DEAR SOUTH AFRICA.co.za

Evaluation of Public Comment on the Draft Identification Regulations, 2026

4 May 2026 — 6 June 2026

https://cdn.dearsouthafrica.co.za/

DearSouthAfrica.co.za is an online platform designed to facilitate government and encourage the public to participate in unbiased decision-making processes or policy formation at SOE, municipal, provincial and national levels.

Compiled for:	Department of Home Affairs | Government Gazette No. 54610 (Notice No. R. 7428) Date of Issue: 9 July 2026
Delivered To:	The Chief Director: Legal Services, Department of Home Affairs
For Attention of:	Adv. Moses Malakate (Moses.Malakate@dha.gov.za)
Compiled by:	Dear South Africa Platform (DearSouthAfrica.co.za)

1. Executive Summary

This administrative report presents an exhaustive, data-driven analysis of the public participation process conducted via the Dear South Africa open-governance platform in response to the Department of Home Affairs' invitation for comment on the draft Identification Regulations, 2026. The official public consultation window opened on 4 May 2026 and concluded on 6 June 2026.

The primary objective of the draft regulatory framework is to amend the legacy 1998 regulations to accommodate a smartphone-based "Digital Identity Credential" through a state-issued application named MyMzansi. Under the proposed text, this digital token holds equivalent legal standing to a physical Smart ID card. It establishes secure mechanisms for decentralised identity verification and creates real-time data synchronisation interfaces between the master population register and accredited private "Trusted Entities" (including commercial banks and telecommunications networks).

Over the 33-day legislative window, the campaign generated an unassailable civic footprint of 29,807 unique South African citizens who registered their positions on the portal. Furthermore, this process yielded 10,203 custom qualitative written representations, which were compiled individually and routed directly to the Department's legal desk.

The quantitative findings reveal a state of absolute, overwhelming public resistance: 95.82% of all participants explicitly rejected the regulations as published. While the public broadly favours state modernisation and the mitigation of identity theft, the empirical data shows deep societal concern regarding centralised cybersecurity dependencies, hardware-locked financial access, algorithmic profile degradation, and the technical infrastructure for overreaching surveillance states.

2. Definitive Quantitative Stance Analysis

Unlike symbolic collective petitions which are recorded as a single legal entity by state tribunals, the individual mandate model deployed by Dear South Africa registers each participant as an independent administrative objection under the Promotion of Administrative Justice Act (PAJA).

Overall Public Consensus

The quantitative division of the 29,807 registered participants reflects an unprecedented alignment of public dissent across all demographic parameters:

Participant Position	Total Unique Entries	Percentage Allocation
Do Not Support (Total Rejection)	28,562	95.82%
Support with Amendments (Conditional Objection)	1,022	3.43%
Fully Support (Unconditional Approval)	223	0.75%
Total Civil Footprint	**29,807**	**100.00%**

Qualitative Volume Breakout

- Total Registered System Participants: 29,807 citizens
- Total Unique, Custom Text Comments Lodged: 10,203 sub-missives (34.23% comment-to-participant engagement density)

3. Geospatial & Provincial Distribution

The regional spread of entries shows active participation across all nine provinces, with the highest concentration occurring within South Africa's primary economic and urban corridors. This distribution directly mirrors areas where dependency on digital banking authentication, mobile line porting, and remote transaction verification is densest.

Provincial Spread and Stance Cross-Tabulation

Province of Origin	Total Participants	No I Do Not	Not Fully	Yes I Do
Western Cape	10,139	9,728	357	54

Gauteng	9,913	9,448	376	89
KwaZulu-Natal	3,731	3,570	131	30
Eastern Cape	1,856	1,802	45	9
Mpumalanga	1,073	1,040	23	10
North West	918	899	15	4
Free State	881	844	22	15
Limpopo	752	717	26	9
Northern Cape	406	393	11	2
Outside South Africa (Expats)	138	121	16	1
Total National Footprint	**29,807**	**28,562**	**1,022**	**223**

4. Analytical Breakdown of Primary Systemic Concerns

For participants who registered an objection, the platform deployed a granular concern filter to identify exactly which policy mechanism caused the greatest public friction. For the 22,529 individuals who selected "All of the Above," the platform captured their primary overriding systemic anxiety through a dedicated secondary filter.

By consolidating direct standalone concerns with the prioritised variables from the "All of the Above" dataset, the effective total concern index ranks as follows:

Ranked Systemic Concern Variable	Total Selectees	Effective Percentage
1. Centralized Cyber & Security Risk	13,663	45.84%
2. Centralized Economic Kill-Switch Risks	3,880	13.02%
3. Soft Discrimination & Digital Exclusion	3,654	12.26%
4. Structural Function Creep & Tracking	2,903	9.74%
5. Corporate Interoperability & Privacy Creep	2,886	9.68%
6. The 10-Year Physical Queue Trap	1,327	4.45%

7. The 30-Day Address Notification Penalty	691	2.32%
8. Other Custom / Structural Worries	670	2.25%
9. No Concern (Satisfied with Framework)	121	0.41%
Total Evaluated Concerns Baseline	**29,795**	**100.00%**

5. Socio-Economic and Sector Deep-Dive

Segmenting the data based on the demographic status tags reveals that different sectors of the economy view the technological and administrative impacts of Gazette No. 54610 through distinct lenses.

1. Retired Demographics (9,643 Participants | 32.35%)

The single largest active cohort in this campaign consists of retired South Africans, who are overwhelmingly aligned against the 10-Year Physical Queue Trap and Soft Discrimination.

- Of this group, 95.99% voted "No I do not."
- They express severe resistance to Regulation 20(5), which mandates that a digital profile will completely lapse if a citizen has no physical interaction with a department branch or corporate partner within 10 years. Elderly citizens who have successfully mastered remote mobile banking object to being forced back into physical queues simply to prove their existence to a database.

2. Employed Individuals (6,446 Participants | 21.63%)

Urban professionals and corporate employees focused heavily on Centralised Cyber Risk and Device Binding Vulnerability.

- Within this sector, 95.27% issued a total rejection.
- Their custom commentary emphasises that in a country with exceptional rates of street muggings, burglaries, and device theft, tying an individual's entire legal identity, phone line connectivity, and financial access to a single smartphone hardware element creates a terrifying single point of failure.

3. Self-Employed & Business Owners (5,361 Participants | 17.99%)

This highly economically active sector focused its objections on The 30-Day Address Notification Penalty and Corporate Interoperability.

- Small business owners note that the threat of having their internal "Identity Assurance Level" degraded by an automated state algorithm because they failed to log a shift in

contact variables within 30 days is unworkable. They note that lowered assurance rankings will instantly paralyse online commercial procurement, business banking single-sign-on authentications, and automated SARS tax portal access.

4. Unemployed & Vulnerable Citizens (2,210 Participants | 7.41%)

This cohort overwhelmingly highlights Digital Exclusion. They argue that while the regulations give lip service to inclusion, the inevitable commercial trajectory will prioritise mobile app users. For millions of poor citizens who cannot afford smartphones, experience irregular network coverage, or live in cash-dominant rural informal markets, the optimisation of systems for the MyMzansi app will trigger severe soft discrimination when trying to access basic societal resources.

6. Qualitative Evaluation & Verbatim Civic Testimony

A comprehensive analysis of the **10,203 custom written records** uncovers deep undercurrents of intense pushback, running from sophisticated technical and constitutional critiques to deep-seated survival anxieties.

Focus Area A: System Interoperability & Mass Surveillance Creep

Lawyers, researchers, and tech analysts argue that establishing bi-directional, automated live data synchronisation streams with banking and telecommunications giants effectively out-sources state sovereign registration functions to private corporate infrastructure.

I. "*While leapfrogging older tech infrastructure sounds highly ambitious on paper, it introduces a severe policy blunder. South Africa's public sector has a horrific record of protecting its own standalone registries from data breaches and ransomware attacks. Connecting our authoritative civil population registry directly to corporate networks via live APIs creates an enormous, hyper-connected target for global identity syndicates.*" — Verbatim Civil Commentary Entry

II. "*I strongly object to the establishment of 'Verified Relationships' that allow banks and telecom companies to receive near real-time automated data updates from Home Affairs. This completely chips away at the wall separating my private commercial consumer footprint from my sovereign civic record. It creates a technical architecture open to mass tracking, data commercialisation, and profiling.*" — Verbatim Civil Commentary Entry

Focus Area B: Centralised Control and the Economic "Kill-Switch"

A massive concentration of comments focuses on the extreme danger of consolidating identity tokens, asset authorization, and communication links into an un-reviewed state application that uses behavioural tiers.

I. "*Giving an executive department or a central automated algorithm the power to degrade my 'Identity Assurance Level' because I missed a 30-day address filing window is terrifying. It creates an authoritarian social-credit-style environment. If my assurance level drops, private bank systems will instantly reject my login tokens. This functions as a centralised economic kill-switch over my life without any prior court oversight or due process.*" — Verbatim Civil Commentary Entry

II. "*In South Africa, having your cell phone hijacked or stolen is an everyday reality. If my identity credential is strictly bound to that specific physical hardware element, a mugging doesn't just lose me a phone—it wipes out my entire legal existence. The fact that these regulations feature no transparent, remote, self-sovereign path to safely unbind a stolen phone means citizens will face complete financial and constitutional lockdown.*" — Verbatim Civil Commentary Entry

7. Direct Administrative & Legislative Demands

Based on the explicit mandate of the 29,807 citizens analysed in this report, the Department of Home Affairs is formally requested to completely extract or radically amend the following provisions before attempting to finalise the Identification Regulations, 2026:

1. **De-Link Bi-Directional Corporate Data Synchronisation:** Completely delete all clauses enabling automated, near real-time personal details broadcast loops between the central state population register and private corporate APIs. Identity verification must remain strictly a one-way, closed transaction query.
2. **Abolish the 10-Year Profile Lapse Rule:** Strike down Regulation 20(5) in its entirety. A digitally active, biometrically verified identity credential must never lapse or be declared legally void based purely on a lack of physical interaction with a physical brick-and-mortar office.
3. **Establish Secure, Remote Device Unbinding Frameworks:** Insert clear, transparent statutory provisions detailing how a citizen can safely isolate a compromised device and securely reactivate their credential on a new phone remotely using secure, decentralised cryptographic parameters, bypassing the necessity of physical state queues.

4. **Repeal the Identity Assurance Level Scoring Penalties:** Eliminate the internal scoring mechanism that tiers citizens into "Identity Assurance Levels" based on regulatory compliance timelines. Routine delays in reporting contact alterations must have zero impact on an individual's legal capacity to execute bank single-sign-ons or access services.
5. **Enforce Mandatory High Court Oversight:** Insert an explicit, unalterable clause declaring that any freeze, suspension, restriction, or revocation of a digital identity credential by the state requires a prior High Court order, preventing the system from ever being used as a speculative, warrantless civic or economic kill-switch.

Legal and Constitutional Status of this Submission

This public participation report is compiled and formally delivered in terms of Section 33 of the Constitution of the Republic of South Africa (Right to Just Administrative Action) and the text of the Promotion of Administrative Justice Act (PAJA), No. 3 of 2000.

The Department of Home Affairs, the Director-General, and the Minister are legally required to review these detailed public positions, apply balanced administrative reasoning, and formally state how these extensive public concerns have been substantively answered or resolved before these regulations can be validly signed into law.

DearSA Campaign Registry Baseline Verified: 29,807 Submissions Delivered.

	2026-07-06 10:47:09	No I do not	All of the above	Structural Function Creep & Tracking	Digital ID is the beginning of state and certain tech control over every movement/activity that an individual can do. This is happening all over the world in lock step. I do NOT want a digital ID and I certainly do not want control over every move, purchase etc. Besides this, South Africa has an incredibly high rate of stolen phones. Having your ID gone is going to create massive unease for the victim (think stolen ID, access to bank accounts etc) and a huge workload for those having to guard against this eventuality. At the end og the day this is the heartbeat of Agenda 2030 and I want NOTHING to do with it.	ALEX	Western Cape		unemployed individual

	2026-06-18 20:13:16	No I do not	All of the above	Structural Function Creep & Tracking	Subject: Strong Opposition to the Draft Amended Regulations on Digital Identity Credentials under the Identification Act, 1997 Dear Minister of Home Affairs I am writing as a concerned South African citizen to formally object to the proposed draft amended regulations for the introduction of Digital Identity credentials. While I acknowledge the government's stated intentions to modernise identity management, improve service delivery, and enhance security, I believe these regulations raise serious risks that outweigh the benefits and should not be implemented in their current form. My primary objections are as follows: Severe Privacy Risks and Loss of Control Storing a Digital ID primarily on a mobile phone creates a single point of failure. In the event of loss, theft, or damage to the phone, which is extremely common given South Africa's high crime rates, citizens could effectively lose access to their identity. Recovery processes are likely to be cumbersome, time-consuming, and inaccessible for many, particularly in rural or low-income areas. This undermines the very purpose of a reliable national identification system. Introduction of a Behavioural Scoring Mechanism The regulations appear to enable a scoring system linked to the Digital ID that can fluctuate based on interactions or compliance. This resembles a social credit system, where non-compliance with government preferences could lower one's score and restrict access to services. Such a mechanism is inherently unfair, open to abuse, and represents a profound threat to personal liberty and privacy. Citizens should not have their fundamental rights and access to services conditional on a changeable government-linked score. In-Person Renewal Requirements Requiring in-person renewal every 10 years contradicts the "digital" nature of the system. This requirement penalises elderly citizens, people with disabilities, those in remote areas, and anyone unable to travel to Home Affairs offices. It adds unnecessary friction and undermines claims of convenience and accessibility. Home affairs is already a cumbersome activity in places where you must present yourself physically and this will add to the strain offices currently face. Data Sharing with Private Companies The provisions for sharing personal data with accredited private entities are overly broad. Private companies have no legitimate need for direct access to core government identity data. This creates unnecessary overlap, increases privacy risks through expanded attack surfaces, and raises concerns about commercial exploitation of citizens' information without adequate justification or consent safeguards. There seems to be no safeguards or requirement for these companies to report if information is accessed or breached or if they must encrypt and store safely the information accessed. Cybersecurity Vulnerabilities South Africa has a well-documented history of significant data breaches across government and private sectors. Entrusting sensitive biometric and identity data to a digital system in an environment with persistent cybersecurity weaknesses is irresponsible. A breach could have catastrophic, irreversible consequences for millions of citizens. The government has not sufficiently demonstrated how this system would be more secure than current methods. Excessive Touchpoints, Penalties, and Mission Creep Strict requirements such as updating information within 30 days (with penalties for non-compliance) add burdensome obligations on citizens. Combined with potential future expansions (e.g., broader social scoring, which seems to be the way this policy is written and geared to), the system grants the state excessive reach into private lives. This infringes on constitutional rights to privacy, dignity, and freedom, and erodes trust in government. Trust, which I may remind you, is at a very low level. I do not trust that the system will be used solely for the benign purposes described. Its broad scope, centralised nature, and lack of robust opt-out or data deletion mechanisms make it prone to overreach and surveillance. These draft regulations should be withdrawn or substantially revised to eliminate the privacy-invasive elements. Any digital identity initiative must prioritise true citizen control, minimal data collection, strong independent oversight, verifiable security, and genuine voluntariness without de facto mandatory adoption through service access. We have seen policies like this before in the history of our country and to have them re-introduced by a democratic government is incomprehensible. I urge you to heed public concerns and reject this overreaching framework in its current form. South Africans deserve identity solutions that enhance freedom and security, not ones that compromise them. Thank you for considering my submission. I kindly request acknowledgment of this comment as part of the public consultation process.	Dean	Limpopo

	2026-06-17 23:21:09	No I do not	All of the above	Structural Function Creep & Tracking	I do not agree with a digital ID because it centralises too much personal information in one system, increasing privacy and security risks. If the system is hacked, misused, or experiences technical failures, it could affect people's access to essential services. I also believe individuals should have the choice to use traditional forms of identification. i do not support digital IDs because of concerns about privacy, data security, and the potential for excessive government or corporate control over personal information. 	2026-06-06 10:41:37	No I do not	All of the above	Structural Function Creep & Tracking	I strongly object to the Draft Identification Regulations, 2026, primarily because they create an unacceptable concentration of power over citizens' identities without adequate safeguards. Binding a person's legal identity to a single smartphone device in a country with one of the highest mobile theft rates in the world is not a convenience — it is a vulnerability. The regulations provide no clear, secure pathway to restore access if a device is lost or stolen, meaning an ordinary citizen could be locked out of banking, healthcare, and government services overnight through no fault of their own. Furthermore, the automated synchronisation of personal data between the state population register and private entities like banks and telecommunications companies fundamentally erodes the boundary between public civic records and corporate data infrastructure, exposing citizens to risks they never consented to. My deeper concern is the long-term architecture this legislation puts in place. The 30-day reporting requirement tied to an algorithmic "Identity Assurance Level" effectively penalises citizens for the ordinary disruptions of life — a delayed address update should not trigger a score reduction that blocks access to essential services. Taken together, a centralised biometric registry, cross-entity data pipelines, and an internal scoring system create the technical foundation for government overreach that far exceeds the stated administrative goals. South Africa's Constitution guarantees the right to privacy, dignity, and access to services. These regulations, as currently drafted, threaten all three, and I urge the Department of Home Affairs to revise them substantially before they are enacted into law. The danger is not any single regulation in isolation — it is that the entire architecture being built is a surveillance and control infrastructure in waiting. Each individual component seems administrative and reasonable on the surface, but together they create a system that can be turned against citizens.	Coerien	Gauteng		business owner

	2026-06-06 09:39:38	No I do not	All of the above	Structural Function Creep & Tracking	The draft regulations appear to underestimate the consequences of linking the National Population Register and related identity systems to multiple external institutions through live application programming interfaces (APIs). South Africa has experienced repeated public-sector data breaches, ransomware incidents, and failures in information security governance. In this context, expanding direct digital connectivity between government identity infrastructure and numerous third-party entities materially increases the nation's attack surface. The proposal effectively transforms the country's foundational civil registry into a high-value target for organised cybercriminal groups, hostile foreign actors, and identity fraud syndicates. A successful compromise would have consequences extending far beyond individual privacy harms and could undermine confidence in the integrity of the national identity system itself. A national identity credential is not a discretionary government benefit but an essential mechanism through which citizens exercise constitutional rights and access public and private services. The proposed lapsing provision appears arbitrary because it penalises citizens who remain fully compliant, digitally active, and lawfully identifiable throughout the ten-year period. Many South Africans increasingly conduct banking, employment, tax, and government interactions remotely. Under the draft framework, a citizen could maintain an active digital presence for a decade yet lose access to their credential solely because they did not physically present themselves at a Home Affairs office or accredited institution. The consequence would be a requirement to re-establish identity through potentially lengthy administrative processes despite no evidence of fraud, misuse, or inactivity. South Africa experiences high levels of smartphone theft, robbery, loss, and device damage. In such an environment, a Digital ID system that is closely tied to a single device risks creating immediate and severe consequences for ordinary citizens. Losing a phone should not translate into losing practical access to one's identity, banking services, government interactions, or essential economic activities. A constitutional identity framework must be resilient to common real-world circumstances. The regulations should therefore provide multiple recovery pathways, alternative authentication mechanisms, and guaranteed emergency procedures that ensure no citizen is effectively locked out of civic participation due to the loss of a personal device. The proposed near real-time synchronisation of identity information with banks, telecommunications providers, and other private-sector entities weakens the traditional separation between sovereign state identity systems and commercial infrastructure. Every additional data-sharing relationship creates further opportunities for misuse, unauthorised access, profiling, and secondary uses of personal information. The regulations should adopt a strict data-minimisation approach and require explicit statutory justification for each category of data sharing. Although the regulations state that implementation should not unreasonably exclude citizens, the practical effect of digital-first systems is often the gradual degradation of non-digital service channels. Poor, elderly, disabled, and rural South Africans may increasingly encounter longer delays, reduced support, and indirect barriers when relying on physical identity documents. The Department should provide enforceable guarantees that physical credentials and in-person service channels will remain equally effective, accessible, and adequately resourced for the foreseeable future.	Elayne	Western Cape		
	2026-06-06 09:38:24	No I do not	All of the above	Structural Function Creep & Tracking	My personal, sovereign being is not a digital imitation! I can never be replaced by an artificial likeness and will never give consent for this. This scheme achieves the antithesis of recognising the inviolable right to humanity and dignity that the bill of rights and the constitution enshrines. This will only hasten the enslavement of people to institutions and corporations. I wish our politician weren't so stupid and naive.	Neal	Western Cape		business owner

	2026-06-06 08:54:27	No I do not	All of the above	Structural Function Creep & Tracking	I value my privacy. I do not want all of my information in one place, potentially accessible to scammers, advertising companies and most importantly A CORRUPT GOVERNMENT. I do not want to be ostracized from society / be cut off from my finances / be stripped away of other rights in the event that I agree or disagree with our government.	Courtney	KwaZulu-Natal		unemployed individual
	2026-06-06 08:52:02	No I do not	All of the above	Structural Function Creep & Tracking	FORMAL OBJECTION TO THE DRAFT AMENDMENT OF THE IDENTIFICATION REGULATIONS, 2026 (GOVERNMENT GAZETTE NO. 54610) Submitted in terms of the Identification Act 68 of 1997 and the Promotion of Administrative Justice Act 3 of 2000 (PAJA) I submit this objection as a South African citizen exercising my constitutional right to participate in matters of public governance. While I acknowledge the Department of Home Affairs' stated intention to modernise national identity infrastructure, the draft regulations as gazetted contain serious structural deficiencies that are constitutionally infirm, administratively unjust, and socially regressive. My objections are as follows: 1. VIOLATION OF SECTION 14 — RIGHT TO PRIVACY (CONSTITUTION OF THE REPUBLIC OF SOUTH AFRICA, 1996) The draft regulations establish real-time, bi-directional data pipelines between the national Population Register and accredited private corporations, including banks and telecommunications providers, under the concept of "Verified Relationships." This constitutes a structural integration of state-held biometric and personal data into private commercial networks that goes materially beyond what is necessary or proportionate to achieve secure identity verification. The Constitutional Court has confirmed in Bernstein v Bester and related jurisprudence that limitations on privacy must be reasonable and justifiable in an open and democratic society. Broadcasting dynamic personal data updates across corporate APIs in near real-time does not meet that test, regardless of POPIA compliance obligations nominally imposed on recipients. The risk of secondary use, unauthorised re-sharing, and data interception across multiple third-party servers is inherent in the architecture itself and cannot be contractually mitigated away. I request that the real-time data synchronisation framework be removed or substantially restricted so that no personal data updates are transmitted to private entities without explicit, informed, specific consent from the affected citizen on each occasion. 2. VIOLATION OF SECTION 9 — RIGHT TO EQUALITY AND SECTION 27 — RIGHT TO ACCESS TO SERVICES The regulations state that physical identity documents remain valid and that implementation must not "unreasonably exclude" citizens without smartphones or internet access. However, this safeguard is expressed in aspirational rather than binding, enforceable terms. As private sector entities and state departments optimise their infrastructure around the MyMzansi application, citizens relying exclusively on physical documents will face structurally inferior service delivery — slower queues, restricted transaction access, and soft discrimination in access to banking, healthcare, and government services. This will disproportionately affect poor, rural, elderly, and digitally illiterate citizens, in breach of the equality guarantee and the state's obligations under socio-economic rights provisions. I request that the regulations include binding, justiciable guarantees — not policy aspirations — that physical document holders receive service parity with digital ID holders, with enforceable timeframes and dedicated oversight mechanisms. 3. ADMINISTRATIVE INJUSTICE — THE 10-YEAR LAPSE RULE (PAJA, SECTION 33 OF THE CONSTITUTION) The provision that a digital identity credential is entirely revoked if a citizen fails to appear physically at a Home Affairs office or accredited partner within any rolling 10-year period — regardless of active and continuous digital use — constitutes administrative action that is arbitrary and procedurally unjust. A citizen who is abroad, hospitalised, disabled, or living in a remote area for an extended period would face complete identity revocation through no voluntary default. The loss of a legal identity credential impairs access to banking, voting, travel, employment, and healthcare. Such a consequence requires a proportionate, individualised process, not an automated regulatory trigger. I request that the 10-year physical presence requirement be deleted or replaced with a robust remote re-verification mechanism that accommodates citizens unable to appear in person, with a right of appeal before any credential lapse takes effect. 4. ARBITRARY DEGRADATION OF CIVIL STATUS — THE IDENTITY ASSURANCE LEVEL SCORING MECHANISM The draft regulations introduce an "Identity Assurance Level" that is algorithmically reduced when a citizen fails to notify Home Affairs of a change of address, phone number, or email within 30 days. A reduced assurance level can restrict access to financial services and high-security transactions. This is, in substance, a behavioural compliance scoring mechanism applied to civic identity — the very architecture critics have identified as analogous to Social Credit systems operating in authoritarian states. It conditions the exercise of legal rights on ongoing regulatory compliance monitored and enforced by a single government department, without independent judicial oversight or a clear appeals mechanism. This is inconsistent with the rule of law and the separation of powers as expressed in Chapters 1 and 8 of the Constitution. I request that the Identity Assurance Level mechanism be redesigned so that assurance levels reflect only verified factual inaccuracies — not administrative omissions — and that no reduction in service access may occur without prior notice and an independent review process. 5. INADEQUATE CYBERSECURITY FRAMEWORK RELATIVE TO SYSTEMIC RISK The draft regulations introduce cryptographic device binding, asymmetric elliptic-curve encryption, and facial liveness detection — sophisticated tools. However, the regulations do not prescribe minimum cybersecurity standards, mandatory independent audit requirements, breach notification timeframes, or liability frameworks in the event of a Population Register compromise. South Africa's public sector has a documented history of severe data breaches and ransomware incidents. A centralised, corporate-networked Population Register represents an exponentially higher-value target than any predecessor system. The regulations are silent on the consequences of a systemic breach for affected citizens and offer no compensation or remediation mechanism. I request that the regulations be amended to incorporate binding minimum cybersecurity standards aligned with international best practice (ISO 27001 or equivalent), mandatory annual independent audits published to Parliament, a 72-hour breach notification obligation to affected citizens, and a statutory compensation regime for citizens harmed by state data failures. CONCLUSION I do not oppose the principle of a voluntary digital identity framework. I oppose this draft as it stands because it is structurally unsafe, constitutionally vulnerable, and operationally unjust to millions of South Africans who cannot or will not participate in a smartphone-dependent system. I urge the Department of Home Affairs to reconvene public hearings, commission an independent constitutional impact assessment, and redraft the regulations to incorporate the safeguards set out above before any final adoption. 	2026-06-05 20:34:30	No I do not	All of the above	Structural Function Creep & Tracking	This is an evil framework that has no net benefit for society and is modeled on a state that has an extensive history of human rights abuses. People do not want digital IDs. They do not want or require government micromanage. Government exists to serve the people. We are not your chattel to spy on and control. And you are not God. The South African is already unable to deliver on basic services and taxes the working class into oblivion. Now it proposes to introduce legislation that would undermine every right under the Bill of Rights enshrined in the Constitution of the Republic of South Africa, 1996. Mass surveillance technology is a hallmark of tyranny, not a free and independent democracy built on the right to dignity, freedom of thought, speech, religion and association. Mass surveillance technology and the adoption of a digital ID framework will result in thought-policing and censorship on an unprecedented scale. This bill must be rejected at all costs. And the notion of Digital IDs need to be abandoned.	Clayton	Western Cape		employed individual

	2026-06-05 11:53:15	No I do not	All of the above	Structural Function Creep & Tracking	The government is a public servant institution and should work for us, i.e. we the people, the taxpayer. I would therefore propose that this digital id system be rolled out first and foremost to all government officials, allowing the public to have total transparency of each public servant's digital id footprint, exactly with the same "benefits and features" as is now proposed to digitally monitor the South African public. This transparency should be available on an official website. What's good for the goose, should be good for the gander. Conversely, don't do unto others, what you do not like to be done to you! In conclusion: If this proposal is not acceptable to government, then obviously it should not be acceptable to the South African public.	Nic	Mpumalanga		retired
	2026-06-05 11:46:17	No I do not	All of the above	Structural Function Creep & Tracking		Charn	Eastern Cape		employed individual
	2026-06-05 11:44:16	No I do not	All of the above	Structural Function Creep & Tracking	Absolutely not under any circumstances its called freedom for a reason, i strongly disagree on any technology that has the power to remove my right to freedom. This country is being completely destroyed from the inside out and the evidence is all there in that it cannot be trusted to implement technology that will threaten the very fabric of our right to freedom ...go fix the current broken systems and basic processing of human needs and the ques at home affairs & driving lisc where you show complete incompetence in managing corruption and that is just a piece of plastic issued, go fix the major banking cyber crimes that are escalating beyond control and you want another tech stack for citizens lives to be totally destroyed...my answer is a resounding no. 	2026-06-05 07:03:02	No I do not	All of the above	Structural Function Creep & Tracking	The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically “lapse” triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch.	Peter	North West		self-employed
	2026-06-05 06:59:08	No I do not	All of the above	Structural Function Creep & Tracking	This is an direct attack on my right as a human. This is an direct mission to control	Jeremy	Western Cape		employed individual

	2026-06-04 21:16:48	No I do not	All of the above	Structural Function Creep & Tracking	There is a lot to be said about this. 1. Digital IDs are inherently exclusionary — not everyone has a smartphone. It’s classist but also insists that people have to ‘buy in’ to having a smartphone and gives one less opportunity to disconnect and choose to be secluded from the cyber sphere / dictate the ambit of the participation in such spaces. 2. It would Initially be optional but once the door is opened, it is a slippery slope. 3. The system at home affairs is always offline but I must trust that same system with sensitive personal information???? You must be out of your damn mind. 4. South African government (and cyber security sector as a whole) has a troubling history of data breaches. Again; why would I trust said government with safeguarding these things from outside interference 5. The capacity for digital surveillance and other forms of invasion of privacy in the cyber sphere is problematic. I am at risk of surveillance at both the hands of government and private parties. 6. Based on the points above, it undermines individual autonomy 7. I don’t see the benefit that will be derived that can outweigh the potential constitutional human rights that threaten to be infringed. 	2026-06-04 14:12:02	No I do not	All of the above	Structural Function Creep & Tracking	The global slide towards authoritarianism is demanding ever greater surveillance and control. These are a major incursion on the levels of personal freedom we have come to enjoy in a democracy. No government seems capable of of resisting the urge to control and dictate the lives of those it controls purports to serve, the corruption of power is unavoidable. These digital tools offer less security to the freedom of individuals and rather assist oppressive governance. They will always be in the wrong hands and should be best left alone. Essentially they become a bureaucratic weapon not a social aid. That is more than sufficient reason to resist them.	Michael	KwaZulu-Natal		retired

	2026-06-03 09:57:46	No I do not	All of the above	Structural Function Creep & Tracking	I oppose the proposed Digital ID regulations because they move South Africa toward biometric and smartphone-linked identity systems that create serious long-term privacy, cybersecurity, and civil-liberty risks. Identification is necessary, but facial recognition and biometric verification go beyond the normal purpose of proving identity. Unlike passwords or physical documents, biometric information such as facial scans is permanently linked to a person's body and cannot simply be replaced if compromised. If this information is leaked, breached, copied, or misused, the consequences may be irreversible. I am concerned about how this system will operate in practice. If digital identity depends on mobile devices and printed documents are gradually reduced or discouraged, many citizens may be pushed toward biometric verification in order to prove who they are. In reality this could make facial scanning or biometric participation difficult to avoid, even if initially described as voluntary. Large centralised identity systems also create significant cybersecurity concerns. Databases containing sensitive personal and biometric information become attractive targets for cybercrime, abuse, and unauthorised access. No system can guarantee permanent security, and the more interconnected and centralised a system becomes, the greater the consequences of failure or breach. I am also concerned about future use and mission creep. History shows that systems introduced for limited purposes often expand beyond their original intent. Technology created for convenience or fraud prevention can later be used more broadly through legal or policy changes. Once infrastructure exists, the temptation to expand its use may grow. Artificial intelligence increases these concerns. AI can rapidly analyse and connect large datasets, automate identity matching, and support large-scale profiling or surveillance capabilities that were previously difficult or expensive to perform. While these technologies may offer benefits, they also create serious risks if linked to identity systems or biometric databases. My concern is not only how the system may be used today, but what becomes technically possible in the future. I do not support creating systems that could enable increased surveillance, behavioural profiling, or the gradual erosion of privacy protections. Public services should remain fully accessible through strong non-biometric and non-smartphone alternatives. Citizens should not have to surrender facial or biometric data in order to participate fully in society or access essential services. South Africa should modernise public services in ways that strengthen security and convenience without compromising privacy, bodily autonomy, or civil liberties. Safeguards must come before expansion, not after it.	D	Western Cape		employed individual

	2026-06-03 09:54:34	No I do not	All of the above	Structural Function Creep & Tracking	Everything the current Government has touched to date has been an absolute disaster,so with their track record I refuse to be part of an experiment that is bound to go terribly wrong. No thank you!!!!!	Brian	Eastern Cape		retired
	2026-06-03 08:49:04	No I do not	All of the above	Structural Function Creep & Tracking	Centralized Cybre & Security Risk: South Africa's public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic "attack surface." If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. The Government CANNOT Guarantee that the data is safe...Have a look at the the current Systemic corruption in Government... 10 Year Physical Queue trap: If your digital ID lapses under the 10-year rule, you are legally stripped of your active digital credential and forced to undergo a physical, standard in-person enrollment process all over again. This creates an unnecessary, cyclical bureaucratic loop that forces digitally active citizens back into notorious, real-world Home Affairs queues simply because they did not have a reason to visit a physical office for a decade. Constitutionally if I am Issued a South African Birth Certificate I am a Citizen Of this country and the cannot restrict My access to any thing in this country and defiantly not with bureaucracy and infringe on my rights as a South African citizen. I have that right through birth and our Constitution. Corporate Interoperability and Privacy Creeping: Although the regulations explicitly ban profiling, commercialisation, and open-ended intelligence gathering, this fluid exchange of live citizen data across corporate API channels raises red flags. Automating data synchronization loops between state databases and private financial/telecom corporate giants chips away at the wall separating public civic records from private commercial infrastructure. I do not need to be attached to A digital device 24/7 . The constitution of South Africa does not quire it. Can the government protect its citizens from Digital espionage from Public and private sector when opening the digital door too Strictly Private information. They cannot as they cannot even protect Witnesses in prosecutable cases. 30 Day Address notification Penalty: Forcing citizens to log formal changes within a rigid 30-day window for routine life adjustments like swapping an email address or moving apartments is highly impractical. Lowering a citizen's "Identity Assurance Level" serves as a hidden penalty, which could lead to sudden, frustrating rejections or delays when trying to execute everyday high-security actions like opening an account or authenticating an online transaction. The government is again penalizing the Law abiding citizen with bureaucracy when the cannot even handle the crooks in their own parliament and government institutions.... Maybe remove all criminals from Public offices and things might go better lock them up its where they belong. instead of trying to infringe on my constitutional right to privacy and freedom of movement. Digital Exclusion & Soft Discrimination:Despite these progressive legal promises, the practical reality of modern service delivery is that digital pathways are quickly prioritized because they save money. As government systems and corporate partners inevitably optimize their systems for the MyMzansi app, citizens relying exclusively on physical IDs could face longer delays, reduced support, and systemic "soft discrimination" when trying to access basic societal resources. With crime rates this high and prosecutions not really happening at a workable pace and criminals being free the aim of this is to control and monitor legal law abiding citizens.. Do something about the problem. The governments problem is not law abiding citizens bur the those that do not comply and still wont when this is introduced, those that steal phones and cars and occupy land, homes and buildings illegally, those that rape and murder, those that steal government funds through a network of integrated corruption schemes and fraudulent contracts. Maybe government should spend more on structured positive and ridged recruitment and policing and prosecutions and maybe even the deplorable schooling system that raises juvenile delinquents... then maybe our country has a chance of actually being a positive contributor to society, but our government and the officers in most public offices and even deplorable public figures instigate and condone anarchy and chaos to suite their pocket. Not the health and well being of the South African People as a whole . They do not want prosperity they wat a system that suits their personal financial gains in which/what ever way possible. 	2026-06-02 14:45:20	No I do not	All of the above	Structural Function Creep & Tracking	George Orwell's novel 1984 was not written to serve as inspiration for governments and government officials on how to establish totalitarian states, but rather to serve as a warning to the masses. This dystopian fictional novel clearly set out the dangers and the oppressive nature of mass surveillance, yet Minister Leon Schreiber (from the Democratic Alliance) and his supporters have decided that this is the exact thing that should happen in South Africa via the implementation of digital ID's. We already live in an era where citizens have very little privacy due to technological advancements and social media. The implementation of digital ID's will completely revoke what little privacy we have. Digital ID's will be the first step to mass surveillance of citizens. We have seen the dangers of mass surveillance in countries like China, where citizens are stripped of their rights to privacy, freedom of speech, freedom of association, freedom of movement, etc. If digital ID's are implemented, South Africa is on a slippery slope to becoming a totalitarian state. Furthermore, it is clear that Minister Leon Schreiber did not even remotely consider the practical implications for the majority of South Africans, especially those living in poverty and in remote areas without the necessary means or access to advanced technological tools. Most South African citizens are not in the financial position to afford smart phones and other smart devices, therefore they will not be able to use digital ID's. If digital ID's become compulsory (which will happen if digital ID's are implemented), then impoverished citizens will be forced to spend money on smart phones/devices, making this an exclusive service instead of an inclusive one. It is thus clear that digital ID's will only bring about major societal problems and should never be implemented.	Lara	Northern Cape		
	2026-06-02 14:45:13	No I do not	All of the above	Structural Function Creep & Tracking	I do not comply to your draconian methods of a digital ID and to be tracked!! I refuse everything to do with digital ID! We have the right as citizens to our privacy!! The government has to be tracked!!!	Tracy-Lee	KwaZulu-Natal		unemployed individual
	2026-06-02 14:39:47	No I do not	All of the above	Structural Function Creep & Tracking	I do not support this Bill. My concern is that it appears to move society towards increased centralised control, monitoring, and restriction of ordinary citizens. From my personal Christian perspective, this raises serious concerns in relation to the warning given in Revelation 13 regarding a system of control over people's ability to buy, sell, and participate freely in society. For this reason, I cannot support the Bill in its current form.	Ruan	Gauteng		employed individual

	2026-06-02 09:49:04	No I do not	All of the above	Structural Function Creep & Tracking	The move to create a digital ID, married with all the functions that the digital ID has attached to it, including using the digital ID profile to monitor where I stay, where I go, what my cellphone number is, and also use it for the 'social credit score', are all functions that are outside the right, scope, power and authority of any government. Tracking the free movements of citizens, and using this digital ID Profile to incentivise behaviour that a handful of state runners require is the creation of state control over the lives of the nation. If the state wants citizens to do something, and no does not comply, whether out of your conscious, or for whatever reason, then the state will be able to create negative social credit that results in lack of ability to get a job, a residence or many other basic rights. When read through, one can clearly see that this system that is proposed is the beginning of the implementation of the ideas of the Chinese digital ID system, which controls access to jobs, access to rental of homes, access to state services. This must not happen in South Africa. The state is trying to structure function creep into areas that are not suited or required for state control. A group of 100 to 200 state administrators should not be able to decide the lifestyle, believes, behaviours of a citizenry.	T	Western Cape		employed individual

	2026-06-01 08:26:07	No I do not	All of the above	Structural Function Creep & Tracking	The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically “lapse” triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual’s legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating “near real-time” data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic “soft discrimination” —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-30 19:36:38	No I do not	All of the above	Structural Function Creep & Tracking	Not only do we find a government skilled solely in corruption and the generally criminal proposing that South Africans ought to sit back and trust it with our personal data, yea our very lives, we find that we are asked to believe that this digital ID system is for the advancement of our freedom and our convenience. And yet, however convenient it may be, it constitutes nothing other than a government invasion of our privacy and a subjugation of the citizen to the guiles of the state whereof the like has no place in our society, but is well-known in countries governed by tyrants. Furthermore, if home affairs cannot solve existing problems, why are we to think this system would work? It is to be mentioned, finally, that I, a blind person, have strong doubts as to the workability of such a system, the ethical question left aside for the moment. It is our moral Christian obligation to refuse to use the proposed system and to oppose it at every turn, turning, if necessary, to public disobedience.	Izak	Gauteng		employed individual

	2026-05-30 12:34:28	No I do not	All of the above	Structural Function Creep & Tracking	THIS IS A BIG NO- NO. NO MATTER FROM WHICH ANGLE YOU LOOK AT IT. The government will have access to your most private and priviliged information. It will not stop at finacial, residential, biometric etc. information. This system wil EVENTUALLY also give the governmnet access to all your most private medical data stored at hospitals and medical practiotioners. A google search of: "Data breaches at the Department of Home Affairs" will reveal all the breaches which took place. It is commonly known that most banking and other data breaches are internal. Thus the DOH will be no exception. The DOH may have an app and change the system but most of the scammers and hackers are most likely still working at the DOH. South Africa is a country of dubious and sometimes proven corrupt and criminal people at the highest level of government , business and the justice sysptem. Thus this proposed digital identification app of Minister Leon Schreiber is like handing all your info to criminals. And the IT specialists who developed the digital id app for the DOH will also be able to hack it.	Christa	Western Cape		retired

	2026-05-29 09:03:42	No I do not	All of the above	Structural Function Creep & Tracking	Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office. If your digital ID lapses under the 10-year rule, you are legally stripped of your active digital credential and forced to undergo a physical, standard in-person enrollment process all over again. This creates an unnecessary, cyclical bureaucratic loop that forces digitally active citizens back into notorious, real-world Home Affairs queues simply because they did not have a reason to visit a physical office for a decade. South Africa’s public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic “attack surface.” If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. Although the regulations explicitly ban profiling, commercialisation, and open-ended intelligence gathering, this fluid exchange of live citizen data across corporate API channels raises red flags. Automating data synchronization loops between state databases and private financial/telecom corporate giants chips away at the wall separating public civic records from private commercial infrastructure. Forcing citizens to log formal changes within a rigid 30-day window for routine life adjustments like swapping an email address or moving apartments is highly impractical. Lowering a citizen’s “Identity Assurance Level” serves as a hidden penalty, which could lead to sudden, frustrating rejections or delays when trying to execute everyday high-security actions like opening an account or authenticating an online transaction. Despite the progressive legal promises, the practical reality of modern service delivery is that digital pathways are quickly prioritized because they save money. As government systems and corporate partners inevitably optimize their systems for the MyMzansi app, citizens relying exclusively on physical IDs could face longer delays, reduced support, and systemic “soft discrimination” when trying to access basic societal resources. 	2026-05-28 11:11:39	No I do not	All of the above	Structural Function Creep & Tracking	I am against any form of digital ID for South Africa - the SA government has bad cyber security, and cannot protect the infromation they currently have available. Also, many South Africans do not have smart phones due to crime (scared they will be stolen) and too many people do not understand how to look after their own cyber security, so this opens them up to crime on a new level. The fact that non-government organisations and businesses will have access to the information is also a huge concern due to mis-management and the potential for corruption. This includes the sale of our information to fourth parties whose intentions may not be honourable.	Bronwyn	Gauteng

	2026-05-28 05:45:19	No I do not	All of the above	Structural Function Creep & Tracking	South Africa and it's government are thoroughly unprepared for a system as technical as this. DHA and other public services are running poorly as is, with DHA's online service included. I do not believe that this service will have the required quality of security, accessibility to older and rural citizens and other functional services. I also disagree with the 5 year re-application period and the strict timelines and penalties placed upon renewal. Though I do see the merit of it. It is important to verify the integrity of someone using a fully digital and therefore nationally accessible document. However this is simply another reason for why security is so important. Furthermore a physical ID card provides so much more interaction, the ability to prove the authenticity of a human through their physical presence. There are many more considerations to take into account both to and for this drastic change. I would suggest keeping an open and objective view on current and upcoming info on this topic that requires decisive, practical decision making,	Carmel	Gauteng		unemployed individual

	2026-05-27 15:55:53	No I do not	All of the above	Structural Function Creep & Tracking	We as South African citizens will not accept digital IDs. We will protest. We will reject it in all forms. We will vote out parties supporting it. We will not conform to this agenda. This system monitors and collects citizens private data and information, tracking us and our habits and behaviors, and will be used as a tool to control opposition to government and organisations, and control religions and faith actions. We will not give up our freedoms. This is a pathway to controlling people and is an invasion of privacy. We will not allow you to use a points system to control us like we are animals in a circus being trained. The people have the power and will not be controlled in this way by governments nor organisations. We will not give up our freedoms. We know that this is just a first step in controlling the population. First voluntary digital IDs, then it becomes compulsory by law, and then you tighten the screws. We are not stupid, we have seen how it works in China, and the plans of the rest of the world "leaders". We will revolt against this in all forms. Further risks are stolen phones, hacked phones, flat batteries, broken phones, no phones because of poverty. Further problems are constant renewal of IDs required after some years. Be warned political parties and organisation pushing this agenda, we the people of South Africa will oppose you and seek your removal.	Brett	Western Cape		
	2026-05-27 15:40:55	No I do not	All of the above	Structural Function Creep & Tracking	We do not want or appreciate government removing our freedoms one by one, we take exception to being tracked and traced by them, they need to understand that they are public servants and serve at the will of the people they are not there to rule over us or to dictate to us, we are many they are few! 	2026-05-27 10:51:03	No I do not	All of the above	Structural Function Creep & Tracking	Civic groups, privacy advocates, and cybersecurity experts argue that while modernisation is welcome, the draft regulations introduce expansive risks and administrative penalties that demand much tighter constitutional safeguards. Their core arguments include: Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector’s history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation’s “attack surface.” Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically “lapse” triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual’s legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating “near real-time” data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic “soft discrimination” —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-27 10:22:51	No I do not	All of the above	Structural Function Creep & Tracking	Concentration of Power: Significant administrative power regarding accreditation and system decisions is vested in the Director General of Home Affairs, raising concerns about potential abuse of discretion. Lack of Independent Oversight: I question what independent oversight structure will exist to monitor the Director General's decisions and ensure accountability. Absence of a Commencement Date: There is no fixed start date for the regulations, leaving the timeline open-ended and without clear accountability. The Digital Divide: The system risks excluding marginalized groups, including the elderly, rural populations, and those in low-income households who may lack reliable internet or suitable mobile devices. Lack of Implementation Detail: While the regulations mention a mandate to avoid excluding citizens, the document lacks practical details on how this obligation will be met. Barriers to Enrollment: Despite being 'free,' the physical reality of Home Affairs office queues and the necessity of traveling for in-person enrollment present significant barriers for many citizens. Device Security Requirements: Regulation 42 allows the Director General to refuse a credential for phones that do not meet certain security standards, which may effectively exclude those with older or lower-cost smartphones. Data Privacy and Recourse: There is uncertainty regarding what recourse citizens have if their data is misused by an accredited trusted entity. Trusted Entity Accreditation Criteria: While criteria exist, the Director General retains significant discretion in deciding which private sector entities, such as banks, become accredited. Public Trust vs. Theoretical Protection: While the gazette includes safeguards like audit logs and requirements for warrants, the effectiveness of these protections depends on whether the institutions responsible for enforcement can truly be trusted. And quite frankly- looking at Zondo & Madlanga commissions.....let's just say based on the evidence, we cannot...	Dan	Gauteng		self-employed
	2026-05-27 10:17:15	No I do not	All of the above	Structural Function Creep & Tracking	We should always be against granting the government any more power. The evidence of the past 30 years, (and beyond) does not paint a pretty picture regarding abuse of power and data security. I do not trust them to secure data. I do not trust them to accurately capture data. I do not trust them to have robust measures in place for lost/found/stolen ID. I do not trust them to use this data purely for identification purposes.	Ben	Western Cape		employed individual
	2026-05-27 10:09:37	No I do not	All of the above	Structural Function Creep & Tracking	The recent cyber attacks on banking institutions and government institutions has proven the state and private industries do not have the capability to securely store private data plus almost all the state's technology infrastructure is archaic, daily we read about different government institutions in need of a massive budget in order to overhaul their tech infrastructure. Furthermore private corporations work on a profit incentive only, mixing private interests with state interests undermines the sovereignty of the state - we are already seeing this in the west with billionaires like Elon Musk creating a tech bureaucracy. Overall this also takes away from a person their fundamental right to privacy. What the government is proposing is not a solution to anything but a way for private corporations to deepen their influence on the state.	Liyema	Gauteng		employed individual

This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual’s legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating “near real-time” data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic “soft discrimination” —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-27 00:33:14	No I do not	All of the above	Structural Function Creep & Tracking	My main concern is structural function creep, where a digital ID system gradually expands beyond its original purpose into widespread tracking and monitoring of people’s behaviour, movement, finances and interactions. Once identity systems become centralised and interconnected, they create the risk of governments or corporations gaining excessive control over access to services and everyday participation in society. I am also concerned about the erosion of privacy and anonymity, where individuals may begin self-censoring because they know their activities can be monitored or profiled. Centralised systems also become high-value targets for cyberattacks, data breaches and misuse of sensitive personal information. Over time, convenience can quietly turn into dependency, where participation in normal life becomes conditional on compliance with a digital system.	LOUISE	Western Cape		retired

	2026-05-26 21:12:01	No I do not	All of the above	Structural Function Creep & Tracking	I’m against digital IDs and increased state control because they create a system where every action, purchase, and movement can be logged, linked to my identity, and used without my consent. Once that data exists in one place, it becomes a single point of failure for breaches, misuse, and function creep—where a tool built for one purpose gets expanded to monitor, restrict, or punish behavior the state later decides is undesirable. It shifts the default relationship with government from innocent until proven guilty to tracked and approved by default, and it gives too much power to whoever controls the system to silence dissent, freeze access to money or services, and erode personal autonomy under the excuse of convenience or safety…and it is not safe! 	2026-05-26 12:15:38	No I do not	All of the above	Structural Function Creep & Tracking	As has already happened in other countries, such systems are still open to cyber-hacking, identify fraud & data theft. Large sections of the population that can’t, or choose not to, use this system will gradually have their civil rights and freedoms eroded as they are systematically excluded from access to essential public utilities and services This system will completely annihilate a person’s right to privacy. Every aspect of one’s life can be tracked, traced and monitored. The system is also open to abuse whereby a person can be instantly locked out of their civic and banking lives should the State choose. I reject these amendments in their entirety.	Jacqui	Western Cape		self-employed
	2026-05-26 12:13:16	No I do not	All of the above	Structural Function Creep & Tracking	South Africa’s Department of Home Affairs has struggled to maintain reliable digital systems—its appointment booking platform is a clear example, with frequent failures and downtime frustrating users. That raises a serious concern about the practicality of a fully digital ID system. If existing platforms cannot consistently stay operational, how can citizens trust that a digital ID app will remain secure, accessible, and properly maintained over time? A physical ID book or smart ID card has one major advantage: once issued, it remains usable regardless of system outages or technical failures. A digital-only identity solution, however, makes access to your identity entirely dependent on the DHA’s ability to continuously maintain complex infrastructure. Given the department’s track record with technical reliability and system maintenance, that creates a significant and unnecessary risk for citizens.	Cobus	Gauteng		business owner

	2026-05-26 12:03:42	No I do not	All of the above	Structural Function Creep & Tracking	SA already has ID books and the smart card and many people also have passports. All these have been perfectly acceptable forms of identification for years. Why can't these simply carry on being used? And besides, such a complex system will require many resources to build, launch and maintain and we the taxpayers will be required, once again, to fork out for this. This could run into billions of Rand in the short to medium term. Already highly taxed, this would be an unfair request to make to stressed taxpayers who are in dire straits financially as it is. As a pensioner, I subsist on a meagre pension and cannot apy more for this infrastructure. Secondly, the vast majority of people in the country have no ability to be digitally recognised as they are rural based and technology absent. This concept cannot apply to them as it's simply too complex.	Richard	Western Cape		retired
	2026-05-26 12:01:52	No I do not	All of the above	Structural Function Creep & Tracking	This is a direct attack on individual freedom in the name of efficiency. i It is merely an excuse for more control that results in dictatorship irrespective of what you do. You can be excluded for any random reason the government sees fit to impose. This is an Emphatic NO!	Steven	Western Cape		unemployed individual

	2026-05-26 11:05:34	No I do not	All of the above	Structural Function Creep & Tracking	The privacy of citizens will be at risk as the government will be tracking all individuals and giving those who comply with these rules social credit scores for compliance. Those who disagree will be penalized or have their access to employment, social services, banking etc provoked. This is an overreach of state and abuse of power limiting freedom of choice and denying individual privacy.	Ntebaleng	North West		employed individual
	2026-05-26 10:45:45	No I do not	All of the above	Structural Function Creep & Tracking	I am worried/ concerned about the proposed digital ID system being introduced. This might be a trap that no one knows about. This is not a step of convenience and modernisation. What about people who do not have/use smartphones. Where will this process leave them? What will happen to them? This step also raises concern about privacy, personal freedom. I am a private person and do not want others to know about my private life, what I am doing and where I am/will be. This does not sound like something where privacy and personal information is protected. It seems like people can be potentially be monitored, tracked or controlled through a centralised digital system. Freedom of movement and the right tp privacy are fundamental human rights. I really don't want to live in a world or society where a system allows state access to my personal data. What if we are forced later into the system whether we agree or not. This "system" might later be abused by authorities.	Magda	Northern Cape		employed individual
	2026-05-26 10:39:54	No I do not	All of the above	Structural Function Creep & Tracking	This system will be "Big Brother" gone absolutely crazy and will be the end of personal privacy. Apart from the internet in SA being erratic at the best of times, this will mean the compulsory ownership of smartphones, which older people generally are not tech-savvy enough to cope with, apart from the expense of keeping them up-to-date. And, this government can't properly administer, let alone keep secure, the systems which are currently in place.	Paul	Western Cape		retired
	2026-05-26 10:24:49	No I do not	All of the above	Structural Function Creep & Tracking	No, this is equivalent to handing over our weapons to the state because "they know best". I do not and never will trust a state system that has to have such deep roots and connections to my private personal data. That can in effect, wipe out my digital identity without my knowledge based on some obscure rules defined by some random person. Also how will you challenge this system if there is no physical locations left, what to do with people that dont have internet access. Why can we not just stick to physical docs	Kris	Western Cape		self-employed

	2026-05-25 19:57:59	No I do not	All of the above	Structural Function Creep & Tracking	Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Not to mention that consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. 	2026-05-25 18:56:50	No I do not	All of the above	Structural Function Creep & Tracking	While modernisation is welcome, the draft regulations introduce expansive risks and administrative penalties that demand much tighter constitutional safeguards. Core arguments include: a) Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. b) The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. c) Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. d) Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. e) The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-25 17:16:06	No I do not	All of the above	Structural Function Creep & Tracking	I write to record my complete and unconditional opposition to the draft regulations pertaining to the proposed Digital Identity Document. I do not support this proposal in any form whatsoever. No amendment, safeguard, or technical modification shall alter my position. The very concept of a digital identity document is, in my considered view, fundamentally flawed and inherently dangerous for the citizens of the Republic of South Africa. My objections are set forth below. 1. UNACCEPTABLE SECURITY RISKS The draft proposal seeks to replace a physical document with a digital credential stored on a personal smartphone. This constitutes, in my submission, not progress but recklessness. Smartphones are routinely lost, stolen, and compromised by malicious actors. No software patch, biometric enhancement, or encryption protocol can alter this basic material reality. A physical card cannot be cloned remotely, intercepted across a network, or extracted from a compromised server. A digital ID, by its inherent nature, can. The Department cannot provide any absolute guarantee of security for any digital system. The public and private sectors of South Africa suffer daily data breaches – the South African Revenue Service, TransUnion, Experian, and numerous other institutions have already lost citizen data. To now propose the centralisation of our most sensitive identity credentials into another digital repository is, with respect, grossly irresponsible. 2. UNACCEPTABLE PRIVACY AND SURVEILLANCE RISKS A digital identity document is, by its very architecture, an instrument of tracking. Every verification generates a digital footprint. Every transaction creates a logged record. This infrastructure creates a panopticon wherein the state may monitor when, where, and how frequently citizens identify themselves. The draft offers no meaningful safeguard against function creep. Once the digital infrastructure is established, it will inevitably be deployed for purposes far beyond its original mandate – including voting, movement tracking, financial monitoring, and political surveillance. This is not speculation; it is the documented and predictable trajectory of digital identity systems globally. I do not consent to being tracked. I do not consent to the creation of a surveillance infrastructure under the guise of convenience. 3. UNACCEPTABLE EXCLUSION OF MILLIONS OF SOUTH AFRICANS Millions of South African citizens do not own smartphones. Millions more reside in areas without reliable access to data networks or electricity. The elderly, the rural poor, and the unemployed will be left behind as a direct and foreseeable consequence of this proposal. The Department asserts that the Digital ID will be voluntary. With respect, this is a misrepresentation. Once the legacy green identity document is phased out – and the draft clearly signals this intention – those without smartphones or digital literacy will have no meaningful alternative. They will be excluded from banking, voting, social grants, healthcare, and every other service requiring identity verification. A system that systematically excludes the most vulnerable members of society is not modernisation. It is abandonment of constitutional obligation. 4. THE ONLY ACCEPTABLE COURSE: RETAIN AND ENHANCE THE PHYSICAL SMART ID CARD South Africa already possesses a secure, accessible, and proven identity solution: the physical Smart ID card. Unlike a digital identity document, the physical Smart ID card: · Cannot be compromised remotely – it possesses no network connectivity; · Cannot be tracked – it generates no digital footprint; · Is accessible to all citizens – it requires no smartphone, data plan, or electricity; · Has demonstrated reliability – it is already deployed to millions of South Africans. The Department should, without delay: · Retain the physical Smart ID card as the sole and permanent identity document for the Republic – indefinitely, with no phase-out whatsoever; · Improve the security features of the physical card – by investing in next-generation anti-counterfeiting technology, stronger cryptographic chips, and enhanced tamper-resistant materials; · Expand enrolment and issuance – by clearing the existing backlog and ensuring every citizen who requires a Smart ID card can obtain one affordably and efficiently; · Strengthen verification infrastructure – by providing all government agencies, financial institutions, and private verifiers with reliable, up-to-date card readers. Every rand expended on the development of a Digital ID is a rand diverted from the improvement of the physical card system that already serves millions. CONCLUSION AND DEMANDS For the foregoing reasons, I reject the Digital ID proposal entirely and without reservation. I do not support any version thereof. I will not be persuaded by technical adjustments or assurances of privacy. I hereby demand that the Department: 1. Withdraw the draft regulations immediately and permanently; 2. Publicly commit, in writing, to retaining the physical Smart ID card as the sole and permanent identity document for the Republic of South Africa; 3. Redirect all resources toward improving the security features of the physical Smart ID card and expanding access thereto. I await written confirmation that this proposal has been abandoned. 	2026-05-25 16:52:21	No I do not	All of the above	Structural Function Creep & Tracking	Overreach into our privacy and rights	Eugenia	Gauteng		self-employed
	2026-05-25 16:51:51	No I do not	All of the above	Structural Function Creep & Tracking	This would take away all rights to privacy and freedom i.e. financial privacy, who you communicate with, who you have accounts with, ALL OF YOUR PRIVACY. It would enable the state/regime (I do NOT agree with anything the current regime dictates) to spy on citizens 24/7. RSA will no longer be a "free" country or society. Research COMMUNISM!	Errol	Western Cape		
	2026-05-25 16:41:27	No I do not	All of the above	Structural Function Creep & Tracking	I do not want a digital ID because I believe it concentrates too much personal information and control into one centralised system, creating serious cyber security and privacy risks if that system is breached, abused, or expanded over time. I am concerned that governments and corporations could increasingly link and share data across banking, telecommunications, healthcare, and other services, leading to constant monitoring, reduced privacy, and gradual function creep where a system introduced for identification becomes a tool for tracking behaviour and controlling access to services. I also worry that physical alternatives may slowly disappear, forcing people into digital-only systems, long queues, compliance burdens, or penalties related to address updates and administrative requirements. In addition, I believe highly integrated digital identity systems create the risk of an economic “kill switch,” where access to payments, banking, travel, or essential services could potentially be restricted through one connected platform. Finally, I am concerned that digital ID systems may lead to soft discrimination and exclusion against people who value privacy, lack reliable internet access or modern devices, or simply prefer physical forms of identification and human-based services. 	2026-05-25 16:06:31	No I do not	All of the above	Structural Function Creep & Tracking	While modernising identity systems may improve convenience, this proposal creates serious risks around privacy, surveillance, and citizen control. China’s social credit and digital identity systems are a clear example of how centralised digital governance can evolve beyond administration into behavioural monitoring and restriction of freedoms. Once government, banking, telecoms, and biometric systems are interconnected in real time, the potential for abuse, data breaches, exclusion errors, and political misuse increases significantly. In a country already struggling with cybercrime, corruption, and infrastructure instability, concentrating so much power and personal data into a single digital ecosystem without robust safeguards is dangerous and premature. Citizens should not be forced into a system where losing a phone, failing to update information, or an algorithmic downgrade could impact their ability to access basic services and rights. 	2026-05-25 14:49:45	No I do not	All of the above	Structural Function Creep & Tracking	Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services.	claire	Western Cape		self-employed

	2026-05-25 12:11:09	No I do not	All of the above	Structural Function Creep & Tracking	I object to this draconian regulation because: Risks creating a highly centralised government surveillance and data-tracking system. Major cybersecurity concerns if millions of identities are stored digitally in one platform. Could exclude poorer, rural, elderly, or less tech-savvy citizens without reliable smartphones or internet. Dependence on phones creates problems if devices are lost, stolen, hacked, damaged, or offline. Fear that government powers and access to personal data could expand over time. Biometric or facial recognition errors could wrongly deny people access to services. Public trust concerns due to Home Affairs' past system failures, corruption, and downtime. Concerns that "optional" digital IDs may eventually become effectively mandatory. Privacy and constitutional concerns around storage and sharing of biometric data. Risk of creating a single point of failure affecting banking, travel, healthcare, and public services if the system crashes or is attacked. crashes or is attacked.	Ricardo	Western Cape		business owner
	2026-05-25 12:10:19	No I do not	All of the above	Structural Function Creep & Tracking	I do not support this smart identification initiative. The government will have full control over one life. If you do not agree their laws they can easily make you dissappear from records. There is already to much corruption in Home Affairs. My data can be sold to foreigners without me knowing or consented there to.. China is a good example of this system. Total exclusion of its own population.	Joan	Western Cape		retired

	2026-05-25 11:14:53	No I do not	All of the above	Structural Function Creep & Tracking	I hereby lodge my outright rejection of the Draft Identification Regulations, 2026 (Government Gazette No. 54610, Notice R.7428). These proposed regulations represent an unacceptable expansion of state control over personal identity and data. The compulsory biometric enrolment, accreditation requirements, and extensive data-sharing obligations imposed on private institutions amount to government overreach. They create disproportionate compliance burdens, undermine individual privacy rights, and risk exposing citizens to surveillance and misuse of their personal information. South Africans already possess secure physical identity documents under the Identification Act. Extending equivalence to digital credentials, while mandating complex verification and reporting structures, is unnecessary and unjustified. The draft regulations fail to demonstrate how these measures will improve service delivery or protect citizens, yet they impose significant costs and risks. This draft reflects the hallmarks of a communist-style state, seeking total control at the expense of its citizens, who are expected to pay for it. Such an approach is ludicrous and fundamentally at odds with the principles of a free and democratic society. For these reasons, I reject the Draft Identification Regulations, 2026 in their entirety and call for their withdrawal.	Natasha	Western Cape		self-employed

	2026-05-25 11:05:35	No I do not	All of the above	Structural Function Creep & Tracking	On the surface it appears that the draft legislation will be a big step forward, but there are many areas of concern where citizens may suddenly find themselves excluded from a whole range of functions. As an older person, I am very aware of the difficulties of older people to cope with technology. Even simple confusion brought about by far too much unsolicited emails being received can easily result in an older person never looking properly at emails, including important ones. Hence a sudden action causing suspension of one's access to your bank account, or just your ID can cause untold stress and disruption to an old person. My concern is that while the current minister may have good intentions, that is not enough to ensure that such a highly integrated system of control can easily be subverted to harmful uses. A person's identity should not summarily be suspended. A significant process of warnings and opportunities to rectify a problem should be provided for. Cyber criminals can much more easily cause major systems shutdown for individuals or large sections of the population with a highly integrated system of identity linked to banking accounts, cell phones, and simple updates of records. It is very difficult even now to get organizations to update one's address. What safeguards will there be for bureaucratic inefficiency which will affect a whole range of services all at once. I think a lot more protection is needed for the individual than just summarily shutting down their services.	Jos	Eastern Cape		retired

	2026-05-25 11:00:53	No I do not	All of the above	Structural Function Creep & Tracking	A centralized digital ID creates a single point of failure for surveillance, exclusion, and abuse.South Africa’s proposed system funnels sensitive biometric and identity data into a government-controlled database. This enables:Mass surveillance and mission creep: One hacked or subpoenaed database gives authorities (or future regimes) easy tracking of citizens’ movements, finances, speech, and associations—far beyond paper IDs. Exclusion of the vulnerable: Millions lack reliable smartphones, data, or digital literacy. Technical glitches, network failures, or “ID blocking” (already ruled unconstitutional before) could deny access to banking, grants, healthcare, or jobs. Irreversible privacy loss: Unlike a stolen password, you can’t change your fingerprints or face. Breaches (common in large government systems) expose irreplaceable personal data forever. Decentralized or voluntary private options with strong limits on data sharing are safer. Centralizing identity hands the state (and its contractors) too much power over people’s lives in a country with a history of corruption scandals in ID systems. Privacy and resilience demand resisting this.	Khris	Mpumalanga		self-employed

	2026-05-25 10:54:38	No I do not	All of the above	Structural Function Creep & Tracking	Question: how exactly is this app going to be rolled out to the millions who don't have access to smartphones - how are you going to fund device purchases for these millions of people? Are these people just going to be ignored and the "financially able" be the only ones who essentially get tracked? How are you planning to handle device thefts? How are you planning to handle hacked devices and obvious resultant identity theft? Will the normal ID card still be a valid alternative to this "digital card"? This is a massive move for a country where the majority of people have simple cellular devices or none at all, and/or don't have the ability to keep these devices charged or to replace them. We are not even close to a place where this can be rolled out equally to all citizens. I think this proposal is very premature, and I certainly do NOT want to foot the bill for individuals who do not have access to these kinds of devices, through no fault of their own I might add. And yeah... storing this info on a mobile device is not very intelligent. These devices get stolen and hacked all the damned time. There is no or little provision for this type of scenario. All in, this proposal is half-baked, and it seems to me will cost a massive amount of money which the fiscus does not really have for development alone, let alone ensuring that every single person has a device. Unrealistic, at best. How's about focussing on fixing what has been broken over the last 30+ years first, and then revisiting this subject/project? That is a much better mission to spend resources on, and as a society we are not even close to ready for this digital ID nonsense, the obvious issues with it aside.	Werner	Free State

	2026-05-25 10:30:31	No I do not	All of the above	Structural Function Creep & Tracking	As I type this, a colleague has been struggling for half an hour to take a picture of her face for her banking app, which refuses to accept it. Traffic cops are now starting to require that you sign with your fingers on their cell phones if you receive a fine, and if you refuse, they indicate "refuses to comply". They will no doubt start taking photos of people next, to verify if they are citizens or have licences. Increasingly, facial recognition (and even palm print scanners) are at entry points to complexes, buildings, universities and other public facilities. Big Brother is absolutely everywhere. Digital biometric verification is creeping into everything, and I will absolutely not comply with any of it. If pushed in a corner, I start making it known that POPIA is being transgressed and demanding to know what they will be doing with my biometric info. Sadly, it's inevitably a poor ignorant employee who has just been told to follow orders, and they have absolutely no idea what is at stake. Bureaucrats have eyes in their faces. They can look at my face and my ID photo and decide if it's me or not. End of. Mr Schreiber appears to be in lock-step with this digital panopticon, which our erstwhile technocratic overlords are salivating over - governance via app. Wonder who is raking in all of the cash for these IT surveillance systems? These measures are all reminiscent of a Chinese-style surveillance state, where privacy and autonomy will become completely eroded and the state thinks that it owns you. This is not just cool gadgetry and convenience. People are walking into this and think that it's just great and dandy, because convenience, or because government says so. Soon, we will be locked out of our homes and jobs for not scanning our faces or, worse - not complying with some digitally monitored societal edict. You think it won't happen? Just look at how the Chinese were locked out of everything if they didn't have cell-phone digital clearance during the 2020 global control exercise. Even UCT jumped on the band-wagon with their green-dot cell phone apps which they tried to foist on everyone during covid. Most people are too scared to challenge these ridiculous compliance exercises and meekly comply. Hannah Arendt warned about the banality of evil. Petty bureaucrats on a power trip are the epitome of that. This little digital exercise of Mr Schreiber's has the hallmarks of this banality. Next step, and the paper or card equivalent will no longer be produced, and we will be chained to our digital cell-phone ankle bracelets for ever. South Africans - do not allow it to happen! THERE IS NOWHERE IN THE CONSTITUTION THAT REQUIRES THAT EVERY CITIZEN MUST OWN A CELL PHONE. Or any digital device for that matter. Nor are we required to allow our government to utilise our private property for their monitoring purposes. Let's keep it that way.	Joanne	Western Cape		employed individual

	2026-05-25 09:43:14	No I do not	All of the above	Structural Function Creep & Tracking	This is another toe in the door to Total Control. With large se lions of Government itching to turn SA into a Communist state, with a wealthy ruling elite and the impoverization of the rest of the population. Digitizing sensitive information and tying it to citizens' identities can and will set the scene to increased surveillance and deny people access to basic rights and resources. Combine this with the draft law on perceived hate speech ad the proposed police database! The inevitable outcome is pure unadulterated horror. Besides, can this (or any) government give 100% insurance against hacking of their systems with sensitive information being used to hold individuals or groups hostage? The digitalization is most likely going to be contracted out to whoever has the best ties with the ruling elite, which will be executed with profit rather than service deliver in mind - despite all insurances to the contrary. And which, because of those ties will have limited accountability. DHA is introducing facial scanning at borders. It's been done all over the world. In China iris-scanning is used. Link those results with digital ID and Big Brother hs total oversight. Aside from that, it looks like a blank invitation to criminals to kill for a smartphone. In a country where nearly 60 people are murdered Every Day. The government will do better by improving existing systems, rooting out corruption in their entities and in their own ranks, and concentrate on improving the lives of the citizens who put them in power.	Nicolette	Gauteng		retired

	2026-05-25 09:26:06	No I do not	All of the above	Structural Function Creep & Tracking	The proposal dictates that digital credentials expire after five years. While remote renewal is allowed via facial biometric app updates, the law states that a digital ID will completely lapse if a citizen has no physical, in-person enrollment or verification touchpoint with Home Affairs or an accredited partner within a 10-year window.	Rudi	Gauteng		employed individual

	2026-05-25 09:25:35	No I do not	All of the above	Structural Function Creep & Tracking	1. Considering how common it is for people to have their phones stolen or lost, tying an ID directly to a smartphone will instantly and often cripple South Africans when their devices are stolen, lost or broke. Considering how much effort and how long it takes to do anything at the Department of Home Affairs, a stolen, lost or broken device may cut citizens from their civic and banking lives for months. Instead of empowering citizens, the proposed legislation does the opposite. 2. Soft discrimination is a concern: a lot of South Africans do not own smart phones and/or do not know how to operate them properly. 3. The 30-day Notification & Identity Assurance Penalties are also very impractical and demonstrates further signs of government wanting more control of their citizens. 4. Cyber security breaches also become a big concern when considering how far behind the South African government is in developing or maintaining any form of online infrastructure. 5. The proposed legislation does not ease the current bureaucracy of the South African ID system but rather seems to add another complex layer of bureaucracy on top of it. Forced visits to the Department of Home Affairs every 10 years is the primary example but any stolen devices or technical difficulties will require a visit to Home Affairs as well. This will strain the system further instead of easing it. 6. The South African government does not hold the best track record for online infrastructure. The Department of Home Affairs website, which can be used to book a time to go to Home Affairs, is infamous for being slow or simply not working for hours (due to high traffic or other reasons). If a simple booking website cannot run properly, how will such a complex ID system be near functional? Fix the existing infrastructure before even thinking about developing much more complex systems. 	2026-05-25 09:18:01	No I do not	All of the above	Structural Function Creep & Tracking	With some research, I have concluded that I reject this Draft Amendment of Identification Regulations (Digital ID) due to the following reasons. Centralised identity systems WILL enable surveillance. The NSA's PRISM program, the UK's Investigatory Powers Act, and India's Aadhaar system have all demonstrated that governments will use identity infrastructure for monitoring citizens when given the opportunity. The gap between "can" and "will" is historically razor-thin. Mission creep is inevitable. The US Social Security Number was created in 1936 solely for retirement benefits. Without a single democratic vote on the matter, it became a de facto national ID used for taxes, credit, employment and banking. This pattern has repeated in virtually every country that has introduced identity infrastructure. There is no reason to believe this time will be any different. Centralised data is a catastrophic security risk. The 2015 US Office of Personnel Management breach exposed the personal details of 21 million people from a single attack. A centralised Digital ID system doesn't just risk your privacy — it becomes a national security target where one successful breach causes irreversible, society-wide damage. It will marginalise the most vulnerable. The elderly, the poor, rural communities and the disabled — the very people who most depend on government services — are those least able to navigate digital systems. Digital ID without guaranteed alternatives doesn't modernise access, it gates it, creating a two-tier society. And most critically — these systems are never dismantled. Emergency powers, post-9/11 surveillance measures, pandemic tracking systems — governments do not voluntarily surrender the capacity to monitor citizens once it exists. Never. The infrastructure, once built, becomes permanent. Just look at China — total surveillance, total control, every citizen monitored, tracked and scored. That did not happen overnight. It was built incrementally, on exactly the kind of "convenient" identity infrastructure now being proposed here. The burden of proof lies entirely with those pushing this system, not with citizens who refuse to accept it. We categorically do not want this — and we are right not to.	Clive	KwaZulu-Natal		employed individual
	2026-05-25 09:15:27	No I do not	All of the above	Structural Function Creep & Tracking	There are so many things about this that are deeply disturbing - tracking people, social credit scores, cyber risks, discrimination against people who don't agree with the state or who do anything that the state objects to (that is not a criminal offence). it removes freedom and rights from the people. it will result in increased unemployment, increased risk of identity being stolen when you cellphone is stolen. I feel incredulous that this is seriously being proposed.	Cindy	Gauteng

	2026-05-25 08:39:25	No I do not	All of the above	Structural Function Creep & Tracking	I am concerned about all the issues raised above, but particularly concerned about how such a digital, centralized system might be used in the future to invade privacy, infringe on human rights and freedoms, and control the behaviour of citizens. The 30-day penalties, as well as problems with lost or broken phones is also a big concern, since one often needs to take a phone in for repair, and then use a temporary phone. What happens then?	Tracy	Mpumalanga		self-employed

					Our public service is in no position to implement and manage such a technically challenging, fast moving technology. These concerns are beside the 'usual' concern with any large government project in our beautiful country: deeply rooted corruption and zero accountability. Furthermore, civic groups, privacy advocates, and cybersecurity experts argue that while modernisation is welcome, the draft regulations introduce expansive risks and administrative penalties that demand much tighter constitutional safeguards. Their core arguments include: ◦ Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. ◦ The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalises compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. ◦ Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. ◦ Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. ◦ The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services.

	2026-05-25 08:20:23	No I do not	All of the above	Structural Function Creep & Tracking	I fundamentally oppose the implementation of this digital identity framework in South Africa. The issue is not whether the system can be improved with better safeguards, revised regulations, or stronger oversight. The issue is that no government should possess this degree of centralised digital control over the identity, movements, transactions, and civil participation of its citizens — particularly not a government operating within the realities of South Africa's corruption, institutional weakness, cybersecurity vulnerability, and chronic administrative failure. South Africans are repeatedly asked to trust systems that the state has consistently proven incapable of securing, managing, or operating competently. We have witnessed state capture, procurement corruption, widespread data leaks, failing infrastructure, collapsing public administration, and ongoing dysfunction across critical departments. Against that backdrop, it is reckless to hand the state and its private-sector partners an integrated, real-time digital identity infrastructure capable of monitoring and controlling access to essential aspects of daily life. This proposal goes far beyond modernising identification documents. It creates the architecture for permanent digital surveillance and administrative control. A citizen's identity is not a privilege to be algorithmically scored, downgraded, suspended, or revoked based on bureaucratic compliance. Yet this framework introduces precisely that risk through "Identity Assurance Levels," real-time behavioural tracking, and interconnected state-corporate databases. The inevitable result is a system where ordinary administrative failures, outdated information, technical errors, or arbitrary policy changes can directly interfere with an individual's ability to bank, communicate, travel, transact, or participate economically. The proposal is especially detached from South African realities. In a country plagued by violent crime and cellphone theft, tying a citizen's identity credential to a single mobile device is absurdly irresponsible. Millions of South Africans live with unreliable connectivity, limited digital literacy, or inconsistent access to technology. The state cannot even reliably manage queues, passport systems, licensing systems, or border control, yet it now seeks to build one of the most intrusive and technically demanding digital governance systems imaginable. There is also no credible reason to believe that such a system would remain limited in scope over time. History shows that once governments build centralised surveillance and compliance infrastructure, the pressure to expand its use becomes inevitable. What begins as "identity verification" quickly evolves into behavioural monitoring, automated exclusion, financial oversight, movement tracking, and social control mechanisms. The framework creates the foundation for a future social-credit-style system, whether intentionally or incrementally. The concentration of biometric data, behavioural records, and transactional identity verification within a centralised ecosystem also creates an extraordinary national security and corruption risk. Any breach, insider abuse, political misuse, or cyberattack would have catastrophic consequences for millions of citizens simultaneously. Most importantly, this proposal reflects profoundly misplaced priorities. South Africa faces illegal immigration crises, border failures, violent crime, unemployment, collapsing infrastructure, corruption, and failing public services. The Department of Home Affairs has not earned public trust through competence or accountability. Expanding its power over citizens' digital identities under these conditions is neither justified nor acceptable. I therefore object not merely to aspects of the framework, but to the underlying premise itself. No democratic society should normalise a system in which access to civil and economic participation depends upon continuous digital validation within a centralised state-controlled identity infrastructure. The risks to privacy, liberty, security, and constitutional freedom far outweigh any claimed administrative convenience. This framework should not be implemented.	Gillian	Western Cape		self-employed

	2026-05-25 07:14:46	No I do not	All of the above	Structural Function Creep & Tracking	Let's be realistic : the 'government' can't even guard their own guns from theft inside a military base or police station. They have no hope of securing our data. Johannesburg has already suffered data breaches (what's worse is that the public noticed first while the government remained oblivious of the breach). Even in first world countries (which we are most definitely not anymore, despite government propaganda to the contrary), there have been massive data breaches for those that implemented any form of digital ID. Look at France earlier this year, India that got hacked within the first month of having digital ID. Terabytes of private data about the citizens held by a government that failed to protect them... If such a country failed to protect its citizens, what chance do we have? Even 'secure' banks that can only operate if their cyber security is excellent is failing to protect customer data due to "inside-man" operations and corrupt staff. Digital security at government level is a fallacy. Smartphones are practically controlled by mega corporations like google who are not subject to our laws and government would not be able to defend us from them should they link into our data at any point. We would effectively be one mugging or theft away from handing criminal syndicates our private details because government is trying to be just like other countries. In a country where we are expected to prove our innocence first (like when our bank accounts have been digitally robbed and we have to first prove that we were not lax with our information to access those accounts before the banks will investigate the crime or our law will see justice served) it would be impossible to prove an intangible thing such as digital applications or approvals should someone else have access to, and thus control of, our information. We can operate perfectly without digital ID, so why force it on us with all these proven, flawed risks? Furthermore, the government has no right to my private dealings if I am a law abiding citizen. What they are planning will lead to government overreach and is unconstitutional. We have constitutional freedoms and they have no right to touch it. Government has proven time and again that it is rotten with corruption and cannot be trusted to not abuse digital ID to control or oppress the people. These are exceptionally dangerous waters and we should be protected from it, even if it essentially means being protected from our own government. They have no right to control us for their convenience. They have no right to control our spending, track and control our movements, monitor and control our choices.	Erin	Western Cape

	2026-05-25 06:34:24	No I do not	All of the above	Structural Function Creep & Tracking	Geagte minister Schreiber Alhoewel ek waardeer dat daar pogings aangewend word om die proses van ID dokumente te moderniseer, het ek heelwat bekommernisse oor die voorgestelde wetgewing. Ek dink daar is verskeie alternatiewe wat ook die proses om 'n ID te kry makliker en beter kan maak. 'n Aanlyn stelsel in die wolk is beslis nie die antwoord nie. Dit sal ook nie die swak toestand van binnelandse sake se geboue of werknemers verbeter nie. Laasgenoemde moet in elk geval dringend hanteer word, aangesien daar meer as net IDs is wat gedoen moet word. Mense kan ook nie altyd regkom met aanlyn stelsels nie, en het dikwel menslike kontak of hulp nodig. Ons het die afgelope dertig jaar gesien wat sentralisering die openbaar kan kos. Afwenteling van mag is 'n baie beter alternatief wat burgers se grondwetlike regte nie net beskerm nie, maar ook bevorder. Die voorgestelde wetgewing sentraliseer egter private inligting en mag tot op 'n nuwe vlak vir die staat. Wat meer kommerwekkend is, is dat dit ook groot korporatiewe se mag saam met die staat s'n sentraliseer. Die uitlegging rondom IDs wat verval, die nalating om die departement te verwittig van 'n adresverandering en soortgelyke situasies, maak my nog meer bekommerd. Trouens, dit herinner aan die Sjinese model waar sosiale krediete gebruik word om burgers se daaglikse lewens te beheer. Ek is absoluut gekant teen hierdie vorm van beheer. Ek smeek die minister om na beter alternatiewe te kyk wat minder sentrale beheer uitoefen oor burgers se kom en gaan, en hulle hul grondwetlike vryhede toelaat.	Philip	Mpumalanga		employed individual

	2026-05-24 22:01:01	No I do not	All of the above	Structural Function Creep & Tracking	I strongly oppose the proposed amendments to the Identification Regulations as they introduce a highly centralised digital identity system without sufficient safeguards for privacy, security, constitutional rights, or social inclusion. The proposed smartphone-based “Digital Identity Credential” creates serious risks in a country already struggling with crime, government corruption, cybercrime, data breaches, and infrastructure instability. The framework also risks expanding surveillance and automated profiling without adequate transparency or independent oversight. There is insufficient clarity regarding data ownership, consent, third-party access, retention policies, appeal mechanisms, and protections against misuse or wrongful exclusion. In addition, a smartphone-dependent system unfairly disadvantages many South Africans who lack reliable access to compatible devices, internet connectivity, electricity, or digital literacy. Identity systems should never become barriers to constitutional rights.	Shannon	Western Cape		employed individual

	2026-05-24 19:11:04	No I do not	All of the above	Structural Function Creep & Tracking	The proposed framework risks enabling disproportionate limitations on constitutional rights under Sections 9, 10, 14, and 33 of the Constitution without sufficient demonstration of necessity, proportionality, accountability, or institutional safeguards. I object to the proposed amendments on constitutional and governance grounds. The Constitution protects the rights to privacy, dignity, equality, and just administrative action. In South Africa’s current environment of corruption, cybercrime, weak institutional capacity, and repeated data breaches, centralising sensitive personal information creates serious risks of abuse, unlawful surveillance, exclusion, identity fraud, and government overreach. Government has not demonstrated that sufficient safeguards, accountability mechanisms, or constitutional protections exist to prevent misuse of such a system. South Africa should first address corruption, governance failures, and cybersecurity weaknesses. Socio-Economic Impact Assessment System (SEIAS), which is a Cabinet-mandated requirement in South Africa for new legislation, regulations, and major policy proposals. Furthermore, given the far-reaching constitutional, social, economic, cybersecurity, and governance implications of this proposal, a comprehensive Socio-Economic Impact Assessment System (SEIAS) process should be conducted in accordance with Cabinet requirements and established best practices before implementation proceeds further. Such an assessment should independently evaluate constitutional impacts, privacy risks, cybersecurity vulnerabilities, implementation feasibility, exclusion risks, corruption vulnerabilities, institutional capacity, and long-term societal consequences. The assessment process should include meaningful public participation, transparency, independent oversight, and publication of findings to ensure compliance with constitutional principles of accountability, openness, and just administrative action. This SEIAS should be shared with the public for review as well.	Marthinus Wessel	Gauteng		employed individual

	2026-05-24 17:46:32	No I do not	All of the above	Structural Function Creep & Tracking	It is not acceptable to have a person's physical ID replaced with a smart phone. Very many people do not have smart phones or cell phone reception or they are allergic to cell phone signals or they don't WANT to be forced to carry a cell phone with them. Phones are constantly stolen in SA which will cripple someone's ability to identify themselves. Phones are constantly hacked and IDs can be stolen. People can be controlled instantly via their phones. Just as WhatsApp can cut your account for no reason, your ID could be blocked and you are will not be able to identify yourself. The State can target people in this way. Sharing personal info with banks/ other private companies and government is unacceptable and is an invitation for crime.	Susan	Limpopo		retired

	2026-05-24 14:01:46	No I do not	All of the above	Structural Function Creep & Tracking	An important question, each citizen deserves an honest answer. Why allocate R13.8 billon for the implementation of a Digital ID, rather than fixing the current systems used by Home Affairs at a lower cost and funnelling funds into our police force, military, roadworks, maintenance, healthcare and educational systems? If the current system is not working, what makes you think the Digital ID will? Is this another E-Toll scenario, citizens didn't want it, it was not really needed, it cost R20.6 billion to build and implement, and was deactivated in 2024. All that money wasted, it could have built hospitals, schools, fire departments or build infrastructure. Please, do not fail South African citizens again by misspending and misallocating budget on grand ideas that we do not need, rather fix what we have, build and restore infrastructure. Digital IDs are not needed/wanted, it's a violation of each citizen's privacy. Our country fought hard for freedom. Freedom to live without fear of undue persecution. Freedom to share our personal information with those we choose. Freedom to move without fear of clinging to a phone for dear life to not lose our Identity and access to our livelihood. This preposterous Digital ID with Social Credit Score ratings and good-standing threats lays the foundation for surveillance and control. Our identity and livelihood will be linked to a smartphone, damned if you cannot afford one, or you're too old to use one, disabled and cannot use one. Damned if a criminal snatches it out of your hand. Now they have your identity. A smartphone will no longer be a means of staying connected with loved-ones, it will become your life, your identity. The implications of a Digital ID are vast and the dystopian reality that it brings is petrifying. It's not just that this impedes our rights to privacy, violates our personal information and exposes us, the tax-paying, law-abiding citizen to risk, but it will also: 1. Make identity theft and fraud easier. It's sold by officials that the proposed system will make identity theft more difficult, but that is a naïve stance. Databases and digital platforms, such as the proposed MyMzansi App, are hackable, corruptible, and vulnerable to Spyware, Stalkware, Ransomware, Malware, and Viruses. Linking citizens' identity and personal information to an application (downloadable for anyone in the world) increases the risk of secure databases being infiltrated, not only placing the citizens' identities at risk, but all their personal information and biometric data as well. It unnecessarily increases the risk of fraud and could make it easier to falsify an identity. 2. Increase surveillance and breach privacy. All applications grant the developer and company (in this case, the State) certain permissions, some are "always on" others can be "denied". This digital ID Application "MyMzanzi" exposes citizens to surveillance and tracking through permissions. The app could potentially have a "backdoor" to always run in the background. Thus, the App will constantly gather personal information from your phone, which apps you access, your IP Address, your location, even who you contact. Did any citizen ask for this? Did any citizen volunteer to have their personal information and identity tracked and made more vulnerable? 3. Turn your personal data into surveillance. The digital ID will require biometric verification (facial and fingerprints) this turns our country into one of constant surveillance. Our biometric signatures lays the foundation to enable the State to track its citizens. Thus, citizens won't just be digitally tracked, our personal data mined and our movements monitored on the Digital ID App, but potentially through security cameras as well if the State so decides, after all, they'll have the database of each citizen's biometrics, conveniently updated every 5 years. It disregards our freedom and right to privacy. 4. Breach our right to privacy and sharing our personal information. The State will decide the "trusted" private sector partners to link with and share our private information with. The "trusted" partners in the private sector will have access to our personal data, whether we consented or not. The State is basically taking our right to share our personal information with whom we choose, and deciding on our behalf who to share it with. How is this not a breach of the POPI act? Are Laws set for citizens only? Does the Government not need every citizens personal written consent to share our information and who they can share it with? Apparently, the State may now unilaterally decide that our personal information is not ours to share, they get to consent on our behalf, the Constitution and protecting citizens' privacy is forgotten in this proposal. Is this not what Communists and Dictators do? Decide unilaterally, consent on behalf of every citizen and force compliance through threat of loss of good-standing and low Social Standing and the consequences befalls the citizen, they're separated and excluded if they do not comply. 5. Cause loss of identity through non-compliance - if a citizen fails to renew their ID for 10 years they have to go and "prove" who they are. Digital renewal is possible, but if you do not renew in person in 10 years you're locked out of your life, so, renew digitally but also we must see you in person to verify you? What about coma patients, elderly people, sick and disabled people who cannot verify their identity physically every 5 or 10 years? Will these citizens be discarded, excluded, locked out of their accounts, their livelihoods jeopardised because they cannot physically renew every 5 years? If your phone is stolen, lost, damaged beyond working or you choose to upgrade to a new phone, you lose access to your digital ID and accounts and have to go through a torture system to prove who you are to regain access to your identity and accounts. 6. Lay the foundation to more social structures. Every move we make will be monitored, points deducted for "non-compliance" and access to various commodities, banking, travel, etc. could become dependent on SCS good-standing. Sure, it starts with renewing our ID every 5 years, updating your details within 30-days after moving or marriage to remain in good-standing and not have SS points deducted, but it lays the foundation for further implementations and linkages. Digital IDs are the foundation for various social "allowances" such as personal carbon allowance and "demerits" in point-based-systems such as the Social Credit Score. These systems are not for convenience as it's sold, but it is cyber identity control. Digital IDs lay groundwork to exert control through fear of losing good-standing and the consequences thereof. The proposal in entirety is absurd, an attempt to control and coerce, it disregards each citizen's right to privacy, it contravenes protecting personal information and it opens the door for various social-point-systems and allowances to further coerce and control. Which other laws and requirements might follow the Digital ID Social Credit Score system? Do not feed the citizens manure and tell them it's steak. Split the allocated budget among different services, fix the current Home Affairs Systems, build infrastructure and service delivery, do not try to gaslight citizens that this is the best way to spend R13.8 billion when we know that a digital ID is the State's coercive-control.	Veronique	Western Cape		
	2026-05-24 13:50:38	No I do not	All of the above	Structural Function Creep & Tracking		Viv	Western Cape		
	2026-05-24 13:41:26	No I do not	All of the above	Structural Function Creep & Tracking	There already is an Identity card system. Linking identity to a handheld device, such as a phone, is not an option in a country with such a high crime rate. Citizens are the ones who will be penalised and struggle when their phones are stolen. This will also give criminals easy access to identity theft. This is also govermental overreach to control citizens with a social credit system and a means to track movement with the 30 day address notification penalty. Total disregard of right to privacy. 	2026-05-24 12:31:50	No I do not	All of the above	Structural Function Creep & Tracking	While I support the modernisation of public services, these regulations go far beyond administrative convenience. They represent an unprecedented expansion of state power over the private lives of citizens — power that is inadequately constrained, poorly defined, and constitutionally suspect. My specific objections are as follows: 1. Compulsory corporate data sharing violates privacy rights. The creation of real-time, bi-directional data pipelines between the state and private entities — banks, telecoms, and other "trusted" corporations — erases the fundamental boundary between civic identity and commercial surveillance. Citizens have not consented to their personal data flowing freely between government and private interests. This directly threatens the right to privacy enshrined in Section 14 of the Constitution. 2. The "Identity Assurance" scoring mechanism is a social credit system by another name. Penalising citizens algorithmically for failing to report routine life changes within an arbitrary 30-day window creates a punitive, opaque tier system that can deny people access to banking, services, and civic life — without due process or transparent appeal mechanisms. 3. Device-binding a legal identity document is reckless. In a country with among the highest rates of smartphone theft in the world, cryptographically tying a citizen's legal identity to a single physical device — with no clear recovery pathway — is administratively and humanly irresponsible. 4. The 10-year in-person renewal trap undermines the very convenience this framework claims to deliver, and disproportionately burdens rural, elderly, and vulnerable citizens who face the greatest barriers to physical access. 5. The centralised biometric infrastructure created by these regulations provides no meaningful safeguards against future function creep — including mass surveillance, coercive compliance systems, or authoritarian misuse by any future administration. The state's role is to serve citizens — not to monitor, score, or control them. A government that makes access to one's own identity conditional on continuous behavioural compliance with corporate and bureaucratic systems has overstepped its mandate entirely. 	2026-05-24 12:04:05	No I do not	All of the above	Structural Function Creep & Tracking	Without a fully transparent, auditable and CITIZEN controlled system, this system WILL simply be an insecure new avenue for compromising and faking personal information. Furthermore this is the first step on a gradual slide to complete, authoritarian control of the citizenry through a Chinese-like social credit score. We know the SA government admires the Chinese government, has clear tendency to overreach, has no history of implementing transparent, secure systems (despite an ignored open source policy), but rather a history of corruption, exposure of citizens' data, and overly ambitious white elephants. Do you trust the SA government with this level of access to your private information?	Werner	Western Cape		employed individual

	2026-05-24 12:02:26	No I do not	All of the above	Structural Function Creep & Tracking	This country with poverty and crime firstly is not ready ...majority...to be knowledgeable... if one loses yr pho e you can be at a major disadvantage....I dont like the idea of being eventually controlled totally as this system could be the invasive silent start up of an eventual link with the well now mission of a First World Order System when all countries will be ruled with one switch off button to the way of leading a freedom of choice life...let us not be fooled by the little changes we think are not so big to worry that eventually take control over our freedom of choice...this country is too corrupt to trust...criminals have the upper hand	Tina	Western Cape		retired
	2026-05-24 12:02:20	No I do not	All of the above	Structural Function Creep & Tracking	1. The State has established a track record of not thinking policies through, especially "unintended consequences" and personal ID and personal ability to function, move, open accounts etc should not become victim to this. 2. The increasing and high level of crime and theft. The loss of a cell phone becomes even more of a problem, as so much personal details and ability to function in a state controlled environment will become almost impossible. Has the framework detailed how to make this process easier for a victim of the loss of a cell phone? 3. This is moving more towards a Chinese system of controlling citizens. The State can't even fulfill basic functions and services towards citizens, let alone financial mismanagement in the State departments / entities, but now it wants to control citizens even more??? 4. How pray, is the State controlling and managing the influx of "illegals"? Yet the citizens have to have this system of control? 5. Elderly people are not generally so familiar with technology, let alone having smart phones. This is NOT going to make things easier for them. Imagine an elderly person with movement, health, transport, hearing etc problems having to go to sort things out. Why doesn't the State streamline SaSSA first and show us how they consider and make things easier for the elderly?? 6. This is making things very difficult for someone who is moving around for work purposes. Now, on top of other worries, they must "report" to Big Daddy first...! 7. Maybe the State should get its own act together first, before trying to micromanage citizens.	Anlie	Western Cape		self-employed

	2026-05-24 10:28:09	No I do not	All of the above	Structural Function Creep & Tracking	I object to the proposed Draft Identification Regulations, 2026, due to the long-term constitutional and civil-liberty risks created by centralized digital identity systems and expanding interoperability between government and private-sector databases. While modernization and fraud prevention are important, centralized digital identity infrastructure creates significant risks relating to privacy, surveillance capability, cybersecurity, and future function creep. Systems introduced for convenience today may later expand into broader monitoring, behavioral scoring, or indirect economic exclusion mechanisms. I am particularly concerned about: • interoperability between state, banking, and telecom systems; • dependence on smartphones and biometric verification in a high-crime environment; • the risk of digital exclusion for vulnerable citizens; • and the gradual erosion of practical alternatives to digital identity participation. No citizen should be forced, directly or indirectly, to rely solely on centralized digital identity infrastructure in order to participate fully in society. I therefore request that the Department: • guarantee the permanent validity of physical ID documents; • ensure digital participation remains genuinely voluntary; • prohibit behavioral scoring or automated exclusion systems; • limit data sharing between state and private entities; • and establish strong independent oversight and constitutional safeguards before implementation.	David	KwaZulu-Natal		
	2026-05-24 10:27:28	No I do not	All of the above	Structural Function Creep & Tracking		Carolyn	Western Cape		retired
	2026-05-24 10:26:26	No I do not	All of the above	Structural Function Creep & Tracking	The proposed Digital Identity framework is being marketed as a leap into modern convenience, but beneath the polished language lies a deeply troubling expansion of state and corporate power over ordinary citizens. South Africans should object strongly to these regulations before they quietly reshape the relationship between the individual and the state forever. A national identity system should exist to verify citizenship and protect rights — not to create a permanent, centralised infrastructure for surveillance, behavioural monitoring, and automated exclusion. The draft Identification Regulations, 2026 risk doing exactly that. The first major concern is the creation of interoperable data-sharing pipelines between government and private corporations. Banks, telecom providers, and other “trusted entities” would effectively become extensions of the state identity apparatus. This destroys the traditional separation between public administration and private commerce. Citizens should not have to wonder whether updating information with a bank will trigger government monitoring or automated profile adjustments behind the scenes. Once this architecture exists, it will inevitably expand. Second, the so-called “Identity Assurance Level” is extraordinarily dangerous in principle. Governments should never assign citizens algorithmic trust rankings tied to administrative compliance. Even if officials deny comparisons to social credit systems today, the mechanism already resembles one: your access to services may depend on maintaining a satisfactory digital status. Bureaucratic delays, missed updates, technical errors, or system glitches could suddenly affect your ability to transact, authenticate, or participate in society. Rights should not become conditional on maintaining a government-managed digital reputation score. Third, tying a legal identity credential to a single smartphone device is reckless in a country with severe levels of phone theft and inequality. Millions of South Africans cannot afford secure flagship devices, constant connectivity, or rapid replacement phones. A stolen or damaged device should never place someone in administrative limbo or cut them off from proving who they are. Digital systems fail. Phones break. Networks go down. Batteries die. Real-world governance must account for these realities instead of assuming a frictionless technological utopia. There is also a broader constitutional issue at stake: centralisation of power. A unified digital identity platform creates a single point of control over banking access, communication, employment verification, travel, and potentially voting infrastructure in the future. History repeatedly shows that powers granted to governments during one political era are eventually inherited by future administrations with different intentions. South Africans, of all people, should understand the danger of constructing systems that could later be weaponised against dissenters, minorities, journalists, activists, or political opponents. Supporters argue that digital ID systems improve efficiency and reduce corruption. But efficiency alone is never sufficient justification for mass data consolidation. Authoritarian systems are often highly efficient. The question is whether the safeguards are strong enough to prevent abuse, mission creep, hacking, unlawful surveillance, or coercive social control. At present, these draft regulations do not inspire confidence. The proposal also risks deepening inequality. Millions of South Africans still struggle with unstable electricity, unreliable internet access, limited smartphone ownership, and long-standing digital exclusion. A society cannot declare digital identity systems “voluntary” while steadily making physical alternatives slower, weaker, or less practical over time. What begins as optional convenience frequently evolves into soft coercion. Most concerning of all is the long-term precedent being established. Once biometric identity, real-time data sharing, behavioural scoring, and centralised authentication become normalised, future expansions become politically easier. Today it may be address updates and authentication checks. Tomorrow it could involve financial monitoring, movement tracking, automated flagging systems, or restrictions tied to compliance metrics. Citizens are right to ask where the line will eventually be drawn. I demand: • Strict limits on data sharing between government and private companies. • A complete ban on any form of identity scoring or behavioural ranking. • Guaranteed permanent availability of physical IDs and offline services. • Independent judicial oversight for all biometric and identity data usage. • Clear legal protections against surveillance, profiling, and automated exclusion. • Robust recovery mechanisms for stolen or lost devices. • Transparent cybersecurity auditing by independent experts. • Parliamentary scrutiny instead of regulation-by-notice. Technology should serve citizens — not condition citizenship on technological compliance.	Piet	Gauteng		retired
	2026-05-24 10:25:46	No I do not	All of the above	Structural Function Creep & Tracking	I do not conform to any of these proposals! No digital ID or cellphone tracking. My name is not a corporation and I identify with my name in lower case, my city, province and e-mail address only. A business card with these details is all that I need as a sovereign being. No track and trace or smart city control for me! We all need to stand up against the global elites and the cabal control.	Vernon	Eastern Cape		retired

	2026-05-24 07:30:54	No I do not	All of the above	Structural Function Creep & Tracking	I've been saying this. It is about control and the prep for the mark of the beast. Read the Bible, you will NOT go wrong. No matter what we say, the thieves in suites us gonna do what they need to do. Life as we know it has changed and COVID 19 was just the beginning. Those conspiracy theories are no longer just theories it is and always was and always will be the truth. Why can't they just come out and say we are preparing for 666 either you are on board or you dead. Why dragging things? They are going to do what they want to do, I can only pray that God is pushing back the darkness to light up his Kingdom in the name of Jesus enemies defeated and we will shout it out because the end we Christians win, rule and reign.	Agnes	Gauteng		unemployed individual
	2026-05-24 07:27:00	No I do not	All of the above	Structural Function Creep & Tracking		Edith	Western Cape		unemployed individual
	2026-05-24 07:19:06	No I do not	All of the above	Structural Function Creep & Tracking	I disagree with key elements of these proposed regulations because they risk creating unnecessary friction, exclusion, and centralised vulnerabilities in an already unequal society like South Africa, where smartphone penetration, data costs, theft rates, and digital literacy are uneven. Tying a legally equivalent identity to a single device in a high-crime environment, with weak details on rapid recovery from loss or theft, effectively holds citizens' access to banking, work, travel, and services hostage to hardware fragility—potentially paralysing the poor or rural users far more than urban elites. The mandatory 30-day update windows and algorithmic "assurance level" downgrades introduce bureaucratic rigidity disguised as modernity, penalising normal life changes and echoing failed over-engineered systems elsewhere that foster exclusion rather than inclusion. While interoperability sounds efficient, real-time bidirectional data flows between state and private corporations blur public-private boundaries without robust, independently audited safeguards, inviting mission creep, data breaches, or subtle surveillance that undermines constitutional privacy rights. A hybrid voluntary digital option alongside strengthened physical IDs would better balance convenience with resilience, avoiding the trap of forcing a one-size-fits-all centralised app that assumes perfect state execution and universal access in a country still battling basic service delivery failures. 	2026-05-24 06:57:51	No I do not	All of the above	Structural Function Creep & Tracking	I am writing to formally record my objection to the proposed framework. I do not consent to this system in its current form for the following reasons: Firstly, I believe it lacks sufficient safeguards against state surveillance, which threatens my fundamental right to privacy. Secondly, I am concerned about corporate overreach; this framework allows corporations to establish a data monopoly, potentially using my personal information to predict or manipulate my behavior without my explicit, ongoing control. Lastly, I object to any system that risks digital exclusion, where active citizenship or access to services becomes dependent on a digital platform that may infringe on my personal or religious freedoms."	Rudolf	KwaZulu-Natal		employed individual
	2026-05-24 06:50:36	No I do not	All of the above	Structural Function Creep & Tracking	This is the first proposed step to introduce a social credit system, and I do not support it at all. My greatest concerns are the increasing state control and tracking of our private lives and having the mechanisms to then shut us out of the economy if we have dissenting voices. 	2026-05-24 06:06:14	No I do not	All of the above	Structural Function Creep & Tracking	I refuse to take part in the digital ID as purposed because in actuality my every move will be tracked in real time. That is beyond creepy. We are not prisoners, we are patriots. Furthermore, this plan is completely unsustainable. The recoverability of your Identity is a tedious and long winded problem because of the crime rate.	Francisca	North West		employed individual
	2026-05-24 06:06:02	No I do not	All of the above	Structural Function Creep & Tracking	South Africa’s proposed digital ID system poses a serious threat to constitutional rights, personal autonomy, and the balance of power between citizens, the state, and large corporations. Centralising biometrics and linking identity across government and private sectors creates an infrastructure of control that can easily expand beyond its stated purpose, turning an “optional” system into a de facto requirement for banking, grants, healthcare, travel, and daily life. In a country already struggling with data breaches, weak oversight, and fragmented governance, this level of centralisation is unsafe and exposes citizens to irreversible harm, surveillance, and exclusion. I strongly urge the Department to halt the proposal until independent oversight, strict limits on data use, meaningful opt-out rights, and robust POPIA-aligned protections are guaranteed. Digital identity must protect freedom and dignity, not undermine them.	Trevor	Eastern Cape		self-employed

	2026-05-23 22:33:30	No I do not	All of the above	Structural Function Creep & Tracking	South Africa’s public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic “attack surface.” If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. It is highly unconstitutional to force people to prove themselves over and over again. Once again the taxpayers will do their duty and be tracked, while the rest of the people roam free, untouched.	Corni	Western Cape		student

	2026-05-23 19:14:39	No I do not	All of the above	Structural Function Creep & Tracking	All of the concerns carry the exact same weight; not just for me but for everyone. We won't have control over anything technically in our lives. They block your digital ID and you can't access anything or they block you from accessing your digital ID, you try to buy a car, house or anything big where ID is required and you're screwed. This isn't about making it easier for humanity, it's about making it easier for the elite and corrupt governments to control us. If they get control of you, you have no OPTION/FREE CHOICE but comply. Because at this moment they can only control us through money. That's why Sassa grants are as low as they are,for CONTROL. The digital ID move is all part of the bigger plan and I DO NOT AGREE WITH ANY PART OF WHAT THEY ARE WANTING TO DO! Thank you	Oswayne	Western Cape		self-employed
	2026-05-23 19:06:18	No I do not	All of the above	Structural Function Creep & Tracking		Denis	Free State		retired
	2026-05-23 19:05:58	No I do not	All of the above	Structural Function Creep & Tracking	This is just another way to control we the people, part of the plan to do away with cash and make everything digital. Then we are totally controlled, all the other reasons the government gives is a smoke screen	Hugh	Gauteng		unemployed individual

	2026-05-23 12:39:43	No I do not	All of the above	Structural Function Creep & Tracking	The UE is not able to impose this digital ID system because the EU is not a state or a country, it has no legal grounds to impose this SYSTEM. The EU cannot sit on the chair of the member states, therefore member states can REFUSE to implement the digital ID system. The digital system is not issued by the government, instead it is issued by a cartel, banks, big tech companies. This all puts You at big risk as it exceeds both the legal & political system. They are using censorship, propaganda and social media to create hype and fear to drive their agenda. Your medical information as w, financial, person , private, information will be accessible to the WHO, Your Government etc and will be used against You. The Government is required by the Cartel to get access to Your ID for connectivity and of course this is illegal and all Your other information is given without Your consent. This all started with a group called ID 2020, the Rockafella Foundation, Microsoft, Accenture and others. They have a programme called Road Map to Digital Vaccination Card, already launched in 2018. (makes one think.) They have begun chipping babies in Bangladesh and Kenya.... (vaccination proof.) They have this planned for the whole world. The EU has been chipping all Employees. This has exponentially increased and empowered the cartel and their cronies and will continue to empower them. A Lawyer at a very HIGH LEVEL, has encouraged that we DO NOT comply with Digital ID as it is a trap and if You have already done so DITCH IT!!!!! Th She says that the Government are EMPLOYED by these Cartels. I vote for a Party that has never and will never BOW to the EU or any Cartels!!!	Antoinette	Western Cape

	2026-05-23 11:13:27	No I do not	All of the above	Structural Function Creep & Tracking	In the hands of any government this is an extremely dangerous proposal to adopt. Giving the government control of my entire identity? I don't think so. They should be busy fixing and maintaining the many looted and corrupted services they are paid (by us) to keep in working order. Leave my God-given liberty alone - it is no concern of the government.	Rosalynd	Limpopo		self-employed
	2026-05-23 11:07:44	No I do not	All of the above	Structural Function Creep & Tracking	Good morning Minister, I used the opportunity to comment on this very important subject and started with my first comments yesterday but will add the following for you to take note off. I provided Scripture from the Word of God, the original Greek and Hebrew scripts and not the translated versions because many mistakes happened because of the definition of different words. We all know that Yeshua, Jesus Christ was born and raised in Israel, we also know He was a carpenter who worked with His hands and He healed many people with the same hands, He also provided food to the hunger performing miracles. We all know in terms of our calendar that the year 0000 is real and that it started with Matthew chapter 1. The only way to know Him is to study the Word of God, not necessary to visit any buildings built by hands and bricks. We also know He is the Word of God as declared in Revelation chapter 19 from Genesis chapter 1 to Revelation chapter 22! We also know that Revelation chapter 6 defines other horse's while Revelation chapter 19 specifically declaring that He is the Rider on the White Horse, the Horse of victory. We also know that from information from the internet that there's a lot of "religion's" globally, but they are all integrated into the four named in Revelation chapter 6. Two of them are the moon worshippers and the sun worshippers, those who attend their rituals on Fridays and Sundays and they are specifically defined in Matthew chapter 16 and Revelation chapter 13. From this information we can clearly define two types of seed, the seed of satan and the seed of Christ, Galathians chapter 3 and John chapter 10! This is confirmed in Matthew chapter 13 and Revelation chapter 2 and chapter 3! The choice we must make is out of own free will, the door is open to anyone as explained in John chapter 10 and chapter 8! We made our choices many years ago and our choice as Protestants is John chapter 3, chapter 10 and Galathians chapter 3, the seed of Christ! As mentioned we are been created by our Father to His image as Creators and not destroyers. Today we are just witnesses of the destruction by those who make their choices in the new South Africa as mentioned to you in my previous comments. The reason for this force of destruction is given in Revelation chapter 22, especially His words, if anyone add anything to this Book or delete anything from this Book, the Word of God, the consequences of this decisions are well stipulated and we see that consequences in the new South Africa without any reasonable doubt. We also know since 1977 that this way of control will not end with the cellphone and computer but with a chip planted on the forehead of humans which was already tested a couple of years ago because cellphones might get lost, this is not mentioned in you proposal at all. As mentioned our foundation is the Word of God and our parents educated us as is Commanded by Yeshua, Jesus Christ in Ephesians chapter 6! We also know that deceit will be spread during the last days as written in 2 Thessalonians chapter 2 and the Prophet Daniel confirmed by Yeshua, Matthew chapter 24, warned us about this evil but give us the next key which is wisdom in Daniel chapter 12 confirmed in Matthew chapter 25! This is unfortunately the problem in the new South Africa, the lack of wisdom and knowledge of the Truth, John chapter 16! Those who allowed the criminals defined in John chapter 8 in our country must resolved their own mistakes, it is not our responsibility and therefore distance ourselves from any type of religion, irrelevant of what type. As mentioned, religion can be anything and we see it in the new South Africa. The mark on our forehead is "Jesus Christ, Yeshua" and not the mark of the beast, Revelation chapter 13! Providing all the relevant information we reject your proposal and with all our respect, the disrespect it deserves because we developed this country, our Temple, the Voortrekker monument outside Pretoria, not temples built by hands and brick's. We do not go to places of worship because Yeshua's Kingdom is near us, in our hearts and our mouths, something religious leaders do not understand, John chapter 3! We all saw the devastated storm that hit our country recently because our Creator created heaven on earth as written in Genesis chapter 1 verse 6 to 8, He can open the tap or He can close the tap causing drought to happen. Concluding this message with the warning in 2 Peter chapter 3 and Habbukuk chapter 2, the clock of our God is ticking day by day, hour by hour and minute by minute. I thank you for the opportunity to inform you about our task on this planet, to be witnesses and refuse to be part of this evil in our country! Unfortunately we are been targeted by this evil powers and many lost their lives, we lost our properties and belongings because they do not respect our rights in their Constitution!	Derek	Northern Cape

	2026-05-23 10:58:09	No I do not	All of the above	Structural Function Creep & Tracking	I do not trust the government's ability to effectively protect us. Our crime rate remains alarming. I am completely uncomfortable with the idea	Yolindi	Western Cape		self-employed
	2026-05-23 10:56:00	No I do not	All of the above	Structural Function Creep & Tracking	I do not trust the government. I am wary of giving it more power and control especially with how that power and control has been used histrionically across metrics of equality, transparency, and accountability. I find myself unable to believe at times that the social contract has not been broken. So I voice this as a formal compliant. I do not believe that innate human sovereignty has been respected in any way, shape, or form in so far as the current administration is concerned. I fear for the well being of our children. This state of affairs cannot persist any longer or it will be our end. Something drastic must be done sooner rather than later. I voice my thoughts in the hope of better tomorrows and times of greater liberation. If there is another way then surely we must find it. Peace. Love. Truth.	Rainer	Gauteng		employed individual

	2026-05-23 08:49:31	No I do not	All of the above	Structural Function Creep & Tracking	This would lead to a dystopian society which imperils individual rights to privacy and freedom which are handed over to the State . 1984 looms large and as has been shown time and time again , the State is not a benign entity which often opts for control in place of just governance. Our every action is dictated by the State and the concept of democracy , 'rule by the people', becomes an autocracy resulting in 'rule of the people' thus eroding any and all democratic principles, hard won over hundreds of years. Civilization as we know it collapses. 1984 was a warning against excessive State control and with this legislation, it's not the back door that's been left ajar; its the front door that's been thrown wide open which is not a good omen for the human race.	Graham	Gauteng		retired
	2026-05-23 08:47:57	No I do not	All of the above	Structural Function Creep & Tracking	Too much control over people's property and earnings by the state, opens another pathway for further corruptive and financially abusive behaviour. The legislation should show better protection built in for the public and e.g. financial incentive to actually comply to new laws.	Inger	KwaZulu-Natal

	2026-05-22 23:15:43	No I do not	All of the above	Structural Function Creep & Tracking	This is a way for future tracking by the state and a breach on privacy. And for state surveillance, this is not acceptable and against the constitution and huma rights. There is already enough tracking and privacy breaches we do not need more. Not to mention it can be used to exclude people if they do not comply. This is a ridiculous way forward and the ID cards must stay. Not everyone has phones and the crime is so high that it changes regulary. There has also been compliance issues getting everyone on the ID card how will it work with a digital ID. This is to give total power to the government and companies using the said data. Not acceptable.	Marko	Gauteng		employed individual
	2026-05-22 23:15:41	No I do not	All of the above	Structural Function Creep & Tracking	I have zero trust in our government to do what's good for its citizens.	Peter	Western Cape		self-employed
	2026-05-22 23:09:39	No I do not	All of the above	Structural Function Creep & Tracking	All of the concerns listed above are valid. They way laws and human rights function in a digital domain is very far from being of service to the ordinary citizen, and failures weigh disproportionately heavy on the side of the citizen. The government is meant to serve the population. We're not here to make things convenient for government. Convenience for public servants is secondary to the rights and convenience of the citizen. Considering the very real threats domestically and internationally to digital privacy, and ordinary rights of privacy of citizens from the government... it's a hard no to this proposal on all topics listed above. We are not far enough developed in these areas to facilitate and guarantee the freedoms of citizens.	Amit	Western Cape		self-employed
	2026-05-22 23:01:06	No I do not	All of the above	Structural Function Creep & Tracking		Stephanie	Gauteng		employed individual
	2026-05-22 22:56:14	No I do not	All of the above	Structural Function Creep & Tracking	I do not agree to anything the current government wants to put in place, it's all about control. I would never subject myself to be under their control - they are so corrupt and would not know how to safeguard anything, least of all my identity & being able to cut me off from essential needs should I do something not suitable to their agenda	Marisa	Gauteng		employed individual
	2026-05-22 22:53:13	No I do not	All of the above	Structural Function Creep & Tracking	Although, the intention of the new regulations are noble. Why do I need a new ID every 5 years? Why is there digital over-reach? Why do I feel like the new digital way of collecting information does not feel very safe? The government also does not have a good track record of keeping personal records safe and updating their virus and encryption software. How does Mr Schreiber plan to tackle these issues? 	2026-05-22 18:41:07	No I do not	All of the above	Structural Function Creep & Tracking		Jacques	Gauteng		unemployed individual
	2026-05-22 18:40:50	No I do not	All of the above	Structural Function Creep & Tracking	I do not consent to: Expanded National Cyber-Defences Vulnerability: The rise of powerful AI and Quantum Super Computers are a major risk for hacking Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-22 18:39:26	No I do not	All of the above	Structural Function Creep & Tracking	I absolutely oppose digital ID, for the following reasons: Digital systems can log when, where, and how you verify your identity, creating a record of your activities, potentially across many services, which could allow governments or companies to monitor behaviour. Centralised databases become prime targets for hackers. A single breach could expose millions of identities at once, and identity data is harder to “reset” than passwords (e.g. fingerprints or facial data). Systems introduced for convenience can expand (“mission creep”), may be reused for policing, immigration enforcement, or surveillance, slowly but surely shifting towards a surveillance state which impinge on citizens' freedoms. Anonymous browsing, whistleblowing, or activism could become harder, making people feel less free to speak or participate publicly. Systems tied to access (e.g. SIM cards or online services) may restrict expression. People without smartphones, internet access, or digital skills may be excluded. Vulnerable groups (elderly, low-income, homeless) could struggle most, and if digital ID becomes mandatory, this can block access to essential services. We do not need more government oversight, interference, and control over our private lives, especially not in a country such as South Africa with its high levels of crime, corruption and incompetence.	Joe	Western Cape		employed individual
	2026-05-22 18:36:26	No I do not	All of the above	Structural Function Creep & Tracking	I am a citizen of this country. How is it possible that it can expire? Mobile phones are for communication not for being the center of your life. This is also another means of having absolute control over life style, decisions of individuals etc. Absolutely in contravention of a democracy that the government so wants to describe itself.	Patrick	Western Cape		
	2026-05-22 18:36:24	No I do not	All of the above	Structural Function Creep & Tracking	Give a government a lever of power and its just a matter of time before they 100% WILL use it. This legislation is extremely dangerous as it gives the government access to many vast levers of power that it should NOT have. The most pressing example for me is that this legislation provides the state with the perfect infrastructure for surveillance and tracking of citizens. It throws the door wide open for "social credit-style" systems of control and exclusion. Given such powers, it's not that I don't trust the government to use them... I am 100% sure the government WILL use them. This legislation is anti-privacy, anti-freedom, and anti-citizen. It must be rejected at all costs!	happy	Western Cape		self-employed

	2026-05-22 18:02:10	No I do not	All of the above	Structural Function Creep & Tracking	Good evening Minister, thanks for the opportunity to comment on this very important subject. It seems that the most important part of this proposal moves from we as humans to a device. Our finger prints are our identity as humans created by our Creator which no digital system can replace, neither a computer nor a cellphone. It also seems that control becomes the object of your proposal with no freedom at all, just a number on a system. We are not animals to be treated as if we are the government's slaves, this however can be applied on those who are named in Revelation chapter 13, and John chapter 8, the Word of God. Our rights are vested in your Constitution and we are sheep as declared in John chapter 10, not criminals, we know our Shepherd, the Good Shepherd. He is the Word of God as declared in Revelation chapter 19 and our rights are written in Ephesians chapter 6 because our earthly father's educated us as we are doing with our children. We are been created by our Father which are in the heavens above to His image and not those named in Matthew chapter 16, very important, as creators. We have been excluded from participating in the country we developed as Protestants and our identity is in our museum, the Voortrekker monument outside Pretoria. We do have an ID document which reflects our finger prints and do not need to be controlled by any other system. The problem is the freedom of religion lie in your Constitution because we never agreed to this force known as religion. The Prophet's Daniel and Isaiah warned us about this evil many years ago, the abomination of desolation that will happen and confirmed by Yeshua in Matthew chapter 24, even the war in the Middle East which happened because of religion! Yeshau, Jesus Christ is the Word of God as declared by our Father which are in the heavens, Revelation chapter 19 and God the Holy Spirit, John chapter 16 verse 13, we distance ourselves from any types of religion which are created by humans to be controlled, Matthew chapter 16 and Revelation chapter 13, we demand our freedom and privacy because our foundation is the Word of God. Computers and cellphones are meant to be used as a tool making life easier, not to be used as a tracking device or for any type of intelligence. We understand John chapter 3 and Galathians chapter 3 which is our freedom, hopefully you will read the quoted Scripture to understand who we are, not slaves but free humans since 1652 when we entered South Africa and developed this country, not the ANC nor the DA or any other political parties! The destruction of this country since 1994 is to be blamed on your Constitution because religion can be anything and we see the "anything" around us everyday as confirmed in John chapter 8, the Word of God! It is time for this country to repent their sins as written in 1 John chapter 1 verses 8 to 10 or face 2 Peter chapter 3, because the Words spoken by our God to Moses is written in Exodus chapter 20 repeated in Exodus chapter 34, 1 Corinthians chapter 13 and Matthew chapter 7, a corrupt tree cannot bear good fruit!. The burning thorn bush can never be extinguished, never ever because it is on Holy Ground! We reject this proposal with the disrespect it deserves and demand our freedom, our integrity, our privacy and to be respected as human beings as explained. The referendum we voted in the eighties was never to sell our birthright to any politician or religious leaders but to add a fourth chamber to the existing Parliament which never happened, claiming our freedom and not to be controlled. I thank you for allowing us as Protestants to comment on our freedom as explained, we had enough of criminals managing this country and to be a witness of the destruction of our beautiful country, cities, towns, infrastructure, municipalities, public sector, health care, education, transportation services, etc.	Derek	Northern Cape		business owner

	2026-05-22 15:35:13	No I do not	All of the above	Structural Function Creep & Tracking	This is an infringement on privacy and personal freedoms and creating a a surveillance state which will punish you electronically for what they consider good or bad behavior and where they determine the definition of good and bad. This is large scale communism.	Dirk	Gauteng		employed individual
	2026-05-22 15:26:31	No I do not	All of the above	Structural Function Creep & Tracking	I am totally against the idea of a digital ID as pushed worldwide for misuse and digital cetralised control. This is all about surveillance and tracking of citizens which is a direct infringement of our right to freedom of movement and privacy. This is pushed for at the WEF and got absolutely nothing to do with advancing free citizens rights. It will end up in digital slavery where the govt will decide what you can do, what you can buy and when. So no, Schreiber, we are totally against your digital ID nonsens and every citizen should not be fooled that this is for our good, cause its not. Also, poverty is very high, not all got a cellphone and cellphone theft and lost occur on a daily basis. Its unworkable and people will throw away their smartphones (private property) to not be part of this government overreach and control	Marius	Gauteng		employed individual
	2026-05-22 15:15:10	No I do not	All of the above	Structural Function Creep & Tracking	Digital ID is about control. It will be sold as anti fraud, convenience, safety and security. But it's a tool for control and surveillance. What you buy, what you watch and where you go. Don't be fooled.	Anya	Western Cape

	2026-05-22 11:39:17	No I do not	All of the above	Structural Function Creep & Tracking	This serves as a formal declaration that I do not consent to any compulsory implementation of digital identification systems, biometric surveillance, centralized personal data control, or any legislative or administrative measure that would unlawfully infringe upon my constitutional rights, privacy, bodily autonomy, property rights, freedom of movement, and personal sovereignty. Constitutional Protections: The Constitution of the Republic of South Africa is the supreme law of the Republic. Section 1 establishes the foundational values of: Human dignity; The achievement of equality; The advancement of human rights and freedoms; Non-racialism and non-sexism; Supremacy of the Constitution and the rule of law; and a democratic government based on the will of the people. In terms of the Bill of Rights, I expressly invoke and reserve, among others, the following protections: Section 10: The right to inherent human dignity. Section 12: Freedom and security of the person, including bodily and psychological integrity. Section 14: The right to privacy, including protection against unlawful collection and retention of personal information. Section 18: Freedom of association. Section 21: Freedom of movement and residence. Section 22: Freedom to choose one's trade, occupation, or profession. Section 25: Protection against arbitrary deprivation of property. Section 27: Access to social security and essential services. Section 32: Access to information. Section 33: Just administrative action. Section 34: Access to courts. Section 36: Rights may only be limited where reasonable and justifiable in an open and democratic society. No administrative system or legislative framework may lawfully extinguish or unreasonably limit these rights without meeting the strict constitutional requirements applicable to any limitation of rights. International Human Rights Protections: I further rely upon universal human rights principles recognized in instruments such as the United Nations Universal Declaration of Human Rights, including: Article 1: All human beings are born free and equal in dignity and rights. Article 3: The right to life, liberty, and security of a person. Article 12: Protection against arbitrary interference with privacy. Article 13: Freedom of movement. Article 17: The right to own property and not be arbitrarily deprived of it. Article 18: Freedom of thought, conscience, and belief. Natural Law and Common Law Principles. I affirm the enduring principles of natural law, which recognize that certain rights are inherent to every human being and are not granted by governments. These include the rights to life, liberty, privacy, bodily integrity, peaceful enjoyment of property, and self-determination. I also reserve all lawful rights available under common law principles, including: The right to informed and voluntary consent; The right to security of one's person and estate; The right to peaceful possession of property; The right to be free from unlawful coercion or undue intrusion; The right to lawful due process. Spiritual and Moral Convictions. My body, mind, conscience, and spirit are inviolable. My personal beliefs affirm that human life is sacred and that each person bears a profound responsibility to safeguard their own dignity, conscience, and freedom. No administrative or technological system should diminish these values or compel surrender of autonomy over one's physical person or deeply held beliefs. Objection to Compulsory Digital Identification. Accordingly, I formally object to and decline any attempt to compel: Mandatory digital identification or digital-only credentials; Expanded biometric surveillance beyond lawful and proportionate purposes; Centralized control over my personal data and identity; Unlawful restrictions on banking, property ownership, travel, employment, education, or access to public services based solely on digital compliance; Any measure that compromises privacy, security, or autonomy without proper constitutional safeguards. I expect that any digital systems introduced by the Department will remain subject to the Constitution, the Information Regulator and the Protection of Personal Information Act, and that no person will be deprived of lawful rights or essential services without due process and constitutional justification. Reservation of Rights: All my rights are expressly reserved. Nothing in this correspondence should be interpreted as a waiver of any constitutional, statutory, common law, or human rights protections available to me. Should any governmental action unlawfully infringe upon these rights, I reserve the right to pursue all lawful remedies, including applications to the courts and complaints to appropriate oversight institutions. Lastly: I respectfully call upon the Department of Home Affairs to ensure that all modernization initiatives fully respect constitutional supremacy, human dignity, privacy, informed consent, and the fundamental freedoms of every person in the Republic. The State exists to serve the people and to protect their rights, not to erode them. Any technological advancement must enhance liberty, security, and accountability rather than diminish them	Louis	Gauteng		employed individual

	2026-05-22 11:24:36	No I do not	All of the above	Structural Function Creep & Tracking	Corporate Interoperability & Privacy Creep The regulations empower the Department to record a "Verified Relationship" between a citizen and an accredited private company, such as a bank or mobile network provider. If any core details are changed or verified in person by that business or Home Affairs, the system can automatically broadcast these updated particulars to every other private entity linked via that relationship in near real-time. The Concern: Although the regulations explicitly ban profiling, commercialisation, and open-ended intelligence gathering, this fluid exchange of live citizen data across corporate API channels raises red flags. Automating data synchronization loops between state databases and private financial/telecom corporate giants chips away at the wall separating public civic records from private commercial infrastructure. 	2026-05-21 13:58:55	No I do not	All of the above	Structural Function Creep & Tracking	1. Many South Africans are excluded from this technology. This exclusion also indirectly make the application group related based on income. 2. The device contains highly personal and confidential information and especially with AI exploits becoming nearly impossible to stop, place this information with a government controlled front door to this information widely at risk. 3. Governmental overreach knowingly or unknowingly is a real concern. This government has a record of being one having the worst financial control over funds in the world. This is a controllable asset governed by various laws and specialised bodies with a trail and track record. How much easier for unauthorised access to information which does not have any of that, and even if introduced still stays virtually untraceable.	Charl	North West		retired

	2026-05-21 13:57:17	No I do not	All of the above	Structural Function Creep & Tracking		Elsie	Limpopo		retired

	2026-05-20 21:16:21	No I do not	All of the above	Structural Function Creep & Tracking	The onset of digital id is the end of our civil liberties and democratic rights, I refuse to give away my freedom and all rights to be controlled by a system we will have no control of. Punted as ease of access to all your personal links to banks, Id and all related everyday living and then can be used to contain and control your way of life in as system you may not agree with. Simple as this if digital id is used to live your normal daily life and there where to be a lockdown it can be effected better by simply blocking you digital spend within 500m of your residence and this has far reaching implications to one's right to freedom. We can and will be controlled if we let this ever happen.	Thamandran	Gauteng		self-employed

	2026-07-04 18:41:35	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Giving more control over our lives to a government who can't secure our borders, protect it's citizens or uphold the law as it already stands I do not see how they can be in any way trusted in securing our identities digitally. Lost or stolen phone, your identity and everything connected to it is compromised and identity theft will run rampant. Publically speaking out against our government, your identity will be revoked or frozen. Your whole life can be shut down remotely if they so please. Your rights will be determined by how "good" you are as a citizen, step out of line and your bank account (which will also be connected to your digital ID) gets frozen. Do not fall for the lies of convienence or accessibility, it might be volantary for a time until enough people start using it than it becomes mandatory (same thing happened with the smart ID cards that made the ID books obsolete), this is the kind of power that should never be given to our government or any government ever.	Jacques	Northern Cape		employed individual

	2026-06-25 06:00:25	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I live in a small town in the Western Cape, De Doorns. The local people are still working with cash on hand and even struggle and need help applying for their kids at school. Just having a bank account or a phone is a luxury. Trying to incorporate an all-digital platform for identification will just not be possible in our South African reality. Rather try and make our existing protocols work, or think of solutions that would actually work for our people. We still have a right to our privacy. Blasting our identification and details on a platform accessible to all corporate and private entities , raise serious privacy concerns. We are a third-world country - face that fact amd act accordingly. Do better! Your people deserves it.	Corlia	Western Cape		unemployed individual

	2026-06-19 09:26:36	No I do not	All of the above	Soft Discrimination & Digital Exclusion	The problems does not only apply to government that will use this platform to control but the fact is that cellphone mugging has become a lucrative business of which government do not care about. Crime is extremely high especially in Cape Town which is ranked amongst the top internally. The criminal has no right to pay back what he stole and neither does government grant an incentive upon stolen goods towards the victim's. Yet, government is seeking more ways to control the populace, bringing them closer towards a One World Order System under the disguise of "Safety and Security". Government has become part and parcel of the Ganglord Fraternity operating very much in the same framework of taxing and controling. The only difference between the two is, government puts it in black and white which does not always constitute to legality. It is still forced but in a subtle way.	Shahieda	Western Cape		retired

	2026-06-17 18:41:12	No I do not	All of the above	Soft Discrimination & Digital Exclusion	What about people who don't have a smartphone? Do they just cease to exist? Some people don't want a smartphone, or can't afford one, so this will exclude the very poor or technologically illiterate and is therefore unfair. I also object to having such vital information on an easily hackable or stolen device. It may be fairly secure now, but when AI gets into the hacking scene - which it will - no digital device will be safe. Those IDs will be stolen and sold online and cause endless headaches for the authorities and their owners alike. Identity theft will run rampant. AI is an every-growing threat that should not be underestimated. The only certain secure ID document is a paper one. Anything online is going to become increasingly difficult to protect - eventually impossible. So, this is a VERY bad idea! It may be convenient, at the moment, but in the long run, it will become a nightmare. Don't go down this road! It's a path to chaos - or Hell - paved with good intentions but doomed to fail.	Tamsin	Western Cape		self-employed

	2026-06-17 13:48:14	No I do not	All of the above	Soft Discrimination & Digital Exclusion	This move to Digitization gives the state far too much control and power over citizens. Either now or in the future this can be used to both incentivize and /or punish citizens as deemed fit by the state. As such it infringes on individual rights or freedom and privacy. 	2026-06-09 11:10:32	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I do not support: - a legal framework that enables private identity data to be shared and synchronised in near real-time between government systems and private corporations - there is no reason or justification for any expire date, and any 5-year expiry date for digital credentials is just idiotic. This smacks of revenue generation via application fees as primary motive. Forcing citizens back into physical queues to re-prove their identity is impractical - it was not used with the Green IDs and it will not work. US Social security cards (ID) is valid life long with no expiry dates - SA has high device theft stats. Binding anybody to a specific device and/or mandatory facial biometric protocols do not protect citizens from unfair lockouts if a phone is lost, stolen, or damaged - This system does not guarantee non-discrimination for non-users - SA gov has slack/low security standards, incompetent administrators, and cannot guarantee the safety of personal data. Prison sentences for leaks or selling of personal data are rare - specifically if big banks or credit bureaus leak data, there are zero consequences, no protection for the rights of the victims - Ranking user identity profiles through an internal scoring mechanism smacks of a social credit score which is wholly unconstitutional	Benjamin	Gauteng		business owner

	2026-06-09 09:44:42	No I do not	All of the above	Soft Discrimination & Digital Exclusion	We have a population that is very diverse financially. How many people are unable to afford a smart phone? How many elderly are barely surviving on a SASSA grant and you want to burden them more. If their phone is stolen, then what? First, they would have to replace the phone, then re-register with their service provider which they can't do without their ID! Many who may be able to afford a smart phone are quite happy with a land line.	Susan	Western Cape		retired

	2026-06-08 08:40:38	No I do not	All of the above	Soft Discrimination & Digital Exclusion	1. “Centralising identity data in a digital system increases the impact of breaches. Given South Africa’s track record with data leaks and identity fraud, this could expose citizens to greater harm rather than protect them.” 2. “A digital ID system creates a single point of failure in a country already dealing with load shedding and infrastructure instability.” 3. “A digital-only or digital-first system risks excluding the very people who rely most on government services.” 4. “Even if the system starts as identification-only, there is a risk of ‘function creep’ where it is later used for tracking behavior or restricting access to services. International examples show how digital systems can expand beyond their original scope.” 5. “Public trust in state institutions is already low. Expanding state control over personal data without strong oversight may worsen that trust deficit.” 6. “Before implementation, there must be enforceable guarantees that the system cannot be used for surveillance, discrimination, or restriction of services and I do not trust this government not to do that in the future, even while saying they won't.”	Marelie	Free State		employed individual

	2026-06-07 07:51:31	No I do not	All of the above	Soft Discrimination & Digital Exclusion	As a South African citizen and business owner in Cape Town, I submit this comment in the spirit of the constitutional values this country was founded upon — equality, dignity and freedom for all who live in this land. While the proposed Digital Identity Credential is presented as voluntary, I submit that it is voluntary in name only. When banks, SARS, telecoms providers, professional licensing bodies and essential service providers become accredited trusted entities, any South African who declines will progressively lose access to banking, tax compliance and professional licences. This creates a two-tier citizenship that directly violates Section 9 of the Constitution. The Director-General's power to suspend a citizen's credential where "suspension is otherwise necessary for the proper execution of the Act" is dangerously vague, requires no judicial oversight and no court order. This violates Sections 33 and 34 of the Constitution. The real-time data sharing architecture across institutions is identical to the technical foundation of authoritarian social credit systems. Infrastructure built today will be inherited by governments we have not yet elected. Biometric data cannot be changed if compromised. Collecting and sharing it across a network of public and private entities, given South Africa's track record on state data security, represents an irreversible risk to every citizen. Finally, delegating critical decisions to the Director-General by "instruction" allows this system to expand without parliamentary oversight or public consultation. South Africans have fought too hard for their freedom to hand it over to a centralised digital system governed by unchecked administrative power. I call on the Department of Home Affairs to withdraw these regulations and return with a proposal that includes judicial oversight, strict limits on trusted entity scope, independent data security auditing, and a genuine guarantee that no South African will be penalised for choosing not to participate. Our freedom is not a feature to be toggled on and off by a government application.	John	Western Cape

	2026-06-06 23:52:34	No I do not	All of the above	Soft Discrimination & Digital Exclusion	that they do not need! Please do not go ahead with it. 2026-06-06 23:39:20 +02:00 Denese No I do not All of the above Centralised Economic Kill-Switch Risks It is very difficult to select one primary concern. The whole concept of Digital ID makes me feel physically sick. Under this system, everyone will be required to carry a digital dompas. Surely this violates a basic human right? I certainly don't want to be carrying a cellphone around with me wherever I go. I can look after my green ID book, and take it with me when I know I'm going to need it. Why does that need to now change? Cellphone theft is rife in SA. How can this system function securely and effectively in such a crime-ridden country? Who will have authority to freeze assets and travel etc for any given individual? And who will unfreeze them, and at what cost and inconvenience? The corrupt will find loopholes like they always do, and the people will sit with a giant noose around their necks. This is a BAD IDEA, and needs to go back to the drawing board. Furthermore, it is being rushed through, giving the impression that it is not open to being trustworthy or transparent. Please grant a decent extension, so that the whole concept can undergo proper scrutiny, before putting what looks to be a totally draconian system onto the people. How much dud Bill Gates and his friends paid you to enforce their system on us.	July	Mpumalanga		employed individual

	2026-06-06 21:43:35	No I do not	All of the above	Soft Discrimination & Digital Exclusion	This leaves room for total governmental overreach. Draconian policies can be forced upon citizens, and you will have to obey, or your bank account will be stopped, as it is in China. The fact that all your information will be on your phone is a security risk. In a country with so much crime, it will encourage more theft and attacks on citizens. If your phone gets stolen, your identity will be stolen, and all your information available to criminals. This is very dangerous for a lawless country.	Sanet	Limpopo		retired
	2026-06-06 21:32:52	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Assuming all the things can go together and a system actually "works" for whatever purpose it's "meant to" how exactly does anyone expect anyone to logically believe a company won't consider prioritizing a digital ID applicant to a non digital ID applicant? How would a built in system like "Identity Assurance Level" which is an internal scoring system not be factored into discrimination of South African citizens? how does any internal scoring system benefit the identity of your nationality? This is corporate backed and tied governmental overreach akin to communism, South Africans shouldn't say "I'm proud to be a South African because I have a high score in my mobile app".	David	KwaZulu-Natal		employed individual
	2026-06-06 21:26:45	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Main concern: Lack of control over my life. South Africa is a crime ridden country with a high risk society as a whole. Digitalising sensitive personal information leaves citizens vulnerable and open to exploitation. SA government are not trustworthy enough with so much power. Such power can be abused and mishandled. Digital ID will lead to a fully centralised control grid, once the CBDC is implemented afterwards. It will become a digital concentration camp. Authoritarian in nature, you will not be able to buy or sell without a digital ID. It is an authoritarian, draconian step towards less freedom and privacy & mass surveillance 24/7. So my main concern is that this digital ID is not for safety, protection or for progress but for FULL control of the people. It allows access to the people's assets & takes away their own locus of control. Essentially, you become a slave & this is just the start to the full implementation of the beast system. I do not agree.	Kirsten	Eastern Cape		self-employed

	2026-06-06 14:46:39	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Due to the technical invasion of privacy as well as a control of identity proves that the government would rather want to watch you and remove your own identity from you, instead of governing the country. For people that can not afford smartphones or do no understand how a smartphone works, such as the elderly, etc. , this means that no longer will they have an identity. We as individuals are all entitled to have and carry our own God given identity and not to submit to the identity that man and the world has given you. This identity form is a form of control of the people and to be able to remove certain people that do not conform to their rules and their way of life, from a system that wants to create their own for of Eutopia. This also seems like a form which is derived from the Apartheid era, where people's identities will be controlled by the state and that your identity will no longer be your own, but rather a commodity that is used by the state. 	2026-06-06 14:26:51	No I do not	All of the above	Soft Discrimination & Digital Exclusion	object to the proposed Digital ID/biometric system and unrestricted access to identity information. Biometric data is “special personal information” under POPIA 2013 and requires lawful, limited, secure processing with free, informed, and specific consent. This proposal risks identity theft, fraud, cybercrime, and unlawful surveillance if implemented without strict safeguards. It must comply with Section 14 of the Constitution, which guarantees the right to privacy, as well as the common law right to privacy, PAIA 2000, the Identification Act 1997, and the Electronic Communications and Transactions Act 2005. I request that no such system be implemented without independent oversight, clear limits on access, strong encryption, and the right to opt out of biometric collection	Peter	Western Cape

	2026-06-06 00:11:19	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I object for the following reasons: Centralised risk: Aggregating sensitive identity data into a national Digital ID creates a single, high-value target for cybercriminals and hostile actors. Existing technical and legal safeguards are insufficient to eliminate the risk of large-scale breaches. Proven vulnerability to SIM and telecom fraud: Linking identity to mobile authentication amplifies harms from SIM-swap attacks and telecom fraud. Current telecom authentication processes remain vulnerable and easily exploited. Inadequate victim redress: When identity is compromised, victims face protracted processes and limited remediation. My experience illustrates this failure: my mobile number was hacked and taken over via repeated illegal; simswaps; my identity was used to commit fraud; my business and reputation were destroyed; and my service provider has, to date been unable to rectify the situation. A Digital ID system that relies on the same weak authentication pathways would deepen these harms. Threats to civil liberties: A universal Digital ID that connects to services, payment systems, and telecoms can enable exclusion, surveillance, and mission creep. Citizens risk losing access to essential services through technical errors, algorithmic decisions, or misuse. Digital exclusion and inequality: Many citizens lack reliable devices, secure internet access, or the means to use biometric systems safely. The proposed changes will disproportionately disadvantage elderly, rural, low-income, and otherwise marginalised people. Weak governance and transparency: The proposed amendments lack adequate independent oversight, transparent impact assessments, and enforceable constraints on data sharing, retention, and cross-border transfers. My lived experience of my telephone number and WhatsApp account being hacked and taken over demonstrates the human cost of weak identity and telecom protections. I urge you to halt the proposed amendments!! I am willing to provide evidence of my case and to participate in consultations or hearings.	Emma	KwaZulu-Natal		self-employed

	2026-06-05 21:16:55	No I do not	All of the above	Soft Discrimination & Digital Exclusion	ANC to become a surveillance communistic state, like China. They would like us to give them that power by trusting them. This government will never use it responsibly. This government cannot be trusted, even with a whole bunch of assurance. But the underlying issue here is that they are building the infrastructure to a system that could be. immensely destructive. This is the type of system that could work or should work in first world countries with high human rights track records. But it's very questionable whether a system like this would work in a third world country , with a corrupt criminal syndicate for a government. The very poor human rights track record presided over by a government that openly celebrates and venerates some of the countries all over the world with their worst human rights track records. We know in countries like China, systems like these are being used to implement social credit scores where, for example, if you criticize the government in one place, you will be denied access to certain public goods and services in another place. We also know that those in power in South Africa think China is incredible and say openly that they are inspired by the Chinese model. Now, while they are saying that and while they are building this infrastructure, they would like us to believe that they would use it responsibly. The same way they would like us to believe that they would be responsible with expropriation without compensation, and the same way they would like us to believe that they are responsible when dealing with black economic empowerment. South African government does not have the capacity to implement a system like this responsibly. To say that it will be optional is not much of a safeguard because what tends to happen with systems like these is it eventually becomes compulsory just in reality in practice. Helped by some crooked government scam in the background. When banks and big corporations and so forth start defaulting on the digital system, making it very difficult for you to pursue your normal life if you don't opt in. Theory, a system like this could work in a high trust society presided over by a responsible, accountable government. South Africa is a low trust society with an irresponsible, unaccountable government that is now trying to consolidate as much power as they possibly can. And there is a real threat that if they put a system like this in place, it would become increasingly difficult to work or operate with out. The potential inherently built into this system to be a destructive force and violate our most basic freedoms. The solution to the crisis in South Africa is not more power for the government. It's not more centralization. This is essentially what this boils down. The solution is decentralization. Less power for the government. Or even better, another government, that put the citizens of the country and the country first and not their bank balance and party. A government that is not out to see how fast they can destroy this country.	Jacques	Western Cape		self-employed

	2026-06-05 21:06:28	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I do not support the Draft Amendment of Identification Regulations (Digital ID) as proposed by the Department of Home Affairs. Although government claims that the Digital ID system will be voluntary, I am concerned that over time it could become increasingly compulsory to access services, creating pressure on citizens to participate. I believe South Africans should be cautious about any system that has the potential to expand government oversight and erode personal freedoms in the future. I also have serious concerns about privacy and security. South Africa already struggles with high levels of phone theft, cybercrime, identity theft and data breaches. Storing more personal information on digital platforms creates additional risks for ordinary citizens. The regulations also do not provide sufficient reassurance regarding device loss and recovery. Phones are frequently lost, stolen or damaged in South Africa. Citizens should not face the possibility of being locked out of their identity, banking, healthcare or other essential services because of a device problem. Another concern is the five-year validity period and the requirement for an in-person verification within a ten-year period. While renewals may be done remotely using smartphone facial biometrics, a person must still complete a physical verification at a Home Affairs office or accredited entity within ten years or their credential will lapse. This creates an unnecessary burden, particularly for older South Africans, rural communities, people with disabilities, and lower-income citizens who may struggle with smartphone technology, transport costs, or long queues at Home Affairs offices. The proposal also risks creating soft discrimination against people who cannot afford smartphones or who are not technologically confident. Access to identity should remain simple, reliable and accessible to all South Africans, regardless of age, income or digital literacy. For these reasons, I strongly oppose the Digital ID proposal. 	2026-06-05 17:53:38	No I do not	All of the above	Soft Discrimination & Digital Exclusion	This government can't even give us a competent police force. There are many instances where one can't log into a government website because it isn't working. Most of the rural citizens don't have Internet. This is foolishness to implement digital ID when a large percentage of the population can't access it. Also, if the phone is hacked or stolen, unsafe. If government chooses, it could cut citizens off for wrong think. This is a terrible idea. I prefer my freedom.	Cyrilene	Western Cape

	2026-06-05 17:46:34	No I do not	All of the above	Soft Discrimination & Digital Exclusion	There are too many draconian aspects related to this digital ID that can easily be used to usurp my civil liberties. In a country where beareucrats are already running amok and trampling on civil liberties, this is just another weapon in their hanss	Steve	Gauteng		employed individual
	2026-06-05 17:44:28	No I do not	All of the above	Soft Discrimination & Digital Exclusion		Riaan	Gauteng		
	2026-06-05 17:40:50	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I'm not convinced that a Digital ID is the right move for South Africa. In a country where corruption, data breaches, and government IT failures are already a reality, centralising everyone's identity information feels like putting all our eggs in one very vulnerable basket. I'm also not comfortable with the idea that losing a phone could potentially leave someone struggling to access essential services, or that people who aren't fully digital could be disadvantaged over time. Technology should make our lives easier, but it should also make us safer. At this point, I have more concerns than confidence in this proposal.	Kristi	Gauteng		employed individual

	2026-06-05 17:04:21	No I do not	All of the above	Soft Discrimination & Digital Exclusion	It's the old practice of "big brother is watching". I dont want government spying on me or controlling my choices, discriminating against me if I dont. I believe our current system of government & private industry having independent systems suites me. I already have to cue for a drivers license, an ID, a passport etc. I already have biometrics for banking & still have to cue at the bank. I dont like the fact that if my phone is stolen, crashes or breaks that my "whole world" is linked to it, & I now have to jump through fiery hoops to get my life re-activated or prove who I am. The otherside of it is what about hackers, who time & time again prove they are smarter then any agency firewalls. Everyday we hear about some institution, whether private or government being breached by hackers. This reminds me of a saying "dont keep all your eggs in one basket"(never a good idea).. This is exactly like that having your whole ID footprint in one system.. Bad idea!	Brodie	KwaZulu-Natal		business owner

	2026-06-05 10:48:18	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-06-05 10:14:28	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I object to the proposed Digital ID/biometric system and unrestricted access to identity information. Biometric data is "special personal information" under POPIA 2013 and requires lawful, limited, secure processing with free, informed, and specific consent. This proposal risks identity theft, fraud, cybercrime, and unlawful surveillance if implemented without strict safeguards. It must comply with Section 14 of the Constitution, which guarantees the right to privacy, as well as the common law right to privacy, PAIA 2000, the Identification Act 1997, and the Electronic Communications and Transactions Act 2005. I strongly object to any such system being implemented under ANY circumstances due to the potential discriminatory aspects and risks cited above.	Gill	Gauteng

	2026-06-05 06:57:35	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I strongly oppose a Digital ID for the following reasons: Systems at many Department of Home Affairs offices are constantly offline. For example in Bredasdorp the system is offline almost 40 percent of the time. If our ID is linked to a centralized system, we could be unable to transact with an ID on a regular basis. Every single centralized system in SA has been captured, looted, plundered and exploited. When this is done with the identities of the entire population, the fraud, identity theft, extortion, ransom demands and totalitarian abuse will be on another level. Cyber criminals and hackers gain access to the most advanced systems in the world. It is just a matter of time before they gain access to this system and exploit it just like the corrupt officials and mafia networks. Having a digital ID on a mobile device and synchronizing it with private sector data creates a system of real-time 24-7 tracking and surveillance. We refuse to be tracked like that. 	2026-06-04 23:31:41	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Civic groups, privacy advocates, and cybersecurity experts argue that while modernisation is welcome, the draft regulations introduce expansive risks and administrative penalties that demand much tighter constitutional safeguards. Their core arguments include: Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-06-04 14:53:52	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Digital Exclusion & Soft Discrimination The draft policy features transitional arrangements declaring that the system must be phased in a way that does not unreasonably exclude individuals who do not own smartphones, lack internet access, or are unable to use digital services without help. Physical IDs will also remain completely valid. The Concern: Despite these progressive legal promises, the practical reality of modern service delivery is that digital pathways are quickly prioritized because they save money. As government systems and corporate partners inevitably optimize their systems for the MyMzansi app, citizens relying exclusively on physical IDs could face longer delays, reduced support, and systemic "soft discrimination" when trying to access basic societal resources. 	2026-06-04 08:48:55	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I do not support the implementation of a digital ID system in South Africa and it raises serious concerns about privacy, government control, and cybersecurity. A digital ID could give the government too much access to citizens’ private activities, especially in a country already facing corruption and administrative challenges. There are also concerns about the practicality of constant renewals or address confirmations, which could create delays and negatively affect businesses and everyday life. In addition, if a digital ID system is hacked or digitally disabled, it could leave people unable to access important services. For these reasons, I believe the government not be allowed such control over its citizens and should improve the current ID system instead of introducing a fully digital one. 	2026-06-04 06:25:34	No I do not	All of the above	Soft Discrimination & Digital Exclusion	INTRODUCTION While the Department of Home Affairs' intention to modernise South Africa's identity infrastructure is acknowledged, this submission opposes the proposed regulations in their current form. They pose serious and demonstrable risks to the rights, privacy, and security of ordinary South Africans — particularly the most vulnerable. Governments around the world have implemented digital identity systems, and the lessons from those experiences are sobering. 1. A MASS SURVEILLANCE INFRASTRUCTURE The proposed regulations establish a centralised biometric population register linked to a digital credential verifiable in real time by a wide range of "trusted entities." This creates a surveillance infrastructure that any future government could exploit. India's Aadhaar system is instructive. Hailed as transformative, it became a major scandal when personal data of over one billion citizens was found accessible for as little as USD 8. South Africa's Department of Home Affairs has itself struggled with endemic data breaches and corruption. Entrusting it with a biometric database linked to every citizen's mobile device is an extraordinary risk. China's Social Credit system offers a starker warning. What began as a digital identity system evolved into a tool of social control, restricting travel, education, and employment based on government-defined behaviour. The architecture proposed here — where identity assurance levels can be reduced as a consequence of a citizen's conduct — mirrors the early design of exactly such a system. 2. DIGITAL EXCLUSION OF THE MOST VULNERABLE Regulation 49(5) cursorily acknowledges that implementation must not "unreasonably exclude" those without mobile devices. This single sub-regulation is wholly inadequate. Millions of rural and low-income South Africans lack smartphones and reliable connectivity. A credential delivered exclusively through the MyMzansi application, on a device meeting the Director-General's technical requirements, will be inaccessible to grant recipients, rural communities, and the elderly. Kenya's Huduma Namba programme offers a direct parallel. Challenged in court and found to have excluded marginalised communities lacking required documentation, Kenya's High Court suspended the programme because it created a class of people unable to access services. South Africa's enrolment prerequisites — proof of residence, device binding, email verification, and biometric capture — risk producing the same outcome. 3. DANGEROUS CONCENTRATION OF POWER An extraordinary range of consequential decisions are delegated to the Director-General "by instruction," with minimal Parliamentary oversight — including biometric standards, identity assurance criteria, device security requirements, and cryptographic standards governing the entire system. The United Kingdom's failed National Identity Scheme is instructive. After billions of pounds spent, the programme was scrapped in 2010. The UK's Information Commissioner had repeatedly warned of "function creep" — the gradual expansion of a system's use beyond its original mandate. South Africa's broadly defined trusted entity categories and expansive data-sharing framework are particularly vulnerable to exactly this. 4. PRIVATE SECTOR ACCESS IS UNACCEPTABLY RISKY Banks, telecoms, and insurers — all falling within the "trusted entity" definition — will have access to a live, verified feed of citizens' identity particulars. The prohibition on commercial misuse depends entirely on the Department's audit capacity, which has historically been weak. Australia's My Health Record demonstrated this risk: when launched, it emerged that insurance companies could potentially access sensitive personal data, forcing legislative amendment under public pressure. South Africa's framework provides fewer safeguards than the Australian system that nonetheless nearly collapsed under public opposition. Critically, the 24-hour breach notification window is dangerously inadequate — biometric data, unlike a password, cannot be changed once compromised. 5. RISK TO CIVIL SOCIETY AND POLITICAL DISSENT The "verified relationship" mechanism links citizens to trusted entities in the population register, giving government near-real-time visibility of citizens' interactions with banks, telecoms, and social services. For journalists, activists, and opposition politicians, this creates a detailed, government-held picture of their associations and movements. Hungary demonstrates the danger. When the Orbán government gained control of national identity infrastructure, it progressively used it to monitor political opponents and civil society. South Africa's history of state capture, documented by the Zondo Commission, shows this risk is not abstract. CONCLUSION The proposed regulations should not be promulgated in their current form. At minimum, the Department must commission an independent Data Protection Impact Assessment, establish a constitutionally compliant appeals mechanism for citizens whose credentials are suspended, introduce mandatory Parliamentary review every three years, and explicitly prohibit law enforcement use of the population register without a court order. South Africa's Constitution is among the most rights-protective in the world. These regulations, as drafted, are not worthy of it.	Warner	Gauteng		employed individual

	2026-06-03 19:55:39	No I do not	All of the above	Soft Discrimination & Digital Exclusion	South Africans already have good reason to be cautious about giving the state more power over their personal information. This proposal centralises sensitive identity and biometric data, increases data-sharing between government and private entities, and creates new ways for ordinary people to lose access to essential services through administrative or technical failures. Modernisation should make citizens freer and more secure, not more dependent on a single government-controlled digital system.	Brendon	Western Cape		employed individual
	2026-06-03 19:39:03	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector’s history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation’s “attack surface.” Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically “lapse” triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual’s legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating “near real-time” data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic “soft discrimination” —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-06-03 18:37:20	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Digitale Uitsluiting en Sagte Diskriminasie Die konsepbeleid bevat oorgangsreëlings wat verklaar dat die stelsel gefaseer moet word op 'n manier wat nie individue wat nie slimfone besit nie, nie internettoegang het nie, of nie digitale dienste sonder hulp kan gebruik nie, onredelik uitsluit nie. Fisiese ID's sal ook ten volle geldig bly. Die kommer: Ten spyte van hierdie progressiewe wetlike beloftes, is die praktiese realiteit van moderne dienslewering dat digitale paaie vinnig geprioritiseer word omdat hulle geld bespaar. Namate regeringstelsels en korporatiewe vennote onvermydelik hul stelsels vir die MyMzansi-toepassing optimaliseer, kan burgers wat uitsluitlik op fisiese ID's staatmaak, langer vertragings, verminderde ondersteuning en sistemiese "sagte diskriminasie" in die gesig staar wanneer hulle toegang tot basiese maatskaplike hulpbronne probeer verkry. Perspektiewe: Wat is die debat? Die voorgestelde Wysiging van die Identifikasieregulasies, 2026, het 'n belangrike gesprek regoor Suid-Afrika aan die gang gesit rakende die digitalisering van burgerlike infrastruktuur. Om u te help om u amptelike voorlegging te formuleer, is die kernargumente rondom die beleid hieronder in twee omvattende perspektiewe herstruktureer.	Johan	Mpumalanga		retired

	2026-06-03 16:45:52	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Page 11, Chapter 17(d). Please clarify if population of South Africa can opt out of digital identity, since it is an alternative form of identity card (Page 9, Chapter 2(d)) and has expiry information. Moreover, Page 33, Chapter 49, point 3 mentions that no person is compelled to obtain digital identity however, the related government departments may in future demand or only accept digital identity and therefore make it compulsory i.e. backdoor obligation for citizens. For example, no digital identity, no social grant. Point 5 acknowledges no unreasonable exclusions however it falls short on opt out option. Please explain. Page 20, Chapter 6, 31(a) Does the department of Home Affairs have expertise in biometric device certification, maintenance and decommissioning or should expertise of SABS handle these functions? If yes, please expand on level of skills and expertise and confirm whether these are insourced or third party resources? Governance problems in the making A. There is no data residency requirements for the Department and for any of the trusted entities. This may lead to Department's data moving from a local datacenter to a local cloud provider datacenter and then again to a cloud provider region outside of South Africa jurisdiction, under a pretext of offshore mirror or backup outside local region. In either case, prosecution of data breached outside your jurisdiction will be more complicated and long drawn affair. What is your stance of data residency requirements? B. There is no mention of audited secure disposal of information held by trusted entities when data sharing agreements or accreditation is withdrawn or terminated (Page 25 section 38 or Page 31, section 46). Please explain?? C. Page 27, Chapter 8, there is nothing in this proposal document that commits to using secure, strong cryptographic standards (above certian key lengths as per NIST standard). Furthermore, no mention of key ceremonies to ensure auditable process of recycling of keys, ensuring strong non-expiry passwords and digital infrastructure hardening.	Kenneth	KwaZulu-Natal

	2026-06-03 09:59:20	No I do not	All of the above	Soft Discrimination & Digital Exclusion	To Chief Editor Legal Services I am a South African citizen and strongly object to the current digital ID plans. The technology and infrastructure needed for a safe digital ID and digital currency system are not realistically available to many people even in cities and especially not in rural and remote areas. Rolling this out now, and then using it as a gatekeeper for grants, healthcare, education or work will discriminate against the poor and rural population and undermine their constitutional rights to equality, dignity and basic services. If government insists on digital ID it must be rural first and rights first. Prove it in rural areas first, guarantee permanent paper and offline access to all and place protection and remedy in place so that no one lose their livelihood because of network or device failures. If the system can't meet these conditions it can't go ahead. Yours sincerely M. Myburgh	Marinda	Gauteng		employed individual

	2026-06-03 04:23:43	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I hereby lodge a formal objection to the Draft Identification Regulations, 2026, published under Government Gazette No. 54610. This objection is grounded in constitutional and statutory contraventions that render the draft regulations unlawful and unenforceable in their current form. 1. Constitutional Contraventions 1.1 Section 14 – Right to privacy infringed by biometric capture and device-binding. 1.2 Section 9 – Equality compromised by exclusion of citizens lacking digital access. 1.3 Section 32 – Risk of restricted access to information. 1. Statutory Contraventions 2.1 POPIA – Unlawful biometric data processing without adequate safeguards. 2.2 PAIA – Transparency undermined in verification processes. 2.3 Cybercrimes Act – Increased exposure to unlawful interception and fraud. 2.4 ECTA – Device-binding limits fair access to services. 1. Request for Action 3.1 Immediate suspension of the draft regulations pending constitutional review. 3.2 Full public consultation with civil society, legal experts, and affected communities. 3.3 Revision of the draft to ensure compliance with constitutional rights and statutory safeguards. The Draft Identification Regulations, 2026, in their current form, contravene multiple constitutional provisions and statutory safeguards. I respectfully request that the Department of Home Affairs withdraw or substantially amend the regulations to align with South Africa's constitutional democracy. 	2026-06-02 15:32:21	No I do not	All of the above	Soft Discrimination & Digital Exclusion	The proposed Digital ID system raises serious concerns about soft discrimination, digital exclusion, privacy, and personal freedom for the citizens of South Africa. While proponents argue that a Digital ID can improve efficiency and service delivery, it also risks creating a society where access to essential services becomes increasingly dependent on technology, internet access, and digital literacy. Many residents, particularly the elderly, low-income households, and those living in areas with limited connectivity, may find themselves disadvantaged or excluded through no fault of their own. This form of "soft discrimination" may not be explicit, but it can effectively create barriers that prevent equal participation in society. Furthermore, citizens already possess multiple forms of identification, including national ID documents, driver's licenses, and passports, which adequately serve the purpose of proving identity. Introducing an additional digital identification layer raises concerns about unnecessary data collection, increased surveillance, and the potential for individuals' activities to be tracked, monitored, or linked across different aspects of daily life. Human beings are citizens with rights and freedoms, not assets to be monitored through centralized digital systems. Any system that expands the ability of governments or institutions to track individuals must be approached with extreme caution, as future misuse, data breaches, or policy changes could erode privacy and civil liberties. A truly inclusive society should prioritize accessibility, freedom of choice, and the protection of personal privacy rather than making digital participation a requirement for everyday life. 	2026-06-02 14:36:04	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Regarding the digital ID and the notion that it makes online activity safer; some of the most digitally secure locations in the world have been digitally hacked. Some of these locations include: the Pentagon, the White House and the Kremlin—a digital ID can protect no one. All digital technology can be hacked. A central bank digital currency, a social credit Score system and a digital ID, in combination, allow corporate South Africa and the government to shut down the bank accounts of an individual or group for any reason they believe appropriate. Those individuals or groups will have no legal recourse and no way of contesting this decision. Essentially, this amounts to a form of modern-day human slavery! Why are corporate South Africa and the SA government considering using digital technology to enslave the population?	Rob	Western Cape		business owner

	2026-06-02 10:08:14	No I do not	All of the above	Soft Discrimination & Digital Exclusion	With our current infrastructure and service delivery this will not only be a huge security risk but also guaranteed to be more of a hassle to maintain. It sometimes takes weeks for public services to resolve issues so imagine your phone is lost and you cannot buy or sell for weeks, or even withdraw money or access certain services due to lack of digital "proof of identity". This will be a burden upon the population and not even mentioning the social credit score side of it that will follow or intensify.	Jay	Free State		employed individual
	2026-06-02 10:04:42	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I am concerned that the implementation of digital ID systems could lead to increased surveillance and reduced personal privacy. As someone with religious convictions, I worry that a mandatory digital identity may eventually be used to monitor individuals, restrict freedoms, or disadvantage those who object on grounds of conscience or faith. I am also concerned about the concentration of power that could result from centralized digital identity systems and the potential for misuse of personal information. Furthermore, certain religious interpretations raise concerns about the possibility of digital identification becoming linked to broader systems of social or economic control. For these reasons, I oppose the implementation of digital ID systems and believe that individuals should retain the freedom to participate fully in society without being required to adopt a digital identity. 	2026-06-01 23:47:48	No I do not	All of the above	Soft Discrimination & Digital Exclusion	There is many concerns, like hacking of data, systems that is offline and then you can't do anything. Wrong data capturing could lead to problems. Later they will want to exclude people if they do not have the digital ID, like they did with the Covid vaccine and what if you are denied service due to hacking, wrongful capturing, later you will not be allowed to buy food without it, etc. That is very concerning. Sound like gateway for the 666 mark of the beast. All systems linked to each other, thus if one system is hacked or offline, all the accounts/services will be down. IT perspective- not a good idea. All systems can be hacked. Then there is the fact of phones gets stolen and not all people have phones. Then there is a 30day notice for change of address, what if it is not possible, you are in a coma? Renew every 10 years, not a good idea. Then there is there issue of privacy being stolen. 	2026-06-01 16:24:21	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I strongly oppose the draft regulations. These regulations will lead to all kinds of problems, such as erosion of privacy, loss of freedom of movement, and cutting off access to services. Digital ID will become de facto required for ordinary life, and citizens will be reduced to digital slavery. Highly sensitive identity data is being centralized; a prime target for hackers. The EU Digital ID app was hacked in a very short period of time. This entire move creates privacy and security risks. Disadvantaged people without smartphones,reliable internet, or the ability to use app-based services will be discriminated against. So physical ID must remain the default.	Philip	Western Cape		self-employed

	2026-05-29 12:31:31	No I do not	All of the above	Soft Discrimination & Digital Exclusion	1. The option to not engage with a particular technology needs to remain an option. That includes smartphones, especially in today's landscape. The moment the option goes away the technology-provider essentially becomes above the law because any T&C they choose to come up with to protect their own corporate interest, often in direct conflict with legitimate personal interests, become non-optional. The T&C of every cellphone operating system provider left the realm of innocent or benign years ago. They are already deeply oppressive to privacy, data privacy and intellectual property right principles and laws. This also gives these same cellphone operating system providers (apple, google, Huawei) non-negligible leverage over government. 2. This proposed legislation is also way too close to blurring the line between corporations and government. While the two need work together, they also need to remain apart with handover-lines more distinct. Government needs to enforce law & regulations against corporates and corporates need to call out government when it miss-steps or oversteps. This legislation would put both in a space where they are more likely to let things slide that they shouldn't. 3. As much as corporates claim benefits from digital adoption, they've been marking their own homework and significant down-sides have been ignored, often deliberately. The downsides of going too far into digital adoption are things that government, tasked with protecting South African society, can't ignore. This legislation is going to far down that road. 4. Every single digital security measure ever implemented has failed at some point or another. Every time the provider in question afterwards claims: "the gap has been closed and we're more secure than ever". Every time that claim gets dis-proven. The damage that can be wrought when, not if but when and how often, this system gets breached would be immense and completely negate any possible upsides this legislation hoped to achieve. Even a single breach might well cause irreparable harm to countless individuals and the country as a whole. That also means that this platform will be an instant and continuous target for malicious actors both inside and outside the country. Digital security has never stood up to such attention. Not a single vendor can claim a perfect record, or even a perfect record in the last 3 years. It would be foolhardy to assume this would be the first, given the incentive every malicious actor will have.	Barry	Gauteng		employed individual

	2026-05-29 08:25:28	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I strongly object to the proposed Digital Identity Credential framework in its current form. While I support the modernisation of government services and measures to combat fraud, I have serious concerns regarding the concentration of identity, personal information and access to essential services within a smartphone-based digital platform. My primary concerns are: Digital exclusion – Millions of South Africans do not have reliable access to smartphones, affordable data, stable electricity or network connectivity. Constitutional rights must never depend on access to technology. Cybersecurity and national risk – A centralised digital identity platform creates a high-value target for cybercriminals, organised crime and foreign actors. A large-scale breach could affect millions of citizens simultaneously. Privacy and data protection – Increased integration between government and private-sector systems raises legitimate concerns regarding data sharing, profiling, surveillance and future expansion beyond the original purpose. System failures and resilience – Citizens should not be unable to identify themselves due to system outages, software failures, network disruptions, device loss or administrative errors. Constitutional rights – Access to employment, banking, healthcare, travel, voting and other essential services must never become dependent on a smartphone application or ongoing digital validation. I strongly urge the Department to ensure that any digital identity solution remains voluntary and supplementary to physical identity documents. South Africans must retain the permanent right to use a physical identity document without prejudice, restriction or reduced access to services. Technology should enhance freedom, security and service delivery, not create new dependencies, vulnerabilities or barriers to the exercise of constitutional rights.	Christo	Gauteng		business owner

	2026-05-28 17:17:11	No I do not	All of the above	Soft Discrimination & Digital Exclusion	The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically “lapse” triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch.	David	Western Cape		retired
	2026-05-28 17:05:53	No I do not	All of the above	Soft Discrimination & Digital Exclusion	This is a move toward complete control of every individual. This will eventually be a prison. We will be told what to eat when to eat, how much we can eat. We will be cut off from resources if we do not get mandated vaccines. If we use freedom of speech, we will be cut off from resources if we speak against the governing party. All our assets will be frozen and confiscated if we step out of line. This is a precursor to the mark of the beast. It's a satanic agenda.	Jull	Western Cape

					Cybersecurity Readiness & “Leapfrogging” Vulnerabilities South Africa’s public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic “attack surface.” If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. While leapfrogging older tech sounds ambitious, cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. And with the implementation of AI as a hacking tool, pundits have remarked that no system will be safe in the near future. That would obviously included individual identity information. The 5-Year Expiry & 10-Year Physical Queue Trap If anybody’s digital ID lapses under the 10-year rule, that person will be legally stripped of his or her active digital credential and forced to undergo a physical, standard in-person enrolment process all over again. This creates an unnecessary, cyclical bureaucratic loop that forces digitally active citizens back into notorious, real-world Home Affairs queues simply because they did not have a reason to visit a physical office for a decade. Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Device Binding: The Stolen Phone Lockdown Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from a person’s legal identity and banking access until he or she can get to a physical state office. South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Interoperability & Privacy Creep Although the regulations explicitly ban profiling, commercialisation, and open-ended intelligence gathering, this fluid exchange of live citizen data across corporate API channels raises red flags. Automating data synchronization loops between state databases and private financial/telecom corporate entities chips away at the wall separating public civic records from private commercial infrastructure. Automating "near real-time" data synchronisation loops with banking and telecommunications entities chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The 30-Day Notification & Identity Assurance Penalties Regulation 37(1) places a strict legal obligation on every individual in the population register to notify the Director-General of any permanent change to their ordinary place of residence, postal address, mobile phone number, or email within 30 days. Non-compliance with this rule will negatively alter the “Identity Assurance Level” assigned to his or her digital identity credential. Forcing citizens to log formal changes within a rigid 30-day window for routine life adjustments like swapping an email address or moving apartments is highly impractical. Lowering a citizen’s “Identity Assurance Level” serves as a hidden penalty, which could lead to sudden, frustrating rejections or delays when trying to execute everyday high-security actions like opening an account or authenticating an online transaction. Digital Exclusion & Soft Discrimination The draft policy features transitional arrangements declaring that the system must be phased in a way that does not unreasonably exclude individuals who do not own smartphones, lack internet access, or are unable to use digital services without help. Physical IDs will also remain completely valid. Despite these progressive legal promises, the practical reality of modern service delivery is that digital pathways are quickly prioritized because they save money. As government systems and corporate partners inevitably optimize their systems for the MyMzansi app, citizens relying exclusively on physical IDs could face longer delays, reduced support, and systemic “soft discrimination” when trying to access basic societal resources. Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor,				
	2026-05-27 14:43:32	No I do not	All of the above	Soft Discrimination & Digital Exclusion	elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination"- including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-27 14:26:02	No I do not	All of the above	Soft Discrimination & Digital Exclusion	There are so many issues with this suggestion. Firstly just looking at how China has implemented digital ID and coupled the social credit score with it. It is used as a means to regulate and enforce compliance in China. If people do not adhere to regulations related to travelling, speech, religion, prescribed buying patterns, vaccination ,etc. they are excluded from the economy. This is THE MOST DANGEROUS thing the government wants to implement. If this is coupled with digital currency we will face a full blown Communist oppression in SA. A BIG NO to all and any facets concerning a digital ID. The Green Book is sufficient, period.	Johan	Free State		employed individual

	2026-05-26 22:34:40	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Here are my concerns: 1. I worry about peoples biometric information being stored digitally. What if it gets accessed or shared without people knowing? 2. South Africa already has a lot of fraud and cybercrime. A big digital identity system could make it easier for people to steal identities and commit fraud. 3. I do not like the idea of the government or others watching people without permission. These systems can be used for things they were not meant for especially if there is no one to check if they are being used fairly. 4. Data breaches are happening more often. If millions of South Africans identities and biometric records were stolen it could be very bad. 5. I am also worried that poor and vulnerable communities might be left behind. Many people do not have smartphones, internet or know how to use things. They should not be disadvantaged when trying to get services. 6. I think this proposal could also be a national security risk. A big digital identity database could be a target for hackers, foreign interference or misuse from within.	Minenhle	KwaZulu-Natal		unemployed individual

	2026-05-26 18:37:35	No I do not	All of the above	Soft Discrimination & Digital Exclusion	1. Linking the database of a digital ID to that of the banking system is the classical basis for a totalitarian system with total state control of every individual in South Africa! China's state control is a real life prototype demonstrating what can happen here. Banks and other corporations already have digital databases in place to protect the interests of clients. Once a state run digital ID database is put in place as well it would take only a small step to link the databases of the private corporate organisations to the ID system thereby gaining total state control over every individual! And penetration and control of this vital firewall by the state is already one of the aims. Why, there is already talk of implementing "Social Credits". This despotic concept is already being implemented in entire model cities in China whereby any dissident who does not tow the party line loses "social credits" including the right to transact, such as purchase a car; the right to travel, obtain social benefits; hold more than menial jobs, have their accounts partially or totally frozen; and in some instances also impair the right to marry! China's state control includes intrusive tracking of individuals using ubiquitous surveillance cameras with facial recognition and even identifying an individual's gait if they happen to cover their face. Who they meet and even what they discuss is all analysed. Basically it is the Orwellian nightmare. This is the wet dream of Marxism embodied in the "Freedom" Charter whereby the state is inexorably taking control of every lever of power, first in the public sector (the disastrous results of this policy are obvious) and increasingly the contagion is intruding into the private sector. This remains the policy of government as witnessed by an increasing avalanche of policies. 2. Some in power would claim that they won't do such a thing. But this is a hollow promise since those making it cannot hope to remain in power for ever. Bad policy and systems will always be exploited by bad actors. Moreover, if the proponents don't desire to misuse the system themselves, then why do they want to link it to financial systems and why do they already talk about Social Credits and deleting people's IDs (effectively taking them out of the system since no-one can transact or vote without an ID)? 3. With the current levels of corruption and incompetence in the public sector, how can we expect that the system will not be corrupted by the same issues? Hence even without sinister intentions, chaos could ensue.	Dr Christopher	Gauteng		self-employed

Jennifer	Western Cape		self-employed
	2026-05-26 15:07:21	No I do not	All of the above	Soft Discrimination & Digital Exclusion	This framework represents a significant overreach by creating total dependency on a state-controlled mobile application for exercising basic constitutional rights such as accessing banking, employment, healthcare, travel, and voting. It raises serious privacy concerns through real-time data synchronisation with the private sector, automated profile-tiering, and continuous rolling validation, effectively turning every citizen's identity into a permanently monitored digital profile. Furthermore, linking core identity to a single smartphone app creates exclusionary risks for millions of South Africans without reliable devices, data, or digital literacy, while introducing dangerous systemic vulnerabilities. The potential for this system to be integrated with future CBDC or financial platforms heightens the risk of citizens being effectively 'switched off' for non-compliance, which is incompatible with a free and open democracy.	Antonie	Gauteng		employed individual
	2026-05-26 15:03:24	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I am very concerned that, out of security concerns and convenience, all societies globally are quickly building their own digital prisons, and that soon it will be impossible to be part of said society if one chooses not to take part in owning a smart device. 	2026-05-26 14:35:10	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I fundamentally oppose the proposed Identification Regulations, 2026, and any system that centralises, digitises, profiles, monitors, conditions, restricts, or algorithmically controls a person's legal identity, movement, associations, access to services, or participation in society through integrated digital infrastructure. I value privacy, autonomy, freedom of movement, freedom of association, and the right to determine how, where, when, and with whom I interact—publicly or privately—without the risk of surveillance, behavioural scoring, forced digital dependence, or centralised administrative control over my lawful activities and personal affairs. While administrative efficiency and technological advancement may have legitimate purposes, they must never come at the cost of constitutional freedoms, individual sovereignty, due process, data security, or the creation of systems capable of abuse, exclusion, coercion, or authoritarian expansion through function creep.	Wilhelm	Gauteng		employed individual

	2026-05-26 14:32:13	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I do not like this simply because it is open to abuse and is a complete record of whom one interacts with, steps on one's privacy and freedom of association, limits one's access to facilities whether health. Education, business and employment dependant on whatever policies are passed by the state such as the current Employment Equity Act, Expropriation without Compensation, BEE & BBBEE and considering the amount of exclusion of minorities the list becomes ever greater. This system is open to abuse by governments who by rights should be serving the people but find new ways to control people by introducing social credit systems even though the social credit system isn't stated in those terms. There is nothing credible or protective about this system and biometrics is a pure invasion of privacy - the only people you need biometrics for are criminals which was the case in the past - but nowadays the state virtually insinuates that the public are criminals in waiting when the real criminals are those serving in Parliament. The state should never have this much power. It is as simple as that and this system is highly adaptive to the introduction of abuses of all kinds to the point as was seen with COVID that people were given criminal records merely because they did not agree to take the vaccines or refused to abide by the irrational laws by silly politicians. This is bad and should be banned or a better system with serious accountability introduced - otherwise it will become as useless as it was found when trying to sue Peugeot.	Mary Nicol	Western Cape		retired
	2026-05-26 14:27:18	No I do not	All of the above	Soft Discrimination & Digital Exclusion	There are multiple reasons why this is a bad idea. The possible over-reach of government and different Government entities to manipulate, censor and/or discriminate against anyone who do not agree with government, is to big a risk. Especially in a polarized society like our beloved South Africa! Stop changing everything and just do your work efficiently!	Petrus JJ	Eastern Cape		employed individual

	2026-05-26 11:16:41	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I wish to formally object to significant aspects of the Draft Identification Regulations, 2026. While I support the modernisation of Home Affairs systems and acknowledge the need for improved efficiency, fraud reduction, and digital service delivery, I believe these proposed regulations introduce deeply concerning risks to constitutional rights, privacy, civil liberties, and democratic accountability. The proposed creation of a centralised digital identity system — particularly one housed on a government-controlled smartphone platform with equivalent legal status to a physical ID document — represents a fundamental shift in the relationship between the citizen and the state. Such a system materially increases the potential for surveillance, behavioural monitoring, exclusion from essential services, cybercrime exposure, and abuse of power. South Africans are being asked to place extraordinary trust in a centralised digital infrastructure at a time when both public and private institutions globally continue to suffer major cybersecurity breaches, data leaks, identity theft incidents, and misuse of personal information. I have serious concerns regarding: • The concentration of sensitive biometric and identity data within a centralised digital ecosystem • The absence of sufficiently detailed safeguards limiting state access, tracking capability, or future function creep • The potential erosion of anonymity and privacy in everyday civic participation • The risk that digital identity could ultimately become linked to financial systems, healthcare access, movement, social services, taxation, or broader behavioural profiling • The vulnerability of citizens to hacking, identity theft, system outages, or politically motivated misuse • The exclusionary impact on elderly, rural, low-income, or technologically disadvantaged citizens • The absence of meaningful guarantees that physical identification methods will remain permanently protected and fully equal in practice • The lack of independent oversight structures with real enforcement authority A digital identity system of this magnitude cannot be introduced incrementally through regulations without broad public consultation, transparent technical scrutiny, constitutional review, and explicit legislative safeguards. Convenience and administrative efficiency can never justify the weakening of constitutional freedoms or the creation of infrastructure that could enable future overreach. I therefore strongly urge the Department to: 1. Suspend implementation of these regulations pending broader public engagement and independent constitutional review. 2. Provide full transparency regarding data architecture, storage, cybersecurity protocols, third-party access, and future interoperability intentions. 3. Legally guarantee the permanent right of citizens to utilise physical identity documentation without prejudice or disadvantage. 4. Establish strict statutory limitations preventing expansion of the system into broader surveillance, financial monitoring, or social control mechanisms. 5. Ensure independent judicial and civilian oversight over all digital identity operations and data access. The protection of individual liberty, privacy, and constitutional rights must remain paramount in any democratic society.	Jacqueline	KwaZulu-Natal		self-employed

	2026-05-26 10:38:40	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I have had myriad issues with incorrect personal details collected by DHA, CIPC, banks. How one earth could there be any possibility of this working correctly ALL the time? Because that is what is possible with a handheld document. There is a far better, technological way to do this, which keeps the control of information in the hands of the individual - a personal ID smartcard that has layered information secured by the three layers of self-identification: what I have (a card), what I know (PIN), and who I am (biometric, which it is possible to do on a card, having done it 20 years ago myself). To this can be added 2-factor verification via smartphone, if necessary. All relevant information is retained on the card, released only by the explicit permission of the individual. Updating of information is through certified, trusted institutions only. Actually quite simple and not costly.	Jan	Western Cape		self-employed
	2026-05-26 10:35:06	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Any law the ANC / DA bring in wrt digital ID can only be used for nefarious purposes. They want the China Credit Score system here in SA to control the population and bring in a totalitarian system of rule. No Thanks!!!!	James	Western Cape		self-employed
	2026-05-26 10:32:16	No I do not	All of the above	Soft Discrimination & Digital Exclusion	This amounts to the state having control over my movements, and freedom of movement is a right. It infringes on my right to live my life free from interference from the state or any other entity. It also infringes on my right to privacy and can be used to discriminate against me in many ways.	Graeme	Western Cape		employed individual

	2026-05-26 09:47:49	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Would like to know what these people smoke. They are on the road to making sure that you can be 'erased' at the government's whim. What about the older generation who do not like using Smart phones? What about the people who live in rural areas who do not have access to internet. What about my 91-year-old mother-in-law who has no idea, and doesn't want to know, how to use a Smart phone? What will happen if, and when, I upgrade (every 2 - 3 years) my cell phone contract? How much red tape to move everything to the new phone? Although things are changing at Home Affairs, they are changing for the wrong reasons. First World technology will not work in a third world country. Fix what needs to be fixed first, then modernise!	Roy	KwaZulu-Natal		business owner
	2026-05-26 09:45:10	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Hate to sound unprogressive but I think we have more important problems to solve than this. The marriage between big banks and government is concerning and being surveyed and tracked like this is a breach of privacy. Keep the existing system and simply find solutions to make the queues go faster, that's all South Africans need for now.	Jeanine	Western Cape		unemployed individual
	2026-05-26 09:44:59	No I do not	All of the above	Soft Discrimination & Digital Exclusion	The widespread reliance on mobile applications presents severe security, physical, and societal risks that remain dangerously unaddressed. A smartphone is now a single point of failure. Stealing a device via mugging or robbery gives criminals immediate access to financial accounts and identity credentials, drastically increasing the incentive for physical theft. App-based fraud is rising alongside increasingly sophisticated hackers. Because no system is impenetrable, trusting corporations to keep centralized personal data secure is a dangerous gamble. Mandatory app integration creates a stark digital divide. Forcing essential services onto mobile platforms systematically marginalizes those without smartphones or technological literacy. A significant portion of the population still relies on traditional green ID books and does not own a phone. Forcing a digital-first approach while these citizens depend on legacy physical infrastructure makes the push for mandatory app integration completely absurd and unrealistic. Forcing a transition to a smartphone-dependent ecosystem invites sophisticated cyber fraud, heightens real-world physical dangers, and entirely cuts off vulnerable populations who rely on traditional, physical means of identification. 	2026-05-26 07:40:47	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Trying a device for identification can have crippling effects on a persons ability to bank and carry on with day to day activities . Muggings / stolen or lost phones / changing cell numbers are a reality in South Africa and there is no easy way to recover when these events occur. How would one be able to recover easily is vital especially when one travels outside of South Africa. We all already have an identity number so why the need to have an additional way of identifying a person? The 10 year visit to a home affairs department is just another inconvenience and overreach of controlling citizens who do not interact with home affairs especially the elderly or those in rural communities. Overall the proposal puts every single citizen at risk of their details being stolen / breached as we have already seen on some government sites. This proposal has a very strong no from me	Lesley	Western Cape		retired

	2026-05-25 22:26:41	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I oppose the proposed Digital ID system in South Africa because: 1. It threatens privacy and enables mass tracking– Permanent biometric data can’t be changed if leaked, and the system opens the door to unchecked state and private sector surveillance. 2. It risks exclusion and mismanagement – Millions without smartphones or digital access will be locked out, and DHA’s history of blocking IDs without notice shows how easily people can lose access to services. 3. It lacks safeguards and public trust – Weak legal oversight, breach risks, and DHA’s current mismanagement mean there’s no accountability before rolling this out. 	2026-05-25 19:42:07	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Technology is great but should never be a reason to exclude South Africans from our civic services. The fact is that people will choose to live a non digital life and government, or any other body, should not force citizens to do so under the threat of not being able to access services otherwise. The assumption that digital is part of life, is a flawed one and we shouldn't be coerced into forced digital interaction simply to be able to get government services	Loshen	Gauteng		self-employed
	2026-05-25 19:41:18	No I do not	All of the above	Soft Discrimination & Digital Exclusion	If I had to choose one, it would be the soft disciirimination, digital exclusion and state surveilance threats. But that is merely one of the symptoms of a larger cancer. At this point I support no government action that makes it easier to consolodate power over the people, espesially a currently incompetent government that drools over the prospect of a racist, communist future. This current government is also trying to further race dicriminatory regulations, where the associated race classifications are literally assisted by apartheid documentation. If legislative racial "redress" for the past was legitimate, then there would have been a deadline, not to mention....progress. There are none! Thus, there are other agendas being pushed and I will oppose all actions that smoothens the road for said agendas.	Christiaan	Gauteng

	2026-05-25 16:48:03	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I do not want a digital ID because I believe it concentrates too much personal information and control into one centralised system, creating serious cyber security and privacy risks if that system is breached, abused, or expanded over time. I am concerned that governments and corporations could increasingly link and share data across banking, telecommunications, healthcare, and other services, leading to constant monitoring, reduced privacy, and gradual function creep where a system introduced for identification becomes a tool for tracking behaviour and controlling access to services. I also worry that physical alternatives may slowly disappear, forcing people into digital-only systems, long queues, compliance burdens, or penalties related to address updates and administrative requirements. In addition, I believe highly integrated digital identity systems create the risk of an economic “kill switch,” where access to payments, banking, travel, or essential services could potentially be restricted through one connected platform. Finally, I am concerned that digital ID systems may lead to soft discrimination and exclusion against people who value privacy, lack reliable internet access or modern devices, or simply prefer physical forms of identification and human-based services.	Johan	Western Cape		retired
	2026-05-25 16:37:46	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I dont want the government to control me. The governments duties are to govern not to control its citizens. You are developing modern slavery system. This digitial ID is going to make us into slaves. I will not take it. Never.	Stephanus	Free State		business owner

	2026-05-25 16:24:40	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Any controle that is given to machines seems convinient but it has a lot of downside. Machines do not have mercy or decernme t that causes a lot of problems. It makes life feel hard and unsimpathetic. Did God say machines should rule over earth or people? Humans are giving power to a harsh system that does not have any feelings and will harm them. We as huma s have to have the integraty and talent to work honostly and in respect. We are created to lead ...and do it respectfully and in love. What I see is the reason there is no jobs...and why people feel worthless and depressed as if life has no meaning anymore. Everything is getting to fast and too hard and controlive.... we were never created to give over to a machine system that will lead to our own downfall... but some or the world will and it will bring forth humaneties downfall as the Bible predicts unfortunatelly..No privacy, being handled lime a criminal and controled like a little child to conform into rules and laws that is ungodley and hidden in the name of "safety". This all will lead to the Beast system the Bible speaks of to controle so that all who buy or sell will be forced to take a mark on their forehead or hand to buy or sell.. and THOSE will LOOSE their eternaty and Gods Grace forever. This system will be like a god and have even a name and be worshipped. I say again...in the name of "safety and securety". We are in times all signs show that the puzzles are starting to make a very predictable picture of where we are heading very fast...Wars, Islamists takeover plans.., Noahs times sins/lawlessness , lovers of self/sin, nature earthquakes and storms, pests, money systems.. I /we can speak, God kbows the timing to seperate the goats from the sheep. I just do not want ro be apart of the goats or those planning all this system. I pray that true leaders will be awake and not fall for this cobtrole systems for it will speedely lead to the endtime prophecies. Judgement will be the final outcome for all if they like it or not.. Sometimes something seems good but satans plan fir it is not.. People need Jesus, jobs and a reason to live for, to use their talent...not machines that takes over humanety. We need a better structure...old people did it, we can also.	Zelda	Gauteng

	2026-05-25 15:19:49	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector’s history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation’s “attack surface.” Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically “lapse” triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual’s legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating “near real-time” data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic “soft discrimination” —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services.	joan	Western Cape		retired

	2026-05-25 15:14:04	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I wish to formally record my objection to the proposed Draft Amendment of the Identification Regulations introducing or expanding a Digital ID framework in South Africa. While modernisation of public administration and improved service delivery are important objectives, the current proposal raises significant constitutional, legal, operational, cybersecurity, and socio-economic concerns that require far greater scrutiny, consultation, and safeguards before implementation. 1. Privacy and Constitutional Rights Concerns The proposed Digital ID system creates substantial concerns regarding the constitutional right to privacy protected under Section 14 of the Constitution of South Africa. Centralised digital identity systems inherently involve the large-scale collection, storage, processing, and sharing of sensitive personal and biometric information. Without exceptionally robust legislative safeguards, independent oversight, and clear limitations on data usage, such systems increase the risk of surveillance, profiling, unauthorised data sharing, and abuse of citizens' personal information. The draft does not adequately demonstrate how compliance with the Protection of Personal Information Act (POPIA) will be ensured in practice. 2. Cybersecurity and Data Breach Risks South Africa has experienced repeated cyberattacks against both public and private institutions. Creating a highly centralised Digital ID platform may establish a single, high-value target for cybercriminals. A breach of Digital ID databases could expose millions of South Africans to: Identity theft Financial fraud Unauthorised access to services Long-term compromise of biometric information Unlike passwords, biometric identifiers cannot be replaced once compromised. The Department has not sufficiently demonstrated the cybersecurity architecture, independent security auditing, liability framework, or disaster recovery mechanisms required for a system of this magnitude. 3. Digital Exclusion and Inequality South Africa remains a deeply unequal society with significant digital access limitations. Many citizens face barriers including: Limited internet connectivity High data costs Poor rural infrastructure Lack of smartphones or digital literacy Electricity disruptions and load shedding Any Digital ID framework risks unintentionally excluding vulnerable citizens, elderly persons, rural communities, low-income households, and persons with disabilities from accessing essential services. Access to identity verification must remain universally available through secure physical and non-digital alternatives. 4. Risk of Function Creep and Expanded State Control Experience globally demonstrates that digital identity systems can gradually expand beyond their original purpose. Without strict statutory limitations, Digital IDs may evolve into mechanisms linked across banking, healthcare, voting, taxation, social grants, telecommunications, travel, and other sectors, potentially enabling excessive centralisation of personal data and state oversight. The draft regulations should clearly define: Scope limitations Permitted uses Prohibited uses Data minimisation requirements Citizen consent mechanisms Independent oversight arrangements 5. Insufficient Public Consultation and Transparency Given the profound implications for civil liberties, governance, and everyday life, a Digital ID system requires extensive and meaningful public engagement. The Department should provide: Detailed technical architecture documentation Privacy impact assessments Cybersecurity risk assessments Cost-benefit analyses Governance and accountability structures Independent expert review reports The public cannot meaningfully comment without access to sufficient technical and legal detail. 6. Financial and Administrative Concerns The cost of developing, maintaining, securing, auditing, and upgrading a national Digital ID system is likely to be substantial. At a time when South Africa faces severe fiscal pressures and ongoing service delivery challenges, the Department should transparently demonstrate: Full projected implementation costs Long-term maintenance obligations Procurement arrangements Value-for-money assessments Contingency planning for system failures Conclusion The proposed Draft Amendment of Identification Regulations, in its current form, presents serious unresolved concerns regarding privacy, cybersecurity, constitutional rights, inclusion, governance, and accountability. I therefore oppose the Draft Amendment as currently presented and request that the Department: Withdraw or substantially revise the proposal; Conduct broader public consultation and independent expert review; Publish detailed technical, legal, privacy, and cybersecurity assessments; and Ensure any future Digital ID framework prioritises constitutional protections, voluntary participation, strong oversight, cybersecurity resilience, and universal accessibility. South Africans' identity systems must protect citizens' rights, not expose them to new risks.	Ren	Eastern Cape		self-employed
	2026-05-25 15:13:52	No I do not	All of the above	Soft Discrimination & Digital Exclusion	In practice this sounds good. the big problem is the loss of privacy. there are benfits to such a system, but the negative potential issues are a great concern	Mark	Western Cape		
	2026-05-25 15:11:36	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Not only does personal privacy cease to exist, but discrimination expands even further by punishing poor, elderly, rural and any other South African who relies exclusively on physical documents. 	2026-05-25 14:09:32	No I do not	All of the above	Soft Discrimination & Digital Exclusion	This shift could transform the internet into a heavily monitored space, where every action is traceable and personal freedoms are compromised. The implementation of mandatory digital IDs carries the risk of creating an omnipresent surveillance state. With every individual's activities tracked and recorded, governments and corporations could gain unprecedented control over personal lives. This level of oversight could stifle dissent, manipulate behavior, and infringe upon basic human rights. Every purchase made with a digital ID could be tracked, allowing those in power to monitor and analyze consumer behavior in real-time. Beyond simply tracking, this level of control introduces the possibility of restricting purchases based on government or corporate agendas. The issue is not identification. It is political will.	Liz	Gauteng		
	2026-05-25 13:53:01	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Our inefficient government would not be able to handle a system like this properly - but a system like this infringes on a citizen's right to privacy in so many important ways anyhow. 	2026-05-25 12:53:30	No I do not	All of the above	Soft Discrimination & Digital Exclusion	We the citizens want less technology, not more. The more you force technology on us, the less freedom we have. The Government may argue that these sweeping new changes are for our benefit to protect us from criminals, however as we can see from all of the various commissions, it is the Government that is the most corrupt with a hefty amount of criminals, including our President who has not been charged for his Phala Phala money laundering. No, we don't want this, not for any of the drop down list options, but for ALL of them. We do NOT want "Social Credit Scores", we do NOT want to be forced to renew our identity every 5 years, nor even 10 for that matter. We do NOT have to. You are forcing this onto us so that your friends who got the tender can print money! Locking our identities to something that changes every 2 years (our phones) is unacceptable, even if it was locked in for 10 years, or for life. We do NOT want it linked to our phones, we do NOT want it linked to anything. What we have now, our CARD IDs is what we want. No more. Start adding value to the country and BUILDING the Nation instead of milking it's citizens to make your friends and family members rich.	Brian	Gauteng		employed individual

	2026-05-25 12:09:23	No I do not	All of the above	Soft Discrimination & Digital Exclusion	To whom it may concern, I would like to raise concerns regarding the proposed Digital Identity Credential framework and the MyMzansi application published under Government Gazette No. 54610. While digital transformation and reducing identity fraud are important objectives, the proposed system introduces significant privacy and civil liberty risks for ordinary South Africans. A centralised digital identity platform that integrates real-time information across government and private sector institutions creates the potential for excessive surveillance, data misuse, profiling, and unauthorised access to sensitive personal information. The concentration of identity, banking, healthcare, employment, and travel verification into a single digital ecosystem significantly increases the consequences of any data breach or cyberattack. In addition, the heavy reliance on smartphones and continuous digital validation may unfairly disadvantage citizens who do not have reliable access to smartphones, data, electricity, or stable connectivity. There is also concern around automated profile-tiering and rolling validation systems, which may result in individuals being incorrectly flagged, restricted, or denied access to essential services without adequate transparency or recourse. I believe stronger safeguards, decentralised protections, independent oversight, and clear limitations on data sharing and monitoring must be implemented before such a system is introduced. Kind regards, Charles	CH	Eastern Cape		employed individual

	2026-05-25 11:57:25	No I do not	All of the above	Soft Discrimination & Digital Exclusion	With infrastructure collapsing and poor maintenance becoming endemic, it goes without saying that there will be times when this type of interface will fail and that might be somewhat critical when faced with having to present your ID in a critical situation. This aside from all the security concerns and the fact that many cannot afford 'smart' technology. The above combined with the absolute control that this technology hands to sketchy individuals who have become the defacto controllers is many steps toward fascism and many steps away from democratic freedom.	Jimi	Western Cape		retired
	2026-05-25 11:54:13	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I am deeply troubled that whilst South Africa is the most unequal society she now must be the first to introduce the Global Agenda of 2030. This draft has not in mind the majority of this country who has been systematically and deliberately marginalised. Another attempt to use South Africa as a Guinea pig for the Global Agenda. Not impressed by the leapfrogging idea.	Archibald	Gauteng		retired
	2026-05-25 11:50:29	No I do not	All of the above	Soft Discrimination & Digital Exclusion	No, I do not support the Draft Amendment of Identification Regulations 2026 as currently presented. While I appreciate the intention to modernise identity services and reduce queues, the proposed Digital Identity Credential in the MyMzansi app raises several serious concerns that outweigh the potential benefits in its current form: Device Binding Risk: Cryptographically binding a person’s legal identity to a single smartphone is highly problematic in South Africa, where mobile phone theft is extremely common. Losing or having a phone stolen could result in immediate loss of access to one’s legal identity, with the draft regulations providing insufficient clarity on fast, secure remote recovery processes. Forced Physical Touchpoints: Requiring an in-person verification every 10 years defeats the purpose of a “digital-first” system and will create unnecessary hardship, especially for elderly citizens, rural residents, and those with mobility issues. Privacy and Function Creep: The automatic real-time sharing of personal data with private entities (banks, telcos, etc.) through “Verified Relationships” blurs the line between state and corporate data systems. This creates serious privacy risks and opens the door to future surveillance or economic control. Digital Exclusion: Many South Africans still do not have reliable access to smartphones, stable internet, or the technical ability to use such a system. The current proposal risks excluding vulnerable groups from essential services. Identity Assurance Penalties: The 30-day mandatory update rule and algorithmic downgrading of “Identity Assurance Levels” could unfairly punish citizens for minor oversights and lead to arbitrary denial of services. I urge the Department of Home Affairs to substantially revise the draft to include stronger privacy protections, robust device-loss recovery mechanisms, clear opt-out options without penalty, and better safeguards against exclusion before proceeding.	George	Western Cape		
	2026-05-25 11:49:27	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector’s history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation’s “attack surface.” Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically “lapse” triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual’s legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating “near real-time” data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic “soft discrimination” —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-25 11:44:12	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I do not support digital ID. This system has been implemented in other countries, and used as a tool to silence individuals with unpopular opinions. Social credit scores are used to discriminate against specific individuals, making it difficult for them to live normal lives simply due to their opinions or the things they say online. It is one short step away from affecting freedom of speech, freedom of movement, and even private ownership, as bank accounts linked to this ID can easily be frozen. This country is also experiencing a severe fraud crisis. In the event that the device linked to the ID is stolen, that person's entire life is in jeopardy, as their bank accounts and identity document is now under the control of the criminal who stole the device. Should the database be compromised, potentially millions of citizens information may get leaked. This makes the database an attractive target for hackers, which means massive costs in cyber protection and countermeasures which still might not be effective. Having to renew every 5 years and in person every 10 will add additional load to an administration system which is already struggling to function, adding extra cost and more frustration to an already strained system. This also applies to the 30 day notification period, which may have disastrous consequences for a small and easily made mistake. The country, it's people, infrastructure and the government is unprepared for such a large systems change. Due to the critical nature of this change, even the smallest mistake can spell disaster for millions of people. Due to these reasons I strongly reject digital ID	Jeremi	Gauteng		employed individual
	2026-05-25 11:39:28	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I strongly oppose the MyMzansi digital ID concept. Forcing national identity onto a smartphone app is completely exclusionary in a country facing high data costs, network issues, and electricity blackouts. Furthermore, "real-time private sector data synchronization" is an extreme invasion of privacy that turns the state into a tracker of citizen activity. Identity should remain a secure, physical legal right, not a conditional digital permit that can glitch, get hacked, or profile citizens through automated tiering. 	2026-05-25 10:41:50	No I do not	All of the above	Soft Discrimination & Digital Exclusion	A national digital identity system in South Africa raises several serious concerns. The issue is not necessarily digital IDs themselves, but what happens when identity verification, payments, public services, healthcare records, banking, and personal data become tightly connected within a single interoperable system. Critics argue that once this kind of infrastructure exists, it can gradually reshape the relationship between citizens, corporations, and the state in ways that are difficult to reverse. 1. Expanded Surveillance Capacity One of the biggest concerns is the amount of surveillance power a centralised digital identity system could create. A unified system makes it much easier for governments or institutions to track transactions, connect databases, monitor movement, analyse metadata, and build detailed profiles of citizens' behaviour. Even if such a system is introduced for practical reasons like convenience or fraud prevention, the infrastructure itself creates the potential for long-term monitoring and behavioural analysis. Critics often point out that the concern is not only about the intentions of the current government, but about how future governments or institutions might use the system. A platform initially created for grants, tax, healthcare, or authentication could later be linked to banking systems, transport networks, telecoms, facial recognition, geolocation data, or even voting systems. 2. Loss of Privacy Through Data Integration Digital identity systems often combine large amounts of personal information, including biometric data, financial records, addresses, SIM registration details, employment history, tax records, and service usage patterns. As government departments, banks, insurers, and telecom companies become more interoperable, the line between a person's private identity and their state-managed civic identity can start to disappear. Individually, each dataset may seem harmless, but when combined they become extremely powerful. Critics worry this could lead to mass profiling, behavioural prediction, and widespread data sharing that citizens may not fully understand or consent to. 3. Cybersecurity Risks A centralised identity system would become a highly valuable target for hackers, organised crime groups, hostile foreign actors, ransomware attacks, and insider corruption. The risk becomes even more serious when biometric information is involved. Passwords can be changed, but fingerprints and facial data cannot. If a national biometric database were ever compromised, the consequences could last for decades. In countries where procurement oversight is weak or corruption is a concern, these risks may increase further. Poorly secured contractors, vulnerable third-party vendors, and politically connected technology tenders can create systemic weaknesses across the entire system. 4. Administrative Exclusion Another concern is that digital identity systems can unintentionally exclude vulnerable groups. Poor communities, rural populations, elderly citizens, undocumented individuals, migrants, informal workers, and people without reliable smartphone access may struggle to use digital-first systems. In practice, systems that begin as optional often become effectively mandatory overtime. This can result in blocked access to banking, healthcare disruptions, grant payment problems, or difficulties completing routine transactions. When identity systems become deeply integrated into everyday life, even a technical failure can quickly become a civic failure. 5. Dependence on Smartphones and Connectivity South Africa still faces challenges such as electricity instability, expensive mobile data, poor network coverage in some areas, phone theft, and frequent device turnover. A smartphone-dependent identity system could therefore create additional fragility. Potential problems include losing access after a stolen phone, authentication failures during outages, SIM swap attacks, or being unable to verify identity while travelling. 6. Automated Decision-Making and Risk Scoring Modern digital governance systems increasingly rely on automated fraud detection, risk scoring, anomaly detection, and verification algorithms. Critics worry that this could evolve into systems where people are silently flagged as "high risk" without understanding why. Citizens may experience unexplained service denials, frozen accounts, delayed approvals, or repeated verification requests with little transparency or accountability. The concern is not necessarily the creation of an explicit "social credit system," but rather the gradual rise of automated gatekeeping systems that ordinary people cannot easily challenge or understand. 7. Weak Oversight and Mission Creep In South Africa specifically, many concerns revolve around institutional trust. Critics question whether regulators, oversight bodies, courts, and data protection authorities would have enough independence and technical capacity to prevent abuse once such a powerful identity infrastructure is established. Historically, systems introduced for narrow purposes often expand over time. Anti-terror tools become tax enforcement tools, tax systems become welfare-monitoring systems, and identity systems gradually become integrated into law enforcement and broader state monitoring. Once the infrastructure exists, political and institutional pressure often pushes for broader use. 8. Chilling Effects on Freedom and Expression If people begin to feel that every transaction is traceable, every identity centrally verifiable, and every activity potentially linkable across systems, it may change social behaviour. Citizens may become less willing to protest, support activist organisations, donate to controversial causes, or express dissenting political opinions. Even without overt repression, the mere existence of extensive surveillance capability can create a chilling effect on freedom of expression and association. 9. Vendor Dependence and Corporate Influence Large-scale digital identity systems are often built with the help of multinational technology firms, cloud providers, telecom companies, and biometric vendors. Over time, governments can become dependent on proprietary software, external infrastructure, and long-term licensing agreements. Critics argue that this creates procurement risks, opportunities for corruption, and a loss of technological sovereignty. 10. Long-Term Irreversibility One of the deepest concerns is that once society reorganises itself around digital identity infrastructure, reversing course becomes extremely difficult. As digital identity becomes integrated into banking, healthcare, education, voting, taxation, telecommunications, and public services, opting out may no longer be realistically possible. Even if participation remains "voluntary" in theory, it can become effectively mandatory in practice. Ultimately, critics argue that highly centralised digital identity systems may gradually shift the relationship between citizens and the state away from rights that inherently exist, and toward permissions that must continuously be verified through interconnected systems. For many people, the concern is not about convenience technology itself. It is about the concentration of power, systemic dependency, and the gradual erosion of personal autonomy and privacy over time.	Pravin	KwaZulu-Natal		employed individual

	2026-05-25 10:34:11	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Everything of this draft as presented by home affairs stinks of the new world order!!! You will be controlled, the state will know more about you than you will know about yourself. This is pure overreach by the state and South African citizens will be open to global hacking syndicates, like in communist countries you will have a social score, that the state controls and has power over everything about you - whether you can buy or sell etc. It all starts with removing a person's freedom as a South African citizen to move, trade and be who they are. This digital ID has nothing about making our lives easier, it is all about controlling people and removing our rights and freedoms. Every 5 years you need to ensure that your SA birthright ID has not expired....REALLY!!! and the economic loss for people whose phones are stolen, whose digital ID has now been "frozen - another word for "cancelled" ,and the elderly, poor, those in rural areas - are they no longer seen as SA citizens because of the situation they are in? Stop pushing this new world order, control our borders better, get rid of all this corruption and fraud in our county and start looking after the SA citizen that pays to keep our country running. Digital IDs are not the solution to SA - Ensuring the people in SA are either citizens or here legally is the start of the solution and jailing all corrupt officials giving SA ID to illegal foreigners, will be a good start to sorting out ID issues!!! So absolutely a NO to the Digital ID draft.	Karen	Gauteng

	2026-05-25 10:24:17	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I do not support the Draft Identification Regulations in their current form. I recognise that modernising identity systems, reducing identity fraud, and improving access to Home Affairs services are legitimate public objectives. A secure digital identity system could be beneficial if it is voluntary, privacy-preserving, resilient, accessible, and subject to strict independent oversight. However, the current draft regulations go too far without providing adequate safeguards. They create a centralised, smartphone-dependent digital identity infrastructure connected to private-sector entities through real-time verification services and near real-time update notifications. This raises serious concerns about cybersecurity, exclusion, privacy, administrative penalties, and the long-term risk that a supposedly optional system becomes practically compulsory. 1. Cybersecurity and Centralised Risk The draft regulations rely on advanced cryptographic controls, including digital signatures, encryption, certificate lifecycle management, hashing, token expiry, and possible elliptic-curve cryptography. These are useful technical protections, but they do not remove the systemic risk created by centralising population-register access and connecting it to accredited external entities through APIs. South Africa has already experienced serious public-sector cybersecurity incidents. The Department of Justice confirmed a ransomware attack in 2021, and Statistics South Africa confirmed a cybersecurity breach affecting an HR database in March 2026. Before implementation, the regulations should require independent cybersecurity audits, public reporting, penetration testing, breach-response simulations, and parliamentary or independent oversight. The population register should not become a high-value central target without stronger statutory safeguards. 2. The 5-Year Renewal and 10-Year Physical Verification Trap The draft provides that a digital identity credential is valid for five years and may be renewed through facial biometric verification. However, it also states that the credential lapses if no standard in-person enrolment or in-person verification at an accredited trusted entity has occurred within the preceding 10 years. Once lapsed, the holder must undergo in-person enrolment or another in-person verification process before a new or renewed credential can be issued. This creates an unnecessary bureaucratic trap. A citizen may remain digitally active, compliant, and fraud-free for ten years, yet still be forced back into physical verification simply because they had no reason to visit Home Affairs or an accredited entity. This undermines the purpose of digital transformation and risks sending ordinary people back into physical queues. The 10-year lapse rule should be removed or replaced with a risk-based renewal model. In-person verification should only be required where there is a specific fraud risk, biometric mismatch, court order, suspected compromise, or material identity dispute. 3. Device Binding and Lockout Risk The regulations define device binding as linking a digital identity credential to a specific mobile device through secure cryptographic means. They also require verification of the mobile device through device binding during enrolment. This may improve security, but it creates a serious access risk. Phones are frequently lost, stolen, damaged, replaced, or reset. The regulations do not provide a clear, citizen-friendly, remote recovery process for unbinding a lost device and securely binding a new one. The regulations should include a mandatory recovery protocol, including remote unbinding, alternative authentication, emergency suspension, restoration timelines, human support channels, and non-smartphone alternatives. No person should be locked out of essential services merely because a phone was stolen or damaged. 4. Corporate Interoperability and Privacy Creep The draft allows real-time identity verification services to accredited trusted entities through secure APIs or other connectivity methods. These services may include verification of mandatory particulars, biometric data verification where lawfully authorised, and confirmation of life-event status. The draft also allows “verified relationships” between citizens and accredited trusted entities. Once such a relationship exists, updated particulars may be notified in near real time to each trusted entity with a current verified relationship, subject to POPIA and data-sharing agreements. Although the regulations include data-minimisation, purpose-limitation, audit logging, and POPIA safeguards, the structure still creates a live data exchange between the state population register and private corporate systems. This increases the risk of function creep, unauthorised profiling, over-sharing, data leakage, and commercial dependence on state identity infrastructure. Citizens should have clear rights to see which entities have a verified relationship with them, what data was shared, when it was shared, and why. They should also have a simple process to dispute, limit, or terminate non-essential data-sharing relationships. 5. The 30-Day Notification Burden and Identity Assurance Penalties Regulation 37 requires people, where reasonably possible, to notify the Director-General of permanent changes to ordinary residence, postal address, mobile number, or email address within 30 days. Non-compliance does not invalidate the digital credential, but it may affect the identity assurance level assigned to that credential. This is too rigid. Many citizens change phone numbers, email addresses, accommodation, or postal details under stressful or unstable circumstances. Penalising them through a reduced identity assurance level may lead to practical exclusion or unnecessary friction when trying to access banking, employment, telecoms, government portals, or high-security digital transactions. The regulation should be amended so that identity assurance is not downgraded automatically or disproportionately for ordinary administrative delays. Citizens should receive warnings, grace periods, easy correction mechanisms, and appeal rights before any adverse consequence applies. 6. Digital Divide and Soft Compulsion The government states that the digital identity system will be optional and that physical products will continue to exist in parallel. The draft also says implementation must not unreasonably exclude people who lack suitable mobile devices, reliable internet access, or the ability to use digital services without assistance. These protections are important, but they must be made stronger. In practice, once banks, telecoms, employers, insurers, schools, landlords, and government departments optimise for digital verification, citizens without smartphones may experience slower service, fewer options, and indirect discrimination. The regulations should expressly prohibit public bodies and private entities from making the digital credential the only practical route to essential services. Physical ID, assisted service channels, and non-smartphone alternatives must remain genuinely equal, not merely theoretical. Requested Amendments I request that the Department revise the draft regulations to include: mandatory independent cybersecurity audits before launch and at regular intervals; a public breach-response and citizen-remedy framework; removal or reform of the 10-year in-person lapse rule; a clear remote device recovery, unbinding, and re-binding process; citizen dashboards showing all verified relationships and all data-sharing events; explicit opt-out and dispute mechanisms for non-essential data sharing; strict limits on biometric sharing and private-sector access; stronger protection against profiling, commercialisation, and function creep; appeal rights before suspension, revocation, or assurance downgrading, except in urgent fraud cases; a statutory guarantee that physical ID a	Charl	Gauteng

	2026-05-25 10:17:44	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I do not support the proposed amendments in their current form. My concerns include all of the issues raised, but my primary concern is the risk of soft discrimination through digital systems that can quietly exclude or disadvantage people without clear visibility or recourse. I do not trust that a centralised digital identity system, especially one deeply integrated with state and private infrastructure, will be implemented or governed in a way that adequately protects ordinary citizens. In theory such systems may be presented as efficient and modern, but in practice they concentrate an extreme amount of control over identity, access, and participation in daily life. This level of control creates a real risk that individuals could be filtered, flagged, or tiered through automated processes in ways that are not transparent and may not be easy to challenge. Even without explicit intent, these systems can produce outcomes that feel discriminatory or exclusionary, particularly for vulnerable groups or people with limited access to technology. I am also concerned that increasing reliance on digital identity tied to devices and real time data systems creates unnecessary dependency on infrastructure that is not equally accessible to all citizens. This could lead to a form of soft exclusion where people are technically included in the system but practically disadvantaged in accessing essential services. For these reasons I believe the proposal grants too much control to state systems without sufficient safeguards, transparency, or meaningful limits on how identity data can be used, shared, or interpreted. I therefore cannot support the regulations in their current form and strongly urge that they be reconsidered with much stricter protections for privacy, autonomy, and equality of access. 	2026-05-25 09:05:54	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Cell phone based ID is a big risk given the rate of phone theft and hacking in SA. There are also many people that live in areas without internet connection and many people that cannot afford smart phones or are not literate enough to use smart phones. How will bed-ridden or mentally handicapped people be able to re-new their ID in person if it expires or even use a digital ID in the first place? Then there is the inevitable scope creep due to a digital based control system, as already implemented in communist China, that will steal the hard-won freedoms of SA citizens. The only advantage of a digital ID is for the government to save money and increase control, there is no advantage for the SA citizen that cannot also be gained by better implementation of the current smart-card IDs. I would also like to know why the SA government that is so often against the western culture is now implementing something that is being pushed by the west onto the world through organizations like the UN, WEF, etc. Organizations that SA citizens have not voted for and cannot influence through their vote, this is not democratic. I am sure this will cost the ANC and DA lots of votes come next elections.	Achim	Gauteng		
	2026-05-25 09:04:29	No I do not	All of the above	Soft Discrimination & Digital Exclusion	NO NO NO NO!!! ARE THEY MAD TO THINK THAT ANYTHING LILE THAT COULD WORK IN SOUTH AFRICA!? THE SYSTEM IS TO SLOW AND INCOMPETENT . IT WILL OBVIOUSLY BE A DISASTER. AND WHAT ABOUT THE PEOPLE WHO DOES NOT HAVE A PHONE?? OMG THAT IS THE MOST STUPID IDEA FOR SOUTH AFRICA EVER IN THR HISTORY OF MAN!!!! NO NO NO	Sone	Western Cape		employed individual

	2026-05-25 09:02:14	No I do not	All of the above	Soft Discrimination & Digital Exclusion	This digital ID proposal is a catastrophic overreach dressed up as convenience. Another "skelm" way of moving us towards a communist state where they controll everything.	Michael du Plessis	Mpumalanga		unemployed individual

	2026-05-25 08:23:36	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I don't agree with any of this. Nothing is to do with security it is all to do with dehumanization. Making the human race slaves to those who see people as commodities not beings with a soul and spirit. If this is implemented without the agreement of all human beings we can safely say that we have been enslaved by those who were elected to serve us.	Bev	Western Cape		retired
	2026-05-25 08:22:08	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Any digital ID should not occur	Alois	KwaZulu-Natal		retired
	2026-05-25 08:21:40	No I do not	All of the above	Soft Discrimination & Digital Exclusion	The Concern: Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office.	Gerda	Eastern Cape		employed individual
	2026-05-25 08:21:36	No I do not	All of the above	Soft Discrimination & Digital Exclusion	While it is great that there is a move to simplify things in our digital age, the proposed shift is too big and fast considering where we are as a country. Instead it can create greater hurdles for people, especially the older generation and people living in rural areas. Digitization to such a degree also carries great risk, which increases every day as cyber crime, data breaches and online fraud also grow, and South Africa does not have a good track record in dealing with this.	Louisa	Western Cape		employed individual

	2026-05-25 07:58:41	No I do not	All of the above	Soft Discrimination & Digital Exclusion	The draft Digital Identity regulations represent a high-risk leap into centralised digital control by a government department with a poor record of competence, integrity, and respect for individual rights. The combination of incompetence (leading to failure and leaks), privacy erosion (enabling surveillance), and potential for racialised abuse makes this proposal premature and dangerous. I urge the Minister to withdraw or substantially revise these regulations. At minimum, extend the comment period, conduct comprehensive independent impact assessments (including privacy, security, and equality), and prioritise strengthening physical IDs and basic governance before pursuing such an ambitious digital overhaul. South Africans deserve better than another expensive, poorly executed experiment that trades liberty for unproven promises of efficiency.	Willem	Gauteng		employed individual

	2026-05-25 07:37:23	No I do not	All of the above	Soft Discrimination & Digital Exclusion	This is again about power. Governments think that they are in "power", that is not your purpose. You are supposed to ensure that the basic needs of citizens are met by policies that will encourage economic growth so you can spend our taxes on things like infrastructure, water and sanitation, citizen safety, medical care etc. Instead, you try with every opportunity to steal that tax money or use it for nefarious projects which really just aim to control law abiding citizens. Until you have fix the unemployment and crime in this country, do not spend our taxes on anything else. But I guess you won't do that because to many of you benefit from crime and unemployment. Despicable people.	AC	Free State		employed individual

	2026-05-25 07:10:46	No I do not	All of the above	Soft Discrimination & Digital Exclusion	In countries where this has already rolled out, hackers have taken ID data with ease and sold it on the dark web. In the UK, the idea was dropped when some 3m citizens signed a parliamentary questionnaire. It was explained that banking would be linked and a citizen would not be able to travel more than a certain distance away from home without payment facilities being blocked. The fact that all countries are wanting to roll out the same concept simultaneously suggests collusion to corner the world population into something that is not for the citizens benefit. 	2026-05-24 23:11:15	No I do not	All of the above	Soft Discrimination & Digital Exclusion	This is a BAD idea on so many levels. Digital ID's leave citizens totally exposed to government's corruption and flawed socialist ideologies and racial laws and vulnerable to cyber crime, including identity theft and scams. Given the high rates of crime, poverty, and unemployment in South Africa there is no way that linking ID's to a phone is feasible or wise. I am also very concerned that this gives government absolute power over citizens. The government could monitor all aspects of a citizens life and could block access and freeze the accounts of anyone they wanted to 'punish' or control. Given the amount of racial laws and racial classification prerequisites in South Africa this could very quickly be weaponised against minority groups, business owners, opposition political parties and anyone the state wants to control and silence. This is a VERY slippery slope for democracy. This amendment will kill democracy and individual freedoms and should be scrapped immediately.	Bettina	North West		retired

	2026-05-24 21:45:45	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Where this has been implemented it is already problematic. This can be used as abusive control and can result in government overreach. Secondly locking this into a digital device in a country fraught with theft and also opens itself up to an increase in the number of identity-theft based kidnapping. A number of South Africans are not fully literate and do not have access to a smartphone. This regulation is exclusionary for these people.	Zelda	Western Cape		employed individual
	2026-05-24 21:41:33	No I do not	All of the above	Soft Discrimination & Digital Exclusion	As a well-educated senior I barely understand the reasons for and problems with this 'reform'. I dread to think how those less than sophisticated than I are going to receive the complexities and draconian conditions associated with the proposal. I can foresee thousands of South Africans sanctioned by an unthinking, uncaring system for no 'crime' other than failing to understand what is expected of them. I can also foresee us becoming more vulnerable to identity theft than before as such criminals find yet another use for stolen cell phones -- their robbery is likely to increase, greatly adding to the inconvenience of such theft. If this were an orderly, honest Scandinavian-style society the reform just might be of benefit, but it is precisely the opposite, and the proposal will only make everyone, especially the vast non-tech majority, more exploitable and confused than already is the case.	Robin	Western Cape		retired

Both he and the DA are in derelict of their duties and responsibilities as elected officials and the supposed official opposition in South Africa. DA governed municipalities and their only province may be more efficiently run, but then so was Nazi Germany compared to the rest of Europe at the time. 2026-05-24 18:27:33 +02:00 Jan No I do not All of the above The 30-Day Address Notification Penalty Dear Minister Leon Schreiber and the Department of Home Affairs, I hereby submit my formal objection to the Draft Identification Regulations, 2026 (Government Gazette No. 54610). After careful consideration of the proposed framework, I do not support the introduction of a mandatory or legally equivalent digital identity system as currently drafted. My position is a clear NO to the proposed model in its present form. While I acknowledge the intention to modernise public administration and improve efficiency, the draft regulations raise serious constitutional and human rights concerns that cannot be ignored. In particular, I wish to highlight the following principles under the Constitution of the Republic of South Africa, 1996: • Section 14 – Right to Privacy: The proposed extensive integration of identity data with third-party private entities presents a significant risk to the lawful protection of personal information and autonomy. • Section 10 – Human Dignity: Any system that could result in administrative exclusion or loss of access to essential services undermines inherent human dignity. • Section 33 and the Promotion of Administrative Justice Act (PAJA): Administrative processes must be lawful, reasonable, and procedurally fair. Any automated or algorithmic dependency that may lead to restrictions without transparent appeal mechanisms raises concerns of procedural fairness. • Section 36 – Limitation Clause: Any limitation of rights must be reasonable and justifiable in an open and democratic society based on human dignity, equality, and freedom. The current draft does not sufficiently demonstrate proportional safeguards. I am also concerned about the potential risks of function creep, data centralisation, and lack of clear safeguards against misuse, surveillance expansion, or unintended exclusion from essential services due to technical or administrative failures. For these reasons, I respectfully request that the Department reconsider the scope, legal safeguards, and implementation framework of this proposal. Any future system must ensure: • Strong opt-out or alternative non-digital identity pathways • Clear, independent oversight mechanisms • Robust data protection aligned with POPIA and constitutional standards • Guaranteed access to services without digital dependency • Transparent appeal and restoration processes in cases of system failure or loss of access Until such protections are clearly and legally guaranteed, I cannot support the current draft regulations. Thank you for the opportunity to submit public comment. I trust that constitutional rights and human dignity will remain the guiding principles in any reform of our national identity system.	Hendrina	Gauteng

	2026-05-24 17:21:27	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Interference with the rights of a South African Citizen as stipulated by our Constitution by excluding poor people who cannot afford smart phones, elderly and less educated people who struggle with smartphones (and believe me its not as simple as showing them or asking somebody to help - we talk about trusting somebody with your life information in an utterly corrupt society who does not think twice to con and exploit the vulnerable and sadly we do have lots of elderly who have nobody to turn to) or forcing people to make their most private information available on a platform in an AI rising era where security bridges in secure institutions are a common thing. Smartphones being stolen / broken/unaffordable, etc poses the next challenge... how do you proof that you have an identity without your phone and how do you get a phone without your phone... it is difficult enough getting into less secure platforms without your smart device. Getting mugged and beaten up, how do you pass digital recognition. How do you proof an identity to reregister when all you had to proof it no longer exists... And lastly, what happens to freedom where a government rolls you out if you choose not to take vaccines or whatever they may force upon society next.	Stephanie	Western Cape		employed individual
	2026-05-24 17:20:22	No I do not	All of the above	Soft Discrimination & Digital Exclusion	This is just another way for the Goverment to try and Control people's freedom and their money. If my phone gets stolen then I am stuck having to reprove my identity and can't do transactions till proven. This just leaves the whole nation open to a lot more Cyber attacks and Identity Theft, I do not agree with this at all.	Anna	Gauteng		employed individual

	2026-05-24 16:28:22	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Dear Minister Schreiber, I have been a long time DA supporter and appreciative of the positive impact you have had on the Dept of Home affairs since the formation of the GNU. Digital Exclusion & Soft Discrimination I do not support the migration to the MyMzanzi digital platform for a number of reasons. 1. The draft policy features transitional arrangements declaring that the system must be phased in a way that does not unreasonably exclude individuals who do not own smartphones, lack internet access, or are unable to use digital services without help. Physical IDs will also remain completely valid. My concern is that despite these progressive legal promises, the practical reality of modern service delivery is that digital pathways are quickly prioritized because they save money. As government systems and corporate partners inevitably optimize their systems for the MyMzansi app, citizens relying exclusively on physical IDs could face longer delays, reduced support, and systemic “soft discrimination” when trying to access basic societal resources. Therefore, unless existing ID cards are valid for ever and we the public retain the right to choose whether we wish to go digital or remain non-digital, I will strongly object to the implementation of such a system. 2. A physical ID is a legal document, whose possession imparts the rights of citizenship irrevocably and irrefutably, whereas a digital ID on a smartphone is "somewhere in the cloud" and can be switched on or off remotely at the whim of any future politician. The nature of our present government and the challanges we will face going forward into the 2029 national election, requires a cautious approach and some circumspection. It is uncertain whether the GNU will hold till then and if not, we may be faced with a national government post 2029 that is openly hostile to minority communities in South Africa where digital ID's can be manipulated to influence electoral outcomes, access to services, both private and state. We as a nation are not ready to entrust our government with such a major issue affecting all citizens. You have not earned our trust sufficiently yet. Sincerely Des Green	Des	Western Cape		business owner

	2026-05-24 13:25:49	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Despite these progressive legal promises, the practical reality of modern service delivery is that digital pathways are quickly prioritized because they save money. As government systems and corporate partners inevitably optimize their systems for the MyMzansi app, citizens relying exclusively on physical IDs could face longer delays, reduced support, and systemic "soft discrimination" when trying to access basic societal resources. Although the regulations explicitly ban profiling, commercialisation, and open-ended intelligence gathering, this fluid exchange of live citizen data across corporate API channels raises red flags. Automating data synchronization loops between state databases and private financial/telecom corporate giants chips away at the wall separating public civic records from private commercial infrastructure. South Africa's public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic "attack surface." If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly.	Bill	Gauteng		retired

	2026-05-24 11:05:46	No I do not	All of the above	Soft Discrimination & Digital Exclusion	First, connecting the national population register directly to banks and telecoms via live APIs vastly increases South Africa’s cyber vulnerability. Given our history of ransomware and weak IT controls, a centralised live registry becomes a prime target for global hacking syndicates. Second, Regulation 20(5) unfairly penalises citizens by forcing IDs to lapse after 10 years unless they physically visit Home Affairs or a bank. This punishes digitally active citizens and traps them in bureaucratic queues. Third, tying identity tokens exclusively to a single smartphone is dangerous in a country with high rates of theft and damage. Without a secure remote process to switch devices, citizens risk immediate lockout from banking and civic life. Fourth, near real-time data syncing with private corporations erodes the boundary between public registries and commercial infrastructure. This raises risks of data leaks and corporate surveillance. Finally, the regulations risk deepening the digital divide. Poor, elderly, and rural citizens who rely on physical documents may face slower service, reduced support, and systemic discrimination.	Eric	Western Cape		retired
	2026-05-24 10:59:18	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual’s legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating “near real-time” data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic “soft discrimination” —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-24 10:51:39	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I do not agree with any of the issues raised but I'm especially worried about my right to privacy, the fact that my accounts and ID can simply be locked for a small error like failure to supply a new address within 30 days, and this new social credit system. So, if I do not live and do exactly as the state demands, my social credit will drop and I will be excluded from certain things. That is discrimination and the very thing we as South Africana have been fighting against. While I'm all for streamlining Home Affairs and making it accessible to all, our rights as citizens must be protected.	Baileigh	Free State		self-employed

	2026-05-24 10:43:38	No I do not	All of the above	Soft Discrimination & Digital Exclusion	The reasons to oppose this are as follows: 1. Fascism: paraphrasing the World War II dictator Mussolini who recognised that 'fascism' is when big business and governments cooperate. Do we want to replace our hard fought democracy with a fascist state - because digital identities will be first and most critical step toward this. 2. Temptation for absolute power: when this type of legislation - that give enormous power to our government - comes along, we always have to ask ourselves whether handing institutions of power and profit the keys to further power and greed, will not inherently have the temptation for abuse. One such abuse will be a social credit score system, which is abhorrent. Constant legalised surveillance is another. 3. Trias Politica: at the core of our democracy we recognise the separation of powers system between executive, legislative and judicial, for good reason. We must retain a separation of powers between government and corporations. Failing to do so will lead to concentrated power that will be used against South African citizens. 4. Social credit score: the digital ID system is the first step towards such an abhorrent system. Such a digital ID can very easily lead to a Feudal system of 'us and them'. Once the data is out there, it can be farmed and thus we will be 'farmed'. We will become a product rather than a citizen with constitutional rights. Governments answer to citizens - once governments get the idea that it's the other way round, we will have a massive problem and subjugated enslaved society. 5. Privacy: privacy will be replaced by constant surveillance, and dissemination of citizen information. Governments and corporations have proved themselves incapable of handling this type of power, thus the current system of physical IDs - for all its imperfections - should remain as is. We should not buy the excuse that the physical ID will remain of force - the reality is they are massaging in their intent over a period of time, until the system hangs around all our necks like a noose. 6. Continual updates: if you have physical ID there is no need for continual updates and keeping a 5 - 10 year diary for when you could lose your rights as a citizen. It's bad enough having to keep a 5 year diary of when your drivers' license expires. 7. Political agenda: this could easily be used as a tool for political and ideological control - if you don't tow the line, your privileges are revoked by both government and corporate. Who gives the governments and corporations the right to decide what is right? Most of these power concentrated institutions have no value system at all as we see play out on the media all the time. The value system of governments is purely based on what keeps them in power often deliberately and disingenuously misinterpreting the true public sentiment, or delaying it until they can no longer hold back the collective feeling of the citizens. 8. Poor and elderly: they will be excluded from the system. Marginalization from government service and corporate facilities will occur. 9. Freedom of choice: And why should people be excluded from using the long standing physical ID, if that is their choice? Why should they be excluded from choice because they have a 'smart phone'?! There is a growing sector of society that is sick of cell phones for a long long long and valid list of reasons, not least evidence that phones are detrimentally affecting our cognitive abilities. Phones are making us cognitively lazy, distracted and making us a deeply inconsiderate and insular global society, not least in traffic accidents and fatalities caused by them being with us all the time. Whether hand held cell phone or not, distraction will always be distraction. Let's not fall for 'you still have a choice' because we know that governments these days massage these types of things in with sweet promises, and a few years down the line reveal their true intent by dilution of the built in protections or the 'changing of the guard' blame illusion. Governments are never accountable for the mess they leave behind, but they will always build on their predecessor's power base. 10. Despite POPIA and all the so-called data protection legislation out there, we have probably never seen as many data breaches and private information being hacked until the POPIA era. As citizens we should never trust a third party - government or corporate - to keep our personal information and identification safe.	Matthew	Eastern Cape		self-employed

	2026-05-24 10:06:39	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I'll state up front that I have an absolute aversion to the proposed South African 'Digital ID', it's literally George Orwells' 1994 coming into reality and will open the door to a world of future abuse of the citizens of South Africa. Concerns from people like myself and others raised over a piece of tech like this are legitimate and serious, especially run by this current ANC Government that has mismanaged literally every SOE since this country's independence. Some of my concerns include: • Centralized tracking of citizens • Expansion of surveillance capabilities • Linking financial activity, health records, travel, taxes, communications, and social behavior into one system • Risk of mission creep ("only for X" gradually becoming mandatory for everything) • Potential abuse by future governments, not just current ones • Data breaches and cyber risks • Exclusion of people who refuse participation or lack access • Losing or having a device stolen with this software could be disasterous for an individual The biggest danger is not the ID itself, it's when a digital ID becomes: • Mandatory for normal life • Linked to financial access and movement • Connected across multiple databases • Controlled without independent oversight or due process • Linked to your medical status/vaccine information History shows that governments and large institutions often expand powers once infrastructure exists. Many people are uncomfortable because digital ID systems can technically enable unprecedented levels of population monitoring and control if legal protections weaken over time. If it were to be implemented, any rights-respecting digital ID system should require: • Voluntary participation and the legal right to opt out • Strict privacy laws • Minimal data collection • Independent judicial oversight • Transparency • Strong encryption • Separation between identity verification and behavioral monitoring The debate is really about trust, accountability and limits on power, not just technology. Skepticism about centralised systems that affect civil liberties is neither irrational nor extremist- it's a normal part of a democratic society. And do I trust any government globally with this technology, let alone this corrupt ANC government? That answer is a definite NO, and I object to any form of digital ID in South Africa, now, or in the future. I will not live in a 'surveillance state'.	GE	KwaZulu-Natal		self-employed
	2026-05-24 10:01:44	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Loss of freedom is never a good thing. 	2026-05-24 08:59:49	No I do not	All of the above	Soft Discrimination & Digital Exclusion		Claudette	Western Cape		business owner
	2026-05-24 08:56:15	No I do not	All of the above	Soft Discrimination & Digital Exclusion	The regulations as currently drafted pose severe risks to constitutional privacy rights, institutionalize socio-economic exclusion, create unworkable bureaucratic penalties, and expose the foundational population register to catastrophic cybersecurity threats. KEY GROUNDS FOR OBJECTION Ground 1: Systemic Privacy Infringement and Corporate Data Synchronisation The draft regulations empower the DHA to establish real-time, bi-directional data pipelines with private "trusted entities" (banks, telecommunications providers, etc.) to synchronise personal information such as contact details and residential addresses. Objection: This constitutes an alarming state overreach. Merging corporate databases with the master population register creates an omniscient state-corporate surveillance apparatus. Constitutional Concern: This framework directly violates Section 14 (Privacy) of the Constitution. Despite assurances of POPIA compliance, distributing real-time data updates via corporate APIs exponentially expands the "attack surface" for unauthorized data interception, leakages, and corporate profiling. Ground 2: State Cybersecurity Incapacity and Vulnerability The proposed framework introduces a hyper-integrated system utilizing device binding, decentralized cryptographic signatures, and real-time multi-entity interfaces. Objection: The public sector has a historical record of failing to secure state databases, suffering repeated ransomware disruptions and data leaks. Centralizing data access via a single mobile application (MyMzansi) creates a high-value, single-point-of-failure target for global hacking syndicates. Consequence on Innocent Citizens: Chapter 10 introduces harsh criminal penalties (up to two years imprisonment) for digital identity fraud or tampering. If a citizen’s digital ID is compromised due to a state data breach or a flaw in the app's security, law-abiding citizens face the catastrophic risk of wrongful criminal prosecution to cover up systemic state IT failures. Ground 3: Hardware Dependency and Unreasonable "Device Binding" Rules The regulations mandate strict "device binding," locking a citizen's legal identity token to the secure cryptographic hardware elements of a single smartphone. Objection: If a phone is lost, stolen, broken, or upgraded, the citizen is instantly locked out of their legal identity credential. The draft regulations fail to provide a seamless, secure, remote, and automated process to un-bind and re-bind a new device. Service Delivery Reality: Given the DHA's reputation for severe administrative delays, offline systems, and exhausting physical queues, forcing citizens to physically visit a Home Affairs branch simply to reactivate a mobile application after losing a phone is an unacceptable and punitive administrative burden. Ground 4: Unjust Rolling Expiry and Mandatory In-Person Enrollment The regulations impose a rolling 5-year expiry on the digital credential and mandate that a digital ID will completely lapse if a citizen has no physical, in-person touchpoint with the DHA or an accredited partner within a 10-year window. Objection: Forcing digitally active citizens back into physical queues to re-prove their identity from scratch after 10 years is an irrational bureaucratic bottleneck. Human Rights Violation: A citizen's identity is an inherent human right, not a subscription service that should "lapse" or be "wiped out" due to physical absence. Given the long queues and loss of economic productivity caused by taking time off work to stand at DHA offices, this policy is highly oppressive. Ground 5: The "Identity Assurance Level" and Policy Creep toward Social Credit The regulations introduce an internal scoring mechanism called the "Identity Assurance Level." If a citizen fails to notify the DHA of a change in address or phone number within 30 days, their assurance level is algorithmically downgraded, restricting their ability to open bank accounts or execute high-security transactions. Objection: This sets a dangerous precedent mimicking authoritarian behavioral tracking and social credit systems. Degrading a citizen’s access to basic societal and economic services based on minor administrative non-compliance is an unconstitutional infringement on freedom and human dignity. Ground 6: Structural Discrimination and "Soft Exclusion" of the Vulnerable While the regulations claim that the MyMzansi system is entirely voluntary and that physical ID cards remain fully valid, real-world implementation will dictate otherwise. Objection: As corporate and state infrastructures optimize for the digital app because it is cheaper and faster, those who rely on physical documents (the elderly, the poor, those without smartphones, and those in deep rural areas lacking stable internet) will face systemic "soft discrimination." They will be pushed to the back of the line, facing longer waiting times and reduced service delivery. Ground 7: Blind Alignment with International Agendas Over Local Realities The technical architecture of this layout mirrors digital identity blueprints heavily promoted by supranational bodies like the World Bank, the United Nations (SDG 16.9), and the World Economic Forum (WEF). Objection: The DHA is rushing to implement a hyper-integrated digital infrastructure to satisfy international fintech and cross-border trade standards without conducting localized, independent impact studies. This layout ignores the material reality of millions of South Africans who rely entirely on cash, informal economies, and physical paperwork to survive.	Warren	Western Cape		self-employed

	2026-05-24 08:21:22	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I absolutely do not consent to a state and private partnership via banking to store or control identity of citizens. What an outrageous, idiotic and unworkable idea to try to pass into law. ID theft, access to replacement and exclusion of ordinary people through weaponised administrative processes are concerns for the elderly, youth and women who live with economic insecurity. How will disabled and poor people access this? Even the ID that many or most people have access to smart phones is so out of touch with reality that it erodes any trust in this minister. What is he even thinking? How ridiculous. He must focus on basic service delivery via home affairs not sit in meetings with banks talking about tech solutions. I'm a 52 year old white, middle class woman and I'm appalled at how out of touch and dangerous this thinking is. Has this man ever tried to replace an ID or deal with theft of his wallet or bank cards in his life? The lack of insight is staggering.	Catherine	Western Cape		self-employed

	2026-05-24 06:49:16	No I do not	All of the above	Soft Discrimination & Digital Exclusion	So the government wants to centralise everyone's identity data into a live system connected to banks and telecoms, in a country already plagued by data breaches and weak cybersecurity, and call that progress? Your ID can lapse after 10 years unless you physically queue at Home Affairs, losing your phone could lock you out of your own identity, and private corporations get deeper access to sensitive citizen data. This isn't modernization. It's a security risk wrapped in bureaucracy.	J	Eastern Cape

	2026-05-24 05:38:14	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services.	don	Mpumalanga		retired

	2026-05-23 21:34:49	No I do not	All of the above	Soft Discrimination & Digital Exclusion	SUBMISSION ON DRAFT AMENDMENT OF IDENTIFICATION REGULATIONS, 2026 (GAZETTE NO. 54610) This submission records an objection to the proposed regulations based on three structural and operational flaws: 1. DIGITAL EXCLUSION OF THE VULNERABLE AND AGED The regulations mandate reliance on smartphone technology and continuous connectivity, which do not reflect the socio-economic reality of South Africa. Transitioning essential identity infrastructure to a smartphone application (MyMzansi) while introducing a '10-Year Physical Queue Trap' (Regulation 20(5), where digital credentials automatically lapse unless an in-person touchpoint occurs) creates an immediate divide. This ruleset penalises elderly grant recipients, rural communities, and the impoverished who use feature phones or lack digital literacy, resulting in soft discrimination and administrative lockouts from basic rights. 2. DEVICE DEPENDENCY RISK IN HIGH-CRIME ENVIRONMENTS Cryptographically tying a citizen's entire legal identity exclusively to a single mobile device fails under South African crime conditions. Mobile device theft and muggings occur daily. Because the draft text is entirely silent on a secure, immediate, and accessible remote protocol for unbinding a stolen device and re-verifying a new one, a citizen whose device is stolen suffers instant personhood paralysis—unable to clear RICA, replace SIM cards, or access financial institutions. 3. CORPORATE PIPELINE INTEGRATION AND ATTACK SURFACE RISK Establishing real-time, bi-directional synchronisation loops with private banking and telecommunications networks merges sovereign public registers with commercial databases. This live API framework significantly expands the national cybersecurity attack surface, making it a high-value target for security breaches. Furthermore, tracking and automated profile-tiering via the 'Identity Assurance Scoring Loop' creates a compliance-driven social credit metric that penalises citizens for routine lifestyle changes. 	2026-05-23 17:57:04	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Government infringement on our individuality and citizenship. Too much interference, we are SA citizens by birth right. GOVERNMENT NOT GOD.	Carol	Gauteng		self-employed
	2026-05-23 17:52:18	No I do not	All of the above	Soft Discrimination & Digital Exclusion	This new approach may be suitable for a highly developed and wealthy country, but not for South Africa. Poor peopld cannot afford cell phones and the elderly are unable to adapt to these devices. They high ldvel of theft and muggings will result in extreme inconvenience if your device is stolen. You will be unable to access funds, whild being exposed to additional security risks. My gardener has had his simple cell phone stolen at least three times. He would be unable to access his salary...a disaster fof someone who lives from hand to mouth. The level of hacking being reported in the media indicates that the less data you have on your smartphone, the better. A 30-day window to change your address before all is frozen is a reflection of Big Brother overreach. I am strongly against this proposal.	Sandra	KwaZulu-Natal		retired
	2026-05-23 17:48:10	No I do not	All of the above	Soft Discrimination & Digital Exclusion	My sister is mentally disabled and paralysed. She can't even get a card ID. She doesn't have a phone and can't operate it. Now you want to implement this system. It's a bloody disgrace and poses serious questions about your commitment to the realities of the vulnerable people in this country.	Janse van Rensburg	Gauteng		retired

	2026-05-23 17:28:42	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Have you given consideration to the elder persons? My parents for example use one device between them. Would you allow more than one ID per smart phone? An elderly aunt of mine does not own a smart device. She would be effectively excluded from this digital ID. There are other South Africans in a similar situation. I'm gravely concerned about the security risks that are very real in South Africa. One should not be locked out if your device is stolen and you treated as the criminal. South Africa does not have a proven track record of good cyber security systems. I'm concerned. Why is there a 30 day time limit to update address details? My ID should not be linked to where I live. We have freedom of movement. What about the informal settlements? Who is verifying those addresses?	Yanita	Western Cape

	2026-05-23 13:24:34	No I do not	All of the above	Soft Discrimination & Digital Exclusion	In a country like South Africa, with a promise to safeguard all sensitive personal privacy, corruption and selling of information could/ would fall into the wrong hands. Nothing is guaranteed and I don't trust this new development - Who will be monitoring the new proposal and who stands to benefit the most? Not the ordinary South African that's for sure. * Who controls the data? * Who audits access? * Can data be sold, shared, or politically abused? * What happens if insiders are compromised? * Are independent watchdogs truly independent? * What legal consequences exist for misuse — and are they ever enforced equally? This is what chatGPT had to say: What you've quoted explains why so many people are reacting strongly. This is not just a "new app" — it touches the foundation of citizenship itself in South Africa. When a digital identity becomes linked to: * banking, * employment, * voting, * healthcare, * travel, * grants, * SIM registration, * and potentially behavioural or verification scoring, then people stop seeing it as convenience and start seeing it as a system of control and dependency. The proposed Department of Home Affairs (South Africa) framework raises several concerns that many civil-liberty advocates globally have warned about in similar systems: Centralisation of Power A single digital identity hub creates an enormous concentration of personal data. If compromised — internally or externally — the consequences affect every aspect of a person's life simultaneously. Smartphone Dependency In a country with inequality, load shedding, device theft, patchy connectivity, and poverty, requiring smartphone access can unintentionally exclude vulnerable citizens: * elderly people, * rural communities, * low-income users, * undocumented or displaced persons, * people with damaged/lost devices. A national identity system cannot safely depend on uninterrupted access to private technology. Real-Time Data Synchronisation The concern here is less about convenience and more about surveillance capability. If banks, telecoms, healthcare systems, insurers, or government departments continuously sync identity data, people worry about: * profiling, * tracking, * automated flags, * errors spreading instantly, * and the inability to "opt out." Automated Tiering or Validation This alarms many people because once systems begin categorising users into risk levels, verification statuses, or access tiers, mistakes can become life-altering. A technical error could affect someone's: * banking access, * travel rights, * grant payments, * or ability to prove identity. And in bureaucracies already struggling with corruption or inefficiency, ordinary citizens fear having little recourse when something goes wrong. Trust Deficit The biggest issue is trust. In countries with strong institutional trust, people may accept digital systems more easily. But where there has been: * state capture, * tender corruption, * data leaks, * cadre deployment accusations, * cyber vulnerabilities, * and weak prosecution of wrongdoing, citizens naturally question whether safeguards will truly protect them long-term. The numbers you quoted — over 3,400 opposing versus only 24 fully supporting — show that many people feel the consultation process is not simply technical, but constitutional and ethical. Supporters will argue: * it reduces fraud, * modernises services, * improves efficiency, * and aligns with global digital identity trends. But critics worry about "mission creep" — where systems introduced for convenience gradually become mandatory infrastructure for participation in society. The most important thing, regardless of viewpoint, is that there are: * strict legal limits, * independent oversight, * transparent auditing, * offline alternatives, * clear appeal mechanisms, * and guarantees that no citizen loses rights because of technical failure or lack of smartphone access. Without those protections, people will continue seeing the proposal not as modernization, but as a risk to civil liberty and personal autonomy.	Bev	Outside SA	United Kingdom

	2026-05-23 13:10:48	No I do not	All of the above	Soft Discrimination & Digital Exclusion	In my opinion cyber security can never be 100% guaranteed, particularly around the existing government internet channels. It would be absolutely disastrous to be locked out of this system for whatever reason. The following points are extremely relevant to this proposed digital ID system : • The regulations do not adequately address the realities of South Africa's high levels of phone theft, SIM-swap fraud, and digital inequality. A person should never lose practical access to their identity, banking, employment, or public services because a device is stolen, hacked, broken, or unaffordable to replace. • There must be guaranteed rapid recovery procedures for victims of phone theft, SIM-swap fraud, identity fraud, or technical lockouts, including secure offline alternatives and immediate access to emergency support. • Citizens should retain the right to fully opt out of digital identity systems and continue using physical identity documentation without penalty, discrimination, or reduced access to services. • The requirement for periodic in-person verification undermines the promise of digital convenience while potentially creating future administrative bottlenecks and exclusion for vulnerable communities, rural residents, elderly citizens, and people with disabilities. 	2026-05-23 12:24:19	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I do not support this bill at all as it creates risk for identity theft, total tarian discrimination and control, digital exclusions, methods to penilize people. The only thing that should be done is to create a 2 part encryption key to encode the id to make it verifiable against fraud. The current ID methods is suffiecient.	Ivan	KwaZulu-Natal		
	2026-05-23 12:23:09	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I will definitely NOT support or participate to this regulation.	Rika	Gauteng		retired
	2026-05-23 12:13:38	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I have stated this frequently. The government is seeing to control the population by the many evil legislation that they have been producing for many years. I do not support a government where political parties have control. I want the people to have control where individuals are tasked with guiding the country, and if they do not perform - ACCOUNTABILITY - they will be removed and replaced. Not where a party protects corrupt politicians and just relocates them at their will - absolutely no ACCOUNTABILITY. Further our government has a BEE policy that is evil and serves nobody other than a few select individuals and serves to promote racial discrimination and polarization.	Ed	Western Cape		retired
	2026-05-23 12:12:30	No I do not	All of the above	Soft Discrimination & Digital Exclusion	South Africa can't even keep the lights or water on. The infrastructure for every aspect of life is eroding and maintenance is basically none existent. What makes the government think they can actually maintain something like the digital IDs. No thanks	Nicholas Phillip	Gauteng		self-employed

	2026-05-23 11:54:56	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. 	2026-05-23 11:48:34	No I do not	All of the above	Soft Discrimination & Digital Exclusion	This is another method that this government endeavors to exercise an eventual total top-down control of individual rights, identity, and security to function independently with the right of choice. This violates e.g. the POPI act, putting government in control of all your decisions and power/ability to buy, sell, perform transactions, etc. It is again ideology driven and against the constitution. They will have the power of access to individual's finance, title deeds, transactions with privacy violated in a one-way top-down mode only. Practicality and cost is again overlooked: what about people that don't have cellphones, only use it to make limited calls by buying time, or phones lost. This will create a paradise for hackers. Stolen phones will be detrimental regarding your banking details, contacts, etc. The government's abuse of this was demonstrated in their history of behaviors and actions/omissions during lockdowns, characteristic corruption, selection in caders and discrimination against minority groups. A tool such as this cannot be put in the hands of any world power, let alone a government with a track record and double standards and agendas (2030) such as ours.	Chris	North West		retired

	2026-05-23 11:08:02	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Mass Surveillance & Loss of Anonymity: Digital IDs can enable governments or corporations to track every transaction, movement, and interaction, eliminating the ability to act anonymously in public or online. Exclusion & Discrimination: Those without access (due to poverty, disability, or lack of documentation) can be denied essential services, voting rights, or employment, creating an underclass. Single Point of Failure: A centralized digital ID system becomes a high-value target for hackers; a breach could expose or lock all citizens out of banking, healthcare, and travel simultaneously. Function Creep & Coercion: IDs designed for one purpose (e.g., voting) can be expanded for others (e.g., social scoring or restricting movement) without consent, often making them mandatory for daily life. Permanent Disenfranchisement: If your digital ID is suspended or revoked due to error, debt, or political dissent, you can be systemically erased from legal and economic participation. > For a corrupt and compromised government < Surveillance for Extortion: The government uses the ID's tracking data not for security, but to identify wealthy citizens, political opponents, or dissidents, then extorts bribes, freezes assets, or levies bogus fines under threat of digital blacklisting. Exclusion as a Weapon: Access to food, fuel, healthcare, and travel is deliberately denied to opponents, ethnic minorities, or anyone who fails to pay protection money to local officials, creating a starvation-and-denial tool. Selling the Backdoor: The corrupt regime sells master access keys or "ghost identities" to criminals, spies, or sanctioned oligarchs, allowing them to loot state funds, launder money, or impersonate citizens while hiding behind the official system. Function Creep for Theft: The ID is quietly linked to land titles, bank accounts, and pension systems so that officials can remotely transfer ownership of property or siphon welfare payments into fake accounts flagged as "active" in the system. Permanent Auction of Citizenship: A suspended ID isn't a mistake—it's a product. Your voting rights, passport, and legal existence are privately auctioned to the highest bidder, while you are left stateless inside your own country unless you pay a ransom. 	2026-05-23 08:07:45	No I do not	All of the above	Soft Discrimination & Digital Exclusion	In a country where discrimination against and oppression of different people groups have been an ongoing problem for decades, it would be the worst possible idea to put so much power in the hands of a small group of people, i.e. the government. How will democracy prevail if the government has the power to punish / exclude anyone who doesn't agree with them or go along with their agendas? And that goes for any government, not only the ANC. There has been a history of corruption, and clear evidence that decisions and policies are not driven by what is best for the people. How will law inforcement be able to prosecute politicians if those politicians can influence that person's personal standing and access? This will create a tyrannical government, where the people of South Africa is no longer free, and are powerless to do anything about it.	Maryke	Gauteng		employed individual
	2026-05-23 08:01:31	No I do not	All of the above	Soft Discrimination & Digital Exclusion		Denis	Western Cape		business owner
	2026-05-23 08:00:39	No I do not	All of the above	Soft Discrimination & Digital Exclusion	This will be an end to personal Privacy . It is also concerning that phone theft could place an individuals information at risk . It is simply a way for the State-to have control over individuals . 	2026-05-23 07:28:28	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I object to the proposed Digital Identity framework under Government Gazette No. 54610 on the grounds of soft discrimination, digital exclusion, centralized data vulnerability, and the long-term risk of economic and administrative overreach. While the Department of Home Affairs presents the MyMzansi system as a voluntary modernization initiative, history consistently shows that “optional” digital systems gradually become functionally mandatory once banks, insurers, telecom providers, employers, and state departments optimize their infrastructure around them. Citizens who choose not to participate are often not formally excluded by law, but are indirectly disadvantaged through slower processing, increased scrutiny, reduced convenience, and administrative friction. This creates a two-tier society where digitally connected citizens receive preferential treatment while poorer, rural, elderly, and technologically disadvantaged South Africans are left behind. South Africa remains one of the most unequal countries in the world. Millions of citizens still rely on cash economies, shared devices, unstable electricity, intermittent internet access, and basic cellular infrastructure. A smartphone-centric identity framework risks embedding structural discrimination into essential services under the guise of modernization. I am particularly concerned about the creation of real-time interoperable data-sharing pipelines between government systems and private corporations such as banks and telecommunications providers. Expanding the number of systems, APIs, vendors, and databases connected to the national identity infrastructure dramatically increases the cybersecurity attack surface. South Africa’s public and private sectors already have a poor record when it comes to protecting sensitive information from breaches, ransomware attacks, insider leaks, and data theft. International examples should serve as warnings, not aspirations. India’s Aadhaar system — despite being promoted as a revolutionary digital identity success — experienced repeated privacy controversies, unauthorized data exposure incidents, and concerns around exclusion from essential services due to authentication failures. South Africa should not blindly imitate global digital identity trends without conducting extensive localized constitutional, economic, and cybersecurity impact assessments. The proposed “Identity Assurance Level” mechanism is another deeply troubling feature. Any system that algorithmically downgrades a citizen’s identity profile due to administrative non-compliance — such as failing to update contact details within 30 days — creates the foundation for behavioral governance and automated exclusion. Even if limited today, such infrastructure establishes a dangerous precedent for future governments to expand digital compliance scoring into broader areas of civic participation, financial access, or service eligibility. This is not merely a technological concern. It is a constitutional concern. The regulations also create disproportionate dependence on a single smartphone device through cryptographic device binding. In a country with high levels of phone theft, robbery, and economic instability, tying legal identity access to one physical device introduces unnecessary risks. Losing a phone should never result in immediate disruption to a citizen’s ability to authenticate themselves, access services, or prove legal identity. The mandatory five-year renewal cycle further raises concerns regarding recurring administrative burdens and potential revenue extraction from citizens for maintaining legal identity credentials. Identity documentation is a constitutional necessity, not a subscription service. Furthermore, assurances that POPIA compliance alone will protect citizens are insufficient. No digital system connected to multiple public and private networks can ever be considered fully secure. Once centralized identity systems are compromised, the damage is irreversible because biometric identifiers cannot simply be “reset” like passwords. I therefore oppose the regulations in their current form and call for: * Stronger constitutional protections against digital exclusion * Permanent legal parity between physical and digital identification * Explicit prohibition of algorithmic identity scoring mechanisms * Independent cybersecurity audits and public transparency reports * Decentralized verification options that do not rely on single-device dependency * Guaranteed offline access pathways for vulnerable citizens * Parliamentary oversight on all future interoperability expansions with private corporations * A full constitutional and socioeconomic impact assessment before implementation Modernization should serve citizens, not condition them into dependency on centralized digital systems that may eventually undermine privacy, autonomy, and equal access to essential services. South Africans should ask a simple question: once essential systems become digitally centralized and interconnected, what safeguards truly exist to prevent future governments, corporations, or compromised systems from using that infrastructure to restrict participation in economic and civic life? 	2026-05-23 07:24:16	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Although this sounds like a great idea and has good potential it poses too many risks and even practical issues. Phones are easily lost, stolen, broken or even become out dated. Not everyone can buy a new phone every two years. Personal data in one place, as one source of truth, is a huge security risk. Hacking is a reality that happens more and more often and even easier not only for human hackers but also for AI agents. And on top of this there is a risk of who controls the data. Data equals statistics and we'll end up with groups wanting to discriminate against others. Our nation is full of diversity. Each group does things differently. We need to keep our freedoms in order to stay a democracy. We cannot allow government to be in control of a system like this.	Dewald	Gauteng

	2026-05-22 22:53:31	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I think this is a terrible idea . Linking ID to a specific cellphone immediately discriminates against those living in places without cellphone networks; those who cannot afford smartphones; the elderly who find their smartphones difficult to operate; the mentally impaired due to mild alzheimers or other memory issues; people who live in less safe areas where phones are frequently stolen etc. It forces people to use cellphones who have health issues that prevent them from exposure to electromagnetic radiation. It forces people to use smartphones for banking. At the moment, I refuse even to use banking apps on my phone for security reasons. Why should I be forced to use multiple apps on my phone? Why should I be forced to use multiple corporate apps on my cellphone--for insurance; healthcare etc, because companies need to link my data to a centralised government database? If I don't want to use all this technology all the time, I will suddenly become a persona non grata and lose my right to the most basic right of a country's citizen: to have a country's ID. I can have been born here, paid personal tax all my life, and then, for some minor technical inability or snag, or physical impediment which makes it difficult to comply with this proposed system--which is bound to get increasingly monstrous, more government system friendly, and less citizen friendly, because there is no incentives to anything but. Additionally, I have already had to travel to a different province in order to help a elderly relative after a banking app glitched because of an unsupported old cellphone model she was using. This is a perfect example of the kind of soft discrimination baked into the proposed cellphone--ID system. She was unable to bank because she had an old cellphone. Using my cellphone temporarily, to transmit her biometric data (which would become impossible under the proposed ID system where one cellphone is linked to a specific ID only, we managed a work-around. But that very simple workaround also cost us thousands of rand, and days out of both of our lives. Partly because it took four hours for a bank employee who understood the app, to get a photo that the cross-reference with home affairs would accept! These wonderful apps, so beloved of big governments and corporations do not cater for old tech; old people; special difficulties; anomalies; or uniquely situated people. Will there be special systems designed for the blind and otherwise visually impaired? Why should corporations be granted access to my data by government? Why should my biometrics become public property? Why does personal privacy suddenly become an unprotected right? I am very uncomfortable with close digital co-governance by corporates and government--this is the actual definition of fascism.... Please no.	Linda	Western Cape		unemployed individual

	2026-05-22 20:31:46	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I am against any government, institution, sector or group, holding me, a legally born South African citizen, hostage by regulating my citizenship, my identity and primarily my absolute right to privacy in every sense. It is once again, an attempt by a certain grouping that wants to have total control over every living person, all finances and pretty much everything else in South Africa. Not only is it a communistic ideology, which has never worked successfully anywhere in the world, but it is an absolute and clear violation of my rights according to the South African Constitution. No-one can tell me where to live, which church I should attend, which bank or banks I may transact with, when and where I am permitted to go or not to go,. My birth certificate is absolute and undeniable evidence that I exist as a born citizen of South Africa. My ID book/card is only proof that I am who I say I am. That is more than sufficient. This new proposal is unnecessary, will cost taxpayers more money and the state has had 32 years to show that they cannot be trusted, especially not with one’s identity. The state departments are the most inefficient and ineffective departments in South Africa. It is monumental failure after monumental failure, with no integrity, accountability or any formal legal action or sentencing and imprisonment of those who are corrupt and/or break the law. I refuse to participate in this new program and will fully support any group who is not in agreement with any part of that which is proposed. We do not require digital ID’s. South Africa requires rebuilding in every sphere, which in my mind, is more beneficial to all citizens of South Africa rather than wasting time and money on a proposal that no-one requires .	Kevin	Western Cape		retired

Submitted first-name support concern top-concern message 2026-05-22 20:22:33 +02:00 Jacobus No I do not All of the above Centralised Cyber & Security Risk 2026-05-22 20:22:11 +02:00 Carl No I do not All of the above Soft Discrimination & Digital Exclusion South Africa must never implement Digital ID, as this will allow a corrupt, kleptocrtic state to shut down and completely deplatform and unperson any critic or opponent of the government. At face value, Digital ID is a good thing. It purports to allow for smoother administration, and for secure identification for online transactions and banking. It makes a number of other fine-sounding claims that are actually completely toxic to a democratic society. Digital ID is the end of privacy and the end of human rights. A government that has complete access to all of its citizens' information can strip any citizen of his or her rights, if that government deems that citizen to have offended whatever regulation or rule it so chooses. The current and previous South African governments have shown distressing willingness to run roughshod over those who get in the way or who criticise the government. Such a government can simply switch off that critic's Digital ID and that person goes away. They cannot buy, or travel, or obtain finance. It is logical to assume that laws will be enacted to make tansacting informally with such people illegal. No. South Africa cannot afford to allow anything of this sort to be implemented in this country. 2026-05-22 20:22:08 +02:00 Yvonne No I do not All of the above Centralised Cyber & Security Risk If each person can have a QR code given to prevent the ID from been stolen and more stricter measures put in place to prevent all the extra procedures one has to go through to prove who you are if ID is stolen, then perhaps this will work. But I appose this until it is safe and with SA cellphone crime, this is not a good idea. 2026-05-22 20:22:03 +02:00 Gareth No I do not Soft Discrimination & Digital Exclusion 2026-05-22 20:21:55 +02:00 Jonathan No I do not All of the above Soft Discrimination & Digital Exclusion This is a direct violation of my privacy as a blind person it will not be easy to be in such a system where I feel I will be discriminated against if I have such an app that would not even maybe work with VoiceOver I also feel that because we get mugged often and blind people lose their phones this will create a crucial and very frustrating gap where we will not then even be able to get food or anything whatsoever because we will not be able to prove who we are this is totally unacceptable What Supporters Say What Opponents Say Civic groups, privacy advocates, and cybersecurity experts argue that while modernisation is welcome, the draft regulations introduce expansive risks and administrative penalties that demand much tighter constitutional safeguards. Their core arguments include: Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services.

	2026-05-22 19:53:44	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Having had one cellphone stolen and recently my SIM card removed from my phone during a robbery of my handbag in the Mall whilst shopping which was recovered almost immediately, I have no faith in these proposed regulations. Apart from some money being taken, my phone was in the handbag and everything intact except that I discovered weeks later, quite by chance, the SIM card had been removed from my phone. I don't believe the scheme will be practical as there are many elderly people who find operating a cellphone difficult and for some impossible. There is also the cost of buying such devices as well as the cost of running them. I also don't believe my personal information will be any safer under the proposed scheme. It will be expensive to introduce and maintain and still be open to criminality despite whatever safeguards the State proposes. Rather spend the money on providing homes and schools for all those who daily suffer little comfort.	Mrs L	Western Cape		retired

	2026-05-22 19:42:18	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Yeah this is a transparent attempt by the cANCer to get access to our money, identity and privacy. They will control us and rob us blind under the guys of "law enforcement" something they know nothing about. This is evil, cyber criminal, unlawful and unconstitutional and I will not bow to it. Next they will control who we vote for, what we believe in and if we don't comply we can't buy food, fuel, electricity, send our kids to school, or have a free society. This is the end of days style manipulation. And this is not the time for it. They trying to adopt China's gamification of society.	Adrian	Eastern Cape		employed individual
	2026-05-22 19:41:58	No I do not	All of the above	Soft Discrimination & Digital Exclusion	I do not support the proposed Digital ID regulations. While modernisation is important, this framework creates serious risks for ordinary South Africans. 1. Privacy & Data Security: Centralising sensitive personal and biometric data makes the system a major cyber-target. Given South Africa's history of data breaches, the safeguards are not convincing. 2. Exclusion of Vulnerable Groups: A smartphone-based ID excludes people who cannot afford devices, have poor connectivity, or struggle with technology. A national ID system must be accessible to everyone. 3. State–Corporate Data Sharing: Allowing real-time data exchange with private companies opens the door to profiling, tracking, and commercial misuse of personal information. 4. Automated Tiering & Penalties: The proposed "tiers" and ongoing validation could lead to unequal access to services and unfair penalties—especially the requirement to update addresses within 30 days. 5. Unnecessary Physical Revalidation: Requiring citizens to queue every 10 years defeats the purpose of a digital system and places extra burdens on workers, the elderly, and rural communities. For these reasons, I request that the regulations be revised to ensure stronger privacy protections, non-smartphone alternatives, decentralised data storage, and meaningful public oversight. 	2026-05-22 19:23:26	No I do not	All of the above	Soft Discrimination & Digital Exclusion	1. Having the digital identity synchronized online at all times opens up a huge risk for hacking, with unknown consequences to the digital id owners. I would rather have a digital id that is stored statically on a device, which cannot be tampered with (if this is possible), but not synchronized automatically and at all times with central systems. 2. The 10-Year physical renewal. I do not see the point or benefit of it. It works against the idea of easy holding of an ID document (physical card and or digital id document) indefinitely. If it is required to change fundamentally the ID technology or improve it, then one can require such re-registration. 3. Theft, loss of devices, which is common in RSA can cause more trouble and harm when the digital id is out of reach/lost and then blocked, for safety reasons. A physical id must always be available. 4. Privacy concerns. Digital id details given to "trusted corporates" infringes on privacy rights in a massive way.	Sally-Anne	Western Cape		self-employed

	2026-05-22 18:09:00	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Ones identity should he protected at all times and in all possible ways. With S. A. 's crime rate, (muggings and smash&grab of which myself and my husband were victims about 6 months ago) the risk is too high of one's identity (& life) being stolen. And I am not even mentioning all the other problems this proposed digital id o. a phone can create.	Salome	Western Cape		
	2026-05-22 18:07:41	No I do not	All of the above	Soft Discrimination & Digital Exclusion	My core arguments include: Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-22 16:16:33	No I do not	All of the above	Soft Discrimination & Digital Exclusion	There is not ONE concern, as there are so many issues and things that could go wrong should this be approved. Concerns I have / Reasons I DON'T agree or support with the proposed Digital Identity System. 1. Data Privacy and Surveillance Risks Centralized Risk: Digital ID systems create a single, centralized database of sensitive information, making it a "hacker's goldmine" for cybercriminals and data breaches. Surveillance Infrastructure: The system creates a digital trail of your movements, financial transactions, and interaction with public services, allowing for mass surveillance, tracking, and the logging of metadata. Function Creep: There is a fear that a system initially promoted as voluntary for one purpose will be expanded to regulate access to housing, health care, or travel. 2. Exclusion and Inequality Digital Divide: Digital IDs can exclude, or "digitally dispossess," those without smartphones, reliable internet access, or high levels of digital literacy. Exclusion of Vulnerable Groups: Evidence shows that automated systems can lead to the wrongful denial of benefits to marginalized communities, elderly residents, and disabled individuals. Errors in Data/Biometrics: Inaccurate, missing, or broken digital records can lead to people being unable to prove their identity, leading to the loss of rights or benefits. 3. Security and Technical Failures Unresetable Biometrics: Unlike a password, unique biometric data (fingerprints, iris, facial scans) cannot be changed if stolen or sold. Technical Glitches: System-wide failures or hacking can lock millions out of their bank accounts, health records, or ability to work, as witnessed with similar systems. Fake Identity Generation: Digital IDs may be easier to generate for fraudulent activity by "spoofing" a person's facial or fingerprint characteristics through techniques like "digital injection attacks". 4. Democratic and Social Concerns Authoritarian Potential: Digital IDs can be used to create a "compliance ladder," where access to essential services is revoked if individuals dissent against government policies, similar to Chinese social credit models. Lack of Public Trust: There is often a profound lack of trust in government and private entities to properly manage and protect the massive amount of collected data. Reduced Privacy: Digital IDs, particularly those using biometric data, can be used to track individuals at protests or public meetings, potentially penalizing those with different views. 5. Legal and Ethical Concerns Lack of Legal Framework: Many digital ID systems are introduced before robust legal protections for privacy and human rights are fully established. Lack of Consent: There is often very little public consultation or consent, with systems driven by private technology companies, state police, or intelligence agencies. Inadequate Redress Mechanisms: Often, there is no quick, fair remedy for people if the automated system makes a mistake. 6. POPIA Act - The digital ID proposal goes against the POPIA act in it's entirety.	Carmen	Eastern Cape		unemployed individual

	2026-05-22 12:23:52	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Digital Exclusion & Soft Discrimination The draft policy features transitional arrangements declaring that the system must be phased in a way that does not unreasonably exclude individuals who do not own smartphones, lack internet access, or are unable to use digital services without help. Physical IDs will also remain completely valid. The Concern: Despite these progressive legal promises, the practical reality of modern service delivery is that digital pathways are quickly prioritized because they save money. As government systems and corporate partners inevitably optimize their systems for the MyMzansi app, citizens relying exclusively on physical IDs could face longer delays, reduced support, and systemic “soft discrimination” when trying to access basic societal resources. Perspectives: What is the debate? The proposed Amendment of the Identification Regulations, 2026, has ignited a vital conversation across South Africa regarding the digitization of civic infrastructure. To help you formulate your official submission, the core arguments surrounding the policy have been restructured below into two comprehensive perspectives.	Adele	Western Cape		unemployed individual

	2026-05-21 20:46:30	No I do not	All of the above	Soft Discrimination & Digital Exclusion	To: The Director-General Department of Home Affairs Republic of South Africa Key Officials for Digital Transformation Minister of Home Affairs: Dr. Leon Schreiber Email: ministerialqueries@dha.gov.za (For high-level policy or strategic concerns regarding digital ID) Minister's Private Secretary: Anthula Higgins (Acting) at Anthula.higgins@dha.gov.za Director-General: Mr. Livhuwani Tommy Makhode Email: Tommy.Makhode@dha.gov.za (For administrative escalations) Spokesperson: Carli van Wyk Email: Carli.vanwyk@dha.gov.za Subject: Objection to the Implementation of Digital ID Systems on Constitutional and POPIA Grounds Dear Sir/Madam, I write to formally express my concern regarding the proposed implementation and expansion of digital identification systems by the Department of Home Affairs. While I recognise the importance of modernising public services and improving administrative efficiency, I respectfully submit that the introduction of mandatory or broadly applied digital ID systems raises serious constitutional and statutory concerns that require urgent reconsideration. 1. Constitutional Concerns The Constitution of the Republic of South Africa, 1996, guarantees fundamental rights that may be directly implicated by the implementation of digital identification systems: Section 14 – Right to Privacy: Every person has the right to privacy, including protection against the unlawful collection, retention, and dissemination of personal information. A centralised digital ID system inherently involves the mass collection and storage of sensitive biometric and personal data, creating heightened risks of surveillance, misuse, and data breaches. Section 10 – Right to Human Dignity: The compulsory digitisation of identity, particularly where individuals have limited ability to opt out, may undermine personal autonomy and dignity. Section 33 – Just Administrative Action: Any administrative action that materially affects rights must be lawful, reasonable, and procedurally fair. The implementation of digital ID systems must therefore be subject to transparent consultation, proper legislative authority, and meaningful public participation. Any limitation of these rights must satisfy the requirements of Section 36 of the Constitution, demonstrating that the limitation is reasonable and justifiable in an open and democratic society. I respectfully request clarity on how this threshold has been met. 2. Concerns under the Protection of Personal Information Act (POPIA) The Protection of Personal Information Act 4 of 2013 (POPIA) establishes strict conditions for the lawful processing of personal information, including: Lawful and minimal processing (Sections 9–11); Purpose specification and limitation (Sections 12–14); Information security safeguards (Section 19); Processing of special personal information, including biometric data (Sections 26–33). A national digital ID system would likely involve large-scale processing of biometric and sensitive personal information. This raises concerns regarding: Whether data collection is strictly limited to what is necessary and proportionate; Whether adequate security safeguards are in place to prevent breaches; Whether consent is truly voluntary where access to essential services may depend on digital registration; Whether data-sharing between state departments complies with POPIA's purpose limitation requirements. Given the increasing global incidents of data breaches and cybercrime, the centralisation of identity data presents systemic risks that may have long-term consequences for citizens. 3. Request for Reconsideration and Transparency In light of the above, I respectfully request that the Department: Pause further implementation of mandatory digital ID systems; Publish a comprehensive constitutional and POPIA compliance assessment; Conduct meaningful public consultation; Ensure that any digital ID system remains voluntary and does not replace physical identification documents without lawful, transparent parliamentary oversight. Modernisation must not come at the expense of constitutional rights and statutory protections. I urge the Department to prioritise privacy, dignity, and lawful governance in all identity-related reforms. I trust that this matter will receive careful consideration, and I look forward to your response. Yours faithfully, By: Cornel Visser ©™ email: curnel.g@gmail.com 21 May 2026	Cornel	Western Cape		self-employed

	2026-05-21 10:49:12	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Transferring me onto a smart phone poses serious concerns as it will be a small step to limit me when and where and what smartphone I can buy. Also, as part of a minority group, this can become an additional outlet for 'tyranny of the masses'. While convenience is stated as a big reason, what guarantees are there that it won't be used to also assert political views onto the population? In short, to what degree can this thing limit my freedom? The risk is just to grave to ignore and leave in the hands of others who don't have my best interests at heart. Make this optional at least, so I can still maintain my privacy and individual freedoms.	Hennie	Gauteng		employed individual

	2026-05-21 10:47:53	No I do not	All of the above	Soft Discrimination & Digital Exclusion	Still all of the above. I cannot fathom how the government of a 3rd world country thinks the general population is even going to understand how this all works, when I, as a relatively well-educated person do not. Just the way the above selection has been worded goes over my head. Now they want a labourer, that can hardly read, to sign up for a digital ID with all these conditions, when he doesn't even carry a smartphone let alone know how to work one properly. 65 million or our 66 million population will end up undocumented, and our already useless home affairs department will be a bigger laughing stock than it already is. Not to mention the waste of taxpayers money they want to pour into this pit for the government to syphon. Focus on getting the crime and the illegal immigrant issue under control, before embarking on this nonsense	Dana	Western Cape

	2026-05-21 09:09:32	No I do not	Soft Discrimination & Digital Exclusion	Soft Discrimination & Digital Exclusion	The Digital Identity Credential framework, as drafted, is structurally exclusionary. It does not discriminate by intention. It discriminates by design. In constitutional law, that distinction carries no weight. Section 9 of the Constitution guarantees equal protection and equal benefit of the law. The moment legal identity is anchored to smartphone ownership, reliable connectivity, and minimum device specifications — all privately purchased, market-dependent requirements — that right becomes conditional on economic status. That is not modernisation. That is a two-tier identity system written into law. South Africa's internet infrastructure does not support this framework uniformly. Large parts of the country — rural towns, farming communities, deep rural settlements — have no reliable broadband coverage. Load shedding compounds this further, taking down both devices and network infrastructure simultaneously. The government has simultaneously blocked Starlink from operating freely in South Africa, removing the one technology that could have meaningfully extended connectivity to underserviced areas. You cannot mandate a digital-first identity system while actively restricting the infrastructure that would make it accessible. Those two positions cannot coexist. South Africa's smartphone penetration remains significantly lower among lower-income households, the elderly, people with disabilities, and those in deep rural communities. These are not edge cases. They are millions of citizens who will be structurally unable to participate in this system on equal terms. Section 7(2) requires the state to respect, protect, promote, and fulfil the rights in the Bill of Rights. Section 9(3) prohibits unfair discrimination on grounds including social origin and economic status. The draft regulations, as they stand, cannot satisfy either obligation. Analogue pathways must be maintained with equal dignity and equal accessibility. No citizen should lose access to their legal identity because of the device they cannot afford or the connectivity their government has failed — and in the case of Starlink, actively chosen — to provide. 	2026-05-21 08:22:31	No I do not	All of the above	Soft Discrimination & Digital Exclusion	A centralized digital ID system creates a single point of control and failure. The biggest risks are: *Mass surveillance — Governments or companies can track purchases, travel, healthcare, banking, communication, and behavior in one profile. *Loss of privacy — Personal data becomes permanently linked and searchable. *Hacking risk — One breach can expose millions of identities at once. *Social control — Access to banking, transport, services, or the internet could be restricted instantly. *Mission creep — Systems introduced for “convenience” often expand far beyond their original purpose. *No true opt-out — Once required for daily life, participation becomes effectively mandatory. *Algorithmic mistakes — Errors or automated flags can lock innocent people out of essential services. *Dependence on technology — Power outages, system failures, or connectivity problems can stop people from functioning normally. *Potential abuse by future governments — Even if current leaders are trusted, future administrations may misuse the infrastructure. The concern is less about convenience today, and more about the long-term concentration of identity, power, data, and access into one controllable system.	Paula	North West		employed individual

	2026-05-20 23:44:28	No I do not	All of the above	Soft Discrimination & Digital Exclusion	For me, Digital ID is a line I'm not comfortable crossing. I value privacy, personal freedom, and the right to live without every part of my identity, finances, movements, and personal information being centralized into one digital system. I understand that many people see Digital ID as convenient and modern, but I personally believe it opens the door to increased surveillance, loss of autonomy, and greater control over everyday life. Once systems like this become mandatory or tied to essential services, freedom of choice can slowly disappear. I also do not support aspects of the Agenda 2030 framework because I believe some of its long-term goals could lead to more centralized global control rather than empowering independent individuals, families, and local communities. This is not about fear or hatred toward technology, technology can do amazing things. For me, it's about protecting human rights, privacy, informed consent, and the ability to choose how much of our lives become digitally monitored or controlled. Everyone is entitled to their own opinion, and this is simply mine.	Kayla	Gauteng		business owner

	2026-05-20 18:18:23	No I do not	All of the above	Soft Discrimination & Digital Exclusion	The proposed "MyMzansi" Digital ID system represents a dangerous encroachment by the state into the private lives of its citizens. By centralizing identity data and tethering it to private corporate infrastructure, the government is essentially creating a digital panopticon. Here is a breakdown of why this initiative is a fundamental threat to individual liberty and national stability. The Erosion of Privacy and Autonomy The "Real-Time Corporate Data Loops" feature essentially deputizes private banks and telecommunications companies as agents of the state. When the state blurs the lines between civic data and private corporate databases, the individual loses the ability to compartmentalize their life. A private transaction or data update should not automatically flag or inform the state’s registry. This creates a feedback loop of surveillance that allows the government to profile citizens with unprecedented ease. Economic Vulnerability and the "Kill-Switch" The threat of an "economic kill-switch" is not merely theoretical. By making your ability to work, travel, and bank dependent on a "digital credential" housed on a single device, the state gains the power to paralyze any individual they deem non-compliant. If your smartphone—an object that is frequently stolen or malfunctioned in environments like South Africa—is the sole key to your existence in the eyes of the law, you are effectively a hostage to state-managed technology. Algorithmic Tyranny and Function Creep The "30-Day Rule" and the resulting "Identity Assurance Level" are classic instruments of modern, soft-totalitarian control. By automating the regulation of citizens through scores and algorithms, the state can exert pressure on the population without ever having to engage in a face-to-face confrontation. This is a system of "nudge theory" gone wrong, where the citizen is forced to act as an unpaid administrative clerk for the government, risking financial and legal exclusion if they fail to meet the reporting deadlines of the bureaucracy. Institutionalized Dependence The requirement for in-person "touchpoints" every 10 years, combined with the rigidity of the digital system, creates a "trap" that keeps the population in a state of permanent, managed infancy. The state is consolidating its role as the ultimate arbiter of who "exists" and who does not. Once every citizen is converted into a verifiable data point on a smartphone app, the government will find it trivial to expand the "functions" of this registry to track social, political, or financial behaviors, moving from identity verification to behavioral control. The Danger of Centralization History has shown that whenever a state creates a massive, centralized database of its population, that database is eventually used for the benefit of the ruling elite at the expense of the citizenry. A digital ID that makes the state "ever-present" in your pocket is not a service; it is a mechanism of disempowerment. The push for this digital architecture is a move toward the globalist ideal of a technocratic state where national sovereignty and individual privacy are replaced by seamless, intrusive government oversight. Citizens who value their independence must recognize that these systems—marketed under the guise of "convenience" and "efficiency"—are ultimately designed to secure the state's reach and diminish the sphere of individual freedom. 	2026-07-01 06:13:01	No I do not	All of the above	Centralised Economic Kill-Switch Risks	To the Ministry of Home Affairs I don't support the plan to make South African citizens use the digital ID. The concepts of a social credit score penalisations based on things like moving house and and changing email addresses and not informing the department sound like the beginnings of a tyrannical socialist and communistic economy. With the rise of a cashless society, and the rise of Artificial Intelligence, the idea of a social credit score which could result in people being cut off from financial transactions sounds like the ingredients for exactly the type of system that is described in Revelation 13 called the mark of the beast. I know this digital ID drive is not entirely your idea. The World Economic Forum and leaders at DAVOS have been talking about it for years. Your decision to follow through is based either on full knowledge of the global plan to eventually go onto a global currency and a system without which one won't be able to buy or sell except those who participate, or you are going along with it in a level of ignorance. Please pick up your Bible and read Revelation 13. This is what you are pushing the country towards. It will happen and there is nothing to stop it, but we can slow it down. The fact that the DA run ministry of home affairs is behind the drive for digital ID shows just how globalist the DA really is. That is scary. Perhaps you will find out just how concerned the people have become about this at the next national elections.	Lauren Jeannie	Gauteng		employed individual

	2026-06-17 18:01:16	No I do not	All of the above	Centralised Economic Kill-Switch Risks	It is appalling to think that evil people at the top have been allowed to just do whatever they want in exchange for money. People have always been greedy and selfish. I, however, would just never in a million years, for the life of me had been able to guess that I would live to see the day that the few at the top (the very ones put there by us to represent us) openly, shamelessly commits treason. Treason against the entire country. LITERALLY A HAND FULL OF NORMAL PEOPLE LIKE YOU AND ME, Publicly commits a war crime against the masses.. Like probably a thousand people Effectively assaulting our primary basic Human rights. I can list the individual specific human rights that they are taking away from us, but that's not even necessary because brothers and sisters of our motherland, - These absolutely immoral, tiranical monsters are taking away our very right to be a human. When they take away our privacy and use that to take away or suspend our ability to survive,forcing them to pay to live on this earth, as if these people own the land the water and the air we breathe. Who suddenly made them the boss of that what is given to every single last person equally?Life, and a place to live it. Livelyhood declined if you don't do with your identity what they tell you to do.	Werner	Free State		unemployed individual

	2026-06-11 10:55:54	No I do not	All of the above	Centralised Economic Kill-Switch Risks	RE: Public Comment: Serious Concerns Regarding the Proposed MyMzansi Digital ID Framework (Government Gazette No. 54610) Dear Minister, I am writing to share my deep concerns regarding the proposed amendments to the Identification Regulations published under Government Gazette No. 54610. While I fully understand and support the need to modernise Home Affairs and fight identity theft, the proposed MyMzansi digital ID framework goes too far. It sets up an infrastructure that could easily be used to monitor, track, and trace the daily lives of ordinary South Africans, leading to unprecedented government overreach. In South Africa, your ID document is your lifeline—it is what allows you to bank, work, travel, vote, and get healthcare. Moving this entirely into a centralised state app without bulletproof guardrails is incredibly risky. I urge the Department to take a step back and reconsider several deeply worrying flaws in this draft: 1. A Centralised Economic "Kill Switch" By locking a citizen's entire legal existence into a digital profile, the state essentially gains a "kill switch" over their life. If a profile is suspended, blocked, or downgraded for any reason, that person is instantly cut off from society. They wouldn't be able to access their bank account, complete transactions, or use basic services. This level of control should require strict judicial oversight and warrants, not the automated press of a button by a government department. 2. Cybersecurity Risks and Hacking Vulnerabilities The draft talks a lot about high-tech cryptography, but by connecting the state's population register directly to corporate networks via APIs, it creates a massive "attack surface." Given the public sector's track record with data breaches and ransomware, this is terrifying. If a hacker manages to breach the central system or even one connected corporate partner, it opens the door for automated, large-scale identity theft on a level we have never seen before. 3. Corporate Data Sharing and Privacy Creep The regulations introduce a "Verified Relationship" model, where if you update your details with Home Affairs or an accredited business (like a bank or telco), that data can be automatically broadcast to every other linked company in real-time. Even though the draft explicitly bans profiling, creating a fluid, automated data loop between the state and corporate giants completely erodes the boundary between public civic data and private commercial interests. 4. The Stolen Phone Lockout Trap The system relies on "device binding," meaning your digital ID is locked to one specific smartphone. If your phone is lost or stolen—which happens to thousands of South Africans every day—your credential is automatically suspended. However, the draft doesn't offer a simple, secure way to remotely move your ID to a new device. Without a clear remote recovery setup, losing your phone means you are instantly locked out of your identity and your money until you can brave a physical Home Affairs branch. 5. Practical Overregulation: The 30-Day Update Penalty Regulation 37(1) expects citizens to notify Home Affairs within 30 days of any minor life change, like moving apartments, changing a phone number, or getting a new email address. If you miss this tight window, the state can penalise you by lowering your "Identity Assurance Level." This is highly impractical and punitive. It means everyday citizens could face sudden, frustrating rejections when trying to complete normal, high-security transactions just because they forgot to log a change of address in time. 6. The 10-Year Physical Queue Trap Even if you manage your digital ID perfectly online, Regulation 20(5) drops a hidden pitfall: your credential will completely lapse if you do not do an in-person biometric check at a physical office within a 10-year window. This defeats the whole purpose of a digital system. It forces active, digitally compliant citizens back into notorious Home Affairs queues simply because they didn't have a bureaucratic reason to visit an office for a decade. 7. Digital Exclusion and "Soft Discrimination" The draft promises that physical IDs will remain valid and that no one will be left behind. But we all know how modern service delivery works—once a digital app is introduced, physical systems are quickly neglected to save money. Citizens who cannot afford smartphones, data, or electricity will inevitably face worse service, longer delays, and "soft discrimination." This framework subtly forces vulnerable South Africans to take on extra, unfair technology costs just to retain their basic legal visibility. Conclusion The MyMzansi framework, as it stands, turns our legal identity from an inherent constitutional right into a conditional privilege that the state can monitor and toggle at will. I ask that the Department halt the implementation of this framework until an independent, public human rights and privacy assessment is conducted. We need an identity system that serves the people, not one that treats them as data points to be tracked.	Adrian	Western Cape		business owner

	2026-06-09 12:20:03	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Digital ID systems pose serious risks to personal security and individual freedom, and South Africa's proposed digital ID framework, particularly as it intersects with SASSA grant distribution, should raise urgent alarm bells. By tying social grant access to a centralized digital identity, the government gains the ability to suspend, restrict, or permanently cut off millions of vulnerable South Africans from their only means of survival with a single administrative decision, no court order, no appeal, no recourse. This is not hypothetical; SASSA's existing biometric verification system has already wrongly excluded legitimate grant recipients due to system failures, data mismatches, and infrastructure breakdowns, leaving some of the country's most vulnerable people without food or income for weeks. Now imagine that vulnerability scaled across every citizen, where your digital ID governs not just your grant, but your bank account, your healthcare access, your ability to vote, and your legal identity itself. In a country with South Africa's history of racial classification, forced removals, and the deliberate use of pass laws to control Black citizens' movement and economic participation, the architecture of a digital ID system is chillingly familiar, just modernized. Load-shedding and rural connectivity gaps mean millions could be locked out of their own identities simply due to poor infrastructure, while those in power retain full control over who the system recognizes, who it rewards, and who it quietly erases.	Ross	Gauteng		employed individual
	2026-06-09 09:50:21	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I do not agree due to the following: Surveillance State Capacity: Real fear the centralized database allows for extensive behavioural tracking and open-ended intelligence gathering, potentially paving the way for an authoritarian social credit system similar to China's. Systemic Failure and Cyberattacks: State IT infrastructure in South Africa has a track record of severe ransomware attacks and instability. Centralizing identity records creates a massive, vulnerable target for global cybercriminals. Ineffective De Facto Compulsion: Although marketed by the Department of Home Affairs as an optional system, critics argue that digital IDs naturally become "gatekeepers" over time. Without a functioning, non-digital alternative, it effectively forces compliance to access basic services. Severe Financial and Identity Fraud: Tech experts warn that basic mobile authentication relies too heavily on standard 2D smartphone cameras. This makes users highly susceptible to advanced AI "spoofing," presentation attacks, and digital injection attacks that can instantly drain bank accounts. Mass Social Exclusion: Transitioning to a digital framework threatens to lock out marginalized groups, including rural communities without smartphones, stable internet, or electricity, compounding existing inequalities. Monolithic Centralization and System Lockouts: A single algorithmic error or a mistaken "fraud flag" on one centralized network could instantly block an individual from banking, health care, social grants, and freedom of movement simultaneously. 	2026-06-06 23:39:20	No I do not	All of the above	Centralised Economic Kill-Switch Risks	It is very difficult to select one primary concern. The whole concept of Digital ID makes me feel physically sick. Under this system, everyone will be required to carry a digital dompas. Surely this violates a basic human right? I certainly don't want to be carrying a cellphone around with me wherever I go. I can look after my green ID book, and take it with me when I know I'm going to need it. Why does that need to now change? Cellphone theft is rife in SA. How can this system function securely and effectively in such a crime-ridden country? Who will have authority to freeze assets and travel etc for any given individual? And who will unfreeze them, and at what cost and inconvenience? The corrupt will find loopholes like they always do, and the people will sit with a giant noose around their necks. This is a BAD IDEA, and needs to go back to the drawing board. Furthermore, it is being rushed through, giving the impression that it is not open to being trustworthy or transparent. Please grant a decent extension, so that the whole concept can undergo proper scrutiny, before putting what looks to be a totally draconian system onto the people.	Denese	KwaZulu-Natal		retired

It is proven all over the world that computers and servers ect. Is not safe nor secure at all, not in France or America nor Israel and definitely not in South Africa. I do not consent to a digital twin. I do not consent to any connection with any such scheme. Digital systems can be hacked and miss use, be it intentional or unintentional.	Riaan	Western Cape		
	2026-06-06 19:46:30	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Big corporates and financial institutions have had massiven data breeches exposing private citizens data. Having all our data, in one place and accessible on a smartphone is highly risky. Even banking apps have had issues. With the level of crime in South Africa, the theft of smartphones is also high. Not to mention cyber crime. Having this app with your Identity on one's phone makes the phone worth more to criminals. Creating massive inconvenience for SA citizens. Also phones easily break and will create problems for the person affected. I don't have a banking app on my smartphone for security reasons. A lot of people including myself do not want to be tied to our smartphones. There are also lots of technological illiterate can't use a smart phone, cant afford a smartphone. Also having an app like this running on one's phone will run phone batteries down, used lots of data costing citizens more money without any control on their mobile data use and cost. Also this MyMzanzi app will most likely require full permission access to everything on one's phone further breaching our privacy. nternet signals are already good even in cities. Carrying your ID book or plastic ID Card is better. How many times has home affairs had their systems offline.. This will be incredibly inconvenient when a citizen needs to use this. This is the first step towards control over citizens when everything relies on the Digital ID. A massive loss of privacy as the app will track everything including your location and movements. At some point this will be used to prevent citizens from exercising their freedoms; if home affairs or some other department or organizations want to penalize citizens for not having this. This will be digital slavery. Comply or we cut you off. Like Canada freezing truck drivers access to their bank accounts because they were striking. Centralized Economic Kill Switch. Also having this expire every 5 years is crazy it's digital why would it need that. Not to mention the 10 year physical queuing. Everyone involved and organizations pushing for this aren't being completely transparent about where this end because they know if they are no sane person would agree it. The criminals always find a way to get into anything. Not to mention people within organizations, banks, hospitals selling our private data. How will we be protected. How will our personal data be safeguard.... it won't. How will we be protected from someone or companies altering our personal data without our knowledge and consent. Also who "watches the watchers" Who and how would access to our personal data be controlled and safeguarded ...especially work AI being used more and more everyday increasing the risks. This is all far toooo risky.	Claire	Western Cape		self-employed

	2026-06-06 14:21:39	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I can really not see how this can ever work. I can just see how goverment can misuse this whole system to manipulate citizen to do and act like they want you to. And if you don't, flick the switch and you can't do anything. No state should ever have those kind of power over it's citizens. Neither banks, telcom companies or state is secure enough to let that kind of data just float around to everybody. Hackers and criminals are a lot smarter than all of these people combined and they will find a way to hack and grab and steal in this new system. How can you be penalized because you forgot to change details in a certain amount of time. State should not be allowed to penalize human forgetfulness and that through control of your money or your ability to transact. The 10 year period is really not well thought through. People have enough things to worry about, most of those things that the state created. Why should I be 'wiped out' if I am living my life. Goverment should rather be searching for a way to keep tract of the dead than the living. If people were not tempted to steal dead people's identity and money so they don't have to work, none of this 'in person' situations would be necessary. Linking your information to just one device is really problematic. In South Africa, apart from theft, people upgrade or buy new phones at least every two years. There is still no layout of how we will be able to swap phone information in situations like these. I will rather stand in a queue for a new physical ID, than jump through how many loops to switch my cellphone and everything that will entail. We as consumers already face countless difficulties with Cellphone companies. Will these companies no suddenly be flawless, because any difficulty in this switch will render me unable to live. And there will definitely be discrimination towards the marginalised people of our country. This whole change is looking to control the rich and middle class people of this country and the poor will defnitely not win an inch. The goverment should really not be looking to introduce a system that excludes the biggest part of our nation. If the state are struggling to keeo tabs on people with the current system, how will they be able to cope with a dual system. Our country has so many real issues that needs adressing. Why are we wasting time and money on something that will not better the lifes of the poor, but will just give goverment more power and somehow more money?	Maryka	Gauteng		unemployed individual

	2026-06-06 10:54:47	No I do not	All of the above	Centralised Economic Kill-Switch Risks	While the introduction of a digital identity appears to offer convenience, the practical realities in this country makes such a solution extremely risky for its citizens. We have government departments that are still paper-based, and inefficiencies abound. Even if they were to get their act together sufficiently to get this off the ground (most likely impossible without corporate partnership), we still have the aspects of cyber-crime, theft/loss of physical devices and the security of our data to contend with. All that aside, we still have the very real risk that a government that has already shown that it does not have the best interest of its citizens at heart would have full control of the citizens' ability to transact financially, and may exercise that control in ways that are detrimental to those citizens. No thanks!!!	Chantal	Western Cape		self-employed
	2026-06-06 10:53:59	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Grosse government over reach, using a digital system to enforce certain rules on citizens, who can buy what, who can access what. South Africa is a low trust society caused by a majority corrupt government and officials. The answer is not more centralizarion and government power, it is more decentralization. In this country, a digital ID will be a tool for subjection and enforcement	Willem	Western Cape		employed individual

	2026-06-06 10:34:31	No I do not	All of the above	Centralised Economic Kill-Switch Risks	This poses Massive Global, State and Corporate Over Reach threatening our Democratic and Contitutional rights as private Citizens of South Africa. While promoted as optimising digital pathways to cutting operational costs, over time, poor, elderly, or rural South Africans who rely exclusively on physical documents will be marginalized "Out of The System". The severe risk of facing systemic "soft discrimination"—including longer processing delays, reduced human customer support, and slower access to essential public utilities and services, makes this a no-no.	Claire	Western Cape		self-employed
	2026-06-06 10:32:13	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I do not believe in authoritarianism and this is what this bill means for all South Africans. It is part of a globalist agenda and this government is going along with it. Time for all sane thinking South Africans to say No!	Dominic	Western Cape		retired
	2026-06-06 10:24:30	No I do not	All of the above	Centralised Economic Kill-Switch Risks	We already have a working system. Why change this. I leave my phone at home when I go out. The risk of being robbed is far to great. This means I would be without identification posing a risk that I will not to be able to transact. Why should I pay for my device to accommodate the state wanting to force an unwanted new system . The state does not pay for my device or my service provider.	Rosa	Gauteng		retired
	2026-06-06 10:19:23	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Back off. We are all sovereign children of God. How dare you think it's ok to infringe on our freedoms	Emma	Western Cape		

	2026-06-06 10:06:16	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I object to the Draft Identification Regulations, 2026, in their current form because they do not provide sufficient safeguards to protect South Africans against state surveillance, cybercrime, and corporate misuse of personal information. While modernising identity systems may improve convenience and service delivery, a centralised digital identity platform creates significant risks to privacy, constitutional rights, and individual freedoms. The regulations should expressly prohibit citizen tracking, behavioural profiling, mass surveillance, and the sharing of identity data across government departments without strict judicial oversight. The regulations must also prevent private companies from using digital identity information for commercial profiling, targeted advertising, credit scoring, insurance assessments, or any other commercial purpose. Strong cybersecurity protections, independent audits, transparency requirements, and severe penalties for misuse of personal information should be mandatory. Importantly, every citizen must retain the unrestricted right to use a physical identity document. No person should be compelled to use a smartphone-based identity system or be denied services because they choose not to participate. I therefore call on the Department of Home Affairs to substantially strengthen the proposed regulations by incorporating robust protections for privacy, freedom, data security, and citizen rights before any digital identity system is implemented.	Eddie	Gauteng		
	2026-06-06 09:59:31	No I do not	All of the above	Centralised Economic Kill-Switch Risks	As a senior software engineer this is a very dangerous proposition. It would expose people personal information to be easily hacked and enabled easy fraud to occur	Matthew	Western Cape		
	2026-06-06 09:43:10	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The draft regulations appear to underestimate the consequences of linking the National Population Register and related identity systems to multiple external institutions through live application programming interfaces (APIs). South Africa has experienced repeated public-sector data breaches, ransomware incidents, and failures in information security governance. In this context, expanding direct digital connectivity between government identity infrastructure and numerous third-party entities materially increases the nation's attack surface. The proposal effectively transforms the country's foundational civil registry into a high-value target for organised cybercriminal groups, hostile foreign actors, and identity fraud syndicates. A successful compromise would have consequences extending far beyond individual privacy harms and could undermine confidence in the integrity of the national identity system itself. A national identity credential is not a discretionary government benefit but an essential mechanism through which citizens exercise constitutional rights and access public and private services. The proposed lapsing provision appears arbitrary because it penalises citizens who remain fully compliant, digitally active, and lawfully identifiable throughout the ten-year period. Many South Africans increasingly conduct banking, employment, tax, and government interactions remotely. Under the draft framework, a citizen could maintain an active digital presence for a decade yet lose access to their credential solely because they did not physically present themselves at a Home Affairs office or accredited institution. The consequence would be a requirement to re-establish identity through potentially lengthy administrative processes despite no evidence of fraud, misuse, or inactivity. South Africa experiences high levels of smartphone theft, robbery, loss, and device damage. In such an environment, a Digital ID system that is closely tied to a single device risks creating immediate and severe consequences for ordinary citizens. Losing a phone should not translate into losing practical access to one's identity, banking services, government interactions, or essential economic activities. A constitutional identity framework must be resilient to common real-world circumstances. The regulations should therefore provide multiple recovery pathways, alternative authentication mechanisms, and guaranteed emergency procedures that ensure no citizen is effectively locked out of civic participation due to the loss of a personal device. The proposed near real-time synchronisation of identity information with banks, telecommunications providers, and other private-sector entities weakens the traditional separation between sovereign state identity systems and commercial infrastructure. Every additional data-sharing relationship creates further opportunities for misuse, unauthorised access, profiling, and secondary uses of personal information. The regulations should adopt a strict data-minimisation approach and require explicit statutory justification for each category of data sharing. Although the regulations state that implementation should not unreasonably exclude citizens, the practical effect of digital-first systems is often the gradual degradation of non-digital service channels. Poor, elderly, disabled, and rural South Africans may increasingly encounter longer delays, reduced support, and indirect barriers when relying on physical identity documents. The Department should provide enforceable guarantees that physical credentials and in-person service channels will remain equally effective, accessible, and adequately resourced for the foreseeable future. 	2026-06-05 23:30:51	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Having everything pertaining to me (healthcare, religion, property, housing, vehicles, drivers license, money in bank, education, employment, purchases, traveling etc.) centralized, is very concerning to me. I'm not sure, but I think that non - compliance with, for example, future vaccinations, might get you 'locked out' of certain rights or freedoms in society. Many people also do not know the difference between a smart ID and a digital ID, since as a nation, we were not formally educated about it on mainstream TV. So, many people will opt for digital ID's, not knowing that every aspect of their lives will henceforth be linked to and governed by it. Many people are very old and many are illiterate, don't have cellphones, or access to internet or data and I believe, for the sake of especially those people, we all needed to be educated on national TV, the radio or even local newspapers. Data centers and the possible health risks to us as human beings, as well as bird life and the environment, is of great concern to me as well. I read up about digital ID's on social media, so my findings might probably not be 100% correct. I plea for us as South African citizens to be given a fair chance to get educated and to give our input on such a crucial and life changing matter as these digital ID's. Thank you. 	2026-06-05 16:23:10	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I oppose this digital ID because it dangerously expands our national cyber-vulnerability by connecting the entire population register to corporate servers via live APIs, creating an irresistible target for hackers given government's track record of data breaches; because Regulation 20(5)'s ten-year "lapse" rule punishes digitally active citizens by wiping their credentials if they lack a physical branch visit, forcing compliant South Africans back into endless queues; because tying legal identity to a single smartphone means a lost or stolen device locks citizens out of banking and civic life with no secure remote recovery path outlined; and because these risks only deepen corporate surveillance creep and the exclusion of poor, elderly, and rural South Africans, who will face systemic soft discrimination as digital pathways replace physical services.	Cornelis	Gauteng		employed individual
	2026-06-05 16:08:17	No I do not	All of the above	Centralised Economic Kill-Switch Risks	This is unconstitutional. This system is not in our best interest and should be canned. It has huge potential to be used to oppress people and take away their freedoms and South Africa is supposed to stand for freedom.	Debra	Western Cape		
	2026-06-05 16:06:41	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I do not support the introduction of Digital IDs. My concern is that Digital ID systems have the potential to centralise vast amounts of personal information in a way that could erode privacy and individual freedom. Once identity, financial information, health records, travel history, and other personal data become linked through a single digital platform, the possibility for surveillance and monitoring increases significantly. History has shown that powers granted to governments and large institutions are rarely reduced over time. What begins as a convenience can gradually become a requirement, and what is voluntary today may become compulsory tomorrow. I believe that every person has a fundamental right to privacy, freedom of movement, and the ability to conduct their lives without constant monitoring or data collection. Digital systems also create risks relating to data breaches, cybercrime, identity theft, and misuse of personal information. Many organisations, including international bodies, governments, and private corporations, advocate greater digital integration. While some see benefits in efficiency and security, I remain concerned about the long-term impact on civil liberties, personal autonomy, and individual choice. For these reasons, I do not support the implementation of Digital IDs and I choose not to participate in such systems. Freedom, privacy, and personal choice are values that I believe should be protected for future generations.	Ben	Gauteng		self-employed
	2026-06-05 15:55:55	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The government has a long history of not being able to manage online information securely as well as implementing technology that it isn't able to handle in terms of lack of testing of protypes, lack of updated computer systems. The doj online estates portal is a prime example of one of their most recent failures. Furthermore, what is the point of having an online service if it needs to be manually authenticated every few years. And why should itbe renewable every five years if your identity hasn't legally changed. This is another tax that we will be expected to pay to cover the costs of the system. I don't believe the government should be privy to my personal contact details and in many cases people hold more than one email to manage their personal affairs legitimately but now would be restricted to only one. What happens when your cellphone is stolen which is a regular occurrence in this country?	Katherine	KwaZulu-Natal

	2026-06-05 15:22:39	No I do not	All of the above	Centralised Economic Kill-Switch Risks	This should absolutely not be allowed! Apart from the current government's ability to implement and administer anything - I give you a few examples: Aarto; central firearms register; Post office; SABC; Denel; Trasnet; Eskom; SAA; roads and infrastructure; state capture inquiry; e-tolls; levels of unemployment; crime and the list goes on... - no government any ware on the planet should be trusted with managing it's citizens' identities because it's the slippery slope towards authoritarianism. Other reasons include: - Anything digital can be hacked or become corrupted. - What must people do who do not have (cannot afford)/want a smartphone? - What happens when your phone is lost, stolen or broken? I suspect that the agenda behind this is evil and that it does not consider the wellbeing of the citizens of South Africa.	Louis	Free State		employed individual

	2026-06-05 14:47:21	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The proposed South African digital ID system is centralises sensitive personal data in one application (“MyMzansi”), which raises the risk of serious cybercrime. Most of our rural people have no access to internet which will exclude rural and low-income people with potential (definite) government overreach as can be seen in expropriation, NHI, affirmative action to name but a few. It could erode privacy, increase vulnerability to fraud, and deepen inequality. Centralised databases are prime targets for hackers , SIM-swap fraud, phone theft, and biometric spoofing is a reality and the breach could expose millions of citizens’ identity documents, banking details, and health records for abuse. Low-income communities, will be marginalised, effectively denying them access to essential services like healthcare, banking, and voting. This is pure government overreach and surveillance - digital ID could allow authorities to track movements, restrict access to services, or freeze accounts at the touch of a button which can result in a “digital prison” where dissenting voices or vulnerable groups could be controlled more easily. Being tied to one app for all ID functions is CONTROL. What about losing a device, it malfunctioning or running out of data which could stop you from accessing banking, travel, and healthcare. We would lose our autonomy and become dependent on government-controlled digital infrastructure. Again, the high fraud risk (LET THE MADLANGA COMMISSION SPEAK TO THIS), cybercrime in South Africa is already rising; adding a digital ID multiplies exposure and the potential for abuse is unimaginable. As a white South African, I am already being targeted and centralised control makes it easier for authorities to misuse data or restrict freedoms.	Elaine	Western Cape		employed individual

	2026-06-05 12:07:13	No I do not	All of the above	Centralised Economic Kill-Switch Risks	My two biggest concerns are (1) Cell phones are stolen daily and it is a nightmare to manage the consequences ... now you want to escalate the nightmare into losing your ''id'' as well, with even worse consequences. It is actually extremely difficult to believe that anybody thinks that this is a good idea. (2) That a system is implemented that has all the makings of a controlling system affecting every part of people's life's, like the Chinese are already doing with their people. Once again it is extremely difficult to believe that this very significant risk is just ignored and the idea sold is being to our advantage while it definitely is not My most urgent question to the minister would be " Are you really comfortable to put a system like this (with all the risks) in place, if at the next elections a leftist party/coalition won and your post is filled with a very left leaning minister? " I suggest that you stick to the current smart id system and do not put people at more risk than they currently already are	Mijntjie	Gauteng		retired
	2026-06-05 12:07:10	No I do not	All of the above	Centralised Economic Kill-Switch Risks	This gives centralized control to government and possibly private entities to unofficially punish "undesirable behavior" by economic exclusion without going through legal channels. 	2026-06-05 10:17:30	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The proposed legislation is much broader and more significant than simply putting your ID on your phone. The Department of Home Affairs wants to create a digital identity ecosystem under its “Home Affairs @ Home” strategy. The intention is that citizens can prove their identity electronically, access government services remotely, and reduce fraud and identity theft. The digital credential would exist alongside the physical Smart ID card, not replace it. Participation is proposed to be voluntary. The regulations propose a Digital Identity Credential available through the MyMzansi app. The draft expressly states that the digital credential would have the same legal effect as a physical Smart ID card. It could be presented through NFC (“tap”), Bluetooth, QR codes, or other approved methods. That means, in theory, a bank, estate agency, conveyancer, municipality, or employer could eventually accept the digital credential as proof of identity in circumstances where an ID card is currently required. What concerns me most as a legal practitioner? Device binding The regulations require “device binding” as part of enrolment. In simple terms, the credential becomes linked to a specific mobile device. Questions immediately arise. 1. What happens if the phone is stolen? 2.	Veronica	Gauteng		employed individual
	2026-06-05 10:15:42	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Dear Sir, This is what the globalist goal is. I am not a globalist and do not support rheir track, trace and infringement of our lives.	Larga	Western Cape		employed individual

	2026-06-05 08:48:09	No I do not	All of the above	Centralised Economic Kill-Switch Risks	My biggest concern regarding a national digital ID system is the potential concentration of personal, financial, and administrative power into a single system. While digital services may improve efficiency, I am concerned that linking identity, banking, government services, taxation, healthcare, and other essential functions could create a situation where individuals become vulnerable to administrative errors, misuse of authority, cyberattacks, or changes in government policy. If access to essential services becomes dependent on a central digital identity, a person could face severe consequences if their account is suspended, incorrectly flagged, compromised, or made subject to compliance requirements they dispute. I believe any digital ID system should include strong privacy protections, independent oversight, transparency, legal safeguards, and the continued availability of alternative non-digital methods of identification and access to services. Citizens should never be placed in a position where a single system can effectively exclude them from participating in society.	Zelda	Western Cape		self-employed

	2026-06-05 08:34:06	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Not too clued up on the specifics of this proposed digital ID, but the broad idea of relinquishing further personal control of an individual's right to privacy and anonymity to a digital system that can easily manipulate countless individual lives at any given time, gives me the cold shivers. I don't believe this country is at a point where the understanding (and sensitivity to) of the collective information, is going to be managed with care and concern for the individual. This will lead to the possible implementation of global decisions that will not necessarily benefit those being affected. This is a very dangerous option as a potential solution for a problem that exists through lack of education and training, selective employment of management, absolute lack of responsibility and accountability and no remedial action against individuals who have knowingly committed fraud against the department. It is time to go back to the basics, not advance to further technology that we have limited understanding of.	Kim	Western Cape

	2026-06-05 07:14:57	No I do not	All of the above	Centralised Economic Kill-Switch Risks	A centralised digital ID links an increasing amount of personal information, biometric data and daily transactions to a single government-managed system. Over time, this creates the potential for extensive monitoring of citizens' activities and relationships, whether intentionally or unintentionally. My concern is not only how the system may be used today, but how it could be expanded in the future. Once the infrastructure exists, future governments may be tempted to broaden its use beyond identity verification, resulting in increased surveillance, reduced privacy and greater state control over access to services. I am also concerned about the practical risks of relying on a digital credential linked to a mobile device. In a country with high levels of phone theft, technical failures, cyberattacks or administrative errors could leave citizens unable to access essential services, banking facilities or government functions. For these reasons, I believe that any digital identity system should remain voluntary or scrapped in totality , include strong privacy protections, provide independent oversight, and ensure that citizens always have access to secure non-digital alternatives. 	2026-06-04 21:00:45	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Excludes some users – Not everyone has access to smartphones, computers, reliable internet, or the skills needed to use digital platforms. Loss of personal interaction – Face-to-face communication often builds stronger relationships, trust, and community engagement. Cybersecurity risks – Digital systems can be vulnerable to hacking, data breaches, scams, and identity theft. System failures and outages – Power cuts, internet disruptions, or software failures can bring operations to a standstill. Privacy concerns – Storing personal information digitally increases the risk of unauthorized access and misuse of data. Dependence on technology – Overreliance on digital systems can create challenges when technology becomes unavailable or obsolete. Implementation costs – Transitioning to digital platforms may require significant investment in software, hardware, training, and ongoing support. Loss of physical records – Some people value hard copies for legal, historical, archival, or backup purposes. Digital fatigue – Constant screen time can contribute to stress, reduced concentration, and lower engagement. Training requirements – Staff, volunteers, or members may need extensive training, which can take time and resources. Accessibility challenges – Some digital platforms may not adequately accommodate people with disabilities or special needs. Reduced flexibility during emergencies – In situations involving power failures, natural disasters, or network disruptions, non-digital alternatives can be more reliable. 	2026-06-04 19:10:58	No I do not	All of the above	Centralised Economic Kill-Switch Risks	This will lead to and be linked to a programmable digital currency system where the population will be subject to total control by already corrupted politicians and AI systems: Civic groups, privacy advocates, and cybersecurity experts argue that while modernisation is welcome, the draft regulations introduce expansive risks and administrative penalties that demand much tighter constitutional safeguards. Their core arguments include: Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-06-04 16:21:16	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I object to the draft Digital Identity regulations on the following grounds: 1. Constitutional right to privacy (Section 14) The centralisation of biometric and personal data into a single government-controlled digital identity system represents a fundamental infringement on the right to privacy. Citizens should not be compelled to surrender their most sensitive biological identifiers to a centralised database as a precondition for accessing services or exercising their rights. 2. The government has not demonstrated the institutional competence to safeguard this data South Africa's public institutions have a well-documented history of data breaches, system failures, and inadequate cybersecurity infrastructure. The 2021 Experian breach exposed 24 million records. Home Affairs itself has suffered repeated system outages and data integrity failures. Before expanding the scope of personal data under government custody, the state must first demonstrate it can secure the data it already holds. It has not done so. 3. No safeguards against commercial exploitation of citizen data The draft regulations provide insufficient protections against the future monetisation, sharing, or sale of citizen biometric data to third parties — whether corporate or foreign. Once collected at scale, this data becomes an asset. History shows that institutional incentives shift over time, and data collected for one stated purpose is routinely repurposed. Citizens deserve binding, enforceable guarantees — not policy assurances — that their data will never be commercialised. 4. Concentration of power without accountability South Africa's governance institutions face ongoing, systemic challenges with corruption, maladministration, and abuse of authority — as documented extensively by the Zondo Commission, the Auditor-General, and the Public Protector. A centralised digital identity system dramatically increases the power the state holds over individual citizens: the ability to monitor movement, restrict access to services, and track behaviour. Granting these capabilities to institutions that have repeatedly demonstrated an inability to exercise existing powers responsibly and without self-interest is reckless. The question is not whether this power could be abused — it is whether there is any credible reason to believe it won't be, given the track record. 5. No opt-out, no consent, no alternative A system that compels participation is not a service — it is surveillance infrastructure. If digital ID is truly beneficial, citizens should be free to adopt it voluntarily. The absence of a meaningful opt-out mechanism confirms that this system is designed to serve the state's interests in control, not the citizen's interest in convenience. I urge the Department to withdraw these regulations and instead invest in securing existing systems, restoring public trust, and providing non-digital alternatives for all government services. 	2026-06-04 15:40:39	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Formal Objection: Draft Home Affairs Digital Identity Regulation: Public Comment on the Draft National Identity and Digital Credential Regulations I am writing to register my strongest possible objection to the proposed Home Affairs regulations. These draft rules constitute an unprecedented, disproportionate, and unconstitutional infringement on the constitutional right to privacy. Instead of modernising civic administration, these proposals create an invasive state surveillance apparatus that penalises vulnerable citizens.I fundamentally reject the following components of the proposal: 1. Real-Time Corporate Data Loops. The Proposal: Automating near-real-time synchronisation of "Verified Relationships" between the state population register and private entities such as banks and telecommunications companies.The Objection: This permanently blurs the line between public civic data and private corporate infrastructure. It violates the core data minimisation principles of the Protection of Personal Information Act (POPIA). The state has no legal justification to track citizens' private commercial relationships or to exploit private-sector interactions to update state databases without explicit, granular consent.2 The Stolen Phone Lockdown. The Proposal: Cryptographically binding a digital ID to a single smartphone, with immediate freezing or revocation of the legal identity token upon loss or theft.The Objection: In a country with exceptionally high rates of mobile theft, this design is dangerous. Revoking a digital ID without a secure, remote, and immediate restoration pathway will cause instant financial and administrative paralysis. This disproportionately punishes victims of crime and cuts them off from essential services when they are most vulnerable.3. The 10-Year Physical Queue Trap The Proposal: Forcing a complete credential lapse and mandatory, in-person re-registration if a citizen goes 10 consecutive years without a physical touchpoint at a Home Affairs branch or partner bank. The Objection: This entirely defeats the stated purpose of a digital identity system. Forcing citizens back into notoriously dysfunctional, physical Home Affairs queues ignores systemic administrative backlogs. It penalises citizens for successfully utilizing remote, digital channels and creates arbitrary barriers to legal recognition.4. Algorithmic Profiling and the 30-Day Rule The Proposal: Mandating the reporting of routine life updates within 30 days, failing which the state will algorithmically downgrade the citizen's "Identity Assurance Level," leading to transaction rejections.The Objection: Implementing a state-run algorithmic credit-scoring system for basic citizenship rights is dystopian. Punishing citizens with sudden transaction rejections for failing to report an email change within 30 days is entirely punitive. This will lead to arbitrary financial exclusion and administrative blacklining without due process.5. Foundations for Function Creep The Proposal: Centralising dynamic biometric registries and cross-entity tracking pipelines.The Objection: This architecture builds the exact technical foundation required for an authoritarian behavioural tracking system. Centralising this amount of dynamic data creates a single point of failure. It acts as a centralised economic kill-switch over citizen accounts, posing an unacceptable risk to democratic freedoms and cybersecurity.ConclusionThese regulations transform the Department of Home Affairs from a civic registry into an overreaching surveillance hub. The proposals fail to balance technological advancement with constitutional rights. I demand that these clauses be entirely excised from the final regulations, and that the department shift its focus toward a decentralised, privacy-first identity framework that protects, rather than tracks, South African citizens.If you intend to submit this formally, I can help you adapt it. Please let me know:Do you need to add specific personal details or organisation names?Should we target a specific submission email address or deadline?Would you like to add references to specific constitutional sections (like Section 14)? 	2026-06-04 14:52:12	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Here's the full merged version: I support the responsible modernisation of Home Affairs services, but I object to the draft Identification Regulations in their present form. As an attorney, my concern is not with convenience or digital innovation. My concern is with the legal architecture being created around identity itself. A national identity system must be built on consent, necessity, proportionality, transparency, independent oversight, and meaningful non-digital alternatives. The proposed framework appears to create a digital identity credential with substantial legal effect, linked to biometrics, smartphone access, identity assurance levels, and interoperability between the State and private institutions. That is not a minor administrative update. It is a fundamental restructuring of how citizens prove who they are and access essential public and private services. I object in particular to any framework which may result in citizens being indirectly compelled to participate because banks, mobile networks, employers, schools, hospitals, or State departments later treat the digital credential as the practical default. "Optional" must mean optional in law and in practice. No South African should be disadvantaged, delayed, excluded, risk-scored, or denied services because they do not own a compatible smartphone, lose access to a device, cannot use biometric systems reliably, or choose to retain physical identification only. The regulations should also contain clear, enforceable safeguards dealing with data minimisation, purpose limitation, auditability, breach notification, independent oversight, appeal rights, correction rights, and strict limits on sharing between Home Affairs and private institutions. Identity data is not ordinary administrative information. It is the gateway to banking, work, movement, voting, grants, education, healthcare, property, and legal capacity. A centralised digital identity system without hard legal guardrails creates an obvious risk of function creep and future abuse. My further concern is that the proposed system creates the technical and legal foundation for a future social-credit-type infrastructure, even if that is not the stated intention today. Once the State has a centralised digital identity layer, biometric verification, private-sector data links, assurance levels, and the power to downgrade, suspend or revoke a person's effective identity credential, the system can later be expanded far beyond ordinary identification. That is the real constitutional danger. A digital identity system must never become a mechanism through which citizens can be profiled, scored, excluded, inconvenienced, or economically marginalised because they fail to comply with administrative requirements, hold unpopular views, challenge official decisions, or refuse to "toe the line". In a constitutional democracy, identity is not a privilege granted by the State. It is the legal recognition of personhood. The regulations must therefore expressly prohibit the use of digital identity infrastructure for behavioural scoring, political profiling, social-credit systems, predictive risk ranking, viewpoint-based discrimination, or indirect economic exclusion. Without those safeguards, the system risks becoming an infrastructure of control rather than a tool of public service. I therefore submit that the draft regulations should not be adopted in their current form. At minimum, they should be revised to guarantee a permanent physical ID alternative, prohibit indirect compulsion, provide simple and secure recovery mechanisms for lost or stolen devices, restrict private-sector data flows to what is strictly necessary, require independent oversight, and give citizens clear remedies where their identity credential is suspended, downgraded, revoked, misused, or incorrectly verified. Digital transformation must serve citizens. It must not become a system of administrative control over citizens.	Donald	Western Cape		self-employed

	2026-06-04 11:04:30	No I do not	All of the above	Centralised Economic Kill-Switch Risks	This DIGITAL ID proposal poses a 100% RISK to all SA citizens - the fact is that this SA government and now the GNU government has produced FRUITS of ABSOLUTE 100% ROTTEN FRUITS - SA ranks GLOBALLY THE WORST on all regarding HUMAN RIGHTS abuses, literacy and education, security, corruption, transport, violence and crime and all the GOVERNMENT FAILURES!!! This DIGITAL ID will be just ANOTHER FAILURE OF THE GNU GOVERNMENT !! We as SA citizens DO NOT WANT your evil tyrannical DIGITAL ID and we certainly DO NOT WANT THAT "SO CALLED CONVENIENCE" !!! We are absolutely capable of storing the manual green ID book or ID card safely !! The PROPOSAL OF ISSUEING THE DIGITAL ID ON A SMART PHONE IS ABSOLUTELY RIDICULOUS GIVEN ALL THE SECURITY RISKS REGARDING A PERSON'S IDENTIFICATION ON A PHONE WHERE IT CAN BE LOST OR HACKED AND ALL THE CORRUPTION POSSIBILITIES !! Also, given that the SAP AND NPA of SA is HIGHLY COMPROMISED, THE POSSIBILITY OF SOLVING ANY IDENTITY FRAUD, WILL NOT BE POSSIBLE FOR ANY SA CITIZEN !! EVERYONE PUSHING THIS ON SA CITIZENS ... you better be warned of FORCING this on SA citizens. We all know this is part of the EVIL AGENDA 2030 ... NOT EVEN the only true living GOD, Creator of the heavens and the earth, will never FORCE people to do anything !! And you have NO RIGHT to force this on the population !! The GOVERNMENT OFFICIALS should KNOW YOUR PLACE in SOCIETY = you are unfortunately not elected, but PUT into a place of CIVIL SERVICE !! You are put in the position to SERVE the will of the people and NOT THE WILL OF THE GLOBAL UNELECTED FOUNDATIONS AND SO CALLED "ELITES" !! If you keep on pushing these global agendas, the plans of satan, you WILL BE JUDGED by the only true living GOD !! WE REJECT YOUR DIGITAL ID 100% !! GOD will never FORCE or DOMINATE PEOPLE ... NEITHER SHOULD YOU !! This digital ID has the EVIL POTENTIAL AND PURPOSE to DOMINATE citizens, make citizens vulnerable to fraud and theft and vulnerable to be COMPLETELY CONTROLLED, NOT BY THEIR OWN CHOICE !! ... SO .... NO,NO,NO,NO !!!	Mariana	Gauteng		
	2026-06-04 11:01:41	No I do not	All of the above	Centralised Economic Kill-Switch Risks	For too long have people turned their eyes from the almighty God (Yahweh) of the bible and these are the consequences that we are dealing with because of it. 	2026-06-04 10:08:27	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I object in the strongest possible terms to the draft Identification Regulations, 2026. The proposed regulations represent a fundamental shift in the relationship between citizens and the state by creating a highly centralised digital identity ecosystem that concentrates sensitive personal and biometric information within interconnected government and private-sector systems. Such a framework significantly increases the potential consequences of data breaches, cyberattacks, system failures, misuse of information, and unauthorised surveillance. The regulations appear to prioritise administrative efficiency and technological convenience over constitutional rights, particularly the rights to privacy, dignity, equality, freedom of movement, and just administrative action. Once implemented, citizens may become increasingly dependent on a digital identity infrastructure over which they exercise little practical control and for which meaningful accountability mechanisms remain unclear. I am particularly concerned by the expansion of data-sharing arrangements between the Department of Home Affairs and accredited third parties. The creation of interoperable identity systems risks normalising the continuous exchange of personal information across institutions and creating a permanent digital profile of citizens that extends far beyond the traditional purpose of identity verification. The draft regulations also create significant risks of exclusion. South Africa remains a country with substantial inequality, intermittent connectivity, varying levels of digital literacy, and high rates of mobile device theft. Access to fundamental identity functions should never be dependent on the possession, security, maintenance, or replacement of a smartphone. Any system failure, device compromise, administrative error, or cyber incident could have severe consequences for an individual's ability to participate in economic and civic life. Furthermore, the regulations establish infrastructure that may enable future expansions of state monitoring and behavioural compliance mechanisms. Even if such uses are not presently intended, the concentration of identity, biometric, authentication, and transactional data within a unified framework creates the technical capability for future governments to extend surveillance powers far beyond what citizens currently expect or consent to. The Department has not demonstrated that the benefits of this framework outweigh the substantial risks it creates. Nor has it demonstrated why existing identity mechanisms cannot be improved without introducing such extensive centralisation and interconnectivity. I therefore oppose the regulations in their current form and request that they be withdrawn and reconsidered following a comprehensive constitutional review, an independent cybersecurity assessment, a detailed privacy impact assessment, and a significantly expanded public participation process. Any future digital identity system must be strictly voluntary, supported by robust legislative safeguards, subject to independent oversight, and must never diminish the legal standing, accessibility, or practical usability of physical identity documents. The protection of constitutional rights must take precedence over administrative convenience. Once a centralised digital identity infrastructure is established, the loss of privacy, autonomy, and individual control may be extremely difficult to reverse.	Judith	Gauteng		unemployed individual
	2026-06-04 10:06:01	No I do not	All of the above	Centralised Economic Kill-Switch Risks	If South Africans think we live in a sovereign country, why does our government follow in the same track as especially the European Union? They all crack down on farming putting pressure on the food supply. They all allow illegal immigration that weakens each country in terms of security, economy, identity etc. They all allow crimes in general to go rampant. It is becoming more dangerous in terms of legal repercussions to act against crime than to just allow it. The European Union also recently came out with an app (that was hacked soon after its release) whereby citizens are supposed to register themselves on. It would appear our government is acting on instruction of foreign entities and not ruling toward what is best for SA Citizens.	Quinton	Limpopo		employed individual

	2026-06-04 08:08:09	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The people of the UK stopped Kier Starmers attempt to invade the privacy of citizens for the same reasons as those listed below. I reject he ANC led governments attempts to invade my privacy for these same reasons. They have no right to my life. ? Real-Time Corporate Data Loops: The state will record "Verified Relationships" between you and private entities like banks and telcos. If you update your address or phone number at your bank, it will synchronise across the state population register automatically in near real-time—permanently blurring the line between public civic data and private corporate infrastructure. ? The Stolen Phone Lockdown: Your digital ID is cryptographically "bound" to a single smartphone. In a country with high rates of mobile theft, losing your phone means your legal identity token is instantly frozen or revoked. The regulations are currently silent on a secure, remote path to restore your access, raising the threat of immediate financial and administrative paralysis. ? The 10-Year Physical Queue Trap: Your digital ID expires every 5 years. While remote renewal via a facial scan in the app is permitted, the draft rules state that if you go 10 consecutive years without a physical, in-person touchpoint at a Home Affairs branch or partner bank, your credential completely lapses. You will be forced to line up in person from scratch to re-prove your identity. ? Algorithmic Profiling (The 30-Day Rule): You will be legally required to report routine life updates (moving house, changing an email) within 30 days. If you fail to do so, the state will algorithmically drop your internal "Identity Assurance Level." A lowered score could mean sudden, frustrating transaction rejections when you try to use high-security online services. ? Foundations for Function Creep: Centralising dynamic biometric registries and cross-entity tracking pipelines creates a technical foundation that critics warn could easily be weaponised into an authoritarian behavioural tracking system, or act as a centralised economic kill-switch over your accounts. 	2026-06-04 07:41:35	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The Digital ID system is flawed on nearly every level and creates the possibility for massive abuses and security risks. The system: Creates a single point of failure for cyber breaches and data leaks. Gives government extensive control over citizens' personal information, allowing them to track your activities and transactions and has the potential to expand into broader surveillance of citizens. Makes large-scale data collection and profiling easier, similar to China's digital ID system. It allows increased scrutiny of certain groups and restrictions on access to services, giving greater state control over citizens' daily lives. It will allow the use of identity verification as a mechanism to regulate participation in economic and civic activities. If your phone is stolen, which happens often in this country, citizens can be left unable to verify their identity, losing access to banking and government services. This removes the individual's rights to control how their information is managed and who accesses it, increasing dependence on government-controlled systems, whilst allowing the government to share private data with commercial institutions. This system can be used as an economic kill switch, restricting access to banking or financial services, using identity verification as a condition for economic participation and creating mechanisms through which citizens could effectively be excluded from normal economic activity. The government has proved over the past 30 years that it cannot be trusted with the level of control they already have, increasing this control gives them broader license to discriminate, control and steal. 	2026-06-04 01:59:56	No I do not	All of the above	Centralised Economic Kill-Switch Risks	HOW DARE YOU strip away my sovereignty and diminish my rights as a citizen of the country in which I was born. I was NOT granted my citizenship by political favour, nor do I hold it at the pleasure of any government - including this current Socialist Government of SA. It is my birthright!!! Governments are elected to SERVE their citizens, NOT to erode their freedoms, silence their concerns, or weaken their standing in their own homeland. I will not quietly accept policies that reduce my voice, my rights, or my ability to determine my own future. NEVER!!! I was born on this soil. I have contributed to this nation. I have a stake in its future. No government has the moral authority to treat its citizens as subjects rather than stakeholders. My sovereignty as a citizen matters, and I reject any attempt to diminish it. HOW DARE YOU remove my sovereignty as a human being! This country is my home, my heritage, and my birthright. Governments come and go, but the rights of citizens should never be treated as expendable. I refuse to stand by while my voice, my freedoms, and my place in my own country are diminished. 	2026-06-03 16:39:50	No I do not	All of the above	Centralised Economic Kill-Switch Risks	It is almost a given that a digital identity system of this nature could become a single point of control if not governed with exceptional care. Once established, such systems are inherently susceptible to mission creep, where their use expands far beyond their original purpose. This raises legitimate concerns about future abuse, regardless of the intentions of those currently designing or administering the system. Equally concerning is the apparent lack of meaningful public participation and transparency surrounding the proposal. The central question is this: will South Africa's digital identity infrastructure become: 1.) A centralized and linkable system, concentrating power and creating significant surveillance and exclusion risks; or 2.) A decentralized, privacy-preserving system, where identity can be verified without creating a universal mechanism for tracking an individual's activities across multiple platforms and institutions. Supporters argue that the risks can be mitigated through robust legal frameworks, sound technical design, and strong institutional safeguards. In principle, this may be true. In practice, however, such protections are only as effective as the institutions responsible for enforcing them. My concern is that South Africa has not yet demonstrated the level of institutional maturity, accountability, and independence required to provide citizens with consistent and impartial protection against abuse. Too often, administrative overreach, governance failures, or political considerations are addressed only after significant harm has occurred. By then, the cost to affected individuals can be substantial. If we proceed down this path without adequate safeguards, public scrutiny, and a clear understanding of the long-term implications, we risk creating an infrastructure that future governments, agencies, or private actors may be tempted to exploit. Once such a system becomes deeply embedded in daily life, the question is no longer how it should have been designed, but who will possess the power and capacity to reform it. Thought for the day: was starlink created to be weaponized...	Peter	Gauteng		unemployed individual

	2026-06-02 12:30:34	No I do not	All of the above	Centralised Economic Kill-Switch Risks	This discriminates against those who can not afford to be digitally active with a smart phone. The crime rate is too high and smart phones get stolen. You do not have adequate processes in place in these regulations to mitigate this.	Harold	Western Cape		unemployed individual
	2026-06-02 12:29:14	No I do not	All of the above	Centralised Economic Kill-Switch Risks	This is an international exercise to privately control people and remove freedoms that we currently experience. This change is happening in 100 countries around the world, which shows this is a private initiative, which inducates private control of your life. The negatives are too much to express here, but impacts on freedom of, expression, private ownership, freedom of movement, right to privacy and many others. A central kill switch is key tonthis control that will not be managed by people anymore. This is a digital jail that the private sector is trying to force through the governments of the world. This MUST be resisted at all costs...	Chris	Western Cape

	2026-06-01 17:59:05	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Apart from giving the government too much power to control us, and the power to spy on everyone; we need to consider a factor that has not been mentioned at all. Petty crime is rampant in this country and has spread to the suburbs- spotters walking around the streets and in the malls informing the other criminals in vehicles and on foot about pedestrians using cellphones so they can swoop, mug them and take their phones. This is happening all the time. If all your information and financial access is digitized on your phone what will you do? If you don't have ID cards/books how will you even be able to get another phone to access your bank? Or access your bank to arrange to buy a phone - very few physical banks now. How can you prove who you are? And what about hackers? It will be a complete disaster. Say NO to state population control via phone.	Patricia	Gauteng

	2026-06-01 16:01:12	No I do not	All of the above	Centralised Economic Kill-Switch Risks	A disfunctional government want to impose digital IDs on its citizens. What could go wrong? You just want to control our lives , our money and health. This is just a WEF idea to take control of citizens worldwide. Now listen, we dont want digital IDs and keep your filthy hands off us, our money, health and movement. State overreach at its best. Just no againsts our consritutional rights as well.	Marius	Gauteng		employed individual
	2026-06-01 15:55:24	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I am extremely disappointed that the DA Minister of Home affairs has seen fit to publish these proposed amendments to the Identification Regulations. Our country no longer has the capacity or sophistication to successfully manage, maintain and protect such an advanced "Digital Identity Credential". I selected All of the Above because I am in full agreement with all the core arguments raised by Civic groups, privacy advocates, and cybersecurity experts regarding the proposed amendments. 1) Expanded National Cyber-Defences Vulnerability: Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. ALL our critical personal information will be exposed. 2) The "Identity Assurance" Scoring Loop: This algorithmic tiering could cause sudden, frustrating transaction rejections when you try to open accounts or authenticate services. Since these transactions are critical in one's everyday life, this very SEVERE penalty will cripple citizens and is UNJUST. 3) The Stolen Phone Lockdown: Your digital ID will be cryptographically locked to one specific smartphone device. Given that ordinary citizens are daily exposed to high rates of serious crime, including frequent mobile theft, losing your device means your digital identity token is instantly frozen or revoked. The regulations are completely silent on a secure, remote path to restore your access, raising the threat of immediate administrative paralysis!! 4) The 10-Year Physical Queue Trap: Our current ID has no expiry date, but the digital ID will expire every 5 years?? This amendment is another inconvenience and additional cost for citizens to bear. While app-based biometric renewal is permitted, the law dictates that if you do not present yourself physically at a Home Affairs office or partner bank for 10 consecutive years, your credential completely lapses, and you must line up in person from scratch to re-prove who you are!! THIS IS COMPLETELY UNACCEPTABLE. 5) The Blueprint for Function Creep: Centralising a dynamic repository of dynamic biometric signatures and tracking variables provides the perfect infrastructure for future state surveillance or a compliance-driven "social credit-style" exclusion system. 6) The Deepening Digital Divide: The majority of the population will be unable to afford Smartphones and many do not have Wi-Fi connections as this comes at great cost. Millions are already dependent on government grants! Many South Africans, especially the elderly and those in rural areas, still rely exclusively on physical documents. Was this even a consideration when this sophisticated and unworkable amendment was drafted?	Theresa	Gauteng		retired
	2026-06-01 15:37:36	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Absolute state and globalist control over all human rights and freedoms and over all of OTHERS private living resources, privacy etc with digital credit and finance control, high tech surveillance, Ai and other totalitarian digitally controlled systems and methods. 	2026-06-01 13:36:35	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I do not support digital ID systems because of concerns around privacy, cybersecurity risks, digital exclusion, increasing dependence on smartphones, and the potential misuse of personal information. Digital id systems create the infrastructure for misuse. The concentration of identity, financial, and personal data within interconnected systems raises the risk that access to essential services could be restricted or conditioned in ways that undermine individual freedoms. Digital IDs could be used to monitor behaviour, restrict access to banking or public services, limit freedom of movement, or penalise individuals for holding views that are considered unacceptable or inconvenient. For these reasons, I believe digital ID systems pose significant risks to privacy, civil liberties, and the balance of power between citizens and the state. If implemented, it will completely shift control to the state and remove personal liberties from citizens, which is unacceptable.	Tracey	KwaZulu-Natal

	2026-06-01 11:06:58	No I do not	All of the above	Centralised Economic Kill-Switch Risks	This will open the door for even more government overreach - government has become a boss rather than the servant of the people. No person who fully understands what a digtal ID really represents would vote for it. It is being sold as a convenience that will turn into a very big regret.	Dee	KwaZulu-Natal		business owner
	2026-06-01 11:06:06	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I wonder how this is going to work for people living in an informal settlement or farm labourer's accommodation? What about the people the system doesn't know of at present? In the same way as the current ID system is not perfect the digital ID is not going to work either. Different system, different flaws. remember AI makes a lot of things possible!	Manfred	Western Cape		self-employed
	2026-06-01 10:57:53	No I do not	All of the above	Centralised Economic Kill-Switch Risks		Marianne	KwaZulu-Natal		self-employed
	2026-06-01 10:48:53	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I have an ID card that has served me well since 2014. I despise the plan to replace it with an app on a phone. I have experienced a phone beining stolen outside the department of home afairs. I would hate to go through that experience again. I have read through all the problems and risks that I will have with all my information being digitalised and don't want to go through any of that.	Keith	Western Cape		retired
	2026-06-01 10:45:42	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I do not agree to this as it gives the department too much power to simply erase you from the system.	Peter	Eastern Cape		
	2026-06-01 10:34:01	No I do not	All of the above	Centralised Economic Kill-Switch Risks	If an individual disagrees with the powers that be. You could just be shut out of the system. The days of health debate would be gone.	Donovan	KwaZulu-Natal		self-employed
	2026-06-01 10:14:36	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates.	Wilna	Gauteng		employed individual

	2026-06-01 03:47:25	No I do not	All of the above	Centralised Economic Kill-Switch Risks	In addition to the high crime rate affecting devices, smartphone companies design their products for quick turnover, meaning that people are constantly changing their devices due to seen and unforseen circumstances. The idea of tying one's identity exclusively to a device that can easily be lost or damaged, raises concerns about the fragility of one's access to participating freely in society, economically and otherwise. There are also rising numbers of youths that are dropping smartphones in favour of the so-called "dumb phones" for the sake of their mental health and cognitive functioning. This digital smart-phone based imperative restricts freedoms to make these sorts of decisions.	Benita	Western Cape		employed individual

	2026-05-31 12:12:26	No I do not	All of the above	Centralised Economic Kill-Switch Risks	This is part of the definition of government over reach, as we - the citizens - are beholden to how the exact implementation is done, without having any say on exactly how my data is stored, who has access to it and how it is secured. There is also no accountability for when the system is going to get compromised, leaving each citizen to deal with that themselves.	Roland	Western Cape		business owner
	2026-05-31 09:17:21	No I do not	All of the above	Centralised Economic Kill-Switch Risks	One of my primary concerns with the proposed Digital ID implementation is the creation of a centralized identity platform that could enable unprecedented levels of monitoring and oversight of citizens' activities. By linking an individual's identity across multiple government and private-sector services, the system has the potential to create a comprehensive digital footprint of a person's interactions, transactions, and movements. While the stated intention may be to improve efficiency and service delivery, the concentration of such extensive personal information within a single system introduces significant risks to privacy, civil liberties, and democratic freedoms. Once established, the possibility of function creep—where data is gradually used for purposes beyond its original intent—becomes a real concern. I believe this approach shifts the balance of power too heavily towards centralized control and creates the potential for excessive surveillance, whether intentional or unintended. The risk is not only how the system is used today, but how it could be used by future administrations, agencies, or third parties. For these reasons, I do not support the implementation of a centralized Digital ID framework unless there are exceptionally strong constitutional safeguards, independent oversight mechanisms, and guarantees that citizens cannot be tracked, profiled, or denied access to services based on the aggregation of their personal data. 	2026-05-29 13:40:29	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Actually the entire idea is horrible, especially with a government that constantly show they cannot be trusted when pushing ideas like this, with only thought how easy things would be for government but not individuals or general public. I guarantee the "app" of this digital id proposal will require as much if not more invasive access to not only any accounts listed on you cell phone, but everything else on it as well. And as per usual, once passed and in use for merely a few months, government will once again make changes to pertaining and corresponding laws, regulations and terminology which will change the entire claimed intent of the proposed digital id. Which would allow government access to your digital soul so to speak, and everything you say or do monitored. Let's not forget how things ran in Canada when truck drivers were peacefully striking, then having their bank accounts frozen by government government who also went as far to imply the related truck drivers were terrorist. And currently in the UK, where citizens speak out against violence, murders and rape purpotrated mainly by immigrants, are falsely arrested by the UK government also refering to these concerned citizens voicing their concerns as terrorist. It's far safer security and personally for individuals to carry separate card as opposed to digitally on their phone, where someone could easily steal your phone and gain access to everything of yours, in one easy and simple theft. And all know passwords and fingerprints do prevent access.	Sheldon	Western Cape		business owner

	2026-05-29 13:10:34	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The fact that your id related and financial transactions are linked to one phone that may need to go in for repairs, be stolen, be lost or may need to be replaced means that you are locked out of these and at current there is no explanation as to how this will be resolved so as to not inconvenience the law abiding citizen. There will still be queues at home affairs due to the 5 year expiration and 10 year lock out, so it will not be as convenient as a smart ID. Cyber security is a major concern, now hackers have one database to hack in order to gain all vital information including banking information and it further leads to identity theft	Maya	Western Cape

	2026-05-29 13:02:20	No I do not	All of the above	Centralised Economic Kill-Switch Risks	There are a number of pitfalls that Sout Africa in particular faces in order to link a digital identity to one smartphone. First, it is going to need massive data centers and have to rely on AI. AI has proven to be final and there have been proven incidents of AI shutting systems down without being requested to by the users. AI has also been known to lie. Data bases require electricity and Sout Africa's power grid is flimsy to ut it politely. We don't have the infrastructure needed to maintain huge data centers. Cellphone are stolen on a daily basis, they get lost and are broken and sometimes simply need replacing. There are no clear guidelines to determine how the digital ID will be unbound from one and bound to another, this means people are locked out of their financial institutions as well as normal services which require an ID. What happens if someone can't afford data that month or the signal is weak where they are trying to use their ID, which is ofter the case in large malls and big buildings.? What happens when people have more than one phone and more than one number. It says that you have to declare within 30 days if you have a new number. What if that is for a second device and not your primary number? The South African government institutions do not have a good reputation when it comes to cyber security, making one central database opens up the possibility for hacking banking information and identity theft. 	2026-05-29 10:50:09	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Every government that has introduced a Digital ID system has read from the same script. The opening line is always reassuring: "This is completely voluntary. Your physical documents remain valid. Nothing will change unless you choose it." They lie and they know that they are lying. The mechanism is generally never a sudden ban. Physical IDs are rarely declared illegal. Instead, they are made progressively inconvenient. Systems are optimised for digital. Queues shorten for those with the app and lengthen for those without. Banks, employers, hospitals, and government departments quietly restructure their processes around the digital credential. The physical card still technically works, it just works slower, less reliably, and with increasing friction, until opting out becomes functionally impossible. Vietnam is the clearest modern example of what comes next in a sudden ban. Its digital ID launched as a modernisation tool. By September 2025, the government had frozen over 86 million bank accounts, 43% of all active accounts. TO FORCE COMPLIANCE! Citizens had no option to participate. They were financially paralysed until they did. The government called it an anti-fraud measure. Citizens called it what it was: coercion. Then came the scoring system. Vietnam's Ministry of Public Security proposed classifying every citizen into 3 tiers: Active, Basic, or Unclassified. Based on their digital engagement score. The government insisted it was not punitive. It did not need to be. When your tier determines your access to services, the punishment is built into the architecture. Then came surveillance. A 2024 decree forced Facebook and TikTok to collect citizens' national ID numbers, store their personal data, and hand it to authorities on demand. One system. Three escalations. All within three years. South Africa's proposed Identity Assurance Level scoring mechanism, its real-time corporate data sharing, and its bank-integrated enrollment network are not safeguards. They are the same foundations to force compliance. The blueprint is not new. Digital ID's are NOT a good thing.	Nicola	Gauteng		business owner

	2026-05-29 10:29:01	No I do not	All of the above	Centralised Economic Kill-Switch Risks	This opens the door to oppression on many fronts. It is deadly. In addition, in a high crime country such a system is ludicrous, for once again the criminal is advantaged and the victim disadvantaged and suffers the most. When will men cease behind the scenes their work of increasing crime? If you sow a wind, you reap a whirlwind. This one is potential a tornado.	Nic	Western Cape		retired
	2026-05-29 10:26:02	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Government access to a Digital Economic Kill Switch for Citizens is Deeply Disturbing. Below are just a few examples of how citizens around the world have already been impacted in very real, life altering and life threatening situations. The Following Governments Have Used Digital ID Punitively: This evidence is not theoretical. Governments around the world have already demonstrated exactly how digital identity systems get weaponised against the very citizens they claim to protect. India's Aadhaar System: Starvation as a Side Effect. The Right to Food campaign documented more than 100 starvation deaths between 2015 and 2019, many of which occurred because people were unable to meet the stringent digital conditions required to link their Aadhaar number to their ration cards. An 82-year-old woman named Sukra Oram had enrolled in Aadhaar but could no longer perform biometric authentication because her hands had changed with age, and she had no mobile phone to receive a one-time password bypass. A leading litigator described the system as "dehumanising," enabling the denial of food rations to the poor over simple fingerprint authentication failures. Banks began refusing to open accounts for people without Aadhaar, and insurance firms denied claims if no number was linked. Links: https://rupe-india.org/aspects-no-81-82/automating-exclusions-how-digitalisation-can-lead-to-exclusions-in-welfare-programmes/ https://thewire.in/rights/digital-exclusion-poor-elderly-face-the-brunt-of-aadhaar-based-authentication-errors Kenya over 40,000 Citizens Classified as Refugees. In Kenya, over 40,000 local Kenyans who had, as children, received food and medical aid at refugee camps were flagged as refugees by the system, and subsequently denied registration as Kenyan citizens when they turned 18. Their entire civic and legal identity was erased by an algorithmic error, with no easy path to appeal. Link: https://www.statelessness.eu/updates/blog/will-digital-id-help-stateless-people-threat-digital-administrative-violence Uganda, Elderly Denied Pensions by Data Entry Mistakes. In Uganda, some older people's birth dates were incorrectly captured in the digital ID system, falsely indicating they were younger and therefore ineligible for old-age support. The burden of correcting the inaccurate data fell entirely on the citizens themselves, doubly burdening a group already vulnerable and in need. The Ugandan Digital ID is a 10 year failure with people still shut out of the system due to administrative errors that were not their fault. Links: https://chrgj.org/2021-06-08-report-finds-uganda-national-digital-id-system-leads-to-mass-exclusion/ https://observer.ug/viewpoint/older-ugandans-still-shut-out-by-national-id-system/ Myanmar: Digital ID Used as a Weapon Against Minorities. This example is horrendous! In Myanmar, military authorities implemented a digital ID project with assistance from China and India, further entrenching the discriminatory 1982 Citizenship Law, leading to mass statelessness and providing the regime with an additional tool against democratic forces and ethnic minorities. Link: https://progressivevoicemyanmar.org/2025/07/20/65773 So, the above are examples are how other governments have abused their own citizens with technology. Lets look at how good the SOUTH AFRICAN Government is with our Data. 1. The SA Government's Own Admission: Home Affairs Cybersecurity is "Low" The most damning source comes not from critics or opposition parties, but from the government's own parliamentary documents. The Department of Home Affairs' Annual Performance Plan acknowledges that its cybersecurity maturity "remains low" and flags the absence of a fully implemented disaster recovery strategy as a key weakness, even as it pushes ahead with building the entire digital ID infrastructure. This is the government confessing, in a tabled parliamentary document, that it is not ready... and then proceeding anyway. 2. A Relentless Wave of Government Hacks. This is not a historical problem. It is ongoing. In July 2024, hackers stole R300 million from the Department of Public Works over 10 years of completely undetected theft. In May 2024, the Department of Justice was hit by ransomware compromising over 1,200 sensitive files. National Treasury found malware on its own systems. In January 2025, the South African Weather Service was hacked and rendered non-functional for two weeks. In March 2025, Parliament itself was compromised. But we need to trust the goverment with our entire life with a Digital ID. HELL NO!!!!!!!	Marc	Free State		business owner

	2026-05-28 22:17:28	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Dear Adv A M Malakate and the Department of Home Affairs, I write as a concerned South African citizen to formally object to several provisions of the Draft Identification Regulations, 2026, published in Government Gazette No. 54610, ahead of the 6 June 2026 deadline. While I support the modernisation of identity services and welcome reduced queues, the draft as written introduces structural risks that are constitutionally unacceptable. My specific objections are as follows: 1. Corporate data integration without adequate consent. The proposed real-time, bi-directional data pipelines between the national identity register and private "trusted entities" (banks, telecoms) blurs the fundamental distinction between civic and commercial data. This arrangement requires explicit opt-in consent, independent oversight, and strict purpose-limitation clauses — none of which appear adequately defined in the current draft. 2. The Identity Assurance Level mechanism is disproportionate. Automatically downgrading a citizen's assurance level for failing to report routine life changes within 30 days — with no stated appeals process — risks creating a punitive, opaque tiering system that could unlawfully restrict access to banking, employment, and services. This is functionally a social credit mechanism and is inconsistent with the Constitution's guarantee of equality and dignity. 3. No clear device-loss recovery pathway. Cryptographically binding a legal identity credential to a single device, without mandating a secure remote restoration process, is reckless given South Africa's mobile theft rates. Citizens must not face administrative paralysis because of crime. A robust, accessible recovery pathway must be legislated, not left to future policy discretion. 4. The 10-year in-person lapse clause disproportionately burdens vulnerable citizens. Requiring physical re-registration after a decade without in-person contact will disproportionately exclude elderly, disabled, rural, and economically marginalised South Africans — the very people most reliant on stable identity access. 5. Insufficient safeguards against future function creep. The centralised, dynamic biometric repository created by this framework must be accompanied by hard legislative limits on permissible uses, subject to Parliamentary oversight, to prevent future repurposing for surveillance or compliance-based exclusion. I respectfully urge the Department to pause finalisation of these regulations, conduct broader public consultations — including with civil society, digital rights organisations, and the Information Regulator — and redraft the provisions above with explicit constitutional safeguards. The right to identity is the gateway to all other rights. These regulations must be watertight before they become law.	Ilze	Northern Cape		business owner

	2026-05-28 17:05:04	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The introduction of digital IDs in South Africa is a very concerning step towards total government control and overreach. Introduced as "optional" it will soon become mandatory for standard necessities, eventually even controlling what you can spend your money on. Tracked at all times, centralised IDs and eventually the currency that follows it will allow the government to authorise private entities to track our activity across multiple sectors, creating a detailed log of daily life. No one should have the right to this information. It's a gross invasion of our privacy and essentially the new dompas. I'm horrified that South Africa, of all countries, wants to introduce this. 	2026-05-28 14:03:43	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Simply not wanting this highly centralized, potential digital prison should be enough for it not to succeed. This system provides too much power to an extremely corrupt government. Much like the etolls, we no longer trust the governments decision making and their ability to protect us from international predators and nefarious international state and non state actors (this includes and especially the DA). The question of who owns this technology is a big question for me, specifically understanding how vulnerable RSA's digital systems are to hacking and interference. Seeing this system raises red flags alongside the deep desire of companies like Starlink and countries like Israel to have backdoor access to this. It's a No from me, and should be from anyone who enjoys their freedom of choice and thought.	Sboniso	Limpopo		employed individual

	2026-05-28 13:58:38	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The right to lawful due process. Spiritual and Moral Convictions My body, mind, conscience, and spirit are inviolable. My personal beliefs affirm that human life is sacred and that each person bears a profound responsibility to safeguard their own dignity, conscience, and freedom. No administrative or technological system should diminish these values or compel surrender of autonomy over one's physical person or deeply held beliefs. Objection to Compulsory Digital Identification Accordingly, I formally object to and decline any attempt to compel: Mandatory digital identification or digital-only credentials; Expanded biometric surveillance beyond lawful and proportionate purposes; Centralized control over my personal data and identity; Unlawful restrictions on banking, property ownership, travel, employment, education, or access to public services based solely on digital compliance; Any measure that compromises privacy, security, or autonomy without proper constitutional safeguards. I expect that any digital systems introduced by the Department will remain subject to the Constitution, the Information Regulator and the Protection of Personal Information Act, and that no person will be deprived of lawful rights or essential services without due process and constitutional justification. Reservation of Rights: All my rights are expressly reserved. Nothing in this correspondence should be interpreted as a waiver of any constitutional, statutory, common law, or human rights protections available to me. Should any governmental action unlawfully infringe upon these rights, I reserve the right to pursue all lawful remedies, including applications to the courts and complaints to appropriate oversight institutions. Lastly: I respectfully call upon the Department of Home Affairs to ensure that all modernization initiatives fully respect constitutional supremacy, human dignity, privacy, informed consent, and the fundamental freedoms of every person in the Republic. The State exists to serve the people and to protect their rights, not to erode them. Any technological advancement must enhance liberty, security, and accountability rather than diminish them. 	2026-05-28 09:49:19	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Is this yet another attempt to move us as a nation into a communist nation where we the people will have no say or right and we and our children belong to the government, there are always hidden agenda's in these bills. Any form of complete state control of our right to choice cannot be constitutionally democratic. This is far too dangerous to vote into law, no matter which party takes majority in our government. The rate of mobile device theft, muggings, and phone damage are way to high in South Africa. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. This again moves in the direction of control over the nation. This bill must be stopped!!	Louise	Northern Cape		employed individual

	2026-05-28 09:11:27	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touch point with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch.	Ben	Northern Cape		retired

	2026-05-27 11:43:13	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Sadly you can only choose one "most important" concern out of all these. George Orwell would indeed be rolling in his grave if he could see the world as it is now. If you believe that's hyperbole, well that's your decision I suppose. I have lived as a guest in a country with digital ID services, and while it all looks and sounds very nice on the surface, there is a monster lurking beneath. I found this out first-hand during the COVID pandemic when I saw how easy it was for the authorities to monitor every aspect of our lives and decide for us what we could and couldn't do. Things like social credit scores (see a particularly apt episode of Black Mirror for this one), shared intelligence databases between private and public sectors (go take a look at Palantir for this one), ID theft due to loss of mobile device, the list could go on all day, should be extremely concerning for us as citizens of a democracy with a robust constitution. And dear Minister of Home Affairs, while I appreciate the hard work you and your department does, I also know that you will trot out the old "if you don't have anything to hide, you don't need to be afraid of us knowing everything. To that I would like to quote from the character in the film Anon (go see it if you want to know why we hate this idea). "I don't have anything to hide, I just don't have anything I want you to see."	Richard	Western Cape		retired
	2026-05-27 11:42:32	No I do not	All of the above	Centralised Economic Kill-Switch Risks	This is the line in the sand we must not cross. Totally unworkable, unconstitutional and imposed externally but the WEF onto our democracy. Phones getting stollen is a very common occurrence in SA, and this will effectively mean the person will become a non person, as his ID is tied to his phone. Also, what about the aged? My 80 year old mother has never had her own cell phone, and doesn't want one, so under digital ID she would cease being a person! Totally unworkable!	Andrew	Western Cape		business owner
	2026-05-27 11:33:02	No I do not	All of the above	Centralised Economic Kill-Switch Risks	For a secure digital future, it demands tougher safeguards to protect citizens against corporate overreach and state surveillance. If there was any infringement on a violation that is put in place, a kill-switch could oppose human rights without any knowledge of the citizen, leaving them homeless etc...	Tamerah Leigh	Gauteng		self-employed
	2026-05-27 11:32:35	No I do not	All of the above	Centralised Economic Kill-Switch Risks	With the current government, crime, fraud and corruption, and no accountablilty it hard to see how anything they do will benefit the country as a whole.. just another loophole for them to continue the destruction of South Africa and most of its citizens.	j	Western Cape		
	2026-05-27 11:32:35	No I do not	All of the above	Centralised Economic Kill-Switch Risks	With the current government, crime, fraud and corruption, and no accountablilty it hard to see how anything they do will benefit the country as a whole.. just another loophole for them to continue the destruction of South Africa and most of its citizens.	j	Western Cape		
	2026-05-27 11:29:42	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I do not support this as we have already got our ID document and can't open an account without it. I don't see why a person would now have to go and renew it every time as that is what the government has already put in place to make sure they know who you are. What about babies that do not have a phone and many other poor people that can not afford phones, also if your phone gets stolen then the criminals have access to something that is very dangerous as what is stopping them from using your information. Also if there is an emergency and there is no internet or you drop your phone and it breaks or it just stops working which has happened to me before then what happens.? I am just not ready to put so much trust in technology as it does fail and can be hacked.	Maria Gezena	Mpumalanga		
	2026-05-27 11:28:55	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The risk of data breaches, the overreach of government and the fact that phones are stolen daily in this country make this bill a far reaching fantasy.	Telara	Gauteng		employed individual

	2026-05-27 11:20:48	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Digital ID enables the implementation of an authoritarian surveillance system giving governments (and other unethical, greedy stakeholders) total control of every aspect of our lives. This would be a truly dystopian future.	Dee	Western Cape		self-employed

	2026-05-27 11:20:34	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services.	Jolanie	Gauteng		
	2026-05-27 10:56:06	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I cannot select one, I oppose this in its entirety. I DO NOT agree.	Chazam	Western Cape

	2026-05-27 10:23:08	No I do not	All of the above	Centralised Economic Kill-Switch Risks	South Africa appears to be moving toward increasingly centralised digital identity systems, similar to models used in countries such as China, where digital infrastructure has been criticised for enabling mass surveillance, social control, censorship, and restrictions on civil liberties. My concern is that a fully digital ID system could create opportunities for excessive state monitoring, tracking of citizens, and exclusion from essential services if systems are abused, compromised, or politically manipulated. South Africa's Constitution protects rights to privacy, dignity, freedom of expression, and freedom of movement. Any digital identity system that concentrates too much personal data and control in a central authority risks undermining these constitutional protections if strong safeguards, transparency, and independent oversight are not guaranteed. In a country with high inequality, corruption concerns, and uneven digital access, a mandatory fully digital ID system could also unfairly exclude vulnerable people who lack reliable technology, internet access, or digital literacy. For these reasons, I believe a fully digital ID system poses unacceptable risks to privacy, freedom, and constitutional rights, and I am therefore unequivocally opposed to its introduction in South Africa.	Charmaine	Gauteng		employed individual
	2026-05-27 10:05:35	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Terwyl reels en wette noodsaaklik is, is die geweldige inperking van vryheid soos voorgestel 'n hel.	Alvin	Western Cape		self-employed

	2026-05-27 07:20:12	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I write to formally oppose the proposed amendments to the Identification Regulations under Government Gazette No. 54610, particularly with respect to the introduction of a "social score" mechanism and the restriction linking a Digital Identity Credential to a single device. The proposed "social score" model raises profound constitutional and ethical concerns. Any system that profiles individuals based on aggregated behavioural, financial, or social data risks arbitrary classification and discrimination. Such scoring frameworks are inherently opaque, prone to error, and difficult to challenge. Given that identity credentials underpin access to essential rights—including employment, healthcare, banking, and voting—the introduction of automated or semi-automated profiling may lead to unjust exclusion or diminished access without due process. This is incompatible with principles of equality, dignity, and administrative justice. Furthermore, the potential integration of private-sector data introduces additional risks related to consent, proportionality, and the lawful limitation of personal rights. Equally concerning is the proposal to bind a citizen's legal identity credential to a single smartphone device. This requirement imposes a material barrier on access, particularly in a society marked by economic inequality, shared device usage, and inconsistent connectivity. Device loss, theft, or technical failure could result in immediate and disproportionate exclusion from critical services. A single-device dependency also undermines resilience, creates a single point of failure, and elevates cybersecurity risks. Any digital identity system must, at minimum, remain device-agnostic, offer secure multi-device access or physical alternatives, and ensure that no citizen is disadvantaged due to technological constraints. In its current form, the proposal introduces significant risks to rights, inclusion, and public trust. I respectfully request that these provisions be withdrawn and reconsidered through broader public consultation and constitutional scrutiny. Yours faithfully,	Michael	Gauteng		employed individual
	2026-05-27 06:41:42	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Where to begin? I'm utterly shocked by th whole proposal. 	2026-05-27 01:00:16	No I do not	All of the above	Centralised Economic Kill-Switch Risks	South Africa is a third world country plagued by a lot of issues that this department could be addressing and this is the non-issue you choose to champion. We do not need/want this, if there are issues with the current ID sytem why not amend those? Literally ask any regular SA citizen to list the top 5 things they wish for this country and I swear on my life none of us would mention this Digital ID. Niyagagamela, your employees are running amok in your branch offices being rude, condescending, corrupt and not even being efficient. And all you can think of is that the PEOPLE must get Digital IDs?	Zodumo	KwaZulu-Natal		unemployed individual
	2026-05-27 00:45:15	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis.	Hill	Limpopo

	2026-05-26 11:14:35	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I vote NO against the draft Identification Regulations, 2026. I do NOT support the introduction of the dual-track digital identity system, including the MyMzansi smartphone application and the Digital Identity Credential. I am concerned about the risks this poses to privacy, personal security, and constitutional rights. Key reasons for my opposition include: • The proposed real-time data sharing with private entities and the creation of an interoperable network between state and corporate databases. • The introduction of an "Identity Assurance" scoring system that could penalise citizens for everyday life changes. • The device-locking of digital identity and the lack of clear, secure recovery processes in a country with high rates of phone theft. • The risk of function creep and potential for increased surveillance or exclusion. • The requirement for periodic physical verification, which may create new barriers instead of removing them. I believe these changes represent an unnecessary and risky overhaul of our national identity system that could compromise citizens' freedoms and security rather than genuinely improve service delivery. I request that my NO vote and these concerns be formally recorded as part of the public participation process.	John	Western Cape

	2026-05-26 10:33:57	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Device Binding: The Stolen Phone Lockdown To secure your data, the system relies on device binding—the technical process of cryptographically locking your digital identity token to one single mobile device running the MyMzansi application. If a device is compromised, or its private cryptographic key is suspected of being leaked, the credential must be immediately suspended or revoked. Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office. Forcing citizens to log formal changes within a rigid 30-day window for routine life adjustments like swapping an email address or moving apartments is highly impractical. Lowering a citizen's "Identity Assurance Level" serves as a hidden penalty, which could lead to sudden, frustrating rejections or delays when trying to execute everyday high-security actions like opening an account or authenticating an online transaction.	Elmari	Gauteng		
	2026-05-26 10:30:13	No I do not	All of the above	Centralised Economic Kill-Switch Risks		Andrew	Western Cape		employed individual
	2026-05-26 10:06:37	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I am deeply concerned about the proposed Digital ID system being introduced in South Africa under Home Affairs Minister Leon Schreiber. While government presents it as a step toward convenience and modernisation, I believe it raises serious concerns about privacy, personal freedom, and government overreach. I do not want to live in a society where every aspect of my identity, movement, and personal information can potentially be monitored, tracked, or controlled through a centralised digital system. Freedom of movement and the right to privacy are fundamental human rights, and any system that increases state access to citizens' personal data must be approached with extreme caution. Although government has stated that the Digital ID system will initially be optional and exist alongside physical IDs, many people fear that "optional" systems often become unavoidable over time. Once essential services become tied to digital verification, citizens may effectively be forced into the system whether they agree with it or not. My concern is not about technology itself. Technology can improve services. My concern is about how such systems can be abused in the future — by governments, institutions, or even through cyber breaches. South Africans already face serious challenges around corruption, data leaks, and misuse of personal information. Giving any central authority more control over biometric and identity data creates risks that cannot simply be ignored. I believe citizens should have the absolute right to choose how they identify themselves, without pressure, discrimination, or restrictions placed on those who prefer traditional documentation. No digital system should ever become a tool that limits access to movement, banking, employment, healthcare, or basic freedoms. Modernisation should never come at the cost of liberty, privacy, and constitutional rights.	M	Gauteng		self-employed

	2026-05-26 08:44:14	No I do not	All of the above	Centralised Economic Kill-Switch Risks	If your digital ID lapses under the 10-year rule, you are legally stripped of your active digital credential and forced to undergo a physical, standard in-person enrollment process all over again. This creates an unnecessary, cyclical bureaucratic loop that forces digitally active citizens back into notorious, real-world Home Affairs queues simply because they did not have a reason to visit a physical office for a decade.	Gideon	Western Cape		
	2026-05-26 08:42:54	No I do not	All of the above	Centralised Economic Kill-Switch Risks	One of the main concerns raised about phasing out South Africa's green ID book in favour of a fully digital ID system is digital exclusion. Not everyone in the country has reliable access to smartphones, stable internet, or consistent electricity. This is especially true in rural areas, low-income communities, and among older citizens. A fully digital system risks leaving these groups behind if physical alternatives are completely removed, potentially limiting access to essential services such as banking, healthcare, social grants, and identity verification. Another key issue is system reliability. Digital systems depend on networks, servers, and infrastructure that can fail. South Africa already experiences challenges such as load shedding and periodic network outages. If identity verification becomes entirely dependent on digital platforms, people could face situations where they are unable to prove their identity simply because systems are down or inaccessible. A physical ID book provides a simple offline backup that does not rely on electricity or internet connectivity. Cybersecurity risks are also frequently raised in discussions about digital identity systems. Centralised databases storing identity information can become high-value targets for hackers. A large-scale breach could expose millions of citizens' personal information at once, leading to identity theft and fraud on a significant scale. While no system is perfectly secure, critics argue that the consequences of a digital breach are far more severe and widespread than issues associated with physical documents. Privacy concerns also play a major role in resistance to fully digital IDs. Depending on how such a system is designed, it could potentially allow for increased tracking, data linking across services, and broader surveillance capabilities. Even if not intended, there is concern about "function creep," where systems originally designed for identification gradually expand into monitoring or profiling citizens in ways that were not initially disclosed or consented to. There are also concerns about trust, transparency, and fairness in implementation. Public confidence in large-scale digital systems depends on strong governance, clear rules on data usage, and accountability. Where trust in institutions is uneven, some people prefer the certainty of a physical document they can hold and use independently of digital systems. Finally, accessibility and resilience during emergencies are important considerations. Physical ID documents remain useful when people are travelling, experiencing device loss or theft, or facing disasters where digital access is disrupted. A hybrid system is often seen as more practical, where digital identity is introduced to improve efficiency, but the green ID book remains as a reliable fallback to ensure no one is excluded. Please consider all aspects of this technocratic movement and the potential problems/implications it may create.	René	Western Cape		employed individual

	2026-05-26 08:13:26	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Strong reasons not to implement a national Digital ID system in South Africa emerge directly from the country's documented governance, security, and institutional challenges.1. Entrenched Corruption, Especially in Identity-Related ServicesThe Department of Home Affairs (DHA) — the very department responsible for issuing IDs, visas, residency permits, and citizenship — has systemic corruption. Officials and syndicates have sold fraudulent permits, fast-tracked applications via bribes, falsified documents, and manipulated biometrics/DNA for years. Billions of rand have been linked to such fraud. A centralized Digital ID would concentrate enormous power in the same compromised institution, creating a single high-value target for corrupt insiders to manipulate identities at scale. Instead of reducing fraud, it risks making large-scale identity manipulation more efficient and harder to detect.2. Poor Track Record on Data Security and Frequent BreachesSouth African government departments and agencies have suffered repeated major data breaches and ransomware attacks (e.g., Department of Justice, Stats SA, SANSA, municipalities, and SOEs like Transnet). These incidents have exposed hundreds of thousands to millions of citizens' personal records. A national Digital ID system would centralize highly sensitive biometric and personal data, dramatically increasing the consequences of any future breach. In a country already facing rising ransomware and cyber threats, this creates an unacceptable risk of mass identity theft, financial fraud, and surveillance abuse.3. High Government Financial and Transactional Oversight Already ExistsSouth Africa already operates a managed exchange control regime with strict AML/KYC rules, mandatory suspicious transaction reporting, and significant monitoring of banking and cross-border flows. Adding a Digital ID would further expand government visibility and control over individuals' lives — linking identity, finances, services, and movement in one system. This level of control exceeds that in many developed countries and risks "function creep," where the ID becomes a tool for exclusion (e.g., blocking access to grants, banking, or services) rather than mere identification.4. International Precedents of Successful RejectionCountries with stronger institutions and better privacy protections have rejected or abandoned similar systems:Australia (Australia Card) United Kingdom (national ID cards) Switzerland (initial e-ID proposal) These rejections were driven by privacy, surveillance, and trust concerns. South Africa, with weaker enforcement, higher corruption, and more frequent data incidents, faces even greater risks.Bottom LineWhile a Digital ID is promoted for efficiency and fraud reduction, South Africa's combination of high public-sector corruption (especially in DHA), repeated large-scale data breaches, and already extensive financial controls makes it a high-risk proposition. It could amplify existing weaknesses — enabling more sophisticated corruption, identity abuse, and exclusion — rather than solving them. Citizens and civil society should demand far stronger independent oversight, proven security, and genuine voluntariness before any rollout. The risks of abuse and catastrophic failure currently outweigh the promised benefits.	Lance	Western Cape		retired

	2026-05-25 22:14:37	No I do not	All of the above	Centralised Economic Kill-Switch Risks	No matter how tight the alleged security and cryptography of the data, the proposal to share with private third parties, and governments shocking track record at keeping anything safe, puts all our lives and lively hoods at risk. Nobody's identity is temporary. Either you are who you are registered as at birth, or you are not. That one would be required to renew one's identity every 5 or 10 years is suspicious to say the least. That your only form of identity will be your mobile phone, which most people upgrade every 2 to 3 years and which can be stolen at any moment is utterly ridiculous and short sighted. Also, have you been to a home affairs office recently? They are still in the dark ages. Have you seen how much fraud is happening despite all governments insistence on FICA and RICA? IDENTITY ASSURANCE LEVEL, is the window dressing wrapped on the voodoo doll that is THE SOCIAL CREDIT SCORE, gleefully being pushed on us to CONTROL US because government and their corporate backers are clearly power hungry and lusting for the extra ordinary control they would have over us. Disgraceful. This will not secure the digital economy. It will not reduce bureaucracy, it will increase government grip on EVERYONE INSIDE OF THEIR SYSTEM. There will be NO unprecedented bureaucratic convenience. In fact if you have a problem with your ID it will be far harder to get it sorted out and that is not taking bad actors inside or outside government into account! "Gold standard" fraud prevention is a joke. Criminals are now forced to take you hostage to commit fraud. We are NOT safer. That is really lazy wishful thinking. The "vital systemic" reset is utter nonsense. AI and quantum computing is upon us. Does the government really thing that the cryptography will be enough to save public records in a centralised system OR prevent false identities for that matter. You are talking about systems that can write their own code. Only a fool dreams that there will be no massive exploits or "errors" yet government wants to tie our entire transactional life to this system. I hope they didn't pay ridiculous money for this very flawed advice. Physical ID will be worth nothing if government forces all banks and institutions to gear up for this form of digital ID only. You CANNOT then transact and will be excluded until you comply. THIS IS ABSOLUTE CONTROL, NO ROOM FOR FREE TRADE OR EVEN FREE EXPRESSION. IT WILL BE LINKED TO EVERYTHING WHEN THE TIME COMES. That is a dystopia ANC & DA ministers may want to live in, but I don't.	GA	Western Cape		employed individual

	2026-05-25 21:37:40	No I do not	All of the above	Centralised Economic Kill-Switch Risks	That the Department of Home Affairs even considers a Digital ID like this, is incomprehensible. Under the pretence of convenience they want to scrap the core of our liberties and have a permanent reporting mechanism to them and corporations?? We patently reject these attempts in their entirety. If I were to choose to never once report to government for verification in my whole life, they it must be perfectly in order that I chose to live this way, and government (or any other entity) may never be allowed to discriminate against me on that or any other basis. As long as I do not direct harm to my fellow humans, there is no basis for any of these attempts as a "digital id" The absurd time limits (30 days) to report address change to prevent being downgraded, smacks of elitism. Having to report to Home Affairs is person is also unacceptable. The argument that his prevents identity fraud for SASSA or other financial transactions doesn't hold water, since there are already good ways to validate someone's identity without dragging the whole of South Africa down in the process. Lastly, in a time when we are warned daily that our dependence on smart phone is becoming a IQ-debilitating habit and that people should actively become less dependent on mobile devices, this is a move in the wrong direction. In my whole life I have never once been inconvenienced or disenfranchised because I carried a physical ID and presented it. The problem is not that we not have a good ID system, we do. It is that corruption and criminality is being rewarded and protection at the highest levels of government. Do I need to tell you how destructive this system will become on the hands of these criminals?? Scrap the idea. Bill Gates, Klaus Schwab and the other manipulators from the WEF and similar orgs can go fly a kite. The Answer Is NO.	Roland	Western Cape		business owner

	2026-05-25 18:34:07	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I wish to formally express my opposition to the current draft Identification Regulations, 2026, in their present form. While I support efforts to modernise Home Affairs, reduce fraud, and improve service delivery, I believe the proposed Digital Identity framework introduces serious constitutional, privacy, cybersecurity, and accessibility concerns that have not been adequately addressed. My primary concerns are as follows: 1. Excessive Centralisation of Identity Data The creation of a centralised digital identity ecosystem linked across government departments, banks, telecom providers, and other "trusted entities" creates a dangerous concentration of sensitive personal information. In a country already affected by corruption, cybercrime, and large-scale data breaches, this poses a major risk to citizens' privacy and security. 2. Risk of Function Creep and Surveillance The regulations create infrastructure that could easily be expanded beyond identity verification into behavioural monitoring, profiling, or exclusionary systems in the future. Even if this is not the current intention, laws and systems evolve over time. Safeguards against abuse must be explicitly written into law. 3. Smartphone Dependency and Digital Exclusion Many South Africans do not have stable access to smartphones, reliable internet, electricity, or digital literacy. Others may lose their phones through theft or crime. A citizen's ability to identify themselves or access essential services should never depend primarily on possession of a single electronic device. 4. Lack of Clear Recovery Mechanisms The draft regulations do not clearly explain how citizens will securely recover their identity credentials if their device is stolen, lost, hacked, or damaged. This creates the possibility of administrative paralysis and exclusion from essential services. 5. Concerns Regarding "Identity Assurance" Levels Any form of automated scoring, ranking, or reduction of identity confidence based on administrative delays or data inconsistencies could unfairly prejudice citizens, especially vulnerable communities. Such systems risk violating constitutional principles of dignity, equality, and administrative justice. 6. Preservation of Physical Alternatives Physical Smart ID cards and in-person verification mechanisms must remain permanently available and legally equal to digital systems. No South African should ever be forced into a fully digital identity framework. I therefore request the following safeguards before any implementation proceeds: - Full transparency regarding data-sharing agreements; - Independent cybersecurity audits; - Strong POPIA oversight; - Judicial and parliamentary oversight mechanisms; - Guaranteed non-digital alternatives; - Clear appeal and correction procedures; - Strict limitations on data usage and retention; - Explicit prohibition of behavioural or social-credit style scoring systems. Modernisation must not come at the expense of constitutional freedoms, privacy rights, or equal access to public services. I urge the Department of Home Affairs to reconsider the scope and safeguards of the proposed regulations before implementation. Kind regards, A concerned South African citizen	Shiv	KwaZulu-Natal

	2026-05-25 17:44:39	No I do not	All of the above	Centralised Economic Kill-Switch Risks	It is a no from me. In fact, the draft Identification Regulations, 2026 should be withdrawn in their current form because they likely exceed constitutionally permissible limits on administrative power, fail the proportionality requirements implicit in sections 14 and 33 of the Constitution, and create a legally dangerous framework for continuous state-corporate identity surveillance without adequate statutory safeguards. The regulations fundamentally alter the nature of identity administration in South Africa. They do not merely modernise document handling. They establish the legal architecture for a centralised, interoperable, continuously updated digital identity ecosystem tied to biometric authentication, private-sector data integration, behavioural compliance obligations, and algorithmic trust stratification. Such a transformation cannot lawfully be introduced through subordinate regulations without far clearer statutory authority and substantially stronger constitutional protections. The regulations likely exceed the lawful scope of delegated authority The Minister may regulate identity administration procedures. However, these regulations appear to go materially further by establishing an integrated digital identity governance framework with profound implications for privacy rights, data sovereignty, transactional participation, and access to essential services. Where subordinate legislation materially affects constitutional rights, courts require clear and specific empowering authority from Parliament. The regulations appear to create: - Continuous data interoperability between state and private actors - Persistent digital identity profiling - Behaviour-linked identity assurance consequences - Expanded biometric dependency - Dynamic credential governance systems Those are substantive policy choices with constitutional implications, not merely administrative details. Major constitutional transformations should occur through primary legislation subjected to full parliamentary scrutiny, not through regulations. The framework creates disproportionate privacy intrusions Section 14 of the Constitution protects informational privacy. Any state system enabling centralised aggregation, synchronisation, and continuous updating of identity-linked personal data must satisfy strict standards of necessity, proportionality, and procedural protection. The regulations fail to demonstrate: - Why such extensive interoperability is strictly necessary - Why less intrusive alternatives are inadequate - What hard limits exist on secondary data use - What independent oversight mechanisms exist - What judicial remedies are available for misuse - How data minimisation principles will be enforced - How the government or ANC will prevent tracking and privacy breaches. The mere existence of POPIA does not cure these defects. POPIA compliance is not a substitute for constitutional proportionality. South Africa has repeatedly demonstrated institutional weaknesses in cybersecurity, data governance, and protection against unlawful information exposure. In that context, creating a centralised identity ecosystem materially increases systemic risk to citizens. The “Identity Assurance Level” mechanism is constitutionally suspect Any framework that algorithmically degrades an individual’s authentication reliability, service accessibility, or transactional legitimacy based on administrative compliance raises profound constitutional concerns. A democratic state may verify identity. It may not create behavioural ranking systems that indirectly condition participation in civic or economic life upon continuous compliance with bureaucratic updating obligations. The practical effects are foreseeable: - Delayed transactions - Authentication failures - Service exclusion - Financial friction - Administrative discrimination Such outcomes will disproportionately affect poor, rural, elderly, technologically vulnerable, and marginalised populations. A rights-based constitutional order cannot permit digitally stratified citizenship through opaque administrative scoring mechanisms. The regulations are irrational in the South African context Under constitutional legality principles, exercises of public power must be rationally connected to legitimate governmental purposes. The proposal appears insufficiently tailored to South Africa’s actual infrastructural conditions, including: - High rates of violent smartphone theft - Connectivity instability - Digital literacy disparities - Rural access limitations - Frequent device turnover - Load-shedding-related disruptions A digital identity system that can become inaccessible because of device theft or technological failure risks denying practical access to civic participation and essential verification functions. The regulations appear silent or inadequate regarding: - Emergency restoration mechanisms - Offline fallback systems - Guaranteed continuity protections - Non-smartphone alternatives - Immediate re-verification rights That omission is irrational given foreseeable real-world conditions. The framework creates unacceptable risks of future function creep Constitutional analysis must consider not only present intentions but foreseeable future applications of state power. The regulations establish infrastructure capable of enabling: - Cross-platform identity tracking - Behavioural profiling - Transaction-linked monitoring - Automated exclusion mechanisms - Expanded state-private surveillance integration Once established, such systems rarely remain confined to their original administrative purpose. The absence of explicit anti-surveillance limitations, statutory purpose restrictions, independent oversight structures, and judicial preconditions materially increases the risk of future abuse. Constitutional systems are designed on the assumption that powers granted today may later be exercised improperly. These regulations do not adequately constrain that risk. Procedural fairness concerns remain unresolved Section 33 of the Constitution and PAJA require lawful, reasonable, and procedurally fair administrative action. Where algorithmic systems may negatively affect authentication outcomes, access reliability, or identity legitimacy, affected individuals must have: - Clear notice - Reasons for adverse outcomes - Rapid appeal rights - Human review mechanisms - Transparent correction procedures The regulations do not appear to provide sufficient procedural safeguards against erroneous or arbitrary digital exclusion. Conclusion Digital modernisation is not inherently objectionable. However, constitutional democracies must modernise within carefully defined limits that preserve liberty, dignity, privacy, and equal participation. These regulations do not yet strike that balance. They centralise excessive power, insufficiently constrain future misuse, inadequately protect vulnerable populations, and appear to attempt major constitutional restructuring through subordinate legislation rather than robust parliamentary process. For those reasons, the draft Identification Regulations, 2026 should be withdrawn and comprehensively redrafted with substantially stronger constitutional, procedural, cybersecurity, and anti-surveillance safeguards before any implementation proceeds. 	2026-05-25 17:28:22	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically “lapse” triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch.	Sandra	Western Cape		self-employed

	2026-05-25 15:17:30	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I am writing to formally object to the proposed automated identity framework. As a citizen, I am very concerned that these regulations compromise my constitutional right to privacy and create severe security risks that will disrupt my daily life. I strongly urge the Department to revise the following points: The Smartphone Security Risk: Locking my digital identity to a single smartphone device is a sure safety hazard. Given the high rates of muggings, robberies and smash and grabs and mobile theft in South Africa, losing my phone shouldn't mean my entire civic identity is instantly frozen. Without a secure, remote recovery process, this regulation will leave crime victims stranded and administratively paralyzed when they are at their most vulnerable. Corporate Surveillance and Data Sharing: The state has no right to invade my privacy by linking public civic registries with private banks and telecom databases in real time. Blurring these lines without my explicit consent creates an unacceptable surveillance network and a massive data leak risk. "#person of interest" The Algorithmic Scoring Loop: Punishing citizens with a lower "Identity Assurance Level" for missing a 30 day window period to update routine details like an email or home address is an extreme overreach. It acts like a social credit score that will unfairly block me from accessing my own money and daily services and access to various other platforms or activities, this is not what a democracy entails. The 10-Year Queue Bottleneck: Forcing citizens into notorious Home Affairs physical queues every 10 years to "re-prove" their identity defeats the purpose of digital modernization and creates an unnecessary barrier to exercising basic civil rights. In conclusion this blueprint creates dangerous infrastructure for future state surveillance and places a high stakes or burden on ordinary people. Public participation is a binding constitutional right, and I request that the Department prioritize citizen safety and privacy over corporate integration.	Michelle	Western Cape		business owner

	2026-05-25 15:00:03	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The biggest threat depends on what you value most — privacy, resilience, freedom of movement, or practical access — but many cybersecurity and civil-liberty experts would argue that the most serious long-term risk is: Centralised economic kill-switch risks This becomes the most powerful threat because once identity, banking, tax, healthcare, travel, licensing, and communications become linked to a single digital identity infrastructure, access can potentially be restricted instantly and at scale. Why many people see this as the highest-risk scenario: A single error, hack, false flag, or bureaucratic mistake could lock someone out of essential services. Governments or institutions could theoretically freeze participation in society without due process. It creates dependency on continuous system availability and compliance. It concentrates enormous power into a small number of institutions or technology providers. This risk becomes even larger when combined with: biometric authentication, cashless payment systems, centralized databases, AI surveillance, and mandatory digital verification for daily activities.	Maura	Gauteng		
	2026-05-25 14:59:59	No I do not	All of the above	Centralised Economic Kill-Switch Risks	This is one of the most horrific pieces of 'legislation' I have ever heard of. It is apartheid on steroids. In that it is state overreach. It has been profoundly opposed all over the world and rightly so. Unfortunately, the ramifications listed above don't even begin to crack the surface of the problem with digital IDs.	Karen	Gauteng

	2026-05-25 14:48:54	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I do not support the proposed draft Identification Regulations, 2026 in their current form. While I understand the need for modernisation and improved service delivery, I believe these proposals create serious risks to citizens' constitutional rights, privacy, freedom, and equal access to public services. My primary concern is the creation of a highly centralised digital identity system that appears to combine government and private-sector data into a continuously shared network. I do not believe citizens should be subjected to ongoing synchronisation between banks, telecom providers, and state databases without extremely strict legal protections, transparency, and independent oversight. Such a system creates the potential for abuse, surveillance, data breaches, and function creep far beyond the original purpose of identification. I am also deeply concerned about the proposed "Identity Assurance Level" mechanism. Any system that effectively scores or ranks citizens based on administrative compliance risks becoming discriminatory and exclusionary. Essential rights and services should not depend on algorithmic profiling or automated trust ratings. Citizens should not face blocked transactions or restricted access because of delayed updates or technical errors. The proposal also appears to disadvantage vulnerable South Africans, including elderly people, low-income citizens, rural communities, and individuals who cannot reliably access smartphones, mobile data, electricity, or secure devices. A digital identity system must never become a barrier to participation in society or access to lawful rights. In addition, South Africa has high levels of cellphone theft and cybercrime. Tying a person's legal identity to a single smartphone device raises serious security and practical concerns. The regulations do not appear to provide sufficient guarantees regarding recovery procedures, emergency access, identity restoration, or protection against digital exclusion after theft or device failure. I further object to any framework that could eventually enable expanded state surveillance or social-credit-style systems. South Africa's constitutional democracy was built on protecting human dignity, privacy, freedom of movement, equality before the law, and freedom from arbitrary state control. Any identity framework must be designed with those rights as the highest priority. Before implementing such sweeping changes, I believe government should: • Provide far stronger privacy protections and independent oversight. • Guarantee that physical identification and in-person services remain permanently available without disadvantage. • Prohibit any form of citizen scoring, behavioural ranking, or automated exclusion. • Limit data-sharing between government and private entities. • Publish clear cybersecurity, recovery, and appeals procedures. • Conduct extensive public consultation and independent constitutional review. Modernisation must not come at the cost of civil liberties. Convenience should never override privacy, freedom, democratic accountability, and human rights. If I had to identify one central concern, it would be the creation of a centralised, interconnected digital identity system that could gradually enable surveillance, automated exclusion, and loss of individual autonomy. Many of the other concerns flow from that single issue. Once identity, banking, telecom data, biometrics, authentication systems, and behavioural compliance mechanisms become deeply integrated, the state — or potentially private entities connected to the system — gains unprecedented power over a person's ability to function in society. Even if the current government has good intentions, the infrastructure itself could later be expanded or abused in ways citizens never originally agreed to. A concise way to express this in your submission could be: My greatest concern is the creation of a centralised digital identity infrastructure that could enable excessive surveillance, automated exclusion, and loss of personal freedom over time. An identity system should exist to verify citizenship and protect rights — not to monitor behaviour, rank citizens, or create dependence on interconnected digital systems that can deny access to essential services through technical failures, data errors, or administrative decisions. South Africa's history makes it especially important that any national identification framework be designed with strict constitutional safeguards against overreach, abuse of power, and erosion of privacy. Once this infrastructure exists, future governments or institutions may expand its use far beyond its original purpose. Convenience and technological progress must never come at the expense of civil liberties, democratic protections, and human dignity.	Judy	Western Cape		employed individual

	2026-05-25 14:37:12	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The growing push toward mandatory digital identification systems raises serious concerns about privacy, freedom, and the future relationship between citizens and governments. While digital technology can improve efficiency, many people fear that these systems are increasingly being used not to serve the public, but to monitor, track, and control populations through centralised data structures. A digital ID linked to banking, healthcare, taxation, property ownership, travel, communications, and social services creates an unprecedented level of control over ordinary citizens. Once every aspect of a person's life is connected through a single digital profile, individual freedom becomes vulnerable to political agendas, technological abuse, cyberattacks, and government overreach. History has repeatedly shown that concentrated power — whether political, ideological, or economic — can be abused. Many critics argue that global initiatives tied to long-term governance frameworks, including aspects of the so-called "2030 Agenda," risk moving societies toward excessive centralisation and reduced national sovereignty. Citizens are increasingly concerned that decisions affecting their daily lives are being shaped by unelected global institutions, large technology corporations, and powerful financial interests rather than local democratic processes. Another major concern is the role of massive data centres and artificial intelligence systems that collect, store, and analyse personal information on millions of people. The more data that is centralised, the greater the risk of surveillance, censorship, behavioural manipulation, and social control. If access to essential services can one day depend on digital compliance, then freedom itself may become conditional. In addition, cybersecurity threats continue to grow worldwide. No digital system is completely safe from hacking, leaks, identity theft, or misuse. A centralised digital ID system creates a single point of failure that could expose citizens to devastating risks if compromised. People should have the right to live, work, travel, own property, trade, and participate in society without being forced into fully digital tracking systems. Technology should remain a tool that serves humanity — not a mechanism that controls it. Governments must protect constitutional freedoms, privacy rights. Citizens should never be pressured into surrendering their freedoms in exchange for convenience. A free society depends on human dignity, personal choice, and the protection of civil liberties — not on centralised systems capable of monitoring every aspect of human life. 	2026-05-25 13:54:37	No I do not	All of the above	Centralised Economic Kill-Switch Risks	It us clear that Gov is going toward a communistic approach and will destroy the value of living in South Africa.. The system discriminates against those without access to smartphones, reliable internet, or digital literacy, which could exclude millions from essential government and financial services. By tying all civic and financial information to a central population register, the system creates a high-value target for hackers, syndicates, and systemic data breaches. The ID is bound to a single cryptographic device. If a phone is lost or stolen, citizens face mandatory queues or bureaucratic friction to un-bind and re-verify their credentials before accessing services. This is idiotic thinking! Consolidating movement, health, and financial data into one networked spine threatens civil liberties, inviting potential government surveillance or corporate data profiling. Is this going towards a communist state? With all identity functions linked in one place, technical errors, bureaucratic flags, or compromised accounts can instantly "lock" a citizen out of work, banking, and medical aid.	Charl	Gauteng		unemployed individual
	2026-05-25 13:48:51	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Hierdie beheer staan my glad nie aan nie. Ek is 'n volwasse persoon wat heeltemal by magte is om my eie identiteit te bestuur en te beheer. Hoekom moet my identiteitsbewys na n tydperk verval? Sodat daar sekere 'regte' van my ontneem kan word? Ek is nie n minderjarige kind om 'gestraf' te word vir 'ongehoorsaamheid' aan die staat se nukke en grille en ondeurdagte besluite nie. Ek is tans n wetsgehoorsame burger, van wie se belastinggeld die staat afhanklik is. Miskien moet die staat besef dat hulle niks is en geen se het , as daar nie landsburgers is om hulle vet te voer nie. Ek stel nie belang in hulle poging tot beheer oor my nie. En wat as daar fout kom met hulle stelsel waarop al die id's gelaai is? Waar in hierdie land, waar die staat dinge moes beheer, het daar nie fout gekom nie?	Petro	Gauteng		self-employed

	2026-05-25 13:44:23	No I do not	All of the above	Centralised Economic Kill-Switch Risks	It's does bot bode well that in a democratic country ,our government wants to control our citizens in such specific ways so as to ensure our data, financial privacy and business movements are monitored in such detail. The idea that the government could use a kill switch over our bank accounts if they deem it necessary is horrifying. It's ushering in a dystopia world you only watch in the movies.	Rayleine	Western Cape		business owner
	2026-05-25 13:43:58	No I do not	All of the above	Centralised Economic Kill-Switch Risks	All of the above points - not just one of them! The govt is slowly moving to digitalisation on everything concerning the people in order to fully control us all. Track us; What we eat, when we eat, if we are allowed to spend our money or not etc etc. I do not agree with any of this.	Helena	Gauteng		

	2026-05-25 13:36:39	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Submission Opposing the Draft Identification Regulations, 2026 (Government Gazette No. 54610) I formally object to the Draft Identification Regulations, 2026, on the basis that they introduce systemic risks to civil liberties, privacy, access to services, and democratic participation in South Africa. An identity system is foundational to the exercise of basic rights. The proposed framework, however, shifts from a rights-enabling system to a conditional, surveillance-adjacent architecture that risks exclusion, inequality, and administrative harm. 1. Interoperable Private Corporate Network The proposal to create real-time, bi-directional data pipelines between the state and “trusted entities” such as banks and telecom providers fundamentally erodes the separation between public governance and private commerce. This model: - Collapses meaningful consent over how personal data is shared and propagated. - Exposes citizens to expanded surveillance across both public and private domains. - Creates amplified attack surfaces for data breaches, given the scale and interconnectivity of the system. Citizens should not be subjected to an automated, continuous data-sharing ecosystem in which a change made in a private system becomes instantly embedded in a state identity register without explicit, case-by-case authorisation. 2. The ‘Identity Assurance’ Scoring Loop The introduction of an algorithmically adjusted “Identity Assurance Level” effectively creates a state-managed reputational scoring system. This mechanism is deeply troubling because: - It penalises ordinary, non-malicious administrative delays (e.g., not updating an email or address within 30 days). - It introduces opaque and potentially unchallengeable decision-making into access to banking, telecommunications, and public services. - It risks creating a de facto “social credit” system that disproportionately affects vulnerable populations who may lack digital access or administrative capacity. Access to essential services must never depend on dynamic scoring mechanisms that are neither transparent nor easily contestable. 3. Device-Locked Digital Identity (“Stolen Phone Lockdown”) Binding a digital identity to a single smartphone device presents a severe operational and human risk in the South African context, where mobile device theft is prevalent. The absence of a clearly defined, secure recovery pathway creates the risk that: - Citizens could be immediately locked out of their identity, finances, and services following theft or loss. - Individuals could face prolonged administrative paralysis with no ability to authenticate themselves remotely. - The system effectively punishes victims of crime with bureaucratic exclusion. - The lack of control, law enforcement and judicial outcomes for smartphone theft does not benefit the owner, but that of the thief. A national identity system must be resilient, recoverable, and user-protective—not fragile and punitive. 4. The 10-Year Physical Revalidation Requirement The requirement that individuals must physically present themselves after 10 years—or risk complete identity lapse—is impractical and exclusionary. This approach: - Reinforces inefficient, queue-based administrative systems that have historically strained citizens. - Disadvantages rural communities, the elderly, and people with mobility constraints. - Undermines the benefits of digital transformation by reintroducing compulsory physical dependency. A modern identity system should reduce—not preserve—barriers to access. 5. Risk of Function Creep and Surveillance Expansion The consolidation of biometric data, behavioural updates, and transactional identity records into a single dynamic system creates a powerful infrastructure capable of future misuse. Even if not immediately intended, such a system: - Can be expanded into surveillance or compliance enforcement tools without sufficient safeguards. - Risks enabling exclusionary practices tied to behavioural or administrative metrics. - Lacks clear guardrails to prevent mission creep or abuse of authority. South Africa’s democratic framework requires that identity systems remain strictly limited, purpose-bound, and rights-protective. In conclusion In its current form, the Draft Identification Regulations, 2026 represent a fundamental departure from a citizen-centric identity system toward a control-oriented digital infrastructure. I respectfully submit that these regulations should be withdrawn and fundamentally reconsidered, with particular emphasis on: - Stronger privacy protections and consent mechanisms - Elimination of scoring or ranking systems tied to identity validity - Robust, user-friendly recovery mechanisms - Removal of unnecessary physical attendance requirements - Clear legal safeguards against function creep and surveillance expansion An identity system must empower citizens - not condition their participation in society. 	2026-05-25 12:37:06	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Privacy is a right that is a prerequisite for freedom. No one can have freedom without privacy. The State does not need nor has any right to the digital information of its citizens. None of our legal or social responsibilities require the breach of our privacy in order to protect us. This law is designed to promote compliance, prevent dissent and entrap citizens in a system. That requires its citizens to prove their innocence and compliance every day rather than providing them freedom and dealing with actual criminals who steal, rape and murder. Ill say it again. There is no such thing as freedom without PRIVACY.	Emile	KwaZulu-Natal		employed individual
	2026-05-25 12:35:33	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I am a pensioner and do not trust any of these new ideas and changes because you cannot trust the Government and politicians, especially all the criminals that just help themselves with our money. ANC and company are just looking again for new ways to be corrupt and to feed the criminals with our money and info for their use. SORRY I WON'T HAVE A DIGITAL ID. If the BEE is too lazy or not equipped to do their job properly to avoid any delays in the exsisting systems, just fire them and get rid of themall and appoint capable people who wants to work	Corrie	Gauteng		retired

	2026-05-25 11:58:45	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Government cannot even stop officials stealing physical goods and cash, now you want to be the custodian of everyones info? It will get stolen and misused. Not everyone has a smartphone, nor does everyone want a smartphone. Some people choose not to have one as they have addictive personalities. Corporates should not have access to citizen safety, look what MTN did in Iran. You guys just want a social credit score, don't you? Why not just admit it? You want it easy to track people you disagree with.	Grant	Western Cape		
	2026-05-25 11:55:34	No I do not	All of the above	Centralised Economic Kill-Switch Risks	There is real likelihood of government, and other role players, misuse of centralized digital ID to silence critics and control how people live their lives, what they eat, where they travel, what they say, even think (i.e. penalize on-line posts that don't conform to certain narratives) , who they worship and how they interact with others, including family relationships. This is Orwellian government over-reach, and it cannot end well. Also, others could access your "secure digital ID" (online or in person) and victims would be unable to prevent a "mugger" accessing their accounts, etc. with everything linked to one insecure device that is opened using facial biometrics, etc.. The up-side of digital ID is small, the downside is a huge risk.	stephen	Western Cape		employed individual

	2026-05-25 11:33:55	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The draft Identification Regulations, 2026, trade convenience for control, turning a basic right into a conditional privilege. Forcing citizens to tether their legal identity to a single smartphone—vulnerable to theft in a country with high mobile crime—risks instant administrative paralysis if a device is lost or stolen, with no clear recovery path. Real-time data pipelines to private corporations erase the line between public and private information, while the "Identity Assurance" scoring system punishes routine life changes with bureaucratic exclusion. The 10-year in-person verification trap and centralised biometric repository lay the groundwork for future surveillance and social credit-style control, all under the guise of modernisation. These rules will entrench a system where your identity—and your rights—are held hostage by algorithmic whims and corporate access. South Africans must reject this false choice: efficiency should never come at the cost of privacy, autonomy, or the very foundation of our democracy.	Leon	Gauteng		
	2026-05-25 11:31:00	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I object to all of the above. We are being forced to comply with rules and regulations that are invasive to our sovereignty as human beings. The fact that you cannot operate/purchase/bank without a cell phone or computer is ridiculous and unfair. All of this is taking away our freedom of choice.	Marcia	KwaZulu-Natal		employed individual

	2026-05-25 11:20:05	No I do not	All of the above	Centralised Economic Kill-Switch Risks	If a digital ID becomes linked to banking, payments, SIM cards, transport, tax, licensing, healthcare, or employment systems, then access to normal life can potentially be suspended centrally — whether due to error, cyberattack, policy abuse, administrative disputes, or automated enforcement. That creates a situation where: one system failure affects everything, people become fully dependent on digital approval, and economic participation can effectively be switched off remotely. The concern is less about convenience today, and more about the long-term concentration of control over identity, access, and economic survival.	janus	Gauteng		employed individual

	2026-05-25 10:46:13	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Identity theft is real, and I have already been a victim of this. This new proposal would just make identity theft so much easier. I think the proposal is ludicrous. Also, what happens if their system is down when a supplier needs access to your information. Then you cannot just take your ID out of your wallet and show them who you are??? You will have many frustrated businesses and clients together with a huge cyber risk! Not to even mention the difficulty for everyone, especially people in rural areas to update this every 5 years!	Rusermie	Western Cape		employed individual
	2026-05-25 10:45:10	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The state should not be able to arbitrarily have access to citizens personal information or have oversight or involvement in any personal interactions with banks and other institutions or companies. The state must have no ability to "switch off" your access to your own money or services of any kind. Placing your "ID" on a smart phone without the appropriate infrastructure to easily and quickly recover that ID is completely idiotic and an infringement of your rights as a human being. The automatic deletion or suspension of your Identity with the state should not be allowed - the only event that should affect this would be death or proven identity theft. The state has already shown its complete incompetence in managing just about everything else - and even acting in a punitive illegal way to punish taxpayers if they just don't like your tone of voice - to give them even more power is insanity,	Paul	Gauteng		business owner
	2026-05-25 10:41:25	No I do not	All of the above	Centralised Economic Kill-Switch Risks	This legislation is a deplorable invasion/erosion of my constitutional rights. 1. If your phone is stolen your identity can be stolen. You can also be locked out of banking and other activities. 2. Government can effectively cancel you if they are not happy with your political, religious or other beliefs activities. 3. It can be used as a form of BEE to cancel white businesses or people from the economy. 4. There has been so much fraud in the department of home affairs in the last 20 years, now the public can become victims of criminal activity initialed via department officials. I do not trust government officials an even in fact some of our Presidents we have have had since 2007.	WARREN	KwaZulu-Natal		business owner

	2026-05-25 10:01:49	No I do not	All of the above	Centralised Economic Kill-Switch Risks	This draft regulation seeks to drastically centralize all information about the citizen in the private and corporate sphere into a single government body. This level of centralization is a massive errosion of privacy, and might violate several constitutional rights to privacy. Why should a bank know the exact same about you as the government? Why should an insurance company? Not to mention the other massively damanging clauses of this bill -- e.g. the expiring identity at 5-10 years. No SA citizens identity should ever expire, and this bill now makes your very human identity subject to regular biometric renewal. This is seeminly a clear violation of citizenship rights of South Africa. Also, while added as an additional option for now, it creates a 2-tier society between those that want to live without a smartphone with regular ID cards or green books, and those that live with fancy smartphones. Overall there are several major issues, both moral and constitutional, with the proposed regulation in its entirety and I emplore you to fully withdraw it and focus on enforcement of the current rules.	Nigel	Western Cape		self-employed
	2026-05-25 10:00:53	No I do not	All of the above	Centralised Economic Kill-Switch Risks	What else are they going to think of. Can you imagine trying to manage all of this? They can't even give us lights and water. Leave your citizens alone and in peace. We did not vote to be harassed.	Iris	Gauteng		retired
	2026-05-25 10:00:21	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Besides being now a number and glued to a phone your assets are also at scrutiny. Thus all treated as sheeple. This country was not based on socialism nor Marxism.	M	Western Cape		business owner

	2026-05-25 09:18:37	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Absolutely not!! In a country like South Africa, this kind of government power is dangerous. The government is ridden by corruption and this could mean that individuals are singled out and penalized because of their views and their way of living. Movement will eventually be limited to where and when the government wants you to be at a certain point at a certain time in life. Holidays could be cancelled centrally, if you do not adhere to certain rules and regulations. This is essentially worse than communism, all regulated by a centralized data bank that can be hacked or glitches occur because some AI is malfunctioning. Absolutely NO to any privacy infringement and to government total control over individuals.	Ursula	Western Cape		employed individual
	2026-05-25 09:17:59	No I do not	All of the above	Centralised Economic Kill-Switch Risks		Mike	Western Cape		Non-profit
	2026-05-25 09:17:47	No I do not	All of the above	Centralised Economic Kill-Switch Risks	We can't give government, who is easily corrupted, so much control over our private lives, it gives them much more power over our daily dealings than they should have. This will only result in them eventually controlling us more and more, and if we don't agree with whatever they say, they have the power to disrupt our lives severely. This must be stopped.	Gys	Western Cape		self-employed
	2026-05-25 09:16:50	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The ANC Trying to turn S.A. into China	John	Western Cape		
	2026-05-25 09:16:46	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Our government is terrible at their best. This would give them the tools to economically exclude anyone they felt like for any reason. My data and my family's data would be out there with the least trustworthy of entities. I completly disagree with this direction. Government servers are unreliable and insecure, I do not trust them with this. Just make the other processes work properly - applying for ID, renewing passports, licenses. Bring those up to speed.	Eric	KwaZulu-Natal		employed individual
	2026-05-25 09:16:13	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I have been mugged, smashed and grabbed as well as hijacked. That alone was so traumatic, not to mention how difficult it was to replace everything. And the information lost, this can not be approved.	Ansie	Gauteng		employed individual
	2026-05-25 09:15:17	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The proposed law is unconstitutional as it will remove my right to participate in public life if certain aspects of this control system fails. Corruption or abuse of power can easily be slipped in where digital control capturing occurs via corrupt officials or cyber crime specialists. Even voting can be manipulated. The choice must always be there to use physical cards and that must happen by DEFAULT and citizens must APPLY to belong to this new world order control system. That must apply to any young citizen about to come of age also. If global internet is cut by war or emp attacks then all information flow is cut also and we can starve to death or can not fly or pay bills and we lose our bank accounts. Social scoring is a criminal act taking freedom away based on laws made by politicians for control. Blackmailing from politicians can force you to vote for a certain party or you lose your freedom to move or sell or buy or to possess a firearm for self defence. Control per race can follow. Phones allow spying and right of privacy is removed that is also UNCONSTITUTIONAL.	georg	Gauteng		retired

	2026-05-25 07:49:15	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The proposed digital ID system represents yet another mechanism through which government seeks to increase control over the lives of ordinary people by dictating what individuals and groups may, may not, or must do. Such a system threatens not only personal freedom and privacy, but also opens the door to discrimination, surveillance, exclusion, and excessive state control over nearly every aspect of daily life. Once implemented, it creates the potential for governments or institutions to restrict access to services, opportunities, or participation based on compliance with centrally imposed rules and regulations. Furthermore, the practical realities of society appear to have been overlooked. Not everyone owns or can afford a smartphone, particularly people living in rural areas, the elderly, and low-income communities. If such a system becomes mandatory, many individuals who are already financially strained will effectively be forced to purchase expensive devices and maintain internet access simply to participate in normal civic and economic activities. Those unable to do so risk being excluded from essential services, employment opportunities, banking, travel, healthcare, and even basic social participation. This proposed system therefore risks deepening inequality while concentrating unprecedented levels of authority and control in the hands of the state. It represents another step toward an increasingly authoritarian and totalitarian model of governance in which the freedoms, choices, and autonomy of individuals and communities are gradually eroded in the name of administration, security, or convenience. For these reasons, such a system is fundamentally unacceptable and should be strongly opposed in defense of individual liberty, equality, privacy, and democratic rights.	Don	Gauteng		self-employed

	2026-05-25 07:30:34	No I do not	All of the above	Centralised Economic Kill-Switch Risks	This digital ID is inspired by globalists and the World Economic Forum and similar networks. I encourage the minister and government officials to read Revelation 13, especially the information on the mark of the beast. This digital ID system is setting the ground work for the mark of the beast system in Revelation 13. This very system will be a social economic exclusion system if one doesn't have allegiance to a certain leader and ideals. The social credit score element and how one's ID could be revoked or frozen is a tactic that the beast system would be using when it is finally implemented. South Africa has a high statistic of phone theft. Our IDs are safer at home in a safe rather than in our wallets and purses. The policy is quiet on how one would get our ID restored to a new phone and the time this would take. We also replace phones every two years on contract, which means we would have to have our ID moved to a new phone halfway through the five year period. If we lose our phones close to voting time, how would we vote? And how easy would it be to slow the process of renewing our IDs for a certain demographic? People can't be atheists anymore. They need to wake up as to what is happening. Because the mark of the beast is coming which means Jesus is real and He is also coming soon.	Lauren	Gauteng		employed individual
	2026-05-25 07:27:44	No I do not	All of the above	Centralised Economic Kill-Switch Risks	According to the constitution people are not supposed to be denied their citizenship. If a cellphone is stolen the police refuses to open a case if the victim does'nt bring the original packaging. This means the police refuses to open a case if a phone was bought second hand or if the victim doesn't have the original packaging of a phone he bought. This is in connection with the Rica act being unconstitutional to start with, the Rica act deeming a victim guilty unless otherwise convicted, which is unconstitutional. A citizen!'s ID isn't supposed to be subject to a certain political ideology, in this case the fascist ideology of the DA.	Dirk	Free State		employed individual
	2026-05-25 07:27:20	No I do not	All of the above	Centralised Economic Kill-Switch Risks	With any government, but especially this one which has proved itself corrupt, limiting their power over everyday life and interactions should be the norm. Giving them more power to interfere is going to lead to slavery of the citizenry.	Leanne	KwaZulu-Natal		employed individual
	2026-05-25 07:23:55	No I do not	All of the above	Centralised Economic Kill-Switch Risks	While I understand the desire to modernise the processes, I feel the government is not geared for administering and securing any sensitive data at all. Also, I fear this will be used for more nefarious practices, and a breach of privacy in the wrong hands is a big no-no. Rather, fix the current processes before you collect your citizens' lives into a database.	Herman	Gauteng		employed individual

	2026-05-25 07:15:36	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Citizen privacy should not be a question. The government cannot centralise IDs, they should rather sort their current systems out to get it more efficient and effective. We pay so much in taxes and levies, this shouldn't be something we have to worry about.	Jade	Eastern Cape		employed individual
	2026-05-25 07:13:11	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Why must we have a digital id just to be controlled by people!!! I just don't stand for it.....GOD gave me freedom and i will not be controlled by humans!!!	Martie	Free State		retired
	2026-05-25 07:07:54	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I will not be part of a communist state where the state controls my personal life and opening the door to social scoring systems. Start getting rid of the corrupt officials making and providing ID documents to illegal foreigners and doing what they are paid for instead of looking to clamp down on ordinary citizens, with all kinds of controls, who actually pay your salary. You work for us, and not we for you.	Riaan	Gauteng		self-employed
