	2026-05-23 10:05:19	No I do not	All of the above	Centralised Cyber & Security Risk	I am so tired of this agenda to control every aspect of the citizens life. The government is paid by the citizens taxes, to serve not control & laud it over the population. The GNU would be better seeing to things that need attention such as the appalling state of hospitals, the lack of police to combat every day crime, such as smartphone theft! the roads that are not fit for use etc etc The govt wants everyone to have a smartphone but not everyone can afford a smartphone and not everyone wants to do all their business from a smartphone. The proposal is to prevent fraud & identity theft but the govt is working towards controlling everything about the citizens & their every movements; controlling & legislating every move the law abiding citizens make, will not control the cybercrime or terrorists.	Barbara	Western Cape		retired
	2026-05-23 10:05:00	No I do not	All of the above	Centralised Cyber & Security Risk	Introducing a first world system in a third world country is never going to work. 	2026-05-23 10:02:13	No I do not	All of the above	Centralised Cyber & Security Risk	Globally, not just in South Africa, cyber attacks are getting more and more complex. The rate of successful attacks have also been increasing greatly, especially with the help of artificial intelligence. Making all South Africans 100% dependent on this technology, is frankly ridiculous. Furthermore, South Africa chronically struggles with electricity outages and infrastructure deterioration. I have no confidence that the priposed system would continuously function in a manner that benefits all South Africans. Furthermore, apps generally collect a lot more data on each person than what the law legally prescribes. I find this nothing shrt of spying oun your own citizens. Reminds me a lot of George Orwell's "1984", wich was prescribed reading in school for us South Africans, warning against exactly such monitoring behaviour by totalitarian governments. The next question is who will have access to all our data? Including yet more private companies and giving them access to data that, quite frankly, I don't even want the government to have access to. Does nobody remember Edward Snowden of the USA? Do I as a South African Citizen, living in Germany (on a visa), also need to get this app? Will my movements, data interactions, conversations also be recorded - basically making my phone an international spying device, which a requirement by law? The next problem is high unemployment rate in South Africa. 1% of South Africans carry the tax burden of the entire country, yet the government wants every single South African to suddenly own a smartphone? Preposterous! Fix the infrastructure and weed out corruption, by actually prosecution currently sitting politicians for their publicity known corruption or unwillingness to actively combat and expose corrupt officials (making the complicit). Stop spending money on luxuries for for upper level civil servants, and actually start helpin the poor. Such as people living in Diepsloot. Get you priorities in order and become familiar with the harsh realiies most South Africans face on a daily basis, before spending money on technology that is currently unimportant, once put into perspective and trying to put more financial burden on the poor by forcing them to also invest in this technology. Also, if this is not a requirement for them, it should not be required for anyone else either, as all South Africans should be treat equally.	Andre	Outside SA	Germany	employed individual

	2026-05-23 09:55:15	No I do not	All of the above	Centralised Cyber & Security Risk	Our gov as it is, is one big security risk. All gov websites have viruses on them. Most gov websites are slow and throw away your info, then you have to start again. Our gov spends as little money as they can on IT. If gov can't run IT properly at this moment, how are they going to do it in future? This 3year, 5year, 10year plans of gov is nonsense. So if a cellphone gets stolen by criminals, the cellphone owner have to jump through hoops, fork out cash, wait in long lines at DHA, have to deal with arrogant gov employees, have to wait years for a new digital ID, have to pay a bribe to get things moving and can't do nothing without an ID. While the criminals are protected by gov law and the cellphone owner has no rights.	Faan	Mpumalanga		retired
	2026-05-23 09:52:16	No I do not	All of the above	Centralised Cyber & Security Risk	I do not feel comfortable with the government having access to ALL my personal details. And to add insult to injury, they can do with that information (and make changes and share with 3rd parties) what they want. One has the right to protect oneself, and one's personal information is not the business of other open platforms. The addition of AI in our daily lives is already of great concern, and one has to be more vigilant against fraud.	Charon	Western Cape		retired

	2026-05-23 09:16:01	No I do not	All of the above	Centralised Cyber & Security Risk	Not every one has access to a cell phone or can operate a cell phone..my husband is one of these.. . The elderly in particular will face major challenges apart from many other reasons why this is a stupid idea. ,?. It's sounding more like controlling the citizens every move. What will the next step be, the chip under your skin ...This is BS	Elizabeth	Gauteng		retired
	2026-05-23 09:15:38	No I do not	All of the above	Centralised Cyber & Security Risk	The current ID cards have sufficient detail why is it necessary to have additional information attached to my ID? I already present my card or ID number where required. Who will have access to all the other information on the digital ID? Being digital doesn't imply less fraud, forgeries or increased security. Mobile phones are not secure devices. What other means have been explored to counter the issues faced with the current ID? RSA is not at this stage for many reasons (maybe in 100 years), fix what is broken first. As is HA can't keep the ID information they currently have safe & confidential, but seek more private information to handle and access.	Sannah	Gauteng		self-employed

	2026-05-23 09:00:28	No I do not	All of the above	Centralised Cyber & Security Risk	South Africa is not ready for this level of tech, especially the the government (at all levels). With this digital ID system, I'm concerned about the frequency one may need to pop into Home Affairs to preset oneself as proof of life. I haven't been to Home Affairs in nearly 20 years, simply due to the fact that the staff are impolite and the service is so shameful it should be declared a prosecutable human rights violation. Just like many other government departments I've been to, or accompanied someone to, I've found that they are so incredibly disorganised it's atrocious. For that reason alone, a digital system should be shelved until the government can getting its house in order. Then there are potential POPI Act violations, which will happen! Information sold to the highest bidder (ie via a corrupt tender process or contract). Hard copy identification should always be mandatory as it is now and always run parallel to a digital system and never eliminated. Digital ID systems should never become mandatory. While a centralised system sounds good on paper, it never is in practise. Rather introduce a voucher system valid for 12 months, whereby an individual can, for example; do a change of address as well as general updates at any government office nationally free of charge. After expiry, an individual will have to go through the normal processes at cost. The voucher system basically allows an individual to "jump the cue" and do updates that normally would have one moving from cue/office to another free of charge. This bill shouldn't see the light f day until such time that proper 5 to 10 year research study covering various countries in Europe, Asia, Africa, the Americas as well as and including Australia and New Zealand has been done. Government over reach presents a huge problem and government doesn't always know best. In this case, prior to legislation like this particular one, government should have pitch the idea to the public at large, and requested inputs and ideas which may have resulted in a better tailor made system. This is going to turn into mud!	Quintin	Gauteng		unemployed individual

	2026-05-23 08:19:24	No I do not	All of the above	Centralised Cyber & Security Risk	I am extremely concerned and totally opposed to the State control of citizens proposed by this law. It is disturbingly over-reaching in terms of State oversight and control and invasion of privacy of the individual and goes against all the freedom and rights which our Constitution attempted to put in place. This kind of centralised control goes way beyond the Apartheid regime's Pass laws which so unjustly restricted and bound and controlled people's freedom to live and move at will. It also imposes unworkable and impractical obligations for citizens.	Peta	Western Cape		
	2026-05-23 08:19:24	No I do not	All of the above	Centralised Cyber & Security Risk	Losing access to your digital ID means you lose your identification, thus you lose access to services, like banking or other online platforms, permanently with not a single, plausible solution to this problem other than repeating the mistakes of in-person appointments to Home Affairs. A centralised, digital ID leads to a concerning pipeline to a much more concerning reality: an easy gateway for malicious individuals to steal your identity and frame you for crimes that you never committed. Crime rates continue to spiral and remain unimpeded; the consequences of a digital ID will only give criminals a consistent, reliable way to commit crimes, regardless of how well it is secured. No matter the security put in place for digital IDs, it will ONLY make the lives of South Africans more difficult, as the ease of access with digital ID will be lost due to the need to secure it. This is a very dangerous pipeline, one that results in an authoritative regime. I do not support any version of this legislation for I do not support fascist ideologies. 	2026-05-23 08:14:10	No I do not	All of the above	Centralised Cyber & Security Risk	Away with digital ID al together!!! The general public is not aware of the ramifications that this will cause if allowed to become law. The same government that employed POPI Act to protect our personal data, is now turning around a full 180 deg and want to leverage full control over our personal data. How much has really changed since POPIA was in acted? Are you seeing any difference at all, are you being SPAMMED less? I thought you'd say no… This government has proposed so many new laws in the last couple of years since Covid, it seems like they want to lock us in and tell us how we are allowed to live our lives!!! And don't get me started on the recent cyber attacks, just this week thousands of small businesses was hampered by internal DDoS attacks, imagine, you cant purchase food because of an ongoing DDoS attack that prevents you from showing your perfect social score, that due to this act allow or disallow you to purchase certain goods??? Imagine a scenario where you go away for work for 30 days, or perhaps take a long deserved holiday, and due to your "changed location " the algorithm now flags you as having moved, but did not update the government… now you get locked out from certain purchases, perhaps can't even buy fuel due to the rules that may be imposed by this act… How will you get home??? These are hypothetical scenarios, but scenarios that can easily arise should this bill be passed… Why would anyone in their right mind propose, or support this without having an agenda? Hell no!!!!!!!!	Francois	Western Cape		business owner
	2026-05-23 08:13:48	No I do not	All of the above	Centralised Cyber & Security Risk	This regime will result in South Africans losing their identities easily. It has cyber security issues on top of it. With sector partners involved like banks, it can be easily verified through biometrics.	Tebogo	Mpumalanga

	2026-05-23 08:03:58	No I do not	All of the above	Centralised Cyber & Security Risk	Expanded National Cyber-Defenses Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralized live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touch-point with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralyzing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronization loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimize for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-23 06:33:33	No I do not	All of the above	Centralised Cyber & Security Risk	1. The "Honey Pot" of Personal Information When you centralise identity, you create an enormous target for state-sponsored actors, hackers, and cybercriminals. Because a digital ID is intended to be a "single key" to access all aspects of life—financial, medical, travel, and interaction with the state—a single security breach is catastrophic. Unlike a credit card that can be cancelled and reissued, your identity, specifically your biometric markers (face, fingerprints, iris scans), is permanent. Once that data is compromised, it is compromised forever. 2. Surveillance and the Death of Anonymity The most significant privacy risk is the transition from "observed" to "tracked." In a traditional, analogue society, you can move through public and private spaces with a degree of healthy anonymity; the state does not know your every move, purchase, or conversation. A digital ID ties your physical presence in the world to a digital profile. Once you are required to use this ID for shopping, transit, or entering public buildings, the state can map your movements, associations, and habits in real-time. This effectively ends the private life, as every action becomes an entry in a government-monitored ledger. 3. Function Creep and Data Interconnection The "function creep" phenomenon is where data collected for one benign purpose (e.g., renewing a driver's license) is surreptitiously shared with other agencies or private partners. For example, a system initially framed as a tool for "efficient tax filing" can easily, with a software update or a policy change, be linked to your medical records, banking history, or even social media activity. Once these databases are linked, the state can build a comprehensive "life profile" that can be used for profiling, discriminatory enforcement, or targeted social engineering. 4. Algorithmic Profiling and Automated Control Privacy is not just about secrecy; it is about autonomy—the right to not be manipulated or coerced by those in power. If your digital ID is tied to an automated system, algorithms can profile your behaviour to make decisions about you without human intervention. If an algorithm marks you as a "high risk" due to your political affiliations, travel history, or even your social network, the system can automatically restrict your access to services, freeze your assets, or flag you for intervention. This turns privacy into a variable that can be retracted by the system if you fall out of favour with the regime 5. Lack of "Purpose Limitation" or Right to Erasure In government-run digital systems, the individual rarely has true ownership of their data. You cannot easily "delete your account" or opt out of data collection if that account is your only means of legal existence. Furthermore, there is rarely a clear "purpose limitation"—meaning the state is not legally restricted from using your data in ways you would never have consented to, such as sharing it with third-party intelligence or corporate entities. The fundamental privacy risk is that the digital ID changes the relationship between the governing and the governed. It removes the wall of privacy that protects the individual from state overreach, enabling a condition of "transparent citizenry" while the mechanisms and motives of the state remain largely hidden and unaccountable	Jan	Western Cape		self-employed

	2026-05-23 06:22:37	No I do not	All of the above	Centralised Cyber & Security Risk	Moving to a digital platform involves many risks especially in our crime ridden country. Identity theft, having to re prove who you are, state surveillance, possible breach of privacy, not excluding those members of society who do not have access to smart phones or who live in remote places and cannot have continuous access to a home affairs office. You say you're working towards the betterment of the civilians yet all the laws that are been passed seems to be heading towards a totalitarian state. What happens in the case where our phones get stolen or lost? What guarantees of privacy can you give us? How will we stay protected against loss of identity etc. Instead of introducing all these new laws, things should be put in place to clean up the country and fix issues that already exist, not create more trouble.	Zaakirah	Gauteng		student

	2026-05-23 05:20:32	No I do not	All of the above	Centralised Cyber & Security Risk	South Africa’s public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic “attack surface.” If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly.	Ian	KwaZulu-Natal		retired
	2026-05-23 05:19:58	No I do not	All of the above	Centralised Cyber & Security Risk	Home affairs is one of the most corrupt and criminal departments amongst other corrupt government departments, that has demonstrated no will to deal with the criminality within itself, even with all evidence and public outcry; it can't be trusted with this humungous trust based power. The public made suggestion after suggestion over the years, for HA to deal with the criminality in the department, including the use of body-cams but citizens were ignored. Rushing to fulfill GNU commitment to NWO deals they agreed to, is NOT in the best interest of citizens. HA fails to manage its employees shenanigans, with all available digital know-how, but the same HA rushes to manage all citizens' existence? HA must first demonstrate its will and capability to manage itself regarding its staff criminality and the sales of SA citizenship BEFORE rushing to move on to bigger areas of encroachment onto citizens privacy removal and control. 	2026-05-23 05:17:38	No I do not	All of the above	Centralised Cyber & Security Risk	I reject the structural exclusions in Draft Regulations 8 and 14. Forcing citizens into physical Home Affairs queues every 10 years—despite successful remote biometric app verification—completely penalizes pensioners, rural communities, and vulnerable populations with mobility challenges. Furthermore, algorithmically downgrading a citizen's identity level for missing a routine 30-day administrative update window will lead to unfair digital lockouts from essential services. Identity status must not rely on punitive, automated algorithmic profiling.	Janine	Gauteng		retired

	2026-05-22 22:37:01	No I do not	All of the above	Centralised Cyber & Security Risk	How the heck does our government with its track record of fraud think that citizens are going to trust them to consolidate highly sensitive personal and biometric data into a centralized registry, which creates a single point of failure? Moreover, in practice digital IDs consistently result in exclusions, denial of services, and non-existing or inadequate mechanisms for remedy or redress. These exclusions create a new class of digitally dispossessed persons deprived of rights and entitlements and without legal recourse. WE DO NOT LIVE IN A FIRST-WORLD COUNTRY but a third-world state teetering on economic and structural collapse. This government would do well to fix the basics instead of trying to pretend all is well when Rome is burning.	Lesley	Western Cape		self-employed

	2026-05-22 22:11:15	No I do not	All of the above	Centralised Cyber & Security Risk	I vote NO against the draft Identification Regulations, 2026. I do NOT support the introduction of the dual-track digital identity system, including the MyMzansi smartphone application and the Digital Identity Credential. I am concerned about the risks this poses to privacy, personal security, and constitutional rights. Key reasons for my opposition include: • The proposed real-time data sharing with private entities and the creation of an interoperable network between state and corporate databases. • The introduction of an “Identity Assurance” scoring system that could penalise citizens for everyday life changes. • The device-locking of digital identity and the lack of clear, secure recovery processes in a country with high rates of phone theft. • The risk of function creep and potential for increased surveillance or exclusion. • The requirement for periodic physical verification, which may create new barriers instead of removing them. I believe these changes represent an unnecessary and risky overhaul of our national identity system that could compromise citizens’ freedoms and security rather than genuinely improve service delivery. I request that my NO vote and these concerns be formally recorded as part of the public participation process.	Elizabeth	Western Cape

	2026-05-22 21:54:57	No I do not	All of the above	Centralised Cyber & Security Risk	While the idea of computerized or digital IDs may sound modern and efficient, the reality is that such systems carry enormous risks that cannot be ignored. Far from making life easier, they could make things exponentially worse. Cybercrime and identity theft are already major global concerns, and digital IDs would only widen the door for criminals. In countries where similar systems have been introduced, the consequences have been devastating—people have lost access to their assets and livelihoods with the mere push of a button. The thought of placing such power in the hands of government officials, especially in a context where corruption has been repeatedly exposed, is deeply troubling. With no guarantee of integrity, digital IDs could easily be misused to silence or punish those who are not deemed compliant. This is not progress—it is a dangerous step backward. The risks are simply too great, and the potential for abuse too alarming. We must stand firmly against this proposal, because the safety, dignity, and freedom of citizens should never be compromised for the sake of convenience.	Millicent	Western Cape		employed individual

D-icon 2.5k Shares whatsapp sharing buttonfacebook sharing buttontwitter sharing buttonemail sharing button Top concerns Centralised Cyber & Security Risk Cybersecurity Readiness & “Leapfrogging” Vulnerabilities While the draft regulations introduce highly sophisticated cryptographic measures, including asymmetric elliptic-curve cryptography and encrypted database storage, they create an unprecedentedly dense web of database interfaces. This leapfrogges global legacy models by connecting the state’s population register directly to corporate networks via secure APIs. The Concern: South Africa’s public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic “attack surface.” If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. The 10-Year Physical Queue Trap Device Binding Vulnerability Corporate Interoperability & Privacy The 30-Day Address Notification Penalty Soft Discrimination & Digital Exclusion Perspectives: What is the debate? The proposed Amendment of the Identification Regulations, 2026, has ignited a vital conversation across South Africa regarding the digitization of civic infrastructure. To help you formulate your official submission, the core arguments surrounding the policy have been restructured below into two comprehensive perspectives. What Supporters Say What Opponents Say Facebook Email Twitter Telegram Instagram PRIVACY POLICY Proudly powered by WordPress en English Skip to content Dear South Africa Dear South Africa Democratically Engaged, Active and Responsible Menu Digital ID Digital ID for South Africa DEAR-SOUTH-AfFRICA 3,504 comments individually delivered to the Minister, so far No I do not support the regulations 3408 Yes I do 24 Not fully 72 The Department of Home Affairs has published proposed amendments to the Identification Regulations under Government Gazette No. 54610. 	2026-05-22 21:14:26	No I do not	All of the above	Centralised Cyber & Security Risk	While modernisation is welcome, the draft regulations introduce expansive risks and administrative penalties that demand much tighter constitutional safeguards. Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-22 21:03:57	No I do not	All of the above	Centralised Cyber & Security Risk	This is yet another disgraceful act of corruption in a world tainted by racism. It's alarming to see parties like the ANC, EFF, and other black political groups engaging in even more under-the-table corruption. They'll fabricate information and ID numbers to evade accountability. The climate is ripe for risk and rampant fraud, and it's unacceptable. Too risky, and too much fraud will occur.	Linda	Free State		unemployed individual
	2026-05-22 21:03:05	No I do not	All of the above	Centralised Cyber & Security Risk	South Africa's public sector has a fraught history with systemic data breaches and ransomware attacks. If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly.	Debbie	Eastern Cape		employed individual
	2026-05-22 21:02:55	No I do not	All of the above	Centralised Cyber & Security Risk	By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis.	Andries	Western Cape		retired
	2026-05-22 21:02:29	No I do not	All of the above	Centralised Cyber & Security Risk	The Government is not to be trusted. They (even DA) shown time and time again that they are not trustworthy. They can freeze my bank account or any financial traction as and when they please. Share your info with whom every they want. There are so many data breaches on the government sites (if and when they work). Other main issue is it is connected to a cell phone. The phone is lost, stolen, stop working or whatever reason. What about your data? Are you now lost and what then? Has anyone even tried to phone Home Affairs for their helpdesk? I done it recently and it took me 2 days eventually to have a person to answer the phone! Although the lady was nice and tried to be helpful, they can't do anything. Told me to write and email. Still waiting for a reply. I have application for visas, waivers and permits gathering dust in Home Affairs from 2022. Fix first the normal process and then see this daydream. This dream belongs in Ramaphosa's smart city. Dream on. Not going to work. One other thing, due to circumstances beyond my control - I moved house 5 time in 2 years. Updating this will be a nightmare as I knew I was only temporary staying in a place until now. So update, update, update?	Lorraine	Gauteng		self-employed
	2026-05-22 21:01:43	No I do not	All of the above	Centralised Cyber & Security Risk	This is just another way for the criminals in our government to get access to personal information.	Annamarie	Gauteng		retired

	2026-05-22 20:18:50	No I do not	All of the above	Centralised Cyber & Security Risk	There is so much identity theft and this happens in collusion with home affairs employees been involved. Home affairs was recently hacked and personal information stolen. Imagine hacking digital ID's this can then be cloned onto smart devices and everyones ID is in the criminals hands to do as they please. With physical ID they still need to fraudulently reproduce them. How many cellphones are stollen daily in SA, what in inconvenience it is going to be if everything is linked to your digital ID. ID gets locked and everything linked thereto as well? Then there is unnecessary and unwarranted penalties for citizens, unnecessary queues, privacy issues, potential discrimination and exclusion. Every single last one of these needs to be thoroughly addressed with the necessary substantial revisions before it's even possible to think of bringing this draft amendment back for anyone to decide on. The requirement to visit home affairs or a bank to "renew" your ID every ten years. It is already a nightmare to renew your passport - A whole day is wasted. I avoid banks and home affairs simply because of the queues. What about the aged citizens of the country. They already sit days in queues to claim Sassa grants. This topic can be discussed forever with more negatives than positive reasons proceed.	Jason	Western Cape		
	2026-05-22 20:17:37	No I do not	All of the above	Centralised Cyber & Security Risk	Is a security risk because your phone could get stolen and your identity could be stolen as a result of theft.	Debbie	Western Cape		employed individual

	2026-05-22 19:36:59	No I do not	All of the above	Centralised Cyber & Security Risk	What is wrong mentally with the people in charge of governing this country? We are surrounded daily by technological "advancements" that are supposed to make our lives easier, but end up achieving the opposite. Then, we have various places where personal data is supposed to be safely stored, yet regular news reports tell us of massive data breaches. Another classic example are the cellular service providers who are unable to even keep our personal information safe from the public and yet our personal information is sold to commercial entities like insurance companies. Here I am subjected to as many as 3 to 4 calls daily by persistent salesperson wanting to sell their products to me and who do not take no for an answer. This pathetic world can not protect my personal information so I am absolutely against this proposed legislation becoming law. It will just give this government more power over me, in which case life in this world will become an absolute waste of time. I vote NO to this proposed legislation.	Mark	Western Cape		retired

	2026-05-22 18:18:25	No I do not	All of the above	Centralised Cyber & Security Risk	I strongly oppose the proposed MyMzansi digital ID system. While modernisation is welcome, making digital identity the primary form of ID takes away our freedoms in the following ways: It creates dangerous dependence on smartphones and private corporations, excluding many South Africans and exposing us to phone theft and system failures. Real-time data sharing with banks and telecoms enables mass surveillance and function creep. The “Identity Assurance” scoring system introduces coercive control similar to social credit. Centralised biometrics put our privacy and security at serious risk. I request that physical Smart ID cards remain the full and sufficient form of identification. Any digital option must be strictly voluntary, with no penalties for opting out. We fought for freedom in this country. We should not surrender it to a digital system that hands the state and corporations excessive power over our lives.	Colleen	Eastern Cape		self-employed

	2026-05-22 18:16:17	No I do not	All of the above	Centralised Cyber & Security Risk	I do not own a smartphone. I do not plan to own a smartphone. If I am forced to buy a smartphone because feature phones become unavailable it will not have Internet access. Will the government buy me a smartphone and provide free Internet access? This amendment will present huge security risks if the phone is stolen. Then there is the issue of privacy and dis-empowerment. With no identity what will a citizen be able to do? Powerless and devoid of a voice! Such a digital system will also open up avenues to huge fraud and identity theft. Then there is the issue of dissemination, leaking, sale of or hacking of the ID data. Bank's cannot even manage fraud with smartphone banking or even disclose the amount of fraud or the mechanisms. The usual route for fraud is collusion between corrupt individuals at banks and phone service providers. No amount of security can address this. Imagine Home Affairs trying to get a grip on system abuse? This amendment is fraught with dozens of problems and is a non starter.	john	Western Cape		self-employed

	2026-05-22 18:02:51	No I do not	All of the above	Centralised Cyber & Security Risk	This system will be open to abuse, hacking, cybertheft and government snooping on private citizens. Stolen or lost cellphones will cause endless problems for the person whose cell was lost/stolen. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. 	2026-05-22 16:45:52	No I do not	All of the above	Centralised Cyber & Security Risk	This is a nightmare. The government can't be trusted to do anything properly. The security risks are legion and as for IDs expiring - forget it. What about people who don't have a cell phone (and don't want one or can't afford one)? Before they attempt anything this sophisticated and beyond their abilities why don't the government try to fix some simpler things. Crime, corruption, incompetence, stabilise the power supply, stabilise the potable water supply, stabilise sewage disposal, fix potholes, fix education, fix unemployment, fix the railways, fix roads, fix the police, fix the NPA, fix the justice system. I could carry on with this list for hours. So many things have become a disaster during 30 years of ANC misrule and now they want to jump straight into technologies that they don't understand and won't be able to control.	Graham	KwaZulu-Natal		retired

	2026-05-22 16:34:00	No I do not	All of the above	Centralised Cyber & Security Risk	I hereby submit my objection to the Draft Identification Regulations, 2026, published under Government Gazette No. 54610. While I acknowledge the Department's intent to modernise identity management through the proposed MyMzansi digital credential system, I believe several provisions pose serious risks to constitutional rights, privacy, and digital freedom. Key Objections Interoperable Private Corporate Network The creation of real-time, bi-directional data pipelines between state registers and private corporations (banks, telecoms) risks eroding the boundary between public civic data and private commercial databases. This undermines the constitutional right to privacy (Section 14 of the Bill of Rights) and creates opportunities for abuse, profiling, and surveillance without adequate safeguards. Identity Assurance Scoring Loop The proposed algorithmic downgrading of "Identity Assurance Levels" for failure to report routine life updates within 30 days introduces a punitive, compliance-driven scoring system. This mechanism resembles a "social credit" model and could arbitrarily restrict access to essential services, violating rights to equality and dignity. Device-Locked Digital Identity Binding a digital ID to a single smartphone device, without a secure remote recovery pathway, exposes citizens to administrative paralysis in the event of theft or loss. Given South Africa's high rates of mobile theft, this design choice is impractical and risks disenfranchising vulnerable populations. 10-Year Physical Queue Trap The requirement for in-person revalidation every 10 years, regardless of successful biometric renewals, reintroduces the very inefficiencies the system claims to eliminate. This disproportionately burdens rural and disadvantaged citizens who lack easy access to Home Affairs offices or partner banks. Blueprint for Function Creep Centralising dynamic biometric and behavioural data creates an infrastructure ripe for future surveillance expansion. Without explicit legislative limits, this framework could evolve into a compliance-driven exclusion system, undermining democratic freedoms. Constitutional Concerns Privacy: Section 14 guarantees the right not to have personal information infringed. Equality & Dignity: Algorithmic scoring and exclusionary mechanisms risk discriminatory outcomes. Access to Rights: Identity documents are gateways to voting, employment, financial access, and freedom of movement. Any system that jeopardises access undermines constitutional democracy. Requested Amendments Explicit safeguards against corporate-state data blending. Removal of punitive "Identity Assurance" scoring mechanisms. Introduction of secure, remote recovery protocols for stolen or lost devices. Extension of biometric renewal validity beyond 10 years without mandatory physical revalidation. Clear legislative limits to prevent surveillance expansion or function creep. Conclusion Identity management reform must enhance efficiency without eroding constitutional rights. The current draft, while innovative in vision, risks embedding structural vulnerabilities that could harm citizens' privacy, dignity, and freedom.	Gerald	Gauteng		retired
	2026-05-22 16:33:26	No I do not	All of the above	Centralised Cyber & Security Risk	People's personal info would be open to hacking and others. Not everybody has a cell phone and older and indigent people would be at serious risk. Many people will be excluded since not everybody is conversant with these type of applications. Nothing wrong with the card ID system.	Diomedes	Gauteng		retired

	2026-05-22 16:00:52	No I do not	All of the above	Centralised Cyber & Security Risk	Device Binding: The Stolen Phone Lockdown To secure your data, the system relies on device binding—the technical process of cryptographically locking your digital identity token to one single mobile device running the MyMzansi application. If a device is compromised, or its private cryptographic key is suspected of being leaked, the credential must be immediately suspended or revoked. The Concern: Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office.	Hermien	Gauteng

	2026-05-22 15:50:13	No I do not	All of the above	Centralised Cyber & Security Risk	Increased fraud risk is a definite problem. The Stolen Phone Lockdown: Your digital ID will be cryptographically locked to one specific smartphone device. Given South Africa's high rates of muggings and mobile theft, losing your device means your digital identity token is instantly frozen or revoked. The regulations are completely silent on a secure, remote path to restore your access, raising the threat of immediate administrative paralysis. The 10-Year Physical Queue Trap: Your digital ID will expire every 5 years. While app-based biometric renewal is permitted, the law dictates that if you do not have a physical, in-person touchpoint with a Home Affairs office or partner bank for 10 consecutive years, your credential completely lapses, and you must line up in person from scratch to re-prove who you are. The Blueprint for Function Creep: Centralising a dynamic repository of dynamic biometric signatures and tracking variables provides the perfect infrastructure for future state surveillance or a compliance-driven "social credit-style" exclusion system. Violation of constitutional right to privacy. Not every South African owns a smart phone.	Michelle	KwaZulu-Natal		employed individual

	2026-05-22 15:45:50	No I do not	All of the above	Centralised Cyber & Security Risk	Totally against digital ID. This is a mechanism to steal your privacy and impliment central control of asects of ones life. You will be cntrolled an they will dictate what you can and cannot do. Look at what they already trying by restricting acess to dams and rivers, registration of bore holes as well as control over your cripto and gold ownership. With this we will be controlled as socialist state. WEF. Look who our government plus DA have senior positions in WEF. You will own nothing and be happy. GNU =WEF	Stephen	KwaZulu-Natal		employed individual
	2026-05-22 15:45:31	No I do not	All of the above	Centralised Cyber & Security Risk	A digital ID is a very bad idea since being digital and "in a cloud" it is subject to being stolen or hacked or abused either by bad players or by the government. Having an interconnected profile could cause difficulties with erroneous information being captured or citizens being manipulated or prejudiced by social scores. This system may have devastating consequences when it comes to choice versus unfounded "obligations". Just imagine if the SA government forced everyone to get a jab that pretended to be a vaccine and devastates a persons body as has happened with the Covid 19 debacle, and if you did not get the jab you could be loaded onto the system as a rogue element and then not rent a car or get onto an aircraft or apply for a loan or use public transport or open an account or even function normally in society. The closer we move to being a police state, the closer we get to a point where revolt happens. What happens when an app based digital ID is hacked by another app on ones smartphone? Suddenly a person is married to a person they never met or a person is deemed to be liable to a debt or crime they never opted for or engaged in. This system is fraught with risk and prejudice on hundreds of levels. IT IS A VERY VERY BAD IDEA AND WILL LEAD TO TEARS AND TRAUMA AND LOSS.	Graham	Gauteng

	2026-05-22 15:14:42	No I do not	All of the above	Centralised Cyber & Security Risk	I agree with civic groups, privacy advocates, and cybersecurity experts who argue that while modernisation is welcome, the draft regulations introduce expansive risks and administrative penalties that demand much tighter constitutional safeguards. Their core arguments include: Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-22 12:17:04	No I do not	All of the above	Centralised Cyber & Security Risk	## Major Concerns With South Africa's Proposed Digital ID Regulations The proposed regulations create a nationwide biometric digital identity system linked to the population register, mobile devices, and private-sector verification systems. While framed as modernisation, the draft raises serious privacy, cybersecurity, and constitutional concerns. ### 1. Centralised Biometric Database The system stores facial biometrics, fingerprints, liveness data, phone numbers, addresses, and device-linked credentials in a central state database. A breach could permanently expose sensitive biometric information that citizens cannot change like passwords. ### 2. Broad Data-Sharing Powers "Trusted entities" may include banks, telecoms, government departments, licensing bodies, and law-enforcement-related institutions. The Director-General may share identity information for broadly defined "lawful purposes", creating risks of function creep, excessive monitoring, and overreach. ### 3. Real-Time Identity Tracking The "verified relationship" system allows accredited entities to receive near real-time updates when a citizen's details change. This creates the foundation for continuous identity synchronisation between the state and private institutions. ### 4. Excessive Administrative Power Critical technical and operational rules are left to future "instructions" by the Director-General rather than Parliament. This includes biometrics, verification standards, API rules, security protocols, and credential controls. ### 5. Risk of Digital Exclusion Although digital IDs are described as voluntary, the system depends heavily on smartphones, apps, device verification, and internet access. Poor, rural, elderly, or less tech-savvy citizens could be disadvantaged in practice. ### 6. Cybersecurity and State Capacity Concerns The regulations assume highly secure infrastructure despite South Africa's history of government data breaches, cyber incidents, and weak IT governance. A national biometric identity system would become a high-value target for organised crime and fraud syndicates. ### 7. Private-Sector Access to National Identity Systems Private entities may operate enrolment points, perform biometric verification, and access population register APIs. This effectively outsources parts of national identity management to external organisations. ### 8. Weak Citizen Remedies The draft contains limited detail on appeals, compensation, independent oversight, or remedies for false biometric matches, wrongful suspensions, or administrative errors that could block access to services. ### 9. Surveillance Infrastructure Risk The framework introduces many components associated with modern surveillance systems: * biometric authentication, * device binding, * real-time verification, * persistent identity tracking, * continuous data updates. Future governments could expand these powers significantly without needing new infrastructure. ### 10. "Voluntary" May Become Mandatory in Practice Even though physical IDs remain valid, businesses and government services may increasingly prefer digital verification, making participation effectively unavoidable over time. ### Overall Concern The proposal goes far beyond a digital ID card. It establishes the legal and technical foundation for a fully integrated national digital identity ecosystem with extensive biometric, verification, and data-sharing capabilities. 	2026-05-22 07:45:23	No I do not	All of the above	Centralised Cyber & Security Risk	I wish to formally object to aspects of the draft Identification Regulations, 2026, particularly the provisions enabling extensive centralisation of biometric identity systems, real-time data synchronisation with private entities, and algorithmic identity assurance scoring. While I support modernisation and improved service delivery within the Department of Home Affairs, the current draft creates significant risks to constitutional rights relating to privacy, dignity, freedom of movement, and equal access to services. Of particular concern is the creation of infrastructure that could enable mass behavioural tracking, function creep, or economic exclusion through excessive state and corporate integration. The regulations do not provide sufficient safeguards against abuse, unauthorised surveillance, data breaches, or wrongful suspension of digital identity access. I am also concerned that binding legal identity to a single mobile device creates severe practical and security risks in South Africa, where phone theft and unequal digital access remain major realities. No citizen should face loss of functional identity due to theft, technical failure, or inability to access digital systems. I respectfully request that the Department: Introduce stronger privacy and constitutional safeguards; Limit cross-entity data sharing between the state and private companies; Prohibit automated profiling or identity scoring mechanisms from restricting access to services; Guarantee a fully functional non-digital alternative for all citizens; Clarify independent oversight, appeal mechanisms, and protections against misuse of biometric and personal data. The regulations should prioritise convenience without compromising civil liberties or creating systems that could be abused in the future.	Patrick	Western Cape		business owner

	2026-05-22 06:27:00	No I do not	All of the above	Centralised Cyber & Security Risk	My biggest personal concern about this proposal is cyber security. This proposal will make it even easier for crime syndicates to operate. My biggest social concern is digital exclusion - there are millions of already marginalised people living in South Africa , this kind of technological identification will marginalise this group of people even more than they already are. We're supposed to be working towards closing the gap between the haves and the have-nots, rather than widening it into a chasm that the poor, the homeless & the marginalised are going to find even more impossible to overcome.	Judy	Gauteng		self-employed

	2026-05-21 20:34:55	No I do not	All of the above	Centralised Cyber & Security Risk	Cybersecurity Readiness & "Leapfrogging" Vulnerabilities While the draft regulations introduce highly sophisticated cryptographic measures, including asymmetric elliptic-curve cryptography and encrypted database storage, they create an unprecedentedly dense web of database interfaces. This leapfrogges global legacy models by connecting the state's population register directly to corporate networks via secure APIs. The Concern: South Africa's public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic "attack surface." If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly.	Luzette	Gauteng		employed individual

	2026-05-21 20:24:39	No I do not	All of the above	Centralised Cyber & Security Risk	Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office. I do not carry my phone with me all the time. Theft is a real issue. There's issues of phone losing charge and no access to data.	Lauren	Western Cape		unemployed individual

	2026-05-21 20:02:42	No I do not	All of the above	Centralised Cyber & Security Risk	This is a full on entrapment and against humanity, freedom to privacy. Thdecitizens will never ever benefit from such a subtle entrapment. It will pave the way for crime, crime - crime and hacking. Do we not face ENOUGH crime? Come on it is absurd to follow the world into self destruction. When will SA for a change follow their own gut to PROTECT their citizens against this absurd RULES. Tell us, how will our very precious poor and needy benefit from this, there are NO assistance given to them already to get their IDs even the older ones on the street. A TRACKING SYSTEM not for our benefit! I LOVD SA and the people, DO NOT lead us into the road the worlds no care ELITE leads us. In SA in parliament there are those who really care and those who love SA and the citizens, please do not let this absurd 'entrapment' happen. HIGH SECURITY RISK AND CYBER CRIME! 	2026-05-21 17:39:54	No I do not	All of the above	Centralised Cyber & Security Risk	Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-21 13:08:01	No I do not	All of the above	Centralised Cyber & Security Risk	I am against the implementation of mandatory Digital IDs in South Africa in their current form. While modernisation and convenience are important, these regulations create serious risks around privacy, surveillance, cybercrime, and digital exclusion. In a country with high phone theft, unstable infrastructure, and widespread poverty, tying a citizen's legal identity to a smartphone is reckless and dangerous. No South African should risk losing access to their identity, finances, or services because of a stolen device, system failure, or algorithmic scoring system. A physical ID must always remain a fully supported alternative, and strict protections must exist to prevent abuse, data sharing, profiling, and future authoritarian overreach. Robberies, mugging and pick pocketing cases have surged over the last few years. Last year I was robbed twice on 2 different occasions. Both times my phone was stolen from me. My dad was also robbed twice last year too. By carrying a digital ID on a phone all that information is lost. Now the government wants to link ID's to mobile phone's. Convenience should never come at the cost of freedom, privacy, and basic human dignity. The only digital ID I would accept is carrying a photo of you drivers licence or ID on your phone as America allows. That is it. Government just wants to be able to turn our phone's off at will. 	2026-05-21 11:28:03	No I do not	All of the above	Centralised Cyber & Security Risk	Not only is this an infringement on Constitutional rights of South African citizens, it also contravenes multiple legislative bodies and the rights enshrined therein. Furthermore, a major concern is resources and upkeep. It has been proven through the online Court System (Court Online and Caselines) as well as through municipal online systems, that South Africa does not have the resources to keep these online platforms functioning properly and consistently. Consistency is a major concern. If consistent and stable online platforms cannot be maintained on a municipal level, I am very concerned for how it will be maintained on a national level. Furthermore, the mass of South African citizens are currently not connected online and also do not have access to education around being online as a whole. Most also do not have the means or the resources to be online. Further to that, mobile devices are stolen and/or lost on a daily basis. Having your identity linked to your mobile device is extremely risky. It poses a massive risk to personal security and hugely increases the chances of cyber crime. Another issue is the fact that alot of citizens have yet to transition to Identity Cards (from the green book). Transition will take an immensely long time and the proposed methods are going to add rediculous strain on an already pressured and overworked system. South Africa simply does not have the resources, infrastructure or execution plan to put this new mechanism in place.	Leandré	Gauteng		employed individual

	2026-05-21 10:51:35	No I do not	All of the above	Centralised Cyber & Security Risk	We live in a world where cellphones get lost, stolen, upgraded or just BREAK far too often to tie our LEGAL IDENTIFICATION to something so temporary and fickle. It's bad enough you lose your physical ID if someone steals your wallet/purse, now you lose your ID if your phone is lost/stolen/broken? That's dangerous. Not to mention all the other concerns, like a pipeline into authoritarian surveillance at even higher levels than we already experience. We have genuine issues that need to be addressed in this country, and overhauling our identification system is nowhere near a priority. Green books and ID cards work just fine thank you. 	2026-05-21 10:40:52	No I do not	All of the above	Centralised Cyber & Security Risk	Real-Time Corporate Data Loops: The state will record "Verified Relationships" between you and private entities like banks and telcos. If you update your address or phone number at your bank, it will synchronise across the state population register automatically in near real-time—permanently blurring the line between public civic data and private corporate infrastructure. The Stolen Phone Lockdown: Your digital ID is cryptographically "bound" to a single smartphone. In a country with high rates of mobile theft, losing your phone means your legal identity token is instantly frozen or revoked. The regulations are currently silent on a secure, remote path to restore your access, raising the threat of immediate financial and administrative paralysis. The 10-Year Physical Queue:: Your digital ID expires every 5 years. While remote renewal via a facial scan in the app is permitted, the draft rules state that if you go 10 consecutive years without a physical, in-person touchpoint at a Home Affairs branch or partner bank, your credential completely lapses. You will be forced to line up in person from scratch to re-prove your identity. Algorithmic Profiling (The 30-Day Rule): You will be legally required to report routine life updates (moving house, changing an email) within 30 days. If you fail to do so, the state will algorithmically drop your internal "Identity Assurance Level." A lowered score could mean sudden, frustrating transaction rejections when you try to use high-security online services. Foundations for Function Creep: Centralising dynamic biometric registries and cross-entity tracking pipelines creates a technical foundation that critics warn could easily be weaponised into an authoritarian behavioural tracking system, or act as a centralised economic kill-switch over your accounts. 	2026-05-21 10:07:31	No I do not	All of the above	Centralised Cyber & Security Risk	Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services.	Geeta	KwaZulu-Natal		employed individual
	2026-05-21 09:59:57	No I do not	All of the above	Centralised Cyber & Security Risk	Digital ID would be extremely dangerous and detrimental. Cyber ID theft would be disastrous and financially crippling. Cyber theft is real and cyber control over the populist would result in a Taliterian government system suppressing the will of the people. Unacceptable and undemocratic.	Derek	Eastern Cape		retired

	2026-05-21 03:28:08	No I do not	All of the above	Centralised Cyber & Security Risk	Your digital ID is cryptographically "bound" to a single smartphone. In a country with high rates of mobile theft, losing your phone means your legal identity token is instantly frozen or revoked. The regulations are currently silent on a secure, remote path to restore your access, raising the threat of immediate financial and administrative paralysis. South Africa’s public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic “attack surface.” If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. Regulation 20(5) introduces a strict hidden pitfall: the credential will completely lapse if no in-person enrollment or physical verification occurs at a Department office or accredited trusted entity within a 10-year window. The Concern: If your digital ID lapses under the 10-year rule, you are legally stripped of your active digital credential and forced to undergo a physical, standard in-person enrollment process all over again. This creates an unnecessary, cyclical bureaucratic loop that forces digitally active citizens back into notorious, real-world Home Affairs queues simply because they did not have a reason to visit a physical office for a decade. Automating data synchronization loops between state databases and private financial/telecom corporate giants chips away at the wall separating public civic records from private commercial infrastructure. Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office. As government systems and corporate partners inevitably optimize their systems for the MyMzansi app, citizens relying exclusively on physical IDs could face longer delays, reduced support, and systemic “soft discrimination” when trying to access basic societal resources. 	2026-05-20 22:27:29	No I do not	All of the above	Centralised Cyber & Security Risk	Cybersecurity Readiness & "Leapfrogging" Vulnerabilities While the draft regulations introduce highly sophisticated cryptographic measures, including asymmetric elliptic-curve cryptography and encrypted database storage, they create an unprecedentedly dense web of database interfaces. This leapfrogges global legacy models by connecting the state's population register directly to corporate networks via secure APIs. The Concern: South Africa's public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic "attack surface." If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly.	Zelna	Northern Cape

	2026-05-20 22:13:41	No I do not	All of the above	Centralised Cyber & Security Risk	One of the biggest risks is the creation of a highly centralised “single authoritative” identity database. The draft explicitly states that the population register will become the “authoritative, accurate and up-to-date record” used for identity verification across government and authorised entities. That creates several concerns: A single breach could expose massive amounts of biometric and personal data. Centralised systems become attractive targets for cybercrime, identity theft, espionage, and insider corruption. Errors in the database could affect banking, travel, healthcare, employment, voting, and access to services simultaneously. South Africa already has a mixed track record with government IT security and data protection, so critics worry that concentrating even more sensitive information into one system increases systemic risk. 1. South Africa Has Already Experienced Major Government Data Breaches The Experian Data Breach (2020) One of the largest breaches affecting South Africans exposed the personal details of roughly 24 million individuals and 793,000 businesses after an alleged fraudster obtained data from Experian. The exposed data reportedly included: ID numbers, phone numbers, addresses, employment information.Although this was not directly a government breach, South African identity systems rely heavily on ID-number-based verification. The incident demonstrated how widely identity-linked data already circulates and how vulnerable the ecosystem is. TransUnion and Credit Fraud Ecosystem South Africa has long struggled with: SIM-swap fraud, banking identity theft, fraudulent loans, account takeovers. Attackers frequently exploit weak identity verification chains between: banks, telecoms, government records, third-party databases. A centralised digital ID system could become an even more valuable target because compromising one authentication layer may unlock access across multiple sectors simultaneously. Department of Justice Cyberattack (2021) The South African Department of Justice and Constitutional Development suffered a major ransomware attack that disrupted: court systems, email systems, websites, payment services. This demonstrated that even highly sensitive government departments can suffer serious operational compromises. If core justice infrastructure could be severely disrupted, citizens should question whether a national identity backbone can realistically maintain world-class resilience. Department of Justice Cyberattack (2021) The South African Department of Justice and Constitutional Development suffered a major ransomware attack that disrupted: court systems, email systems, websites, payment services. This demonstrated that even highly sensitive government departments can suffer serious operational compromises. If core justice infrastructure could be severely disrupted, citizens should question whether a national identity backbone can realistically maintain world-class resilience. 2. Home Affairs Already Has a History of Fraud and Corruption Problems The Department of Home Affairs itself has faced repeated allegations involving: fraudulent IDs, bribery, syndicates, illegal documentation, insider corruption. Examples over the years have included: illegally issued identity documents, fraudulent passports, duplicate identities, manipulation of records by insiders. A digital identity system is only as trustworthy as: the enrolment process, the staff, the audit controls, the governance surrounding it. If corrupt insiders can improperly create or alter records, a centralised digital system may scale those risks rather than eliminate them. 3. Insider Threats Are Often More Dangerous Than External Hackers Many large breaches globally occur through: compromised employees, contractors, privileged access abuse, poor internal controls. In South Africa, critics worry about: weak accountability, political appointments, outsourced IT contractors, insufficient auditing, procurement irregularities. A central identity database creates extremely powerful insider access. An insider with sufficient privileges could potentially: alter identity records, disable accounts, facilitate fraud, extract biometric data, assist organised crime. The more centralised the system becomes, the more damaging insider abuse can be. 4. South Africa Has Chronic Problems With SIM-Swap and Mobile Fraud This is especially important because the proposed regulations heavily involve digital/mobile identity. South Africa has historically had serious issues involving: fraudulent SIM swaps, mobile banking theft, OTP interception, telecom insider corruption. If digital identity becomes smartphone-centric, attackers may increasingly target: mobile carriers, authentication apps, device recovery systems. A major fear is thta the system could unintentionally create: “One compromise unlocks everything.” For example: compromise the phone, gain identity access, reset banking credentials, access government services, impersonate the citizen elsewhere. 5. South Africa’s Public Sector IT Track Record Is Uneven Many citizens have firsthand experience with: unstable government portals, outages, poor user support, slow dispute resolution, broken integrations. Examples commonly cited include issues involving: UIF systems, eFiling outages, municipal systems, licensing systems, Home Affairs downtime. Digital identity systems require exceptionally high reliability because identity becomes foundational infrastructure. If the identity system fails, users may be unable to: authenticate, receive grants, access banking, travel, verify employment, access healthcare. The concern is therefore not merely “privacy,” but operational fragility. 6. Biometric Data Raises the Stakes Dramatically Passwords can be changed. Biometrics generally cannot. If: facial templates, fingerprints, iris data, are compromised, the consequences may persist for life. The main worry is that South Africa already has a substantial cybercrime problem, organised criminal syndicates are sophisticated, state institutions have shown uneven cyber maturity. A breach involving biometric templates would be extraordinarily serious. Even if templates are encrypted, critics question whether: encryption standards, key management, vendor controls, long-term storage protections, will remain robust for decades. 7. “Single Point of Failure” Risk This is the core systemic-risk argument. When identity becomes integrated across: banks, telecoms, healthcare, social grants,SARS, travel, licensing, employment, then the identity platform becomes a national dependency. That means: technical outages, cyberattacks, corruption, data corruption, false positives, administrative lockouts, can ripple across the entire economy. Instead of one bank failing independently, or one telecom suffering issues, a central identity failure may affect everything simultaneously. That is what critics mean by “systemic risk.” 8. Low Public Trust Magnifies the Problem Countries that successfully implement digital ID systems usually have: strong institutions, high trust, strong data protection enforcement, mature cyber capability, rapid dispute resolution. However South Africa currently struggles with: institutional trust, corruption concerns, uneven state capacity, poor accountability, weak prosecution of cybercrime. Even if the technical design is sound, public trust may remain low because citizens doubt: long-term governance, political restraint, operational discipline. 9. Function Creep Is Historically Common There are many international examples where systems introduced for convenience later expanded in scope. A digital ID initially used for: identity verification, could later become linked to: financial monitoring, telecom verification, movement systems, social services, health records, voting systems. The concern is what future governments may do with this. What stops abuse?	Sascha	Gauteng		self-employed

	2026-05-20 19:53:18	No I do not	All of the above	Centralised Cyber & Security Risk	Centrised security risk!! Cybersecurity Readiness & “Leapfrogging” Vulnerabilities While the draft regulations introduce highly sophisticated cryptographic measures, including asymmetric elliptic-curve cryptography and encrypted database storage, they create an unprecedentedly dense web of database interfaces. This leapfrogges global legacy models by connecting the state’s population register directly to corporate networks via secure APIs. The Concern: South Africa’s public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic “attack surface.” If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. 	2026-06-08 09:10:28	No I do not	All of the above	The 10-Year Physical Queue Trap	I am writing as a concerned South African citizen to submit my formal objection to the draft Identification Regulations, 2026. While modernising civic infrastructure is important, the current framework introduces severe risks regarding digital exclusion, privacy violations, and administrative vulnerability. I request that the Department of Home Affairs addresses the following critical flaws before attempting to pass these regulations into law: Severe Digital Exclusion: Tying legal identity to smartphone applications (such as MyMzansi) inherently discriminates against millions of low-income, elderly, and rural South Africans who lack stable network connectivity or smartphone access. Physical, paper-based identification must maintain permanent, equal legal priority. Vulnerability to Phone Theft: Cryptographically binding a legal identity to a single smartphone is highly dangerous in a country with rampant mobile theft. The current draft lacks a secure, immediate, and remote mechanism to restore identity access, meaning a stolen phone could instantly result in severe financial and administrative paralysis for a citizen. Privacy Compromise via Corporate Data Loops: Synchronising real-time personal data (such as address and phone number updates) between the state registry and private entities like banks and telcos permanently blurs the line between public civic data and private corporate infrastructure, opening the door to corporate surveillance. Unfair Algorithmic Profiling (The 30-Day Rule): Penalising citizens who do not report routine life changes within 30 days by algorithmically dropping their "Identity Assurance Level" is highly punitive. Lowering scores will cause sudden, automated transaction rejections for essential services. The 10-Year Physical Queue Trap: Forcing a credential to completely lapse if a citizen does not have an in-person touchpoint within 10 years creates artificial bureaucratic hurdles and will overwhelm already strained physical Home Affairs branches. If the Department cannot guarantee absolute data separation from corporate entities, foolproof remote identity recovery, and a rights-first approach that prioritises our most vulnerable offline populations, this rollout must not proceed. 	2026-06-06 23:55:02	No I do not	All of the above	The 10-Year Physical Queue Trap	SA does not have the capacity to move from the Green ID book to the ID Card, and then the Government wants to implement a system which will increase workload 100 fold. Its a joke. And if this is implemented you will be required to carry your cell phone at all times. Given the risk of mugging and theft this is also a joke. The need to keep the system updated so as not to incur penalties is ridiculous. Change of email address? Change of physical address? Is this a dictatorship? Where are my rights to privacy? and how does this impact POPI? There is not enough space here to voice all my concerns.	Loretta	Western Cape		retired

	2026-06-05 17:05:56	No I do not	All of the above	The 10-Year Physical Queue Trap	Forcing an essential civil right like a national identity credential to automatically “lapse” triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch.	Janet	KwaZulu-Natal		retired

	2026-06-04 10:46:33	No I do not	All of the above	The 10-Year Physical Queue Trap	I do not support this new Identity way! Poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic “soft discrimination”—including longer processing delays, reduced human customer support, and slower access to essential public utilities and services and high rates of mobile device theft, muggings, and phone damage. By legally tying an individual’s legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis.	Anna Maria (Mari)	Gauteng		retired
	2026-06-04 09:12:08	No I do not	All of the above	The 10-Year Physical Queue Trap	As usual, the state is wasting money duplicating an already functioning system. We do not need expensive, unmanageable systems in a country where the majority of the citizens are battling to put food on the table. Spend your time doing things that will materially benefit the citizens and not deprive them of their social freedoms.	Carol	Eastern Cape		business owner
	2026-06-04 09:10:40	No I do not	All of the above	The 10-Year Physical Queue Trap	Some of us work abroad for extended periods of time, and some of us are abroad for many years at a time (I have been abroad for 8 consecutive years now, as an example) I see this as a trap for those abroad that run the risk of 'getting stripped' of our identification, because we might not be able to appear in person. Right now I work in a country that does not even have an embassy, nor any embassy services either. If we have bank accounts, savings, property, etc, back home, all of that would potentially seize to function & I foresee the government exploiting this "loophole" to cease the property, assets & financial savings that these citizens still have in South Africa. Thus, If we cannot appear in person every 10 years to verify our credentials, you run the risk to forfeit your property, assets & savings... This entire thing stinks & from my position it sound a lot like a 'nicely dressed up way' for the rulling government to enforce "expropriation without compensation"... a.k.a. legalized theft! 	2026-06-02 17:08:12	No I do not	All of the above	The 10-Year Physical Queue Trap	An ID number and document is issued for life. There is no reason to have to keep renewing it. What a waste of people's time and money (in travelling to the dreadful, incredibly inefficient DHA venues). The centralised state mobile application (called MyMzansi) is clearly not really about convenience - it is about far reaching control over every person who joins. No government entity should have the power to strip you of an 'active' digital credential. In fact, such a platform should not exist. Some people don't have a digital device., but if a phone line is "active", I cannot think of any valid reason for this to happen. This is a total overreach and far too much power. This is not Democratic. This is Dictatorial. Device Binding and facial biometrics indicates more stripping away of personal privacy and independence, and tighter public control. The Locking of digital IDs to a single mobile device defies understanding. It is difficult to comprehend why this suggestion is even put forward. Phones and computers get stolen at an alarming rate., and get hacked regularly. No logic? TOTALLY UNACCEPTABLE. Identity Assurance Scoring Loop is of particular concern because it ia NOT necessary for every Government entity to know any persons every move. This is just More Control. Government wants to introduce 'cutting edge software". Not a single Government department in the last 30+ years has performed at any level that inspires public confidence, so Hackers will undoubtedly "Break" into this "cutting edge software and then - - - Everybody's privacy will be invaded/stolen	Natascha	KwaZulu-Natal		retired

	2026-05-28 13:17:35	No I do not	All of the above	The 10-Year Physical Queue Trap	An identity document isn't just a piece of plastic or an app icon. It is our gateway to exercising our civil rights. It governs your ability to access your money, secure a phone line, work, travel, and vote. These regulations seem to be a bit extreme. The government should rather focus on making the existing identity process more efficiency without the entanglement of all different organizations into an electronic database that could all kinds of paralysis to somebodies life and state surveillance. And instead of queues of people renewing their passports or ID cards, there will be queues twice as long with people trying to reprove their identity. The Interoperable Private Corporate Network: The state will establish real-time, bi-directional data pipelines with accredited trusted entities like private banking giants and telecom networks. If we change our address at your bank, it will synchronise across the state register automatically in near real-time—blurring the line between public civic data and private corporate databases. If we fail to formally report routine life updates like moving to a new house or changing your email within a strict 30-day window, the state will automatically drop our internal Identity Assurance Level. This algorithmic tiering could cause sudden, frustrating transaction rejections when you try to open accounts or authenticate services. Your digital ID will be cryptographically locked to one specific smartphone device. Given South Africa's high rates of muggings and mobile theft, losing ones device means our digital identity token is instantly frozen or revoked. The regulations are completely silent on a secure, remote path to restore your access, raising the threat of immediate administrative paralysis. Our digital ID will expire every 5 years. While app-based biometric renewal is permitted, the law dictates that if you do not have a physical, in-person touchpoint with a Home Affairs office or partner bank for 10 consecutive years, our credential completely lapses, and we must line up in person from scratch to re-prove who we are. Centralising a dynamic repository of dynamic biometric signatures and tracking variables provides the perfect infrastructure for future state surveillance or a compliance-driven social credit-style exclusion system. 	2026-05-26 16:13:03	No I do not	All of the above	The 10-Year Physical Queue Trap	I do not agree or support to have my private identity data shared between government systems and private corporations, without my permission. I do you agree with a rolling 5-year expiry date of my digital credentials, forcing me to pay again and queue to re-prove my identity. This is just another way to extract money off already TAX heavy citizens. I am not satisfied with device-binding and mandatory facial biometric protocols used for identity fraud, which could be used for unfair lockouts if a phone is lost, stolen, or damaged. I do not believe that physical ID cards, will reduce slow turnarounds, discrimination, or reduced service delivery times. The South Africa government does not have the infrastructure to run a first world Internet network service. Currently the country, is not capable to even keep the power on 24/7/365. I would suggest that members of parliament try renewing their driver's licences in some areas, where system is more down than up.	Mark	Western Cape		retired

	2026-05-26 13:56:37	No I do not	All of the above	The 10-Year Physical Queue Trap	I oppose the proposed Digital Identity Credential framework in its current form. While reducing fraud and improving efficiency are important goals, this system creates serious risks around privacy, exclusion, surveillance, and over-centralisation of personal data. A national identity system should never become dependent on constant smartphone access, rolling digital validation, or real-time integration with private sector platforms. Many South Africans, including the elderly, people with disabilities, low-income communities, and those living in areas with unreliable connectivity, could be unfairly disadvantaged or excluded. A digital ID must remain optional, with physical identity documents fully protected and equally valid. I am also deeply concerned about data security, function creep, automated profiling, and the long-term consequences of linking essential rights such as banking, healthcare, employment, and travel to a centralised digital system. Once implemented, systems like these rarely become less intrusive over time. The Department of Home Affairs must prioritise: Strong privacy protections and independent oversight Guaranteed offline and non-smartphone alternatives Clear limits on data sharing with private companies Transparent accountability for breaches or misuse Protection against automated exclusion or profiling Public consultation that is meaningful, accessible, and extended if necessary South Africans should not be forced into a permanently monitored digital identity ecosystem in order to participate fully in society. 	2026-05-26 12:45:56	No I do not	All of the above	The 10-Year Physical Queue Trap	Why do I need to constantly update my ID? Why does it need to be tied to a phone, when in a country like ours mobile phone theft is high? I need my ID as a separate document, so that if I lose my phone or my house burn down with all my papers, I can rest assured that my ID is still with me. Why should my ID be tied to a banking service? Banks already have the problem of fraud on people's accounts, people who don't even have phones or online accounts. Please just let us keep the current system, there is nothing wrong with it. If there is a problem with the system, it must be dealt with those who are exploiting the system from the inside. 	2026-05-25 20:05:46	No I do not	All of the above	The 10-Year Physical Queue Trap	1. A “convenience” system can quietly become a control system When your ID, banking verification, SIM card, travel access and government services are all tied into one digital identity ecosystem, whoever controls that system controls access to normal life. Today it’s sold as convenience. Tomorrow it can become permission-based living. History teaches that governments rarely give themselves less power once infrastructure exists. 2. South Africa already struggles with corruption and cyber vulnerability A centralised identity database sounds clever until you remember where you live. Massive state-linked data leaks, hacking incidents, tender corruption and administrative chaos are not theoretical risks here. One breach could expose millions of citizens’ biometrics, addresses, banking-linked data and movement patterns. Unlike a password, you cannot change your fingerprints or face. 3. The “Identity Assurance Level” smells like a soft social-credit system Call it a score, a level, a trust metric or a compliance index — lipstick on a crocodile is still a crocodile. If your access to services can be downgraded because you missed an update deadline or failed some automated verification, then your rights slowly become conditional on bureaucratic compliance. That’s dangerous territory in any democracy. 4. It punishes ordinary people for technology failures and crime South Africans lose phones daily through theft, breakage, load shedding chaos, battery failure or poverty-level device turnover. If your identity becomes device-dependent, then losing a phone can suddenly become losing access to banking, communication or verification. A country with unreliable infrastructure should not build a system that assumes constant digital stability. 5. Function creep is almost guaranteed Governments always begin with: “We only want this for efficiency and safety.” Then later: link it to tax compliance link it to traffic fines link it to voting verification link it to firearm licences link it to vaccine records link it to financial monitoring Once the infrastructure exists, future governments — good or bad — inherit the machinery. A wise society judges systems not only by who builds them, but by who might one day abuse them. One more thing worth asking bluntly: If physical IDs already work, why must the state and private corporations build real-time interconnected identity pipelines at all? Convenience alone does not explain that level of integration.	Johan	Northern Cape		retired

	2026-05-25 17:12:14	No I do not	All of the above	The 10-Year Physical Queue Trap	The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically “lapse” triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual’s legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating “near real-time” data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic “soft discrimination” —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-25 11:35:33	No I do not	All of the above	The 10-Year Physical Queue Trap	The thought of the Digital Identity is evil! South Africa should not blindly follow other countries that think it is OK to live in a "1984" society. South Africa's government systems have been hacked many times in the past and even held for ransom. Government systems are known for their weak security and South Africa is the only country where the IT security community is growing smaller. Putting all our information, some of which is highly sensitive, into one live network is inviting trouble and fraud. Having your identity "lapse" because you have not had a physical, in-person touchpoint with Home Affairs Branch is absurd. Your identity as a citizen remains lifelong or until revoke by the government . It furthermore discriminates against people who for various reasons, such as a disability, illness, lack of transport or long travel distance to nearest bank or HA branch cannot comply. It also makes no provision for people who do not have smart phones. South Africa is a country know for its high crime rate and the theft of mobile phones is very high and also the rate of phones getting damaged. By tying a person's identity to a single smart phone and making no provision on how to securely and easily migrate to a new phone is absurd and speaks loudly of shortsightedness. And when a person dies? How does an executor get access to the information needed to handle the deceased's estate? The government cannot guarantee to any degree that distributing live date updates to multiple third-party commercial servers will not lead to the very real danger of data leaks, fraud and corporate surveillance. No mention is also made of plans on how to ensure that the elderly, poor or those living in remote rural areas will not be left behind or discriminated against. And finally who will there be complied with the current POPIA? which mandates that an institution must obtain permission from a client to collect and distribute personal information? 	2026-05-25 09:26:15	No I do not	All of the above	The 10-Year Physical Queue Trap	Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-25 08:48:37	No I do not	All of the above	The 10-Year Physical Queue Trap	If your digital ID lapses under the 10-year rule, you are legally stripped of your active digital credential and forced to undergo a physical, standard in-person enrollment process all over again. This creates an unnecessary, cyclical bureaucratic loop that forces digitally active citizens back into notorious, real-world Home Affairs queues simply because they did not have a reason to visit a physical office for a decade. And also, despite the progressive legal promises, the reality of modern service delivery is that digital pathways are quickly prioritized because they save money. As government systems and corporate partners inevitably optimize their systems for the MyMzansi app, citizens relying exclusively on physical IDs would face longer delays, reduced support, and systemic "soft discrimination" when trying to access basic societal resources!	MaameYaa Erika	Outside SA	Ghana	business owner
	2026-05-25 08:48:03	No I do not	All of the above	The 10-Year Physical Queue Trap	No no....they want to control everything about you as a person.....I repeat....NO....NO....NO!!!!!!!!!!!!!!!!!!!!!!!!!!!!	Rita	Limpopo		retired

	2026-05-25 08:29:54	No I do not	All of the above	The 10-Year Physical Queue Trap	Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-24 07:38:22	No I do not	All of the above	The 10-Year Physical Queue Trap	Dear Minister Schreiber, your plans to centralise our ID on our phones is insane. So far I have not even yet been able to access a smart ID card as I am a foreigner living here on a Permanent Residence Permit. I get harassed at the airport if I do not present my official Permanent Residence Permit, but only a certified copy of it. I do not want to travel with the official permit, as I am afraid to lose it. As a pensioner I really do not manage to keep up with all this technology and have already lost two phones over time to theft. Your rules for the ID on my phone are not sufficient to ensure that I have an ID available at all times. So far I am glad that at least I still have my old ID book, because that is a tangible piece of paper, however tatty, to prove who I am. How about you first make sure that I can access a smart ID card, before trying to link this whole thing to my phone, which when the service provider fails, or one of the issues mentioned kick in, is useless.	AnneMarie	Gauteng		retired
	2026-05-24 07:23:35	No I do not	All of the above	The 10-Year Physical Queue Trap	The fact that people will have to reaply every 10 years if no digital renewal makes it very difficult for many people living in poverty, with disabilities- physical or mental, plus the elderly population. We are not a first world country and this will be a logistic nightmare for many, including home affairs. The consequences are also potentially devastating, e.g. being locked out of SASSA grant payments, social welfare etc. Even elderly people not dependent on sassa will struggle with going digital. Aside from that with the high rate of cell phone thefts, stolen ID takes a whole new turn. This will fuel cell phone theft big time.	Jane	Western Cape

	2026-05-23 10:06:30	No I do not	All of the above	The 10-Year Physical Queue Trap	The draft regulations introduce expansive risks and administrative penalties of which the following is of key concern: Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and service	Elma	Western Cape		employed individual

	2026-05-22 20:01:39	No I do not	All of the above	The 10-Year Physical Queue Trap	I live abroad most of the time. SA Home Affairs can’t even process a new ID card or passport without trying at least 4 different times and in the end, I have to fly in at great inconvenience and cost. With Corporate banking linked to my Smart phone app, I can’t go away for a weekend to a neighboring country as I run the company finances. Do I leave my pvt phone with the deputy director to access funds as only one login profile is allowed. I can never be away or on leave. Must guard the phone more than my child and get anxiety when I have to upgrade to a new iPhone. This task takes days over the phone with business on line. Then when it happens that a card gets cloned (like buy jewelry on a fuel card) they lock my personal card, and all 33 cards over all platforms of the company. I have to fly in and sign for new cards, have them issued, get the profiles going and verified. THIS IS A SYSTEM THAT IS SUPPOSED TO BE PROVEN BAY A CORPORATE BANK ON A SMART PHONE. NOT WORKING. TRIED ALL THE BANKS. Same problem. SA is not geared for this. I now closed all my SA business accounts and moved to Revolute and Wise to run my SA companies. Especially after the March data breach. Don’t get me started on that.	Yolanda	Gauteng		business owner

	2026-05-21 07:18:24	No I do not	All of the above	The 10-Year Physical Queue Trap	The policy establishes that a digital identity credential is only valid for five years. While remote renewal via a basic smartphone facial biometric scan is permitted , Regulation 20(5) introduces a strict hidden pitfall: the credential will completely lapse if no in-person enrollment or physical verification occurs at a Department office or accredited trusted entity within a 10-year window. The Concern: If your digital ID lapses under the 10-year rule, you are legally stripped of your active digital credential and forced to undergo a physical, standard in-person enrollment process all over again. This creates an unnecessary, cyclical bureaucratic loop that forces digitally active citizens back into notorious, real-world Home Affairs queues simply because they did not have a reason to visit a physical office for a decade. 	2026-06-24 15:31:38	No I do not	All of the above	Corporate Interoperability & Privacy Creep	No one - Neither the government, big corporates of other institutions have the right to monitor, observe, judge and punish citizens for actions they deem unacceptable. We are sovereign beings and although we have to be law abiding, we do not have to have our liberties surveilled by entities that dont want the best for humanity.	Nana	Western Cape		retired

	2026-06-22 12:39:57	No I do not	All of the above	Corporate Interoperability & Privacy Creep	I do not support the Draft Amendment of Identification Regulations as presented. I support the modernisation of South Africa's identity system in principle, including secure digital identity credentials, faster verification, and reduced fraud. However, identity is not an ordinary administrative tool. It is the foundation through which citizens access banking, employment, mobile services, healthcare, travel, voting, and other civil rights. My concern is that the proposed framework creates too much centralised power over a citizen's practical ability to function in society, without sufficient safeguards, appeal rights, transparency, recovery mechanisms, and limits on private-sector data sharing. The regulations appear to allow the Department of Home Affairs to work with accredited trusted entities through data-sharing agreements, biometric verification, device binding, and identity assurance levels. These mechanisms may improve security, but they also create serious risks if implemented without strict public oversight. A citizen should not be downgraded, blocked, suspended, profiled, or excluded from essential services because of unclear algorithmic scoring, device loss, outdated contact details, system errors, or private-sector data mismatches. I am especially concerned about the following: 1. The sharing and synchronisation of personal identity data between the state and private companies must be strictly limited, transparent, auditable, and based on informed consent where appropriate. 2. Any identity assurance level must not become a hidden social credit-style score that affects access to services without clear notice, reasons, appeal rights, and a fast correction process. 3. Citizens must have a secure and practical recovery route if a phone is stolen, lost, damaged, or compromised. In South Africa, mobile phone theft is common, and nobody should lose access to their identity because they lost a device. 4. Digital ID must remain genuinely optional. Physical ID documents must remain fully valid and accepted, especially for elderly people, poor communities, rural citizens, people without smartphones, and people without reliable internet access. 5. Biometric and cryptographic systems must be subject to independent oversight, clear retention limits, breach notification duties, and meaningful penalties for abuse. 6. No future expansion of this system should allow mass surveillance, political profiling, behavioural scoring, or exclusion from public or private services without proper parliamentary scrutiny and constitutional safeguards. For these reasons, I cannot support the draft in its current form. I request that the Department revise the regulations to include stronger privacy protections, clearer appeal and correction mechanisms, transparent rules around trusted entities, guaranteed non-digital alternatives, and an explicit prohibition against surveillance, profiling, commercialisation, or social-credit-style use of identity data.	Gert	Gauteng		unemployed individual
	2026-06-19 10:10:58	No I do not	All of the above	Corporate Interoperability & Privacy Creep		I	Western Cape		
	2026-06-17 16:47:14	No I do not	All of the above	Corporate Interoperability & Privacy Creep	I do not want to live in a country where the government just becomes more and more powerful. Digital ID is one step closer to a totalitarian, dystopian state. Not to mention that the ANC has proven itself incompetent, so I will not be surprised if bad actors manage to hack and steal our data for nefarious purposes. I want less government, not more of it.	Kurt	North West		self-employed
	2026-06-17 13:44:30	No I do not	All of the above	Corporate Interoperability & Privacy Creep		Pierre	Gauteng		employed individual
	2026-06-17 00:14:49	No I do not	All of the above	Corporate Interoperability & Privacy Creep	I don't agree to any back door bringing in of a system that the government says won't happen, yet follows the agreements of the W E F and digital centralized currency that is attached to everything, identification, banking, health, food, etcetera. They say it won't but they have proved they lie about what they will and won't do. No government is to be trusted with our privacy and individual sovereignty.	Paul	Gauteng		self-employed
	2026-06-16 23:17:11	No I do not	All of the above	Corporate Interoperability & Privacy Creep	I wish to formally express my opposition to the introduction of a Digital Identity system in South Africa in any form. While the stated objectives of improving efficiency, reducing fraud, and enhancing service delivery may appear beneficial, I believe the long-term risks to privacy, individual liberty, personal autonomy, and democratic accountability outweigh the proposed advantages. A centralised digital identity system creates the potential for unprecedented collection, storage, monitoring, and control of citizens' personal information. Regardless of the safeguards initially proposed, future governments, agencies, or third parties may expand the use of such systems beyond their original purpose. History repeatedly demonstrates that powers granted in one era are often extended in another. I further believe that no digital system can be guaranteed immune from security breaches, cyberattacks, technical failures, or misuse. Especially in South Africa. The consequences of compromising a national digital identity system could be severe and far-reaching for every citizen. Many South Africans are also concerned that a Digital ID could gradually become a requirement for access to essential services, financial systems, travel, employment, healthcare, or participation in everyday life. Even if introduced as voluntary, there is a risk that practical realities may make participation unavoidable. I therefore call upon the Government of South Africa to abandon the implementation of a Digital Identity system and to preserve existing methods of identification that allow citizens to maintain greater control over their personal information and freedoms. Any changes affecting the rights, privacy, and freedoms of South Africans should be subject to extensive public consultation, independent scrutiny, and broad democratic consent. I believe that the protection of individual liberty, privacy, and human dignity must remain paramount in a free and democratic society.	Debbie	Gauteng		business owner

	2026-06-07 16:14:56	No I do not	All of the above	Corporate Interoperability & Privacy Creep	We're now headed in the same direction as the EU: corporate and goverment lines blurring, mechanisms to track what you do online already exist, so tying a real ID to a device (which can be "finger printed" by any website) becomes invasive. No public or private entity has the right to: - Know my brand of coffee, where I eat, where I shop, etc. - My dating preferences. - My friend group, family, etc. - My political views. - My religion. - What I watch or learn online. ... or anything else that can be used to monetize, manipulate, coerce, or silence me. And this is a foot in the door. And that door is not ajar; it's wide open.	James	Western Cape		
	2026-06-07 15:19:08	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Everyone assumes that this type of 'advance' in digitisation is inevitable because everyone else is doing it. This is a fallacy. Countries are changing their laws all the time, especially when they realize that some digital initiatives do more harm than good. The freedoms of humans, especially the poor, are more important than the efficiencies of digitised control systems that increase the risk of cyber-crime and reduce national security.	Jonathan	Western Cape		business owner

	2026-06-07 00:48:16	No I do not	All of the above	Corporate Interoperability & Privacy Creep	The Identification Act, 1997 gives a mandate to the Minister focusing on compiling a population register and issuing identity documents. Radically expanding this via mere regulations to encompass automated commercial tracking and private-sector synchronization potentially exceeds the powers granted to the Minister by the principal Act (ultra vires). The Proposed System Fails the Section 36 Test The proposed Digital ID framework fails across these metrics: 1. The Nature of the Right (Severe Infringement) The system does not just chip away at one right; it creates a domino effect across a cluster of fundamental rights: Privacy (Section 14), Equality (Section 9), and Human Dignity (Section 10). Because identity is the gateway to exercising all other civil liberties, restricting it strips a person of their legal persona. The nature of the rights being limited is of the highest order. 2. Importance of the Purpose of the Limitation The state's stated purpose—preventing identity theft, curbing fraud, and streamlining economic inclusion—is highly important. However, under constitutional law, a noble purpose does not automatically justify draconian mechanisms. 3. The Nature and Extent of the Limitation (Disproportionality) The extent of the limitation is total and absolute. • Surveillance by design: A real-time, federated digital ID means every time a citizen opens a bank account, buys a SIM card, or accesses a government building, a digital log is created. The state and its private partners gain a continuous, live map of a citizen's economic and social life. • The "Economic Kill-Switch": If an algorithm errs, a database glitches, or the state suspends a profile, the extent of the limitation is catastrophic. The citizen is instantly locked out of modern society. 4. The Relation Between the Limitation and its Purpose The state argues that digitization increases security. However, cybersecurity experts note that centralizing national biometrics and digital keys into a single synchronized framework actually increases systemic risk. It creates a single point of failure. A mass data breach undermines the very purpose of the system (preventing fraud) by exposing the entire population to digital identity theft that cannot be undone (you cannot change your biometrics after a hack). 5. Less Restrictive Means to Achieve the Purpose (The Fatal Flaw) This is where the state's argument completely collapses. Under Section 36(1)(e), if the government can achieve its goals using a method that is less invasive to privacy and less exclusionary to the poor, it is constitutionally mandated to do so. The state has bypassed several safer, more inclusive alternatives in favor of a rigid digital-first model. Part 2: Less Restrictive, Less Invasive, and More Inclusive Alternatives To modernize South Africa's identification framework constitutionally, the Department of Home Affairs could adopt alternative paradigms successfully utilized in other democratic nations. 1. Smart, Offline-Capable Physical ID Cards (The Hybrid Model) Instead of forcing citizens into a smartphone-dependent ecosystem requiring cellular data and network connectivity, the state could maximize the utility of the existing Smart ID Card. • How it works: Expand the chip capability of the existing physical Smart ID card. The card itself can hold encrypted, offline cryptographic keys. • Why it's more inclusive: It bridges the digital divide. A citizen in a rural area with no network coverage or smartphone can still authenticate their identity offline at a local clinic or bank branch using a secure card-reader. It removes the threat of "digital exclusion" (Section 9 violation). 2. "Zero-Knowledge Proofs" (ZKP) for Minimal Data Minimization Under POPIA, data collection must be minimized. Current systems often require a citizen to hand over their entire ID profile just to prove one minor fact. • How it works: By implementing Zero-Knowledge Proofs in the identity infrastructure, a citizen can prove eligibility without revealing identity data. • Example: If a citizen needs to prove they are over 18 to access a service, the digital system gives a simple "Yes/No" cryptographic answer to the vendor. The vendor never sees the person's date of birth, full name, ID number, or biometric data. Some ad-hoc comments/questions: • I have a big problem with the Accredited bodies and information flows being concentrated into the Director General's hands... • And all this information should be public on a dashboard... which organisations can see what and why... • I would have a big problem with health information being added to this framework or identity. The Act should specifically forbid this. • What recourse do citizens have if their data is abused by an accredited Entity? • What penalties and jail-time will be levied against a CEO and board of an accredited Entity abusing data? • Biometric Data concentrated in a central database is a beautiful prize for criminals. • How will it not become hacked with AI that is capable of breaking the best systems? • With even top police in this country toppling in public, we can not entrust the government with this much power and authority and believe that it will not be used against the citizens in a harmful way or abused. Here are some more problems with the proposed act: 1. South African Bill of Rights (Chapter 2 of the Constitution) A centralized Digital ID system creates tensions with several fundamental rights and the framework implementation can cause violations Violations that WILL Occur (Inherent to the system design) • Section 14: Right to Privacy: A centralized digital ID inherently infringes on the right to privacy because it requires continuous tracking, rolling validation cycles, and real-time private sector synchronization. The consolidation of data into the Automated Biometric Identification System (ABIS) means the state tracks when, where, and why you authenticate your identity, eliminating the right to informational self-determination. • Section 9: Equality (Indirect Discrimination / Digital Exclusion): By tethering legal identity to a digital ecosystem (requiring smartphones, data, and digital literacy), the system will create a state of "soft discrimination." Millions of South Africans in rural areas lack smartphone access or network coverage. Conditionality of services based on a digital credential directly discriminates against the poorest segments of society. Bad batteries, loadshedding... Potential Violations (Risks depending on abuse or system failure) • Section 10: Human Dignity: If a citizen's digital profile is flagged, erroneously suspended, or subjected to automated "profile-tiering," they lose the ability to prove who they are. Stripping a person of their legal identity and forcing them to navigate bureaucratic loops to regain it is a direct assault on human dignity. • Section 27: Health care, food, water and social security: There is a high potential for violation if possession of a Digital ID becomes a de facto prerequisite for receiving social grants or accessing public healthcare. System downtime or exclusion due to a lack of technology would actively block access to these socio-economic rights. 2. South African Constitutional Precepts Constitutional precepts represent the foundational values, doctrines, and structures of the state as outlined in Chapter 1 and the broader framework of the Constitution. Violations that WILL Occur (Inherent) • The Precept of Founding Values (Section 1) – Non-racialism, Non-sexism, and Equality: Creating an exclusionary infrastructure that disproportionately affects historically disadvantaged, low-income citizens Potential Violations (Risks) • The Doctrine of Separation of Powers: • POPIA – Section 19 (Security Safeguards): Centralizing national biometrics • PAJA - algorithm kill switch violation • Cybercrimes Act, 2020	Tim	Gauteng		
	2026-06-06 23:29:33	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Absolutely unconstitutional. Privacy and freedom of choice on all levels are birthrights. This move - part of the greater global totalitarian scheme - intends to take these away from the people entirely, in the not-so-long run. I do not consent.	Clara	Western Cape		self-employed
	2026-06-06 22:57:19	No I do not	All of the above	Corporate Interoperability & Privacy Creep	The Interoperable Private Corporate Network: The state will establish real-time, bi-directional data pipelines with accredited "trusted entities" (like private banking giants and telecom networks). If you change your address at your bank, it will synchronise across the state register automatically in near real-time—blurring the line between public civic data and private corporate databases. The 'Identity Assurance' Scoring Loop: If you fail to formally report routine life updates (like moving to a new house or changing your email) within a strict 30-day window, the state will automatically drop your internal "Identity Assurance Level" (social credit score). This algorithmic tiering could cause sudden, frustrating transaction rejections when you try to open accounts or authenticate services. The Stolen Phone Lockdown: Your digital ID will be cryptographically locked to one specific smartphone device. Given South Africa's high rates of muggings and mobile theft, losing your device means your digital identity token is instantly frozen or revoked. The regulations are completely silent on a secure, remote path to restore your access, raising the threat of immediate administrative paralysis. The 10-Year Physical Queue Trap: Your digital ID will expire every 5 years. While app-based biometric renewal is permitted, the law dictates that if you do not have a physical, in-person touchpoint with a Home Affairs office or partner bank for 10 consecutive years, your credential completely lapses, and you must line up in person from scratch to re-prove who you are. The Blueprint for Function Creep: Centralising a dynamic repository of dynamic biometric signatures and tracking variables provides the perfect infrastructure for future state surveillance or a compliance-driven "social credit-style" exclusion system	Frederick	Gauteng

	2026-06-06 10:20:10	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Dear Sir/Madam, I wish to express my concerns regarding the proposed Digital ID initiative and respectfully urge the government not to proceed with its implementation in its current form. While I recognise the potential benefits of modernising public services and improving access to government systems, I am concerned about the risks associated with creating a centralised digital identity system. These risks include potential breaches of personal data, increased surveillance, identity theft, and the exclusion of citizens who have limited access to digital technologies or reliable internet connectivity. South Africa continues to face significant challenges related to cybersecurity, digital access, and administrative capacity. Before introducing a Digital ID system, it is essential that robust safeguards are in place to protect citizens' privacy, ensure transparency regarding how personal information will be used, and provide meaningful oversight and accountability. Any changes to national identification systems should be subject to extensive public consultation and independent review. Citizens must have confidence that their personal information will be protected and that participation in digital systems will not become a barrier to accessing essential services. I therefore request that the government reconsider the current proposal and undertake broader consultation with civil society, privacy experts, technology specialists, and the public before moving forward. Thank you for considering these concerns. Yours faithfully, Alex	Alex	Western Cape		self-employed

	2026-06-05 21:54:37	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Civic groups, privacy advocates, and cybersecurity experts argue that while modernisation is welcome, the draft regulations introduce expansive risks and administrative penalties that demand much tighter constitutional safeguards. Their core arguments include: Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-06-05 19:42:17	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Dear Chief Director: Legal Services I am a South African citizen living in…. I strongly object to the current Digital ID plans. The technology and infrastructure needed for a safe Digital ID and digital currency system are not realistically available to many people, even in cities, and especially not in rural and remote areas. Rolling this out now, and then using it as a gatekeeper for grants, health care, education or work, will discriminate against the poor and rural population and undermine their constitutional rights to equality, dignity and basic services. If government insists on Digital ID, it must be rural first and rights-first: It design and prove it in rural villages, townships and informal settlements first, guarantee permanent paper and offline access to all essential services, and put strong protections and remedies in place so nobody loses their livelihood because of network or device failures. If the system cannot meet these conditions, it should not proceed. Yours faithfully	E	Limpopo

	2026-06-05 15:39:05	No I do not	All of the above	Corporate Interoperability & Privacy Creep	I submit this objection as part of the public participation process on the proposed amendments to the Identification Act 68 of 1997 relating to Digital ID and the biometric database. I object to the entirety of the act being implemented as digital identification. Once implemented, If I am robbed, they take my wallet and my cell phone and more then likely my vehicle as well. With what you propose they now also steal my identification and my access life. So I have no access to money, I have no means to get a new cell phone, transport in order to get to home affairs to prove again who I say I am. Quite literally you are giving us the reasonable grounds that if you proceed with this, the theft of a cell phone will result in death or grievous bodily harm to the victims, meaning the victim will be legally justified in taking the life of the assailant in order to preserve their own, because without their phone they cannot live. So this opens up a can of legal and constitutional problems for the government. We all have the right to life, but we cannot protect against property theft, making the cell phone our identification means we need to make sure we keep possession of that cell phone at all costs or we loose access to our means of survival, meaning we have the right to use any and all force necessary to maintain our right to life. considering there are over 150 cell phones stolen per day, that could result in an additional 150 or more deaths, more seeing as cell phone theft is under reported to the SAPS. Aside from the common sense of the above there is a unreasonable breach of privacy and access to my personal information. 1- Objection I object to the proposed Digital ID/biometric system and any unrestricted access to identity information. 2- Legal & Constitutional grounds 2.1- POPIA 4/2013 Sec 26: Biometric data is “special personal information”. It requires lawful, limited, secure processing with free, informed, and specific consent Sec 11. 2.2- Section 14 Constitution: Guarantees the right to privacy. Any limitation must be reasonable and justifiable Sec 36. 2.3- Common law right to privacy + PAIA 2/2000: Access to and processing of personal information must be protected, not broadened without oversight. 2.4- Identification Act 68/1997 + Births & Deaths Registration Act 51/1992: The National Population Register NPR is the legal source of identity data. Any Digital ID/CIRP linkage must have a clear legal basis and purpose limitation. 2.5- Electronic Communications and Transactions Act 25/2005: Electronic data security standards apply. 3- Risks Without strict safeguards, the proposal risks: identity theft, fraud, cybercrime, and unlawful surveillance. 4- Requests I will not apply for a Digital ID and I request that no such system be implemented without: 4.1- Independent oversight and regular audits 4.2- Clear legal limits on who can access data and for what purpose 4.3- Strong encryption and POPIA Sec 19 security safeguards 4.4- The right to opt out of biometric collection, with alternative non-biometric verification available 4.5-Publication of DHA’s responses to public submissions as required by PAJA 3/2000 4.6- There are no means of disabling the Digital ID without appearance before a court of law. 5- Linking to Digital Currencies, raised as that is the step after implementation of the Digital ID As per the W.E.F. All countries must implement digital ID and tie it to digital currencies (CBCD's) to give the same outcome as the social credit score currently in use in China. This is a unacceptable overreach and abuse of power. Being able to lock someone out of their banking, restrict their freedom of movement and prevent their function in society. No allowance can be tolerated for this level of overreach. I for one will opt out of accepting your Digital ID, as it presently stands it is not acceptable to any reasonably thinking human being with half a brain.	Craig	Western Cape		employed individual

	2026-06-05 12:06:37	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Privacy concerns A digital ID can centralize large amounts of personal information in one system. Citizens may worry about government or third-party access to their data. Risk of surveillance Digital identity systems can potentially make it easier to track people's activities across government services. Critics argue this could increase state monitoring of citizens. Cybersecurity threats Large databases are attractive targets for hackers. A breach could expose sensitive information of millions of people. Identity theft risks If digital credentials are compromised, criminals may be able to impersonate individuals across multiple services. Exclusion of vulnerable groups People without smartphones, internet access, digital skills, or reliable connectivity may struggle to use digital IDs. This could disproportionately affect rural communities, elderly people, and low-income households. System failures Technical outages could prevent people from accessing essential services, benefits, banking, or identification functions. Function creep A system introduced for one purpose may gradually be expanded to others without sufficient public debate or consent. Loss of anonymity Some transactions or interactions that can currently be conducted with limited identification may become fully traceable. High implementation costs Developing, maintaining, and securing a nationwide digital ID system can be expensive. Critics may argue that funds should be directed to other priorities. Potential for abuse by future governments Even if a system is well-intentioned today, future administrations could use it in ways not originally envisioned. Dependence on technology Citizens become reliant on digital infrastructure, electricity, internet connectivity, and functioning devices. Data-sharing concerns There may be worries about personal information being shared between government departments or private organizations without adequate transparency. Lack of public trust If people do not trust government institutions to protect their data, adoption and legitimacy may suffer. Civil liberties concerns Some critics argue that mandatory digital identification could make participation in society conditional on registration within a centralized system. Risk of wrongful exclusion Errors in databases, biometric mismatches, or administrative mistakes could prevent legitimate users from accessing services.	Tamzyn	Western Cape		employed individual
	2026-06-05 12:06:08	No I do not	All of the above	Corporate Interoperability & Privacy Creep	The last thing our government needs is more control and ability to track our every move and action. We know that this is part of a larger push globally to get everyone on a single digital ID system. Who controls this system? What gives them the right to monitor, judge, approve, or access our data? I want nothing to do with this.	Nathan	Western Cape

	2026-06-05 11:12:53	No I do not	All of the above	Corporate Interoperability & Privacy Creep	The regulations empower the Department to record a “Verified Relationship” between a citizen and an accredited private company, such as a bank or mobile network provider. If any core details are changed or verified in person by that business or Home Affairs, the system can automatically broadcast these updated particulars to every other private entity linked via that relationship in near real-time. The Concern: Although the regulations explicitly ban profiling, commercialisation, and open-ended intelligence gathering, this fluid exchange of live citizen data across corporate API channels raises red flags. Automating data synchronization loops between state databases and private financial/telecom corporate giants chips away at the wall separating public civic records from private commercial infrastructure.	Adriénne	Western Cape		self-employed

	2026-06-05 09:12:57	No I do not	All of the above	Corporate Interoperability & Privacy Creep	All the reasons mentioned in the list. En ook dat ons Suid Afrikaanse regering nie die kapasiteit het om huidige sisteme op te gradeer en reg te kry nie en nou iets nuuts wil implimenteer wat weereens nie behoorlik nagevors word nie. En ook die korrupsie wat hiermee gepaardgaan en POPIA word nie reg toegepas. Net so gaan die Digital ID ook misbruik word.	Lerene	Western Cape		
	2026-06-05 09:10:32	No I do not	All of the above	Corporate Interoperability & Privacy Creep	You do not have control what will be in the phone app. It can easily start with just the detail they mentioned. Later on it can be adapted to include GPS, phone recording and camera control on your phone (yes, the state can easily include this without any consultation). What happens if you cannot afford a smartphone? What happens if the state wants you to report to a police station, block your ID? Will social score, as used by the ANC's partner, the Chinese CCP, also be included in this eventually. You cannot travel if your score is too low, or you cannot buy certain goods if you don't declare and meet your budget? Next thing will be linked to your workplace, taxes and salary. Let's start looking at your drivers license, also going into a digital format. Will you now stand to loose your ID and license until you pay outstanding fines? Great thinking of going digital to make things easier and cheaper for the government. What is the next thing? The mark of the "Beast" and implants to make payments and control movement? 	2026-06-05 09:00:50	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Objection to Proposed Digital Identity Credential Regulations: I am formally objecting to the proposed Digital Identity Credential framework in its current form. While I support efforts to reduce fraud and modernise government services, I have serious concerns regarding privacy, data security, digital exclusion, and the practical implications of the proposed system. The framework appears to permit extensive data-sharing and synchronisation between government departments and private-sector entities. Given South Africa's history of data breaches, cybercrime, identity theft, corruption, and information misuse, the regulations do not provide sufficient assurance that citizens' personal information will be adequately protected from unauthorised access, abuse, or future function creep. I am particularly concerned by the proposed device-binding model, which effectively links a citizen's legal identity credential to a specific smartphone. This creates a significant risk of exclusion, disruption, or loss of access where devices are lost, stolen, damaged, replaced, or become technologically obsolete. The proposal also risks creating a two-tier system in which citizens without smartphones, reliable internet access, digital literacy, or the financial means to maintain compatible devices may experience reduced access to services, slower processing, or indirect discrimination despite assurances that physical IDs will remain valid. Furthermore, the requirement for periodic renewals, biometric updates, and eventual physical re-verification raises questions about whether the system will genuinely reduce administrative burdens or simply shift them into a new digital framework while introducing additional compliance obligations for citizens. Before any implementation proceeds, stronger legislative safeguards should be established regarding privacy protections, limitations on data sharing, independent oversight, cybersecurity standards, transparency, citizen consent, alternative access mechanisms, and enforceable guarantees that physical identity documents will remain equal in status and usability. For these reasons, I object to the regulations in their current form and request that they be substantially revised before adoption.	Bridgetti	Western Cape		retired

	2026-06-04 19:45:11	No I do not	All of the above	Corporate Interoperability & Privacy Creep	I am writing to formally express my deep concern regarding the draft Identification Regulations, 2026. While I appreciate the efforts to modernize civic infrastructure and improve efficiency, I believe the proposed Digital Identity Credential poses serious risks to privacy, equity, and security. First, the integration of personal data loops with private companies—such as banks and telcos—could blur the lines between public civic data and commercial interests, raising alarm about mass surveillance and data exploitation. Second, binding a legal identity to a single smartphone, without a fail-safe backup, risks leaving millions vulnerable—especially in a country with high mobile theft—to sudden administrative and financial paralysis. Third, the mandatory in-person renewal every 10 years risks excluding vulnerable citizens, especially those in rural or low-connectivity areas, who may be unable to easily access a Home Affairs branch. I also worry about the risks of algorithmic profiling. Requiring frequent reporting within 30 days or lowering identity assurance levels based on bureaucratic errors risks alienating law-abiding citizens who rely on stability in their daily lives. I urge the Department to reconsider these measures, ensuring that any digital ID system is designed with explicit safeguards against surveillance, exclusion, and data misuse. Public trust hinges on transparency, security, and equitable access.	Antonia	Western Cape		self-employed

	2026-06-04 16:18:58	No I do not	All of the above	Corporate Interoperability & Privacy Creep	All these proposals, including"Identity Assurance Level" reek of the sort of "social credit" system that China has implemented, where people can get blacklisted for not agreeing with the government. South Africa is supposed to be a democracy, not a digital authoritarian society! If I don't update my address within 30 days ... SO WHAT? No one dies! Why should I be penalised if my organisational skills aren't top-notch - I'll get around to it... Another huge point is security of data and devices. The more my info is shunted around the internet, by corporations who don't give a damn about me, the more vulnerable I feel... And privacy? I don't want split-second decisions made on me without my knowledge or consent. My business is MY business. We are not guilty of crimes unless proven guilty - so don't treat us like criminals just waiting for opportunities.	Tracey	Western Cape		self-employed

	2026-06-04 09:37:04	No I do not	All of the above	Corporate Interoperability & Privacy Creep	As a young South African, I am deeply concerned about the proposed Digital ID framework and therefore selected all of the above concerns. While I understand the intention is to modernise services and improve efficiency, I believe the risks currently outweigh the benefits. Centralising personal information creates significant cybersecurity risks, where a single breach could expose millions of citizens' sensitive data. It also raises concerns around privacy, surveillance and the gradual expansion of how personal information may be collected, shared, and used beyond its original purpose. I am also worried about the potential for digital exclusion. Many South Africans still face challenges with access to technology, connectivity and digital literacy. Essential services should never become more difficult to access for vulnerable communities. Furthermore, placing so much control into a centralised digital system creates the possibility of errors, system failures or abuse that could impact a person's ability to access services, participate in the economy or prove their identity. Technology should serve citizens, not create new barriers or reduce individual freedoms.	Kirsten	Gauteng		self-employed
	2026-06-04 09:36:57	No I do not	All of the above	Corporate Interoperability & Privacy Creep	I do not want the Government to have control over every aspect of my life with the option to dictate what goods and services I am able to access based on my behaviours. I believe that this infringes on my right to privacy.	Joseph	Western Cape		business owner

	2026-06-02 21:34:41	No I do not	All of the above	Corporate Interoperability & Privacy Creep	The digital identity credential is, in actual fact, digital authoritarianism, where Freedom of Speech, the right to express opinions, including criticizing the government without fear of retaliation, and Freedom of Movement, the right to travel freely, change residence, and choose employment, would all become a crime. And what could be more oppressive? Digital identity undermines democratic freedom. South Africa is a democratic country. Democracy does not entail reporting routine life updates, and if you don't, your social credit score drops. It is a breach of privacy and trust, where a person would then not even be able to make a transaction with their own money. A social score pressures people to conform by tying everyday freedoms to their behavior, turning free citizens into compliant subjects. This new system is a dire threat to freedom, and we as South Africans will not accept it. We reject any attempt of undermining the freedoms upon which our democracy is built. 	2026-06-02 13:21:58	No I do not	All of the above	Corporate Interoperability & Privacy Creep	? Real-Time Corporate Data Loops: The state will record "Verified Relationships" between you and private entities like banks and telcos. If you update your address or phone number at your bank, it will synchronise across the state population register automatically in near real-time—permanently blurring the line between public civic data and private corporate infrastructure. ? The Stolen Phone Lockdown: Your digital ID is cryptographically "bound" to a single smartphone. In a country with high rates of mobile theft, losing your phone means your legal identity token is instantly frozen or revoked. The regulations are currently silent on a secure, remote path to restore your access, raising the threat of immediate financial and administrative paralysis. ? The 10-Year Physical Queue Trap: Your digital ID expires every 5 years. While remote renewal via a facial scan in the app is permitted, the draft rules state that if you go 10 consecutive years without a physical, in-person touchpoint at a Home Affairs branch or partner bank, your credential completely lapses. You will be forced to line up in person from scratch to re-prove your identity. ? Algorithmic Profiling (The 30-Day Rule): You will be legally required to report routine life updates (moving house, changing an email) within 30 days. If you fail to do so, the state will algorithmically drop your internal "Identity Assurance Level." A lowered score could mean sudden, frustrating transaction rejections when you try to use high-security online services. ? Foundations for Function Creep: Centralising dynamic biometric registries and cross-entity tracking pipelines creates a technical foundation that critics warn could easily be weaponised into an authoritarian behavioural tracking system, or act as a centralised economic kill-switch over your accounts. 	2026-06-02 09:31:17	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Digital IDs may well become a reality, but they will come at a cost to individual freedoms, personal autonomy, and the right to live privately within the country of my birth. I deeply distrust governments in general, and particularly our own corrupt and self-serving government. I strongly object to the erosion of my privacy, my right to live independently and, if I choose, as a nomad, free from constant monitoring and control. I am equally concerned about the gradual encroachment of government influence over my financial status, independence, and security. Our institutionalised and deeply flawed government cannot be trusted to exercise such power responsibly. History has repeatedly shown that power is often abused to serve political interests rather than the public good. The growing partnership between government, credit agencies, and profit-driven banks represents the ultimate control mechanism. As things stand, banks already have the ability to devastate people's lives through impersonal and often ruthless financial decisions that affect ordinary South Africans. This is one of the most significant moves yet towards the centralisation of control over our private liberties in South Africa, and it should be resisted by all lawful means available. If I choose to live anonymously and privately, that should remain my right. I should not be subjected to lifelong tracking and surveillance by governments, financial institutions, or any other authority.	Alan	Gauteng		self-employed

	2026-06-01 15:19:13	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Device Binding: The Stolen Phone Lockdown To secure your data, the system relies on device binding—the technical process of cryptographically locking your digital identity token to one single mobile device running the MyMzansi application. If a device is compromised, or its private cryptographic key is suspected of being leaked, the credential must be immediately suspended or revoked. The Concern: Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office. The 30-Day Notification & Identity Assurance Penalties Regulation 37(1) places a strict legal obligation on every individual in the population register to notify the Director-General of any permanent change to their ordinary place of residence, postal address, mobile phone number, or email within 30 days. Non-compliance with this rule will negatively alter the “Identity Assurance Level” assigned to your digital identity credential. The Concern: Forcing citizens to log formal changes within a rigid 30-day window for routine life adjustments like swapping an email address or moving apartments is highly impractical. Lowering a citizen’s “Identity Assurance Level” serves as a hidden penalty, which could lead to sudden, frustrating rejections or delays when trying to execute everyday high-security actions like opening an account or authenticating an online transaction. If the government can see address changes from private sources that is a violation of the right of privacy and if they can fine, you for not updating, they can just as easily update your records without fining you. Develop a secure method to request authorisation to amend addresses and drop the fines and this is resolved.	carol	Western Cape		retired

	2026-06-01 10:16:39	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Skip to content Dear South Africa Dear South Africa Democratically Engaged, Active and Responsible Menu Digital ID Digital ID for South Africa DEAR-SOUTH-AfFRICA 22,049 comments individually delivered to the Minister, so far No I do not support the regulations 20994 Yes I do 175 Not fully 880 The Department of Home Affairs has published proposed amendments to the Identification Regulations under Government Gazette No. 54610. This framework introduces a smartphone-based “Digital Identity Credential” housed inside a centralised state mobile application called MyMzansi. While this system aims to eliminate physical administrative delays and phase out identity forgery, it introduces sweeping technological integration, real-time private sector data synchronisation, strict smartphone dependency, automated profile-tiering, and rolling validation cycles. Because your national identity document dictates your legal right to bank, work, travel, vote, and access healthcare, it is vital that the public shapes the regulatory guardrails of this digital infrastructure. You have until 6 June 2026 to submit your formal input. click the link for more info, or scroll down to have your say Have your say – shape the regulations. Do you support the Draft Amendment of Identification Regulations (Digital ID) as presented by the Dep of Home Affairs? No I do not What is your concern? (scroll down for an explanation of each) All of the above As you've chosen "all of the above", if you had to choose one concern, what would it be? D-icon 7.3k Shares whatsapp sharing buttonfacebook sharing buttontwitter sharing buttonemail sharing button Top concerns Centralised Cyber & Security Risk The 10-Year Physical Queue Trap Device Binding Vulnerability Corporate Interoperability & Privacy The 30-Day Address Notification Penalty Soft Discrimination & Digital Exclusion Perspectives: What is the debate? The proposed Amendment of the Identification Regulations, 2026, has ignited a vital conversation across South Africa regarding the digitization of civic infrastructure. To help you formulate your official submission, the core arguments surrounding the policy have been restructured below into two comprehensive perspectives. What Supporters Say What Opponents Say Civic groups, privacy advocates, and cybersecurity experts argue that while modernisation is welcome, the draft regulations introduce expansive risks and administrative penalties that demand much tighter constitutional safeguards. Their core arguments include: Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector’s history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation’s “attack surface.” Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically “lapse” triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual’s legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating “near real-time” data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic “soft discrimination” —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-06-01 08:17:46	No I do not	All of the above	Corporate Interoperability & Privacy Creep	The Problem I see is that when the Net goes down how do I identify myself? And if you think that the Hackers cant or wont be able to hack this you may be sadly mistaken. They will find a way and then. This is in contravention of the POPI Act as I dont believe that my private information will remain private and too many opportunities for disseminating this info will be created. I dont believe that this is the answer and in any case the green barcoded ID is still a valid form of identifcation as stipulated by the SA Government so why change this. I do however have a question, if you cant even get the paper and pen driven system working then how will you get this much more intricate and complicated system working? And then lastly how would people that dont have smartphones or access to the internet be able to access this system, or will they just be excluded from this system? 	2026-06-01 06:54:05	No I do not	Other	Corporate Interoperability & Privacy Creep	Mumofthree Kapish I hereby lodge a formal objection to the Draft Identification Regulations, 2026, published under Government Gazette No. 54610. This objection is grounded in constitutional and statutory contraventions that render the draft regulations unlawful and unenforceable in their current form. 1. Constitutional Contraventions 1.1 Section 14 – Right to privacy infringed by biometric capture and device-binding. 1.2 Section 9 – Equality compromised by exclusion of citizens lacking digital access. 1.3 Section 32 – Risk of restricted access to information. 1. Statutory Contraventions 2.1 POPIA – Unlawful biometric data processing without adequate safeguards. 2.2 PAIA – Transparency undermined in verification processes. 2.3 Cybercrimes Act – Increased exposure to unlawful interception and fraud. 2.4 ECTA – Device-binding limits fair access to services. 1. Request for Action 3.1 Immediate suspension of the draft regulations pending constitutional review. 3.2 Full public consultation with civil society, legal experts, and affected communities. 3.3 Revision of the draft to ensure compliance with constitutional rights and statutory safeguards. The Draft Identification Regulations, 2026, in their current form, contravene multiple constitutional provisions and statutory safeguards. I respectfully request that the Department of Home Affairs withdraw or substantially amend the regulations to align with South Africa's constitutional democracy. 	2026-05-29 10:18:43	No I do not	All of the above	Corporate Interoperability & Privacy Creep	This is not a good idea. While digitalizing is important, I believe we are relying way too much on Cell Phones. With the number of cell phone thefts occurring, puts one at risk. Also, with one changing cell phones every few years makes this process impractical. Another point to make is that not everyone has a modern smartphone. Older smartphones are no longer being supported by companies making these Phone Apps. This will create a massive exclusion list which will cause those people to struggle to get their ID Documents, etc. Then there is the matter of automatically sharing my information with banks, insurance companies, etc. That means that Banks and Insurance companies that I'm not associated to have access to my information. Rubbish. Then the other matter that can happen is that government can introduce new things to the app which implies that you don't have choices anymore, as they have you linked to an app. Not at all a good idea. 	2026-05-28 20:55:14	No I do not	All of the above	Corporate Interoperability & Privacy Creep	This is the absolute worst idea ever. Security and privacy is not debatable. There is no such thing as security on digital devices. SA has no idea how to handle cyber security. Banks can't even keep information secure. Linked to that is privacy. I should be the only one who has the power to disclose my personal information to anyone. Any company (or government) who has access to digital information can disclose it to anyone without my consent, or get hacked at any time. That information belongs to me, not to the government.	Zed	Gauteng		retired
	2026-05-28 20:55:12	No I do not	All of the above	Corporate Interoperability & Privacy Creep	The amount of extra utility I could get from a digital ID vs a physical one is small compared to the possibility of government overreach affecting my human rights. I hardly ever need my ID book, why must I carry one on my person at all times in my phone? Does the state need to identify and track me more often? I reject this. I am a sovereign individual and my activities and location are for me to know and keep private. I reject the notion of a persistent identity existing on my phone because this easily leads to government requiring its presence and usage at many online portals which I currently enjoy anonymously. How will I be able to exercise my right to free speech on any of the apps I enjoy when I know that government identity data could be included with system calls? How will I enjoy the current level of freedom I have when the presence of a digital ID on my phone could be used to gatekeep my access to certain services like payment which I rely on. I will fight the idea of social credit scores and they will not succeed.	Evan	Western Cape		business owner
	2026-05-28 20:33:32	No I do not	All of the above	Corporate Interoperability & Privacy Creep	This is 1984... I won't stand for a digital ID.	Andrie	Gauteng		employed individual

	2026-05-28 19:16:34	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Mistaken identity, computational errors and automatic real time lockout is a very real possibility to the point of probability. This has happened several times to me without even digital sharing of data. I have lost over R300,000.00 to SARS due to their faulty system, which they have forced my bank to pay over to them. The bank just shrug their shoulders. After 3 years and several dispute actions resulting in their admittance to incorrect data, I have still not received a cent in refund. This has had a devastating effect on my life. If digital data sharing between corporate entities and the government, becomes law, it will kill the already flimsy economy. It is guaranteed to have many errors and mistakes which will be impossible to turn around for an individual and it will destroy many many lives, wholw families at once.	Maria	Gauteng		business owner

	2026-05-28 14:33:00	No I do not	All of the above	Corporate Interoperability & Privacy Creep	These draft regulations introduce expansive risks and administrative penalties that demand much tighter constitutional safeguards. • Expanded National Cyber-Defences Vulnerability: Cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. • The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Tremendous impact on older persons who are not by any means conversant with modern technology • Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone is idiotic, a lost or stolen device instantly locks that citizen out of their civic and banking lives and can be life-threatening in many cases. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. • Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers is at nothing but recklessness, inherently increasing the risk of data leaks and corporate surveillance. • The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" (talking about millions of disadvantaged citizens here) —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. THIS IS PIE IN THE SKY FOR THE GOVERNING POWER WITH AN UNKNOWN HIDDEN AGENDA!	Jaco	Gauteng		self-employed

	2026-05-28 14:22:13	No I do not	All of the above	Corporate Interoperability & Privacy Creep	This is taking away from being a private citizen. Free. More and more the governement are seeking ways to monitor us without any reason. Who will there be complied with the current POPIA? which mandates that an institution must obtain permission from a client to collect and distribute personal information? More and more we are being monitored for no reason. Not to mention the high risk of having the ENTIRE country's data in one cetral place. This is a huge safety risk as AI attackers and hackers are growing more skilled by the day. Not to mention this whole thing is evil. It also does not serve the citizens. Notablally those who are poor and live in rural areas. How are they to afford a smart phone? And not everyone wants to own and use a smartphone. This is taking away freedom of choice. By tying a person's identity to a single smart phone and making no provision on how to securely and easily migrate to a new phone is absurd and speaks loudly of shortsightedness. It also discriminates against people who are ill, cannot travel, unable to use phones due to physical disabilities. The government cannot guarantee to any degree that this highly sensative information will not be sold or used by thirdparties. This is of great concern due to fraud and coporate survaliance. 	2026-05-28 14:08:44	No I do not	All of the above	Corporate Interoperability & Privacy Creep	I do not believe the South African government is a secure repository for digital information on private citizens, especially given the high levels of corruption now being revealed. They simply cannot be trusted. As such, who will be called upon to deliver the digital framework, and what will their level of involvement in the data be? The UK now regrets partnership with Palantir, who will the South African government choose? And what cost? This is totally impractical for a third world country, it will never materialise, and will be a monumental waste of money that no-one will be held accountable for.	Anne	Outside SA	UK

And, I'm very worried about my data being shared with whoever feels they have a right to it.	Gayo	Western Cape		business owner
	2026-05-27 14:48:37	No I do not	All of the above	Corporate Interoperability & Privacy Creep	This is all about control and taking away our God given right to freedom	Cheryl	Western Cape		unemployed individual
	2026-05-27 14:46:54	No I do not	All of the above	Corporate Interoperability & Privacy Creep	It's a trap and your right to privacy out the window! It's like being kept under a neverending surveillance by the state, running and controlling your life, even your bedroom activities will be at their disposal! What about those with not strong smartphones or no phone at all? Remember how the devil deceived Eve? What he said to Eve sounded truthful, but it was a big lie that led to their spiritual death and separation from the living and true God. What if the phone breaks? You will be locked out: No reporting power outage, or crime! Your right to cash, sassa denied! No good will come out of this digital ID. It's meant to control your daily life: There will be blockages of: your money, sassa grant, your shopping, your travel, etc. State will be able to track everything you do, including your bedroom gymnastics! It's a digital dompas, but now on your phone. It's meant for evil intentions. This is the start of the "Mark Of The Beast!"	Peter	Gauteng		unemployed individual
	2026-05-27 14:46:36	No I do not	All of the above	Corporate Interoperability & Privacy Creep	It is simply not safe! Will not trust the system	Carina	Gauteng		employed individual
	2026-05-27 14:35:47	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Retired people who are not smart phone literate will be unable to understand this complicated system - much easier to look at ID card see number name etc than to fumble around on a smart phone.	Joan	Western Cape		retired
	2026-05-27 14:30:26	No I do not	All of the above	Corporate Interoperability & Privacy Creep	This opens doors for more fraud and corruption as if there is not enough alredy. Cyber security risk. Asking come and steal from me as i have made it easier for you.	Barend	KwaZulu-Natal		retired

	2026-05-26 15:52:14	No I do not	All of the above	Corporate Interoperability & Privacy Creep	The proposed system creates significant dependence on smartphones, internet connectivity, biometric verification, and a centralized digital infrastructure. In a country with high levels of poverty, digital exclusion, cybercrime, and unreliable connectivity, this could unintentionally exclude vulnerable citizens from accessing essential services. My concerns include: The lack of clear limitations on data sharing between government departments and private sector institutions. Insufficient detail regarding cybersecurity protections and accountability in the event of data breaches or identity theft. The risk of over-centralization of personal information and real-time monitoring capabilities. Potential exclusion of elderly, rural, low-income, or technologically disadvantaged citizens who may not own compatible smartphones. Concerns regarding automated suspension, validation failures, or incorrect biometric matching that could affect a citizen's ability to access banking, healthcare, employment, travel, or voting rights. The proposed five-year renewal and rolling validation process may create unnecessary administrative burdens and service interruptions.	PAUL	KwaZulu-Natal		employed individual

	2026-05-25 16:57:17	No I do not	All of the above	Corporate Interoperability & Privacy Creep	This feels like the usual government overreach and citizen surveillance. I want less government intervention in my life not more. A government is supposed to provide basic underlying structure to a country and then let citizens get on with living. This current government has proved time and time again that they are incompetent at running almost anything. To let them loose on something as essential as an ID that expires arbitrarily, only to be kept alive by one having to go in to a government affiliated office to prove you're still you is tantamount to having a criminal leg monitor attached at all times. The less the government is involved in one's life the better.	Marcus	KwaZulu-Natal

	2026-05-25 16:47:52	No I do not	All of the above	Corporate Interoperability & Privacy Creep	South Africans are not ready for this, to much crime and corruption and faltering education systems and to much older, poor unemployed and uneducated people that cannot keep up with technology. An irresponsible and corrupt government can use this for more power and abuse of its citizens.	Martie	Western Cape		
	2026-05-25 16:28:19	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Our freedom of privacy needs to be maintained as part of our freedoms afforded by our constitution. Maintaining privacy ensures the state cannot make sweeping changes that i have no control of. Besides the privacy issue, there is no capability to run current systems efficiently and the state of our governance clearly shows the chaos we are in now. Introducing a digitally run system opens the door to corruption, hacking, theft of personal information among many other challenges. this once more is an invasion of privacy. The simplest administrative problems cannot be sorted currently so the chaos that this proposed system will bring is beyond even the best imagination - definitely a no-no for our country.	Venessa	Gauteng		employed individual

	2026-05-25 16:18:51	No I do not	All of the above	Corporate Interoperability & Privacy Creep	*FORMAL OBJECTION TO THE PROPOSED AMENDMENTS TO THE IDENTIFICATION REGULATIONS — GOVERNMENT GAZETTE NO. 54610* I hereby record my complete and unequivocal rejection of the proposed amendments to the Identification Regulations relating to the proposed Digital Identity Credential and the MyMzansi centralised state mobile application. This proposal is rejected in its entirety. South Africa does not need a centralised digital identity infrastructure that places citizens' legal existence, access to services, banking, employment, healthcare, travel, voting rights and ordinary civil participation behind a state-controlled digital gateway. The State has not demonstrated the competence, discipline, restraint, transparency or constitutional maturity required to be entrusted with this level of technological power over the individual. A national identity system is not merely an administrative convenience. It is the foundation upon which a person's civil existence rests. Any system capable of centralised monitoring, automated profile-tiering, real-time data synchronisation, rolling validation, smartphone dependency and private-sector integration carries an obvious and unacceptable risk of abuse. South Africans are not prepared to walk blindly into a digital control architecture dressed up as administrative efficiency. This framework raises serious constitutional concerns, including but not limited to: the right to dignity; the right to privacy; the right to freedom and security of the person; the right to equality and non-discrimination; the right to freedom of movement; the right to access public and private services without unreasonable technological barriers; and the right not to be subjected to arbitrary state interference. The proposed system creates the potential foundation for a surveillance state, social-credit-style exclusion, automated punishment, digital profiling, administrative blacklisting and disproportionate penalties for ordinary conduct. Whether the justification is identity fraud, convenience, "smart cities", urban management, public order or administrative efficiency, none of these objectives gives the State the right to strip away the civil liberties and human dignity of ordinary people. South Africans have already seen repeated examples of state failure, corruption, data mismanagement, weak accountability, political abuse of institutions and poor protection of citizens' rights. Against that background, the public cannot be expected to accept a system that centralises identity power even further. The possibility of linking digital identity to movement, banking, employment, transport, municipal enforcement, access to services, healthcare, voting systems, penalties, compliance scoring or behavioural monitoring is not a minor concern. It is a fundamental civil-liberties concern. The answer to administrative inefficiency is not mass digital dependency. The answer to identity fraud is not the construction of a national surveillance infrastructure. The answer to government failure is not to give government even greater power over the individual. I reject any move towards a system that could enable: smartphone-based exclusion; digital identity dependency; centralised citizen tracking; private-sector data synchronisation without proper safeguards; automated risk scoring; behaviour-based profiling; social-credit-style consequences; digital restriction of services; or any framework that can be expanded into surveillance, control or coercion. This proposed regulatory framework must be withdrawn in full. It is not sufficient to amend the wording, soften the language, or promise internal safeguards. The architecture itself is the problem. Once such a system exists, future abuse becomes not only possible, but probable. South Africa is a constitutional democracy. Citizens are not subjects of a digital state. The State exists to serve the people, not to monitor, profile, rank, restrict or administratively control them through technology. For these reasons, I reject the proposed amendments outright and call for the Department of Home Affairs to abandon this framework entirely. This proposal is unconstitutional in spirit, dangerous in design, and unacceptable in principle. It must not proceed.	Gordon	Gauteng		employed individual

	2026-05-25 11:25:47	No I do not	All of the above	Corporate Interoperability & Privacy Creep	We did not get rid of Apartheid so we could be issued a Digital Dom Pas! We recognize that this attempt is not indigenous in nature, but falls into lockstep with globalist imperialist plans to keep us trapped in a surveillance state, and Digital Identification is the key. The nonsense excuse that having this system in place would keep us safe from "illegals" or crime is exactly that: Nonsense. The uselessness of the state to protect our borders, in conceding to the UN's strategy, and the pathetic state of policing both play into providing an excuse for the proposed draconian measures. However, we know that the ineptitude of the government is not due to stupidity or incompetence, it is a deliberate act, done to enable the Agenda 2030 - which NONE OF US VOTED FOR - to be implemented. Every day we see stories about hackers compromising data - even Standard Bank could not defend it's clients from this. Why we should trust a state that is failing the masses so dismally is incomprehensible., Whether the identity data is fed into a government-controlled database, or one outsourced to the private sector, it is not impenetrable. Furthermore, the very existence of such data is a threat, as evidence by the actions of Palantir and other corporations. Mass surveillance can be hacked. Furthermore, a subpoena would provide authorities (or future regimes) easy tracking of citizens' movements, finances, speech, and associations—far beyond paper IDs. These are violations of the very foundation of our freedoms of movement, association, speech, & etc. The loss of privacy would be irreversible. Our biometrics can't be changed if someone steals/hacks them, like a password on an account can be changed. Even under the most competent government in the world - which is not what we have - this system would be undesirable, for ever and always. We will never allow this to happen. We will not tolerate the selling out of our national sovereignty, whether by the GNU, ANC, DA or any other party. We are not bound by any agreements to which we were not a party of making. We will not comply with these heinous violations of mind, body and soul.	Ruth	Gauteng		
	2026-05-25 11:25:16	No I do not	All of the above	Corporate Interoperability & Privacy Creep	It is an invasion of privacy which defies polite description and it is yet another cash cow for an increasingly avaricious and malevolent few.	Tracy	Western Cape		unemployed individual
	2026-05-25 11:25:07	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Sovereign policy creep needs to be prevented. This smacks too much of further State interference in and/or control over the life of its citizens. The importance of maintaining clear boundaries and periodic review of policy scope to prevent unintended consequences or overreach is required. Regrettably, I'm of the view that this rarely happens once the policy is adopted. In addition, citizens are burdened with a number of other issues linked to the proposed process (e.g. renewing the card every five years). Almost everything has to be renewed regularly - firearm licenses, driver's licences etc.	Reg	Gauteng		retired
	2026-05-25 11:15:27	No I do not	All of the above	Corporate Interoperability & Privacy Creep		Dionne	Western Cape		

	2026-05-25 11:12:35	No I do not	All of the above	Corporate Interoperability & Privacy Creep	I hereby submit this objection to the Draft Identification Regulations, 2026 published under Government Gazette No. 54610. While I understand the stated goal of modernising identity systems and improving verification processes, the regulations in their current form raise serious concerns around privacy, civil liberties, cybersecurity, surveillance, administrative fairness, and the growing integration of state and private-sector identity systems. The proposed framework goes far beyond a simple digital ID system. It lays the groundwork for a deeply centralised identity infrastructure that combines biometric information, device-linked credentials, behavioural verification, automated trust scoring, and real-time data exchange between the state and private institutions. 1. Creation of a State-Corporate Identity Network One of the most troubling aspects of the regulations is the creation of interoperable, real-time identity pipelines between the state and accredited “trusted entities” such as banks and telecommunications providers. The regulations appear to allow bi-directional synchronisation of identity information between government systems and private-sector databases. In practice, this means routine updates made to your details at a bank or telecom provider — such as an address change or updated contact information — may automatically propagate into state identity records in near real-time. This represents a major shift in the relationship between citizens, corporations, and the state. The line between public civic records and private commercial databases becomes increasingly blurred, with insufficient safeguards preventing misuse, overreach, profiling, or future expansion of these integrations. South Africans are effectively being asked to trust a permanent identity-sharing framework linking government systems with some of the country’s largest corporations, despite repeated data breaches and cybersecurity failures across both the public and private sectors. 2. Algorithmic “Identity Assurance” Scoring The regulations also introduce an “Identity Assurance Level” system that appears to function as a form of automated trust scoring tied to a person’s identity status. Under the proposed framework, citizens who fail to report ordinary life changes — such as moving house, changing an email address, or updating contact details — within strict time windows may automatically have their assurance level downgraded. This is deeply concerning. It creates a compliance-driven identity regime where ordinary administrative oversights could suddenly result in failed authentication attempts, rejected transactions, or difficulty accessing services. A person should not effectively receive a lower digital trust rating because they forgot to update an address within 30 days. The regulations provide little clarity regarding: - How these assurance levels are calculated; - What consequences attach to lower scores; - What oversight exists over automated decisions; - How citizens can challenge incorrect downgrades; - Whether private-sector entities may rely on these scores. This kind of system creates obvious risks of exclusion, discrimination, administrative unfairness, and eventually social-credit-style behaviour enforcement. 3. Device Lock-In and the Risk of Administrative Paralysis The regulations also appear to cryptographically bind digital identity credentials to a specific smartphone device. In a country with high levels of theft, violent crime, and phone hijacking, this is extraordinarily impractical. If a person’s phone is stolen, lost, damaged, SIM-swapped, or compromised, their digital identity token may immediately become frozen or revoked. The regulations are disturbingly vague about how ordinary citizens would securely and rapidly restore access to their identity credentials after such an event. This creates the risk of immediate administrative paralysis for victims of crime. A digital identity system designed for South Africa cannot simply assume uninterrupted possession of a secure personal smartphone. 4. The 10-Year In-Person Reset Requirement Another deeply impractical provision is the requirement that citizens must still physically present themselves at a Home Affairs office or approved partner location at least once every 10 years. Although app-based biometric renewals are permitted, the regulations provide that if no in-person verification occurs during that period, the credential fully lapses and the citizen must restart the verification process from scratch. Given the existing realities of Home Affairs queues, administrative delays, infrastructure failures, and limited service capacity, this requirement is unreasonable. Many South Africans already struggle to access Home Affairs services efficiently. The regulations risk creating periodic mass re-verification bottlenecks that will disproportionately affect ordinary citizens while adding little meaningful security benefit. 5. The Infrastructure for Function Creep and Surveillance Most concerning of all is the broader architecture being created. Once the state centralises biometric signatures, behavioural identity variables, device-linked credentials, dynamic verification systems, and interoperable private-sector authentication pipelines, the infrastructure for future surveillance and compliance-based exclusion already exists. History shows that systems introduced for narrow administrative purposes almost always expand over time. What begins as “voluntary” digital identity verification can quickly become functionally mandatory once linked to banking, employment, telecommunications, licensing, healthcare, travel, taxation, or other essential services. The regulations contain insufficient protections against: - Future expansion of surveillance powers; - Real-time behavioural tracking; - Commercial profiling; - Automated exclusion from services; - Mandatory digital identity enforcement; - Expanded law-enforcement access; - Private-sector dependency on identity scoring. Even if the current administration claims benign intentions, future governments may not exercise the same restraint. South Africans should be extremely cautious about creating the technological foundations for a social-credit-style identity infrastructure before strong constitutional safeguards are firmly in place. 6. Cybersecurity and Governance Concerns The regulations also fail to adequately address the enormous cybersecurity risks associated with centralised biometric identity systems. South Africa has repeatedly experienced major data breaches affecting both government departments and private corporations. Public trust in the state’s ability to securely manage highly sensitive biometric infrastructure is therefore understandably limited. Unlike passwords, biometric identifiers cannot simply be changed if compromised. The Department has not publicly demonstrated: - Independent cybersecurity assessments; - Comprehensive privacy impact analyses; - Clear data retention limits; - Detailed breach-response protocols; - Strong independent oversight mechanisms; - Meaningful transparency obligations; - Effective remedies for citizens harmed by misuse or breaches. The regulations ask the public to place extraordinary trust in systems and institutions that have not yet demonstrated the technical maturity or accountability required for infrastructure of this scale. Conclusion The Draft Identification Regulations establish the foundations for a highly centralised digital identity regime with profound implications for privacy, civil liberties, democratic accountability, and the future relationship between citizens, corporations, and the state. In their current form, the regulations are overly broad, insufficiently constrained, technologically risky, and highly vulnerable to future abuse and expansion. I therefore strongly object to the regulations as currently drafted and call on the Department	Alan	Western Cape		employed individual
	2026-05-25 11:12:31	No I do not	All of the above	Corporate Interoperability & Privacy Creep	None of this makes any sense in a chaotic 3rd world society such as South Africa. While this system works really well in China, we have far too large of the population living below the poverty line with no access to ever owning a smartphone. It would be far wiser of the goverment to concentrate their efforts and spending on the actual problems facing our country than to try and herd it's citizens into the digital era. It's not that long ago that we moved to ID cards, and some people still have the old green books. There are far more important areas such as education that can use this kind of government restructure and investment. South Africa is still a long way off from even being able to consider this type of population control.	Kayla	Western Cape		
	2026-05-25 11:10:44	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Our government departments must focus on doing the basics proficiently before embarking into something that they do not have the operational aptitude for...there are bigger priorities in SA ! The risks far outweigh the benefits at this satge. A pilot project of digitising just one's ID and drivers licence and storing on smartphones BY CHOICE is OK , and could be expanded BY CHOICE to include other functional personal necessities as the sytem matures with a proven efficiency and beneficial track record. 	2026-05-25 11:01:48	No I do not	All of the above	Corporate Interoperability & Privacy Creep	The regulations empower the Department to record a “Verified Relationship” between a citizen and an accredited private company, such as a bank or mobile network provider. If any core details are changed or verified in person by that business or Home Affairs, the system can automatically broadcast these updated particulars to every other private entity linked via that relationship in near real-time. The Concern: Although the regulations explicitly ban profiling, commercialisation, and open-ended intelligence gathering, this fluid exchange of live citizen data across corporate API channels raises red flags. Automating data synchronization loops between state databases and private financial/telecom corporate giants chips away at the wall separating public civic records from private commercial infrastructure. 	2026-05-25 10:49:40	No I do not	All of the above	Corporate Interoperability & Privacy Creep	South Africans should not fall into this global trap where we have no say over our own identity and become targets of the global elite who wants to control everything, worldwide. No, South Africans! Stay in control of your own destiny.	Joachim	Limpopo		retired
	2026-05-25 10:46:44	No I do not	All of the above	Corporate Interoperability & Privacy Creep	I urge the government to as far as reasonably possible "KEEP THINGS SIMPLE". While smart phones are ubiquitous they are not the answer to all things for all people. Many do not even own a single cell phone, others and amongst these are the aged are not able to use a smart phone, for some a touch screen is unresponsive to their touch and there are a multitude of other areas where conversion to a single smart phone per person is problematic both in concept and in practice. CYBERSPACE is a nightmare for personal privacy and security. In the context that the police services and defence force are unable to prevent theft of arms under their control how can the department of Home Affairs put forward that they can secure digital identity? My fear is that the proposed system will provide a gateway to cybercrime on a massive scale that can be conducted with alarming speed.	Neil	Western Cape		retired
	2026-05-25 10:45:37	No I do not	All of the above	Corporate Interoperability & Privacy Creep	You almost had me sold until I read about the risks. In a country with such high theft how does this protect our identities? I'm all for getting rid of queues, Home Affairs is the pit of hell, but queuing again every 10 years? I'd rather scrub myself down with a pineapple. We’re trying to implement advanced systems, but the underlying mindset hasn’t evolved at the same pace....I'm not convinced of the fit when nothing else here works and nobody is able to keep their hands clean. Please go back to the drawing board and strengthen the practicalities.	C	Gauteng		
	2026-05-25 10:45:13	No I do not	All of the above	Corporate Interoperability & Privacy Creep	This is a critical move towards a complete fascist, surveillance state. As South Africans and global citizens we are losing our freedoms at an alarming rate. There is a total disregard by the state for the concept of privacy - which is an important form of freedom. When combined with CBDC and surveillance AI, central governments will have complete control over our lives. Zero privacy. Zero freedom. Zero choice.	Stuart	Gauteng

	2026-05-25 10:32:32	No I do not	All of the above	Corporate Interoperability & Privacy Creep	• The proposed digital ID system centralises enormous amounts of personal data — biometrics, phone numbers, addresses, devices, and institutional relationships — into a single state-linked framework. • While the regulations claim participation is “voluntary”, systems like this tend to become practically mandatory once banks, telecoms, licensing authorities, and government services begin requiring them. • A classical liberal concern is not only how the system functions today, but how future governments could abuse it during political instability, corruption, or emergencies. • The regulations create “verified relationships” between citizens and accredited institutions, allowing near real-time updates of personal information across interconnected entities. That is a major expansion of state-linked surveillance capability. • Even with POPIA safeguards, concentrating sensitive biometric and identity information into interoperable systems increases the risk of mass data breaches, insider abuse, and mission creep. • The framework grants broad discretionary powers to the Director-General through “instructions” rather than requiring direct parliamentary approval for many technical and operational changes. • The state may initially promise limited use cases, but history repeatedly shows that databases and surveillance powers expand over time beyond their original purpose. • Secure digital identification can improve convenience and reduce fraud, but efficiency alone is not enough justification for creating a highly centralised identity infrastructure. • A free society depends on limiting concentrations of power — especially informational power. Citizens should not have to trust that future governments will always act responsibly. • The real question is not whether this system can be used safely, but whether it creates capabilities that could later be misused. From a classical liberal perspective, the answer is clearly yes.	Marius	Gauteng		self-employed

	2026-05-25 09:45:59	No I do not	All of the above	Corporate Interoperability & Privacy Creep	I oppose these draft regulations because I am concerned about privacy, data sharing, and relying too much on smartphones for identification. Many South Africans do not always have safe access to smartphones, data, or reliable internet, and phones are often lost or stolen. A digital ID system should not make it harder for people to access important services or prove who they are. I am also worried about government and private companies sharing personal information too easily. Stronger protections are needed to keep citizens' data safe and to make sure physical ID options remain fully available at all times.	Emma	Mpumalanga		employed individual

	2026-05-25 09:01:02	No I do not	All of the above	Corporate Interoperability & Privacy Creep	I am also seriously concerned about digital exclusion. I have managed to keep my ID book for decades, and there is never any problem with that. Why should I have to verify my ID every 5 years, or have digital verification cancelled if I don't immediately register changes in address. And to have this attached to a smartphone is iniquitous and inequitable. Not everyone has a smartphone or even wants a smartphone, so how is this going to work? I would therefore like to register my VERY STRONG OPPOSITION TO THESE REGULATIONS. The ID card is sufficient - why change a system that works to one that is fraught with problems for citizens?	Wendy	KwaZulu-Natal		self-employed
	2026-05-25 09:00:08	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Just another step for the African National COMMUNIST party. Every citizen has the right, or in this country should have the right, to freedom. It is clear with this policy that the government wants to control and force their citizens by knowing who you are, what exactly you do, what you spend your time and money on. Force is an indication of weak to no leadership. Leave the good people of South Africa alone. I do not support this policy because it is one of the first steps to a failing and over reaching government.	Eduan	Gauteng		employed individual
	2026-05-25 08:59:41	No I do not	All of the above	Corporate Interoperability & Privacy Creep	This is an infringement of privacy. It is dangerous giving so much control and power to our present government which does not have a good record of dealing honestly and ethically with us. It also makes it easy for the globalists who I definately am not in favour of.	Carrol	Western Cape		
	2026-05-25 08:58:51	No I do not	All of the above	Corporate Interoperability & Privacy Creep	This digital ID proposal is a catastrophic overreach dressed up as convenience. It would bind every South African's legal existence to a smartphone app controlled by the same Department of Home Affairs that already cannot run basic services without multi-hour queues, lost documents, and systemic dysfunction. The scheme creates a single, live, centrally managed identity token inside the MyMzansi app, cryptographically locked to one specific device, with real-time data pipelines pushed out to banks and telecoms. It is not modernisation. It is the construction of a high-value, high-visibility target wrapped around the most fundamental record of who you are. South Africa's public sector already leaks data with depressing regularity. Transnet was crippled by ransomware. Postbank exposed millions of grant recipients. Police records, municipal systems, and SITA infrastructure have all been breached or claimed breached in recent years. Now the plan is to wire the authoritative population register directly into corporate networks via "secure APIs" so that address or phone number changes broadcast in near real-time to every accredited private entity that has a "Verified Relationship" recorded against you. The attack surface does not shrink; it explodes. Every additional server, every API endpoint, every bank backend becomes another vector. The people who cannot keep existing systems secure now want to make the master identity database live and interconnected. That is not courage. It is recklessness elevated to policy. The device-binding mechanism is especially cruel in this environment. Your digital credential is cryptographically married to a single handset. Lose the phone, have it stolen in one of the smash-and-grabs that define daily life in many cities, or simply have it damaged, and the credential is immediately suspect or revoked. Recovery processes are not detailed with any credible remote pathway. The likely outcome for most people is another physical pilgrimage to Home Affairs or an accredited partner to re-enrol. In a country where phone theft is routine and insurance payouts are slow, this turns ordinary misfortune into instant administrative exile from banking, contracts, and services. The "gold standard in cybersecurity" becomes a single point of catastrophic personal failure. Facial recognition with liveness detection for remote renewal sounds sophisticated until it meets South African realities. Lighting conditions, older phones, varying skin tones, ageing faces, and the inevitable false rejects will create friction. More importantly, it normalises the routine capture and central storage of biometric templates by a department with a track record of losing ordinary data. Once collected at scale, those templates do not disappear when a future administration decides the rules need tightening. The technology creates the infrastructure for persistent biometric surveillance even if today's regulations claim to limit it. The 10-year physical verification rule exposes the entire "Home Affairs @ home" slogan as a lie. The digital credential expires after five years and can be renewed remotely by facial scan, yet if you have not performed an in-person touchpoint with Home Affairs or an accredited entity inside any rolling ten-year window, the credential lapses entirely. Heavy users of the app who never visit a physical office still get forced back into the queues. It is a deliberate trap: adopt the convenient digital version and you remain on a timer that eventually demands the very physical bureaucracy the system was supposedly designed to escape. The 30-day notification obligation for changes of address, phone number or email, enforced through downgraded Identity Assurance Levels, is bureaucratic harassment codified into law. Life happens. People move, change numbers, travel for work, or live in informal arrangements. Missing the arbitrary deadline does not trigger a fine in every case; it quietly degrades your assurance score. Banks and other entities then see a lower-confidence record and can refuse or delay transactions. This is not gentle nudging. It is the state inserting itself into the mundane details of your life and punishing administrative oversight with degraded access to the economy. The mechanism is already there for selective enforcement whenever authorities decide certain citizens have become inconvenient. The tiered Identity Assurance Level itself is the most dangerous precedent. It creates an internal, algorithmic judgement of how much the state "trusts" your record based on your compliance with notification rules and verification rituals. Lower the score and doors quietly close on higher-value transactions. This is behavioural scoring by another name. It does not need to be called a social credit system to function like one. Once the infrastructure exists to rate citizens' administrative compliance in real time and attach consequences to that rating, future expansions become trivial. The regulations may claim limits today. Infrastructure does not respect those limits once built. Real-time synchronisation with private corporations further erodes any remaining boundary between civic record and commercial data. Even if current text limits sharing to "minimum mandatory details" and invokes POPIA, the pipes are being laid for continuous, automated updates across multiple third-party servers. Each additional connection increases leakage risk and creates permanent commercial interest in the data flows. The claim that corporations are banned from profiling or commercialisation is only as strong as the next amendment or the next budget pressure. History shows these boundaries rarely hold when convenient data pipelines already exist. The scheme also hardens digital exclusion. Millions of South Africans still lack reliable smartphones, consistent data, or the digital literacy assumed by app-based identity. The regulations contain vague language about not unreasonably excluding non-smartphone users, yet every incentive in the system pushes banks, government departments, and service providers toward the digital channel because it is cheaper and faster for them. Physical ID holders will face longer processes, reduced support, and quiet deprioritisation. The "voluntary" label is a fig leaf. Once the infrastructure optimises for the app, choosing to remain physical becomes a self-inflicted disadvantage. Home Affairs has demonstrated neither the technical competence nor the institutional integrity required for this project. Cryptographic claims on paper mean nothing when the human systems around them are porous, politicised, and under-resourced. The same department that struggles with basic Smart ID production now wants custody of device-bound cryptographic keys and live biometric-linked records. Trusting it with this architecture is not prudent governance. It is institutional self-delusion. The proposal does not merely digitise an existing document. It transforms identity from a relatively static civic fact into a revocable, expiring, device-dependent, compliance-scored token that can be degraded by algorithm and broadcast across corporate networks. It does so in a society already struggling with crime, inequality, state capacity, and data protection failures. The result is not efficiency. It is a centralised chokepoint for everyday life, built by an institution that has repeatedly proven it cannot be trusted with less sensitive responsibilities. Every element — the device lock-in, the forced physical resets, the notification penalties, the assurance scoring, the expanded data sharing, the biometric collection, and the reliance on chronically weak state IT — compounds the others. Together they create a system that is brittle, exclusionary, and primed for both technical failure and future abuse. South Africans should reject it outright.	D	Western Cape		business owner

	2026-05-25 08:51:19	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Our basic rights to privacy are not being respected as it is. Not even following the so called POPIA regulations with telemarketing, how is our most valuable information going to be protected? Who is going to be responsible for safeguarding it and who will get or buy access to the data? Where will it be hosted and what are the guardrails for it? What is the regulations when our identities are being used to make financial payments and how are we going to proof that it was not us? What about the data capturing all our movements and habits. Before we know it we are going to be restricted to certain areas or activities. It is currently such a difficult procedure to get finance from a bank with their new ways to approve or not approve a loan without real insight to a person or the circumstances, what other restrictions are going to be imposed due to this. How ridiculous it is that if a phone gets stolen you will need to go and stand in a queue for how long just to be able to go about your day. Not to say that you will be online when you are finished at home affairs or that you will be able to log into the app and continue. Money making and bribery expansion with this new draft, so many ways this can be done it is not even worth mentioning all of them. We are free citizens of the Republic of South Africa, not slaves, not pawns not here to be overruled and constraint by the government.	Thelmarie	Gauteng

	2026-05-25 08:31:36	No I do not	All of the above	Corporate Interoperability & Privacy Creep	As a concerned citizen of South Africa, I oppose the proposed digital identity regulations due to the serious risks they pose to privacy, accessibility, and civil liberties. An identity document is not merely a form of identification; it is essential for accessing banking, employment, communication, travel, and voting rights. The proposed system enables extensive real-time data sharing between government and private corporations, introduces punitive “identity assurance” scoring that could unfairly restrict access to services, and creates dangerous dependence on a single smartphone device in a country with high rates of theft. The regulations also risk excluding vulnerable citizens through burdensome renewal requirements and lay the groundwork for future surveillance and social-credit-style control systems. South Africans deserve a secure, transparent, and rights-based identity system that protects freedom and dignity rather than undermining them.	Angelique	North West		employed individual
	2026-05-25 08:31:10	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Digital ID must be seen for what it is, viz. tighter control, and less freedom for us, the people. It is a big step required in the move towards "one world government", which is being fervently pursued by the elite psychopaths who own the largest portion of the world's monetary wealth. Sadly, the DA and ANC are the lap dogs of these Elite's who sponsor political parties across the globe, to help them achieve their goals. WE MUST NOT COMPLY! We shall protect our sovereignty with our lives, because a life without freedom is no life at all.	Umesh	KwaZulu-Natal		employed individual

	2026-05-25 08:07:06	No I do not	All of the above	Corporate Interoperability & Privacy Creep	I am surprised the minister supports this. This will be the thin edge of the wedge taking away our liberties. What is next? A chip under the skin, your ID number tattooed on your forehead? Which cronies will benefit from this? The government can't manage driver's licences and they want to do this! Just run the country properly, do away with the graft and corruption, and this would not be necessary. It seems that the politicians just make more systems that provide even more avenues for corruption. What if you don't have or don't want a cell phone? Will that be the next "requirement" to live in what is left of this country? Roll on self determination!	Ian	Western Cape

	2026-05-25 07:32:33	No I do not	All of the above	Corporate Interoperability & Privacy Creep	The SA government has proven over the years that they are not trustworthy. All laws are just steamrollered ahead, no matter the opposition to it. In the same manner digital services are not totally safe either, and open to breaches and theft. This digital ID system is just a new way to control and profile very individual, destroying any semblance of freedom. It is a trap to ensnare every citizen, and to actually make life even harder. A life that will totally be controlled by smart phones (and the government) even for those who cannot afford expensive instruments. When a cell tower is down, communication will also be blocked. This is not acceptable at all. It is an emphatical NO from me.	Letty	Gauteng		retired
	2026-05-25 07:30:39	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Although the regulations explicitly ban profiling, commercialisation, and open-ended intelligence gathering, this fluid exchange of live citizen data across corporate API channels raises red flags. Automating data synchronization loops between state databases and private financial/telecom corporate giants chips away at the wall separating public civic records from private commercial infrastructure. 	2026-05-25 06:49:58	No I do not	All of the above	Corporate Interoperability & Privacy Creep	I oppose the Draft Identification Regulations, 2026 in their current form, for the following reasons: First, the proposal to synchronise the National Population Register with private banks and telecoms in real time erases the constitutional boundary between public civic data and private commercial databases. Citizens should control when and how their information flows to third parties, not have it automated by law. Second, the Identity Assurance Level mechanism automatically penalises citizens who fail to report routine life changes within 30 days. This constitutes administrative action without notice, without the right to make representations, and without a right of appeal. It is inconsistent with PAJA and section 33 of the Constitution. Third, tying a legal identity credential to a single smartphone, with no specified remote recovery pathway, is reckless in a country with South Africa's rates of mobile device theft. Losing your phone should not mean losing access to your bank account, healthcare, and employment verification simultaneously. Fourth, the 10-year mandatory in-person re-verification rule will trap rural citizens, the elderly, and those abroad in a bureaucratic loop. A citizen who has successfully renewed their credential biometrically should not be forced back to a Home Affairs office solely because of elapsed time. Finally, centralising dynamic biometric data and behavioural compliance scores in a single state-held repository creates the infrastructure for future surveillance or a social credit system, regardless of current statutory intent. Function creep in comparable jurisdictions is well-documented. I urge the Department to adopt a Self-Sovereign Identity architecture, in line with the W3C Verifiable Credentials standard now in use in the EU, where citizens hold their own cryptographic credentials and third parties receive only a yes/no confirmation without accessing or storing the underlying data. This achieves the modernisation goal without the surveillance risk. I request substantive engagement with these concerns before the regulations are finalised.	Pierre	Gauteng		
	2026-05-25 06:43:49	No I do not	All of the above	Corporate Interoperability & Privacy Creep	There seems to be a number of provisions that make it more difficult to manage one's own identity.	Peter	Gauteng		employed individual

	2026-05-25 05:55:22	No I do not	All of the above	Corporate Interoperability & Privacy Creep	The ANC are so corrupt. This is just another way to do more corruption. The Government such be voted out as they have no vote of confidence any more. This Idea ? is another option for them to hide what they are doing wrong and trying bully tactics to force us to Obey them. This new ID way is so that they can get more illegal voters on line to keep them in power. They are scared to loose at the next elections.	Heinrich	Western Cape		retired
	2026-05-25 05:51:19	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services.	Marie	Gauteng		
	2026-05-25 05:46:00	No I do not	All of the above	Corporate Interoperability & Privacy Creep	This is an unnecessary "fix" for something that isn't broken. We also cannot trust the South Africa government to implement digital systems. They switched something as simple as learning licenses tests to digital format and in some places we haven't had access to learner testing in months due to constant system outages and system inoperability. This switch will just be another in a long line of failures form the South African government which most likely has discrimination and marginalisation usage in mind with this.	Richard	Western Cape

	2026-05-24 20:21:00	No I do not	All of the above	Corporate Interoperability & Privacy Creep	I doubt anyone will read this message. But if anyone does, thank you. This form of identification puts too much power in the hands of the government. The government is there to serve the citizen, not the other way around. A biometric record of a person's identity together with a physical object such as a booklet or plastic card is sufficient. Cards do not need batteries or software upgrades. They are not damaged by water. They are cheap to produce, cheap to replace, and 100% reliable if used in conjunction with biometric data. Consider the poor. Will the government also be providing smartphones to citizens free of charge? Considering our financial position, that is a stretch of the imagination for any reasonable person. Affordable, durable, accessible, forever-valid identification documents are all we need. There is nothing that the smartphone app offers that can not be done perfectly well with software already. Demanding that citizens maintain a state-regulated software application on devices they own poses unacceptable risk. None of us trust the government to do it's job even today. What makes anyone think we will trust it tomorrow?	Dane	Eastern Cape		employed individual

	2026-05-24 19:52:32	No I do not	All of the above	Corporate Interoperability & Privacy Creep	This digital ID system should be stopped immediately, not only in SA but the world over. It lends itself to Fascism as it can be used for authoritarian, totalitarian and absolutist ends. It is unnecessary. The current system works perfectly well and should continue as is. The digital ID means the state can have absolute powers over citizens. What happens to our rights and liberties as citizens? If citizens did not do as the State commanded the state could shut this defiant out of the system and thereby forced compliance. Our freedom is virtually in the hands of the state. WE REJECT THIS NEW SYSTEM COMPLETELY AND UNCONDITIONALLY!	TLHABANE MOKHINE	Gauteng		employed individual

	2026-05-24 18:28:46	No I do not	All of the above	Corporate Interoperability & Privacy Creep	This is draconian at any level and totally anti-democratic,. The DA is showing how deeply in the pockets of global white monopolism its leadership really is. A real understanding of both capitalism and socialism reveals that the prevailing global economic system is monopolism, the prevailing social system feudalism and the prevailing political system oligarchic/dictatorial. It seems that the DA Minister of Home Affairs, instead of sorting out inefficiencies, incompetence and corruption in his department is looking to promote the quick-fixes that many Apps are, as the permanent solutions needed. Both he and the DA are in derelict of their duties and responsibilities as elected officials and the supposed official opposition in South Africa. DA governed municipalities and their only province may be more efficiently run, but then so was Nazi Germany compared to the rest of Europe at the time.	Gavin	Eastern Cape		
	2026-05-24 18:25:04	No I do not	All of the above	Corporate Interoperability & Privacy Creep	South Africa's public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic "attack surface." If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly.	Betty	Limpopo		retired

	2026-05-24 16:19:51	No I do not	All of the above	Corporate Interoperability & Privacy Creep	This path forward not only excludes those that do not use or do not want a smartphone, but in an environment where hacking and digital security are already such an issue is poses a severe risk for identity theft and manipulation through digital channels. Furthermore as if corporate giants don't get enough of our information, search history, browsing patterns etc. to target us with endless ads and attempts to sell us everything under the sun, providing them access to very personal and private information is just another way they can hone in on harrassing us with products we don't want. I am furthermore concerned about those who travel out of the country frequently, what happens if their smartphone is lost or stolen abroad? Do they cease to exist to the state? I also hate the idea of a digital social rewards system. Forced government compliance to do whatever they want with zero way to argue or find recourse, it's all very totalitarian/dictatorship.	Calliopie	Eastern Cape

	2026-05-24 16:04:49	No I do not	All of the above	Corporate Interoperability & Privacy Creep	The South African government has shown citizens how corrupt they are and how little accountability for corruption there is, so a system like this cannot work here. South Africa has weak cybersecurity, and does not have good digital infrastructure, or robust privacy laws. BEE has prevented Starlink and other service providers from coming in and assisting South Africa with these failures. Failures will stem from over-reliance on biometrics in low-connectivity areas as well as weak data protection enforcement. And with function creep being likely in this government, what stops them from expanding this system beyond the original intent? Then we become a controlled nation like China. This is too dangerous. 	2026-05-24 14:29:07	No I do not	All of the above	Corporate Interoperability & Privacy Creep	A system like this gives my government who I elect, and unelected beurocratic officials too much leeway to block my individual rights. This is clearly a case of more convenience for beurocrats at the expense of privacy and possibly freedoms granted by the constitution of SA. Privacy and freedoms should trump any efficiency or convenience in this case. If any system of digital ID is created, it should always be made voluntary with an opt out clause for citizens at any time. This will allow real time trial for everyone. If the opt out clause is changed or not honored at any time , the law should be made redundant for digital IDs immediately.	Ken	Gauteng

	2026-05-24 14:12:53	No I do not	All of the above	Corporate Interoperability & Privacy Creep	We are already monitored far too much through tracking credit card activity, social media, and advertising spyware. The introduction of digital ID linked to one's phone means that absolutely nothing can be guaranteed to be private. It will be a case of who will pay the most for one's information, and they will get access to it. Today's world is a scary place anyway, and the possibility of being digitally excluded from identificatio, financial transactions , voting rights etc. by someone out there in cyberspace, for some nefarious reason, is terrifying.	Jane	Gauteng		retired

	2026-05-24 13:43:29	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Dear Mr Hutchinson, Thank you for bringing this matter to public attention. I support technological progress and reasonable digitisation where it genuinely improves efficiency, reduces corruption, and simplifies access to services. If this proposal were limited to optional digital convenience alongside strong protections for citizens, I would have no objection. However, I am deeply concerned that the current draft regulations go far beyond simple digitisation. The framework appears to centralise identity, behavioural tracking, and real-time data integration between government and private entities in a manner that creates serious risks to privacy, autonomy, and constitutional freedoms. In particular, I object to: * The creation of interconnected state and corporate data-sharing systems without sufficiently clear limits, oversight, and consent protections. * The concept of “Identity Assurance Levels” that could effectively become a form of algorithmic social scoring with real-world consequences for ordinary citizens. * The vulnerability created by linking legal identity access to a single digital device in a country with high levels of phone theft and infrastructure instability. * The long-term risk of “function creep,” where systems introduced for convenience gradually evolve into tools for surveillance, exclusion, or coercive compliance. * The increasing dependency on centralised digital systems for participation in everyday civic and economic life. I believe citizens must retain meaningful freedom to operate outside compulsory digital identity ecosystems. Physical identification methods and non-digital access pathways should remain permanently protected and fully equal under the law. Technology should serve citizens, not condition citizens into dependence on systems that may later be expanded beyond their original purpose. I therefore urge the Department of Home Affairs to substantially strengthen safeguards around privacy, consent, decentralisation, data ownership, opt-out rights, transparency, and constitutional protections before any such framework is implemented. South Africans should not be required to trade sovereignty, privacy, and freedom for administrative convenience. Kind regards,	Tessa	North West		retired

	2026-05-24 12:39:01	No I do not	All of the above	Corporate Interoperability & Privacy Creep	I strongly oppose the implementation of a centralised digital ID system as proposed. While presented as a modernisation tool, this creates a dangerous single point of failure for every citizen’s identity, financial access, and daily life. A smartphone-dependent digital ID exposes individuals to serious risks: device theft, hacking, network outages, and mass surveillance. Furthermore it forces every person to always have a smartphone with them even if it is not their choice to own one. It hands the state unprecedented power to monitor, restrict, or exclude citizens from services at will. Privacy is fundamentally eroded when every transaction, movement, and interaction can be tracked in real time. Centralised digital IDs are vulnerable to data breaches and authoritarian abuse. We should not sacrifice our fundamental rights to privacy, freedom, and resilience for the state’s convenience and control.	Adrian	Gauteng		employed individual
	2026-05-24 12:33:17	No I do not	All of the above	Corporate Interoperability & Privacy Creep	The Concern: South Africa’s public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic “attack surface.” If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. Although the regulations explicitly ban profiling, commercialisation, and open-ended intelligence gathering, this fluid exchange of live citizen data across corporate API channels raises red flags. Automating data synchronization loops between state databases and private financial/telecom corporate giants chips away at the wall separating public civic records from private commercial infrastructure. 	2026-05-24 12:22:21	No I do not	All of the above	Corporate Interoperability & Privacy Creep	South Africa prides itself on its foundational principles of respect for all her people's dignity and their right to self-determination. Our constitution guarantees our human rights under the principles of democracy and justice. No system can conflict more deeply with these principles than one that seeks to fuse corporate and state power (a pattern of power typically seen in fascist dictatorships of the past). There is no need for the state or any private institution to collate near real-time information about her citizens nor their interactions with any system, be that financial, economic, governmental or otherwise, except if the state expects to exert some form of precise control. A digital identity is not a stepping stone towards tracking the exact movements, purchases and interactions of citizens; it is the autocratic system dictatorships dream of, fully-realized. I do not trust any entity, government or corporate entity with these powers. South Africa's constitution is globally acknowledged as a triumph in the face of an unfair past. For the sake of all future generations, we must ensure that we maintain our constitution and founding principles. This act cannot be passed in any shape or form.	Edward	Western Cape		self-employed

Good idea for you ‘elected’ people - go back to Davos and tell your masters that your slavers will not comply.	Alexander	KwaZulu-Natal		retired

	2026-05-24 09:14:13	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Expansion of Public–Private Data Interoperability The proposed framework appears to envisage the establishment of interoperable, real-time data-sharing arrangements between the state and accredited private-sector entities, including financial institutions and telecommunications providers. Under such a model, changes to personal information recorded by a participating private entity may automatically synchronise with state-held identity records. This approach raises important concerns regarding data governance, consent, accountability, and the distinction between public administrative records and privately held personal information. Consideration should therefore be given to the scope of permissible data exchange, auditability, user notification requirements, and mechanisms for informed consent. Automated Identity Assurance and Service Access Risks The framework may introduce a system of "identity assurance" or confidence-level assessment linked to the accuracy and currency of citizen information. In circumstances where individuals fail to update prescribed personal details within stipulated timeframes, there is a possibility that their assurance status could be downgraded automatically. Such a mechanism could have unintended consequences, including the disruption of access to financial services, digital authentication systems, or public-sector transactions. Clear safeguards are therefore necessary to ensure that administrative non-compliance does not result in disproportionate exclusion from essential services. Transparent appeal and remediation procedures should also be incorporated. Device Dependency and Identity Recovery Vulnerabilities The proposal's apparent reliance on smartphone-based digital identity credentials introduces operational risks in jurisdictions with elevated levels of mobile device theft and loss. Where identity credentials are cryptographically linked to a single registered device, the loss or theft of that device could result in immediate suspension of access to digital identity services. In the absence of clearly defined recovery and restoration mechanisms, affected individuals may face temporary inability to authenticate themselves for essential transactions. The framework should therefore provide secure and accessible identity recovery procedures, including multi-device support, offline recovery options, and alternative verification pathways. Periodic Physical Revalidation Requirements Although the framework may permit remote or app-based credential renewal, provisions requiring periodic in-person verification after extended periods without physical engagement could impose significant administrative burdens on citizens. Individuals who do not interact physically with a designated government office or authorised partner institution within the prescribed timeframe may be required to undergo full re-enrolment procedures. This may create practical challenges for rural communities, elderly persons, individuals with limited mobility, and citizens residing abroad. Policymakers should therefore consider proportionality, accessibility, and service capacity implications when designing revalidation requirements. Potential for Function Creep and Expanded Surveillance Capability The centralisation of biometric identifiers, behavioural verification variables, and continuously updated personal data creates infrastructure that may, over time, be expanded beyond its original administrative purpose. International experience demonstrates that identity systems introduced for service delivery or fraud prevention may subsequently be utilised for broader law-enforcement, financial-monitoring, or regulatory functions. To mitigate the risk of function creep, the framework should incorporate robust legislative safeguards governing secondary use of data, independent oversight mechanisms, judicial accountability, and strict limitations on data-sharing across agencies. Public trust in the system will depend substantially on transparency, proportionality, and enforceable privacy protections.	Stephen	Western Cape		business owner

	2026-05-24 06:06:51	No I do not	All of the above	Corporate Interoperability & Privacy Creep	There are many reasons why this bill is not a good idea. The main reason is the ever increasing over reach of government and corporate business. The desire to make things more streamlined and ‘convenient’ are slowly eating away at our abilities are people to make our own decisions in our own lives. The digital ID framework is a dangerous precedent that continues to give government more and more control of it’s people. Instead of assisting us to live better, it is an attempt to control us more even though the proof is there that they can not control the basic functions of service delivery in this country. The lose of a phone is already a major inconvenience and then with digital ID it will make it crippling. Also a major concern is security and hacking potential that opens everyone up to fraud. This bill is not a step forward for South Africa and its people. This bill only works for the benefit of government and corporate corruption.	Matthew	Limpopo		employed individual
	2026-05-24 06:05:21	No I do not	All of the above	Corporate Interoperability & Privacy Creep	I think privacy needs to be respected as part of the constitution	Robyn	Gauteng		business owner
	2026-05-24 06:04:35	No I do not	All of the above	Corporate Interoperability & Privacy Creep	I have general concerns about digital literacy and access to technology. More worrying is the specific issue that government departments have some of the worst IT systems. Government appears to treat cybersecurity as an optional extra. There is a lack of transparency and accountability from government, the banks and big corporations around data breaches. Home Affairs already can't protect a citizen's identity from fraudsters. I think these regulations are over-ambituous and downright dangerous. I think these regulations overstep and give too much access and control to government and corporations while ordinary citizens must shoulder all the risk. The proposed system is open to abuse. No system should be able to restrict or cut off your access to YOUR OWN IDENTITY.	Abalene	Western Cape		employed individual
	2026-05-24 06:03:21	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Privacy attacked.	Ian	Western Cape		retired

	2026-05-23 15:41:12	No I do not	All of the above	Corporate Interoperability & Privacy Creep	The Concern: South Africa's public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic "attack surface." If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. Although the regulations explicitly ban profiling, commercialisation, and open-ended intelligence gathering, this fluid exchange of live citizen data across corporate API channels raises red flags. Automating data synchronization loops between state databases and private financial/telecom corporate giants chips away at the wall separating public civic records from private commercial infrastructure. Forcing citizens to log formal changes within a rigid 30-day window for routine life adjustments like swapping an email address or moving apartments is highly impractical. Lowering a citizen's "Identity Assurance Level" serves as a hidden penalty, which could lead to sudden, frustrating rejections or delays when trying to execute everyday high-security actions like opening an account or authenticating an online transaction. 	2026-05-23 15:01:12	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Information is power. The idea of big corporates gaining more and more access to personal, private information and the power and control that gives them over us is highly concerning. The blurred lines between the State and big business, and serving the interests of big business, will lead to the erosion of our civic rights and liberties. Our online banking systems are some of the best in the world yet they are still vulnerable to cyber attacks, so how can the government assure us 100% that our information is in safe hands? They can't. The mandatory 10 year renewal is unacceptable not only because of the bottlenecks when we need to appear in person to prove who we are, but to give a machine/system that much power and control over our lives is totally unthinkable. What happens to large portions of our population who do not have access to wifi and digital platforms or who are not tech savvy? They will fall by the wayside as forgotten people, excluded from what they are entitled to from birth. We cannot allow this technology to take us backwards as human beings when our worth will be decided by a computer algorithm. The EU governments are currently standing up to the likes of the Rockefeller Foundation, Microsoft and big pharma who are coercing people to sign up for digital identities which include access to personal medical information. This is against EU laws and EU citizens are being warned not to sign up to any of these platforms no matter how good the benefits sound. Where does the erosion of our rights and privacy end? Change the parameters. How can the government serve "US the PEOPLE" instead of feeding us to big business? Then maybe we can find a way to modernise a system that works for the people without handing power and control to entities who's main purpose is profit.	Lisa	Western Cape		business owner

	2026-05-23 14:35:26	No I do not	All of the above	Corporate Interoperability & Privacy Creep	I believe the proposed Digital Identity framework is a profoundly dangerous step toward centralised state and corporate control over the everyday lives of South Africans. While it is presented as a modern convenience, the regulations create a system in which a citizen's ability to function in society becomes dependent on a permanently connected digital identity infrastructure vulnerable to abuse, exclusion, technical failure, and surveillance. The proposed integration between government databases and private corporations such as banks and telecommunications providers erodes the separation between public authority and private commercial data, creating a deeply intrusive ecosystem of continuous monitoring and automated profiling. The introduction of "Identity Assurance Levels" effectively establishes a behavioural scoring mechanism that can penalise ordinary citizens for administrative oversights, potentially restricting access to essential services without meaningful due process. In a country plagued by high levels of phone theft, violent crime, infrastructure instability, and digital inequality, tying legal identity to a single smartphone device is reckless and exclusionary. Citizens risk being instantly locked out of their own identities due to theft, technical malfunction, cybercrime, or connectivity failures, with no clearly defined emergency recovery safeguards. Most concerning of all, these regulations lay the technical foundation for future function creep: a centralised biometric identity system capable of evolving into a surveillance and compliance regime far beyond its original mandate. Once such infrastructure exists, future governments may expand its powers incrementally without adequate democratic oversight. A democratic society should reduce dependence on centralised digital control, not entrench it. Identity systems must remain tools that serve citizens — not mechanisms through which citizens become permanently trackable, scoreable, and administratively controllable.	Gary	Gauteng		business owner

	2026-05-23 14:29:59	No I do not	All of the above	Corporate Interoperability & Privacy Creep	This is forcing everyone to have a smart phone and be able to use it. Many people dont have smart phones and many more are not that smart on their smart phones. Thousands of smart phones are stolen or lost every day. There are many people who hack smart phones. Your identity could also be stolen and this would cause many problems for the individual and the government. This is also allowing many people to have access to your ID and personal information. This could also lead to corruption both in and outside of government. South Africa is years away from being ready for this and if implemented would be a real disaster. I cant believe that this idea was even brought up now when we have so many other more important things to sort out. A real disaster waiting to happen.	Murray	KwaZulu-Natal		retired

	2026-05-23 13:03:25	No I do not	All of the above	Corporate Interoperability & Privacy Creep	South Africans are people and should not be treated like criminals and terrorists. Our freedom, privacy and social lifestyle as well as our social security, should be left in our hands only. This is againt our Constitutional rights Civic groups, privacy advocates, and cybersecurity experts argue that while modernisation is welcome, the draft regulations introduce expansive risks and administrative penalties that demand much tighter constitutional safeguards. Their core arguments include: Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential	Filippus	Limpopo

	2026-05-23 13:02:12	No I do not	All of the above	Corporate Interoperability & Privacy Creep	One can have id's on a app, but having it locked to a device, especially is south africa(we have new phones almost every 3 years and not even noting theft or loss of device) The Ideaof an more accessible id is great, but this is where the technical implementation matters. Your phone is not your id... you're ID is your ID. It should not change or get destroyed or demoted no matter wat the situation. It is the one thing in Our turbulent lives that should not be impacted by any function. Have you're ID on your Cell, but it is only to view your id when you don't have the fiscal one on hand. This function should not be a new stick to keep the people in check. It should empower us for ease of access. A guaranteed digital path for when the worst have transpired. Technology should be used of enhancing everyone's experience. Not adding Hurdles....	Kallie	KwaZulu-Natal		employed individual

	2026-05-23 10:00:27	No I do not	All of the above	Corporate Interoperability & Privacy Creep	The move to centralised digital identities is a worldwide problem. Even in Countries with relatively well functioning systems the potential that centralised digital ID's provide for total tyranny is very real and disturbing. The many reasons for concern are well summarised : Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-23 09:45:01	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Although the regulations explicitly ban profiling, commercialisation, and open-ended intelligence gathering, this fluid exchange of live citizen data across corporate API channels raises red flags. Automating data synchronization loops between state databases and private financial/telecom corporate giants chips away at the wall separating public civic records from private commercial infrastructure and given the inherent corruption in state departments it opens us citizens up to identity theft and other possible nefarious activities.	John	Western Cape		self-employed
	2026-05-23 09:38:57	No I do not	All of the above	Corporate Interoperability & Privacy Creep	This sounds dangerously close to the Chinese communist party's method of control. I stick to be against all of the above even though you also force me to pick one. This is going against the freedom they so much advocate in the constitution. This sounds more than control to me, they can't even control the criminals due to fear now they want to control the normal citizens to flex their muscles, like paper tigers. Totally against all of the above	William	North West		employed individual

	2026-05-23 09:21:49	No I do not	All of the above	Corporate Interoperability & Privacy Creep	I strongly object to the draft Identification Regulations, 2026 in their current form. While digital modernisation may improve administrative efficiency, these regulations raise serious constitutional, privacy, cyber security, and civil liberty concerns that have not been adequately addressed. The proposed Digital Identity Credential creates an unprecedented level of centralised state and private-sector data integration. Allowing banks, telecommunications providers, and other private entities to synchronise personal information directly with the population register in near real-time creates significant risks relating to privacy, surveillance, data abuse, and cyber security. South Africans should not be forced into a system where routine interactions with private companies automatically feed into a centralised state identity infrastructure. The regulations also fail to adequately protect citizens against the realities of crime and digital exclusion in South Africa. Binding a person's legal identity to a single smartphone is deeply concerning in a country with extremely high levels of theft, fraud, SIM-swap crime, and unequal access to reliable technology. The draft regulations do not clearly provide a secure and immediate recovery mechanism for citizens who lose access to their devices, creating the risk of financial exclusion and administrative paralysis. I am particularly concerned about the proposed "Identity Assurance Level" system, where citizens may effectively be penalised through algorithmic downgrading if they fail to report ordinary life changes within 30 days. This creates the potential for arbitrary exclusion from essential services without proper procedural safeguards, transparency, or meaningful avenues for appeal. Such a system risks violating constitutional rights to dignity, equality, privacy, and just administrative action. The regulations also fail to adequately address the enormous cyber security risks associated with centralising sensitive biometric, identity, banking-linked, and communication-related information into a single interconnected digital ecosystem. South Africa has already experienced multiple serious data breaches across both government and private institutions, demonstrating that no digital system is immune from compromise. A successful cyberattack on a centralised digital identity platform could expose millions of citizens to identity theft, financial fraud, impersonation, blackmail, and long-term biometric compromise. Unlike passwords, biometric identifiers such as facial data and fingerprints cannot simply be changed once exposed. The proposed system creates a dangerous single point of failure. If the MyMzansi platform experiences hacking, infrastructure outages, technical failures, ransomware attacks, or denial-of-service attacks, citizens could suddenly lose access to essential identity verification functions required for banking, healthcare, employment, travel, or government services. The regulations appear to provide insufficient detail regarding independent cyber security oversight, mandatory security auditing, liability for data breaches, breach notification requirements, protections against insider abuse, disaster recovery procedures, offline emergency access mechanisms, and safeguards against AI-driven profiling or automated decision-making. The requirement that citizens must physically present themselves every 10 years or risk losing their digital identity credential also undermines claims of accessibility and convenience, especially for elderly persons, disabled citizens, rural communities, and South Africans living abroad. In a country affected by load shedding, unreliable network coverage, expensive mobile data, and unequal smartphone access, constitutional rights and access to essential services should never become dependent on continuous access to private digital infrastructure. Most concerning is that these regulations create the technical and legal foundation for future function creep, mass surveillance, behavioural profiling, and excessive state control over citizens' identities and access to services. Once such infrastructure exists, future governments may expand its use far beyond its original purpose. I therefore request that these regulations be withdrawn and substantially reconsidered following broader public consultation, independent constitutional review, stronger privacy protections, clearer limitations on data-sharing, robust cyber security safeguards, and legally enforceable protections against abuse, exclusion, surveillance, and algorithmic decision-making. 	2026-05-23 06:50:47	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Considering how the USA, UK, Israel, Russia and Ukraine have been using this exact type of centralised digital data persecute individuals and harm entire populations, we need to be cautious as a country with our political history and sensitivity. The risk of abuse of the system in the near future is highly possible. Just imagine how the Xenophobia would be focused even more intensely on people, how racism and religious persecution could corrupt the good intentions and convenience of these digital systems. We already have centralised data systems and corporate interests already have too much data, we really don't need that linked directly to our location data, and social preference.	Adrian	Western Cape		business owner

	2026-05-23 03:07:13	No I do not	All of the above	Corporate Interoperability & Privacy Creep	PUBLIC CONSTITUTIONAL DECLARATION Civilian Concerns Regarding the Proposed MyMzansi Digital Identity Credential Framework 7. SPECIFIC CIVILIAN CONCERNS REGARDING CENTRALIZED DIGITAL IDENTITY We acknowledge the stated governmental objectives of reducing identity fraud, increasing administrative efficiency, and modernizing service delivery. However, modernization must remain subordinate to constitutional protections and may not undermine the freedoms, dignity, and civil autonomy of South African citizens. The proposed smartphone-based Digital Identity Credential housed within a centralized state-controlled mobile application ("MyMzansi") raises substantial constitutional, ethical, and civilian concerns requiring urgent public scrutiny and legal safeguards. 7.1 Centralization of Identity and Power The proposed framework appears to consolidate identity verification, authentication, and civic access into a centralized digital ecosystem. Citizens respectfully submit that excessive centralization introduces unacceptable risks, including: Creation of a single point of failure vulnerable to cyberattacks, outages, technical errors, or administrative abuse; Excessive concentration of citizen data within centralized infrastructure; Increased vulnerability to unauthorized access, misuse, or future repurposing beyond originally stated objectives; Expansion of governmental or institutional influence over lawful participation in daily life. A democratic society must guard against systems in which lawful access to civic participation becomes increasingly dependent upon centralized digital approval structures. Identity should remain an instrument of verification — not a mechanism of dependency. 7.2 Smartphone Dependency and Digital Exclusion The proposed system appears materially dependent upon smartphone ownership, connectivity, software functionality, and digital literacy. This raises serious concerns regarding equality and accessibility for: Elderly citizens; Low-income individuals; Rural communities; Citizens without smartphones; Citizens with damaged, stolen, outdated, or malfunctioning devices; Persons with disabilities; Individuals unable to maintain stable digital access. A constitutional democracy cannot permit essential civil participation to become contingent upon possession of functioning technology. No citizen should lose practical access to banking, employment, healthcare, travel, voting, or identification due to technological barriers. 7.3 Real-Time Private Sector Synchronization The proposal's apparent integration with private-sector institutions raises serious concerns regarding data interoperability, proportionality, and informational privacy. Where digital identity becomes synchronized across sectors such as: Banking; Telecommunications; Healthcare; Employment; Education; Insurance; Commerce; there exists a substantial risk of excessive profiling, behavioral monitoring, unauthorized data sharing, or disproportionate influence over civic life. Citizens reasonably question: Who controls the data? Who accesses the data? How long data is retained? Whether citizens retain meaningful control over personal information; What protections exist against commercial exploitation or future misuse. Citizens respectfully assert that personal identity data must never become a tradable, monitorable, or behaviorally leveraged asset. 7.4 Function Creep and Expansion Risk History demonstrates that technological systems introduced for limited administrative purposes may gradually expand into broader forms of compliance monitoring or conditional access. Citizens express concern regarding potential future expansion beyond identity verification into: Social scoring mechanisms; Transactional monitoring; Automated risk profiling; Conditional access to services; Expanded behavioral or movement tracking. Even where such outcomes are not presently intended, constitutional safeguards must account for foreseeable misuse, future administrations, or policy expansion. The protection of liberty requires preventative legal limitations — not retrospective correction after rights have been diminished. 7.5 Rolling Validation Cycles and Service Lockout Risks The concept of recurring or rolling digital validation raises concern regarding wrongful exclusion caused by: System outages; Biometric failures; Administrative mistakes; Software malfunctions; Cybersecurity incidents; Lost or compromised devices. Where identity becomes digitally dependent, technical malfunction may unintentionally deny citizens access to essential rights. Citizens respectfully submit that no person should face exclusion from lawful participation due to technological error. Rights cannot become temporarily suspended due to failed software verification. 8. CONSENT AND INDIRECT COERCION We respectfully submit that participation ceases to be voluntary when refusal materially restricts access to ordinary life. If access to: Employment; Banking; Healthcare; Voting; Education; Travel; Social participation; becomes practically dependent upon Digital ID participation, citizens are no longer exercising free consent but responding to economic and civic necessity. Consent obtained through dependency is not meaningful consent. 9. REQUEST FOR CONSTITUTIONAL SAFEGUARDS Accordingly, citizens respectfully request that the Government of South Africa guarantee: Permanent lawful non-digital alternatives for all essential services. No compulsory smartphone-based identity requirement for civic participation. No discrimination against citizens declining Digital ID participation. Strict limitations on private-sector synchronization and data sharing. Independent public auditing and cybersecurity oversight. Legally enforceable privacy protections and transparent consent mechanisms. Clear constitutional limits preventing future expansion into surveillance, profiling, or social conditioning systems. Parliamentary and public consultation prior to any compulsory implementation. 10. DECLARATION OF CIVIC POSITION South African citizens affirm that constitutional freedoms must not become conditional upon technological enrollment. We support administrative efficiency where it preserves liberty. We support innovation where it respects consent. We support modernization where it protects dignity. However, we respectfully oppose any framework that may centralize excessive control over identity, erode privacy protections, indirectly compel participation, or place lawful civic existence behind a centralized digital gatekeeping mechanism. The Constitution must remain superior to technological convenience.	Riaan	Western Cape		
	2026-05-23 02:22:25	No I do not	All of the above	Corporate Interoperability & Privacy Creep	On another note... Has the government considered the hacking of this system? I work in IT and I believe this to be a very dangerous move. Two companies I pay monthly for a service have been hacked recently the latest one a car tracking company. You are talking about a nations personal information being placed at risk with one potential hack. Try as companies may to protect their clients with the latest and greatest technology. Hackers can find a way. This could cause absolutely chaos. So no I absolutely do not agree with this move.	Fern	Western Cape		employed individual

	2026-05-22 23:22:17	No I do not	All of the above	Corporate Interoperability & Privacy Creep	I oppose the implementation of a Digital ID system because it creates serious risks for privacy, freedom, security, and human rights. A Digital ID allows governments, corporations, and financial institutions to collect and centralize massive amounts of personal information. This creates the danger of constant surveillance, where every transaction, movement, purchase, medical record, or online activity can be monitored and tracked. Citizens should not have to live under a system where their daily lives can be observed and recorded at all times. Another major concern is loss of personal freedom. If access to banking, transportation, healthcare, employment, or communication becomes linked to a Digital ID, authorities or companies could deny access to essential services with a single click. This gives too much power to centralized systems and creates the possibility of political abuse, discrimination, or social control. Cybersecurity is also a serious problem. No digital system is completely safe. Large databases are constantly targeted by hackers, criminals, and foreign actors. If a Digital ID database is breached, millions of people could suffer identity theft, financial fraud, blackmail, or exposure of private information. Unlike a password, a person's identity cannot simply be replaced. Digital IDs can also increase exclusion and inequality. Elderly people, poor communities, rural populations, and people without reliable internet access may struggle to use mandatory digital systems. Essential rights and services should never depend entirely on owning modern technology or having constant internet access. There is also the danger of function creep. Governments often introduce systems for one purpose and later expand them into other areas. A Digital ID that begins as optional could eventually become mandatory for banking, travel, taxes, voting, healthcare, or even access to the internet. History shows that powers granted during one period are rarely reduced later. A centralized Digital ID system creates a single point of failure. If the system crashes, is hacked, or wrongly flags a person, that individual could instantly lose access to critical services. Mistakes in automated systems are common, and innocent people may suffer without an easy way to appeal. Freedom requires privacy, independence, and the ability to participate in society without constant monitoring. Technology should serve people, not control them. Any identification system that concentrates too much personal data and power into centralized institutions threatens democratic freedoms and individual rights. For these reasons, I believe Digital ID systems are dangerous and should not become mandatory in society.	Ezra	Western Cape		unemployed individual
	2026-05-22 23:19:00	No I do not	All of the above	Corporate Interoperability & Privacy Creep	At age 82 I am too old for this trouble and bother. I lose my phone or drop it too easily - if these Digital ID regulations are implemented, I will forever be in trouble. (I still have all my marbles, live in my hose with my wife, and drive my car.) But I foresee trouble for my children and grandchildren, with all the potential hassles embodied in this scheme. This is a wedge to open the door a crack, which can and will be abused in any imaginable future, pushing the door wide for authoritarian trouble for citizens.	Angus	Western Cape		self-employed

	2026-05-22 19:35:19	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Most government departments have been hacked. So how are they - the government - going to keep my info safe if there is a 'near immediate' update to corporates? And the opposite also applies - most banks have been hacked. With this system my information is being served on a platter to just about anybody who wants access. So what has happened to the Privacy of Information Act (POPI) whereby none of my information may be shared? I am not data for sale. I am a citizen of RSA by birth with rights to autonomy and security. I ABSOLUTELY OPPOSE THIS BILL IN ALL RESPECTS!	L T	Gauteng		self-employed
	2026-05-22 19:25:55	No I do not	All of the above	Corporate Interoperability & Privacy Creep	I would like to express my strong opposition to the government’s proposed digital ID system. In a country with extremely high levels of crime, corruption, and identity fraud, introducing a fully digital identification system creates far more risks than benefits for ordinary citizens. South Africans are already vulnerable to scams, SIM-swap fraud, banking fraud, and identity theft. A digital ID system would make it even easier for criminals to access people’s personal information, steal their identities, and drain their accounts. Once a criminal has access to someone’s digital profile, that person loses control over visa applications, passports, banking, and other essential services. The government claims this system will improve efficiency, yet they cannot account for billions lost to corruption — including pension funds and municipal finances. If they cannot safeguard public money, how can they be trusted to safeguard the digital identities of millions of citizens? There are also practical concerns. Phones are stolen daily in South Africa. If a digital ID is linked to a device, citizens will constantly be at risk of losing access to their identity. Being forced to queue every few years and pay again for renewals simply creates another revenue stream for a system that already struggles with accountability. My fear is that law-abiding citizens will be the ones who suffer most, while criminals will continue to exploit weaknesses in the system. Before implementing such a major change, the government must first demonstrate that it can secure existing systems, reduce corruption, and protect citizens from fraud. Until then, a digital ID system is not only premature — it is dangerous.	Barbara	KwaZulu-Natal		employed individual

	2026-05-22 14:38:06	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Corporate Interoperability & Privacy Creep The regulations empower the Department to record a “Verified Relationship” between a citizen and an accredited private company, such as a bank or mobile network provider. If any core details are changed or verified in person by that business or Home Affairs, the system can automatically broadcast these updated particulars to every other private entity linked via that relationship in near real-time. The Concern: Although the regulations explicitly ban profiling, commercialisation, and open-ended intelligence gathering, this fluid exchange of live citizen data across corporate API channels raises red flags. Automating data synchronization loops between state databases and private financial/telecom corporate giants chips away at the wall separating public civic records from private commercial infrastructure. 	2026-05-21 18:00:02	No I do not	All of the above	Corporate Interoperability & Privacy Creep	While efficiency in civic administration is necessary, this proposed system represents an unacceptable overreach by the state into the private lives of citizens. I reject these regulations in their entirety based on the following grounds: - Infringement on Privacy and Freedom: The integration of real-time corporate data loops between the state, banks, and telecommunications companies permanently compromises individual privacy. It turns a fundamental civic identity document into a tool for constant corporate and state surveillance. - Creation of an Economic "Kill-Switch": Hard-binding a citizen's legal existence to a single smartphone - coupled with automated algorithmic profile-tiering and penalisation - creates a dangerous single point of failure. It establishes the technical architecture for an authoritarian system where a citizen can be frozen out of banking, communication, healthcare, and travel at the touch of a button. - Forced Digital Migration and Exclusion: This framework creates a multi-tiered citizenship that punishes those without access to expensive smartphone technology, or those who suffer from high rates of device theft. The punitive 30-day reporting rules and the mandatory 10-year physical queue traps demonstrate that this system is designed around state control rather than citizen convenience. Conclusion: A digital identity system should exist to serve the people, not to track, score, or control them. I completely reject the adoption of these regulations. I demand that the Department of Home Affairs withdraw this framework entirely and focus instead on fixing the existing backlogs and inefficiencies within the current physical Smart ID and passport infrastructure. 	2026-05-21 08:28:15	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Device Binding: The Stolen Phone Lockdown To secure your data, the system relies on device binding—the technical process of cryptographically locking your digital identity token to one single mobile device running the MyMzansi application. If a device is compromised, or its private cryptographic key is suspected of being leaked, the credential must be immediately suspended or revoked. The Concern: Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office. 	2026-05-21 06:23:03	No I do not	All of the above	Corporate Interoperability & Privacy Creep	Nobody, absolutely NOBODY, has the right to demand anything from my body (biometrics) and if I don't comply, then withdraw any of my inalienable rights. Governments do NOT have the right to destroy our rights to anything, and that includes autonomy over my body and my human rights. The government should also NOT be in collusion with private corporations e.g. the banks to demand our biometrics or withhold services. Banks know at the moment they cannot do this and I have REFUSED to give my fingerprints or retinal scan. I intend to keep it that way. As for demanding that we give our fingerprints and retinal scan to the Dept of Transport and if we don't, then we cannot get our driving licence, this is COMPLETELY unacceptable and yet again, against my constitutional rights to control over my own body. The government does not have the right to demand ANYTHING from my body and threaten to take away my constitutional rights. On a wider frame, forcing people to rely on a cell phone for everything from ID to banking to government services is not only unconstitutional, it is unsafe and unworkable. Cell phones are stolen all the time and people change them all the time. The data is not safe and government servers and corporate servers are easily hacked. Not only that, but the vast majority of crime regarding identity is from WITHIN the corporations (e.g. banks) and government departments. Why would a digital ID be any different?! In fact, it would be WORSE! My passwords can be updated but my fingerprints remain the same. People will be killed for their hands and their eyeballs, or at the very least, kidnapped for their biometrics. So my answer is NO, ABSOLUTELY I DO NOT CONSENT NOR AGREE TO THE DIGITAL ID or anything remotely resembling a digital ID.	Sarah	Western Cape		employed individual
	2026-05-21 06:13:06	No I do not	All of the above	Corporate Interoperability & Privacy Creep	The current system is better as it safeguards you better. Thebkack of governmental organization shouldn't lead to controlling my privacy. I also am uncomfortable with cell phone dependency. Its unhealthy and controlling	Amanda	KwaZulu-Natal		self-employed

	2026-05-29 09:38:33	No I do not	All of the above	The 30-Day Address Notification Penalty	100% against Digital ID. Here are the main issues, but I'll expand on just two below: The Government's Cyber Security is vulnerable and has been breached multiple times. The Government Wants to Give US a Behaviour Score. Our Personal Information Gets Shared With Companies without consent. If I Lose or have my Phone Stolen, I Lose My Identity to someone else If I Don't Visit a Government Office for 10 Years, I Get Erased. People Without Smartphones Will Be Second-Class Citizens Reporting my daily / personal activities to the government, what are we 5 years old now? If my Digital ID is Stolen I can't recover or replace it. This is a WEF / UN Designed System. This Not for South Africans. It's optional now... but we know the end goal. Mandatory Digital ID's. "Optional Today, Mandatory Tomorrow" Every government that has introduced a digital ID system has followed the same playbook. It starts with a promise: "This is completely voluntary." Then, quietly and gradually, opting out becomes impossible. The pattern is well documented. India's Aadhaar system launched in 2009 as optional. Within a decade it became effectively mandatory, required for filing taxes, receiving welfare, buying a SIM card, opening a bank account, and even accessing school meals. The Supreme Court had to intervene multiple times to push back against scope creep. Australia's MyGov digital identity system began as a convenience tool. It is now the primary gateway for accessing government services, Medicare, and tax returns. Non-participation means you are locked out . The UK's NHS App started as optional. It is now the default and only way to manage prescriptions and appointments. The mechanism is always the same. Physical alternatives are never banned outright. They are simply made slower, harder, and more frustrating to use, until people give up and comply. In South Africa, once banks, employers, hospitals, and government departments optimise entirely around MyMzansi, your physical ID book or card won't be illegal, it will just be useless. That is not choice. That is coercion with extra steps. "Comply or Be Punished" A Social Credit system doesn't need to put you in jail to destroy your life. It simply makes normal life impossible for those who fall out of favour. That is what makes it so insidious, the punishment is invisible, bureaucratic, and almost impossible to appeal. China's Social Credit System is the most documented example. Citizens who missed loan repayments, jaywalked, or criticised the government found themselves banned from buying plane tickets, enrolling children in private schools, and accessing certain hotels. Over 30 million travel bookings were blocked in a single year. But China isn't alone. Canada froze the bank accounts of peaceful protestors during the 2022 trucker demonstrations, without court orders. Accounts were unfrozen only after protesters dispersed. The government used financial infrastructure as a weapon of compliance. The EU's Digital Identity Wallet, currently rolling out, ties access to services directly to a verified digital profile, raising serious concerns among civil liberties groups about future punitive applications. South Africa's "Identity Assurance Level" scoring mechanism follows this exact architecture. Miss a 30-day notification deadline, and your score drops. Your score drops, and your economic access shrinks. You are not arrested. You are simply frozen out, quietly, algorithmically, and without a courtroom in sight. So yeah... Leon Schriber this long standing DA voter is no longer a DA voter. With all of the political corruption in South Africa, giving the government access to controlling our lives digitally is simply insane.	Sean	Gauteng		business owner

	2026-05-28 16:24:09	No I do not	All of the above	The 30-Day Address Notification Penalty	We urge you to reject the implementation of a centralized Digital ID system. While presented as a tool for efficiency and convenience, Digital ID poses serious risks to citizens' privacy, security, and freedoms. It enables unprecedented real time surveillance of movements, transactions, and personal behaviour. It creates a single point of failure that is highly vulnerable to large-scale data breaches and identity theft. Experience from similar systems worldwide shows rapid "function creep," where the ID expands from voluntary use to mandatory control over banking, travel, services, and daily life. Furthermore, it risks excluding vulnerable citizens, including the elderly, rural communities, and those without reliable internet or smartphones, from essential services. Once implemented, such a system concentrates enormous power in the hands of the state and linked corporations, making reversal extremely difficult. We respectfully ask you to protect the privacy, autonomy, and dignity of South African citizens by refusing a centralized Digital ID. Safer, less intrusive alternatives exist that do not turn every citizen into a trackable data point. Thank you for considering the rights and freedoms of the people you serve.	Natvie	Western Cape

	2026-05-28 09:02:04	No I do not	All of the above	The 30-Day Address Notification Penalty	An identity document isn't just a piece of plastic or an app icon; it is your gateway to exercising your civil rights. It governs your ability to access your money, secure a phone line, work, travel, and vote. Privacy advocates, tech experts, and civic organisations have raised alarm bells over several structural features built into the draft rules: 1. The Interoperable Private Corporate Network: The state will establish real-time, bi-directional data pipelines with accredited "trusted entities" (like private banking giants and telecom networks). If you change your address at your bank, it will synchronise across the state register automatically in near real-time—blurring the line between public civic data and private corporate databases. 2. The 'Identity Assurance' Scoring Loop: If you fail to formally report routine life updates (like moving to a new house or changing your email) within a strict 30-day window, the state will automatically drop your internal "Identity Assurance Level" (social credit score). This algorithmic tiering could cause sudden, frustrating transaction rejections when you try to open accounts or authenticate services. 3. The Stolen Phone Lockdown: Your digital ID will be cryptographically locked to one specific smartphone device. Given South Africa's high rates of muggings and mobile theft, losing your device means your digital identity token is instantly frozen or revoked. The regulations are completely silent on a secure, remote path to restore your access, raising the threat of immediate administrative paralysis. 4. The 10-Year Physical Queue Trap: Your digital ID will expire every 5 years. While app-based biometric renewal is permitted, the law dictates that if you do not have a physical, in-person touchpoint with a Home Affairs office or partner bank for 10 consecutive years, your credential completely lapses, and you must line up in person from scratch to re-prove who you are. 5. The Blueprint for Function Creep: Centralising a dynamic repository of dynamic biometric signatures and tracking variables provides the perfect infrastructure for future state surveillance or a compliance-driven "social credit-style" exclusion system. 	2026-05-27 11:52:10	No I do not	All of the above	The 30-Day Address Notification Penalty	We don't need more stress or admin as South Africans!	Jolana	Western Cape		retired

	2026-05-27 11:30:22	No I do not	All of the above	The 30-Day Address Notification Penalty	Expanded National Cyber-Defenses Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralize live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronization loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimize for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-25 13:45:41	No I do not	All of the above	The 30-Day Address Notification Penalty	The system discriminates against those without access to smartphones, reliable internet, or digital literacy, which could exclude millions from essential government and financial services. By tying all civic and financial information to a central population register, the system creates a high-value target for hackers, syndicates, and systemic data breaches. The ID is bound to a single cryptographic device. If a phone is lost or stolen, citizens face mandatory queues or bureaucratic friction to un-bind and re-verify their credentials before accessing services. This is idiotic thinking! Consolidating movement, health, and financial data into one networked spine threatens civil liberties, inviting potential government surveillance or corporate data profiling. Is this going towards a communist state? With all identity functions linked in one place, technical errors, bureaucratic flags, or compromised accounts can instantly "lock" a citizen out of work, banking, and medical aid.	Gail	Mpumalanga		employed individual
	2026-05-25 13:37:04	No I do not	All of the above	The 30-Day Address Notification Penalty	In other words the government want to use a new system and implement it but if you don't comply willing or unwilling you will be penalized. As we know for example all FICA documents must be verified, in this example you upload or send documents on day 21/28 of the said 30 days but it is only verified on day 31 or 100 you will be fined or penalized as we all know home affairs queues, and now add an online component to be updated and verified?... We the people in 2026 still do not have access to basic services everywhere, failing infrastructure, at least Eskom is keeping on the lights for now, stalling economy, rising cost of living and widespread unemployment and poverty. But the government is wasting millions on blatant laws and new systems to make every citizen comply to the systems at the helm. To make every citizen guilty of something, knowing or unknowing. Yet again a government by the people for themselves and their piggy bank. Here is a note to government - simplicity is the best policy.	Gerhard	Free State		employed individual

These dum Presidential officials are being educated by someone outside of Government. They to stupid to come up with these things.	Wayne	Western Cape		unemployed individual
	2026-05-24 19:00:15	No I do not	All of the above	The 30-Day Address Notification Penalty	This is tantamount to social penalising like Chinese Communist policies. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis.	Stefffen	KwaZulu-Natal		employed individual

	2026-05-24 18:27:33	No I do not	All of the above	The 30-Day Address Notification Penalty	Dear Minister Leon Schreiber and the Department of Home Affairs, I hereby submit my formal objection to the Draft Identification Regulations, 2026 (Government Gazette No. 54610). After careful consideration of the proposed framework, I do not support the introduction of a mandatory or legally equivalent digital identity system as currently drafted. My position is a clear NO to the proposed model in its present form. While I acknowledge the intention to modernise public administration and improve efficiency, the draft regulations raise serious constitutional and human rights concerns that cannot be ignored. In particular, I wish to highlight the following principles under the Constitution of the Republic of South Africa, 1996: • Section 14 – Right to Privacy: The proposed extensive integration of identity data with third-party private entities presents a significant risk to the lawful protection of personal information and autonomy. • Section 10 – Human Dignity: Any system that could result in administrative exclusion or loss of access to essential services undermines inherent human dignity. • Section 33 and the Promotion of Administrative Justice Act (PAJA): Administrative processes must be lawful, reasonable, and procedurally fair. Any automated or algorithmic dependency that may lead to restrictions without transparent appeal mechanisms raises concerns of procedural fairness. • Section 36 – Limitation Clause: Any limitation of rights must be reasonable and justifiable in an open and democratic society based on human dignity, equality, and freedom. The current draft does not sufficiently demonstrate proportional safeguards. I am also concerned about the potential risks of function creep, data centralisation, and lack of clear safeguards against misuse, surveillance expansion, or unintended exclusion from essential services due to technical or administrative failures. For these reasons, I respectfully request that the Department reconsider the scope, legal safeguards, and implementation framework of this proposal. Any future system must ensure: • Strong opt-out or alternative non-digital identity pathways • Clear, independent oversight mechanisms • Robust data protection aligned with POPIA and constitutional standards • Guaranteed access to services without digital dependency • Transparent appeal and restoration processes in cases of system failure or loss of access Until such protections are clearly and legally guaranteed, I cannot support the current draft regulations. Thank you for the opportunity to submit public comment. I trust that constitutional rights and human dignity will remain the guiding principles in any reform of our national identity system. Yours faithfully, Jan Lorens	Jan	Western Cape		retired
	2026-05-24 18:06:37	No I do not	All of the above	The 30-Day Address Notification Penalty	Are you satisfied that device-binding and mandatory facial biometric protocols strike the right balance between protecting citizens from identity fraud and preventing unfair lockouts if a phone is lost, stolen, or damaged? No I am not satisfied with Government control over what we do. They work for us.	Shaun	KwaZulu-Natal		retired

	2026-05-24 17:20:04	No I do not	All of the above	The 30-Day Address Notification Penalty	Forcing citizens to log formal changes within a rigid 30-day window for routine life adjustments like swapping an email address or moving apartments is highly impractical. Lowering a citizen's "Identity Assurance Level" serves as a hidden penalty, which could lead to sudden, frustrating rejections or delays when trying to execute everyday high-security actions like opening an account or authenticating an online transaction. Furthermore despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination"—including longer processing delays, reduced human customer support, and slower access to essential public utilities and services.	Talja	Western Cape

	2026-05-24 14:42:15	No I do not	All of the above	The 30-Day Address Notification Penalty	As voters we have asked for better service delivery, not state control of our identities. Our smartphones cannot be used as an identity device, it is way to vulnerable to being stolen, malfunctions, cybercrime etc. I personally don't carry my ID card in public to prevent loss if I am mugged, a smartphone is way more vulnerable and way more targeted for theft than an ID card. I anyways don't give out my identity to anyone even if they claim to be from home affairs. I can't believe I voted for the DA and they got the Home Affairs post and now they try to control and penalize me for my identity, it is not what I voted for. These regulations actually removes allot of freedoms we enjoy and that was so hard fought for.. We also cannot be penalized for changing our contact details or moving around between residences.	Arnold	Mpumalanga		employed individual
	2026-05-24 14:39:05	No I do not	All of the above	The 30-Day Address Notification Penalty	What happens if you loose your phone or your phone get stolen? What about the elderly people who does not have a phone or cannot afford a phone. What if the system crashes?	Erica	Western Cape		retired

	2026-05-23 12:38:27	No I do not	All of the above	The 30-Day Address Notification Penalty	I am 100% agsinst this for the reasons stated below: Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector’s history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation’s “attack surface.” Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically “lapse” triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual’s legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating “near real-time” data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. I Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic “soft discrimination” —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services.	Diane	Western Cape		self-employed

	2026-05-22 17:41:32	No I do not	All of the above	The 30-Day Address Notification Penalty	While the initiative sounds good, the implementation thereof will fail miserably. It seems that whoever thought of this initiative has failed to factor in the huge risks involved, viz. a corrupt government for starters, and the insane rate of smartphone churn, especially due to theft. Also, a stolen smartphone would exponentially increase the risk of identity theft. If re-registering your banking app on a new phone is a difficult to do, just imagine the difficulty and bureaucratic nightmare to traverse in getting a new device registered for this. Government institutions are notorious for drawn out and delayed processes, exorbitant fees thereof, and super confusing processes.	Paul	Western Cape

	2026-05-21 10:35:08	No I do not	All of the above	The 30-Day Address Notification Penalty	South Africa faces unique systemic hurdles. Widespread network connectivity issues, high data costs, electricity grid instability, and massive rates of smartphone theft . The practical rollout faces intense debate due to several built-in mechanisms outlined in the draft: The Smartphone Divide: While the draft promises that physical Smart IDs will remain valid to prevent exclusion, critics argue that state and corporate services will naturally optimise for the MyMzansi app to cut costs. This creates a high risk of "soft discrimination" against elderly, poor, or rural citizens who lack smartphones. The 10-Year Queue Trap: The technical requirement to visit a physical branch every 10 years to prevent an identity credential from completely lapsing threatens to overload already notorious Home Affairs queues with digitally compliant citizens.	Jenny	Gauteng		retired

	2026-07-07 08:41:24	No I do not	Other		The roll out of digital identifications for human beings have been largely pioneered by influential global figures who have agendas of population control and eradicating human sovereignty. The World Economic Forum is driven by the motif "You will own nothing and be happy", which indicates totalitarian regime rising to power through deceptive platitudes of the 17 sustainable development goals and the larger Agenda 2030 - the Global Reset. The basic population cannot exercise basic freedoms of choice and speech in places where digital identifications have rolled out such as the UK. Private information is in the hands of data servers that are controlled by a central corporation which will do with it what it wills at any stage without any communication. Government agencies that perform secret intelligence operations may use this stored private information without obligation of personal safety for their own benefit. This will also result in the merging of unholy practices and biblical deviations, fulfilling the Mark of the beast prophesies of having a "mark" in the head or right arm, as a means to link digital identifications and public space access, controlling where we can go, what we can buy, who we can talk to and accessing any state owned infrastructure.	Duke	KwaZulu-Natal		
	2026-07-06 08:52:06	No I do not	Other		This is BS. Before the election every political party should have their view stated on national TV. I will not vote for any party supporting this idea. My privacy is my personal property and I am not handing it to any political mentally ill institution. This is exactly what the Bible talks and warns us about the 'mark of the beast' I don't need the government to tell me what I can and cannot do, or if I have access to the money I have worked for my whole life. This is the worst bright idea this govt. has come up with upto now. One general question :- every person in this country does not own a smartphone and what if it gets stolen or lost. This is just a shortcut for them to control everything. Laws don't work and can be ignored if I don't agree, but this! SORRY ?	Pieter	Western Cape		retired

	2026-06-13 16:07:15	No I do not	Centralised Cyber & Security Risk		The State departments in South Africa rely on SITA for anything cyber related. We have recently seen reports of a massive attack on various websites and digital networks in the banking systems and websites targeting various government departments and private companies. The Department of Home Affairs has come to earn the stereotype of always being "system offline" for a reason. This is a department with an already weak digital system which often requires people to take an entire day off from work and home just to get the basics such as an ID or birth certificate. Now with all those internal problems, coupled with the decades old scourge of corruption within Home Affairs, there is NO way the department is ready to suddenly move to something as big as the unexplored realm of digital IDs. Furthermore, Home Affairs has admitted to not even having the capacity to do its basic functions: issue IDs, which is why now there's a big push to using private sectors, particularly banks and very little is told about how our information as citizens is safeguarded. These are uncertain and dangerous times in the world of cybersecurity, and South Africa, like many other countries has not yet caught up (legislation and regulation-wise) with the times. We are not ready for digital IDs when the basics are even correct.	Biko	Mpumalanga		employed individual

	2026-06-08 07:26:41	No I do not	Centralised Cyber & Security Risk		It is too risky. At the moment the banks are being hacked by cyber. I am a victim. Our personal details are not safe on our mobile app	Aneetha	KwaZulu-Natal		

	2026-06-08 07:02:42	No I do not	Corporate Interoperability & Privacy Creep		? Real-Time Corporate Data Loops: The state will record "Verified Relationships" between you and private entities like banks and telcos. If you update your address or phone number at your bank, it will synchronise across the state population register automatically in near real-time—permanently blurring the line between public civic data and private corporate infrastructure. ? The Stolen Phone Lockdown: Your digital ID is cryptographically "bound" to a single smartphone. In a country with high rates of mobile theft, losing your phone means your legal identity token is instantly frozen or revoked. The regulations are currently silent on a secure, remote path to restore your access, raising the threat of immediate financial and administrative paralysis. ? The 10-Year Physical Queue Trap: Your digital ID expires every 5 years. While remote renewal via a facial scan in the app is permitted, the draft rules state that if you go 10 consecutive years without a physical, in-person touchpoint at a Home Affairs branch or partner bank, your credential completely lapses. You will be forced to line up in person from scratch to re-prove your identity. ? Algorithmic Profiling (The 30-Day Rule): You will be legally required to report routine life updates (moving house, changing an email) within 30 days. If you fail to do so, the state will algorithmically drop your internal "Identity Assurance Level." A lowered score could mean sudden, frustrating transaction rejections when you try to use high-security online services. ? Foundations for Function Creep: Centralising dynamic biometric registries and cross-entity tracking pipelines creates a technical foundation that critics warn could easily be weaponised into an authoritarian behavioural tracking system, or act as a centralised economic kill-switch over your accounts.	Oethmaan	Western Cape		unemployed individual
	2026-06-08 05:45:36	No I do not	Structural Function Creep & Tracking		This creates many more problems than it addresses and is an unnecessary additional form of identification. The hurdles to recovery based on the level of cellphone theft in South Africa makes this a very risk form of identification which could compromise a bigger range of linked areas in the intended process of digital identification. Losing a cell phone compromises everything digitally linked. It also removes sovereignty over your property which is not acceptable.	Frederick	Eastern Cape		self-employed

	2026-06-07 00:52:24	No I do not	Corporate Interoperability & Privacy Creep		The Identification Act, 1997 gives a mandate to the Minister focusing on compiling a population register and issuing identity documents. Radically expanding this via mere regulations to encompass automated commercial tracking and private-sector synchronization potentially exceeds the powers granted to the Minister by the principal Act (ultra vires). The Proposed System Fails the Section 36 Test The proposed Digital ID framework fails across these metrics: 1. The Nature of the Right (Severe Infringement) The system does not just chip away at one right; it creates a domino effect across a cluster of fundamental rights: Privacy (Section 14), Equality (Section 9), and Human Dignity (Section 10). Because identity is the gateway to exercising all other civil liberties, restricting it strips a person of their legal persona. The nature of the rights being limited is of the highest order. 2. Importance of the Purpose of the Limitation The state's stated purpose—preventing identity theft, curbing fraud, and streamlining economic inclusion—is highly important. However, under constitutional law, a noble purpose does not automatically justify draconian mechanisms. 3. The Nature and Extent of the Limitation (Disproportionality) The extent of the limitation is total and absolute. • Surveillance by design: A real-time, federated digital ID means every time a citizen opens a bank account, buys a SIM card, or accesses a government building, a digital log is created. The state and its private partners gain a continuous, live map of a citizen's economic and social life. • The "Economic Kill-Switch": If an algorithm errs, a database glitches, or the state suspends a profile, the extent of the limitation is catastrophic. The citizen is instantly locked out of modern society. 4. The Relation Between the Limitation and its Purpose The state argues that digitization increases security. However, cybersecurity experts note that centralizing national biometrics and digital keys into a single synchronized framework actually increases systemic risk. It creates a single point of failure. A mass data breach undermines the very purpose of the system (preventing fraud) by exposing the entire population to digital identity theft that cannot be undone (you cannot change your biometrics after a hack). 5. Less Restrictive Means to Achieve the Purpose (The Fatal Flaw) This is where the state's argument completely collapses. Under Section 36(1)(e), if the government can achieve its goals using a method that is less invasive to privacy and less exclusionary to the poor, it is constitutionally mandated to do so. The state has bypassed several safer, more inclusive alternatives in favor of a rigid digital-first model. Part 2: Less Restrictive, Less Invasive, and More Inclusive Alternatives To modernize South Africa's identification framework constitutionally, the Department of Home Affairs could adopt alternative paradigms successfully utilized in other democratic nations. 1. Smart, Offline-Capable Physical ID Cards (The Hybrid Model) Instead of forcing citizens into a smartphone-dependent ecosystem requiring cellular data and network connectivity, the state could maximize the utility of the existing Smart ID Card. • How it works: Expand the chip capability of the existing physical Smart ID card. The card itself can hold encrypted, offline cryptographic keys. • Why it's more inclusive: It bridges the digital divide. A citizen in a rural area with no network coverage or smartphone can still authenticate their identity offline at a local clinic or bank branch using a secure card-reader. It removes the threat of "digital exclusion" (Section 9 violation). 2. "Zero-Knowledge Proofs" (ZKP) for Minimal Data Minimization Under POPIA, data collection must be minimized. Current systems often require a citizen to hand over their entire ID profile just to prove one minor fact. • How it works: By implementing Zero-Knowledge Proofs in the identity infrastructure, a citizen can prove eligibility without revealing identity data. • Example: If a citizen needs to prove they are over 18 to access a service, the digital system gives a simple "Yes/No" cryptographic answer to the vendor. The vendor never sees the person's date of birth, full name, ID number, or biometric data. Some ad-hoc comments/questions: • I have a big problem with the Accredited bodies and information flows being concentrated into the Director General's hands... • And all this information should be public on a dashboard... which organisations can see what and why... • I would have a big problem with health information being added to this framework or identity. The Act should specifically forbid this. • What recourse do citizens have if their data is abused by an accredited Entity? • What penalties and jail-time will be levied against a CEO and board of an accredited Entity abusing data? • Biometric Data concentrated in a central database is a beautiful prize for criminals. • How will it not become hacked with AI that is capable of breaking the best systems? • With even top police in this country toppling in public, we can not entrust the government with this much power and authority and believe that it will not be used against the citizens in a harmful way or abused. Here are some more problems with the proposed act: 1. South African Bill of Rights (Chapter 2 of the Constitution) A centralized Digital ID system creates tensions with several fundamental rights and the framework implementation can cause violations Violations that WILL Occur (Inherent to the system design) • Section 14: Right to Privacy: A centralized digital ID inherently infringes on the right to privacy because it requires continuous tracking, rolling validation cycles, and real-time private sector synchronization. The consolidation of data into the Automated Biometric Identification System (ABIS) means the state tracks when, where, and why you authenticate your identity, eliminating the right to informational self-determination. • Section 9: Equality (Indirect Discrimination / Digital Exclusion): By tethering legal identity to a digital ecosystem (requiring smartphones, data, and digital literacy), the system will create a state of "soft discrimination." Millions of South Africans in rural areas lack smartphone access or network coverage. Conditionality of services based on a digital credential directly discriminates against the poorest segments of society. Bad batteries, loadshedding... Potential Violations (Risks depending on abuse or system failure) • Section 10: Human Dignity: If a citizen's digital profile is flagged, erroneously suspended, or subjected to automated "profile-tiering," they lose the ability to prove who they are. Stripping a person of their legal identity and forcing them to navigate bureaucratic loops to regain it is a direct assault on human dignity. • Section 27: Health care, food, water and social security: There is a high potential for violation if possession of a Digital ID becomes a de facto prerequisite for receiving social grants or accessing public healthcare. System downtime or exclusion due to a lack of technology would actively block access to these socio-economic rights. 2. South African Constitutional Precepts Constitutional precepts represent the foundational values, doctrines, and structures of the state as outlined in Chapter 1 and the broader framework of the Constitution. Violations that WILL Occur (Inherent) • The Precept of Founding Values (Section 1) – Non-racialism, Non-sexism, and Equality: Creating an exclusionary infrastructure that disproportionately affects historically disadvantaged, low-income citizens Potential Violations (Risks) • The Doctrine of Separation of Powers: • POPIA – Section 19 (Security Safeguards): Centralizing national biometrics • PAJA - algorithm kill switch violation • Cybercrimes Act, 2020	Caleb	Gauteng		

	2026-06-07 00:50:11	No I do not	Corporate Interoperability & Privacy Creep		The Identification Act, 1997 gives a mandate to the Minister focusing on compiling a population register and issuing identity documents. 	2026-06-06 16:40:09	No I do not	Soft Discrimination & Digital Exclusion		Dear Dr Leon Amos Schreiber, MP, Minister of Home Affairs, c/o Adv Moses Malakate. No I do not support the Draft Amendment of Identification Regulations, published as notice 7428, 4 May 2026, in Government Gazette 54610. My concern is Soft Discrimination & Digital Exclusion, The implementation of the proposed digital ID's imply the implementation of total control over all aspects of the lives of all the citizens of South Africa at every level by state institutions, government, world institutions and digital driven companies of billionaire technocracies. This legislation will deprive and rob the population of all our constitutional and human rights of privacy, our identity, private properties, savings, long worked for pension funds, savings, the right on self reliance/self preservation, entrepreneurship, and especially our freedom of choice/speech/movement/health choices (my body, my choice), etc. It will implement a social credit/ score system of slavery driven by digital AI systems, with the ultimate purpose of total power over the lives and futures of all humanity, run by non elected leaders as paid/bribed puppets of world organizations and their Agenda 2030 sustainable development goals, with the aim of world power and total control over humanity. Therefore, a definite no to even the suggestion of the implementation of digital ID's, under the flagship of convenience and any other excuse, to force the population into digital slavery! Kind regards Carlina J Prinsloo	Carlina	Mpumalanga		business owner

	2026-06-06 09:58:18	No I do not	Centralised Cyber & Security Risk		In a country where cyber security is on the massive rise aswell as phone theft this sounds like a disaster considering i nearly had all my money taken from a bank hack, who will be held responsible if my identity is swiped by a cyber infiltration and then have access to bank accounts	Darina	Western Cape		business owner
	2026-06-06 09:55:24	No I do not	Centralised Cyber & Security Risk		1. Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. 2. Corporate Interoperability & Privacy Creep The regulations empower the Department to record a "Verified Relationship" between a citizen and an accredited private company, such as a bank or mobile network provider. If any core details are changed or verified in person by that business or Home Affairs, the system can automatically broadcast these updated particulars to every other private entity linked via that relationship in near real-time. The Concern: Although the regulations explicitly ban profiling, commercialisation, and open-ended intelligence gathering, this fluid exchange of live citizen data across corporate API channels raises red flags. Automating data synchronization loops between state databases and private financial/telecom corporate giants chips away at the wall separating public civic records from private commercial infrastructure. 3. Device Binding: The Stolen Phone Lockdown To secure your data, the system relies on device binding—the technical process of cryptographically locking your digital identity token to one single mobile device running the MyMzansi application. If a device is compromised, or its private cryptographic key is suspected of being leaked, the credential must be immediately suspended or revoked. The Concern: Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office. 	2026-06-05 22:09:56	No I do not	Centralised Cyber & Security Risk		Gegewe die Suid-Afrikaanse openbare sektor se geskiedenis van sistemiese data-oortredings, ontwrigtings van ransomware en swak IT-beheer, brei die koppeling van die gesaghebbende bevolkingsregister direk aan korporatiewe bedieners via lewendige API's die land se "aanvalsoppervlak" aansienlik uit. Die konsolidering van toegang tot die burgerlike register in 'n gesentraliseerde lewendige netwerk skep 'n ongelooflik hoërisiko-teiken vir globale hackersindikate. Die 10-jaar lange burokratiese tou-lokval: Om 'n noodsaaklike burgerreg soos 'n nasionale identiteitsbewys outomaties te laat "verval", veroorsaak diep administratiewe angs. Ingevolge Regulasie 20(5), as 'n burger vir 'n dekade ten volle digitaal aktief bly, maar nie toevallig 'n fisiese, persoonlike kontakpunt met 'n tak van Binnelandse Sake of 'n geakkrediteerde bank het nie, word hul wettige bewys uitgewis. Hierdie reël penaliseer onregverdig voldoenende, digitaal aktiewe burgers deur hulle terug te dwing in fisiese toue om hul identiteit van nuuts af te bewys. Ernstige Toestelafhanklikheid en Verlammende Uitsluitings: Suid-Afrika ly aan buitengewoon hoë koerse van diefstal van mobiele toestelle, rooftogte en foonskade. Deur 'n individu se wettige identiteitsteken wettiglik aan 'n enkele slimfoon te koppel, sluit 'n verlore of gesteelde toestel daardie burger onmiddellik uit van hul burgerlike en banklewe. Omdat die konsepregulasies nie 'n deursigtige, veilige en outomatiese afstandspad uiteensit om 'n ou foon te ontkoppel en 'n nuwe een te verifieer nie, kan die verlies van 'n toestel onmiddellike ekonomiese en administratiewe verlamming beteken.	Aletta	Gauteng

	2026-06-05 21:57:11	No I do not	Corporate Interoperability & Privacy Creep		This simply opens the way for the implementation of ever more control - by the few - over the general population. The excuse always used is, "it is necessary to increase general security and the well-being of all". But always only the power of the privileged few is increased, as the freedom of the individual is increasingly curtailed. Always kingdoms and dictatorships of the past are condemned, and in contrast our current "liberal democractic" dispensation is glorified by the media and current authorities. But all people were more free under those systems - for one reason: the technology, and therefore the tools of government were more limited - and so they could not exercise the totalitarian control that all governments aspire to today. Limited governance is the only safe governance. Reduce bureaucratic control and bring it into the open - with transparent procedures and increased accountability of the rulers. That is the solution, not more technology, which, we all know, will ultimately be used for political policing.	Keith	Western Cape		unemployed individual

	2026-06-05 20:53:54	No I do not	Centralised Cyber & Security Risk		The Digital ID system is flawed on nearly every level and creates the possibility for massive abuses and security risks. The system: Creates a single point of failure for cyber breaches and data leaks. Gives government extensive control over citizens' personal information, allowing them to track your activities and transactions and has the potential to expand into broader surveillance of citizens. Makes large-scale data collection and profiling easier, similar to China's digital ID system. It allows increased scrutiny of certain groups and restrictions on access to services, giving greater state control over citizens' daily lives. It will allow the use of identity verification as a mechanism to regulate participation in economic and civic activities. If your phone is stolen, which happens often in this country, citizens can be left unable to verify their identity, losing access to banking and government services. This removes the individual's rights to control how their information is managed and who accesses it, increasing dependence on government-controlled systems, whilst allowing the government to share private data with commercial institutions. This system can be used as an economic kill switch, restricting access to banking or financial services, using identity verification as a condition for economic participation and creating mechanisms through which citizens could effectively be excluded from normal economic activity. The government has proved over the past 30 years that it cannot be trusted with the level of control they already have, increasing this control gives them broader license to discriminate, control and steal. 	2026-06-05 19:49:35	No I do not	Other		I do not support the introduction of Digital IDs. My concern is that Digital ID systems have the potential to centralise vast amounts of personal information in a way that could erode privacy and individual freedom. Once identity, financial information, health records, travel history, and other personal data become linked through a single digital platform, the possibility for surveillance and monitoring increases significantly. History has shown that powers granted to governments and large institutions are rarely reduced over time. What begins as a convenience can gradually become a requirement, and what is voluntary today may become compulsory tomorrow. I believe that every person has a fundamental right to privacy, freedom of movement, and the ability to conduct their lives without constant monitoring or data collection. Digital systems also create risks relating to data breaches, cybercrime, identity theft, and misuse of personal information. Many organisations, including international bodies, governments, and private corporations, advocate greater digital integration. While some see benefits in efficiency and security, I remain concerned about the long-term impact on civil liberties, personal autonomy, and individual choice. For these reasons, I do not support the implementation of Digital IDs and I choose not to participate in such systems. Freedom, privacy, and personal choice are values that I believe should be protected for future generations.	Rinel	North West		self-employed
	2026-06-05 19:47:44	No I do not	Centralised Cyber & Security Risk		South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. 	2026-06-05 17:56:29	No I do not	Soft Discriminati on & Digital Exclusion		While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. 	2026-06-05 16:58:04	No I do not	Centralised Cyber & Security Risk		We have all seen how states have used centralised digital channels to create and become surveillance states, a perfect example of this is China. How can we then trust that some time in the futre the state will not use this digital id thing to survey and infringe on the citizens rights? Its already been reported that such instances of state surveillance is found in the Kenyan and Nigerian governments. This is a perfect mechanism to hand over complete control of the populations lives while at the same time risking creating authoritarian governments because absolute power corrupts absolutely. There is no need for the introduction of digital ids.especially in a country with ailing service delivery not because of its identification system failure but because of the inefficiency and inept of system management. 	2026-06-05 14:14:38	No I do not	Centralised Economic Kill-Switch Risks		Centralised Cyber & Security Risk Cybersecurity Readiness & “Leapfrogging” Vulnerabilities While the draft regulations introduce highly sophisticated cryptographic measures, including asymmetric elliptic-curve cryptography and encrypted database storage, they create an unprecedentedly dense web of database interfaces. This leapfrogges global legacy models by connecting the state’s population register directly to corporate networks via secure APIs. The Concern: South Africa’s public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic “attack surface.” If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. The 10-Year Physical Queue Trap Device Binding Vulnerability Corporate Interoperability & Privacy The 30-Day Address Notification Penalty Soft Discrimination & Digital Exclusion Perspectives: What is the debate? The proposed Amendment of the Identification Regulations, 2026, has ignited a vital conversation across South Africa regarding the digitization of civic infrastructure. To help you formulate your official submission, the core arguments surrounding the policy have been restructured below into two comprehensive perspectives. What Supporters Say Proponents of the draft regulations, including the Department of Home Affairs, state that the transition to a decentralised digital identity network is a necessary evolution that will fundamentally modernise South Africa. Their core arguments include: A Leapfrog Milestone for National Security: Moving to a decentralised digital framework represents an extraordinary technological milestone for South Africa. By introducing cryptographic device-binding, asymmetric encryption, and liveness-detecting facial recognition, the state is effectively “leapfrogging” older, outdated legacy systems used by global powers. This modern infrastructure will significantly curb routine identity fraud, phase out physical document forgery, and secure the digital economy. Unprecedented Bureaucratic Convenience: The MyMzansi application introduces massive administrative efficiency. Being able to securely renew an identity credential remotely via a basic facial scan on a smartphone eliminates the logistical burden of traveling to a state office. Furthermore, establishing automated “Verified Relationships” with trusted private partners (like banks and telecom networks) removes friction from the everyday FICA/KYC compliance process, enabling near real-time, bi-directional address and detail updates without tedious paperwork. Gold Standard Fraud Prevention: Strict cryptographic device-binding—anchoring your legal identity token to a single physical device—serves as the gold standard in modern cybersecurity. It guarantees that even if a criminal steals your personal data, usernames, or passwords, they cannot remotely impersonate you because they do not physically possess your unique bound mobile device. A Vital Systemic Reset: The rolling 5-year expiry and the 10-year in-person check-in requirements are necessary tools to keep the master population register dynamically accurate. The 10-year physical verification rule acts as a vital security reset to ensure that long-term inactive digital profiles belong to living, verified citizens, purging “ghost” records from the database. Enforced Privacy Guardrails: Proponents emphasise that the policy features robust, built-in statutory protections. The regulations explicitly align with POPIA, strictly banning private corporations from using identity pipelines for data commercialisation, consumer profiling, or open-ended intelligence gathering. Additionally, physical IDs remain entirely valid, meaning the system is completely voluntary. This proposed system mirrors that of China' s social credit initiative. The moment you say or do anything anti government or critizise the system, they cut you off from public resources, block your access to your own funds, drag your reputation through the mud and even send you for social reform if you don't comply. The proposed system might not be as aggressive as China's, yet they form the foundation of a program that can be weaponised at a future date. This system is designed for control of a population and the security of its architects....not the safety of its citizens. It carries the hallmark of a dictatorship's directives....not a democratic achievement. • Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector’s history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation’s “attack surface.” Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. • The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically “lapse” triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. • Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual’s legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. • Corporate Privacy Creep: Automating “near real-time” data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. • The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic “soft discrimination” —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-06-05 12:15:49	No I do not	Centralised Cyber & Security Risk		There's so many reasons why this is a bad idea. Look at the India rollout (Aadhaar) which caused a number of starvation deaths because individuals were locked out of the system. I have a background in cyber security and know for a fact that we are not ready for this globally, and especially not in SA. Never mind the fact that any form of centralized control is a bad idea. There are use cases for a digital ID though and the internet does need it BUT it needs to be done responsibly and people need a fallback. If we're going to go the digital ID route then I suggest we implement Self-Sovereign Identity, where the entity owns their own ID and can consent to usage thereof. Again, there must be a low tech backup for outages, cyber crime and other technical issues.	Shaun	Western Cape		employed individual

	2026-06-05 12:08:00	No I do not	Other		I do not support this smart digital ID at all. I don't believe it will be to me benefit, I think its a means of monitoring and using my information against what I initially have agreed on.	Marion	Western Cape		employed individual
	2026-06-05 12:07:26	No I do not	Centralised Cyber & Security Risk		I am 65 years old. To me this is a big concern as I've seen that older people cannot even use the smart phones. After a few traumatic events, they loose the ability to even open this device. This is therefore an absurd idea to be dependent on this. These vulnerable people's identities can also be stolen or misused by staff caring for them. Terrible things has happened to old people because they are not attentive anymore and can only sleep after medication. Mr Schreiber I really imagined that you would be wiser than suggesting such stupid and dangerous changes to something this important. Remember you are also getting older.	Sarina	Western Cape		retired

	2026-06-05 11:53:26	No I do not	Centralised Cyber & Security Risk		And the 30-Day Notification & Identity Assurance Penalties Regulation 37(1) places a strict legal obligation on every individual in the population register to notify the Director-General of any permanent change to their ordinary place of residence, postal address, mobile phone number, or email within 30 days. Non-compliance with this rule will negatively alter the “Identity Assurance Level” assigned to your digital identity credential. The Concern: Forcing citizens to log formal changes within a rigid 30-day window for routine life adjustments like swapping an email address or moving apartments is highly impractical. Lowering a citizen’s “Identity Assurance Level” serves as a hidden penalty, which could lead to sudden, frustrating rejections or delays when trying to execute everyday high-security actions like opening an account or authenticating an online transaction. 	2026-06-05 09:05:48	No I do not	Centralised Cyber & Security Risk		*Subject:* Public Comment on Proposed Digital ID / Biometrics *To:* Moses.Malakate@dha.gov.za and Dept of Home Affairs *RE:* Objection to proposed amendments to the Identification Act relating to the Digital ID/biometric database Dear Mr Malakate and all policymakers at Home Affairs. I object to the proposed Digital ID/biometric system and unrestricted access to identity information. Biometric data is “special personal information” under POPIA 2013 and requires lawful, limited, secure processing with free, informed, and specific consent. This proposal risks identity theft, fraud, cybercrime, and unlawful surveillance if implemented without strict safeguards. It must comply with Section 14 of the Constitution, which guarantees the right to privacy, as well as the common law right to privacy, PAIA 2000, the Identification Act 1997, and the Electronic Communications and Transactions Act 2005. I request that no such system be implemented without independent oversight, clear limits on access, strong encryption, and the right to opt out of biometric collection. An extra thought, to think all South Africans can afford a cellphone and data, is preposterous. Even if they do have a basic cellphone, there are people in the rural and other areas areas who do not have electricity and battle to keep their phones charged. This is not a First World country and its best not to pretend it is. The crime rate in South Africa is out of control whereby honest citizens of our country have had their phones stolen. This will put their lives on hold and in this time, could prohibit them from living a normal life, earning a living, buying essentials including food etc. My 87 year old Mother’s cellphone and ID was stolen in December. Her life became hell, she has a terminal illness and this was the “cherry on top” of her stress. She couldn’t stop her cell contract as her provider refused to assist her without an ID. If you have a digital ID, how will this work? She also couldn’t stop her banking app. This whole new proposed system is impracticable and more invasive than anything humanity has experienced. Kind regards, Laura Cullen	Laura	KwaZulu-Natal		retired

	2026-06-05 06:38:48	No I do not	Structural Function Creep & Tracking		This is a trap cloaked in convenience. This is not, at all, with our best interest at heart, but paving the road to a social credit system that will strip away many freedoms - right to privacy, right to travel, right to trade, and more. I do not consent to being tracked and have my freedom limited digitally. I do not consent to be forced to have a device with me to identify myself. I do not consent to the banks and government colluding as this violates my privacy. I specifically do not consent that the government and other role players orchestrating this, profit from my personal and private data.	Helga	Western Cape		
	2026-06-05 06:38:27	No I do not	Centralised Cyber & Security Risk		Absolutely no privacy and no respect for humanity and hinan rights will result by digital id's	Lucia	Gauteng

	2026-06-04 16:40:05	No I do not	Centralised Cyber & Security Risk		Cybersecurity Readiness & “Leapfrogging” Vulnerabilities While the draft regulations introduce highly sophisticated cryptographic measures, including asymmetric elliptic-curve cryptography and encrypted database storage, they create an unprecedentedly dense web of database interfaces. This leapfrogges global legacy models by connecting the state’s population register directly to corporate networks via secure APIs. The Concern: South Africa’s public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic “attack surface.” If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. 	2026-06-04 16:21:16	No I do not	Other			Cathy	Gauteng		employed individual
	2026-06-04 16:20:48	No I do not	The 10-Year Physical Queue Trap		The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically “lapse” triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual’s legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis.	Paul	Gauteng

	2026-06-04 10:07:23	No I do not	Centralised Cyber & Security Risk		A digital ID is a terrible idea and just another way that the government wishes to control its citizens and remove basic human rights and freedoms. Given the poor state of our government IT infrastructure, the high levels of corruption as well as the multitude number of past data breaches that has exposed personal details of citizens it is clear that a digital ID system will be prone to data breaches, misuse by hackers as well as corrupt individuals and cannot be allowed to be implimented.	Henk	Western Cape		employed individual
	2026-06-04 09:35:34	No I do not	Centralised Cyber & Security Risk		This sounds similar to what was proposed in the medical insurance scheme where the doctor had to work where the state determined. If I want to move house, what does that have to do with internal affairs	Enricus	Gauteng		retired
	2026-06-04 09:32:27	No I do not	Other		A system of such control by intention or other is ungodly and is only been implemented to align with global intention for one word control. Forming a modern day tower of Babylon is most likely inevitable as it is written to come about, however, I choose to make a mark against this system that will eventually lead to the final mark(ID). Thanking You Mark	Mark	Eastern Cape

	2026-06-04 08:40:34	No I do not	Soft Discrimination & Digital Exclusion		Not all people will be able to hold on to the phone for long. Drug addicts sell everything they have which means their IDs are at risk. If someone loses his or her phone their security might be compromised. Senior citizens might be excluded from accessing their social grants simply because they are not used to smartphones. One last thing is the abuse of forcing people who cannot access smartphones to settle for a chip in their bodies with a view to make life easier for them. This is the just a way of introducing us to microchips that might be installed in our bodies for safer security. With that view I say NO TO DIGITAL ID.	Absalom	Gauteng		unemployed individual

	2026-06-04 08:01:03	No I do not	Centralised Economic Kill-Switch Risks		Although the digital ID are “rolled out” as voluntarily it will bring the system one step closer to being mandatory. The digital identification will infringe on the protection of personal information. (Section 24 of the Constitution of SA (hereafter referred to as constitution) and Popia Act). According to the constitution (section 3 (1)), SA citizenship is a common birthright. No ID system may deprive any SA citizen of any citizenship rights. The digital ID system will grant too much power to goverment or any form of error, that may result in unfair discrimination against SA citizens or that SA citizens are not treated equally, which is against section 9 of the contitution. Too many SA citizens may be at risk of exclusion of economic participation due to no or malfunctioning smartphone devices or technical (network) errors or not being able to “activate” or “maintain” proposed digital ID. No ID system should prevent economic participation. Legislation that infringe on the rights of citizens according to the contitution and/or any other official law or deems to be inhumane should not even be considered. Appropriate legal processes should be followed for any consideration thereof, without infringing on human and citizen rights.	Anine	Gauteng

	2026-06-04 07:09:32	No I do not	Centralised Cyber & Security Risk		Dear Chief Director: Legal Services I am a South African citizen living in Centurion strongly object to the current Digital ID plans. The technology and infrastructure needed for a safe Digital ID and digital currency system are not realistically available to many people, even in cities, and especially not in rural and remote areas. Rolling this out now, and then using it as a gatekeeper for grants, health care, education or work, will discriminate against the poor and rural population and undermine their constitutional rights to equality, dignity and basic services. If government insists on Digital ID, it must be rural first and rights-first: It design and prove it in rural villages, townships and informal settlements first, guarantee permanent paper and offline access to all essential services, and put strong protections and remedies in place so nobody loses their livelihood because of network or device failures. If the system cannot meet these conditions, it should not proceed. Yours faithfully Daleen v Niekerk 0829212825	Daleen	Gauteng		retired
	2026-06-04 07:06:20	No I do not	Centralised Cyber & Security Risk		Our government is proven to be incompetent in 99% of what they are doing. We can not trust them to keep this data safe and we can’t trust them to use it legally. Our government has the most racial discrimination laws in the world and this id will only assist them with overreach.	Ben	Limpopo

	2026-06-03 20:34:21	No I do not	Other		I do not support the proposed Digital ID regulations!! South Africans already possess identity documents, passports, and other forms of identification?? No person or government should have the power or authority to force citizens into a digital identity framework that may become a requirement for participation in society!! Freedom of conscience, freedom of religion, and individual liberty are fundamental rights protected by our Constitution. Many South Africans have deeply held religious beliefs that make them uncomfortable with the increasing digitization and centralization of personal identity. These concerns should not be dismissed or ignored!! Participation in any Digital ID system should remain strictly voluntary. South Africans must retain the right to use physical identification documents without discrimination or disadvantage. The Department of Home Affairs should focus on improving existing identification systems rather than introducing new mechanisms that could undermine privacy, constitutional freedoms, and public trust. I therefore object to the draft regulations in their current form!!	Sumi	Gauteng		self-employed

	2026-06-03 09:43:55	No I do not	Centralised Economic Kill-Switch Risks		A digital ID is the first step towards a Social Credit Score System which serves to consolidate power in the apparatuses of the state and to disenfranchise citizens by providing a means to effectively revoke the rights of "undesirables" and exclude them from the economy at the push of a button. By mandating check-ins and compliance, the sovereignty and autonomy of citizens will be further eroded as any failure to jump through the necessary hoops will see their digital ID token revoked. Our identity is already tied too closely to our phones, and adding a digital ID to this list of dependencies will, in essence, concentrate our entire legal identity within the digital realm and within a single portable device, which can be easily stolen or lost. 	2026-06-02 21:07:17	No I do not	Structural Function Creep & Tracking		There is no accountability from government therefore giving them access to a central platform that hold all your credentials poses a huge security risk. Theft of digital ID is a very real possibility which has not been addressed. I am completely opposed to centralised digital ID as it is one of the cornerstones of Agenda 2030 and the New World Order, the proponents of which are unelected elites. We all have a right to freedom of movement, privacy, free speech, biological autonomy and free will. All our data belongs to us, not to the government to be used to track everything that we do and to be monetised by them. They will also use it to control us and restrict us.	Omalleagh	Gauteng

	2026-06-02 20:20:47	No I do not	Centralised Cyber & Security Risk		SA DIGITAL ID ROLLOUT 6/26 PLEASE SHARE! SOUTH AFRICA — YOUR IDENTITY IS ABOUT TO CHANGE FOREVER — DON'T LET YOUR SILENCE BE MISTAKEN FOR CONSENT! The Department of Home Affairs has officially opened public comment on a massive overhaul of South Africa’s civic infrastructure: the draft Identification Regulations, 2026 (Government Gazette No. 54610). Under the new "Home Affairs @ home" strategy, the state is introducing a smartphone-based "Digital Identity Credential" housed inside a new app called MyMzansi. This digital ID will carry the exact same legal weight as your physical Smart ID card. While phasing out paperwork and cutting down administrative delays sounds like a win for convenience, the actual legal mechanics hidden within the draft text raise major questions about privacy, asset security, and digital exclusion. ‼️‼️⚠️ If we don't speak out before the 6 June 2026 deadline, these rules will become law as they stand. Here is what is actually on the table: ? Real-Time Corporate Data Loops: The state will record "Verified Relationships" between you and private entities like banks and telcos. If you update your address or phone number at your bank, it will synchronise across the state population register automatically in near real-time—permanently blurring the line between public civic data and private corporate infrastructure. ? The Stolen Phone Lockdown: Your digital ID is cryptographically "bound" to a single smartphone. In a country with high rates of mobile theft, losing your phone means your legal identity token is instantly frozen or revoked. The regulations are currently silent on a secure, remote path to restore your access, raising the threat of immediate financial and administrative paralysis. ? The 10-Year Physical Queue Trap: Your digital ID expires every 5 years. While remote renewal only via a facial scan in the app is permitted, the draft rules state that if you go 10 consecutive years without a physical, in-person touchpoint at a Home Affairs branch or partner bank, your credential completely lapses. You will be forced to line up in person from scratch to re-prove your identity. ? Algorithmic Profiling (The 30-Day Rule): You will be legally required to report all your routine life updates (moving house, changing an email) within 30 days. If you fail to do so, the state will algorithmically drop your internal "Identity Assurance Level." A lowered score could mean sudden, frustrating transaction rejections when you try to use high-security online services. ? Foundations for Function Creep: Centralising dynamic biometric registries and cross-entity tracking pipelines creates a technical foundation that critics warn could easily be weaponised into an authoritarian behavioural tracking system, or act as a centralised economic ‘kill-switch’ over all your accounts. ? YOUR VOICE IS A LEGAL FORCE Public participation is not a mere tick-box exercise—it is a binding constitutional right under the Promotion of Administrative Justice Act (PAJA). Every choice and comment submitted through the Dear South Africa portal forms a recognised legal submission delivered directly to the Chief Director: Legal Services, Adv A M Malakate. We’ve cut through the legalese and structured the official questionnaire into clear, direct focal points so you can have your say in less than a minute. PLEASE CLICK HERE ? Click the link below to cast your vote and submit your formal comment now! ? https://dearsouthafrica.co.za/digital-id/ Spread the word! Once you’ve participated, share this post to your local community groups, family chats, and colleagues. Our digital future must be shaped by active citizens, not unchecked bureaucracy. We have until the 6th June 2026 to submit our objections - You can copy and paste this objection and send it to Moses. x. To: Moses.Malakate@dha.gov.za Subject: Objection to Draft Digital Identity Regulations Dear Chief Director: Legal Services I am a South African citizen living in…. I strongly object to the current Digital ID plans. The technology and infrastructure needed for a safe Digital ID and digital currency system are not realistically available to many people, even in cities, and especially not in rural and remote areas. Rolling this out now, and then using it as a gatekeeper for grants, health care, education or work, will discriminate against the poor and rural population and undermine their constitutional rights to equality, dignity and basic services. If government insists on Digital ID, it must be rural first and rights-first: It design and prove it in rural villages, townships and informal settlements first, guarantee permanent paper and offline access to all essential services, and put strong protections and remedies in place so nobody loses their livelihood because of network or device failures. If the system cannot meet these conditions, it should not proceed. Yours faithfully [Your Name] [Contact details]	Ina	Western Cape		retired

	2026-06-02 15:58:10	No I do not	Centralised Cyber & Security Risk		The British public have rejected this state centrist attempt to exercise illegal control over key aspects of humanist collective behaviour. South Africans cannot be subject to this invasion of personal identity and space in Chinese, North Korean, Russian or Islamic State of Iran dictatorial manner. South Africa has inherited an intrinsic Ubuntu persona, which places the well-being of the Person well ahead of the State. Umuntu ngamuntu ngabantu is more than a philosophical proposition. It is a social imperative. This phrase is paired with Nkosi yinkosi ngabantu, which makes clear the chief or leaders limits of power; the chief rules at the pleasure of the people. King Shaka himself paid the price of ignoring the wellbeing of the Zulu individuals of early 1800. Entering the realm of coercive oversight is clearly the ambition of this tyrannical piece of intended legislation It must be gutted and rewritten with due regard for the Ubuntu essence of South African identity. 	2026-06-02 13:32:23	No I do not	Structural Function Creep & Tracking		I am deeply concerned about the long-term impact of this Digital ID framework, specifically regarding structural function creep and tracking.While the system is being framed right now as a tool for basic identity verification and better service delivery, building this kind of centralized infrastructure opens the door to massive mission creep. Once the state has a universal digital tracking pipeline in place, it becomes way too easy for future administrations to quietly expand its scope—turning a simple ID app into a tool for social profiling, strict tax policing, or restricting access to everyday public services.Furthermore, a digital ID completely shifts how citizens interact with the state. A physical Smart ID card only reveals information when I choose to pull it out of my wallet. A smartphone-based digital ID, by its very nature, relies on constant device binding, regular biometric checks, and real-time synchronization. This means every time I use it to buy a SIM card, open a bank account, or check into a space, a permanent digital audit trail is generated.We should not be building a permanent tracking apparatus under the guise of modernization. I strongly urge the Department of Home Affairs to reconsider this digital framework and implement strict, unalterable legislative firewalls that prevent our data from being tracked, aggregated, or repurposed.	Celeste	Western Cape		employed individual

	2026-06-02 09:13:29	No I do not	Centralised Cyber & Security Risk		Cybersecurity Readiness & “Leapfrogging” Vulnerabilities While the draft regulations introduce highly sophisticated cryptographic measures, including asymmetric elliptic-curve cryptography and encrypted database storage, they create an unprecedentedly dense web of database interfaces. This leapfrogges global legacy models by connecting the state’s population register directly to corporate networks via secure APIs. The Concern: South Africa’s public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic “attack surface.” If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. 	2026-06-02 08:30:53	No I do not	Soft Discrimination & Digital Exclusion		Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector’s history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation’s “attack surface.” Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically “lapse” triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual’s legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating “near real-time” data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic “soft discrimination” —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-06-02 06:44:54	No I do not	Centralised Cyber & Security Risk		The idea may be good, but the rampant crime in this country, cannot be taken for granted. By having an identity linked to one smartphone is ridiculous. The proposed law only can be used by people who can afford a smartphone, thus leaving countless millions of South Africans without a voice. This proposal may work in a well organized country, but with this government not even knowing how many foreigners are in the country, how on earth can such proposal work in South Africa? This is a pipe dream meant for developed First World countries, NOT for this country where your identity is likely to be stolen and used nefariously	Reuben	Western Cape		employed individual

	2026-06-01 19:25:27	No I do not	Soft Discrimination & Digital Exclusion		I do not believe the Draft Amendment of Identification Regulations as presented by the Department of Home Affairs represents a secure digital future. It demands much tougher safeguards to protect citizens against corporate overreach and state surveillance. This includes an interoperable private corporate network which blurs the line between public civic data and private corporate databases. I have recent experience of changing home address and email address and I do not trust the state's ability to process these within a 30-day window, which will cause my internal Identity Assurance Level to be dropped for me to carry the consequences. Locking a person's digital ID cryptographically to one specific smartphone device is completely impractical in light of South Africa's high rates of muggings and mobile theft (happened to a friend just last week again), and regular upgrades. Furthermore, some people like my own 90-year old father, do not own a smartphone - what will happen in these cases? The regulations are furthermore completely silent on a secure, remote path to restore people's access, raising the threat of immediate administrative paralysis. The requirement that people must have a physical, in-person touchpoint with a Home Affairs office or partner bank every 10 years is also impractical as proven by driving licence debacels. Centralising a dynamic repository of dynamic biometric signatures and tracking variables provides the perfect infrastructure for future state surveillance or a compliance-driven social credit-style exclusion system. 	2026-06-01 14:17:42	No I do not	Other		I object to the implementation of a digital ID. This is based on my right to Freedom as expressed in the SA Constitution. It will force me to own and operate a smart phone or similar electronic device and maintaining and update this for the purposes of providing proof of and accessing my personal identity parameters. That is a form of oppression. If I do not have a device for whatever reason, by my own choice, affordance, lifestyle or other, or through outdated technology that still serves me, theft or disaster no government should be permitted to pressure me to purchase and/or replace such a device. It is up to the Department concerned to processes and provide a book or card that I can carry on my person, free from any electronic interference or obligation. I am retired and work with many communities and in particular teachers that do not have or share devices and that do not have connectivity or provision for data. What punitive measures will we be subjected to when in particular in rural areas like mine where there is no signal we are asked to provide proof of person? We will be predudices by machines and artificial intelligence networks with which we have no resource or ability to communicate in a pragmatic, humane and respectful way. This digital proposal infringes on my right to dignity and my dignity as a person itself.	Pandora	KwaZulu-Natal		employed individual

	2026-06-01 12:45:16	No I do not	Centralised Cyber & Security Risk		I do not agree with the digital ID because it will be used to centralize all our personal data into one location for the government to control and oppress the citizens of the land. Government comes up with all the so called benefits of the ID system but who is it going to benefit? - only government certainly not the citizens. Imagine how a dictator will suppress a whole nation through this system. If you criticize government they will then be able to disable your ID, bank cards, credit score etc. in an instant. South Africa will become a state like China. Government must stop taking the freedoms away from the citizens.They just want more and more control over us. They want to dictate our every move and this system will give it to them on a silver platter. Also any digital system is easily hackable no matter how they try and convince us it's not. We're not going to fall for that lie. This also means that we have to always have our phones with us, and many times we don't have our phones every where we go. Then if your phone gets stolen, then you sit with all the hassles of getting the legalities sorted out.	Renell	KwaZulu-Natal		retired

	2026-05-31 15:08:25	No I do not	Other		All of the points on the list are of grave concern. All points have merit AGAINST the implementation digital ID. It is beyond comprehension that the Govt. plans such sweeping "reforms" without considering vital details: 1. Many people in rural areas do not have the funds to own a smart phone. Will the Govt. supply each and every person in the country, regardless of their standing, with a suitable phone? How about the built in redundancy in smart phones - will the Govt. supply new phones once a year or every two years? 2. With our high unemployment rate, who will cover the data costs of a smartphone in the hands of the unemployed? 3. Not everyone has access to electricity - how will phones be charged? 4. Cellphone networks are not available in many rural parts of the country. 5. Smartphones break easily - will the Govt. cover the costs of repair or replacement for everyone? 6. The recent adverse weather in the Western & Eastern Cape knocked out electricity & cellphone towers for days on end. No contact with the outside world. No way to contact emergency services for help. ATM's didn't work, shops could not accept card payments - how many people went hungry? 7. When severe solar storms (EMF storms) happen, as they do, and they knock out the electricity and cellphone grid, what good is a digital ID? When the ANC signed the UN / WEF 2030 Agenda - BEFORE THEY CAME INTO POWER IN 1994 - they were still considered a terrorist group according to the old RSA Govt. and also by other governments at the time, but they were allowed to attend the UN; makes you think this has been planned all along. They sold out the ENTIRE unsuspecting South African public without consultation to the WEF & UN for the new world order (one world government). Next up on the horizon for Mzansi: 15 minute cities (already playing out in the UK); no personal transportation; no travel - except for the super rich; shutting down farms as being detrimental to the environment (happening in EU & UK) - "you will eat bugs and be happy"(bug farms already operating in Canada and EU) - yet it is big industry and their chemically saturated mono-culture that is the source of breakdown in the environment along with weather modification. Having a hard copy ID should be sufficient for any identification in South Africa. Home Affairs and the SAP already have our fingerprints for a secondary layer of identification. Open your eyes people of South Africa, we are the frog in the pot of water where the temperature is ramping up. The "Government of National Unity" does NOT have the populations' best interests at heart. They are well paid pawns of the UN & WEF and will stop at nothing to sell us out. I DO NOT CONSENT TO DIGITAL ID, I AM A HUMAN AND ALL MY RIGHTS ARE RESERVED.	Janet	Western Cape		self-employed
	2026-05-31 14:58:47	No I do not	Centralised Economic Kill-Switch Risks		It is a very big cyber risk especially with the South African government who have a track record of being hacked Then there is the threat of centralization of your identity which the government can use to force compliance	Michael	Western Cape		business owner

	2026-05-31 01:26:08	No I do not	Structural Function Creep & Tracking		A digital ID as such is a useful and more secure way to protect identity. However, the way HA wants to go about it is a mixture between an utter pipedream and a nightmare. 1. to introduce the whole package proposed in a Nordic country (highly educated and digitalised) would be massive challenge, incl. the privacy issues. 2. In a country of 43 500 000 adults, of which 10% (4 432 923) do not have any official identification (mostly the poor, rural and marginalised) and where 51.3% do not own a cell phone (an many often do not have connectivity) this is insanity. You cannot mandate, for the reasons above alone, the electronic ID for our population at large. There have to be many different means of ID proof: from Paper, to plastic card to some from of electronic ID. 3. I sternly object to lock this digital identity onto the cell phone. 1. There is already too much stuff on the cell phone. I do not want my cell phone to become my life. In RSA, as we all know, cell phones are very vulnerable to theft, to be hacked, etc. It is not a secure way forward to an inviolable identity. 4. Expanded National Cyber-Defences Vulnerability: Esp. in the public sector, which has a poor record. 5. The 10-Year Bureaucratic Queue Trap: is total insanity and unconstitutional. It would make citizens to non-persons. 6. Corporate Privacy Creep - The blurring between the public administration and the private sector. Big Brother would be upon us. No thanks. ---------- Electronic ID, yes. But, come up with a less ambitious plan. One which assures privacy; which is an aid to citizens; and is not poxy boxy (cell phone locked).	Jürg	Western Cape		retired
	2026-05-30 23:41:46	No I do not	Soft Discriminati on & Digital Exclusion		To tie all this to one digital smartphone is ridiculous. In a country where many of the population cannot afford a smartphone, or buy another one as a result of being stolen, lost, or simply coming to the end of its life, is totally impractical. This also opens up your financials to more digital stealing. There is already too much hacking of bank accounts.	Jennifer	Western Cape		retired

	2026-05-30 15:50:42	No I do not	Corporate Interoperab ility & Privacy Creep		Dear Mr Malakate, I object to the proposed Digital ID/biometric system and unrestricted access to identity information. Biometric data is “special personal information” under POPIA 2013 and requires lawful, limited, secure processing with free, informed, and specific consent. This proposal risks identity theft, fraud, cybercrime, and unlawful surveillance if implemented without strict safeguards. It must comply with Section 14 of the Constitution, which guarantees the right to privacy, as well as the common law right to privacy, PAIA 2000, the Identification Act 1997, and the Electronic Communications and Transactions Act 2005. I request that no such system be implemented without independent oversight, clear limits on access, strong encryption, and the right to opt out of biometric collection. Please confirm receipt. Kind regards, Mrs C J STEYN	Cecilia	Western Cape		retired

	2026-05-30 12:32:16	No I do not	Centralised Economic Kill-Switch Risks		I strongly reject these regulations. They establish a dangerous digital surveillance infrastructure that expands state and corporate social control over citizens. The mandatory biometric enrolment (facial, fingerprints, liveness), device binding, and the MyMzansi app create a centralised population register that is vulnerable to abuse. Broad data-sharing with "trusted entities", verified relationships, and real-time notifications enable pervasive tracking and profiling. The Director-General's sweeping powers over suspension, revocation, identity assurance levels, and mandatory updates risk excluding citizens and punishing dissent. In particular, I am concerned that the government can downgrade my citizenship through its 'social scoring' approach This is not mere modernisation — it is digital authoritarianism disguised as convenience. South Africans deserve privacy and freedom, not a biometric panopticon. These regulations must be withdrawn.	Andre	Western Cape		self-employed
	2026-05-30 12:23:07	No I do not	Other		This will allow anyone to access your profile and make it easier to steal your identity and your privacy no longer has protection from fraudsters, security will be easy to penetrate any process, protection of your life and family being exploited. 	2026-05-30 08:09:35	No I do not	Centralised Cyber & Security Risk		In a country where nearly half of adults are unemployed, it will be difficult to allow fair access to “identification”, especially if it depends on the ownership of a specific smartphone. In every LSM category, people are subject to theft of cellphones very regularly. If ID’s are now attached to a phone, that makes the incentive for stealing these devices even bigger, with exponentially more “benefit” to the thief, but also the inverse for the victim. Our authorities do not have the capacity to find people’s identifying devices, if they are still overwhelmed by more violent crimes. I also question what the implications would be when someone changes their cellphone an a 24-36 month cycle?	Ilse	Western Cape		employed individual

	2026-05-29 15:15:15	No I do not	Centralised Economic Kill-Switch Risks		The Govt has not thought this through and does not have a sufficient grasp of the technology to make this work. It does not add enough value to the citizens of SA to justify the budget for its launch and maintenance. This is not on the IMPORTANT list of things to do for South Africa.	KP	Western Cape		self-employed
	2026-05-29 15:13:13	No I do not	Structural Function Creep & Tracking			Linda	Western Cape		
	2026-05-29 15:04:48	No I do not	Centralised Cyber & Security Risk		The government need to fix everything that is wrong instead of new systems etc. First get the corruption cleaned out	Lydia	Eastern Cape		retired
	2026-05-29 15:02:49	No I do not	Other		Across the world security of digital systems is not close to perfect - and in South Africa neither state digital systems nor private sector digital systems have a record that indicates that one's identity would be safe, nor that one's privacy would be protected. In South Africa computer systems are generally accepted to be perfect which is not the case (or anywhere in the world for that matter) and add the nonsensical AI to the digital mix and nothing can be safe. Allowing a government that has badly damaged SA over 30 years to add the consequences of such a proposal to what is already wrong with the country is insanity. Connecting state and private sector entities as one will surely result in multiple violation of the individual's rights Linking all this to a single cellphone is completely ridiculous as the simple act of replacing a phone (because of damage, theft - highly likely in SA, or simply acquiring a different model) will certainly be a dramatic inconvenience.	Robert	Gauteng		retired
	2026-05-29 14:44:08	No I do not	Centralised Cyber & Security Risk		With the amount of nepotism seemingly present in government as well as private enterprise and the almost complete lack of accountability I don't believe South Africa is ready for this change. 	2026-05-29 10:09:20	No I do not	Centralised Cyber & Security Risk		I feel like this is another way that the government intends to put us at risk, without ensuring the proper safeguards and systems in place. I have yet to be able to change my Green ID since getting married, which has caused massive issues for me, not to mention the fact that I haven't even gotten my smart ID yet. I feel like this is just another way for the government to charge us on a regular basis because I can already see with the current stance of privacy that hacking will be an imminent issue, and to re-verify identity regularly will mean an income stream for the department. I find this not only reckless, as identity theft is one of the most difficult thefts to recover from, and I personally believe that protecting the people is the government's first responsibility, which this bill fails to do. If they can't protect a cell phone number on a cell phone, then an ID for biometrics is even less secure because there is an even bigger demand for foreigners to have local identities, and the complication I see is that SA-born people will end up having to prove they are local, which is ridiculous. 	2026-05-28 22:02:17	No I do not	The 30-Day Address Notification Penalty		Dear Adv A M Malakate and the Department of Home Affairs, I write as a concerned South African citizen to formally object to several provisions of the Draft Identification Regulations, 2026, published in Government Gazette No. 54610, ahead of the 6 June 2026 deadline. While I support the modernisation of identity services and welcome reduced queues, the draft as written introduces structural risks that are constitutionally unacceptable. My specific objections are as follows: 1. Corporate data integration without adequate consent. The proposed real-time, bi-directional data pipelines between the national identity register and private "trusted entities" (banks, telecoms) blurs the fundamental distinction between civic and commercial data. This arrangement requires explicit opt-in consent, independent oversight, and strict purpose-limitation clauses — none of which appear adequately defined in the current draft. 2. The Identity Assurance Level mechanism is disproportionate. Automatically downgrading a citizen's assurance level for failing to report routine life changes within 30 days — with no stated appeals process — risks creating a punitive, opaque tiering system that could unlawfully restrict access to banking, employment, and services. This is functionally a social credit mechanism and is inconsistent with the Constitution's guarantee of equality and dignity. 3. No clear device-loss recovery pathway. Cryptographically binding a legal identity credential to a single device, without mandating a secure remote restoration process, is reckless given South Africa's mobile theft rates. Citizens must not face administrative paralysis because of crime. A robust, accessible recovery pathway must be legislated, not left to future policy discretion. 4. The 10-year in-person lapse clause disproportionately burdens vulnerable citizens. Requiring physical re-registration after a decade without in-person contact will disproportionately exclude elderly, disabled, rural, and economically marginalised South Africans — the very people most reliant on stable identity access. 5. Insufficient safeguards against future function creep. The centralised, dynamic biometric repository created by this framework must be accompanied by hard legislative limits on permissible uses, subject to Parliamentary oversight, to prevent future repurposing for surveillance or compliance-based exclusion. I respectfully urge the Department to pause finalisation of these regulations, conduct broader public consultations — including with civil society, digital rights organisations, and the Information Regulator — and redraft the provisions above with explicit constitutional safeguards. The right to identity is the gateway to all other rights. These regulations must be watertight before they become law.	AZIEM	Western Cape		unemployed individual
	2026-05-28 22:00:13	No I do not	Corporate Interoperability & Privacy Creep			Zahn	Western Cape		employed individual
	2026-05-28 21:59:20	No I do not	Other		The government has to start earning trust before they control the people even more. Lack of responsibility and accountability, corruption, heavy burden on business owners due to lack of services etc and the list goes on. Stop controlling citizens before you've done your job as servants to the people, not autocrats.	Estelle	Western Cape		
	2026-05-28 21:56:04	No I do not	Soft Discrimination & Digital Exclusion		This new framework will directly influence and compromise freedom by placing untold powers and control over the people by government. This represents a great risk to privacy and digital enslavement of the people by this government who is supposed to serve - not the other way around. Ones identity should not be based on points or various superfluous hoops to jump through. It is much more important than that and cannot come under such a threat and government beurocracy and whims of the day. As such I strongly oppose this and raise my most fervent objection to the new digital enslavement of the South African people.	Jesse	KwaZulu-Natal		business owner

	2026-05-28 15:09:59	No I do not	Soft Discrimination & Digital Exclusion		I do not support the proposed Digital ID regulations in their current form. My concern is that this creates too much potential for government overreach and centralised control over citizens’ personal information, movement, access to services, and identity. While I understand the need to modernise identification systems and reduce fraud, any digital identity system must be voluntary, transparent, limited in scope, and protected by very strong safeguards. South Africa already has serious challenges with cybercrime, data leaks, corruption, poor administration, and unequal access to digital services. Many citizens, especially the elderly, poor, rural communities, and those without reliable internet or smartphones, could be unfairly excluded or disadvantaged if essential services become linked to a digital ID system. I am also concerned about privacy, surveillance, data security, and the possibility that a digital ID could later be expanded beyond its original purpose. Citizens should not be forced into a system that could potentially track, restrict, or control access to basic rights and services. I believe government should first prove that it can protect citizens’ existing personal information, ensure proper oversight, and provide clear legal limits before introducing any form of digital ID. For these reasons, I do not support the regulations as currently proposed.	Clint	Western Cape		self-employed

	2026-05-28 10:16:35	No I do not	Other		I was born in a natural and biological world. I had no say whether I would be born or not. I had no say about when and where I would be born. I had no say about who I would be. I had no say about whether I had to be registered and of which country I would be a citizen of. I however had a say about who I would become, and how I would be defined. I enjoyed certain rights and a certain amount of freedom. I refuse to be born in a digital world and to be registered as a citizen of such digital world, where no real assurances can be given about what may be decided by authorities to be my my fate and future. I refuse to be defined as a digital being. It is a known fact that in South Africa, politics are primarily run along the lines of race and ethics. But this is not the real issue. Authorities have proven themselves to be corrupt. Crime is rife, and authorities are seemingly unable to curtail crime, not even violent crime. I refuse to be subjected to the whim of authorities who have given me a reason not to be trusted. I refuse to subjected to a system where, as an example, I may have to bear an onus to persuade authorities to remove hurdles relating to social credit scoring simply because I do not conform to what an authority has, in its discretion, unilaterally decided to place upon me. I refuse to cause my children and grandchildren to be subjected to such a system.	Jurie	Gauteng

	2026-05-27 20:31:14	No I do not	Centralised Cyber & Security Risk		Because the digital ID relies on strict cryptographic “device binding” to a single physical smartphone, access to my legal identity token is entirely dependent on maintaining active ownership and operation of that specific device. This looks like a completely unreasonable risk to me. - If that device should be stolen, and an attacker managed to gain the required level of control of the physical device, identity theft would become trivial. This may seem like "a lot of ifs" to string together, but it really isn't. The big problem is that it makes the safety of my identity dependent upon the security features of the device, none of which I fully trust. - Even if the device is not stolen; if it is simply lost, or broken, or upgraded, I would face the hassle of having to somehow move my identity credentials to a new device. - This will make it really difficult to sell such a device second hand... how am I to know for sure that my identity is decoupled from the old device? No, this is a completely unreasonable piece of legislation; the physical token that maintains my ownership of my identity should most definitely be separate to my smartphone. What I might support is the option of a cryptographic token _that I control_; but this would be unreasonable because so very few South Africans could effectively control such a token and keep it safe. 	2026-05-27 15:47:03	No I do not	The 10-Year Physical Queue Trap		Skip to content Dear South Africa Dear South Africa Democratically Engaged, Active and Responsible Menu Digital ID Digital ID for South Africa DEAR-SOUTH-AfFRICA 20,390 comments individually delivered to the Minister, so far No I do not support the regulations 19392 Yes I do 160 Not fully 838 The Department of Home Affairs has published proposed amendments to the Identification Regulations under Government Gazette No. 54610. This framework introduces a smartphone-based “Digital Identity Credential” housed inside a centralised state mobile application called MyMzansi. While this system aims to eliminate physical administrative delays and phase out identity forgery, it introduces sweeping technological integration, real-time private sector data synchronisation, strict smartphone dependency, automated profile-tiering, and rolling validation cycles. Because your national identity document dictates your legal right to bank, work, travel, vote, and access healthcare, it is vital that the public shapes the regulatory guardrails of this digital infrastructure. You have until 6 June 2026 to submit your formal input. click the link for more info, or scroll down to have your say Have your say – shape the regulations. Do you support the Draft Amendment of Identification Regulations (Digital ID) as presented by the Dep of Home Affairs? No I do not What is your concern? (scroll down for an explanation of each) The 10-Year Physical Queue Trap Use this space to comment in any official South African language. You will be redirected to a confirmation page. D-icon 5.9k Shares whatsapp sharing buttonfacebook sharing buttontwitter sharing buttonemail sharing button Top concerns Centralised Cyber & Security Risk Cybersecurity Readiness & “Leapfrogging” Vulnerabilities While the draft regulations introduce highly sophisticated cryptographic measures, including asymmetric elliptic-curve cryptography and encrypted database storage, they create an unprecedentedly dense web of database interfaces. This leapfrogges global legacy models by connecting the state’s population register directly to corporate networks via secure APIs. The Concern: South Africa’s public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic “attack surface.” If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. The 10-Year Physical Queue Trap Device Binding Vulnerability Corporate Interoperability & Privacy The 30-Day Address Notification Penalty Soft Discrimination & Digital Exclusion Perspectives: What is the debate? The proposed Amendment of the Identification Regulations, 2026, has ignited a vital conversation across South Africa regarding the digitization of civic infrastructure. To help you formulate your official submission, the core arguments surrounding the policy have been restructured below into two comprehensive perspectives. 	2026-05-27 10:15:28	No I do not	Other		The proposed regulations are unconstitutional. Digital ID utilises fingerprints, iris scans and facial recognition, and can be extended to include gait. These belong to the person and to the person alone. The Protection of Personal Information Act (POPIA) explicitly recognizes that: "section 14 of the Constitution of the Republic of South Africa, 1996, provides that everyone has the right to privacy; the right to privacy includes a right to protection against the unlawful collection, retention, dissemination and use of personal information". POPIA states that the government has NO RIGHT to retain this data on its citizens, and therefore NO REASON to need to have access to it. Section 12(2) of our constitution states: Everyone has the right to bodily and psychological integrity, which includes the right— (a) to make decisions concerning reproduction; (b) to security in and control over their body; and (c) not to be subjected to medical or scientific experiments without their informed consent. Considering the high risk of data breaches, there is a very high risk of biometric information ending up with corporations which may have technology that could breach all 3 of these rights. In addition,	Veronica	Western Cape		self-employed
	2026-05-27 10:08:54	No I do not	Centralised Cyber & Security Risk		The basis of this requires use of data - what proportion of finances will need to be used by the most marginalized simply to 'exist' on the system. Unfair that the individual must bear the cost of stolen phone and being frozen out as a result. How are scams, hacking etc. going to be managed? Especially on a large scale. This is an institutional risk. There are just so many scams being perpetrated currently and I see little evidence that it is being managed downwards through various security measures. 	2026-05-27 09:44:56	No I do not	Centralised Cyber & Security Risk		To: The Chief Director: Legal Services Department of Home Affairs For the attention of Adv A. M. Malakate Moses.Malakate@dha.gov.za Subject: Public Comment on the Draft Amendments to the Identification Regulations, 1998 (Government Gazette No. 54610) Dear Sir/Madam, I wish to submit the following comments and concerns regarding the proposed amendments to the Identification Regulations, 1998, as published in Government Gazette No. 54610 of 4 May 2026. At the outset, I acknowledge the legitimate goals underlying the proposed regulations, including strengthening identity verification systems, reducing fraud, and modernising identity infrastructure. I also recognise the importance of maintaining accurate population records and improving administrative efficiency. However, I am deeply concerned that the proposed framework creates severe and potentially irreversible risks to citizens' privacy, civil liberties, and access to essential services. My primary concern relates to the creation of interconnected databases containing highly sensitive personal and biometric information. The regulations contemplate extensive real-time and near real-time information sharing between the Department of Home Affairs and "trusted entities" through APIs and synchronised update mechanisms. These include banks, telecommunications providers, and other accredited entities. In particular, regulations 35 and 38A establish a framework for real-time identity verification services and update notifications between the population register and accredited trusted entities. The effect is to create interconnected, bi-directional pipelines through which personal information such as residential addresses, mobile numbers, identity assurance levels, and related mandatory particulars may be continuously synchronised across multiple databases. In the present technological environment, it is no longer reasonable to assume that any large database can remain permanently secure. Major corporations and governments across the world, including highly resourced states, have suffered catastrophic data breaches despite advanced cybersecurity infrastructure. The question is therefore not whether a breach will occur, but when. The danger presented by this framework is compounded by the multiplication of attack surfaces. Once identity information is distributed across numerous interconnected public and private systems, the security of the entire ecosystem becomes dependent upon the weakest participant in the chain. Even if the Department itself maintains high security standards, a breach at a private-sector trusted entity may expose or compromise linked identity systems. The proposed architecture therefore amplifies systemic risk rather than containing it. This concern is particularly acute because the regulations involve biometric information. Unlike passwords or bank cards, biometric identifiers cannot meaningfully be replaced once compromised. A citizen whose facial biometric template or identity credential is exposed may face permanent vulnerability. The consequences of a major breach could therefore be catastrophic and enduring. I am also deeply concerned about the heavy reliance on "device binding" and smartphone-based identity verification. The regulations define device binding as the linking of a digital identity credential to a specific mobile device through cryptographic means. Access to a person's digital identity is therefore dependent upon continued possession and operation of a particular smartphone. This raises serious practical concerns in the South African context. Mobile phones are routinely lost, stolen, damaged, hacked, or rendered temporarily unusable through battery failure, network outages, or software malfunction. Many citizens also experience unstable electricity access, unreliable connectivity, and financial barriers to maintaining functioning devices. I therefore ask whether the Department is satisfied that mandatory facial biometric verification and device binding strike an appropriate balance between fraud prevention and the risk of unfair exclusion or lockout from essential identity functions. A legal identity system should remain robust under ordinary real-world conditions, including theft, power outages, damaged devices, and network instability. A system which depends heavily on constant access to a secure smartphone may not be fit for purpose in many South African conditions. I am further concerned by the breadth of powers contemplated in the definition of "trusted entity", especially regulation 1(a)(ii), which includes entities responsible for "controlling access to electronic communications services or networks". Access to communication networks is no longer optional in modern democratic society. Communications infrastructure now functions as a gateway to education, employment, banking, commerce, emergency services, and participation in public discourse. Measures which permit the State or accredited entities to regulate or control access to communications networks through identity systems therefore raise constitutional concerns. In this regard, I respectfully submit that any framework enabling the control or restriction of access to communications systems must be carefully scrutinised in light of section 16(1)(b) of the Constitution, which protects the freedom to receive or impart information and ideas. More broadly, the regulations centralise immense authority within the executive branch, particularly through the powers vested in the Minister and Director-General to determine standards, issue instructions, define mandatory particulars, accredit entities, regulate access pathways, and manage the operation of the digital identity ecosystem. While these powers may be exercised responsibly by the current administration, laws and regulatory systems must be evaluated not only according to present intentions, but according to their long-term potential for misuse. Infrastructure capable of enabling extensive identity surveillance, access control, and interlinked monitoring across public and private systems carries inherent democratic risks. The concentration of such powers requires exceptionally strong safeguards, transparency, oversight, and independent accountability mechanisms. I therefore respectfully urge the Department to reconsider the scale and architecture of the proposed framework, particularly with regard to: • real-time and bi-directional data sharing between state and private databases; • the expansion of interconnected identity verification systems across multiple institutions; • the use of mandatory or quasi-mandatory smartphone-linked identity credentials; • the long-term risks associated with biometric identity compromise; and • the constitutional implications of linking digital identity systems to control of communications access and other essential services. I further urge the Department to conduct extensive independent cybersecurity review, constitutional review, and public consultation before implementing any large-scale digital identity infrastructure of this nature. Yours faithfully, Mark de Vos	Mark Andrew	Eastern Cape		employed individual

	2026-05-26 18:40:21	No I do not	Centralised Cyber & Security Risk		It is mind blowing that a country whose citizens are subjected to so much physical and digital crime can contemplate a system like this. As a victim of crime myself, just recovering my cell phone number was a traumatic experience, requiring me to engage with someone high up in the corporate structure of my cellular service provider. I was incredibly thankful when the criminals did not take my driver’s license or ID. With this proposed system, anyone, from a physical criminal to a digital hacker can rob citizens of the essential documentation required to participate in society. Anecdotal evidence states that recovering from identity theft is extremely challenging, even when you are in possession of the correct documents and the thief is not. How much worse when everything is digital and only one server needs to be compromised to steal an entire identity. Furthermore, a centralised database can easily be compromised in order to marginalise whole swathes of society. Multimillion dollar companies and first world governments are not able to secure their servers, it would be impossible to keep this centralised data safe in South Africa. The most terrifying crime in South Africa is to have your ID document stolen. But at least it’s currently under my direct control and I have a few other analogue options in case of emergency. I do not support an environment in which this is all linked to one smartphone which is the most readily stolen item I own.	Tamsin	Western Cape		unemployed individual

	2026-05-26 17:36:51	No I do not	Centralised Cyber & Security Risk		Dear Sir/Madam, I respectfully submit my objection to the Draft Identification Regulations, 2026, in their current form. While I support efficient public services and responsible technological advancement, I believe several provisions within the draft regulations raise serious constitutional concerns relating to privacy, digital freedom, data security, administrative fairness, and the protection of civil liberties. In particular, I am concerned about the proposed integration of state and private-sector data systems, the introduction of “Identity Assurance” mechanisms that may result in algorithmic exclusion, the vulnerability created by linking identity credentials to a single mobile device, and the broader risk of excessive state surveillance through centralised biometric and personal data systems. I further believe the draft regulations do not sufficiently protect citizens against digital exclusion, administrative lockouts, cybercrime risks, or future misuse of personal data infrastructure. South Africa’s constitutional democracy is founded on the principles of dignity, freedom, privacy, and accountable governance. Any national identity framework with such far-reaching implications should therefore include far stronger safeguards, transparent oversight mechanisms, and clear constitutional protections before implementation. For these reasons, I do not approve of the draft regulations in their current form and respectfully request that the Department reconsider and strengthen the proposed framework through broader public consultation and constitutional review. Yours faithfully, Andre Rheeder	Andre	Gauteng		Non-profit

	2026-05-26 17:25:42	No I do not	Centralised Cyber & Security Risk		The draft text of ID Regulations 2026 contains some very worrying features. Specifically, there is proposed an ID Assurance Scoring Loop which penalizes those of us who do not report a change in our lives, like moving house or changing a cellphone number – we are not children whose parents need to keep track of us, and some of us cannot take the time off work to stand in queues to fill in a formal report. On the subject of cellphones, the Stolen Phone Lockdown is very dangerous. Those of us who have had phones stolen or lost – certainly a high percentage – have enough problems trying to block the phones without suffering the revocation of our digital ID which the regulations propose being locked to one specific phone. It is puzzling why our digital ID needs to be renewed every five years or alternatively, if we cannot do it online, at a Home Affairs office, Lord help us, or a bank every year for ten years. What exactly is this in aid of? In fact what is the point of all the government surveillance these regulations would enable?	Barbara	Gauteng		employed individual

	2026-05-26 12:31:27	No I do not	Centralised Cyber & Security Risk		I do not support digital IDs for the following reasons amongst others: 1. Cyber security and related ID theft. 2. Digital credentials which expire every 5 years, which is problematic for older persons to do 3. Digital IDs which lapse every 10 years will be really problematic for old and frail & bedridden persons or those who live far away from the service centers. Such persons may not be able to have their IDs renewed. 4. The loss of one's phone or other device will put one's ID at risk to be stolen or cloned and again a frail old person or those living far away from service centers will not be able to access the service centers. 5. With AI, digital ID theft will become that much easier and cybersecurity of Home Affairs and the interconnection with banks & other institutions risks for data breaches and data theft risks will significantly increase. 6. The impact on individuals to do their normal business once their ID credentials are not updated or when their ID's lapse may cause major problems 7. The efficiency of Home Affairs currently is a major concern and with the introduction of the need for ID credentials to be updated or ID to be renewed every 10 years, this will become a major problem and lead to knock on effects for citizens to run their lives or to do their normal business	Abram JM	Limpopo		unemployed individual

	2026-05-26 11:32:07	No I do not	Centralised Cyber & Security Risk		As a Live Birthday Sovereign Man, I do not consent to this action as it infringing of personal information. The dangers of this centralised move leads to many issues with security as any device can be hacked, lost, stolen or damaged with these unintended circumstances it leaves you in a situation where recovering from it is worse than just reapply for a new card, and more costs other than the normal application for a new document or card or passport. The fact o the matter the cards have been in circulation for less than a decade now and this acceleration now will cost more to upskill staff who already are not doing their jobs so applying a new digital framework at such a point will just cost the tax paying citizen more for what another system that does not work for the people of South Africa. Stick to what you know and don't fix an already unreliable system with escalating financial resources you do not have. Because at the end o the day it is our money the government is wasting again for a system that will never be fully functional no matter how much it's promoted. Stick to physical cards as it has not even been mastered for the fluid roll out yet. And get the staff to actually do their jobs it's a sad site at the offices of home affairs as I have seen with my own eyes how long the ques get and the long wait in applications is, this method of digitising it will not happen the people will not accept it, bottom line you work to serve us not the other way around. You chose that path no one put a gun or threatend you into that position you hold. If you don't like the comments resign. Let a more capable employee take over your post who will serve the people. Trying to eliminate physical cards opens up the gates for more corruption and stolen identity problems because it's digital it can be replicated not duplicated but mass flooding of fake credentials can be issued out to illegal immigrants without formal verification or documentation. As seen in the current system how many illegal immigrants have fake documents imagine what will happen because they all have phones so it will become an unstoppable snowball. Which can offset many intricate systems like employment being taken away from local citizens because of hiring a illegal at less than the actual salary or wages intentionally cutting out South African citizens from securing work for themselves. It opens too many problems to too many issues that can and will go wrong because of incompetence or corruption it is out there I'm not going to sugar coat it. Bribes work as long as no one can say they saw you take it, imagine when the wrong person gets access how many forged identitys they will sell because it's digital they can be dished out like sweets from a tuckshop in mass quantities. What happens when it's time to vote, historical numbers rise up again. Which is where this is going and why the enforced vision is being pushed so hard. When the tactic is so brazen it becomes desperate to hold on to something you really shouldn't have access to because perpetuating a crime over 32 years and witnesses keep vanishing is a clear indicator of only one action, the need to keep feeding off of a free lunch and stopping those deserving of distribution of a equal share will never come to pass as long as the wrong people are in charge. 	2026-05-26 10:11:57	No I do not	Centralised Cyber & Security Risk		I completely reject these regulations. And do not accept the offer. There are so many aspects of this that any straight thinking individual man or woman would disagree with I do not even know where to begin as I am not sure any of it would come through the fog. The most basic of social contract in South Africa is not being fulfilled, thus giving attention to this type of regulation, as well as systems and actions, is fundamentally outside of the remit of the social contract. This illicit representation (government is what it is called in legalese) may not continue with this as you do not have permission to continue. Other than all the practical risks that this government is not competent nor (proven) knowledgeable to cover appropriately (cyber risks, fraud, theft of data, etcetera), it is a non-sensical system. An individual man or woman cannot expire, thus how can their identity expire. An individuals' identity is not dependent on a system. Full stop. In addition, requiring anyone to own a device in order to prove who they are is so far from moving to a better place societally, that I am not even sure the fog will ever lift. Stop playing, and start fulfilling the social contract. Nothing else is authorized to act on or generate any resources for nor use any resources for. Next they will want to implant microchips in humans. All of them are part and parcel of the new world order. People please wake up.	Jannie	North West		retired

	2026-05-26 08:53:24	No I do not	Centralised Cyber & Security Risk		The government are unable to keep our information safe as it is currently. This gives more power to identity thieves and the ability to stop you from buying if you do not have one.	Henriëtte	Gauteng		
	2026-05-26 08:50:26	No I do not	Corporate Interoperability & Privacy Creep			Patricia	Gauteng		retired
	2026-05-26 08:46:31	No I do not	Centralised Cyber & Security Risk		Digital government ID systems create a dangerous single point of failure, where one breach can expose an entire population's identity. This risk is not theoretical. In India, weaknesses in the Aadhaar ecosystem allowed access to sensitive identity data at national scale, affecting systems used for banking and public services. In the Philippines, the COMELEC breach exposed voter data for over 50 million citizens, effectively the entire electorate. In the United States, centralized government identity records were stolen, including highly sensitive personal and biometric data. More recently, in France, a breach at the national identity agency resulted in up to 19 million citizen records being offered for sale on the dark web. These examples show a consistent pattern. Once identity data is centralized and widely trusted, any compromise becomes systemic. Unlike passwords, core identity attributes such as ID numbers, biometrics, or personal history cannot be changed. This makes breaches permanent, scalable, and uniquely damaging. In cybersecurity terms, digital IDs increase blast radius, turning a single vulnerability into a national level risk.	Hilton	Gauteng		employed individual

	2026-05-26 07:18:10	No I do not	Soft Discrimination & Digital Exclusion		Not all South Africans have access to good working smartphones to access the digital identity software platform People using the same smartphone for years is a difficulty since they can be robbed of their smartphone and also apps on the smartphone take up too much space and people will need bigger onboard memory smartphones.	Leonard	KwaZulu-Natal		employed individual
	2026-05-26 07:16:28	No I do not	Centralised Cyber & Security Risk		I do not consent that any of my private information be made public. This is an Invasion of one's privacy, external control over personal / private life	Ken	KwaZulu-Natal		retired
	2026-05-26 07:15:31	No I do not	Centralised Cyber & Security Risk			Ruben	Western Cape		unemployed individual
	2026-05-26 07:15:31	No I do not	Centralised Cyber & Security Risk		There is a great concern for our safety in regards to our identity easily being stolen in a country where immigrants are doing Willi nilly and there is poor regulations of immigrants. Cyber theft in our country is not regulated as well as it should we are looking at real crime issues through cyber and technology. South Africa is not equipt for this.	Lebohang	Gauteng		employed individual

	2026-05-26 07:15:13	No I do not	Centralised Cyber & Security Risk		Cybersecurity Readiness & “Leapfrogging” Vulnerabilities While the draft regulations introduce highly sophisticated cryptographic measures, including asymmetric elliptic-curve cryptography and encrypted database storage, they create an unprecedentedly dense web of database interfaces. This leapfrogges global legacy models by connecting the state’s population register directly to corporate networks via secure APIs. The Concern: South Africa’s public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic “attack surface.” If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly.	Lourens	Western Cape		retired

	2026-05-26 07:05:58	No I do not	Centralised Economic Kill-Switch Risks		South Africa is a diverse country with certain limitations in a variety of concerning areas however we are so far ahead of other countries in some ways and we don’t even know it. Only once a person has lived abroad will they be able to grasp the truth of my statement and understand that for us to thrive as a country we should unite all races and cultures. Designing a new country’s flag and stating ‘we are united’ is a rubbish idea and has failed. Racism will never end unless those individuals who are raising their children to hate other nations, just stops spreading hate the buries the vendetta. We must stand together now more than ever! Our voices are not being heard and by standing up against the evil governments of that make up rubbish fear mongering stories such as covid and this new disease, whatever they’ve called it, that is apparently spreading and can ‘kill’ us if we don’t get jabbed; it’s all bullshit. There isn’t a virus that will kill us, it’s the poison that they’ve concocted and forcing people to be jabbed with. If the world leaders are prepared to kill us off like this, they’re going to do their best to control every aspect of our lives. So I say NO to digital ID because I won’t be controlled and led like a sheep to the slaughter house.	Melanie	Western Cape		unemployed individual
	2026-05-26 07:05:02	No I do not	Centralised Cyber & Security Risk		There are just too many negatives. It all sounds wonderful but in a country like this in which nothing is safe or sacred or functional.....you must be stupid to go down this line of thought!!!	Roland	Gauteng		employed individual

	2026-05-25 22:38:09	No I do not	Centralised Cyber & Security Risk		I am concerned about the 10 year physical trap. The problem if one is not always in SA. Phones are constantly stolen leaving one with no ID or personal information and extreme inconvenience while waiting for replacement.	Margaret Jean	Eastern Cape		retired
	2026-05-25 22:33:09	No I do not	Centralised Cyber & Security Risk		I don't think there is anyone in South Africa who either hasn't been a victim of a cyber attack or knows someone who has suffered at the hands of such an attack. Just recently in the news there were stories of how insecure banking is and how people are tricked and hacked, their money stolen and banks simply not caring enough to reimburse these people. I can't imagine what would happen if South African IDs are hacked and used for nefarious purposes. In this country, one doesn't even feel safe in physical environments, how on earth are we meant to feel safe online. No thank you. Until I see evidence where cyber risks are minimized, I'll give this digital ID a hard pass.	Meagan	Western Cape		employed individual
	2026-05-25 22:26:07	No I do not	Centralised Cyber & Security Risk		IT control measures are not effective and thus, the system can be hacked . Once the smartphone is stolen, all information, bank details are at risk. People will find themselves married without their consent and death certificate issued while one is alive Most elderly people on SA are not technological and are not computer gurus, how will they operate. Not everyone has a smartphone and data for daily operations Introduction of renewal of ID every five years is costly considering that poverty levels are high due to unemployment What is set as backup for non exposure of personal information? The risk exposure of updating the personal status every 30 days will lead to extortion as one (even from contracted company) can give information about economic status of a person. In conclusion, there are more risks than benefits	Tembela	Eastern Cape		employed individual

	2026-05-25 21:20:55	No I do not	Centralised Cyber & Security Risk		The draft to vague on issues such as personal privacy and security of information. The possibility for hacking and misuse of information is to great.	Irene	Gauteng		retired
	2026-05-25 21:19:27	No I do not	Soft Discrimination & Digital Exclusion		This would not be feasible as it requires a large amount of money, training etc for a system that would only benefit those with smartphones. Digital devices are not a necessity and this regulation makes them necessary excluding those who choose to opt out Many have just taken the pains to get their smart ID card, and must now get a different system after just a few short years/months, which is unfair. The systems required for this will also be costly to obtain and run, requiring either a re-allocation of funds or external funding, making us indebted to another nation without good cause. South African government websites are already known to be highly unreliable and have been hacked etc in the past, making this idea far from reality. It will not help xenophobia, it will not fix racism, it will not create jobs for the starving and homeless, it will only serve against our fellow African nations in the long run by pressuring them into following this trend, purchasing these systems at the cost of their nation's sovereignty. Technological reliance has become an issue worldwide, with some countries even rolling back on class devices to aid learning because of their distractibility. As someone with adhd, it is difficult for me to keep a device and be productive and I know many people with the condition have chosen to opt out of keeping a smartphone, just for that sake. I have been medically advised as well, that mobile device use being integrated into households seems to be worsening the condition of many with adhd, leading to slow work ethic and lack of productivity. We cannot afford to continue with the digital ID and encourage its reliance at the cost of the nations future. Updates to our physical ID card and visa systems are reasonable and should be enough to get the job done for whatever concerns there may be with regards to identification. It is also far more affordable to the poor and needy, whose needs and lifestyle should be considered. Devices need to be changed every few years to keep updated with the new technology and this is not feasible for many. I believe it will be a costly endeavour that will either have to be rolled back or we will have to go forward with it at the cost of the people	Zakiyyah	KwaZulu-Natal

	2026-05-25 17:38:57	No I do not	Centralised Cyber & Security Risk		Dear Chief Director: Legal Services, Whereas it is recognised that determining the identity of people in South Africa is of vital importance, there are several drawbacks to the system you propose. The first is how the data is going to be protected. It presents a tremendous challenge if anyone loses their phone or their phones break or are stolen. In the past, the government would provide ID cards to people, which no-one had any desire to steal. With phones, not the case. It will be laughingly easy to hold a person to ransom by making off with their phone. Apart from drawbacks about device security, I have little confidence in the government's ability to ensure data security across multiple government, banking and telecommunication platforms. It requires no stretch of the imagination to envisage how the government unfairly suspends an innocent individual's ability to trade.	Werner	Gauteng		
	2026-05-25 17:38:30	No I do not	Centralised Cyber & Security Risk		It is much too easy for criminals to steal your identity although security is always promised, but not guaranteed. It gives too much power to the government to just wipe out your identity. Device binding vulnerability.	Sara	Gauteng		employed individual

	2026-05-25 17:31:45	No I do not	Centralised Cyber & Security Risk		There is no way that I will trust my online security with a flaky system driven by the Government. The internet is a not stable and one cannot rely on it. Apart from that governments all over the world have in the past switched off the internet for various reasons and then nothing works, not even ATMs. Take a look at https://news.un.org/en/story/2026/05/1167445 for more information and download the ITU report and read it. While I am retired I lead a voluntary Specialist Emergency Communications team who has in-depth knowledge of the vulnerabilities of the technology that we so readily accept and rely on. When everything goes dark, then cash and physical documents will be king!	Brian	Gauteng		
	2026-05-25 17:30:35	No I do not	Centralised Economic Kill-Switch Risks		Digital ID opens doors to serious cyber security and privacy risks if the system is breached / internally abused by Govt employees. Corruption is a legitimate concern. Also, sharing of banking, telecommunication, healthcare, and other personal data between institutions is a violation of the people's constitutional right to privacy and the POPI Act. Furthermore, forced compliance to a digital-only system will cause unnecessary burdens and enforced penalties due to proven Govt employee incompetence.. Also, the "kill switch" used as a Govt control mechanism overseas to deactivate citizens access to banking, fuel purchases and essentials and any form of enforced Govt control / dominance will be vehemently rejected. Lastly, SAs older citizens lack / cannot afford reliable internet access and most have outdated devices. The requirement for all citizens to own, and know how to use, smart devices will be impossible to implement.	Jen	Gauteng		employed individual

	2026-05-25 16:54:31	No I do not	The 10-Year Physical Queue Trap		If your digital ID lapses under the 10-year rule, you are legally stripped of your active digital credential and forced to undergo a physical, standard in-person enrollment process all over again. This creates an unnecessary, cyclical bureaucratic loop that forces digitally active citizens back into notorious, real-world Home Affairs queues simply because they did not have a reason to visit a physical office for a decade. I am living and working overseas and have no desire to be forced to come back for renewal - besides the fact that there is minimal chance of being able to renew during a single trip.	David	Outside SA	United Kingdom	employed individual

	2026-05-25 16:49:58	No I do not	Centralised Cyber & Security Risk		I do not want a digital ID because I believe it concentrates too much personal information and control into one centralised system, creating serious cyber security and privacy risks if that system is breached, abused, or expanded over time. I am concerned that governments and corporations could increasingly link and share data across banking, telecommunications, healthcare, and other services, leading to constant monitoring, reduced privacy, and gradual function creep where a system introduced for identification becomes a tool for tracking behaviour and controlling access to services. I also worry that physical alternatives may slowly disappear, forcing people into digital-only systems, long queues, compliance burdens, or penalties related to address updates and administrative requirements. In addition, I believe highly integrated digital identity systems create the risk of an economic “kill switch,” where access to payments, banking, travel, or essential services could potentially be restricted through one connected platform. Finally, I am concerned that digital ID systems may lead to soft discrimination and exclusion against people who value privacy, lack reliable internet access or modern devices, or simply prefer physical forms of identification and human-based services.	Pieter	Western Cape		retired
	2026-05-25 16:47:25	No I do not	Corporate Interoperability & Privacy Creep		The government has shown in all possible ways, that they do not have any concerns for their tax payers or citizens. More power is all they want, and they can not handle it responsibly.	Lizette	Western Cape

	2026-05-25 15:47:17	No I do not	Other		*FORMAL OBJECTION TO THE PROPOSED AMENDMENTS TO THE IDENTIFICATION REGULATIONS — GOVERNMENT GAZETTE NO. 54610* I hereby record my complete and unequivocal rejection of the proposed amendments to the Identification Regulations relating to the proposed Digital Identity Credential and the MyMzansi centralised state mobile application. This proposal is rejected in its entirety. South Africa does not need a centralised digital identity infrastructure that places citizens' legal existence, access to services, banking, employment, healthcare, travel, voting rights and ordinary civil participation behind a state-controlled digital gateway. The State has not demonstrated the competence, discipline, restraint, transparency or constitutional maturity required to be entrusted with this level of technological power over the individual. A national identity system is not merely an administrative convenience. It is the foundation upon which a person's civil existence rests. Any system capable of centralised monitoring, automated profile-tiering, real-time data synchronisation, rolling validation, smartphone dependency and private-sector integration carries an obvious and unacceptable risk of abuse. South Africans are not prepared to walk blindly into a digital control architecture dressed up as administrative efficiency. This framework raises serious constitutional concerns, including but not limited to: the right to dignity; the right to privacy; the right to freedom and security of the person; the right to equality and non-discrimination; the right to freedom of movement; the right to access public and private services without unreasonable technological barriers; and the right not to be subjected to arbitrary state interference. The proposed system creates the potential foundation for a surveillance state, social-credit-style exclusion, automated punishment, digital profiling, administrative blacklisting and disproportionate penalties for ordinary conduct. Whether the justification is identity fraud, convenience, "smart cities", urban management, public order or administrative efficiency, none of these objectives gives the State the right to strip away the civil liberties and human dignity of ordinary people. South Africans have already seen repeated examples of state failure, corruption, data mismanagement, weak accountability, political abuse of institutions and poor protection of citizens' rights. Against that background, the public cannot be expected to accept a system that centralises identity power even further. The possibility of linking digital identity to movement, banking, employment, transport, municipal enforcement, access to services, healthcare, voting systems, penalties, compliance scoring or behavioural monitoring is not a minor concern. It is a fundamental civil-liberties concern. The answer to administrative inefficiency is not mass digital dependency. The answer to identity fraud is not the construction of a national surveillance infrastructure. The answer to government failure is not to give government even greater power over the individual. I reject any move towards a system that could enable: smartphone-based exclusion; digital identity dependency; centralised citizen tracking; private-sector data synchronisation without proper safeguards; automated risk scoring; behaviour-based profiling; social-credit-style consequences; digital restriction of services; or any framework that can be expanded into surveillance, control or coercion. This proposed regulatory framework must be withdrawn in full. It is not sufficient to amend the wording, soften the language, or promise internal safeguards. The architecture itself is the problem. Once such a system exists, future abuse becomes not only possible, but probable. South Africa is a constitutional democracy. Citizens are not subjects of a digital state. The State exists to serve the people, not to monitor, profile, rank, restrict or administratively control them through technology. For these reasons, I reject the proposed amendments outright and call for the Department of Home Affairs to abandon this framework entirely. This proposal is unconstitutional in spirit, dangerous in design, and unacceptable in principle. It must not proceed.	Andrew	Limpopo		self-employed

	2026-05-25 15:39:21	No I do not	Centralised Cyber & Security Risk		South Africa's public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic "attack surface." If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office. Forcing citizens to log formal changes within a rigid 30-day window for routine life adjustments like swapping an email address or moving apartments is highly impractical. Lowering a citizen's "Identity Assurance Level" serves as a hidden penalty, which could lead to sudden, frustrating rejections or delays when trying to execute everyday high-security actions like opening an account or authenticating an online transaction. Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. This entire Digital ID system is definitely the first step to totalitarian governance and control, leading South Africans to chinese-style social control. No thank you!!! 	2026-05-25 15:15:12	No I do not	Other		I hereby express my deep concern and strong opposition to the proposed implementation of a digital identification system. While proponents argue that digital ID will streamline services, many assert that digital identification paves the way for the “Beast Sytem” described to us in Revelation 13, of the Holy Bible. The digital system, like the beast system, forces people to choose between been ruled by God or Man. Those who do not comply will be excluded from the system. I am not an ardent Christian, but I cannot ignore the similarities. Therefore, the inherent risks to civil liberties, discrimation privacy, and personal security far outweigh any potential benefits. Furthermore, we already have a multitude of ways to identify ourselves, including passports, driving licences and ID documents. The only people who really stand to benefit from digital ID are the governments around the world that are so keen to see them implemented. Therefore, it is highly doubtful that this issue will be given a fair hearing.	Paul	Western Cape

	2026-05-25 14:51:58	No I do not	The 10-Year Physical Queue Trap		This is another example of an attempt by government to "streamline" a process which has unintended (or, worse, INTENDED) undesirable consequences. The current ID system has its faults but those faults CAN be fixed but IT TAKES EFFORT AND COMMITMENT, both attributes being in short supply in our government personnel sadly. With the advent of AI the more digitization the more opportunities for nefarious manipulation - and we have no recourse to it. Also it is unimaginable that people over 65, who, most of the time, is not digitally up to date with everything will have to go and stand in ques every 10 years to have their ID renewed if they did not use it within a certain time. This is just one of the many things Government wants to do that they have not thought through properly and in respect of which they are definitely making the lives of the average citizen more difficult and more open to fraught.	Wilna	Western Cape		retired
	2026-05-25 14:50:42	No I do not	Soft Discrimination & Digital Exclusion		There are a number of issues with this type of legislation. However, I will focus on the primary issue only. Such identification methods leave the individual exposed to manipulation by government and large corporate entities. Such exposure could (and most likely will) lead to forcing citizens to behave and to work, and to transact in a particular way. Our present identification practice here in South Africa is a good and proven practice. Care should be taken to preserve this practice. South Africans have come out of an unfair and morally unjust system during the apartheid regime, and now have more equal rights than previously. It would be tragic to have these rights tampered with, to where a group (or groups) within this excellent country are suffer discrimination - once again.	Gordon	KwaZulu-Natal		employed individual

	2026-05-25 14:41:12	No I do not	Soft Discrimination & Digital Exclusion		Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic “soft discrimination” —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services.	Ilsette	Gauteng		
	2026-05-25 14:37:02	No I do not	Centralised Cyber & Security Risk		I don't see the need for this to be done, the id card has been around for centuries. What if you lose your cellphone?	Brenda	Gauteng		employed individual
	2026-05-25 14:34:37	No I do not	Soft Discrimination & Digital Exclusion		Single phone per user - and the privacy aspect related to this being able to track that device. I do not think privacy is respected by this bill at all - it is fundamentally taking over the processor role for banks and other institutions (BI directional real-time sync) - so it is a node in a Master Data management system . What other features would be synced?? or silently rolled out. This is an overreach from a home-affairs perspective - their mandate is the citizen identification and lineage and lifecycle tracking to establish the persons rights and those of the country. Further tracking is invasion of privacy - they do not need to know when I move homes, or buy new cars or shop at checkers vs Pick and pay - next I will not be able to give someone cash on the street to help them in their need, as this would be an invisible transaction?? 	2026-05-25 13:38:57	No I do not	The 10-Year Physical Queue Trap		Nothing wrong with my present ID card. What do you do with people who have no electronic contact? Why must I renew it every 10 years? more queuing and corruption!	Darryl	Gauteng		retired
	2026-05-25 13:37:28	No I do not	Centralised Cyber & Security Risk		South Africa's public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic attack surface. If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly.	Andriette	Gauteng

	2026-05-25 13:36:02	No I do not	Centralised Cyber & Security Risk		I want a card id systme, im not comfortable with my identity only be digital, there are too many risks and unknown factors, its dangerous and wreckless	lyndon	Western Cape		
	2026-05-25 13:35:08	No I do not	Corporate Interoperability & Privacy Creep			Cornelius	Western Cape		
	2026-05-25 13:33:16	No I do not	Other		I use the BIBLE as my instruction manual. In Revelation 13 we read about the "mark of the beast." The Digital ID is exactly that. Revelation 14 : 11 says what will happen when you do take it. Like they say - over my dead body. They will have to kill me first before I take it.	Stephanus	KwaZulu-Natal		self-employed
	2026-05-25 13:31:21	No I do not	Centralised Cyber & Security Risk		This is a recipe for disaster. Home affairs are already in a shambles, having been dropping the ball for YEARS under the ANC government... Trying to "impliment" new systems have proven futile over the past 3 decades. I have no faith in the "officials" to roll out such a complex system that has so much control over every facet of everyone's lives in perpetuity. NO. NO WAY am I going to support that. I will vehemently oppose this globalist nonsense.	George	Western Cape		
	2026-05-25 13:29:54	No I do not	Corporate Interoperability & Privacy Creep		A right to an identity is a fundamental right that should not be abridged or used for other purposes.	Vinodh	Gauteng

	2026-05-25 13:01:05	No I do not	Other		I am emancipated, and this is totally against my Christian belief. We the citizens want less technology, not more. The more you force technology on us, the less freedom we have. The Government may argue that these sweeping new changes are for our benefit to protect us from criminals, however as we can see from all of the various commissions, it is the Government that is the most corrupt with a hefty amount of criminals, including our President who has not been charged for his Phala Phala money laundering. No, we don't want this, not for any of the drop-down list options, but for ALL of them. We do NOT want "Social Credit Scores", we do NOT want to be forced to renew our identity every 5 years, nor even 10 for that matter. We do NOT have to. You are forcing this onto us so that your friends who got the tender can print money! Locking our identities to something that changes every 2 years (our phones) is unacceptable, even if it was locked in for 10 years, or for life. We do NOT want it linked to our phones, we do NOT want it linked to anything. What we have now, our CARD IDs is what we want. No more. Start adding value to the country and BUILDING the Nation instead of milking it's citizens to make your friends and family members rich.	Jacobus	Mpumalanga
