate and incompatible with the rights to dignity, equality, and administrative justice. Locking a person's legal identity to a single smartphone device is dangerous in a country with high levels of theft. The regulations offer no clear, secure recovery process, meaning a stolen phone could instantly freeze someone's ability to work, bank, travel, or vote. This is an unacceptable vulnerability. Finally, the requirement for a mandatory in-person touchpoint every 10 years contradicts the stated goal of digital accessibility and will trap millions in long queues—especially those in rural or low-income communities. For these reasons, I cannot support the draft regulations in their current form. A digital identity system must prioritise privacy, security, accessibility, and constitutional rights—not convenience at the cost of freedom.	Chantel	Gauteng		employed individual
	2026-05-24 10:29:47	No I do not	Other		We as a christian nation: our identity and confidence is in the Lord Jesus Christ. HE is our risen KING & we all serve HIM, not electronics & robots.	Juanita	Northern Cape

	2026-05-24 09:48:01	No I do not	Corporate Interoperability & Privacy Creep		The risk is that South Africa will become like China, where the State is always watching citizens. Citizen privacy will be negatively affected and violated. This is a bad idea. No thanks. Instead of falling around with garbage like this, how about the DHA actually delivers on services to meet the constitutional rights of citizens and permanent residence permit holders.	Richan	Gauteng		employed individual
	2026-05-24 09:46:31	No I do not	Centralised Economic Kill-Switch Risks		No, no, no Cannot trust cyber or government. Its another way to control civillians.	Dalene	Western Cape		retired
	2026-05-24 09:45:11	No I do not	Centralised Cyber & Security Risk		If government departments are currently unable to properly maintain, manage, or protect something as basic and essential as municipal sewage infrastructure, how can the public realistically be expected to trust the State with a fully centralised digital identity system containing sensitive personal information? One of my biggest concerns is cybersecurity risk. South Africa already faces serious challenges with corruption, data leaks, fraud, and weak administrative controls within certain state departments. In many cases, members of the public are already subjected to bribery, unofficial “facilitation payments”, or corruption simply to speed up processes or avoid delays. Introducing a fully integrated digital identity platform without first addressing these governance failures creates enormous risk for abuse, manipulation, identity theft, and unlawful access to personal data. A centralised digital identity system may improve efficiency in theory, but if compromised, hacked, mismanaged, or abused internally, the consequences for ordinary citizens could be catastrophic. A person’s identity today determines access to banking, healthcare, employment, voting, travel, and financial services. Concentrating all of this into a single digital ecosystem creates a highly attractive target for cybercriminals and corrupt officials alike. Before implementing such a system, government should first demonstrate the ability to: • Properly secure existing state databases and infrastructure • Prevent corruption and bribery within departments • Ensure reliable service delivery and accountability • Guarantee independent oversight and transparency • Provide non-smartphone alternatives for vulnerable citizens • Clearly define liability and recourse in the event of data breaches or identity compromise Without these safeguards, this proposal risks creating more danger than protection for South African citizens.	Cornel	KwaZulu-Natal		employed individual

	2026-05-24 08:37:00	No I do not	The 30-Day Address Notification Penalty		Most people in South Africa don’t even have a formal address. And I would hazard to say that most have to replace their phone at least annually, when living in informal settlements. This proposal is a joke. Let’s start by putting homes and personal safety there for everyday South Africans, and demonstrate in the process that some level of public administration is possible, before proposing more administrative systems to mismanage. Demonstrating some trustworthiness with public funds would also be good, before centralising even more control over the affairs of everyday South Africans.	Ryan	KwaZulu-Natal		self-employed
	2026-05-24 08:35:27	No I do not	Soft Discrimination & Digital Exclusion		Those who cannot buy or contract a phone, that has the capacity for this document to upload will be excluded. Secondly this type of document will allow government to survey any citizen without his knowledge. This is unethical and unlawfully according to the present laws.	Gertina van der	Gauteng		retired

	2026-05-24 07:43:15	No I do not	Centralised Cyber & Security Risk		This digital ID is a step into a dystopian nightmare where the possibilities of the system being compromised by unsavoury actors is enhanced. It further allows a multitude of individuals to handle sensitive and possibly life changing information about millions if South Africans. The five year renewal and 10 year disappearance of the ID is wholly unacceptable as it is simply a path for a future government not interested in democracy to easily "disappear" whomever it chooses. Lastly locking the ID to a single phone is unacceptable in this day and age of rapid technology change where mobile phones get traded in or upgraded at a dizzying rate and not to mention how often phones are lost or stolen.	Chris	Western Cape		retired

	2026-05-24 06:14:49	No I do not	Other		This appears to be a good idea. It makes it easier to catch criminals and the social credit system would encourage good social behaviour. But for ordinary law binding citizens, it would be a hassle to get back to your life if you lose your phone. Also, with the development of cyber crimes, the security risk of Home Affairs system being hacked is high. If Home Affairs was a well managed department like SARS, this would be a great initiative. High security risk, Home Affairs poor administration and criminal activities of Home Affairs officials are the reason I do not support this digital ID proposal.	Pumla	Western Cape		employed individual

	2026-05-24 03:25:07	No I do not	Centralised Cyber & Security Risk		ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-23 21:04:02	No I do not	The 10-Year Physical Queue Trap		The risk of having your mobile device stolen, which will become your identity, hope and anchor, with the Digital ID and the consequence there off is absurd. I totally disagree to become a human with no say in how the state prescribes and take control of my identity, prescribe the uncertain consequences of any unfortunate outcome to delete me from their national system and I have to go and proof myself again, collecting and being able to monitor and trace all my information (on the internet - social media, financial dealings, etc. and have me at the mercy of a government that supports Iran, enforces BEE and only care about themselves, and allow thousands of South Africans - their own nation who votes for them, pay taxes which they steal and use to enrich them selves and they expect us to vote YES for this Digital ID in it's current form - a resist. No. No. No. We can't trust anything this Government plans, do or intend to institute. The National Health Insurance Bill that was contested and won is a recent example of a bill that the ANC quietly intends, it can never work, but they just press forward. This Digital ID Act needs more scrutiny and requires much more input from all spheres of South Africans and legal professionals, before the intent and consequences can ever be acceptable. In it's current form I do not support it.	Louise	Gauteng		business owner

	2026-05-23 20:07:34	No I do not	Centralised Economic Kill-Switch Risks		Korporatiewe Privaatheidskruip: Die outomatisering van "byna intydse" data-sinchronisasielusse met bank- en telekommunikasiereuse sny weg aan die noodsaaklike grens wat soewereine openbare burgerlike registers van private, winsgedrewe korporatiewe infrastruktuur moet skei. Ten spyte van statutêre beloftes, verhoog die verspreiding van lewendige data-opdaterings oor verskeie derdeparty-kommersiële bedieners inherent die risiko van datalekkasies en korporatiewe toesig. Suid-Afrika se openbare sektor het 'n belaaide geskiedenis met sistemiese data-oortredings en losprysware-aanvalle. Die skep van 'n allesomvattende digitale identiteitsregister wat siviele data direk aan private entiteite koppel, vergroot die sistemiese "aanvalsoppervlak" dramaties. As hackers 'n sentrale bewaarplek kompromitteer, neem die potensiaal vir outomatiese, grootskaalse identiteitsdiefstal aansienlik toe.	Paul	Outside SA	V.A.E.	employed individual

	2026-05-23 19:08:25	No I do not	Centralised Cyber & Security Risk		South Africa's public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic "attack surface." If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. If your digital ID lapses under the 10-year rule, you are legally stripped of your active digital credential and forced to undergo a physical, standard in-person enrollment process all over again. This creates an unnecessary, cyclical bureaucratic loop that forces digitally active citizens back into notorious, real-world Home Affairs queues simply because they did not have a reason to visit a physical office for a decade. Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office. 	2026-05-23 18:47:19	No I do not	Corporate Interoperability & Privacy Creep		Hierdie voorstel hou reuse gevare in vir die beheer van eienaarskap oor persoonlike data asook vir persoonlike privaatheid. In werklikheid veroorsaak die staat se onbevoegdheid om met Dept. Binnelandse Sake effektiewe dienste te lewer, die oordrag van die onus daarvoor na die privaatsektor. Deure word wawyd oopgemaak vir die verkoop van privatedata aan korporatiewe entiteite. Die enkele belangrikste persoonlike item sal voortaan die slimfoon wees. Diefstal of die verloor van die slimfoon sal lei tot die onmiddellike verlies aan toegang tot fondse en kritiese dienste wat op identifikasie staatmaak. Daar word beweeg na die Chinese stelsel van sosiale krediete - verval in die regering se onguns en die individu verloor alle regte. Die regering sal absolute beheer oor menselewens kan uitoefen. Dit impliseer die verlies aan privaatheid en persoonlike vryheid. Die regering kan d.m.v selfone elkeen se persoonlike bewegings monitor. Ek weier om die voorgenome wet te gehoorsaam.	Okkie	Western Cape		self-employed

	2026-05-23 17:04:13	No I do not	Centralised Cyber & Security Risk		It is absolutely not acceptable that governmental bodies or the authorities be entrusted with control over one's private life and details. There is no necessity, beyond the present forms of governmental control over one's private life and identity details, to sacrifice any further individual rights to governmental authorities. Very reputable banks, well known for their strict security measures protecting clients' personal information, are regrettably responsible for a recent major leak of millions of their clients' details. This has led to fraudulent withdrawals (or attempts at that) of funds from their accounts, including the author of this article. If banks cannot enforce watertight security or strict confidentiality over the private account/identity details, then what hope is there that state employees would fare any better when they cannot even protect one's constitutional rights to privacy? Mr Leon Schreiber is at liberty to be the first volunteer in this crazy idea of his department, especially if he can guarantee that his proposed changes will be applied with the same enthusiasm and objectivity as he believes he possesses. For me and 20 of my nearest of kin, please place the idea in the nearest trash can and burn it	David (Dave)	Gauteng		self-employed

	2026-05-23 17:03:11	No I do not	Centralised Cyber & Security Risk		I do not support the Draft Amendment of Identification Regulations (Digital ID) as presented by the Department of Home Affairs. My main concern is the risk to privacy, personal freedom, and data security. A centralized digital identification system could expose citizens' personal and biometric information to cyberattacks, data leaks, or misuse by officials and third parties. I am also concerned about government overreach and the possibility of increased surveillance of citizens. Many South Africans already face challenges with service delivery, corruption, and data protection, which raises doubts about whether such sensitive information can truly be kept secure. 	2026-05-23 17:00:15	No I do not	Centralised Cyber & Security Risk		This is convenient for us but the problem is our Government's data is not secured well enough to secure any of our private information as we frequently hear in the news from successful hack attempts into our Government's data and it being stolen and or leaked. Due to this I strongly disagree moving away from paper work and the physical ID cards due to the lack of any cyber security that our Government's has from a digital perspective. If the GNU wants to implement something like this, they will have to spend more money on cybersecurity which will cost us tax payers even more in the long run as we will have to fund them for the lack of their insight regarding this. 	2026-05-23 15:58:08	No I do not	Centralised Cyber & Security Risk		Digital ID is a massive cyber security risk and is obviously not in the interest of the people this government is supposed to stand for. The people do not want it!	Jeandre	Western Cape		
	2026-05-23 15:57:27	No I do not	Centralised Cyber & Security Risk			Fanie	Free State		retired
	2026-05-23 15:56:40	No I do not	Centralised Cyber & Security Risk		Using cellphones for central ID is prone to cyber-attack, it is open to fraud and a violation of our civil rights to the security of our identity. Criminals are rife in our country and the government cannot even keep the current crime under control, I hate to think what will happen with cybercrime opportunists come out of the woodwork with the proposed new avenue of fraud, not to mention what it will cost the country in claims. This is a terrible idea.	Rob	Western Cape		self-employed
	2026-05-23 15:56:38	No I do not	Centralised Cyber & Security Risk			Edward Philip	Gauteng		
	2026-05-23 15:56:21	No I do not	Centralised Cyber & Security Risk		Our privacy will be taken away from us, with government more in control than ever. We already have no leg to stand on with so much happening in South Africa, this will push us even further back. They want to control everybody and everything that we do, it is like having a personal spy over one's head with no recourse for us as individuals.	Christine	Gauteng		
	2026-05-23 15:54:15	No I do not	Centralised Cyber & Security Risk		This is an evil attempt to control and “own” human beings! Human beings have the right to total freedom and total privacy . I do not condone any fir of digital Identity!!	Katjy	Western Cape		unemployed individual
	2026-05-23 15:52:40	No I do not	Other		Good Day All Real-Time Corporate Data Loops: The state will record "Verified Relationships" between you and private entities like banks and telcos. If you update your address or phone number at your bank, it will synchronise across the state population register automatically in near real-time—permanently blurring the line between public civic data and private corporate infrastructure. The Stolen Phone Lockdown: Your digital ID is cryptographically "bound" to a single smartphone. In a country with high rates of mobile theft, losing your phone means your legal identity token is instantly frozen or revoked. The regulations are currently silent on a secure, remote path to restore your access, raising the threat of immediate financial and administrative paralysis. The 10-Year Physical Queue Trap: Your digital ID expires every 5 years. While remote renewal via a facial scan in the app is permitted, the draft rules state that if you go 10 consecutive years without a physical, in-person touchpoint at a Home Affairs branch or partner bank, your credential completely lapses. You will be forced to line up in person from scratch to re-prove your identity. Algorithmic Profiling (The 30-Day Rule): You will be legally required to report routine life updates (moving house, changing an email) within 30 days. If you fail to do so, the state will algorithmically drop your internal "Identity Assurance Level." A lowered score could mean sudden, frustrating transaction rejections when you try to use high-security online services. This creates a dystopian future where access to services hinges on how well you behave or follow the arbitrary rules set out by a dysfunctional state Foundations for Function Creep: Centralising dynamic biometric registries and cross-entity tracking pipelines creates a technical foundation that critics warn could easily be weaponised into an authoritarian behavioural tracking system, or act as a centralised economic kill-switch over your accounts. 	2026-05-23 13:21:27	No I do not	Centralised Cyber & Security Risk		Why does the government want to have absolute control over its citizens? These proposals are a direct threat on our constitutional rights as citizens. Why are these regulations necessary? CONTROL OF THE ELITE in government over the people. We do not want to go the route of socialism and communism which is a proven catastrophic failure. The majority dictated to and punished by the so-called leaders.	Carol	Gauteng		retired
	2026-05-23 13:19:59	No I do not	Soft Discrimination & Digital Exclusion		well I think this is a big scam to ensure that people can find all the people's data!!! I would not like to be told that must have a smart phone that they can find all my data No property security / stealing data / taking peoples identity away big time identity theft No thanks / and no thanks Not with all this corruption going on i think	diana	Western Cape		employed individual
	2026-05-23 13:19:39	No I do not	Centralised Cyber & Security Risk		What has happened to the POPI Act then? And if one loses one's smart phone how is one able to link back onto the app - this seems not to have been thought out properly. This is basically trying to keep tabs on all it's citizens in a truly frightening way. The same as they want to control all religions in South Africa. We were supposed to have one of the best constitutions in the world but what has become of it. If the public don't wake up, we will become either a totalitarian or a communist state. I know we are allies with China and Russia but to copy their politics is reprehensible. And also, how about the thousand - no - millions of people living in inaccessible towns or rural villages - how will this affect them or will they become non persons. The Minister of Homeland Affairs should concentrate of getting one thing done at a time and the best way is to start of with getting SASSA up and running PROPERLY which it is not doing now even with all this modernity. People stand in long queues all day to be aided by a consultant, elderly, sick people and if they don't get to see a consultant that day, have to come back again. Get that right firstly and then take another step forward.	Pieter	Eastern Cape		retired

	2026-05-23 12:39:06	No I do not	Centralised Cyber & Security Risk		While the modernisation of identity systems and the reduction of fraud are important objectives, the proposed MyMzansi Digital Identity framework raises serious concerns regarding privacy, cybersecurity, and excessive centralisation of personal data. A national identity system linked to smartphones, real-time private sector data synchronisation, and continuous validation mechanisms creates significant risks for abuse, exclusion, and unauthorised surveillance. Many South Africans also face practical challenges such as device theft, limited digital access, and unreliable connectivity, which could unfairly restrict access to essential rights and services. An identity document is not merely a convenience tool—it is the foundation for exercising constitutional rights, including banking, employment, healthcare, travel, and voting. Any digital identity system must therefore include strong legal safeguards, independent oversight, robust data protection, and guaranteed non-digital alternatives. Modernisation should enhance freedom and accessibility, not create new forms of dependency, exclusion, or state overreach.	Gilberto	Gauteng		retired

	2026-05-23 11:19:57	No I do not	Other		90% of the population do not have access to smartphones or are not digital inclined. Some rural areas does not even have coverage and some still have communal.structures in place. Although the youth are more digital literate everyday more and more people warns against hackers committing identity fraud. Some may view us living in a 1st world country, but our people experience 3rd world challenges every day. Maybe in 30 years this would be feasible, but not now. We still need paper / plastic IDs as backups and a progressive transition to digital IDs . Our people need time and steadfast warranties to change to digital IDs.	Louis	Gauteng

	2026-05-23 11:02:10	No I do not	Centralised Cyber & Security Risk		It seems that our government is part of the 2030 reset. This is a means of control. What about our right of freedom, our right to choose what is best for us as citizens.	Wasielah	Western Cape		employed individual
	2026-05-23 11:02:10	No I do not	Centralised Cyber & Security Risk		It seems that our government is part of the 2030 reset. This is a means of control. What about our right of freedom, our right to choose what is best for us as citizens.	Wasielah	Western Cape		employed individual
	2026-05-23 11:02:02	No I do not	Centralised Economic Kill-Switch Risks		South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis.	Bev	Gauteng		retired
	2026-05-23 11:01:54	No I do not	Centralised Economic Kill-Switch Risks			Brunel	Gauteng		unemployed individual
	2026-05-23 11:01:28	No I do not	Centralised Cyber & Security Risk		The security risk is too high having my ID linked solely to my smart phone. When it is stolen, I am faced with the possibility of the thief gaining access to my personal data. Futuremore, this proposal is in conflict with the privacy protections of the POPI Act..	Matthew	Western Cape		retired
	2026-05-23 10:59:02	No I do not	Centralised Economic Kill-Switch Risks		The state is desperately trying to control the citizens and in so doing trying to gain the ultimate dictatorship powers which would include shutting people down who disagrees with anything the state dictates. So NO as a sovereign being I totally object to any and all controlling/dictorial/harmful mechanisms	Jae	Gauteng		unemployed individual
	2026-05-23 10:57:09	No I do not	Soft Discrimination & Digital Exclusion		The initiative is a good one, but it raises questions about risk for the privacy of our personal data, corporate and state overreach and cyber terrorism. It needs deeper thought to protect citizens.	Hendrik	Gauteng		retired

					1. Identity theft if accounts are hacked 2. Large-scale data breaches exposing millions of users 3. Government overreach into personal life 4. Constant tracking of movements and activities 5. Loss of anonymity online 6. Cyberattacks targeting national databases 7. False accusations from incorrect data matches 8. Difficulty correcting errors in records 9. Account lockouts preventing access to services 10. Dependence on internet connectivity 11. Exclusion of people without smartphones 12. Exclusion of elderly or digitally illiterate users 13. Power outages disabling verification systems 14. Centralized databases becoming single points of failure 15. Abuse of facial recognition technology 16. Mass surveillance concerns 17. Profiling of citizens based on behavior 18. Data sharing without proper consent 19. Private companies monetizing identity data 20. Biometric data theft (fingerprints, iris scans, face scans) 21. No way to change stolen biometric information 22. Social scoring systems tied to IDs 23. Banking access blocked during system failures 24. Travel restrictions caused by technical errors 25. Government censorship linked to identity verification 26. Political discrimination through digital systems 27. Frozen accounts during investigations 28. Risk of authoritarian misuse 29. Reduced personal privacy 30. Increased phishing scams pretending to be ID providers 31. SIM-swap fraud targeting linked accounts 32. AI-generated deepfake identity fraud 33. Children’s data being collected long term 34. Permanent digital records of mistakes 35. Difficulty living “off-grid” 36. Dependence on centralized authentication apps 37. Password fatigue and security weaknesses 38. Loss of access after phone theft 39. Mandatory updates causing compatibility problems 40. Technology failures during emergencies 41. Exclusion during network outages 42. Identity spoofing attacks 43. Inaccurate facial recognition for some ethnic groups 44. Discrimination caused by algorithm bias 45. Employers accessing excessive personal information 46. Insurance companies profiling users 47. Reduced cash and anonymous payment use 48. Pressure toward cashless societies 49. Data leaks exposing home addresses 50. Increased blackmail risks from leaked records 51. Fraudulent loans opened using stolen identities 52. Difficulty proving identity if systems fail 53. Vendor lock-in to certain technology providers 54. High implementation costs for governments 55. Increased taxes to fund infrastructure 56. Corruption in procurement of digital ID systems 57. Cross-border incompatibility issues 58. Confusing verification procedures 59. Overreliance on automation 60. Lack of transparency in algorithms 61. Misidentification by AI systems 62. Unauthorized police access to databases 63. Abuse by insiders with database access 64. Tracking of purchases and spending habits 65. Difficulty escaping abusive relationships if constantly traceable 66. Identity suspension affecting daily life 67. Denial of services due to scoring systems 68. Reduced civil liberties concerns 69. Hackers targeting biometric checkpoints 70. Weak cybersecurity standards in some countries 71. Fraud through fake digital ID apps 72. Identity cloning using leaked information 73. Mandatory linking between services and IDs 74. Reduced freedom of speech due to traceability 75. Fear of expressing unpopular opinions 76. Increased dependence on big tech companies 77. Data retention for decades 78. Risk of political targeting 79. Internet censorship linked to verified identities 80. Difficulty remaining pseudonymous online 81. Privacy loss in healthcare systems 82. Tracking of medical history across institutions 83. Centralized citizen scoring possibilities 84. Unauthorized access by foreign actors 85. System downtime affecting entire populations 86. Fraudulent biometric enrollment 87. Poor regulation of third-party contractors 88. Exploitation of vulnerable populations 89. Lack of informed consent by users 90. Data collected beyond original purpose (“function creep”) 91. Problems caused by outdated information 92. Language barriers in digital systems 93. Rural communities being disadvantaged 94. Exclusion of undocumented individuals 95. Emotional stress from constant verification requirements 96. Increased dependency on electricity and devices 97. Digital exclusion during disasters 98. Risk of monopolies controlling identity infrastructure 99. Difficulty opting out once systems are mandatory 100. Loss of personal control over one’s own data 101. Phone battery dying during identity verification 102. Delays in emergency medical treatment due to ID checks 103. System errors denying boarding at airports 104. Inability to vote if systems malfunction 105. Increased risk of ransomware attacks on governments 106. Data corruption inside national databases 107. Confusion caused by multiple linked accounts 108. Digital IDs being used to monitor protests 109. Restrictions on access to public services 110. Financial exclusion from banking systems 111. Increased dependence on QR codes and scanners 112. Device incompatibility with older phones 113. Fake customer support scams stealing credentials 114. Loss of privacy in transportation systems 115. Data mining by advertisers 116. Forced identity verification for social media use 117. Children inheriting permanent digital profiles 118. Higher risk of cyberwarfare targeting citizens 119. Delays in welfare payments from system issues 120. Risk of identity misuse after death 121. Stalking risks through leaked location-linked data 122. Exposure of family relationships through linked records 123. Conflicts between privacy laws and enforcement practices 124. Mandatory compliance with changing regulations 125. Cross-platform tracking of user behavior 126. AI predicting personal behavior patterns 127. Difficulty accessing services abroad 128. Fraudulent biometric replicas 129. Voice-cloning attacks used for verification fraud 130. Identity blacklisting errors 131. Increased costs for small businesses to comply 132. Overcollection of unnecessary personal data 133. Government dependency on private contractors 134. Political instability affecting digital systems 135. Foreign surveillance through outsourced infrastructure 136. Unclear accountability after data leaks 137. Long recovery times after cyberattacks 138. Complications during software migrations 139. Human rights concerns over mandatory registration 140. Potential discrimination against minorities 141. Invasive monitoring in workplaces 142. Digital IDs being required for internet access 143. Difficulty accessing services in remote areas 144. Overdependence on cloud infrastructure 145. Server outages locking people out of accounts 146. Problems verifying identity after name changes 147. Barriers for refugees or migrants 148. Reduced ability to use anonymous forums 149. Data synchronization errors between agencies 150. Digital fraud rings targeting vulnerable users 151. Increased pressure to surrender privacy for convenience 152. Identity verification delays in hospitals 153. Problems caused by facial injuries affecting recognition 154. Accessibility challenges for disabled individuals 155. Fingerprint scanners failing for manual laborers

	2026-05-23 10:45:05	No I do not	Centralised Cyber & Security Risk		South Africa is already struggling with cyber security vulnerabilities all over the place. This implementation, along with the potential theft of your phone that looms over us all, I can see will only cause issues in the long run. And this is even glossing over the fact that a smartphone is required in the first place, which as we all know, a lot of South Africans still do not have permanent, personal access to. However, this is merely my main concern. My secondary concern is the potential for government control of amenities and whatever else through this hidden social credit-like scoring system in the background. I'm all for having a valid ID on your phone as an *alternative*, but making it the primary ID and crippling other forms into these traps, as well as all the other things they are trying to tack on to the system, makes the entire deal not worth it for me.	Johni	Gauteng

	2026-05-23 09:33:46	No I do not	Centralised Economic Kill-Switch Risks		If our life is to be digitally controlled we as individuals loose our privacy and leave control of all our actions in the hands of mostly AI with government in control of all our actions. This is totally unacceptable as this is the ultimate central control from a government of any country's population with the population with no say over their destiny and no power to change the power that government hold. This destroy the fundamental function of government to serve its population which is totally unacceptable in any free society that is bound by law which should include those that are supposed to serve. But them being in control will take them above repercussion of any bad policy and behavior which looking just at the IRGC is a situation that humans should never reach. 	2026-05-23 09:28:19	No I do not	Structural Function Creep & Tracking		If this digital id goes into lay, it’s a slippery slope to total government control over each and every South African’s life. It opens up many avenues for potential misuse. Elections for example. I understand that security of the id will be paramount. However I also know that there have been ways to beat security measures in the past. In addition an individual no longer has control over their own identity. A digital id may lead to less control of an individual free choice. Take the Covid pandemic for example: vaccines were forced on individuals, which turned out to be dangerous for the individuals health. A digital id will take more free will to decide what is good for your own person.	John	Western Cape

	2026-05-23 08:49:48	No I do not	Centralised Cyber & Security Risk		We all know that electronic systems are not foolproof. We all know that notwithstanding POPIA frequent advertisements and phishing scams come though our phones and e-mail accounts. We all know that systems are vulnerable to hacking. We all know how impossible it is to negotiate anything other than a purely standard, run-of-the-mill transaction via a digital system. Against that backdrop, the more comprehensive and all-embracing a system is, the more vulnerable we, the public, are to cyber attacks that compromise our safety, our identity, our savings and banking arrangements, and our property. The possibility of a purely digital ID system, linked across the entire business and corporate landscape in South Africa terrifies me. So, NO, I do not support this amendment.	Geoffrey	North West		business owner

	2026-05-23 08:35:41	No I do not	Centralised Cyber & Security Risk		While this draft proposal intends to ease the administrative burden of issuing physical ID cards and to reduce the risks of identity forgery or theft, the sweeping technological integration, real-time private sector data synchronisation, strict smartphone dependency, automated profile-tiering, and rolling validation cycles will create greater risks to the individual.	Brenda	Western Cape		retired
	2026-05-23 08:33:36	No I do not	Centralised Economic Kill-Switch Risks		It is taking away my constitutional rights to control ans/or access to my personal identification	Diedré	Western Cape		employed individual
	2026-05-23 08:31:39	No I do not	Centralised Cyber & Security Risk		So there are many concerns that our amazing government has overlooked. This sounds quite cool until my mobile phone goes missing or stolen which is very highly possible in this country. What happens then, my ID will be used in some way which I will have no control over. Cyber crimes to steal ID will also happen. With the governments recent mistakes regarding a simple thing like water and electricity billing systems charging incorrectly, how do we have confidence that our home affairs will be able to control something that has never been tested here. I have soo many concerns that this should never be allowed.. Not to forget that I am not willing to go to the home affairs every 10 years and sit there to renew my ID.. This is quite ridiculous..	Shivan	KwaZulu-Natal		
	2026-05-23 08:27:53	No I do not	Other		Government overreach. Current system is just fine.	Russell	Eastern Cape		business owner
	2026-05-23 08:27:38	No I do not	Centralised Cyber & Security Risk		If this goes through it would leed to a security risk as well as long queues when confirming your identity.	Estelle	Gauteng		retired
	2026-05-23 08:27:29	No I do not	Other		Another way the Government wishes to have control, which imposes restriction on ones privacy, safety and control of one's personal information and data.	Kevin	Gauteng		retired

	2026-05-23 07:39:25	No I do not	Centralised Cyber & Security Risk		We are moving into a dystopian state where the state usurps all power over our movements	Danie	Gauteng		business owner
	2026-05-23 07:38:54	No I do not	Centralised Cyber & Security Risk		The greatest concern is the creation of a highly centralised and permanently connected national identity infrastructure. While modern digital systems can improve efficiency, South Africa's public sector has repeatedly experienced major data breaches, ransomware attacks, weak IT governance, and insufficient cyber defence capacity. By linking the National Population Register directly to banks, telecommunications providers, and other corporate systems through live API integrations, the regulations significantly expand the country's cybersecurity "attack surface." Experts warn that this effectively transforms the national identity system into a high-value target for international cybercriminal networks, identity theft syndicates, and hostile actors. A successful breach could compromise millions of citizens' personal records simultaneously, undermining public trust, financial security, and even national security. Critics argue that before such an interconnected system is introduced, South Africa must first demonstrate robust cyber resilience, independent oversight, strict constitutional protections, transparent accountability mechanisms, and world-class data protection standards. 	2026-05-23 06:25:04	No I do not	Soft Discrimination & Digital Exclusion Structural Function Creep & Tracking		Takes away too many rights and freedoms and gives too much control to government ant cooporations. Making private information available digitally accross many platforms is not acceptable. They have no right to this information. Having to constantly update personal information or loose credit scores is a blatent infrindgement on our constitutional rights and disadvantages millions of citizens who do not have first world access to internet and tecnology. The high crime rate and inadequate policing makes this idea very scary. A mugging will give a stranger access to very private information and can cause a great deal of damage. The assurances that this will reduce fraud are not believable in SA. Hackers and criminals are slways ten steps ahead and police are unable to do anything. A lot of identity theft and fraud comes from outside SA. A HUGE CONCERN IS THAT a system which gives a few organisations and individuals technological and eccomic control over the lives of millions is not acceptable in a democratic country. It has the potential to lead to the erosion of constitutional rights and protections and a police like state. Another way must be found. 	2026-05-23 06:00:11	No I do not	Centralised Cyber & Security Risk		The main concerns are: * data sharing between government, banks, and telecoms, * cyberattacks on a central identity system, * automated identity scoring affecting access to services, * phone theft or SIM-swap risks locking people out, * and future expansion into broader surveillance or tracking. There is also a major concern for high-net-worth individuals and business owners. If criminals gain access to a centralised digital identity system, it could increase risks of targeted fraud, account takeovers, extortion, identity theft, or coordinated financial attacks across multiple institutions at once. Strong safeguards are critical: * strict POPIA compliance, * independent cybersecurity audits, * transparent appeal processes, * access logs, * limits on data sharing, * and a permanent physical ID alternative. 	2026-05-23 00:00:17	No I do not	Soft Discrimination & Digital Exclusion		scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis.	Desne	Western Cape		

	2026-05-22 23:54:28	No I do not	Centralised Economic Kill-Switch Risks			Marius	North West		business owner
	2026-05-22 23:50:10	No I do not	Centralised Cyber & Security Risk		Civic groups, privacy advocates, and cybersecurity experts argue that while modernisation is welcome, the draft regulations introduce expansive risks and administrative penalties that demand much tighter constitutional safeguards. Their core arguments include: Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-22 22:26:11	No I do not	Centralised Cyber & Security Risk		risks of such a system far outweigh the benefits. The violations of privacy, the risk of centralised economic kill-switches are just too many. This is just another ploy for the government to have more control over the citizens of SA. They already have too much insight into our privacy.	Michelle	KwaZulu-Natal		self-employed
	2026-05-22 22:25:48	No I do not	Corporate Interoperability & Privacy Creep		I vote NO against the draft Identification Regulations, 2026. I do NOT support the introduction of the dual-track digital identity system, including the MyMzansi smartphone application and the Digital Identity Credential. I am concerned about the risks this poses to privacy, personal security, and constitutional rights. Key reasons for my opposition include: • The proposed real-time data sharing with private entities and the creation of an interoperable network between state and corporate databases. • The introduction of an "Identity Assurance" scoring system that could penalise citizens for everyday life changes. • The device-locking of digital identity and the lack of clear, secure recovery processes in a country with high rates of phone theft. • The risk of function creep and potential for increased surveillance or exclusion. • The requirement for periodic physical verification, which may create new barriers instead of removing them. I believe these changes represent an unnecessary and risky overhaul of our national identity system that could compromise citizens' freedoms and security rather than genuinely improve service delivery. I request that my NO vote and these concerns be formally recorded as part of the public participation process.	Liz	Western Cape

	2026-05-22 21:11:04	No I do not	Other		While I believe that the country needs new measures to stem the scourge of identity theft and crimes linked to inadequate identification of persons, I am of the opinion that the country is not ready for such a system. I respectfully do not think the failing South African government has the ability to keep my digital ID and biometric data safe. It can be expected that, once approved, this legislation will be amended later on to make certain involvement mandatory in order to not to be disadvantaged in some way. However, someone like me will then be disadvantaged as I cannot entrust the government and their industry partners to protect my information. This effectively implies that the protection of my identification and biometric data will be taken out of my hands and place in an environment where it is the target of bad actors. This is furthermore a new opportunity for bad actors inside government structures to create fake identities for criminal activities, creation of ghost workers to draw salaries, pensions and social grants, and to create fake voters to rig election outcomes. A system like this can only be considered when government has removed all questionable officials and has severed dependency on political parties that do not recognize the separation between the state and the political structures. This legislation and its subsequent systems can also only be considered when independent parties have tested the reliability of the legislation and digital infrastructure, and have certified it as unhackable and uncorruptible. South Africa's public sector has historically suffered from severe data breaches, ransomware disruptions, and weak digital infrastructure defenses. The fact that ID data will be shared among industry partners of the government furthermore means that the data is not only exposed to government inefficiencies, it is also broadcast among different role players, where it will be exposed to other levels of actors. I furthermore suspect that the government has not conducted adequate impact studies on how this system will affect persons without a digital footprint, and which is still relying on traditional means of communication and payment. I am thus of the opinion that the initiative is premature and that it should rather be replaced with interim legislation that would pave the way for the introduction of the proposed legislation. Such interim legislation should deal with the formation of public-private structures that must inter alia first address the concerns above, and resolve all aspects before government is informed that the country is ready for the digital ID legislation.	Andre	Free State		retired
	2026-05-22 21:09:57	No I do not	Centralised Cyber & Security Risk		Don't know what the Department of Home affairs get there info from. Their systems are the worst. 	2026-05-22 19:43:20	No I do not	Centralised Cyber & Security Risk		"Optional" may become effectively compulsory Even if digital IDs remain legally optional, banks, employers, airlines, and government departments may gradually prefer digital verification, making life harder for people using only physical IDs. Privacy and surveillance concerns A centralized digital identity system can create detailed records of authentication and identity usage, raising fears about tracking, profiling, database linking, and misuse of personal data. Biometric risks If biometric data such as fingerprints or facial scans are compromised, they cannot simply be replaced like passwords. Errors in biometric matching could also wrongly deny people access to services. Digital exclusion Many South Africans lack smartphones, stable internet, electricity reliability, or digital literacy. Critics fear this could create a two-tier system where digitally connected citizens receive faster and easier access than poorer or older citizens. Mission creep Systems introduced for identification can gradually expand into banking, healthcare, grants, voting, taxation, telecom registration, and law enforcement, concentrating large amounts of power and data in one system. System failures and lockouts Technical problems, hacking, fraud flags, SIM swaps, or database errors could leave citizens temporarily unable to prove their identity or access services. Broad future powers Some implementation details are left to future regulations and administrative decisions, raising concerns that the system could expand significantly without full parliamentary debate. Cybersecurity and state-capacity concerns South Africa has a mixed record on protecting large databases. A national digital-ID system requires extremely strong security and competent administration to avoid breaches and corruption. Possible constitutional challenges Future implementation could face legal challenges around privacy, equality, access to services, and administrative fairness if digital systems become exclusionary or coercive. 	2026-05-22 17:43:02	No I do not	Centralised Cyber & Security Risk		Phone theft is a daily occurrence, and Cybercrime is on the increase - to have my ID on a phone is a huge risk to myself and the security of my identity.	Sophia	Gauteng		employed individual
	2026-05-22 17:42:42	No I do not	Other		This letter serves as a formal declaration that I do not consent to any compulsory implementation of digital identification systems, biometric surveillance, centralized personal data control, or any legislative or administrative measure that would unlawfully infringe upon my constitutional rights, privacy, bodily autonomy, property rights, freedom of movement, and personal sovereignty. Constitutional Protections: The Constitution of the Republic of South Africa is the supreme law of the Republic. Section 1 establishes the foundational values of: Human dignity; The achievement of equality; The advancement of human rights and freedoms; Non-racialism and non-sexism; Supremacy of the Constitution and the rule of law; and A democratic government based on the will of the people. In terms of the Bill of Rights, I expressly invoke and reserve, among others, the following protections: Section 10: The right to inherent human dignity. Section 12: Freedom and security of the person, including bodily and psychological integrity. Section 14: The right to privacy, including protection against unlawful collection and retention of personal information. Section 18: Freedom of association. Section 21: Freedom of movement and residence. Section 22: Freedom to choose one’s trade, occupation, or profession. Section 25: Protection against arbitrary deprivation of property. Section 27: Access to social security and essential services. Section 32: Access to information. Section 33: Just administrative action. Section 34: Access to courts. Section 36: Rights may only be limited where reasonable and justifiable in an open and democratic society. No administrative system or legislative framework may lawfully extinguish or unreasonably limit these rights without meeting the strict constitutional requirements applicable to any limitation of rights. International Human Rights Protections: I further rely upon universal human rights principles recognised in instruments such as the United Nations Universal Declaration of Human Rights, including: Article 1: All human beings are born free and equal in dignity and rights. Article 3: The right to life, liberty, and security of person. Article 12: Protection against arbitrary interference with privacy. Article 13: Freedom of movement. Article 17: The right to own property and not be arbitrarily deprived of it. Article 18: Freedom of thought, conscience, and belief. Natural Law and Common Law Principles I affirm the enduring principles of natural law, which recognise that certain rights are inherent to every human being and are not granted by governments. These include the rights to life, liberty, privacy, bodily integrity, peaceful enjoyment of property, and self-determination. I also reserve all lawful rights available under common law principles, including: The right to informed and voluntary consent; The right to security of one’s person and estate; The right to peaceful possession of property; The right to be free from unlawful coercion or undue intrusion; The right to lawful due process. Spiritual and Moral Convictions My body, mind, conscience, and spirit are inviolable. My personal beliefs affirm that human life is sacred and that each person bears a profound responsibility to safeguard their own dignity, conscience, and freedom. No administrative or technological system should diminish these values or compel surrender of autonomy over one’s physical person or deeply held beliefs. 	2026-05-22 17:36:19	No I do not	Centralised Cyber & Security Risk		Totally crazy to allow our known corrupt government in control of such a dangerous cyber security risk. Knowing current government our data will be available to all and sundry even without possible security risks and data leaks.	Chris	Gauteng		retired
	2026-05-22 17:35:03	No I do not	Centralised Cyber & Security Risk		There are too many potential problems resulting from the introduction of this proposal. If/when my smartphone is stolen the person who has stolen it can use my ID - Obviously I can delete the phone from the system and, in so doing, will have to have another issued. This is a major problem. I also do not want my ID to be available to third parties without my specific consent. I am not convinced of the ability of Home Affairs to manage the system with integrity. Historically they have been a source of fraud and these problems are ongoing. It will place those who do not have smartphones in an invidious position if, at any time, the new system becomes compulsory	Stuart	KwaZulu-Natal		retired

	2026-05-22 17:26:33	No I do not	Centralised Cyber & Security Risk		I am a 90 year old South African. I am fully capable and do all my own banking pay my taxes etc. I am not tied to my phone and do not always have it with me. In my retirement home are many people who do not often use their phones. In addition we are terrified of them being stolen or of us being the targets of express kidnappings. Have you considered the danger of criminals being in charge of one's phone? They could draw all your money and assert your identity. Altogether this is a loss of identity in a supposedly democratic society.	Marion	Gauteng		retired

	2026-05-22 15:48:53	No I do not	Structural Function Creep & Tracking		We have perfectly good physical ID cards already. This is totally unnecessary. There are numerous risks associated with this implementation, not least, the risk of it being hacked and sensitive, private data being compromised and also, it will be used for monitoring, tracking and tracing our every move, which is completely at odds with the principles of basic freedom of the individual. Desist from this diabolical tendency to force us into an orwellian dystopia.	Julia	Outside SA	United Kingdom	employed individual
	2026-05-22 15:44:17	No I do not	Centralised Cyber & Security Risk		Infringement of personal privacy. Stalking will be come easier, as will crime. No, I do not agree with a new digital system.	Sieglinde	Mpumalanga		employed individual

	2026-05-22 12:57:27	No I do not	Soft Discriminati on & Digital Exclusion		Themba Ngwenya Pretoria, Gauteng Email: thenbang@gmail.com Date: 19 May 2026 Advocate Moses Malakate Legal Advisor Department of Home Affairs Subject: Public Comment on Draft Digital Identity Regulations Dear Advocate Malakate, I would like to submit the following comments as an ordinary South African citizen regarding the Draft Digital Identity Regulations currently under consideration. I support efforts to modernise public services and improve efficiency. However, digital identity systems affect something deeply personal — how citizens prove who they are and access essential services. For this reason, I believe it is important that implementation proceeds with clarity, choice, and public confidence. 1. Identification Act of 1997 (Act No. 68 of 1997) Recognition and Practical Use of Green ID Books While the Draft Regulations acknowledge that green ID books remain legally valid, many citizens experience increasing difficulty using them in everyday situations such as banking, grant access, or identity verification processes. Concern: Green ID books may remain lawful in theory but become unusable in practice through institutional preference for biometric or digital systems. Request for consideration: • Continued issuing and printing of green ID books without restriction; • Maintenance of systems required to verify and accept green ID books; • Clear instruction to all government departments and regulated institutions that green ID books must be accepted. 2. Promotion of Access to Information Act, 2000 (PAIA) Access, Transparency and Third-Party Data Use Citizens require clarity regarding how personal identity information may be accessed or shared. Concern: Unclear boundaries around third-party access may undermine public trust and raise constitutional privacy concerns. Request for consideration: • Clear limits on information sharing; • Assurance that identity data will not be broadly or automatically shared; • Confirmation that constitutional rights remain the primary framework . Protection of Personal Information Act, 2013 (POPIA) Data Protection, Consent and Digital Inclusion Digital identity systems rely heavily on sensitive personal and biometric information. Concern: Without strict oversight, expanded digital systems may expose citizens to risks such as data breaches, identity theft, exclusion or loss of privacy. Request for consideration: • Strict regulation governing who may access identity data; • Transparent oversight and accountability; • Strong cybersecurity protections; • Meaningful public participation processes. 4. Optional Participation and Protection Against Indirect Exclusion Digital identity systems should remain optional and no citizen should experience disadvantage for choosing lawful paper-based identification. Technology can strengthen governance when implemented alongside choice, transparency, and respect for constitutional rights. My intention in submitting these comments is to encourage a balanced approach that modernises services while preserving accessibility and public trust. Thank you for the opportunity to participate in this consultation process.	sbhaxu	Gauteng		unemployed individual

	2026-05-22 08:16:08	No I do not	Centralised Cyber & Security Risk		Mobile phones are not secure and are frequently lost, damaged or stolen. Software is not secure from hacking. This brings potential for large scale identity theft and disruption of economic life vs current small scale options. Rural areas , the elderly and many others will be practically excluded and could lose their income and ability to function through losing access to banks etc. Corporates and the government could intentionally or unintentionally disadvantage those with limited access or abilities. Disadvantages outweigh advantages. Government has demonstrated lack of competence in many ways already. Why would they suddenly be competent and make this work correctly and securely? Large scale projects equals large scale corruption, incompetence, cost, fraud and failure. Just look at eskom.	B	Gauteng

	2026-05-21 16:06:11	No I do not	Other		I do not have a Smart ID card as I do not have finger prints. This is a big problem for me as for years my driver's license states no prints on the back. I do not have a smart phone so app's are no good to me. I am 75 years old and find my Green ID book quite adequate. Opening up channels in banks is wonderful for the elderly but the staff are not trained to assist when one does not have finger prints. Your Home Affairs office in Pietermaritzburg is not safe for the elderly and New Hanover is 40kms each way x2 and I am not able to drive that far. You need to do your homework and take into account those who are not in a position to comply with your demands. Modern technology is all well and good for those who are able to work the system but for those from the senior citizen group are not so fortunate.	Gillian	KwaZulu-Natal		retired

	2026-05-21 16:00:16	No I do not	Structural Function Creep & Tracking		This is going to be used to track everybody continuously with no oversite. Means you must always carry your phone with you, so many security risks as well	Craig	Gauteng		
	2026-05-21 15:13:55	No I do not	Centralised Cyber & Security Risk			Andre	Gauteng		Non-profit
	2026-05-21 15:09:17	No I do not	Centralised Cyber & Security Risk		Digital ID could lead to a violation of Basic Human Rights & a lack of freedom to choose or freedom of speech via Govt controls ! Citizens who do not comply with Govt ideals eg. future vaccine rollouts could be locked out of their Digital ID & banking access! Digital ID is not a guarantee against fraud... Criminals can kidnap or hijack you with yr phone & biometrics & gain access to your banking app & identify for the full 10 yrs, before in-person renewal is required! Through forgetting to update yr details within the narrow time margin of 30 days you lose access to yr Digital ID & banking capacity! ●This time period should be extended to at least 90 days . Global hacking syndicates can gain access to a country's database! This has just happened in France... a 1st world country with superior controls to S.A ! ● SA should wait for roll-outs in 1st world countries before 'leapfrogging' ahead with untested tech ! The poor, elderly & rural citizens are going to be targets of soft discrimination as they do not possess smartphones or cannot operate them effectively. ● Alternative methods of ID need to be retained for those who cannot or do not want to be part of this new system	Kim Savoire-Fae	KwaZulu-Natal		self-employed

	2026-05-21 11:07:20	No I do not	Soft Discrimination & Digital Exclusion		The proposed amendments to the Identification Regulations under Government Gazette No. 54610 risk turning South Africa’s fundamental right to legal identity into a conditional, state-monitored privilege. By forcing citizens into a centralized, smartphone-dependent ecosystem via the MyMzansi application, the Department of Home Affairs introduces structural exclusion and unprecedented surveillance under the guise of modernization.First, this framework creates a digital apartheid. Millions of South Africans lack smartphones, reliable internet, or electricity to charge devices. Conditioning the right to bank, work, travel, vote, and access healthcare on a mobile app effectively disenfranchises the country’s most vulnerable populations. A lost phone, a dead battery, or a network outage should never strip a citizen of their legal existence. Identity is a birthright, not an application that requires a rolling validation cycle or a stable data connection to remain active.Second, the MyMzansi architecture is a cybersecurity disaster waiting to happen. Centralizing the biometric, financial, and personal data of over 60 million people into a single state-controlled repository creates an irresistible target for hackers and state-sponsored cybercriminals. If this system is breached, identity theft will occur at a catastrophic, national scale.Furthermore, real-time private sector data synchronization and automated profile-tiering transform the state from an administrative custodian into an omnipresent surveyor. Linking every private commercial transaction, medical visit, and employment record directly to a centralized state app allows for real-time tracking of citizens. Automated profile-tiering could easily lead to a algorithmic social credit system, where access to basic human rights and public services is throttled or locked by automated, unappealable software glitches.We must not trade our constitutional privacy, freedom of movement, and equal access to the law for administrative convenience. The public must firmly reject this overreach and demand rigid statutory guardrails that preserve physical documentation, enforce strict data decentralization, and forbid real-time corporate-state data sharing. 	2026-05-21 10:23:25	No I do not	Centralised Cyber & Security Risk		South Africa’s public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic “attack surface.” If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly.	Nikelwa	KwaZulu-Natal		employed individual
	2026-05-21 10:22:16	No I do not	Other		Digital ID raise many infringes on many human and legal rights of citizens. It can later be used for more than just identification purposes often leading to control of money through banking system and living needs that will eventually be tied to it. It robs people of their God given freedoms and right to basic needs and autonomy. It also makes it hard for people that depend on cash like car guards to get paid if they don’t have a speed point. It also ties people to technology like a smart phone to access their home or money and if these are out of charge or broken people are often left out of their home or access to their money. There is no need for it. We have lived just fine without it until now. We don’t want to be another China.	Sheilla	Gauteng		self-employed

	2026-05-21 08:40:50	No I do not	Corporate Interoperability & Privacy Creep		This totally unacceptable and overreach. The risks are to high. It is only done in a communist China. The regulations are draconian and not acceptable in a democracy.	Tienie	Western Cape		self-employed
	2026-05-21 08:38:59	No I do not	Corporate Interoperability & Privacy Creep		I am vehemently against any form of identity that can be turned on and off at the clock of a button. In a country with much identity theft physical ID the way we currently have it is essential. I already battle with banking transactions requiring identification for some transactions - it very often doesn't work as intended and feels like an invasion of my privacy having to take a selfie to pay someone. Additionally passwords get compromised and resetting them becomes a nightmare. I'm not willing to risk my identity on a password that can be lost, reset or intercepted.	Lauren	Western Cape		business owner

	2026-05-21 03:46:34	No I do not	Centralised Cyber & Security Risk		Digital Exclusion & Soft Discrimination The draft policy features transitional arrangements declaring that the system must be phased in a way that does not unreasonably exclude individuals who do not own smartphones, lack internet access, or are unable to use digital services without help. Physical IDs will also remain completely valid. The Concern: Despite these progressive legal promises, the practical reality of modern service delivery is that digital pathways are quickly prioritized because they save money. As government systems and corporate partners inevitably optimize their systems for the MyMzansi app, citizens relying exclusively on physical IDs could face longer delays, reduced support, and systemic "soft discrimination" when trying to access basic societal resources. 	2026-05-21 00:18:39	No I do not	Structural Function Creep & Tracking		I don't believe this to be an option in South Africa where nothing is safe so leaving our lives on a cellphone ready to be stolen from us does not make any sense.	Sally	Western Cape		self-employed
	2026-05-21 00:17:54	No I do not	Centralised Cyber & Security Risk		Our government had proven that they are not capable of operating even at the most basic level, a health system, rail system, security force etc. They have failed to provide their citizens with a safe environment, decent basic health and any semblance of economic power. Scores of millions are unemployed. Millions live in poverty and misery. This proposed system will not address any of that. Not only do they lack capacity and ability but they are one of - if not the most - corrupt governments globally. They have also been unable to stop previous cyber attacks and there is every reason to believe that corruption will reach even greater levels, given the power such a digital system will yield to those controlling it. But most importantly, we as citizens should never be handing over such power to any government or unelected bureaucrats. This is only a next step to the global control of citizens by even larger bureaucratic organizations such as the UN and it's proxy organizations - none of whom have been voted for by us, to control our lives. Our government has failed to identify that they are being manipulated by colonial powers that seek to gain control of our rights, our wealth and our sovereignty. I strongly oppose this digital system. They use modernization as a reason to do this. Our country is in dire need of, "modernization" of our basic systems such as health, transport and economy, not some potentially draconian system that gives so called leaders and bureaucrats even more power over our lives. They are being manipulated by the likes of the WEF, world bank, EU, UN and the rest of the bureaucratic global organizations and Multinational companies that will make billions out of the sale of the software and smart phones. A smart phone should NOT be a compulsory or necessary requirement for banking, identity and Purchases. Once this step is taken there is no going back. We MUST resist this at all costs.	Garth	Western Cape		self-employed

	2026-05-21 00:07:56	No I do not	The 30-Day Address Notification Penalty		The infrastructure will be controlled by the private sector and other stakeholders. They are selling this country to Blackrock and the globalist elites in order to turn us into slaves, easier to control. No service delivery in a country ravaged by poverty and inequality where there is accessibility issues. This is a terrible framework for the most unequal society in the world where the youth has over 60% unemployment rate. I do not consent to this, I reject these advancements and urge home affairs to focus on key issues that actually affect the country instead of pandering to a WEF agenda that serves the 1%.	Ntsikelelo	Eastern Cape		student

	2026-06-06 12:17:14	Not fully	All of the above	Centralised Cyber & Security Risk	I am going to weigh in on the topic of digital legislation because it impacts all of us. Dear South Africa is a watchdog and the attachment contains the opinion and commentary from the perspective of the writer. I will try and summarize (with the assistance of AI due to time constraints). I hope it helps. The proposed legislation is much broader and more significant than simply putting your ID on your phone. The Department of Home Affairs wants to create a digital identity ecosystem under its “Home Affairs @ Home” strategy. The intention is that citizens can prove their identity electronically, access government services remotely, and reduce fraud and identity theft. The digital credential would exist alongside the physical Smart ID card, not replace it. Participation is proposed to be voluntary. The regulations propose a Digital Identity Credential available through the MyMzansi app. The draft expressly states that the digital credential would have the same legal effect as a physical Smart ID card. It could be presented through NFC (“tap”), Bluetooth, QR codes, or other approved methods. That means, in theory, a bank, estate agency, conveyancer, municipality, or employer could eventually accept the digital credential as proof of identity in circumstances where an ID card is currently required. What concerns me most as a legal practitioner? Device binding The regulations require “device binding” as part of enrolment. In simple terms, the credential becomes linked to a specific mobile device. Questions immediately arise. 1. What happens if the phone is stolen? 2.	Noelene	Gauteng		self-employed

	2026-06-05 22:32:30	Not fully	All of the above	Centralised Cyber & Security Risk	PUBLIC COMMENT ON THE DRAFT IDENTIFICATION REGULATIONS, 2026 Government Gazette No. 54610 (Notice R. 7428, 4 May 2026). Comment closes 6 June 2026. Submitted as a private citizen. I support a modern, optional digital identity that works alongside the physical Smart ID card. But the draft Identification Regulations, 2026 should not be promulgated as they stand. My concerns, and what I ask the Department to change: 1. Build the law before the system. These are subordinate regulations made under a 1997 Act that predates biometric databases. A national biometric identity system needs protective primary legislation - a dedicated Digital Identity and Privacy Act - that defines and limits the discretion of the Minister and Director-General before the system is built, not promised for later. 2. Stop hiding the substance in "instructions." The provisions that actually determine privacy and security - the cryptographic, biometric and identity-assurance standards, and even which data counts as "mandatory" - are left to unpublished instructions of the Director-General that never go out for public comment. These must be published and open to comment. 3. Do not centralise our biometrics. The draft pools biometric data in a single central register (regulation 30(1)), with no requirement that the data stay in South Africa and an express allowance for cross-border transfer (regulation 34(2)(k)). I ask for a federated design (as used in Estonia), a data-residency requirement, and a ban on transferring biometric data out of the country. 4. Let citizens see who accessed their record. Access is logged for the Department, but a citizen cannot see who looked at their own data. Every citizen should be able to view their own access log and be notified of access. 5. Keep "optional" genuinely optional. "Optional" becomes compulsory in practice once banks and government default to it. There must be an enforceable rule that no service may require the digital ID, or any particular identity assurance level, where a physical ID is currently sufficient. 6. Independent oversight and recourse. I ask for strengthened, real-time Information Regulator oversight of the Department's own data handling; an independent Identity Ombudsman reporting to Parliament; and statutory protection against political interference with the register. 7. Practical protections. A secure recovery path for a lost or stolen phone; accessibility allowances for the five-year and ten-year renewal rules; anti-monopoly and open-standards requirements for vendors; and a fast, low-cost process to correct data errors. South Africa needs a system where technology serves transparency and law serves the citizen. I urge the Department to amend the draft accordingly before it is promulgated.	Peter	Gauteng		retired

	2026-06-05 10:34:39	Not fully	All of the above	Centralised Cyber & Security Risk	It seems unlikely that such a system would be workable alongside the physical realities in this country. Mobile phones are stolen. Non-premium mobile phones become unusable or obsolete fairly quickly. They are not a permanent item. Data breeches seem a pretty regular occurrence. For passports and ID cards, our biometrics are already captured. Further identification related information gathering should be unnecessary, and should last a lifetime, due to its being biometric. 	2026-06-01 12:10:47	Not fully	Other	Centralised Cyber & Security Risk	My concerns about this are significantly tied to the ease of identity theft, identity forgery by foreign nationals, and other white-collar crime that would be made possible by hard-wiring proof of identity onto something as easily compromised as a mobile phone application. In a few minutes I can think of too many ways that a criminal would be able to take advantage of this to avoid police and effectively disappear from international paper trails, as only one example. I do believe that information pertaining to national identity records within the government could be centralised within a secure, isolated system shared by all government departments (home affairs, police, traffic and vehicle licensing, SARS) to insure that the information that the government has access to for the nations citizens are consistent within the scope of what the government needs for its operations. However, I have a huge issue with this being tied to banks and, in fact, any registered financial institution. Proof of identity is something that needs to be strictly a matter of national security and administration, however, as soon as financial integrations are involved, there is a scope of incentive for monetary corruption that I cannot support. 	2026-05-28 05:16:24	Not fully	All of the above	Centralised Cyber & Security Risk	In a country with so much fraud and corruption a highly technical ID seems like a very fragile thing. I am a PR holder, and it has taken me 2 years just to get my ID. DHA processes are not up to scratch and thinking of a completely digital ID is asking for trouble. I still had to apply for a green ID book since it was my first application (system not ready to process foreigner's data to apply for smartID) and when I got my ID after many months they had gotten the country of birth wrong. So even transcribing a simple application form seems to be too complicated for some DHA employees. I had to go through the whole application process again and wait another many months. I would recommend to stick with smart IDs for now and get that rolled out for everyone properly. There are so many people in this country who do not have access to a smartphone, and they would be excluded. And there are so many scams going on, stealing identity would be easier than ever. 	2026-05-26 10:37:16	Not fully	All of the above	Centralised Cyber & Security Risk	I'm not sure if the option I've selected really relates to my biggest concern, which is around the stolen phone lockdown issue. Having my ID linked to one specific physical device is a huge concern. This should be a token-based ID, much like a virtual credit card, and not something linked to a specific device. I'm not sure whether a specific service provider has already provided a solution (that, in itself, is a concern - was this ever open to tender?) and perhaps that is why this specific technology restriction is included in the design. I am also very uncomfortable with the scoring loop - 30 days is a very short window after a major life event like moving house. While I understand the need to ensure that information is correct and updated, the strict rules around this may be punitive for any people. Since drivers licenses are also deemed valid forms of identification, I believe that a single system should be explored for both. Having a single digital tokenised ID which can have attributes like drivers license included, especially where this ID is accessible on any digital device, including smart phones and watches, would make people's lives easier all round. This would also open up the 10-year physical queue to licensing departments. Since most citizens do not physically interact with home affairs unless they are renewing their passports, and since the majority of South Africans probably don't even have passports, when would the average citizen have a physical, in-person touchpoint with Home Affairs every 10 years? Even linking this to drivers licenses excludes many citizens.	Brenda	Gauteng		employed individual
	2026-05-26 10:35:13	Not fully	All of the above	Centralised Cyber & Security Risk	With the rate that cellular phones are exchanged....be it after a robbery, an upgrade process, gifted a new phone or whatever manner a person receives a new phone...the "locking" of an identity to one IMEI number is an absurd mechanism. Also...what guarantee will "Joe Public" have that their ID will not be compromised especially if kept only electronically. Sorry...too many flaws in the proposal, especially in this cyber climate with Ai also in the mix.	Andrew	Western Cape		employed individual

	2026-05-26 09:09:40	Not fully	All of the above	Centralised Cyber & Security Risk	My ID is assigned to me when I am born. That ID CAN NEVER expire. Not even in a document. Having to queue every five or 10 years for a new ID is unacceptable. Furthermore, although a great advantage to have all one's governmental documents readily available at one point, the risk of cyber security remains and as such the contravention of my privacy. Penalties for address changes after 30 days is not on. What happens when one gets a new phone and need to move the Home Affairs app from one phone to another? From what I understand, the link is to one device only and is frozen when that device is stolen or gets loss. In other words, if I change devices, my ID profile will also be frozen. This is not acceptable.	Madely	Gauteng		retired

	2026-05-25 10:27:48	Not fully	All of the above	Centralised Cyber & Security Risk	Cybersecurity is a real concern and risks to easy access to all information. In addition, the 30-day window is unrealistic and could cause major delays in getting easy tasks completed. Another important aspect is how this affects the elderly and poor who don't have access to devices or know how to use the systems	Lesley	Gauteng		employed individual
	2026-05-25 10:21:17	Not fully	All of the above	Centralised Cyber & Security Risk	While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-25 06:33:18	Not fully	All of the above	Centralised Cyber & Security Risk	Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-24 17:28:47	Not fully	All of the above	Centralised Cyber & Security Risk	Our government (and many large corporations) have suffered data breaches. I am very concerned about the possibility of data breaches and identity theft, whether from cyber attacks or theft/loss of the linked smart device. The potential for government overreach, monitoring and control of citizens via digital IDs may prove irresistible to some departments. We may be just one new Act or Regulation away from abuse via the digital IDs. One also wonders who would provide the software and service to implement and operate such a digital ID system in SA. There have been many stories about how large and previously trusted internet platforms (eg social networks) which have surreptitiously and even illegally abused the information from their users. Protection of the identities of minors, while not specifically mentioned, is another matter which much be addressed with great care and sensitivity.	Dennis	Western Cape		employed individual

	2026-06-06 08:35:22	Not fully	All of the above	Corporate Interoperability & Privacy Creep	The reason I rank this above the cybersecurity concern is that: Cybersecurity risks can be mitigated through better technology, audits and encryption. Privacy creep is much harder to reverse once the legal framework exists. Historically, many government identity systems begin with legitimate purposes but gradually expand to additional uses over time. The danger is not necessarily what the draft allows today, but what future governments, departments, or agencies could do using the infrastructure that has been created.	Debbie	Free State		employed individual

					This submission is made in the public interest in response to the draft regulations under Government Gazette No. 54610. A trusted national digital identity system is supported in principle. However, the draft contains five structural provisions that risk serious, foreseeable harm, particularly to vulnerable citizens. While creating legal infrastructure for surveillance and algorithmic discrimination. Each concern is grounded in the Constitution, POPIA, and PAJA, and accompanied by targeted, implementable recommendations. Concern 1: The Interoperable Private Corporate Network The provision: Real-time, bi-directional data pipelines between the National Population Register and accredited private entities (banks, telecoms) mean a corporate data change, such as an address update, automatically overwrites the sovereign state register. Key risks: Accreditation criteria for 'trusted entities' are undefined. A single corporate error or breach propagates instantly and irreversibly into a citizen's identity record. Citizens receive no notification or consent right before private entities update their record, contravening POPIA Sections 13 and 18. The architecture dissolves the boundary between civic identity and commercial data. Recommendations: Redesign data flow as uni-directional (state → private sector, verification only). Define accreditation criteria in primary regulation with annual independent audits. Mandate citizen notification and opt-out rights. Require a POPIA-compliant DPIA before any interoperability agreement activates. Concern 2: The Identity Assurance Level (IAL) Scoring Mechanism The provision: Citizens must report routine life changes within 30 days. Failure automatically reduces their IAL score, triggering service rejections at banks, telecoms, and government service points. Key risks: This is structurally indistinguishable from a social credit system, access to fundamental services is governed by an algorithm, without individual adjudication or human oversight. The 30-day window is unworkable for informal settlement residents, homeless persons, and those in transitional housing. There are no hardship exemptions and no proportionality assessment. Cascading consequences, loss of banking, SIM access, and grant payments, can render a citizen administratively invisible, engaging the Section 10 right to dignity. Recommendations: Remove the automated IAL reduction mechanism pending a public human rights impact assessment. Replace punitive penalties with a proactive citizen-support framework. Introduce a statutory right to human review before any service denial (PAJA Section 3). Publish the full IAL decision logic in the Government Gazette. Concern 3: Single-Device Binding Without a Recovery Pathway The provision: Digital identity tokens are cryptographically bound to one smartphone. Loss, theft, or damage immediately freezes the token. The regulations are entirely silent on how a citizen restores access. Key risks: South Africa has among the world's highest rates of mobile phone theft. A national identity system rendered inaccessible by one of the country's most common crimes is a foreseeable design failure. No recovery pathway means total, potentially prolonged loss of access to banking, grants, employment records, and healthcare, incompatible with the Section 27 right to social security and the Section 10 right to dignity. Recommendations: Define a secure, accessible remote credential recovery pathway in the primary regulations before finalisation. Provide a 72-hour emergency bridge credential via USSD or partner bank. Guarantee a free physical card fallback. Prohibit single-point-of-failure architecture in nationally critical identity infrastructure. Concern 4: The Mandatory 10-Year In-Person Re-Verification Requirement The provision: Digital credentials expire every five years and may be renewed via app. However, any citizen without a physical Home Affairs or partner bank visit within a 10-year window has their credential fully lapsed, requiring in-person re-enrolment from scratch. Key risks: This contradicts the stated purpose of digital identity, reducing in-person Home Affairs attendance. Offices and partner banks remain concentrated in urban centres; the Northern Cape, Limpopo, Eastern Cape, and North West Province are significantly underserved. Citizens with disabilities, those hospitalised, incarcerated, or temporarily abroad cannot comply. Credential lapse terminates identity access entirely, a far more severe outcome than IAL reduction. Recommendations: Remove or replace the 10-year physical touchpoint requirement with a remote re-authentication option. Condition any retained in-person requirement on a national geographic access audit. Introduce statutory exemptions for disability, hospitalisation, incarceration, and foreign residence. Require annual access mapping reports with binding remediation plans. Concern 5: Infrastructure for Function Creep and Surveillance The provision: Read together, the regulations build a centralised repository of biometric signatures, IAL scores, device identifiers, and real-time cross-institutional data feeds, architecture equally capable of mass surveillance and algorithmic exclusion. Key risks: There is no binding, exhaustive purpose limitation clause. Permissive 'accredited use cases' language allows future ministerial expansion without primary legislation. There is no sunset clause or parliamentary re-authorisation requirement. The combined architecture, real-time data feeds, behavioural scoring, and biometrics, is precisely what the literature identifies as the technical prerequisite for a social credit or predictive governance system. Courts in India (Puttaswamy, 2018) and the EU (Digital Rights Ireland; Schrems II) have struck down comparable infrastructure lacking proportionality and independent oversight. Recommendations: Insert a binding, exhaustive purpose limitation clause; any extension must require primary legislation. Establish an independent Digital Identity Oversight Board with audit and enforcement powers. Introduce a mandatory five-year Parliamentary review and re-authorisation clause. Prohibit use of identity data for law enforcement, intelligence, or commercial purposes except by specific court order. Commission a comprehensive Privacy Impact Assessment before finalisation. Additional Recommendations • Mandate a plain-language public awareness campaign before implementation, accessible across all official languages and literacy levels. • Require a piloted rollout with independent human rights and equity evaluation before national deployment. • Guarantee the right to use a physical identity document for any purpose a digital credential is accepted, without penalty, for a minimum of ten years. • Establish a statutory, multi-channel complaints and emergency identity restoration mechanism before any digital identity system goes live. Conclusion The five concerns raised are foreseeable, concrete harms grounded in South Africa's operational context, constitutional obligations, and international comparative experience. The undersigned respectfully urges the Department and Portfolio Committee to address these structural provisions before finalisation. The identity of a citizen belongs to the citizen, the state's role is to certify and protect it, not to condition access on behavioural compliance or deploy it as a vector for surveillance.

	2026-06-01 09:26:55	Not fully	All of the above	Corporate Interoperability & Privacy Creep	While it makes sense to have digital ID, the lines between public and private affairs must not be blurred. The State cannot demand to know who I bank with - SARS already has that record. Allowing the Digital ID to lapse in certain situations also seems unconstitutional. The State must be subject to the same POPI Act requirements as are expected elsewhere in society. The way it is currently formulated is aligned with practice in old-style communist countries, which enforced draconian limitations on private lives.	Rory	Gauteng		self-employed
	2026-05-29 09:28:08	Not fully	All of the above	Corporate Interoperability & Privacy Creep	Whilst I understand that citizens may not be able to prevent the digitalisation of our physical being and existence, I need the govt to know I am not entirely happy with the proposals. The reach that pvt sector and govt have over our lives will encroach on our civil liberties. The more I read up on this, the more it, once again, smacks of chinese comm party type laws, where if a citizen steps out of line, such as criticising the govt on social media, they are "digitally" penalised, where they can be prevented from purchasing goods and transacting at a bank, easily followed by govt appointed agents. If my phone is lost or stolen, then I am at HUGE risk. EVERY citizen will become a target to a "digital ID thief" especially the very wealthy, elderly and infirm! The entire proposal needs to be sent back to the drawing board for overhaul to fall in line with our constitution.	Bruce	Western Cape		retired
	2026-05-27 17:38:14	Not fully	All of the above	Corporate Interoperability & Privacy Creep	Huge concern - is where is the line drawn? It's all the rage to digitise (Technology) and AI - where the boundary line between Technology and Humans Beings. Important to keep in mind: 1) Technology and AI are tools to assist Human Beings. 2) Technology and AI are NOT tools to control Human Beings. As much as countries deny it - Profiling exists, and governments justify and hide behind this of this human profiling as "Safety & Security".... at what Human expense. Technology and AI Control vs. Human Rights and Freedom. Already, we have government, business and institutions responding to Human Beings as "Robotic Plug and play devices" that must bow down to the robotic failed understanding of "Serving", hiding behind Legislation, Regulations and whatever other *tions they use to justify the "hero worship" of "Technology & AI." So, where is the line being drawn between Technology and AI Control vs. Human Rights and Freedom.	Helena	Gauteng		employed individual

	2026-05-26 09:12:50	Not fully	All of the above	Corporate Interoperability & Privacy Creep	I support the modernisation of South Africa’s identity infrastructure and recognise the value of reducing queues, fraud, and administrative inefficiencies. However, I am deeply concerned about the constitutional and civil liberty implications embedded within the proposed Identification Regulations, 2026. My primary concern is not digital identity itself, but rather the creation of a centralised state-linked identity ecosystem capable of aggregating and synchronising both public and private sector data without explicit, ongoing citizen consent. The proposed interoperability framework between government, banks, telecom providers, and other “trusted entities” fundamentally alters the relationship between the citizen, the state, and private institutions. Personal data should not become a continuously shared national utility by default. Individuals should remain the owners and controllers of their own identity data, with the ability to grant, deny, revoke, or limit access on a case-by-case basis. I believe the framework should be amended to include the following protections: Explicit Opt-In Consent No automatic synchronisation of personal data between private institutions and government departments should occur without explicit user authorisation for each category of data shared. Data Ownership Rights Citizens should legally retain ownership and control over their personal identity data, including the right to view, audit, revoke, and manage third-party access permissions at any time. Prohibition of Algorithmic Exclusion An “Identity Assurance Level” should never function as a hidden social scoring mechanism capable of restricting access to financial services, communications, travel, employment, or civic participation without transparent due process and human review. Device Independence and Recovery Rights A digital identity system must not become dependent on possession of a single mobile device. Secure multi-device recovery mechanisms and offline restoration procedures are essential in a country with high rates of phone theft and digital inequality. Constitutional Safeguards Against Function Creep The regulations should explicitly prohibit future use of the infrastructure for behavioural monitoring, social compliance scoring, mass surveillance, or politically motivated restrictions without separate parliamentary approval and constitutional review. Preservation of Non-Digital Alternatives No citizen should be disadvantaged, excluded, delayed, or penalised for choosing physical identity methods instead of digital channels. Technology should empower citizens, not conditionally control access to society. South Africa’s constitutional democracy is built on dignity, privacy, freedom, and informed consent. These principles must remain central to any digital identity framework. I therefore urge the Department to strengthen the regulations with explicit protections for privacy, consent, decentralisation, due process, and citizen autonomy before implementation. 	2026-05-25 09:17:01	Not fully	All of the above	Corporate Interoperability & Privacy Creep	I do not fully support this move towards centralized digital information of my personal details. Not only does it allow economic kill switch risks, it also has a social credit score. Now who determines what is considered socially correct behavior? So one government leadership and ideology might differ from another and I may or may not fit into that ideology, which is my human right. Does that mean if I object to a different ideology to mine I will get penalized? This is a direct threat to my sovereignty as an individual human being that lives on this planet. I object to the corporate interoperability and privacy creep. This once again is a direct threat to my sovereignty. We have seen over and over again the big corporations work very closely with governments and influence policy and world affairs. Unfortunately corporations do not necessary have my best interest at heart and they are definitely not voted in by me. They are un-elected beings that have far too much over reach into my private affairs already. This new proposal takes that "position" even further and I object to that. I am all for progress and streamlining systems, but not at the expense of my sovereignty. We have seen over and over again how technology has been weaponized against humanity over the years, and South Africa is no different. . Until I am in a position where I trust that leadership in government, is there for my best interests and is there to protect my sovereignty then I object to this proposal	Megan	Limpopo		self-employed
	2026-05-25 09:10:41	Not fully	All of the above	Corporate Interoperability & Privacy Creep	Losing or having your device means your digital identity token is instantly frozen or revoked. How can everyone afford a new compatible cell phone? South Africa is not a sophisticated society and penalties are severe and can have catastrophic implications in being locked out of the financial banking. There is no proper explanation how this might timeously be sorted if our banking support system is not functioning and in sync. Banking is continually getting hacked and not take responsibility for our data and theft from our accounts by organised crime within including linked to SIM swopes. I am in favour of having paperless digital systems because this where all government corruption take place, but we need more explanation of of how this is going work for all, including unsophisticated.	Peter	Western Cape		business owner
	2026-05-25 09:06:08	Not fully	All of the above	Corporate Interoperability & Privacy Creep	Key Concerns for South Africans Regarding Proposed Digital Identity Regulations Date: 4 September 2025 Prepared for: Public Review & Submission 1. Executive Summary The draft digital identity regulations propose a shift from a physical, document-based ID system to a dynamic, device-locked digital credential integrated with private sector databases. While framed as a convenience and anti-fraud measure, the structure introduces risks to privacy, access to services, and constitutional rights. This report outlines the 5 core features and the practical concerns for South African citizens, businesses, and civil society. 2. Key Provisions and Concerns 2.1 Interoperable Private Corporate Network Provision: Establishment of real-time, bi-directional data pipelines between the state and accredited “trusted entities” such as banks and telecoms. A change made with one entity automatically synchronises across the state register. Concerns: - Erosion of Data Separation: Blurs the line between civic data held by the state and commercial data held by private firms, conflicting with the purpose limitation principle in POPIA. - Increased Breach Impact: A breach at a private entity would now expose state identity data. South Africa has experienced major data breaches at TransUnion, Experian, and ViewFines in recent years. - Unintended Use: Data collected for administrative updates could be repurposed for credit scoring, marketing, or policing without explicit consent. 2.2 Identity Assurance Scoring Loop Provision: Failure to report routine life updates within 30 days results in an automatic reduction of the citizen’s “Identity Assurance Level.” This score affects access to financial and government services. Concerns: - Exclusion of Vulnerable Groups: Assumes universal digital access, stable addresses, and administrative literacy. This disadvantages informal settlements, rural communities, and the elderly. - Automated Administrative Action: Locks citizens out of services without human review, raising issues under Section 33 of the Constitution regarding just administrative action. - De Facto Social Scoring: Creates a system where behaviour and compliance determine access to rights, even if not formally labelled as such. 2.3 Stolen Phone Lockdown Provision: The digital ID is cryptographically bound to a single smartphone device. If the device is lost or stolen, the identity token is frozen or revoked. Concerns: - High Risk in SA Context: SAPS reported over 40,000 cellphone thefts in 2024/25. Tying identity to a device creates a single point of failure. - No Stated Recovery Path: Regulations are silent on secure, remote recovery. Loss of a device could mean immediate loss of access to banking, SASSA grants, and e-government services. - Shifts Fraud Risk: Reduces SIM swap fraud but increases the incentive for device theft and coercion. 2.4 10-Year Physical Queue Trap Provision: Digital ID expires every 5 years. If a citizen does not complete an in-person verification at Home Affairs or a partner bank within 10 years, the credential lapses entirely. Concerns: - Undermines Digital Purpose: Forces citizens back into physical queues, negating the efficiency gains of digitisation. - Access Barriers: Creates hardship for rural, elderly, disabled, and working citizens who cannot easily attend Home Affairs during working hours. - Risk of Disenfranchisement: A lapsed ID could prevent voting, grant renewals, and employment verification. 2.5 Blueprint for Function Creep Provision: Centralisation of dynamic biometric data and behavioural tracking variables within a state-controlled repository. Concerns: - Historical Sensitivity: South Africa’s experience with the dompas system makes citizens wary of centralised identity databases used for control. - Lack of Safeguards: Draft rules do not specify independent oversight, strict purpose limitation, or data deletion rights. - Precedent for Expansion: Once infrastructure exists, it is commonly expanded for surveillance, compliance, or exclusion purposes, as seen in other jurisdictions. 3. Systemic Risks for South Africa 1. Trust Deficit: Home Affairs faces ongoing challenges with data integrity, duplicate IDs, and corruption. Digitising without resolving these issues risks automating systemic failures. 2. Digital Divide: StatsSA data shows 28% of households lack internet access at home. A digital-first system may exclude a significant portion of the population. 3. Constitutional Challenge: The combination of automated denial of services, lack of appeal mechanisms, and broad data sharing may conflict with Sections 14 and 33 of the Constitution. 4. Recommendations 1. Mandate Public Participation: Ensure the draft is subject to a full public comment process with accessible summaries in multiple languages. 2. Introduce Independent Oversight: Establish a review body under the Information Regulator to audit data sharing and scoring algorithms. 3. Build Secure Recovery Mechanisms: Require a legally defined, secure process for remote ID recovery after device loss or theft. 4. Limit Purpose and Retention: Embed strict purpose limitation and automatic deletion of biometric data when no longer necessary. 5. Maintain Physical Fallback: Guarantee a low-cost, accessible physical verification option that does not require long queues or travel. 5. Conclusion The proposed regulations aim to modernise identity management but do so by centralising risk and shifting administrative burden onto citizens. Without strong safeguards, oversight, and accommodation for South Africa’s socioeconomic reality, the system risks excluding the very people it intends to serve and creating new vectors for exclusion and abuse.	Deon	Gauteng		employed individual
	2026-05-25 08:38:48	Not fully	All of the above	Corporate Interoperability & Privacy Creep	My concern is the capacity of the government to create an online system that actually works. Considering the issues the public faces with something as simple as booking an appointment to apply for an ID or Passport through online government portals, or in fact the government workers accessing this same platform when one goes to collect said document, this idea of moving the entire system onto an online platform is ludicrous. On top of that there are all the risks to cyber security and discrimination. While the idea seems logical, it appears to be flawed based on the already disappointing systems in place. 	2026-06-02 14:23:08	Not fully	All of the above	Soft Discrimination & Digital Exclusion	Additional Submission Regarding Digital Identity and Civil Liberties While I recognise the stated objectives of improving service delivery and reducing fraud, I remain fundamentally concerned about the long-term implications of creating a comprehensive digital identity infrastructure that becomes central to participation in society. History repeatedly demonstrates that powers granted to governments for legitimate purposes are often expanded beyond their original scope. Laws and systems must therefore be evaluated not only according to how they may be used by current office holders, but also according to how they could be used by future governments under different political circumstances. A digital identity credential differs from ordinary government databases because it sits at the intersection of a citizen's ability to work, bank, vote, travel, receive healthcare, access education, and participate in economic life. When these functions become increasingly integrated into a single digital identity ecosystem, the potential consequences of exclusion, suspension, restriction, or misuse become significantly greater. My concern is not merely about current policy, but about the precedent being established. A system designed today for identification purposes could, over time, be expanded to include behavioural monitoring, broader data aggregation, automated risk scoring, access controls, financial restrictions, or other forms of citizen classification that were never contemplated in the original proposal. Throughout history, free societies have recognised that concentrations of power require meaningful checks and balances. Constitutional safeguards should therefore be designed around the principle that citizens possess rights independently of technological systems and that no digital platform should become a prerequisite for exercising fundamental freedoms. The warning presented in George Orwell's novel "1984" remains relevant not because modern governments necessarily intend to replicate such a society, but because it illustrates the dangers of excessive centralisation of information, surveillance, and administrative power. Technological capability should never become a justification for expanding state authority beyond what is necessary, proportionate, and constitutionally justified. For this reason, I believe the following principles should be permanently protected: • Physical identity documents must remain available indefinitely and retain equal legal status. • No citizen should be compelled to use a smartphone-based identity credential. • No system of citizen scoring, profiling, ranking, reputation assessment, trust ratings, behavioural classification, or similar mechanisms should ever be permitted. • Identity information should be limited strictly to identity verification and not expanded into broader social, financial, political, or behavioural monitoring. • Citizens must retain the ability to challenge decisions through human review. • Independent oversight and regular public audits must be mandatory. • The collection and sharing of personal information should be restricted to the minimum necessary for specific lawful purposes. South Africa's constitutional democracy was built upon limiting the concentration of power and protecting individual liberty. Any digital identity framework should therefore be designed with strong safeguards against future abuse, regardless of the intentions of present policymakers. Technology should enhance freedom, not create mechanisms through which freedom may one day be restricted.	Martin	Gauteng		employed individual
	2026-06-02 13:27:04	Not fully	All of the above	Soft Discrimination & Digital Exclusion	I am concerned about the lack of oversight with regard the Director General of Home Affairs decision making with regard to data sharing with entities. I am also concerned about the lack of guidelines when it comes to your phone being stolen or lost and the replacement of your digital ID. Are precautions being put in place to ensure that this digital ID cannot be cloned etc. Is there confirmation that entities like banks and government departments will still accept your smart ID card if you choose not to participate in this digital ID program/app. Thank you for taking the time to note my concerns. 	2026-05-31 22:24:38	Not fully	All of the above	Soft Discrimination & Digital Exclusion	Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms are not favorable to all its citizens. Having racial discriminatory laws it is even easier to exclude a certain ethnic, cultural or race group. As soft as the BBBEE implementation that has failed this country and has never promoted equal opportunities anywhere in the world. It only profits a communist regime where the rich get richer and the poor must vote for them because they are richer and controlling the masses. South Africa cannot afford policies that entrench inequality under the guise of transformation. If BBBEE is to fulfill its original purpose, it must be restructured to deliver transparent audits, community-level investment, skills development, and genuine accountability.	Johan	KwaZulu-Natal		employed individual
	2026-05-30 06:40:15	Not fully	All of the above	Soft Discrimination & Digital Exclusion	Governments unfortunately abuse power, seen over and over worldwide. They don't do what's right or best for the people they will do what's best for themselves. This can put people's lives at serious risk and lead to discrimination in various ways. It will not just be limited to discrimination in race, it could be culture, religion, freedom of choice. Governments are never held liable for their failures. So there is no protection for the people. It's all 'noise', but no actual punishment. So I'm against this globally and not just for South Africa	Nicole	Gauteng		
	2026-05-28 10:42:07	Not fully	All of the above	Soft Discrimination & Digital Exclusion	The ability for the state to introduce a scoring mechanism is very concerning and a threat to hard won freedom and human rights we as South Africans have. We see the state taking away more and more freedom and replace it with centralised controll and that is not democratic. Furthermore, if we look at current discrimination laws agaist minority groups, what prevents goverment from automatically penelising white males for being white and male, making it more difficult for them to "score" enough points to open a bank account, get a loan, or even a job? These are extreme examples, but when I look at the current set of laws that the ANC goverment tries to pass from business licencing requirments to Afirmative Action and Broad Based Black Econimic Empowerment, I fear that we will be moving further away from freedom and giving goverment way too much power over its citisens. 	2026-05-25 12:03:06	Not fully	All of the above	Soft Discrimination & Digital Exclusion	In a system where renewing your driver's license has become a nightmare of long queues where you waste all day to renew it, with corruption (fake eye tests) and money-making schemes(pay extra and you do not have to go personally or someone moves you through the process faster for a "fee", I do not feel that there are enough guardrails to make this safe for the citizens of South Africa. The fact that you have to change your address within a given amount of time, opens every citizen up to digital tyranny. This whole policy will have to be very carefully looked at and I will only support it when all the proper cyber and safety risk have been decentralized. This gives too much power to one person. There needs to be a dual system in place, digital and/or card where both carries equal weight and both can be used with the same rights and legal authority. No penalties and no infringements on citizens right to choice and privacy can be part of your Identification document. As it stands now, this system can create a national dictatorship. We are not children and the state is not the principal.	Marlene	KwaZulu-Natal		employed individual
	2026-05-25 11:53:50	Not fully	All of the above	Soft Discrimination & Digital Exclusion	This system has many issues - like device linked locking, resulting in uncertain processes to reactivate a locked device/ID that's linked to a lost/stolen phone. I think the idea of digital identification is worth exploring, but this seems to lack understanding of my potential flaws to the system, and is obviously a concern of government oversight & dystopian uses of Digital IDs.	Ryan	Western Cape		employed individual
	2026-05-25 11:11:21	Not fully	All of the above	Soft Discrimination & Digital Exclusion	I am a South African citizen by naturalization (since 1972) and I still have an old green ID book. When I applied for an ID card, I was told that I do not qualify because I was not born in SA. (My sisters are in the same boat). The old green ID book is not accepted at some institutions, such as SASSA, and has to be certified by home affairs. I have phoned home affairs numerous times and nobody answers the phone. How is this new system apply to citizens like me???	Elizabeth	Gauteng		retired
	2026-05-25 11:09:36	Not fully	All of the above	Soft Discrimination & Digital Exclusion	I feel like this is going to be yet another one of those dystopian levers that the racist, separatist government will use to control the masses in their own way. Giving them total control over one's livelihood is a huge mistake - especially when they have a proven track record of utter corruption and lack morals and consideration for the people "they serve". These are people that notoriously abuse the law, refuse to perform their duties and blatantly wield power for their own gains. I wouldn't trust them with a pet plant - let alone everything to do with my well-being.	James	Gauteng		
	2026-05-25 11:07:45	Not fully	All of the above	Soft Discrimination & Digital Exclusion	I do not support any system that would jeopardise my freedom, rights of choice, privacy, risk of being manipulated or that will record any of my viewpoints, affiliations or any confidential information about me. I welcome the effort to minimise bureaucracy and that will eliminate physical visits to Home Affairs offices.	Johan	Western Cape		business owner

	2026-05-24 18:15:22	Not fully	All of the above	Soft Discrimination & Digital Exclusion	In a country with so much theft, and so much administrative incompetence, the risk of having your capacity to function in the world being able to be suspended so quickly and easily by some kind of algorithm that cannot take context (eg admin delays) /errors) into account is very concerning. Having the function of Home Affairs join the digital world to streamline and add efficiency to processes would be wonderful, but it MUST include protection for ordinary people's autonomy and capacity to function in the world. If a person's identity is "shut off" because of a stolen phone for example, there MUST be a way for the person to IMMEDIATELY reactivate it in order to function in a digital world. The mandate of the State to "shut down" a person's identity must be strictly subject to checks and balances that allow for the interaction of said person in the process, and to protect them from unfair / unnecessary exclusion. Checks and balances need to be in place that allow for greater administrative effeciency for the state - not for human control for the state.	Christy	Western Cape

	2026-05-24 11:23:13	Not fully	All of the above	Soft Discrimination & Digital Exclusion	Too vaguely worded and the risk of being excluded or cut off from normal day to day functions. Data can become corrupted. How will this affect individuals registered & not registered in such a "centralized " system. How secure can a hackable system be - when it comes to the lives of humans and a possible future where we might be excluded or even turned away from doing basic shopping due to a glitch in a system. No clear answers to these questions make me distrustful of the " centralized use" of our personal data. In South Africa- we first need to address the blatantly corrupt ANC and other such leaders. If the guarantee was given that digital ID would be put to good use in simply protecting our human rights - I might be swayed to support it.	Karen	Western Cape		employed individual
	2026-05-24 10:50:31	Not fully	All of the above	Soft Discrimination & Digital Exclusion	Providing the security is absolutely 100% impenetrable and there is a simple way to transfer you ID to a new or another device. It might be a good idea. Technologically challenged individuals will need help in this regard but it seems the physical card will still be valid. If this is the case then all is good	Michael	Western Cape		retired
	2026-05-24 08:22:01	Not fully	All of the above	Soft Discrimination & Digital Exclusion	There should be a parallel physical ID card system , The telephone (digital) ID / Drivers License or Passport must be the “backup” and not different from the physical identification card with the Physical Identification being the Master of the two. 	2026-05-24 06:20:43	Not fully	All of the above	Soft Discrimination & Digital Exclusion	We cannot risk people's freedom of movement and freedom to exercise other rights like work, travel, etc. if their digital device is stolen or if they choose not to own a digital device. I'm also particularly concerned about the lack of clear boundaries of data privacy and who may share my data.	Nicola	Western Cape		employed individual

	2026-05-23 21:15:32	Not fully	All of the above	Soft Discrimination & Digital Exclusion	I understand that government wants to modernise things and make services easier, but I honestly don't think South Africa is ready for a system like this yet. Too many people already struggle with load shedding, poor networks, phone theft, and limited access to smartphones or data. If your whole identity is linked to your phone, what happens when that phone gets stolen or stops working? People could end up locked out of important services through no fault of their own. I'm also not comfortable with so much personal information being shared between government and private companies. South Africans already deal with scams, data leaks, and corruption problems. Giving more access to sensitive personal and biometric information worries me. Many elderly people and people in rural areas will struggle with a fully digital system. There must always be a simple physical option available that works properly. I think government should first fix the current Home Affairs problems before bringing in a system that could create even bigger issues later on. Technology should help people, not make ordinary citizens more dependent on systems they cannot control or fully trust.	Martin	Gauteng		retired

Purnell	Outside SA	United Kingdom	employed individual
	2026-05-21 12:54:10	Not fully	All of the above	Soft Discrimination & Digital Exclusion	I support the modernisation of South Africa's identity systems and recognise the potential benefits of a secure digital identity platform, including improved efficiency, reduced fraud, and easier access to public and private services. However, I believe the proposed Digital Identity Credential regulations require stronger safeguards before implementation. My concerns are as follows: 1. **Privacy and data sharing:** The draft appears to allow significant interaction between state identity systems and private-sector institutions such as banks and telecommunications providers. Clear limits must be defined regarding what personal data may be shared, under what circumstances, with whose consent, and what protections will exist against misuse or data breaches. 2. **Digital exclusion:** Many South Africans, particularly elderly citizens, rural communities, low-income households, and those without smartphones or reliable internet access, may be disadvantaged by increasing reliance on digital identity systems. Physical alternatives must remain fully accessible without prejudice. 3. **Device loss, theft, and recovery:** Given South Africa's high incidence of mobile phone theft, there must be a simple, secure, and rapid recovery process for citizens who lose access to their devices, ensuring that essential services are not interrupted. 4. **Biometric verification failures:** Facial recognition and biometric systems are not infallible. Clear human review and appeal mechanisms must exist where automated verification fails or incorrectly restricts access. 5. **Function creep and oversight:** The regulations should explicitly limit future expansion of the system beyond identity verification without proper public consultation and parliamentary oversight. Citizens need assurance that digital identity will not evolve into a broader surveillance or behavioural monitoring system. 6. **Transparency and accountability:** Citizens should be clearly informed of how identity assurance levels work, what may affect them, and how incorrect information can be corrected quickly. I support innovation, but digital transformation must strengthen citizen rights, not weaken them. I therefore urge that these protections be clearly built into the final regulations before implementation.	Felicity	Western Cape		retired

	2026-05-26 09:30:42	Not fully	All of the above	Structural Function Creep & Tracking	Our infrastructure and bureaucracy can't bear this functionality smoothly. I foresee many people being excluded and not understanding how this new ID works. This infra is built on the assumption that everyone has a smart device and internet connection, when this is simply not the case in South Africa. I imagine this would also influence voting, which would exclude many and is not constitutional. But my biggest concern is the laying down of a state surveillance structure that forces citizens to comply and be locked in or locked out. And surely this won't solve corruption, but rather create other loopholes in a digital system.	Sharné	Western Cape		unemployed individual
	2026-05-26 08:47:50	Not fully	All of the above	Structural Function Creep & Tracking	A digital ID is a bad idea in all respects for privacy reasons. I would not want anything linked to my phone that could be stolen - no.1. If the department can make one that generates an anonymous code somehow, like with digital banking codes, perhaps it could work but using a digital should not be compulsory for those who cannot operate online like our grandmothers and mothers! Already there is so much identity theft with a paperback ID. If hackers get a hold of digital ones, it would be worse. I think having a database to restore lost IDs is good online that can be quick and efficient is better, especially for the disabled who cannot stand in queues. 	2026-05-25 19:32:41	Not fully	All of the above	Structural Function Creep & Tracking	The draft is a solid foundational framework for introducing a voluntary digital identity credential (via the MyMzansi app) alongside physical Smart IDs. It is privacy-conscious on paper (heavy references to POPIA/PAIA) and emphasises security. However, several critical gaps remain that could undermine trust, security, inclusion, and legality if not addressed before finalisation. 1. Excessive Discretion & Lack of Checks on the Director-General. The Director-General has extremely broad powers: issuing "instructions" on almost everything (biometric standards, identity assurance levels, device requirements, cryptographic standards, etc.). Gap: Very few independent oversight mechanisms, parliamentary reporting, or judicial review triggers. This creates a single point of failure/risk for abuse or mission creep. Regulation 38A on "verified relationships" between trusted entities and citizens is particularly open-ended. 2. Privacy & Data Protection Risks (POPIA Compliance). Strong principles are stated (data minimisation, purpose limitation, consent via data sharing agreements), but implementation details are thin. Gaps: No clear rules on how long biometric templates (facial + fingerprints) are stored centrally. Real-time verification services and update notifications (reg 38A) could lead to de facto mass surveillance if "verified relationships" proliferate. No independent privacy impact assessment requirement before accrediting large trusted entities (banks, telcos, etc.). Cross-border data transfers are mentioned but not tightly regulated. 3. Security Architecture & Technical Details Missing The draft names the MyMzansi app as the sole distribution method but provides almost zero detail on its security model (e.g., secure enclave usage, offline functionality, key management, anti-tampering). Device binding and cryptographic standards are referenced but left entirely to future "instructions" by the DG. Critical gap: No requirement for open standards, independent security audits, or multiple approved wallet providers (as flagged by digital ID experts). 4. Digital Exclusion & Accessibility Mandatory in-person enrolment at accredited points (with biometrics + device binding) for anyone wanting a digital ID. Requires a "mobile device" capable of running MyMzansi + verified phone number/email. Major gap: No meaningful provisions for: People without smartphones (especially rural poor, elderly, disabled). Feature phone users. People with disabilities affecting biometrics (facial recognition issues, fingerprints worn out). Offline or low-connectivity areas. This risks creating a two-tier identity system in practice, despite being "voluntary." 5. Implementation & Transitional Issues No commencement date — huge uncertainty. No clear rollout timeline, capacity building for DHA offices, or funding details. No detailed transition plan for existing ID holders. Private-sector enrolment points (banks, etc.) could create cost barriers ("no additional cost beyond prescribed fees" is vague). 6. Trusted Entities & Private Sector Risks. Very broad definition of "trusted entities" (banks, telcos, government departments, etc.). Accreditation is voluntary but powerful once granted. Gap: Weak safeguards against function creep or commercial misuse of identity data. Audit logs are required, but independent oversight of those audits is limited. 7. Offences & Enforcement Offences are well-defined for individuals (fraud, tampering, etc.). Much weaker on institutional breaches by accredited entities or the Department itself. 8. Other Notable Gaps Biometric standards: Left almost entirely to future instructions (resolution, liveness detection thresholds, etc.). Identity Assurance Levels: Only Level 2 defined initially; higher levels are vague. Revocation & Recovery: What happens if your phone is lost/stolen/destroyed? Process seems cumbersome. Public Participation: Comment period is short (until 6 June 2026). Recommendation: This draft is a good starting point but needs substantial tightening — especially on technical security standards, independent oversight, accessibility measures, and limits on Director-General discretion — before promulgation. 	2026-05-25 09:17:27	Not fully	Structural Function Creep & Tracking	Structural Function Creep & Tracking	CYBER SECURITY - South Africa's public sector has a negative history history regarding systemic data breaches which at this date is not acceptable. TEN YEAR TRAP - The 10-year rule is not well thought through and finalised. Being legally stripped of your active digital credential will create endless problems and frustrations and be exasperated by the known slow acess and service at Home-Affairs. DEVICE BINDING - Locking the digital identity token to one single mobile device running the MyMzansi application without prescribed and clear transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one is non-sensical. CORPORATE INTER OPRABILITY - Allowing the exchange of live citizen data across corporate API channels between Sate and Corporate institutions does not keep the wall, clear deliniation, between state and corporate public records, a definate no-no. 30 DAY NOTIFICATION - The 30 days period is highly inpractical. The aged and poor, without email, no transport or funds to get to determined venue will suffer. FUNCTION CREEP - The system does not allow for blocking system creep which can eventually lead to digital tracking of individuals by state and other parties, completly eroding private citizens their right to privacy. 	2026-05-25 07:24:27	Not fully	All of the above	Structural Function Creep & Tracking	This document serves as a formal objection to the Draft Identification Regulations, 2026, specifically the implementation of the MyMzansi digital identity framework. This objection is fundamentally grounded in the South African government's documented history of systemic corruption, the persistent mismanagement of state IT infrastructure, and the severe vulnerabilities inherent in centralizing critical civic data under the current administrative climate. Core Grounds for Objection Historical Vulnerability to Corruption and State Capture: South Africa's recent history is characterized by the exploitation of state resources and databases for illicit purposes. Centralizing biometric data, real-time tracking variables, and banking interoperability into a single state-managed application creates an unprecedented target for organized crime and corrupt officials. State entities and the State Information Technology Agency (SITA) have repeatedly demonstrated an inability to safeguard sensitive digital infrastructure from tender irregularities, internal syndicates, and catastrophic data breaches. Weaponization of the 'Identity Assurance' Score: The proposed automated "Identity Assurance Level" introduces an opaque, algorithmically driven tiering system. Given the pervasive corruption within administrative structures, granting the state the power to automatically downgrade a citizen's civic and financial access based on arbitrary reporting windows invites extortion. This mechanism closely mirrors social credit systems and creates a fertile environment where the restoration of a citizen's "assurance level" becomes a new vector for bribery. Corporate-State Data Pipelines: Establishing real-time, bi-directional data pipelines with private banks and telecoms dissolves the necessary boundary between public identity and private financial data. Historically, access to such comprehensive state databases has been illegally sold or manipulated by corrupt internal actors. Broadening this attack surface guarantees further misuse of citizens' private data for commercial or political exploitation. Device-Locked Credentials in a High-Crime Environment: Cryptographically locking digital IDs to specific smartphones ignores the daily reality of violent crime and mobile theft in South Africa, particularly in provinces like KwaZulu-Natal. Tying civic enfranchisement to a high-theft commodity guarantees immediate administrative paralysis for victims. Without a secure, remote recovery protocol, this system disproportionately penalizes citizens for the state's failure to curb syndicates specializing in device theft. Required Actions Halt the rollout of the MyMzansi application pending an independent, binding audit of the Department of Home Affairs' data security architecture by non-state cybersecurity experts. Remove all legislative provisions relating to automated "Identity Assurance Level" downgrades and dynamic compliance scoring. Draft and publish explicit, fail-safe protocols for immediate digital ID recovery in the event of device theft, ensuring victims are not locked out of the economy. Ensure physical Smart ID cards permanently retain equal operational validity without forced digital interoperability or arbitrary 10-year in-person reset mandates.	Luke	KwaZulu-Natal

	2026-05-24 10:03:15	Not fully	All of the above	Structural Function Creep & Tracking	I support a digital ID system in principle, but the draft Identification Regulations, 2026 need major changes before becoming law. Tying a legal ID to one device is risky in a country with high theft rates. The rules must include a safe, free, and fast way to recover an ID remotely. Lowering a person's score for missing a 30-day update window is too harsh and could block people from basic services. This system should be removed or made much more flexible. Real-time data flow between the state and banks or telecoms threatens privacy rights under the Constitution and POPIA. Sharing must need clear consent and strong oversight. Forcing people to visit an office every 10 years or lose their ID will hurt the elderly, rural, and disabled most. Digital renewal should be enough. A central biometric system could be misused for surveillance later. The law must set strict limits on data use, access, and storage, with independent checks. Please fix these issues so the new system protects citizens instead of putting them at risk.	Simon	Western Cape

	2026-05-22 22:11:09	Not fully	All of the above	Structural Function Creep & Tracking	While you kind of force a specific answer above I have my doubts about all the mentioned issues. One big thing is has this model been tested in other countries and if one travels do other countries accept digital identification and has a proven track record of being reliable and the fact that basically the government is attempting to control anyone living in SA... So whole some points seem to be a positive move how will this work with rural infrastructure and people who live there... This actually reeks of control over the side of the population that is up to date with technology... And in my opinion too much too soon for this to actually beneficial and it only links to one cell phone that's outrageous. There is just no way this will be a functioning model when even the Supreme Court cannot keep up to date with information on people this 3rd world country is not ready for this	Sharon	Gauteng		self-employed

	2026-05-26 08:37:05	Not fully	All of the above	Centralised Economic Kill-Switch Risks	No government, especially a bad one with communist aspirations like the ANC, should have or hold this much power or control over citizens. This is far too invasive of privacy or control over the citizens' privet affairs. This is basically what China is doing and we see the empirical results of all the power to abuse it gives a government. This is a classic Orwellian nightmare. Further, I have no confidence in the state to protect my private information. They can not even maintain upkeep of the states existing digital system, how will they all of a sudden be able to maintain a system as complex as this. Also, the state can not even protect the boarders of this country, how will they protect infiltration of a system like this by hackers! There is plenty for the state to get in order before they can start to think about something like this. The administrative nightmare and smothering effect this will have on commerce and the economy will be staggering. This does not seem to do away with the endless frustration of standing in lines at home affairs and still requires you to end up at these unsavoury state buildings to convince a lazy state official that you are actually who you are. This is another way to hold citizens hostage with laws that force the citizen to comply to the states demands but the state can not deliver from their side, instantly criminalizing otherwise law abiding citizens. It is a great administrative burden upon citizens to have such a far reaching effect on their daily lives just because they have not visited or update the system. The state will have too much control in the daily activity of citizens: They must remember they are to serve the people and not the people to serve them!	Rudolf	Northern Cape		employed individual

	2026-05-24 12:50:49	Not fully	All of the above	Centralised Economic Kill-Switch Risks	I object to the Draft Identification Regulations, 2026 in their current form. I support modernising Home Affairs and reducing unnecessary paperwork, queues, fraud and administrative waste. However, the current draft goes too far in building a high-risk digital identity infrastructure without sufficient binding safeguards, transparency, independent oversight, and practical protections for ordinary people. My objection is not to digital identity in principle. My objection is to the weak legal guardrails in the draft. First, the regulations give a Digital Identity credential the same legal effect as a physical identity card, while placing that credential inside a mobile application linked to device binding, biometric verification, real-time verification services and data-sharing arrangements with accredited trusted entities. This is not a minor administrative upgrade. It is a major national identity infrastructure change. Second, the draft gives too much power to future “instructions” and private data-sharing agreements. Critical matters such as identity assurance criteria, application programming interface access, cryptographic standards, device requirements, trusted-entity conditions, and verification procedures should not be left to unpublished or weakly scrutinised administrative instruments. These rules must be public, specific, reviewable, and subject to independent oversight before implementation. Third, the identity assurance level system is unacceptable in its current form. A person’s ability to prove identity must not be weakened by opaque scoring, unclear criteria, automated risk flags, or failure to update ordinary contact details within 30 days. No person should suffer a lower assurance level, transaction rejection, suspension, or administrative disadvantage without prior notice, clear reasons, human review, and a simple appeal process. Fourth, the trusted-entity framework creates serious privacy and function-creep risks. Real-time verification and near-real-time update notifications may be useful in limited cases, but they must be tightly restricted. The final regulations must require a public register of all accredited trusted entities, publication of the categories of data shared, mandatory audit reporting, user-visible access logs, and a clear right for citizens to see which entity accessed or received their identity information and why. Fifth, the regulations do not provide a sufficient recovery pathway for phone theft, loss, device failure, inaccessible devices, or compromised cryptographic keys. In South Africa, mobile-device theft is a practical reality. A citizen must not be locked out of identity-dependent services because a phone is stolen, broken, inaccessible, unaffordable, or incompatible. The final regulations must create a fast, secure, free, accessible recovery route with clear time frames. Sixth, the 5-year renewal and 10-year in-person verification lapse rules need stronger safeguards. A digital credential should not lapse in a way that creates administrative paralysis. At minimum, there must be multiple reminders through more than one channel, a reasonable grace period, accessible verification alternatives, mobile units, disability-accessible processes, and a hard rule that the physical identity card remains fully accepted. Seventh, the promise that digital identity is “optional” is not enough. The regulations must expressly prohibit government bodies, banks, telecommunications providers, employers, and other service providers from making the Digital Identity credential a de facto requirement where a valid physical identity card or other lawful identity document is available. Digital convenience must not become digital coercion. Eighth, biometric data demands the highest legal protection. Facial biometric templates, fingerprints, liveness detection markers and device-linked credentials are sensitive identity infrastructure. The final regulations must prohibit expansion of biometric use beyond strictly defined purposes unless there is public consultation, Information Regulator involvement, an independent privacy impact assessment, and a clear lawful basis. I therefore request that the Department withdraw or substantially revise the draft before finalisation. At minimum, the final regulations must include binding protections for privacy, accessibility, non-exclusion, transparency, independent oversight, recovery after device loss, appeal rights, user access logs, published trusted-entity rules, and strict limits on automated identity assurance decisions. South Africa needs a modern identity system, but not one that quietly converts identity into an opaque, always-connected verification layer across the state and private sector. Identity is the gateway to citizenship, services, work, communications, banking and dignity. Such a system must be built with constitutional safeguards at its core, not added later by administrative discretion. Respectfully submitted, Jacques Bosch	Jacques	Gauteng		business owner
	2026-05-24 12:00:02	Not fully	All of the above	Centralised Economic Kill-Switch Risks	I have no problem with a digital card but to go further where I lose all my privacy RIGHTS is unacceptable / The biggest threat I see here is that my life becomes controled and is hackable to the point that Privacy means nonthing .	gerald	North West		unemployed individual
	2026-05-24 11:50:39	Not fully	All of the above	Centralised Economic Kill-Switch Risks	To use a smart phone as an id, is just another form of tracking and invasion of privacy, I can guarantee that the app will ask for permission of GPS , access to microphone, camera, make calls and SMS ect. Even if the give an option to disable, the app is still granted access in the background . The government says it's for security, indeed security for them and not the people. With a central link with the banks and government, who is to say should you violate a "policy" that they won't lock or freeze your identity, bank accounts ect, effectively cutting off access to means to survive. Not to mention the ease of access for hackers to gain access to my ID through my smartphone, you can have the highest level of cyber security but at the end of the day all the news is a password. 	2026-05-23 08:27:07	Not fully	All of the above	Centralised Economic Kill-Switch Risks	It is very ambitious for a start and centralises our livelihood into one single point of failure - “network infrastructure” which we know in this country will need a huge overhaul , over reliance on these telecommunications companies is another risk that nobody wants to introduce in their lives. Perhaps they need to phase out all these ambitions over time and prioritise what they want to remedy.	Dorcas	Gauteng		self-employed
	2026-05-23 07:53:53	Not fully	All of the above	Centralised Economic Kill-Switch Risks	The IT controls need to be privatised. Government's track record in ensuring that data remains private and safe is poor. Government, alone, can not be entrusted to safeguard data. Physical, in-person "renewals" every 10 years is unacceptable and opens up citizens to the incompetent governmental bureaucracy. This will only be acceptable if a significant amount of banks are accredited, maybe also lawyers / commissioner's of oath etc. Government bureaucracy can not be trusted for this. A national ID should further not be able to lapse. By tying an individual’s identity exclusively to a single smartphone and not providing easy means to transfer or unlock, if stolen, the regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one. Corporate Privacy Creep: Regarding data synchronisation with corporates, more care needs to be in place to eliminate any risk of data leaks and corporate surveillance. One remedy may be, that burden of proof needs to lie with the corporate and not individuals making bona fide concerns.	Frank	Gauteng		employed individual

	2026-06-01 16:19:07	Not fully	All of the above	The 30-Day Address Notification Penalty	First of all, many South Africans don't have easily verifiable addresses. Secondly, many South Africans don't necessarily have a fixed address and due to the economic situation, many have to move under trying circumstances that may be immediate and difficult and preclude being able to register a change of address with the government vs. for example making it through another difficult day. Exacerbating the above 2 points is the fact that many South Africans are unemployed, poor, and quite likely unable to comply with several of the rules within stipulated periods and will risk being effectively put into a 'national persona non gratia' where they are unable to conduct daily life without severe difficulty all because of bureaucratic thinking and lawmaking.	David	Eastern Cape		retired
	2026-05-31 23:23:56	Not fully	All of the above	The 30-Day Address Notification Penalty	Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, t cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector’s history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation’s “attack surface.” Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically “lapse” triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. To circumvent this, there must be ways of reminding people of this requirement with plenty of time, and provision must be made for citizens living abroad Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual’s legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating “near real-time” data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic “soft discrimination” —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. Concentrate on South Africa's basic needs like adequate power and water, education. Stop stealing and then maybe citizens might trust government with ambitious plans like this	Ali	Outside SA	USA	employed individual

	2026-05-25 14:06:12	Not fully	All of the above	The 30-Day Address Notification Penalty	1. Privacy and Surveillance Risks Digital IDs typically involve collecting extensive biometric data (fingerprints, facial recognition, etc.) and linking it to a centralized database. This creates a “single point of failure”: • Data breaches and misuse: South Africa has faced major cyber incidents and data leaks. Centralized systems amplify the impact of hacks, identity theft, or unauthorized access. Biometric data is permanent — unlike a password, you can’t change your fingerprints or iris scan. • Function creep and surveillance: Regulations can expand beyond identification to enable broader tracking, profiling, or linking to other databases (banking, social grants, health, etc.). In Africa, weak oversight has led to concerns about governments or private partners using data for political surveillance or commercial exploitation. • POPIA limitations: South Africa’s data protection law (POPIA) offers some safeguards, but enforcement is inconsistent, and digital ID systems often roll out before full privacy-by-design protections are in place. 2. Exclusion of Vulnerable Groups South Africa has deep inequalities (urban vs. rural, rich vs. poor, tech-savvy vs. not). Digital systems often worsen this: • Tech and connectivity barriers: Many South Africans lack reliable smartphones, internet, electricity, or digital literacy — especially in rural areas, among the elderly, low-income communities, and migrants. Requirements for apps, OTPs, or biometric readers can lock people out of grants (e.g., SASSA), banking, healthcare, or voting-related services. • Past failures: Cases like ID blocking have already affected nearly 2 million people, denying access to services. Biometric failures (worn fingerprints, poor-quality scanners) hit manual laborers and older citizens hardest. • Marginalized communities: Women, ethnic minorities, informal settlement residents, and those without easy access to Home Affairs offices face higher risks of exclusion. This undermines the constitutional right to dignity and access to social services. 3. Implementation and Governance Problems • Power concentration: Recent regulations (e.g., May 2026 Gazette) give significant discretion to the Director-General of Home Affairs for accreditation and decisions, raising concerns about accountability, transparency, and potential abuse. • Coexistence issues: While regulations claim digital IDs will coexist with physical ones (Smart ID cards), there’s fear of de facto phasing out physical documents, with banks/offices refusing them. This disadvantages those who can’t or won’t go digital. • Cost and vendor risks: Large biometric projects have faced procurement scandals, vendor lock-in, and high costs in South Africa and elsewhere. Funds could go to fixing basic Home Affairs backlogs instead. • Security of the system: Reliance on devices and networks introduces new failure points (lost phones, hacked accounts, device requirements that exclude users). 4. Broader Societal and Economic Impacts • Erosion of anonymity and rights: A ubiquitous digital ID makes it easier to monitor dissent, restrict movement/services, or discriminate. In unequal societies, this amplifies existing power imbalances. • Trust deficit: High levels of corruption perceptions and past government inefficiencies fuel skepticism. Imposed systems without broad consultation can lead to resistance and low adoption. • Opportunity costs: Time and money spent on digital ID could address root issues like improving civil registration, reducing queues at Home Affairs, or tackling fraud through simpler means	Phillip	Western Cape		
	2026-05-25 12:18:14	Not fully	All of the above	The 30-Day Address Notification Penalty	Technology should not create further additional extreme bureaucratic difficulties and dire implications which seems to be the case.... I am a 72 years old pensioner living a simple lifestyle and I for one am not interested to become a victim of this modern technological approach with endless entrapment and unintended complicated consequences. Please keep things simple....	Martin	Western Cape		retired

	2026-05-28 11:58:00	Not fully	All of the above	The 10-Year Physical Queue Trap	I think the use of technology is the future and I support this digital ID in principle, however as a senior citizen that survives on a SASSA grant I was concerned about the expiry dates where it may be difficult for a senior citizen to comply with all the rules. 1. Old people get forgetful and may lose their phones or may need to rely on assistant or family member to manage their phones and affairs, how will this negatively impact on them? 2. Old people on Government grants how will this 10-year expiry date affect them if they find it difficult to go and queue at the Home Affairs or do not have a participating bank nearby? 3. How safe will this truly be, Criminals and hackers always seem to be one step ahead. So, what guarantees can be provided that your digital ID is more secure than the present ID card or book? 4. Exactly what information will be linked to this digital ID? Will it be limited to the currant ID or will it include financial status, physical status, health and security status and will it be able to track a person via the smart phone? Will this digital system be like 'Big Brother' is watching me all the time? I think more information needs to be obtained to ensure the invasion of privacy and security of a personal information is required.	William	KwaZulu-Natal		retired

	2026-06-05 07:52:15	Not fully	Centralised Cyber & Security Risk		TO: Chief Director: Legal Services Department of Home Affairs 10th Floor, Hallmark Building 230 Johannes Ramokhoase Street Pretoria, 0001 RE: Public Comment — Draft Amended Regulations under the Identification Act 68 of 1997 (Digital Identity System) Date: 5 June 2026 Submitted by: Robert Noad Capacity: South African inhabitant and private man, domiciled in the Western Cape INTRODUCTION I submit this comment as a South African inhabitant — a living man domiciled on the land of the Western Cape — who engages with this process not as a subject owing allegiance to the State, but as one of the people in whose name and for whose benefit government was constituted and exists to serve. I acknowledge that government institutions were created by human beings to serve the community. My engagement here flows from that understanding: I hold government accountable to its founding purpose. I raise these concerns in good faith, expecting good faith in return. My primary allegiance is to my Creator. No regulation, system, or credential may be permitted to place itself between that relationship and my practical freedom to live accordingly. CONCERN 1: CONVERGENCE OF DATA ACROSS STATE INSTITUTIONS The proposed system, read alongside publicly stated government intent to integrate SARS, the South African Reserve Bank, and Home Affairs into a unified identity infrastructure, creates the conditions for an unprecedented aggregation of personal data across tax, financial, and civic domains. Proposal: The regulations must explicitly prohibit, in statute and not merely in policy, the cross-referencing or linking of Digital Identity credentials with tax profile data, banking transaction data, or social grant records without the explicit, informed, and revocable consent of the individual. Data minimisation must be a governing principle: each institution must receive only the minimum verification necessary for its specific, declared purpose. CONCERN 2: BIOMETRIC DATA — OWNERSHIP AND REVOCABILITY Biometric data is by nature irrevocable. Unlike a password or PIN, a compromised biometric cannot be reset. A living man's body is his own — not a data asset of the State. Proposal: The regulations must: (a) Explicitly vest ownership of biometric data in the individual, not the State or any accredited institution; (b) Require that biometric data be stored only in encrypted, decentralised or federated form — never in a single centralised repository accessible by third parties; (c) Provide a clear mechanism for individuals to audit who has accessed their biometric data and when; (d) Prohibit biometric data from being shared with any private-sector accredited entity except under strictly limited, individually authorised, purpose-bound conditions. CONCERN 3: "OPTIONAL" MUST MEAN TRULY OPTIONAL The draft states participation is optional. However, if access to government services, banking, healthcare, or employment progressively requires Digital Identity verification in practice, optionality becomes coercion. Proposal: The regulations must include an enforceable non-discrimination clause guaranteeing that no inhabitant of South Africa will be disadvantaged in their access to any public service, benefit, right, or private-sector service for declining to enrol. This protection must be enforceable and reviewed annually by an independent body. CONCERN 4: ACCREDITED THIRD PARTIES AND SCOPE CREEP The draft allows for accredited private-sector enrolment points and data-sharing with accredited institutions. The criteria and oversight for such accreditation are insufficiently defined. Proposal: (a) A fully public register of all accredited institutions must be maintained and updated in real time; (b) Individuals must receive proactive notification whenever a new category of institution is accredited; (c) Any data-sharing agreement between the DHA and a private entity must be published in the Government Gazette with a 30-day public comment period before taking effect. CONCERN 5: POPIA ALIGNMENT AND ENFORCEMENT The draft references POPIA as a safeguard. However, the Information Regulator remains under-resourced and POPIA's enforcement has been inconsistent. Proposal: The regulations must embed specific, justiciable obligations directly into the Digital Identity framework — not merely cross-reference POPIA. A dedicated oversight body for Digital Identity complaints, independent of the DHA, must be established and operational before the system goes live. CONCERN 6: THE RIGHT TO WITHDRAW There is no clear mechanism for an individual to withdraw from the system once enrolled. Proposal: Every enrolled individual must have the unqualified right to: (a) Revoke their Digital Identity credential at any time with immediate effect; (b) Require deletion of all associated data held by the DHA and any accredited third parties within 30 days of revocation; (c) Receive written confirmation that deletion has been completed. CONCERN 7: CENTRALISATION RISK Centralising all identity and civic status in a single population register creates a single point of failure — technically, through data breach risk, and institutionally, through the risk of exclusion or manipulation of those who hold no political favour. Proposal: A distributed or federated architecture must be seriously evaluated. Individuals should be able to hold verifiable credentials locally on their own devices without those credentials requiring constant validation against a centralised state register. CLOSING Government was instituted to serve the people — not to manage, classify, or surveil them. A Digital Identity system built on genuine consent, true data stewardship, and the irreducible dignity of each person is worth building. One that centralises power over personal identity in State and corporate hands — however well-intentioned — is not. I call on the Department to build the former. The time to embed these protections is before the infrastructure is built, not after. Submitted in good faith, Robert Noad South African inhabitant Western Cape robertnoad@gmail.com	Robert-louis-isak	Western Cape		retired
	2026-06-05 06:06:40	Not fully	Corporate Interoperability & Privacy Creep		I am not inherently against a digital ID. However access to this mechanism and the associated data should be strictly user controlled and it should not be legal for this data to be shared between companies and/or state. This is extremely concerning. Data should be controlled by the user with extremely granular permission structures.	Paul	Western Cape		employed individual

	2026-06-04 15:08:35	Not fully	Soft Discrimination & Digital Exclusion		As a caregiver to an elderly individual and an individual with a traumatic brain injury, I see the drive to digitalization as continually excluding or increasing the vulnerability of people (and I work in IT). It is exclusionary because there are those who simply cannot handle the rapid pace of change, and it increases vulnerability because firstly the most secure devices offering greatest protection are unaffordable so cheaper less safe alternatives are used and secondly the speed of mutation is cybercrime is most felt by those who adapt at a slower pace. There must at all times be analog alternatives, and this is driving the shutdown of those alternatives.	Connie	Western Cape		employed individual

	2026-06-02 09:55:37	Not fully	Other		This new plan sounds good, yet in practice, with everything hinged to an easily stolen cell phone, it will fail and cause untold headaches for the population. If you push ahead, why do you not try this system on a part of the population, say all those who receive child grants? Then, IF it works, expand it to all those who receive social welfare. Those are the areas most fraud is committed, not within the general, law-abiding population.	Dagmar	Mpumalanga		retired
	2026-06-02 09:16:47	Not fully	Other		I believe in the concept - if it is built with NOBEL INTENTIONS ?✨ An area of concern would be "technical failures"... or an individual loosing their device which potential whould mean being locked out of "their life"... If we are already aware of the potential challenges and hiccups... then surely measures can be put in place to mitigate these ?. Eg = Compensation: If the system "messes up" (as in... its not the users fault)... then the system pays the person a reward of x-amount for the inconvenience(s). This should ensure there is enough motivation for the SYSTEM to be as efficient as AI possible ? People are worried about being tracked... or surveilled... Then they have been living under a rock ?... anyhooo... My stance is: This is the most efficient way to keep crime/criminal behavior "in-check". I believe that citizens who have nothing to hide ? ? have no need to fear being surveilled. I see more positives (for me personally anyway). Eg... if someone was crazy enough to snatch my bag... which contains my phone... 1. the entire thing is catch on camara 2. they should be able to locate me... and my phone in "no-time" ? Mzanzi... our system is crumbling around us. The humans currently in positions of authority... currently responsible for serving and protecting the public... are more interested in "lining their pockets with gold", than performing the tasks they swore to uphold ? As I type this... there is a definite xenophobic narrative being pushed thru our little community. Which is another glaring example of DHA failings being brought to light... but the truth will be deflected and buried with the bodies of innocent people caught in the crossfire... Because someone is a "foreigner" does not mean they are illegal... and sadly... highlighting the failings at DHA... because a foreigner has legal documentation... doesn't mean they came through "legally". Which is why I am personally open to a digital ID system... built using NOBEL INTENTIONS ?✨	Andrea	KwaZulu-Natal		unemployed individual

	2026-06-01 20:20:39	Not fully	Other		I do not fully support the regulation changes with regard to my digital representation being locked to a specific smart device like a phone, and about the impact of 'social credit/scoring'. Phones are easily stolen in South Africa, or damaged or lost, which would be a problem if losing the device directly impacts a citizen's ability to function as a citizen. What types of corruption or bad behaviour would it imply if there is friction in getting a new device? Digitising the process is a step in the right direction to help make South Africa a better country to live in, but our country still suffers corruption and bad actors who do not think much of the common South African citizen. Thus, having an impact of a 'social credit/rating' possibly impacts how we can function as citizens is concerning if corrupt individuals in our government could use it against the people. 	2026-06-01 16:59:28	Not fully	Centralised Cyber & Security Risk		The Department of Home Affairs should investigate how Estonia did their Digital ID system. They are one of the few countries who successfully did it. The three main concerns stand out as genuinely serious when compared to Estonia: Centralised architecture → increases systemic and political risk Algorithmic identity scoring → likely conflicts with modern data protection law Weak recovery mechanisms → creates real-world exclusion risks Other concerns (like interoperability or renewal requirements) are not inherently problematic—but depend heavily on implementation details. NUMBER 1: Centralised architecture → increases systemic and political risk Algorithmic identity scoring → likely conflicts with modern data protection law Weak recovery mechanisms → creates real-world exclusion risks Other concerns (like interoperability or renewal requirements) are not inherently problematic—but depend heavily on implementation details. Here are 6 pointers: 1) Centralised app-based identity ("MyMzansi") vs Estonia's model In Estonia, digital identity is not tied to a single app. The backbone is the state-issued ID credential (ID card, Mobile-ID, Smart-ID), governed by Estonian Identity Documents Act and the broader Public Information Act. Key difference: Estonia uses a distributed system (X-Road data exchange layer), not a single centralised "super-app." No single application holds "your identity." Instead, identity is cryptographic and reusable across services. Comment: Your concern about centralisation is well-founded. Estonia deliberately avoided a single app precisely to reduce systemic risk. A "MyMzansi"-style hub creates a single point of failure (technical, political, or security-related), which Estonia has spent decades designing around. NUMBER 2: "Interoperable Private Corporate Network" Estonia does allow data exchange between public and private entities via X-Road, but with strict constraints enforced under General Data Protection Regulation (GDPR). How Estonia handles this: Data sharing is not automatic or bi-directional by default. Each query is logged and auditable by the citizen. Citizens can see who accessed their data and why. "Once-only principle": the state tries not to ask for the same data twice—but it doesn't mean free-flow syncing across banks and government. Comment: Your assumption that such a system "blurs the line" is valid if implemented without safeguards. Estonia shows it can be done without collapsing that boundary—but only with: full transparency logs, legal purpose limitation, and user visibility. Without those, your concern becomes a real constitutional issue. NUMBER 3: "Identity Assurance Level" (social credit–like scoring) Estonia does not use any form of social credit scoring tied to identity. There is no "trust score" that affects your ability to transact. Instead: Authentication is binary: either your credentials are valid, or they are not. Risk scoring exists in banking (AML/KYC), but not as a state-managed identity tier system. Relevant legal anchors: General Data Protection Regulation strongly restricts automated decision-making that significantly affects individuals (Article 22). Estonian Constitution protects equality and proportionality. Comment: This is one of the most serious red flags in your text. A state-managed "Identity Assurance Level": risks violating GDPR protections on automated profiling, and could conflict with constitutional guarantees of equal treatment. Estonia's model suggests this is not necessary for a functioning digital identity system—and may be legally vulnerable in an EU-style rights framework. NUMBER 4: Device-locked identity ("stolen phone lockdown") Estonia again provides a useful contrast: Smart-ID is not tied to a single device permanently. Mobile-ID works via SIM authentication. Physical ID cards remain a fallback mechanism. If you lose your phone: You revoke certificates quickly. You can restore identity via another channel (ID card, bank, or in-person verification). Comment: Your concern here is very practical and valid. Estonia's system is built on redundancy: multiple authentication channels, rapid revocation, and clear recovery pathways. A system that binds identity rigidly to one device without a robust recovery protocol would be considered poor design and legally risky, especially regarding access to essential services. NUMBER 5: Forced in-person renewal after 10 years Estonia does require periodic renewal of identity documents, but: renewals can often be initiated online, biometric updates are required, but processes are streamlined, and there is no punitive "lapse → start from zero" trap. Comment: A forced reset after 10 years of no physical interaction feels more like an administrative safeguard gone too far. Estonia balances: security (biometric refresh), with continuity of access. Your concern about "queue traps" is less about constitutionality and more about proportionality and administrative fairness—but it's still a legitimate critique. NUMBER 6: "Function creep" and surveillance risk This is the deepest issue—and Estonia is often cited both as a success and a warning. Estonia mitigates function creep through: data minimisation laws (GDPR) strict purpose limitation citizen access logs (who viewed your data) independent oversight bodies But even in Estonia, critics point out that: the infrastructure could be repurposed, safeguards rely heavily on rule of law and institutional trust. Comment: Your concern is structurally correct. Any centralised identity system: creates latent surveillance capacity, regardless of current intentions. The real question is not "can it be abused?" (it can), but: what legal and technical barriers exist to prevent that? Estonia's answer is: decentralisation + transparency + auditability. Your draft scenario seems to lack at least two of those. 	2026-05-30 18:30:29	Not fully	Other		I support the modernisation of Home Affairs services and recognise that digital identity systems can improve efficiency, reduce fraud, and make public services more accessible. However, I oppose the draft Identification Regulations, 2026 in their current form because several critical concerns remain unresolved. Firstly, South Africa continues to face significant challenges relating to internet access, mobile data affordability, smartphone ownership, digital literacy, and mobile device theft. A digital identity system should not be implemented in a manner that assumes all citizens have reliable access to the technology required to participate. Before expanding reliance on digital identity, government should demonstrate that the necessary infrastructure and accessibility standards are in place for all South Africans, including those in rural and underserved communities. Secondly, the proposal raises legitimate concerns regarding privacy and data protection. Any system that centralises identity information, biometric data, and interactions between government and accredited private-sector entities must be subject to the highest possible standards of security, transparency, and accountability. Citizens deserve clear explanations regarding what information may be shared, who may access it, under what circumstances access may occur, and what remedies are available if information is compromised or misused. Thirdly, South Africa has experienced numerous cybersecurity incidents and data breaches affecting both public and private institutions. Before introducing a national digital identity framework, government should provide clear evidence that robust cybersecurity protections, independent auditing mechanisms, and continuous oversight processes are fully operational and capable of protecting sensitive citizen information. Fourthly, the proposed system appears to rely heavily on smartphone-based credentials. Given South Africa's high levels of phone theft, loss, and device failure, citizens require clear, simple, and accessible recovery procedures. No person should face barriers to proving their identity, accessing services, or conducting lawful transactions because a device has been lost, stolen, damaged, or replaced. Fifthly, any use of identity assurance levels, automated verification systems, or administrative status changes must be fully transparent and subject to meaningful appeal processes. Citizens should never be disadvantaged by technical errors, outdated records, automated decisions, or administrative failures without a clear and efficient mechanism to challenge and correct such outcomes. Finally, physical identity documents must remain permanently available as a fully recognised and equal alternative to digital credentials. Access to one's legal identity is a fundamental right and should never become dependent on smartphone ownership, internet connectivity, or participation in a digital platform. I therefore urge the Department of Home Affairs to reconsider and strengthen the draft regulations by providing stronger privacy protections, enhanced cybersecurity safeguards, independent oversight mechanisms, transparent governance standards, comprehensive device-recovery procedures, and permanent protection for physical identity documents before these regulations are finalised. Modernisation should enhance citizens' freedoms and convenience, not create new risks, barriers, or dependencies. Any digital identity system must place security, privacy, accessibility, and citizen choice at its core.	Gordon	Western Cape		retired

	2026-05-29 07:53:30	Not fully	Centralised Cyber & Security Risk		It is turning South Africa into a Police State: same as it was under the old regime. If somebody gains access to the state databank I could loose my identity, or access to my life. The cost involved: Don't we need more affordable housing, more police, more jobs more than spending money on this system, which can be manipulated by unscrupulous individuals?	Deon	Western Cape		retired
	2026-05-28 21:03:42	Not fully	Other		I realise that a digital ID will have its advantages, as long as everything runs justly, securely and smoothly. But my concerns are that the system will not deliver as promised or envisioned and that it will put additional risk and strain on everyone: security and privacy risk in terms of centralised data collection and sharing ; financial and administrative strain related to the need for a smart phone and making sure that everything is always up to date: the device, addresses and contact details, the ID itself; the risk that any administrative slip-ups could cost a person dearly. Furthermore, I'm concerned that, in the end, the new system will unjustly exclude people from being fully functional citizens and exercising reasonable freedom of choice, especially in terms of smart phone use, people like some of the elderly and disabled, and those who can't afford smart phones, as well as people who choose to abstain from such devices. I'm also concerned that it will be too easy (and perhaps tempting) to switch off a person's ID when they are unjustly (or even accidentally) defined as an "unwanted" citizen for exercising their freedom of choice in matters of the day. A current example of how things can go wrong is the fact that people who have registered on the Government's Central Supplier Database are inundated with phishing emails every week from seemingly compromised government departments. They are constantly under threat because of engaging with a large government system. Please don't abuse us, let us be abused or put us under still more pressure with insecure and high-maintenance solutions.	Monica	Western Cape

	2026-05-27 15:42:05	Not fully	Other		My other is based on concerns that our systems and governance in general is a mess. We are dealing with the government with no positive track record anywhere. They fail on simple things. Sometimes they try to hide their mistakes and short comings. Officials are easily attracted and are corrupt. If we can't secure something as simple as a physical border how are we to be assured of something of this nature. It's a NO from me. Let us fix the physical shortcomings first and build up to these. We can6keep aiming higher and higher every time we fail at the bottom. So other languages are not important	Thabo	Gauteng		unemployed individual
	2026-05-27 15:24:12	Not fully	Centralised Cyber & Security Risk		This not at all clear. Whilst it sounds good and progressive I am not sure exactly what we are signing up for. this needs more debate in the public space.	Louise	Gauteng		retired

	2026-05-26 12:00:27	Not fully	Centralised Cyber & Security Risk		South Africa’s public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic “attack surface.” If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office. Although the regulations explicitly ban profiling, commercialisation, and open-ended intelligence gathering, this fluid exchange of live citizen data across corporate API channels raises red flags. Automating data synchronization loops between state databases and private financial/telecom corporate giants chips away at the wall separating public civic records from private commercial infrastructure. If your digital ID lapses under the 10-year rule, you are legally stripped of your active digital credential and forced to undergo a physical, standard in-person enrollment process all over again. This creates an unnecessary, cyclical bureaucratic loop that forces digitally active citizens back into notorious, real-world Home Affairs queues simply because they did not have a reason to visit a physical office for a decade. Despite these progressive legal promises, the practical reality of modern service delivery is that digital pathways are quickly prioritized because they save money. As government systems and corporate partners inevitably optimize their systems for the MyMzansi app, citizens relying exclusively on physical IDs could face longer delays, reduced support, and systemic “soft discrimination” when trying to access basic societal resources. 	2026-05-25 22:36:58	Not fully	Other		Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office. Furthermore, given the South African public sector’s history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation’s “attack surface.” Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. Despite the offences created in the Cybercrimes Act, the criminal justice system faces severe systemic challenges in implementing it and prosecuting for example section 11. Forcing an essential civil right like a national identity credential to automatically “lapse” triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Lastly: South Africa is not ready for this. This Bill essentially forces people who don't have a smart device for whatever reason (of which poverty may be one), to obtain one. This flies in the face of some of the most basic Constitutional values.	Marike	Gauteng

	2026-05-25 11:52:40	Not fully	Centralised Cyber & Security Risk		Yes, technology has to play an increasing role in streamlining paperwork systems and insuring efficiency increases at Home Affairs, but all systems and safeguards need to be double and triple-checked to avoid cyber theft and fraud before such a system can be implemented, particularly in SA where crime is the national sport and criminals the heroes. My main concern, however, is that the identity is linked to one device that can be easily stolen and there's no clear methodology outlined to put this right quickly and effectively. And how does the presentee know the presenter of the ID on the phone is indeed the owner of the device and ID? No. there will always have to be some sort of card backup.	Nick	Western Cape		self-employed
	2026-05-25 11:45:23	Not fully	Corporate Interoperability & Privacy Creep			Adriaan	Western Cape		retired
	2026-05-25 11:44:14	Not fully	Centralised Cyber & Security Risk		While further modernization and streamlining of DhA processe is a good thing and moves to digital technologies is the way to go, the current proposal has too many shortcomings. Not everyone has a modern smart phone; theft or loss of smartphones leaves ones digital identity at risk, and the adoption of digital technology and "virtual" certification has historically be fraught with problems and low progress in South Africa. At the very least the proposal must be improved to address these issues before being consdidered a viable option.	Frank	Gauteng		unemployed individual
	2026-05-25 11:44:07	Not fully	Centralised Cyber & Security Risk		Cyber security in South Africa is limited with daily reports of hacking having taken place at both private and state institutions. Further to this, for the elderly to become smart savvy with new technologies is minimising their rights in terms of the South African constitution as does the clause indicating that after 10 years and individual must present themselves to a Home Affairs office to prove who they are.	Michael	Western Cape		
	2026-05-25 11:42:16	Not fully	Other		Currently ID information is stored on a database which is aged and may I presume more susceptible to hacking than a modern development should the necessary attention be paid to that detail. Replacing current in person administrative processes with suitably protected IT solutions should be beneficial to all citizens, and should be rolled out to processes such as the drivers license renewal process. However, I agree that government over reach should be guarded against in that the government could have read and write access (only where appropriate) to the biographical data required to register citizenship, record births/deaths and issue/revoke ID credentials. Regarding third party databases such as banks or investment houses the government should not have read access while the government should have write access where appropriate. The best example being the current way SARS can deposit funds into a citizens bank account. Of most concern is individual system operator fraud. The government should be required to prove that any form of access required for human intervention will only be possible following thorough security sign-on processes. What could be learned from the current process in place in the UAE??	O'Brien	Mpumalanga		retired

	2026-05-25 09:19:20	Not fully	The 10-Year Physical Queue Trap		Dear Minister and Department of Home Affairs, I am writing to comment on the proposed amendments to the Identification Regulations published in Government Gazette No. 54610, which introduce a smartphone-based Digital Identity Credential via the MyMzansi application alongside existing physical Smart ID cards. While I support the goal of modernising identity management, reducing fraud, and improving convenience through secure digital credentials that carry the same legal weight as physical cards, I have significant concerns about key aspects of the draft regulations. These shortcomings could undermine accessibility, efficiency, and individual privacy.1. Mandatory physical re-enrolment every 10 years creates unnecessary queues and inefficiency. The regulations provide for 5-year validity of digital credentials with remote renewal via facial biometrics, but Regulation 20(5) requires an in-person enrolment or verification at a Home Affairs office or accredited entity within every 10-year window. Failure to do so causes the digital credential to lapse entirely, forcing citizens back into physical processes. Given Home Affairs' well-documented challenges with long queues, capacity constraints, and service inefficiencies, this risks creating recurring administrative burdens for millions of compliant citizens who actively use their digital ID but have no other reason to visit offices. This contradicts the "Home Affairs @ home" vision and could exclude or inconvenience users rather than streamlining services. 2. Device binding to a single mobile device heightens risks in a high-theft environment. The draft introduces cryptographic "device binding," linking the digital identity credential to one specific smartphone running the MyMzansi app. In South Africa, where cellphone theft and loss are common, this creates a single point of failure. The regulations do not appear to provide clear, user-friendly, and secure remote unbinding/rebinding protocols for lost, stolen, or damaged devices. Citizens could face immediate lockout from banking, services, and legal identity verification until they can physically re-enrol, exacerbating vulnerability rather than enhancing security. 3. Data sharing with private "trusted entities" and "verified relationships" poses privacy risks. The framework enables data-sharing agreements and near real-time synchronisation of personal particulars (e.g., addresses, contact details) between the population register and accredited private entities such as banks and telecom providers. While aligned with POPIA and limited to statutory purposes, this expands the attack surface for breaches and raises concerns about potential privacy creep, even with prohibitions on commercialisation or profiling. Greater transparency on safeguards, audit mechanisms, consent, and limitations on onward sharing is needed to protect individuals' personal information from unauthorised access or misuse. I urge the Department to address these issues by strengthening remote recovery options, reconsidering or softening the 10-year in-person requirement, enhancing privacy protections and oversight for private sector integration, and ensuring robust implementation that avoids digital exclusion or added burdens. Physical IDs must remain fully viable without disadvantage.Thank you for the opportunity to comment. I request acknowledgment of this submission.	Mark	Western Cape		employed individual
	2026-05-25 09:18:43	Not fully	Corporate Interoperability & Privacy Creep		The concept of moving towards digital is great. Interoperability, reduction of duplication, single source, are great positives. The concerns - risk of cyberthreat and theft of ID which has far reaching consequences - breach of privacy and trust issues, as the unfortunate criminal culture in South Africa is at a level well above many developed countries. My ID and privacy getting into the wrong hands would keep me awake. - South Africa's readiness in core infrastructure is lacking and the depending on technology with a weak infrastructure in the dual areas, will create chaos. - I would suggest that this be piloted first. 	2026-05-25 08:46:11	Not fully	Structural Function Creep & Tracking		Digital ID linked to your biometrics is great as it will prevent corruption and the verification process will definitely ensure that it is really you that is online ....However as a citizen, I must be the one that grants access to my digital ID and biometrics, including government itself. So the DHA can capture my biometrics, issue the digital ID, store them but each citizen must control and view the access to this info. Also the issuer and verifier of the digital ID must be totally independent to prevent possible corruption. Biometrics stored on your mobile device is definitely a big NO. The verification costs especially for financial transactions should be minimal to almost zero.	Treveen	Western Cape		employed individual
	2026-05-25 08:42:13	Not fully	Centralised Cyber & Security Risk		The idea behind simplifying procurement and updating of ID documents sounds excellent; however, we should be very concerned about digital security.	Sarah	Western Cape		retired
	2026-05-25 08:36:26	Not fully	Structural Function Creep & Tracking		While it will be a great option to have your ID and biometrics on your phone, to present as an alternative to a physical ID card, it must be written into this regulation that it can never become mandatory and there can never be scope creep like social credit scores. The ANC loves the CCP but we can never allow CCP methods to be used in South Africa	Duane	Gauteng		employed individual
	2026-05-25 08:33:26	Not fully	Centralised Cyber & Security Risk		Identity theft and corruption will be handed out on a plate as you only have to access or breech one system to gain access to personal information. Assuming that all inter conencted systems will be equally secure is an illusion.	Allison	Gauteng		self-employed
	2026-05-25 08:33:13	Not fully	Other		We need to see Home Affairs taking the issue of illegal immigrants with fraudulent South Africans seriously first. 	2026-05-24 20:39:30	Not fully	Other		Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office. Forcing citizens to log formal changes within a rigid 30-day window for routine life adjustments like swapping an email address or moving apartments is highly impractical. Lowering a citizen’s “Identity Assurance Level” serves as a hidden penalty, which could lead to sudden, frustrating rejections or delays when trying to execute everyday high-security actions like opening an account or authenticating an online transaction.	Craig	Gauteng		business owner
	2026-05-24 20:17:29	Not fully	Centralised Economic Kill-Switch Risks		Our present goverment have proved itself to get entangled in many grand schemes that result in numerous blunders. These inevitably cause severe financial damage to citizens that are physically challenged due to age, health and already lesser monitory means. I seriously suspect that the digital id system is fraud with unclear traps that will escalate an already challenging access to basic services. Leaving us completely bare and helpless. Unable to survive at all.	Carlo	Gauteng		retired
	2026-05-24 20:05:04	Not fully	Centralised Cyber & Security Risk		The incidence of crime and theft of mobile devices, the expense of owning a mobile device being a requirement to have "an identification document" and the lack of effective online security systems make this a bad idea in South Africa currently.	Beverley	Eastern Cape		self-employed
	2026-05-24 19:33:30	Not fully	Centralised Cyber & Security Risk		Firstly, this seems very ambitious. There may be merits about certain aspects but rather sophisticated for the geberal population. Question Q1. Please share an example where this has been successfully implemented anywhere in the world. Suggestion. Would need to run this in parallel with existing system for at least five years before embracing completely.	Richard	Gauteng		retired
	2026-05-24 19:30:11	Not fully	Centralised Cyber & Security Risk		The system has a lot of potential, but at the moment it does not seem that the government is sufficiently equipped to protect its people from threats, whether from external or internal	Ciska-Mari	Outside SA	The Netherlands	employed individual

	2026-05-24 19:09:58	Not fully	Centralised Cyber & Security Risk		I think that there might be an argument for a full biometric honestly controlled centralized register of every citizen in the country. That has information only of their name, ID number, biometric facial features, address and fingerprints. Just so that every citizen is documented and accounted for. There should be no access to their bank accounts, government controls of movement, expenses, income, wealth, or any other information. This would assist with a true evaluation of those suitable to vote and when and where they have voted but not who they voted for. The vote should be done by electronic means by a login and verification and no paperwork and an immediate outcome. This would exclude cheating the vote. Those with no access to a computer or smart phone (very few people of voting age these days don’t possess a cell phone) would need to attend a Centre in their area to have their biometrics verified and then be given the opportunity to vote in privacy and without prejudice. No gifts to potential voters would be considered legal even transport would not be allowed. A mobile computer would be taken to rural areas to allow rural people to vote, each accompanied by members of many different parties to oversee honesty. Security against AI interference and hacking would be essential. This would need alarm systems integrated into the verification of identities of voters. This proof of identity would be used to control illegal immigration and any refugee or asylum seeker. They would be deported back to their home country immediately and every citizen in the country would be continuously verified by their photo on mounted cameras and by direct investigation and recorded centrally so that no financial bribe would be possible. This would also apply to traffic police and the South African police service as well as local, municipal, regional, provincial and national persons with any degree of power or access to finances, procurement and tender decisions. Any record of intimidation or conviction would be available on the central honest system run not by cadres but by a group of computer experts with across the spectrum members.y	Sylvia	Gauteng		retired

They would be deported back to their home country immediately and every citizen in the country would be continuously verified by their photo on mounted cameras and by direct investigation and recorded centrally so that no financial bribe would be possible. This would also apply to traffic police and the South African police service as well as local, municipal, regional, provincial and national persons with any degree of power or access to finances, procurement and tender decisions. Any record of intimidation or conviction would be available on the central honest system run not by cadres but by a group of computer experts with across the spectrum members.	Tom	Gauteng		retired

	2026-05-24 09:54:30	Not fully	Other		Digital id can be useful if done right. "Done right" has some very specific requirements: 1. Zero-knowledge proofs must be used to assert identity properties. No single database of ids even with cryptographic, post-quantum secure, storage is viable. Single instance of key exposure or loss is devastating. ZK proof protect citizen identities. 2. Banks are not proxies for government identify confirmation: banks are unelected private enterprises. Citizens did not vote to give them power over identity. 3. Recovery. Theft of key devices can disconnect citizens from essential services, a fallback system and robust recovery system is essential.	Angharad	Western Cape		employed individual

	2026-05-24 08:34:31	Not fully	Structural Function Creep & Tracking		I am concerned for the possible effects of my privacy, which unavoidably impacts my human dignity. I can be a loyal and law-abiding citizen, but still not consent to the state having access to this much information about me at such an easy range, in almost real time - as history has warned against time and again. Sounds like everything George Orwell and Aldous Huxley wrote about…	Caitlin	Gauteng		
	2026-05-24 08:26:59	Not fully	Centralised Economic Kill-Switch Risks		Tying our identity to a specific smartphone doesn't seem like a good idea, given the ease with which phones are lost or stolen (or replaced). It also creates huge potential for identity theft - which is obviously the reason for the immediate hard lock down if a phone is stolen. How would the government know a phone has been stolen, though? Does it depend on reporting from us? Hopefully the reporting doesn't rely on a call centre or visiting a Home Affairs office in person? I am imagining a situation where a criminal steals your phone and then detains you or keeps you captive to prevent you reporting the theft, while they steal or abuse your identity. Is this a possibility? Also, instantly losing access to your identity because of a stolen phone would be super frustrating and potentially catastrophic! People can hide an ID card on their body or leave it at home when not needed, but smartphones are always with us, and more likely to be lost or stolen. I hope the ID card continues to be valid alongside the digital system.	Karen	Gauteng		self-employed

	2026-05-24 06:51:51	Not fully	Centralised Cyber & Security Risk		Good morning. I trust that you all wee Personally I value the change to get more effective and more technological savvy. However my concern is the following, Should I ever be the victim of a crime (mugging, phone theft, or identity theft) how quickly will the government help to restore me? Or lock down my identity? How secure are their systems? We know that hackers can be vary crafty/ persistent when it comes to theft (hacking) Will they report the breach? How long do I get should any off the above happen to secure/ protect myself?	Fred	Gauteng		employed individual
	2026-05-24 06:40:22	Not fully	Corporate Interoperability & Privacy Creep		The proposed Digital Identity framework presents significant potential benefits for South Africa, particularly in reducing identity theft, improving service delivery, and modernising interactions between citizens, government, banks, and businesses. A secure digital identity system could simplify transactions, reduce paperwork and queues, improve verification processes, and support greater ease of doing business in an increasingly digital economy. The integration of biometric authentication and real-time verification may also strengthen fraud prevention and enhance administrative efficiency across both public and private sectors. However, the concerns surrounding the smartphone-dependent model are equally substantial. In a country with high levels of cellphone theft, loss, and unequal digital access, tying one's legal identity to a single mobile device introduces serious risks of exclusion and disruption. The draft regulations appear unclear regarding recovery mechanisms when devices are stolen, damaged, or inaccessible. Furthermore, the extensive data-sharing arrangements between government and private entities raise legitimate concerns regarding privacy, cybersecurity, surveillance, and the potential misuse of personal information. While digital transformation is necessary and desirable, safeguards must ensure that citizens are not disadvantaged, locked out of essential services, or subjected to excessive monitoring due to technological failures or administrative processes. A balanced approach that retains reliable physical alternatives and robust privacy protections will therefore be critical.	Cornel	Western Cape		self-employed

	2026-05-23 21:59:54	Not fully	Centralised Cyber & Security Risk		While modernisation is welcome, the draft regulations introduce some serious risks plus administrative penalties that require much tighter constitutional safeguards. Cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, I fear that connecting the authoritative population register directly to corporate servers via live APIs increases the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an seriously high-risk target for global hacking syndicates. Also, many citizens cannot afford smartphones or reliable internet. Furthermore, given the high rates of mobile phone theft in South Africa, it is impractical to tie a legal identity credential to a single mobile device - it would introduce a real risk of citizens being digitally excluded from essential financial, travel, and government services.	Nicolette	KwaZulu-Natal		retired

	2026-05-23 09:32:33	Not fully	Other		I support the principle of a modern digital identity system if it genuinely improves efficiency, reduces fraud, and spares citizens the endless queues and administrative failures currently experienced at Home Affairs. Estonia has shown that such a system can work extremely well when implemented with strong legal safeguards, transparency, accountability, and competent administration. However, South Africa is not Estonia. Our country has serious challenges with corruption, weak cybersecurity, poor state IT performance, data leaks, unreliable infrastructure, and high levels of phone theft and crime. Under these conditions, centralising citizens' biometric, financial, and identity verification systems creates major risks if not properly controlled. The Department of Home Affairs must therefore ensure that this system never evolves into anything resembling the more authoritarian Chinese-style model where digital identity can become a tool for surveillance, behavioural control, or exclusion from services. South Africa's Constitution demands protection of privacy, due process, and freedom from arbitrary state interference. I strongly recommend the following safeguards before implementation: • Physical ID documents must remain permanently available as a fully functional alternative, especially for the elderly, poor, rural communities, and those without smartphones. • No citizen should ever lose access to essential services because of phone theft, connectivity failures, administrative errors, or algorithmic "assurance levels". • Citizens must have the legal right to see who accessed their data and why. • There must be strict limits on data sharing between government departments, banks, telecoms, and private entities. • Independent judicial and parliamentary oversight must be mandatory. • Any automated scoring, flagging, or verification system affecting citizens' rights must be transparent and fully appealable. • Strong cybersecurity standards and independent security audits must be legally required. • The system should be phased in gradually with extensive public testing before becoming widely mandatory. Digital identity can be a force for efficiency and convenience, but without proper safeguards it can also become a dangerous concentration of power. South Africans should support modernisation while insisting on robust constitutional protections and practical safeguards suited to the realities of this country.	Rick	Western Cape		retired

	2026-05-23 07:46:23	Not fully	Centralised Cyber & Security Risk		Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-22 20:16:58	Not fully	Centralised Cyber & Security Risk		I acknowledge the potential benefits of a modernised digital identity framework, including improved efficiency, reduced administrative burdens, and greater accessibility to public services. The vision of integrating digital services into everyday civic life is commendable and aligns with broader global technological developments. However, I believe the proposed framework requires significantly stronger safeguards to ensure that constitutional rights to privacy, security, and administrative fairness are fully protected. In particular, I would like to raise concern regarding the following areas: 1. Data Privacy and Interoperability 2. The proposed real-time data sharing between government systems and private sector entities such as banks and telecommunications providers introduces substantial privacy risks. Citizens require clear legal guarantees regarding consent, data minimisation, independent oversight, and strict limitations on secondary use of personal information.Identity Assurance Scoring 3. Any system that automatically downgrades a citizen's "Identity Assurance Level" based on administrative updates risks unfair exclusion from essential services. There should be transparent criteria, accessible appeal mechanisms, and protections against automated decision-making that may negatively affect citizens without due process.Device Dependency and Digital Exclusion 4. Linking digital identity credentials to a single mobile device may disproportionately affect vulnerable citizens, especially in a country with high levels of mobile theft, digital inequality, and inconsistent internet access. The regulations should provide secure alternative recovery mechanisms and maintain practical non-digital access pathways.Centralisation and Future Function Creep 5. The creation of a centralised biometric and identity infrastructure requires robust legislative limitations to prevent misuse, excessive surveillance, or future expansion beyond its original purpose. Independent constitutional oversight and regular public audits are essential.Accessibility and Long-Term Inclusion 6. The requirement for physical revalidation after extended periods may unintentionally disadvantage elderly citizens, rural communities, and individuals with mobility or financial challenges. The system should prioritise inclusion and avoid creating unnecessary administrative barriers.I support digital innovation in public administration, but technological convenience must never come at the expense of civil liberties, equality, and democratic accountability. I therefore urge the Department to strengthen the regulatory safeguards before implementation.	Jake	Western Cape

	2026-05-22 19:38:18	Not fully	The 10-Year Physical Queue Trap		I support this in principle BUT this leads to total lack of privacy.	Joy	Western Cape		
	2026-05-22 19:16:53	Not fully	Other		1. Having the digital identity synchronized online at all times opens up a huge risk for hacking, with unknown consequences to the digital id owners. I would rather have a digital id that is stored statically on a device, which cannot be tampered with (if this is possible), but not synchronized automatically and at all times with central systems. 2. The 10-Year physical renewal. I do not see the point or benefit of it. It works against the idea of easy holding of an ID document (physical card and or digital id document) indefinitely. If it is required to change fundamentally the ID technology or improve it, then one can require such re-registration. 3. Theft, loss of devices, which is common in RSA can cause more trouble and harm when the digital id is out of reach/lost and then blocked, for safety reasons. A physical id must always be available. 4. Privacy concerns. Digital id details given to "trusted corporates" infringes on privacy rights in a massive way.	Roni	Gauteng		employed individual

	2026-05-22 18:10:07	Not fully	Corporate Interoperability & Privacy Creep		I have a generally favourable view of digital ID so longs as: 1) It is never interfaced, shared or linked in any way to any entity other than the government department responsible to managing citizen identity processes. Government has no business sharing private citizen information with private entities or even between different government departments, and private entities should never share personal information in their care with government. Personal information used by government for the purpose of recording the identity of citizens or residents must be ring-fenced exclusively for the use of the department responsible with no exception. 2) Once a citizen or resident's identity is established, the government must treat that as a permanent record, and no citizen or resident should suffer any inconvenience or prejudice arising from any requirement to maintain identity records. No citizen must be forced to re-register, and no identity record should expire or be deemed to be invalid simply because of the passage of time.	Charles	Gauteng		retired

	2026-05-22 17:57:08	Not fully	Centralised Cyber & Security Risk		The proposed amendments to the Identification Regulations represent a progressive step toward modernising South Africa's identity ecosystem and enabling secure digital public services. The introduction of digital identity credentials has the potential to significantly improve service delivery, reduce fraud, and accelerate digital transformation across both public and private sectors. However, given the critical nature of a national digital identity system, several concerns and recommendations should be carefully considered before implementation. Cybersecurity Governance and Assurance The draft regulations should provide clearer minimum cybersecurity requirements and governance obligations for the protection of digital identities and biometric information. Specifically, the regulations should mandate: • Independent security audits and penetration testing • Continuous security monitoring and threat detection capabilities • Zero Trust Architecture principles • Encryption standards for biometric and identity data • Mandatory breach notification obligations • Third-party supply chain security requirements • Insider threat monitoring and mitigation controls Given the increasing sophistication of cyber threats targeting identity ecosystems globally, cybersecurity should not only be operationally implemented but also explicitly embedded within the regulatory framework. Protection of Biometric Information The proposed use of biometric verification introduces significant long-term privacy and security implications. Unlike passwords, biometric identifiers cannot be reset once compromised. The regulations should therefore clearly define: • Storage and protection requirements for biometric templates • Data retention and deletion periods • Restrictions on data sharing between departments and third parties • Citizen rights relating to biometric data access and deletion • Oversight mechanisms aligned with POPIA and constitutional privacy protections Additional clarity is needed to prevent potential misuse, unauthorised access, or function creep beyond the original purpose of identity verification. Digital Inclusion and Accessibility While digital identity initiatives support modernisation, the regulations should recognise South Africa's digital divide and socioeconomic realities. Many citizens still face challenges relating to: • Smartphone access • Affordable internet connectivity • Digital literacy • Device theft and mobile fraud risks The framework should therefore ensure that physical identity alternatives remain fully functional, accessible, and equitable to avoid unintentionally excluding vulnerable communities. National Critical Infrastructure Classification A national digital identity platform should be formally classified and protected as critical national digital infrastructure. This should include: • Enhanced resilience requirements • Disaster recovery and business continuity obligations • Redundancy and availability standards • Regular national cyber resilience assessments • Dedicated incident response capabilities The compromise of a national digital identity system could have significant implications for national security, economic stability, and public trust. Independent Oversight and Public Accountability To strengthen trust and transparency, consideration should be given to establishing independent oversight mechanisms involving: • The Information Regulator • Cybersecurity experts • Civil society representatives • Privacy and constitutional law specialists Public trust will be essential to the success and adoption of any digital identity ecosystem. Interoperability and Open Standards The regulations should encourage the use of interoperable and open technology standards to avoid long-term vendor lock-in and ensure sustainability, scalability, and national digital sovereignty. Phased and Risk-Based Implementation It is recommended that implementation be phased and guided by measurable cybersecurity maturity, infrastructure readiness, and public awareness programmes before broader national adoption. 	2026-05-26 12:36:01	Yes I do	All of the above	Centralised Cyber & Security Risk	I support the MyMzansi framework. Digital integration delivers measurable benefits—I've lived it in Sweden. Proof of residence becomes redundant. Contracts execute digitally via bank ID. Administrative friction collapses. These gains are real and substantial. However, realising these benefits demands five non-negotiable safeguards: 1. Fraud prevention: The technical architecture must meet the highest standards of cryptographic security and auditability. Fraud tolerance must be zero. 2. Device loss: Specify secure, remote credential restoration. Losing a phone should not trigger administrative paralysis. 3. Corporate data sharing: Require explicit, revocable consent for each private entity connection. Banks and telcos operate under different fiduciary duties than the state. 4. Status updates: Extend the reporting window from 30 days to 90 days. The current window is punitive. 5. Ten-year lapse: Remove the requirement for in-person re-registration. Digital renewal should suffice indefinitely. 6. Non-digital alternatives: Mandate that physical identity documents and non-digital pathways remain equally functional and accessible. The state and private sector cannot render analogue alternatives so onerous that adoption becomes coercive. With these safeguards and rigorous fraud prevention, this framework will deliver the efficiency gains other nations have realised whilst preventing both sectors from weaponising the technology. 	2026-05-25 12:17:49	Yes I do	All of the above	The 30-Day Address Notification Penalty	I am not against the Government moving towards more digital systems. In fact, I think South Africa does need to modernise many of its public services. Long queues at Home Affairs, licensing departments, SASSA offices, and other government services are frustrating and inefficient, and digital systems could help improve this. However, I do not believe South Africa's current digital infrastructure is fully reliable enough yet for citizens to become too dependent on a digital-only identity system. One of my biggest concerns is the practical reality of living in South Africa. Government systems are often offline or unavailable, we experience connectivity problems, cybercrime is increasing, and mobile phones are frequently lost or stolen. A Digital ID system that is linked to one specific device creates unnecessary risk for ordinary citizens. People change phones regularly, phones break, phones get stolen, and contracts and numbers change. The system should work more like banking apps where you can securely move your profile to a new device through verification and authentication processes. I also believe physical IDs must remain fully valid and accessible. Not all South Africans have reliable smartphones, internet access, data, or the digital skills needed to manage important identity processes online. I understand the need for security and verification, but I am concerned about the concept of "Identity Assurance Levels" if this could result in people struggling to access services because they failed to update an address, email address, or cellphone number within a certain time period. Administrative issues should not create barriers to essential services. The requirement for periodic revalidation also concerns me. Our current ID documents do not require constant authentication or renewal in the same way. If the purpose of digital systems is convenience and efficiency, then the process should not eventually force people back into physical queues after years of digital participation. I support digital progress, but I believe stronger safeguards, clear recovery processes, privacy protections, and practical implementation measures are needed before this system is fully rolled out. My concern is not with technology itself. My concern is whether the systems, infrastructure, protections, and support structures are truly ready for something this important. 	2026-05-26 16:39:35	Yes I do	No concern, I Support the Framework		South Africa as a whole lacks behind on Digital Transformation. I do not regard this as a weaponization of the State, as it is in actual fact a step forward in brining to a close a 'manual' era, which truth be told is so ineffective in this day and age that it might as well not exist This transformation would pave the path for a singular digital identity, which could mean phasing out something like drivers licenses in the future. Further to this is the Fraud prevention that will be gained, particularly when it comes to SASSA payments. My only concern - all be it small - is that this Digital ID would be lined to a single device. I would argue that a Identity Platform that can be accessed from multiple devices is a better solution. 	2026-05-25 15:43:27	Yes I do	Centralised Cyber & Security Risk		I support efforts to modernise South Africa’s identity systems and improve service delivery through digital innovation. Reducing queues, fraud, paperwork, and administrative inefficiencies is necessary and overdue. However, several aspects of the Draft Identification Regulations, 2026 raise serious concerns relating to privacy, cybersecurity, accessibility, and constitutional rights. My concerns are as follows: Data Sharing Between State and Private Institutions The proposed interoperability between government systems and accredited private entities such as banks and telecommunications providers requires far stronger safeguards and limitations. Real-time or near real-time synchronisation of personal information between state and private databases creates substantial risks relating to: cybercrime, identity theft, unauthorised profiling, misuse of personal information, and excessive centralisation of citizen data. The regulations should clearly define: what information may be shared, who may access it, under what legal authority, retention periods, audit mechanisms, and penalties for misuse. Independent oversight mechanisms should also be mandatory. Device-Dependent Digital Identity Risks South Africa experiences extremely high levels of mobile phone theft and loss. Linking a person’s identity credential primarily to a single smartphone device creates a serious risk of exclusion from essential services. The regulations should explicitly provide: secure remote recovery procedures, multi-device recovery options, offline identity verification alternatives, emergency restoration pathways, and guaranteed access to physical identity verification channels. No citizen should effectively lose access to their legal identity because a device was stolen or damaged. Digital Exclusion and Accessibility A significant portion of South Africans still face: unreliable internet access, limited digital literacy, lack of smartphones, financial barriers to device ownership, and rural access challenges. The system must remain fully functional for citizens who rely on physical identity documents and in-person services. Digital systems should enhance access, not replace access. Physical IDs must remain permanently available without indirect penalties or reduced functionality. Identity Assurance and Administrative Penalties Any system that automatically reduces a citizen’s “identity assurance” status due to delayed updates or administrative non-compliance requires careful scrutiny. Administrative delays, forgotten updates, or technological barriers should not result in sudden restrictions or failures when accessing banking, communication, employment, or public services. Citizens must have: transparent notification systems, accessible appeal mechanisms, correction rights, and reasonable grace periods. Automated administrative scoring systems should never become a mechanism for indirect exclusion. Constitutional and Privacy Protections Given the sensitivity of biometric and identity data, the regulations should include stronger protections aligned with: the Constitution, POPIA, administrative justice principles, and proportionality requirements. The regulations should explicitly prohibit: unauthorised surveillance uses, secondary commercial exploitation of data, behavioural profiling, and expansion of identity systems beyond their original lawful purpose without parliamentary oversight. Conclusion Modernisation is necessary, but public trust depends on transparency, accountability, security, and meaningful safeguards against exclusion and abuse. I urge the Department to strengthen the protections within these regulations before implementation to ensure that convenience does not come at the expense of constitutional rights, privacy, and practical accessibility for ordinary South Africans. Submitted respectfully.	Chris	Gauteng		business owner
	2026-05-25 15:24:33	Yes I do	No concern, I Support the Framework		When you have a society with many people operating outside of the law, one should welcome regulation that tries to tighten control, especially if it promises to be more effective and more efficient, i.e., less onerous to implement. At present, we are inundated with control measures (FICA et al) which attempt to prevent fraud and/or identity theft, yet overall we fail to contain the proliferation of criminal activity. Hence, we are all subjected to onerous validation processes whenever we start a business, open a bank account, buy a property, and so on. Effectively, people who obey the law and pay their taxes are subjected to red tape and rules which exist mainly to inhibit the criminals and the non-compliant. It may be counter-intuitive, but if the controls could become more effective and efficient, as digitalisation promises, then criminality will diminish or go elsewhere, whereupon the cumbersome rules and red tape could be alleviated.	Dawid	Western Cape		employed individual
	2026-05-25 14:52:46	Yes I do	Centralised Cyber & Security Risk		The current level of corruption, fraud, and incompetence within the government officials is extremely concerning. 	2026-05-24 20:14:46	Yes I do	The 10-Year Physical Queue Trap			Munira	KwaZulu-Natal		retired
	2026-05-24 20:01:50	Yes I do	The 10-Year Physical Queue Trap			Leon	Gauteng		
	2026-05-24 18:19:33	Yes I do	No concern, I Support the Framework		I support the framework as it will make address issues with changes in physical addresses, easy to verify where whereabouts of individuals, easy to address corruption that involves loss of physical card ID, The framework will also modernized how identification is managed.	Choice	Mpumalanga		employed individual
	2026-05-24 17:14:31	Yes I do	Other		It’s 2026, this makes sense, corporates (particularly banks) have more information about us then our own government that can use that data to streamline service delivery, fight crime and corruption and streamline services that were rife with fraud, this is the future that we expected and implementation will be key.	Sifiso Julian	North West		business owner
	2026-05-24 16:27:36	Yes I do	The 10-Year Physical Queue Trap			Shawn	Gauteng		employed individual
	2026-05-24 16:00:26	Yes I do	No concern, I Support the Framework		This framework is wonderful for the people. That increases the sivion of the shout African people	Efraim	Mpumalanga		retired

	2026-05-24 14:15:17	Yes I do	No concern, I Support the Framework		This questionnaire is unfortunately extremely biased in its design. Including the email only stating “the problems”. Where are all the benefits of such a system. If anyone wants to know how this works, look up how Norway uses it. It’s an amazing system and increases online security and reduced fraud!	Shawn	Western Cape		employed individual
	2026-05-24 13:50:06	Yes I do	Corporate Interoperability & Privacy Creep		I support greater control over citizens and foreigners living in SA. I hope the government will use the data to improve citizens' quality of life and not abuse it. I also believe greater control will assist with crime reduction and prevention.	Ikhraam	Free State

	2026-05-24 11:32:54	Yes I do	The 10-Year Physical Queue Trap		These regulations do not take into consideration the aged who are in many ways handicapped; 1. IT ASSUMES YOU ARE TECHNILLY ABLE TO DO ALL THE THINGS ON YOUR SMAT PHONE OR LAPTOP. OLDER PEOPLE DO NOT KNO EVERYTHING BECAUSE THEY GREW UP WHEN THE POSTMAN DELIVERED THE POST AND THE TELEPHONE WAS CONNECTED TO A CABLE. We know the basics, how to make a call and how to send an email. But that is it. The rules must be user friendly for older people. I am 80 years old and government departments assume that I can do everything on my Laptop or smart phone which is not the case. THEY EXPECT ME TO DO THONGS i CANNOT DO. 2. I do not agree that you must in a certain time limit see a bank officer or Home Affairs official. There must be other ways to proof your identity; 3. If my cell phone is stolen, how do I proof my identity.	Johan	Western Cape		retired
	2026-05-24 09:58:57	Yes I do	No concern, I Support the Framework		As I've been bedridden for 13 years, unable to visit DHA office to change from ID book to ID card, i would like to be able to do it via smartphone.	Gustav	Gauteng		retired
