	2026-05-24 22:58:26	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Cyber security has proven time and time again that it is far from secure. Hacks into supposedly secure data banks happen frequently. This puts our personal info at severe risk. Additionally, the State has no right to control the citizens of this country to the extent this digital network will ultimately lead to. It is immoral, dangerous and should absolutely be forbidden.	William	Western Cape		business owner
	2026-05-24 22:45:00	No I do not	All of the above	Centralised Economic Kill-Switch Risks	A digital identification system is the first step to a tyrannical government . As much as safety and convenience is being propagated as the core reasons, some of us are fully aware of the globalist agenda to "mark" global citizens like cattle. Easy to suppress activism against government overreach. With the perpetual narrowing of private money funding government infrastructure projects, the continues calls for the privatization of state owned assets and expansion of public/private partnerships, it won't be long before citizens would have to adhere to policies (masked as legislation) enacted by unelected bureaucrats. Next, smart cities restricting citizens inside parameters determined by the so-called governments. Making surveillance even more effective and freedoms less of realities. Thereafter central bank digital currencies, then we can just as well have to accept that no sale, purchase, travel or any other freedom will be subjected to whoever is in the administration of the country. So no thank you. for digital id's.	Brian	Free State		unemployed individual

	2026-05-24 22:24:28	No I do not	All of the above	Centralised Economic Kill-Switch Risks	This discussion is about giving away all chance of personal sovereignty in life, or not. The economic kill-switch built implicitly into the digital ID under discussion, means giving the authorities the power of real-time blocking of access to all bank accounts and financial activity, effectively paralyzing independent survival (debanking). It is the ultimate means of control lying at the heart of the Social Credit System along with 24/7 surveillance, which is also built into the this universal tracking digital ID. The whole thing must be emphatically rejected at every level.	Helen	KwaZulu-Natal		self-employed
	2026-05-24 22:14:38	No I do not	All of the above	Centralised Economic Kill-Switch Risks		Robyn	Western Cape		employed individual
	2026-05-24 22:12:19	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Leon Schreiber's digital ID is a Trojan horse for total surveillance and control, South African style. Once every citizen is tokenized and trackable, your freedoms vanish into a centralized database ripe for abuse by the powerful—exactly as these systems have always been designed.	Sarah-Jane	Western Cape		self-employed
	2026-05-24 22:09:15	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Overly clearly, this is simply about heinous, electronic control over which the common man has no defence or control. The obviousness of this is actually blatant & beyond evil and should never, ever be allowed. While "academically" there "could" on the face of this proposal be a move towards technological advancement, the sad fact is that the people in government in control of this information and "kill-switch" power are deeply untrustworthy. This does not need further evidence. In a perfect, 100% moral world this "could" be argued more positively, but, we're not even close to achieving such a decency within our government, as we speak. It's a no-brainer: NO, NO, NO ... this can never be allowed to take place!	Dorian	Western Cape		self-employed

	2026-05-24 20:23:23	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Minister I have supported your reforms and think your ideas are top class...this one, however, is frightfully scary and needs to be scrapped. The possibilities of violations against an individual are just too many to be listed; from the all too real risk of criminal fraud by hacking to the conspiracy theories of social punishment via "kill switch" technologies should a person not conform to what is deemed "needed" or "normal" by the "elites". Six years ago the world governments went mad because of a virus and trampled upon peoples' rights and freedoms. The insistence upon injecting an untested drug into every person and suggesting that opposition to such was tantamount to treason is the very reason I do not trust any government with a decision made on my behalf when I can clearly see the future pitfalls. And this decision you want to make smacks of "future pitfalls". Any convenience for the public and for government of digital IDs is nullified by the potential for the human rights violations that are likely to occur. And violations will most definitely occur because human nature is unlikely to change and history shows the cruelty of human nature.	TRACY	Gauteng		business owner

	2026-05-24 20:16:01	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I vote NO against the draft Identification Regulations, 2026. I do NOT support the introduction of the dual-track digital identity system, including the MyMzansi smartphone application and the Digital Identity Credential. I am concerned about the risks this poses to privacy, personal security, and constitutional rights. Key reasons for my opposition include: • The proposed real-time data sharing with private entities and the creation of an interoperable network between state and corporate databases. • The introduction of an “Identity Assurance” scoring system that could penalise citizens for everyday life changes. • The device-locking of digital identity and the lack of clear, secure recovery processes in a country with high rates of phone theft. • The risk of function creep and potential for increased surveillance or exclusion. • The requirement for periodic physical verification, which may create new barriers instead of removing them. I believe these changes represent an unnecessary and risky overhaul of our national identity system that could compromise citizens’ freedoms and security rather than genuinely improve service delivery. I request that my NO vote and these concerns be formally recorded as part of the public participation process.	Elize	Western Cape

	2026-05-24 19:53:46	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The Department of Home Affairs push for a smartphone based Digital Identity Credential through the MyMzansi app, while marketed as “Home Affairs @ home,” introduces severe structural risks that outweigh its convenience claims. Centralised Cyber and Security Risk: A single national system housing biometrics, device binding, cryptographic keys, and liveness data creates an exceptionally attractive target for state level hackers or insiders. A breach or outage could compromise millions simultaneously not to mention the temptation of a Authoritarian State to use it as a tracking and penal system. The 10-Year Physical Queue Trap: Digital credentials expire every 5 years and can be renewed remotely via facial scan. However, if no in person enrolment or trusted entity verification occurs within any 10 year period, the credential fully lapses. Users must then queue physically again trapping millions in periodic Home Affairs visits despite the “digital” promise, so citizens should endlessly validate their existance to the State, what absolute dystopian idea. Corporate Interoperability and Privacy Creep: The framework enables broad data sharing agreements with banks, telcos, and other “trusted entities” for real time verification. This fosters ongoing corporate access to population register data, expanding surveillance and profiling far beyond original identity purposes. The 30-Day Address Notification Penalty: Citizens must report changes to residential address, contact details, or email within 30 days. Non-compliance risks suspension/revocation of the digital ID, turning routine life updates into a bureaucratic trap with potential exclusion from services. Welcome to the Communist Republic of South Africa with a special flavour of China. Structural Function Creep and Tracking: Device binding, mandatory biometrics, and API driven verification lay the technical foundation for continuous tracking, behavioural profiling, and expanded uses well beyond basic identification. Welcome to the Communist Republic of South Africa with a special flavour of China. Centralised Economic Kill-Switch Risks: Full reliance on a government controlled digital credential for banking, grants, travel, and contracts creates the infrastructure for rapid suspension or revocation effectively freezing individuals out of the economy at the flick of a switch. Soft Discrimination and Digital Exclusion: The system disadvantages the elderly, rural poor, those without reliable smartphones/ internet, or device compromised users. While physical cards remain, pressure toward digital use risks de facto exclusion from efficient services. Overall, these amendments centralise power and vulnerability in a flawed digital ecosystem rather than genuinely modernising identity access for all South Africans. Greater decentralisation, stronger privacy guardrails, and genuine optionality are urgently needed.	Jean	Gauteng		employed individual

	2026-05-24 19:26:22	No I do not	All of the above	Centralised Economic Kill-Switch Risks	1. Introduction I am writing to formally log my objection to the proposed amendments to the Identification Regulations concerning the introduction of the smartphone-based "Digital Identity Credential" via the MyMzansi application. While digital modernization is a noble goal, the current framework introduces severe constitutional violations, socioeconomic exclusion, and existential risks to the citizens of South Africa. I request that these regulations be rejected or heavily overhauled based on the grounds detailed below. 2. Socioeconomic Exclusion and Indirect Discrimination (The Smartphone Assumption) The draft regulations are built on the fundamentally flawed premise that all South Africans possess, or can afford to maintain, a smartphone capable of running the MyMzansi application, biometric liveness detection, and stable internet connectivity. • The Reality: Millions of South Africans live below the poverty line. Forcing a digital shift—even an optional one that sets a precedent for resource allocation—incentivizes a two-tier society. • Undue Pressure on the Poor: If digital IDs become the preferred avenue for corporate and state transactions, vulnerable citizens will face immense pressure to divert scarce financial resources away from basic needs like shelter and food simply to purchase smart technology to prove who they are. • Constitutional Breach: This constitutes indirect discrimination based on socioeconomic status, violating Section 9 (Equality) of the Constitution of the Republic of South Africa, by creating structural barriers to civil identity. 3. State Surveillance, Corporate Interoperability, and Violation of Privacy The framework outlines an "Interoperable Private Corporate Network" that enables bi-directional, real-time data sharing between the state population register and private entities (banks, telecoms). • Invasion of Privacy: Automatically synchronizing real-time personal updates across public and private lines blurs the boundary between public civic duty and private corporate monitoring. • The Blueprint for Function Creep: Centralizing a dynamic repository of real-time biometric signatures, tracking variables, and device data creates an immediate infrastructure for state surveillance and biometric tracking. This is a direct violation of Section 14 (Privacy) of the Constitution and overrides the spirit of the Protection of Personal Information Act (POPIA), 2013. 4. Financial Exclusion and the Economic "Kill-Switch" Risk The regulations introduce an "Identity Assurance" scoring loop and the immediate cryptographic locking of a token to a single device. • Administrative Paralysis: In a country plagued by high mobile theft and muggings, freezing a digital ID upon phone loss with no remote, secure pathway for restoration strips a citizen of their economic agency instantly. • Suspension of Trade: By tying access to banking, employment, and trade to an algorithmic tiering or a device-dependent token, the state creates an economic "kill-switch." This grants the government and automated algorithms the unprecedented power to effectively suspend a citizen's ability to trade, earn an income, or buy food. • Religious and Ethical Objections: This concentration of absolute economic control—where a centralized digital token dictates whether an individual is permitted to buy, sell, or participate in the economy—mirrors the prophetic warnings regarding totalitarian control over trade found in the Book of Revelation (Chapter 13). Citizens holding these deeply rooted religious convictions must have their freedom of conscience protected under Section 15 of the Constitution. 5. Conclusion and Demands The regulations as they stand do not protect the citizen; they expose them to algorithmic exclusion, device dependency, and state overreach. I demand that: 1. The physical Smart ID card and standard manual updates remain permanently equal, fully funded, and accessible without penalty or "identity assurance" tiering. 2. All real-time, bi-directional data integration with private corporate networks be removed to protect citizen privacy. 3. A robust, non-digital, decentralized alternative be guaranteed so that no citizen can ever have their economic right to buy, sell, or work suspended by digital or technological failure. 	2026-05-24 16:41:12	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I vote NO against the draft Identification Regulations, 2026. I do NOT support the introduction of the dual-track digital identity system, including the MyMzansi smartphone application and the Digital Identity Credential. I am concerned about the risks this poses to privacy, personal security, and constitutional rights. Key reasons for my opposition include: • The proposed real-time data sharing with private entities and the creation of an interoperable network between state and corporate databases. • The introduction of an "Identity Assurance" scoring system that could penalise citizens for everyday life changes. • The device-locking of digital identity and the lack of clear, secure recovery processes in a country with high rates of phone theft. • The risk of function creep and potential for increased surveillance or exclusion. • The requirement for periodic physical verification, which may create new barriers instead of removing them. I believe these changes represent an unnecessary and risky overhaul of our national identity system that could compromise citizens' freedoms and security rather than genuinely improve service delivery. I request that my NO vote and these concerns be formally recorded as part of the public participation process.	Bianca	Western Cape

	2026-05-24 11:03:11	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Because once identity, banking, telecoms, and government verification are integrated into one centralised system, a technical error, fraud flag, policy change, or administrative mistake could effectively block a citizen from participating normally in economic life. My concern is not only abuse by the current government, but the long-term creation of a system where access to everyday life becomes dependent on continuous digital validation and institutional approval. South Africa does not have a history of a dependable and transparent government. You can’t fix what is broke from the outside in, you have to fix the inside first before starting to build the outside.	Michelle	Western Cape		employed individual
	2026-05-24 11:00:31	No I do not	All of the above	Centralised Economic Kill-Switch Risks	This is clearly a WEF exercise to enforce control over every single person in the country. Politicians LOVE control, and this proves it.	Gregg	Western Cape		self-employed
	2026-05-24 10:59:39	No I do not	All of the above	Centralised Economic Kill-Switch Risks	South Africa is a free and democratic country. It is not a Communist, Fascist and Totalitarian Regime. Even though the cANCer "government" is trying its utmost to change that. I am fully against the impedance of my personal civil liberties and rights. As it is civil and public service cannot support or even complete their respective public mandates. So tto give the "government" full control of my identity is un acceptable in any form. 	2026-05-24 09:54:24	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis.	Andrea	Gauteng		self-employed

	2026-05-24 09:46:11	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Digital ID is no more than an attempt at a mass control mechanism designed to usurp our freedoms protected by the Constitution. No. Lovegeist All Prevail Thrive	Zach	Gauteng		self-employed
	2026-05-24 09:45:41	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Please, don't make our country part of the digitally controlled New World Order where everything we do, buy, eat or say is tracked and people are then punished for disobeying government "rules" with a negative score and blocked from certain rights. That's not FREEDOM and democracy!	Corrie	KwaZulu-Natal		retired
	2026-05-24 09:39:10	No I do not	All of the above	Centralised Economic Kill-Switch Risks	This will open the door for a Social Credit Score System. It will give the state too much power to interfere in the lives of ordinary people. Our so-called freedom will be under state control. And it will be a matter of government over-reach. It will make people live in fear of doing or saying anything the state doesn't like, and in turn the state can then "penalise" them. It also paths the way for something the Christian Bible calls: The Mark of the Beast. I vote no. No digital ID. The government should instead focus on the REAL problems in the country: Crime, Corruption, unemployment, collapsing infrastructure and the economy. Digital ID can be hacked and manipulated by bad people. In a country with such a big corruption problem as South Africa, Digital ID can only lead to some very bad situations. This will give the state, Apartheid-era control over people's lives. I VOTE NO!	Concerned	Mpumalanga		employed individual

	2026-05-24 08:21:50	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Some people no longer want smart phones, because they intrude everywhere in your life. None of the points are not important, so it is impossible to just say one is more important. I do not trust the government's IT infrastructure, especially not DHA. I see how they handle data and access, leaving passwords with usernames on screens for everyone to see. Private sector is not much better, especially at banks. Demerits for failure of certain things may sound fine, but who has really seen how far SA has truly fallen? It took years to get my e-mail address rectified for my driver's license, over two years to get my e-mail and postal mailbox rectified with different banks, literally seven years to have ESKOM deliver my account to the correct mail address, not to mention our municipality. DHA always blames SITA their problems, but investigate and see in the majority of cases, it was never SITA that was at fault or SITA had warned them of the failure on DHA side and they ignored it! How will they suddenly do better if they are failing now? And then we sit with another debacle as with the driver's licenses of renewal every five years. They could not even acknowledge the fact that my wife and I were at their offices for a new ID card each, ignoring my request, only giving her an ID card. Like with our municipality, sitting on social media is much more important to them than service delivery. Think about this when your data was leaked by someone from a private institution, when what you wanted to keep confidential or hidden is suddenly discussed on some ignorant banking clerk's social media or government admin clerk's social media. That is what happens, sometimes with photos of people.	Willie	Northern Cape

	2026-05-24 07:18:12	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I strongly oppose the proposed amendments to the Identification Regulations and the introduction of a centralized Digital ID system. This framework represents a dangerous expansion of state surveillance and control over ordinary citizens. Here are my key reasons for rejection: 1. **Mass Surveillance and Loss of Privacy**: A centralized "single authoritative record of identity" linked to biometrics and a mandatory state mobile app (MyMzansi) will allow the government to track and monitor citizens' movements, financial transactions, healthcare, and daily activities. This destroys personal privacy and creates a permanent digital dossier on every person. Biometric data cannot be changed if breached. 2. **High Risk of Abuse and Mission Creep**: History shows that digital ID systems rarely stay limited to their original purpose. They expand into areas such as restricting access to services, banking, travel, or benefits based on compliance, political views, or arbitrary criteria. In South Africa's context of corruption, cadre deployment, and weak institutions, this power is highly vulnerable to political weaponization. 3. **Exclusion of Vulnerable Citizens**: Millions of South Africans, especially in rural areas, the elderly, and low-income communities, do not have reliable smartphones, internet access, or digital literacy. This system will effectively deny them access to basic services, turning identity into a privilege granted by the state rather than a right. 4. **Serious Security Vulnerabilities**: Centralized databases are prime targets for hackers, identity thieves, and foreign actors. South Africa has suffered multiple major data breaches. A compromise of this system would have catastrophic consequences that cannot be undone. 5. **Foundation for Social Credit-Style Control**: Digital ID systems form the technical backbone for future social scoring mechanisms, where citizens could be punished or rewarded based on behavior, speech, or associations. This is incompatible with a free and democratic society. The public response has already been overwhelmingly negative, with over 3,400 individual comments against the proposal and only a handful in support. This clear rejection must be respected. The Department of Home Affairs should focus on improving the existing identification system with better security and efficiency, rather than imposing a risky, intrusive, and unnecessary centralized digital control system. I call on the Minister to reject these proposed regulations entirely.	Pieter	Gauteng		employed individual
	2026-05-24 07:16:55	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Our government cannot control access to such a system. The data will be farmed out to various "contractors" ensuring identity theft for many people. This is already a problem with our current system. Now information will be much more accessible to undesirable elements. Data can be hacked, attacked by viruses or stolen through various means. Privacy goes out the window as the information will be accessible to too many people. Data can be used to lock people out of their bank accounts, steal from the bank accounts, or just be declared invalid due to purposeful intentions, particularly at voting times. This could shift the entire results process to favour one party. We cannot assume everyone has a smart phone that can contain such data. Some people have older devices that do nothing more than call and message. . TheSecurity of information stored on cell phones will be compromised We have a high incidence of cell phone thefts and this will raise levels of targeted phone theft. We cannot predict where mobile cell phone technology will evolve and this opens more potential risk for safe storage of personal information. It Would open up my potential for cyber theft of personal information and identity If government cannot manage current systems there is no guarantee that they could effectively manage digital systems without contracting other individuals to assist, once again increasing security risks for individuals Too much personal information stored in single systems allows increased attempts to illegally access and steal or alter personal data. Moving house or changing an email address or a phone would become a complete nightmare. Yet another thing to add to your to do list at a very stressful time. Constant renewals would make life even more difficult for citizens, as the system is bound to be as inefficient as the drivers licence system. Extra time, money and effort, amongst endless delays and waiting periods, combined with government inefficiency makes this an extremely bad idea South Africa is a third world country, we are not in a position to implement, or maintain, the first world standards which this system would require and this kind of system has been rejected and protested in many countries due to the risks to privacy, security and safety	Carol	Gauteng		employed individual

	2026-05-23 21:26:43	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I don't support the Centralised Cyber and Security Risk. South Africa's public sector has a fraught history with systemic data breaches and ransomware attacks. This is just another target for hackers. The 10-Year Physical Queue Trap is another concern. How are our elderly, infirm or disabled supposed to do this every 10 years if they want to go digital? Home Affairs expects you to make appointments to apply but the wait is still very long even for able-bodies who have to take time off work. Corporate Interoperability & Privacy Creep - Automating data synchronization loops between state databases and private financial/ telecom corporate giants chips away at the wall separating public civic records from private commercial infrastructure. The 30-Day Address Notification Penalty - Forcing citizens to log formal changes within a rigid 30-day window for routine life adjustments like swapping an email address or moving apartments is highly impractical. Lowering a citizen's "Identity Assurance Level" serves as a hidden penalty, which could lead to sudden, frustrating rejections or delays when trying to execute everyday high-security actions like opening an account or authenticating an online transaction. Structural Function Creep & Tracking. Soft Discrimination & Digital Exclusion - Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination"—including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. Device Binding Vulnerability - Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office. And appointments are not easy to make nor immediate!! Centralised Economic Kill-Switch Risks - this possibility of this being used nefariously on racial, religious or other lines is too great.	Yetta	Gauteng

There is no guarantee that future governments won't misuse its powers and punish groups or individuals if they have different views from the government. People have the freedom of speach, religion and association. These human rights are in danger when a government controls any medium that may be used to punish groups, religions and freedom of speech.	Petrus	Outside SA		employed individual
	2026-05-23 20:30:23	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I am writing to object, in the strongest possible terms, to the draft Identification Regulations, 2026, as published for public comment. While I support the modernisation of Home Affairs services, the proposed regulations contain provisions that, in my view, violate fundamental rights enshrined in South Africa's Constitution, 1996. My objections are as follows: 1. Unjustified infringement of the right to privacy (Section 14) The draft creates a system of real-time, bi-directional data sharing between the state and accredited private entities such as banks and telecoms. This blurs the constitutionally protected boundary between public civic data and private corporate databases. Even with consent, the architecture enables continuous, automated surveillance of citizens' personal information without clear, proportionate safeguards, violating the spirit of Section 14 and the Protection of Personal Information Act (POPIA). 2. Violation of the right to just administrative action (Section 33) The proposed "Identity Assurance Level" (a de facto scoring mechanism) may be reduced automatically if a person fails to report routine life changes within a strict 30-day window. This can lead to unexplained transaction rejections or service denials. Such algorithmic, non-transparent administrative action is neither lawful, reasonable nor procedurally fair, as required by Section 33. 3. Threat to security of person and access to services (Sections 12 & 22) Locking a digital identity exclusively to a single smartphone, without providing a secure remote mechanism to restore access after theft, is recklessly dangerous in South Africa, given our high rates of violent muggings and mobile theft. Losing a device would result in immediate administrative paralysis – inability to access banking, communications, or even prove one's identity. This effectively holds a person's identity hostage to a physical object, undermining their dignity and economic freedom. 4. Risk of function creep toward a surveillance or social-credit system Centralising a dynamic repository of biometric signatures, tracking variables, and identity assurance levels creates a powerful infrastructure that is ripe for future function creep. Even if not intended today, the architecture could easily be repurposed for mass state surveillance or a compliance-driven exclusion system – which would be incompatible with a free, democratic society. 5. Unreasonable barriers to re-entry after 10 years Requiring a person whose digital ID has lapsed due to 10 years without an in-person touchpoint to start the process from scratch (including physical queues) is arbitrary and punitive. It disproportionately affects vulnerable citizens – the elderly, disabled, rural poor, and those living abroad – without any legitimate administrative justification. Request I respectfully request that the Department withdraw these draft regulations and undertake a proper constitutional and human rights impact assessment, with meaningful public participation, before re-proposing any digital identity framework. 	2026-05-23 20:21:06	No I do not	All of the above	Centralised Economic Kill-Switch Risks	10 year physical queueing to confirm that i am who i am is for the birds - i don't care if the government cant get their act together to control criminal elements but to make me responsible to enabling their ineptness is another burden i am sick and tired of caring. Then if some reason one's smart phone is inconveniently lost, stolen, broken or one cannot show up as required and the kill-switch on all functionality is flipped, i have to jump through hoops without instant electronic response to re-ignite my identify tools to allow for everyday banking and identity requirements. The government is not known for quality and that i am hamstrung at some stage by dependence on any department of government is debilitating and counter productive. The government may not care if i am "out of operation" for however long while they sort out their mess but i don't want to be held to ransom by any government employee or departmental ineptitude. Any electronic mechanism that requires 24/7/365 connectivity is laughable in South Africa as too often there is no signal or the systems are down and the card in hand is the more efficient method to carry and have an identity tool with one at all times, not requiring any person or government department not to be "out to lunch" or on sick leave when a person is required to actually do some work, as might be necesasary.	Scott	Western Cape		self-employed
	2026-05-23 20:20:19	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I appreciate the effort to make things more convenient, but the inconvenience lies in all the risks that await us citizens if any of these "perfect lines" just happens to fall out of place. 	2026-05-23 19:54:01	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I support modernisation and secure digital services — but South Africa's proposed Digital ID system raises serious concerns that cannot simply be ignored given our country's long and painful history of corruption, state capture, data leaks, and institutional failure. The issue is not whether digital systems are useful. The issue is whether South Africa currently has the governance, cybersecurity capacity, transparency, and accountability mechanisms required to safely centralise the identity and personal data of millions of citizens. Right now, there is little evidence that it does. A centralised Digital ID system creates an enormous single point of failure. If compromised, hacked, manipulated, or corrupted, the consequences would be catastrophic — affecting banking, voting, healthcare, travel, employment, grants, and basic civic participation. Given South Africa's track record, there are very real corruption risks, including: • Insider corruption where officials sell or manipulate citizen data • Political abuse or surveillance of journalists, activists, or opposition figures • Tender corruption involving politically connected tech vendors • Fraudulent identity creation or alteration through compromised officials • Bribery to remove blacklists, criminal records, or verification flags • State capture through control of population databases • Illegal sharing or selling of citizen behavioural data to private entities • Procurement inflation on software, devices, and cybersecurity contracts • Weak auditing allowing unauthorised database access to go undetected • Cybersecurity neglect due to mismanaged budgets and incompetent contractors • Fake "system failures" used to deny citizens access to services • Selective enforcement targeting vulnerable or politically inconvenient groups • Dependence on private telecoms and banks creating opportunities for commercial surveillance and abuse • Criminal syndicates exploiting SIM swaps, stolen devices, and identity recovery loopholes • Corrupt officials fast-tracking identity restoration for bribes while ordinary citizens wait months South Africans already struggle with: * Home Affairs dysfunction * large-scale data leaks * banking fraud * SIM swap scams * ransomware attacks * unreliable public IT systems * widespread mobile theft Yet we are now being asked to trust the same ecosystem with a fully integrated live digital identity framework connected to banks and telecom providers in near real time. That is not innovation without safeguards — that is risk concentration. The proposed 10-year lapse rule is also deeply concerning. A citizen who remains fully compliant digitally could suddenly lose legal identity status simply because they did not physically appear at a branch within an arbitrary timeframe. In practice, this punishes law-abiding citizens and creates more bureaucratic dependency. There is also the danger of a deepening digital divide. Poor, elderly, rural, and technologically vulnerable South Africans may increasingly face exclusion from essential services as physical systems are slowly deprioritised. Before implementing any Digital ID system, South Africa needs: * Strong constitutional safeguards * Independent oversight * Transparent auditing * Strict limitations on data sharing * Offline alternatives protected by law * Robust cybersecurity standards * Clear recovery mechanisms for lost/stolen devices * Severe criminal penalties for misuse * Public accountability and parliamentary scrutiny Digital progress should empower citizens — not create new tools for corruption, exclusion, surveillance, and systemic failure. Modernisation without trust, safeguards, and institutional competence is not progress. It is vulnerability.	Lianne	Western Cape		self-employed

	2026-05-23 15:55:50	No I do not	All of the above	Centralised Economic Kill-Switch Risks	This is absolutely ridiculous. Check how many smartphones are stolen in a day in South Africa. People change their phones yearly or every two years. We will spend half our lives trying to get our ID authenticated. This also gives criminals access to our ID as it is on our phones. If the battery on the phone dies while we are out how do we show proof of ID. This is the most ridiculous concept I have ever heard. SA cant handle simple things like potholes and dealing with criminals but they want to introduce an ID concept that will result in the legal population being penalised.	Esther	Gauteng		
	2026-05-23 15:53:57	No I do not	All of the above	Centralised Economic Kill-Switch Risks	As tempting as it may be to opt-in for the convenience promised, this system allows way too much room for abuse between the government and the big five banks, none of whom have given the public any reason to trust them.	David	Gauteng		self-employed
	2026-05-23 15:52:35	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Pure authoritarian control, any and all dissent or critique of those in power be it government, coporate or private can lead to being locked out of being able to provide for yourself and your family. If you want to live and eat the you under the new system you must abide, must bend the knee to literal devil worshippers clocked under the guise of democracy or advancement of humanity. The only advancement that the last 100+ years have really brought to humanity is the shackles are now so embedded, so ubiquitous and alluring nobody questions what freedom means and certainly nobody's willing to kill those evil in power to stop the apocalypse.	Ryan	KwaZulu-Natal		employed individual
	2026-05-23 15:50:05	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I do not support or trust a centralized control system storing a digital ID. It is vulnerable to data breaches and identity theft, furthermore it can only setup further overreach and abuse by the government. It does not serve the best interests of any individual in a free country.	Simon	Gauteng		employed individual

	2026-05-23 15:31:51	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The absolute control and power this process would provide government over its citizens!!	Christo	Western Cape		self-employed
	2026-05-23 15:28:39	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Dear Department of Home Affairs, I strongly oppose the draft Identification Regulations 2026 and the MyMzansi digital ID system. This is a dangerous expansion of state control over every citizen's life. It creates a centralized, interoperable system linking personal data with private entities (banks, telcos, etc.), an "Identity Assurance" scoring mechanism, phone-based lockouts, and mandatory in-person renewals. South Africa's government has repeatedly proven it cannot be trusted with such power. Decades of corruption, state capture (as detailed in the Zondo Commission), data breaches, and mismanagement have eroded public trust. Handing over a single digital token that controls access to banking, travel, services, and rights is reckless. Empirical reality shows the risks: Centralized digital ID systems are vulnerable to massive breaches and abuse (seen across Africa and globally). They enable function creep into surveillance and exclusion, as warned by privacy experts and reports on similar initiatives. Governments with low trust and high corruption records (like ours) use these tools for control, not service. History proves more government oversight does not equal better outcomes—it leads to exclusion, inefficiency, and tyranny. This is Orwellian. It will not make life better; it will make citizens more vulnerable to theft, administrative failure, political targeting, and corporate-state collusion. Physical IDs already work. We do not need a digital chokehold on our freedom. Reject these regulations entirely. Protect privacy, liberty, and the Constitution.	Jan Harm	Western Cape		
	2026-05-23 15:25:54	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Too easy to cut people off if things go wrong. One should not be tied to a phone that can be stolen or lost. Actually - so many problems with this!! People who don't have/want a smartphone.	Theresa	Western Cape		business owner

	2026-05-23 15:17:56	No I do not	All of the above	Centralised Economic Kill-Switch Risks	We have enough forms of identification. The department should focus on improving their delivery and securing our borders. This is overreach and will enable the wrong people in government in future to have control over every thing. This has no positives in the long run and will only be a mechanism for state control. Do you jobs and stop following a global agenda	Zander	Gauteng		business owner
	2026-05-23 15:17:29	No I do not	All of the above	Centralised Economic Kill-Switch Risks		Linda	Western Cape		self-employed
	2026-05-23 15:10:50	No I do not	All of the above	Centralised Economic Kill-Switch Risks	A centralised Digital Identity system creates the risk that a citizen's access to essential services could be restricted, suspended, or indirectly controlled through a single integrated identity platform. Because identification is linked to banking, employment, healthcare, travel, voting, communications, and commercial participation, excessive centralisation may unintentionally create an "economic kill-switch" effect where technical failures, administrative errors, cyberattacks, political misuse, automated risk scoring, or wrongful suspensions could severely limit a person's ability to function in society. My concern is not with technological progress itself, but with the absence of sufficient constitutional safeguards, decentralisation protections, transparent oversight, independent appeals processes, offline alternatives, and limitations on private-sector integration. A Digital ID framework should strengthen citizens' rights and convenience without creating conditions where participation in economic or civic life becomes dependent on continuous approval, smartphone access, behavioural profiling, or real-time centralised validation. And this will also affect the elderly who would be excluded by such a system not to even touch upon the poorest of the poor in our society	Vincent	Gauteng		employed individual

	2026-05-23 14:00:45	No I do not	All of the above	Centralised Economic Kill-Switch Risks	South Africa must modernise, but not at the cost of freedom, privacy, and constitutional rights. A digital ID system may start as “optional,” but history shows these systems can gradually become mandatory for banking, healthcare, travel, grants, and everyday life. In a country already struggling with corruption, cybercrime, data leaks, and weak state capacity, creating a centralised digital identity system is extremely risky. No government should have the power to track, monitor, or control citizens through a digital identity infrastructure. Physical IDs and offline alternatives must always remain available. Once privacy and freedoms are surrendered to centralised systems, it becomes very difficult to reverse. Convenience should never be traded for surveillance or control.	Piet	Free State		business owner

	2026-05-23 12:14:52	No I do not	All of the above	Centralised Economic Kill-Switch Risks	This bill demands much tougher safeguards to protect citizens against corporate overreach and state surveillance, a person's identity should never be revoked, or questioned in any way, this will cause serious human rights violations, people will be ultimately tracked and surveilance will enfringe our privacy, and could close out peoples access to their bank accounts and ability to earn a living. This over-reliance on the cell phone and all things digital is curbing our ability to function as normal human-beings. Such as bad idea in a supposed free and democratic society.	Jean	Gauteng		employed individual
	2026-05-23 12:10:38	No I do not	All of the above	Centralised Economic Kill-Switch Risks		Konrad	Gauteng		

	2026-05-23 12:10:34	No I do not	All of the above	Centralised Economic Kill-Switch Risks	South Africa's proposed Digital Identity framework fundamentally alters the relationship between citizen and state by transforming identity from an inherent constitutional status into a continuously monitored, conditionally validated digital credential. The core danger is not digitisation itself. The danger is the creation of a centralised, interoperable identity infrastructure that introduces a single point of failure for exercising basic civil, economic, and democratic rights. Under the draft regulations, a citizen's ability to authenticate themselves may become dependent on: possession of a specific smartphone device, uninterrupted access to digital infrastructure, successful biometric verification, compliance with ongoing reporting obligations, and algorithmic "Identity Assurance" evaluations. This framework effectively converts identity into a permission-based system rather than a guaranteed constitutional status. South Africa is uniquely unsuited to this model due to: extremely high rates of mobile phone theft, persistent electricity and connectivity instability, deep digital inequality, widespread cybercrime, and low public trust in institutional data security. A stolen or inaccessible device should never create the possibility of administrative exclusion from banking, communication, employment, travel, or public services. Yet the regulations fail to establish a clear, constitutionally protected emergency restoration pathway for citizens who lose access to their registered device or digital credentials. The proposed interoperability between government systems and accredited private-sector entities is especially concerning. Real-time synchronisation between banks, telecom providers, and the state creates a powerful surveillance architecture capable of aggregating behavioural, financial, purchasing, movement, and identity-linked data at unprecedented scale. This creates the infrastructure for unprecedented governmental control over ordinary life. Once identity, banking, telecommunications, travel verification, and digital authentication become interconnected, the state gains the practical ability — whether immediately or in future — to influence, monitor, restrict, or condition: what citizens can purchase, where they can travel, which services they can access, and how freely they can participate in society. Even if these powers are not explicitly present in the current regulations, the architecture itself creates the capability for future abuse. History shows that governments rarely surrender powers once technological control systems are established. Systems introduced for efficiency or fraud prevention often evolve into broader mechanisms of behavioural enforcement and social compliance. A future administration could use such infrastructure to: restrict movement, freeze access to services, limit financial transactions, monitor dissident activity, or impose ideological or regulatory compliance requirements before granting access to civic participation. This is not speculative paranoia. Around the world, digital identity systems are increasingly being linked to financial systems, travel permissions, social scoring mechanisms, and behavioural monitoring. South Africa should not build technological infrastructure that could one day allow constitutional freedoms to become digitally mediated privileges. Freedom of movement, freedom of association, economic freedom, and personal autonomy are foundational democratic rights. Citizens should never fear that access to transport, banking, communication, or commerce could be conditionally granted through a centralised digital identity ecosystem. The proposed "Identity Assurance Level" framework is particularly alarming because it establishes the principle that a citizen's functional legitimacy can algorithmically rise or fall based on administrative compliance rather than judicial process. This risks creating a de facto social credit architecture incompatible with constitutional democracy. Identity systems should minimise state power over citizens, not deepen dependency on centralised technological infrastructure. A constitutional democracy must preserve the principle that citizenship cannot be suspended, degraded, or operationally obstructed by: device loss, database failures, algorithmic scoring, administrative delays, political abuse, or digital exclusion. Digital tools may complement identity verification, but they must never become the primary gatekeeper of movement, commerce, financial participation, or civil liberty. For these reasons, the draft regulations should be substantially revised to: prohibit behavioural or scoring-based identity assurance models, prohibit automatic interoperability with private-sector databases, guarantee permanent parallel physical identity pathways, establish legally enforceable offline recovery mechanisms, limit biometric centralisation, and ensure that no citizen can be denied essential services, travel rights, or economic participation due to digital credential failure. Convenience cannot come at the cost of constitutional resilience and individual freedom.	Lisa	Western Cape		self-employed

	2026-05-23 11:39:59	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I do not support periodic identity renewals like drivers licenses need renewal. Drivers licenses require capability to drive assurance reviews but are a painful burden. Identity does not require any assurance checks and the older people get the more onerous it is to do these renewals. While people may stop driving well before their death, they will not stop living until they die. Failing to renew one's identity cannot be allowed to stop one's access to banking and heath care facilities etc. This would be age discrimination. The requirement to change address within 30 days is also not practical, especially for people who rent accommodation or who do not have homes. Large corporate databases are subject to cyber attack as well as corrupted information from identity theft. These cannot be integrated into or be used to update national information databases for individuals.	Rodney	KwaZulu-Natal		retired

	2026-05-23 11:23:02	No I do not	All of the above	Centralised Economic Kill-Switch Risks	In addition, having just spent the past 2 weeks without electricity following a storm, very much highlights the complete and utter ineffectiveness of a digital system in the south african reality. There were no working phones, no atms, no petrol. Cash only for the shops that were able to stay open. These level of storms are becoming much more frequent. The chaos that the proposed system will produce as a consequence of this unimaginable. No No No	Pamela	Western Cape		retired
	2026-05-23 11:14:08	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual’s legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis.	Andries	Gauteng		retired
	2026-05-23 11:04:16	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Implementing rules like this is another attack on our constitutional rights and freedom. This will allow the South African Government and anyone else they choose to control your movements, what you buy, how you invest, who you interact with ETC. If your actions oppose their regulations you will be penalized, blocked from performing transactions, blacklisted, accounts frozen and so much more! You will have no privacy and your life will not be in your control! I refuse to subscribe to any person or institution that takes away my basic human rights and this is exactly what this bill intends to do it must not be allowed to come into effect! The greater problem with any of these things is that it's never for a government; it's only for the public. The government will have the right to do exactly anything that they want to, while the public will have no rights and will be abused every single turn as best possible.	Frans	Gauteng

	2026-05-23 10:49:22	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Civic groups, privacy advocates, and cybersecurity experts argue that while modernisation is welcome, the draft regulations introduce expansive risks and administrative penalties that demand much tighter constitutional safeguards. Their core arguments include: Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector’s history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation’s “attack surface.” Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically “lapse” triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual’s legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating “near real-time” data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic “soft discrimination” —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-23 08:41:28	No I do not	All of the above	Centralised Economic Kill-Switch Risks	While modernisation of governmental systems and processes is welcome, the draft regulations introduce expansive risks and administrative penalties that demand much tighter constitutional safeguards. Their core arguments include: Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. As for the the 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Concern: Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. All that aside the social scoring seems to be to have been imported from a possibly near-totalitarian China. Last I looked we still seem to live in a democracy. I would not appreciate to see that change without public consent, ie. a vote. Thank you very much for the platform provided. Best wishes	Rolf M	KwaZulu-Natal		employed individual

	2026-05-23 08:29:59	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I cannot believe that the Minister of a party that purportedly supports democracy and liberal freedom is willing to go to Orwellian levels to control the populace. We might as well live in China. I will not vote for a party or government that supports this kind of centralised control, that is basically a weapon to be used against it's citizens.	Arthur	KwaZulu-Natal		self-employed
	2026-05-23 08:29:17	No I do not	All of the above	Centralised Economic Kill-Switch Risks	As a Christian I am aware of the totalitarian powers the taking of the Mark of the Beast will entail, and am aware of the futile efforts to throw off the intended evil of total control once you have taken the mark. Therefore I refuse to comply with any coercion to make me part of the system, and if we all refused, it would not be possible to bring in the tools that will enforce the concept of centralized control. On a more practical note, name me one bank, Home Affairs or government department that has never failed, because their computers were infallible. The sheer horror of trying to make the centralized control and all the downstream applications function for those in power, is unimaginable. They would sit happily by and watch while we live in Hell. How would you correct errors when a central, or subsidiary, computer decides you do not exist or are confused with someone else? Based on existing computer systems the problems are endless and will only become more complex with a centralized evil master. Look at computers and cell phones today, and the incessant failures and updates, penetration by scams and ambush marketing, and the answer is a resounding "No !"	Allan	KwaZulu-Natal		retired

	2026-05-23 07:17:47	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Wow - A new and more inclusive DOMPAS so soon after we abolished the last one. Except this one will be much much worse. Instead of people telling us face to face where we can and can't go; what we can and can't eat; where we can and can't live, there will be some autonomous anonymous global power doing it. So we can't even appeal to humanity. This is a global control, digital panopticon where the bankers have already stated that they will control our "money" it will be programmable. We will not be able to save. They will tell us how much meat we can eat (linked to carbon emissions), and if and how far we can travel. This will be under the guise of "protecting the planet" but it's really protecting those who have stolen and are stealing all our resources because we will not be able to fight back. ABSOLUTELY NOT!	Bronwyn	KwaZulu-Natal

	2026-05-23 06:48:00	No I do not	All of the above	Centralised Economic Kill-Switch Risks	South Africa's proposed Digital ID via the MyMzansi app is a dangerous leap toward authoritarian control over citizens' lives. This system doesn't just offer "convenience" — it creates a single point of failure for your entire legal and economic identity. Bound to one smartphone in a high-theft country, with weak recovery options, real-time data sharing with banks and telcos, mandatory 30-day life updates, algorithmic profiling and forced physical re-enrolment every 10 years. Add CBDCs on the horizon and the state (or future governments) gains a powerful economic kill-switch over individuals. Most critically, we demand: Never scan your biometric information online. Biometric data (fingerprints, facial scans, iris, etc.) is permanent and irreplaceable. Once leaked, stolen, or harvested — which is inevitable with centralised digital systems — it cannot be changed like a password. The draft regulations open the door to remote facial scans for renewal and verification, creating massive data harvesting risks. South Africa's history of data breaches, weak cybersecurity and corruption makes this extremely dangerous. Your biometrics could end up in databases accessible to hackers, foreign actors, or misused by the state for surveillance and control. Key demands: • Ban all online biometric scanning — no facial recognition, fingerprints, or other biometrics via apps. • No automatic real-time data loops with private companies (banks, telcos). • Strong offline recovery options that don't freeze your life if your phone is lost/stolen. • Explicit prohibition on using the system for behavioural scoring, asset control, or linking to CBDCs. • Preserve privacy and prevent function creep into a full surveillance state.	Garth	Western Cape		business owner

	2026-05-23 03:50:00	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The PROVEN inability of THIS incompetent and corrupt government to get anything right is of HUGE concern. For 50 years I was Financial Director and head of group internal audit of major RSA companies. I was, obviously, deeply involved in all aspects of corporate governance. That is a huge task and fraught with extremely high areas of risk - both procedurally and digitally. This proposal by a communist government is problematic on every aspect. Just one part of this is absolutely headed for disaster. That is digital risk. Ask virtually any major corporation about new digital systems and in EVERY case you will here stories of major disruption and financial loss. Implementing a NATION WIDE CRITICAL SYSTEM is, frankly, idiotic, even insane. As with a lot of these proposals it "SOUNDS" all happy and smelling of roses but is GOING to be a disaster! The digital world is changing at a faster and faster rate - more so than any "revolution" in human history. For an incompetent and corrupt government to try to mess in that world is suicide for the country. I could write BOOKS about this stuff!! I'm not saying digital solutions are bad - not all. BUT not at this time and NOT this government. Let a first world country take the lead and, when they have succeeded, copy what they have.	Chris	KwaZulu-Natal		retired

	2026-05-22 22:28:06	No I do not	All of the above	Centralised Economic Kill-Switch Risks	During creation God created what is known as the Seven Holy Sanctities of Creation. They form part of the Theonorm which means the Standard Operating Procedures (SOP) of humanity. Privacy is one of the seven sanctities and is therefore Holy. Privacy is an enclosed authoritative domain which is never to be entered into by another authoritative domain. This is an unforgivable sin. This is a direct challenge directed to our Creator, the God of the Christians. Once anyone steps over this prohibited line, then the fall of the perpetrator becomes unavoidable. God then deliberately starts the process towards the downfall of such a foul mind. The Bible even tells us that when one goes into communion with God, go into your room and in secret. Our privacy is not a government given freedom or right, but a God ordained moral right. The one who violates this institution of God will not enter through the gates of heaven, a very special place in hell is reserved for such violators of God's Holy institutions. That which is "Holy" in the Bible is not open for discussion by God. Violating this institution will result in the ultimate punishment. The Bible makes it clear that it is the responsibility of Christian men to disobey any expectation from any authority which violates His commands and institutions. According to the Bible your approach by informing them of our view is the first step. If they refuse to adhere, then God commands us Christian men to disobey. Finish and klaar. If one can initiate the acknowledgement of Muslim marriages, then I suppose any evil can be expected from an individual with the likes of Leon Amos Schreiber. And from the political party (DA)employing this caliber of individuals. Marriage is a HOLY institution of God. The Muslim god, Allah is nobody else than Satan himself. To associate a Muslim marriage with that which God created is blasphemy against the Holy Spirit, and therefore the unforgivable sin. In simple terms, it means that you will go to hell. Not if, but when. The reason I brought this argument and subject into the equation is to discredit the legitimacy of the individual who implements these evil acts of rebellion against the God of the Christians. It is known as Christiano phobia. He has absolutely no regard for what is to be beneficial for the nation of South Africa but has an exclusive objective for control without responsibility. It is called negative-Equithesis. To be the Elohim aspect of God but without the accountability. There is something very sinister about this character. God instructed Satan to inform Christians beforehand of his intensions. Do we need more clearer warnings? Or are we stupid. Seeing and hearing the truth and still denying it? It is time that the Christian men wake up in this country. Wonder why this minister is so secretive about his religious believes? Wonder how he will react to hearing the name of Jesus. The Bible tells us that the demons shiver in fear in hearing His name. Jus ta thought.	Gert	Gauteng		retired

	2026-05-22 20:42:16	No I do not	All of the above	Centralised Economic Kill-Switch Risks	This monstrosity must be fought on ALL levels! This can never be allowed to come to pass. This is a Globalist push to control all of humanity. Digital ID is backed by the psychopath banksters that currently control all the world finance. If we lose this fight, Humanity is doomed. Freedom will be lost forever. This nonsense is already in place in China, and horror stories abound about people losing their "credit rating", being locked out of their finance, their homes, becoming homeless because it was 'deemed' they said something against the government. THIS IS HUMANITIES` LAST STAND. We lose this, we are done for. [Will our voices even, count, even matter?] I have heard that the ANC communist government will target the SASSA holders first, with the threat of losing old age pension etc should we refuse to comply. This is TYRANNY!!	john	Eastern Cape		retired
	2026-05-22 20:41:05	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The more state control, the less freedom we have. This is just the start, and must be stopped in inception! We don't want digital ID!	Kim	Western Cape		retired
	2026-05-22 20:40:31	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Our privacy is everything. No one knows who will be in charge in the future, digital ID is a very dangerous concept	Barbara	Western Cape		employed individual

	2026-05-22 20:30:20	No I do not	All of the above	Centralised Economic Kill-Switch Risks	No Goverment has the right to infringe on the citizens privacy. Goverment was not put in charge to control human beings. Its time to put a stop to these ungodly practices. The minister should remember he is working for the people and not the other way round.	Patricia	Western Cape		retired
	2026-05-22 20:29:37	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Digital ID is taking away our sovereignty and placing control in the hands od psychopaths and Satanists. Digital ID is a trap for digital concentration camps. It is demonic and done with evil intent.	Lionel	Western Cape		
	2026-05-22 20:28:35	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The risks involved with a digital ID it to much of a risk for common citizens. It places to much power in the hands of people who will abuse it.	Shaun	Gauteng		employed individual
	2026-05-22 20:27:18	No I do not	All of the above	Centralised Economic Kill-Switch Risks	This is a clear indication that government wants to rule and interfere within our daily lives. This is a no go.	Gerhardus	Western Cape		employed individual
	2026-05-22 20:25:56	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Totally a proposerous idea which needs to be kicked out and not even consirered. My phone does not get carried with me when I go shopping or to any area where it could be stolen from me. If my ID is part of my phone, I would be forced to carry it with me and that is not safe. I do not use any apps on my phone - that way I am safe from scammers and my phone never goes on the internet. The elderly are known to struggle just using a plain cell phone to call and receive phone calls and now you expect them to use a smart phone so that the app for the ID is compliant. So in other words those who use old phone models will have to buy more recent phones that can support this app. With what money? These days it is known that hackers have no issue hacking ones phone - so until it is totally impossible to hack peoples phones - you can forget about this whole idea. The Interoperable Private Corporate Network: This is another ploy by the government to control each person and is a direct violation of ones private life and privacy risks. The Interoperable Private Corporate Network - This concept means the government will lower a hidden digital trustworthiness score if you forget to report personal life updates on time - in other words what happens in ones personal life is now being evaluated by our government - are we already a communist country? The stolen phone lockdown: This concept means your digital ID is permanently glued to your specific smartphone, creating a massive risk of getting locked out of your daily life if your phone is stolen. You might then have no option but to go steal a phone as you will more than likely be blocked from your banking accounts and as cash is on its way out - oops the only alternative then is to purloin a phone - ouch... The 10-Year Physical Queue Trap - This concept means that even if you use the digital ID app perfectly, you are legally forced to visit a physical Home Affairs office at least once every decade, or your identity will completely expire. So why then change the system - we still will have to make a personal visit to Home Affairs. You didn't quite get it right microchipping everyone during Covid, so now this appears to be your next plan.	Veronica	Eastern Cape		retired

JC	Western Cape		unemployed individual

	2026-05-22 18:22:22	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I am afraid the globalists are working with the communist (DA and ANC) to achieve their ultimate goal to control the citizens of South Africa. We cannot let this happen I hope that the voters start waking up as it is five to twelve I for one will not vote DA again as well as my family. They have lost the plot or why is Schreiber not fighting this law. This is the latest of DA failures in the GNU like Bela, EWC, digital control act etc. They will get a fat surprise come the next election.	Martin	Western Cape		
	2026-05-22 18:18:57	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Its ridiculous to propose this when we cant even get amenities, food, shelter, education and general human rights access to mkst of SA. We cant even get the digital ID card rolled out, yet here they want to roll out a high tech, latest hardware dependent system, that has 10 thousand immediate pitfalls, let alone the obvious ones, there are tons of underlying ones, besides the sheer logistics of it all. This is a very grand ambitious project which they know cannot be rolled out. Hence this is yet again a mere project for corruption and money grabbing. We all know this cannot succeed. They rolled this out in European countries over decades, starting in the non digital age, and even so there having tech and logistics issues. Look at the UK and brexit - they cant even logistically correct all their EU to UK passports and so much more (abt the same population as SA). SA is still nationally for the majority generally in the non digital age. You cant implement digitisation on an analogue base.	S	Western Cape		employed individual
	2026-05-22 18:17:49	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Too much transparency & therefore power by the government over the individual. 	2026-05-22 14:52:22	No I do not	All of the above	Centralised Economic Kill-Switch Risks	1. Widespread collection and use of biometric data especially in access-controlled environments, risk disproportionate surveillance and function creep. 2. The very foundation of a smartphone-based digital ID system is inherently exclusionary. This risks violating the constitutional right to equality and access to services, particularly for low-income and rural populations. 3. Data sharing with "accredited" or "trusted entities" creates a high risk of expanded surveillance and a "big brother" ecosystem where citizens' movements and transactions are tracked across the public and private sectors.	Sandi	Limpopo

	2026-05-22 09:10:22	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The convergence of centralized Digital Identities and Central Bank Digital Currencies represents one of the greatest technological threats to individual liberty, private property, and intellectual autonomy in the modern era. Under the guise of convenience, security, and financial inclusion, global institutions are building an architecture of total surveillance. This infrastructure systematically dismantles personal sovereignty, shifting power from the citizen to the state and paving the way toward a high-tech, totalitarian governance model. At the core of this transformation is the eradication of true ownership. When physical currency is replaced by a central bank digital currency, money ceases to be a personal asset and becomes a permission-based digital token. Because these digital currencies are programmable, the state gains the absolute power to monitor, restrict, or permit transactions in real time. This directly undermines the ownership of physical devices. If your digital identity or wallet is deactivated due to regulatory non-compliance, your ability to purchase hardware, maintain subscription-based equipment, or access the digital networks required to operate modern devices vanishes. Your tools are effectively rendered useless by remote decree. Furthermore, this regime attacks the ownership of ideas. In a society where a digital identity is mandatory to access the internet, publish content, or participate in commerce, intellectual dissent carries an immediate financial penalty. If an individual expresses an idea, exposes a vulnerability, or conducts research that challenges the prevailing political narrative, the state can instantly restrict their access to the economic grid. When your livelihood and communication channels are tethered to a single, government-controlled digital profile, freedom of thought is replaced by algorithmic compliance. Ideas that are deemed non-compliant are not merely debated; they are starved of the digital infrastructure required to exist. This complete integration of identity and currency mirrors a socialist credit system, wherein access to basic societal functions is contingent upon obedience. Under such a system, citizen behavior is continuously scored. Buying the wrong product, traveling beyond an allocated quota, or associating with dissident networks triggers automated penalties. This is not a hypothetical risk but a structural certainty when a centralized ledger tracks every transaction and movement. The traditional legal framework of due process is replaced by automated enforcement, where algorithmic systems judge, sentence, and penalize citizens instantly by locking their accounts or restricting their purchasing power. Ultimately, the rollout of digital identities and central bank digital currencies represents the ultimate vehicle for government overreach. It establishes a totalitarian panopticon where privacy is impossible and compliance is mandatory for survival. By controlling the mechanism of exchange and the validation of identity, central authorities achieve absolute leverage over the populace. To preserve individual liberty, the ownership of property, and the independence of thought, this creeping infrastructure of centralized digital control must be fundamentally resisted. True sovereignty demands that the boundaries between personal life and state oversight remain absolute.	M	Gauteng		employed individual

	2026-05-22 07:45:38	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Don't understand why the id has to be SMART PHONE based?? How many in our country can afford a smart phone? Or will this also now become a taxpayer funded human right? The smart id is an item that everyone carries with them. It does not need updating and is independent of impediments like address change challenges, etc. ID theft??? How will the smart phone stop if theft? That key issue is the centralised ability of govt to kill my life economically if I don't comply… as in China.. that is the true value of this to govt… CONTROL .	An	KwaZulu-Natal

	2026-05-21 16:37:02	No I do not	All of the above	Centralised Economic Kill-Switch Risks	This is highly dangerous regulation and technology. I vehemently oppose all aspects of digital ID, as it brings no obvious benefit to the citizen and allows government agencies, private institutions and criminal enterprises access to my sensitive personal information with basically zero assurance that such personal data is meaningfully protected. Furthermore, digital IDs can be used to control and extort members of the public through coercive measures, as was openly displayed during the COVID pandemic, when citizens in South Africa and abroad were restricted from participating in society if they did not adhere to draconian measures that were criminal and against human rights. In other words, digital IDs lead to authoritarianism!	Brendon	Gauteng

	2026-05-21 15:12:36	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Digital ID gives government and corporate entities way too much access to personal info, and it would be a major privacy violation. Trading privacy and freedom for convenience (the trap) is plain stupid, and in a country with such a high level of crime and a corrupt government, the risk of abuse is just too great. Governments also love moving the goalposts, and corporates love collecting data, which means soon your digital ID will be used for a lot more like social credit scores, which determine what you can and can't do, where you can go and what you can buy. The fact is, sooner or later, digital IDs will be used to enforce greater control. It might take 2 years or 20, but sooner or later, the wrong person will misuse it.	Gordon	Gauteng

	2026-05-21 12:39:06	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I do not support this at all. Regarding Crime: South Africa is know for its High crime rates and fake police officers. Now they want us to hand over our phones with our drivers license & identifications to complete strangers. NO, I bought the phone its my property. I will sue if i am forced against my will to hand over my property. I will sue SAPS then any relevant department of government. Regarding Poverty: There are many technologically illiterate and POOR !!! people in this country, so will they now be forced to buy smartphones for this crap that government is trying to push on the population as a whole ? Regarding Data collection: Government will sell out user data at the soonest moment possible just to get some quick, cheap and dirty money. Then we will be tracked and traced, while AI records everything we do and say. Saying I pinky promise to not sell the data is words that no ordinary citizen would believe. Regarding Jobs: This rubbish will take jobs from the people at home affairs & driving license department. Government needs to create more jobs not take them away by creating a digital platform where AI does everything. Regarding Freedom: So if this absolute garbage goes through and someone either steals my phone or If i forget my phone at home will I be fined or arrested ? This whole thing should be scrapped and we need to start looking at politicians bank accounts to see who is being bribed by the WEF (World Economic Forum)	Daniel	Gauteng

	2026-05-21 08:27:14	No I do not	All of the above	Centralised Economic Kill-Switch Risks	Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis.Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance.The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services.	Monique	Gauteng		employed individual
	2026-05-21 08:22:06	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I don't own a smartphone and don't intend to ever get one, so this will never work for me.	Hennie	Western Cape		unemployed individual
	2026-05-21 08:20:39	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I am planning on not having a smart phone in the future as I am EMF sensitive. 	2026-05-21 06:29:51	No I do not	All of the above	Centralised Economic Kill-Switch Risks	I believe the role of the state is to protect individual freedoms, not expand control through centralised digital systems. Consolidating identity, biometric data, and administrative authority into a single framework creates a dangerous concentration of power and raises serious concerns around privacy, autonomy, and abuse. The possibility that citizens could one day be digitally restricted or effectively excluded from essential services because they disagree with government policy is entirely unacceptable in a constitutional democracy.	Michael	KwaZulu-Natal		self-employed

	2026-05-20 22:20:17	No I do not	All of the above	Centralised Economic Kill-Switch Risks	With our unstable power grid and uncertain economic/political environments, total disconnection from the internet could most certainly mean total inability to use the digital ID framework. Not to mention when "the system is down" (like we've heard so many times at home affairs dept), everyone using digital ID will be unable to carry on with their lives as normal. Should there be a cyberspace hack into the digital ID framework or corresponding private networks, an entire nation's ability to go about their financial and business day-to-day dealings could be jeopardized. Additionally, I'm very uncomfortable with the idea that the private sector or covernmental bodies could use the digital ID platform to control certain behaviours or guarantee expected reactions from normal citizens should they wish to push a narrative of authoritarian control. The digital ID provides more ways for the state to tighten their grip on free-flow of business and cash-flow which further restricts the majority of small businesses owners to generate income. This also will cause even more people to become financially dependent on governmental grants and further burden any prominent entrepreneurs from developing. In conclusion, the risks and cons to normal South-Africans far out way the advantages and therefore I, Pieter Schalk Eugene Marais, DO NOT CONCENT to this.	Pieter	Gauteng		employed individual

	2026-05-20 19:49:11	No I do not	All of the above	Centralised Economic Kill-Switch Risks	The digital ID would take away everyone's freedom as a human being. You would be under total control of the government and lose your sovereignty as a human being. You would basically be found guilty of anything they say without having the chance to defend yourself. No more innocent till proven guilty! In today's age anything digital can be hacked and changed and you could be wiped out of existence on the digital platforms while you are still alive. Just look at how other people in other countries around the world are also against this and the many valid reasons why!!! Can you imagine waking up one day and "you have been hacked" and are now seen as a criminal and are locked out of everything digital and unable to go anywhere or buy any food as everything would be digitally controlled? The possibility of wrong doing and evil far outweighs any good that this could bring. If the people of this country actually did their job correctly and ethically and without corruption then this would not be on the agenda. We as South Africans and Africans in general, do not need to be "enslaved to the system" of the western countries.	S	Gauteng		business owner

	2026-05-20 18:06:29	No I do not	All of the above	Centralised Economic Kill-Switch Risks	They are trying to roll this out all over the world, always saying how 'convenient' it will be. But what's more convenient than a simple card you can easily replace? if you look at (all) government's inability to secure centralised data (there has already been a major leak of private data in India's digital ID), as well as the increasing trend to track and surveil everyone for tighter control and selling our data to marketers), this will take us to a dystopian future. Think social credit score, where they can automatically deduct money from your account in error, or they freeze your ability to use your money if you exceed your carbon credit score. And that's not even talking about what happens if your identity for access to everything is instantly gone if you lose your phone. People need to say NO to this. Does anyone really want to give total control over their life to inefficient and corporate controlled government? Disgusting.	M	KwaZulu-Natal		employed individual

	2026-06-23 23:08:55	No I do not	All of the above	Centralised Cyber & Security Risk	Digital ID is one of the worst ideas ever.it has nothing to do with stream lining services and security,its about control and tracking and!!!! there is no such thing as DATA safety in south africa.every system gets hacked continuously and we must trust you after a tenderneer gets the contract for this nonsense? nope.	jared	Gauteng		unemployed individual
	2026-06-23 19:40:19	No I do not	All of the above	Centralised Cyber & Security Risk	Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office. Additionally, South Africa’s public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic “attack surface.” If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly.	Ariel	Western Cape		student

	2026-06-19 11:11:19	No I do not	All of the above	Centralised Cyber & Security Risk	I am an elderly person , As one gets older so the risk of losing ones cell phone increases. The present economy and massive unemployment increases the criminal activity in many ways. least of all is the ever increasing financial , identity fraud and hijacking targeting the elderly. In its proposed form, the Digital ID takes away our constitutional rights to privacy and freedom of choice.	Marilyn	Western Cape		retired
	2026-06-18 23:20:32	No I do not	All of the above	Centralised Cyber & Security Risk	I do not support a legal framework that enables my private identity data to be shared and synchronized in near real-time between government systems and private corporations. I foreshadow severe data breaches, ransomware disruptions, and weak digital infrastructure defenses. The government's central cybersecurity controls will fail to protect the population register, this highly integrated system will present a massive, centralised target for advanced hackers and identity syndicates. Losing my phone will mean losing immediate access to my digital credential. This is quite simply put a digital dictatorship and a policy overreach. The draft regulations allow the state to rank my identity profile through an internal scoring mechanism called an "Identity Assurance Level." If I fail to notify the state of a change in my everyday details within 30 days, my assurance level drops. To allow the SA government department to algorithmically tier or degrade a my access to services based on regulatory compliance sets a highly dangerous precedent that mimics authoritarian behavioural tracking systems.	Ferdie	Mpumalanga		business owner

	2026-06-16 11:01:39	No I do not	All of the above	Centralised Cyber & Security Risk	To whom it may concern, I do not support the introduction of Digital ID for South Africa at this time, since it does not solve or ameliorate any institutional, financial or societal problems South Africans are currently facing. It will in fact make life more difficult in a country where state cybersecurity has been proved to be weak, and whole governmental IT systems have gone down with vital data lost (entire library system) or proven to be leaky (NSFAS). Neither I nor my family and community will consent to digital ID should it be introduced. In addition, corruption in home affairs, and the constant theft of phones make one foresee endless identify theft or frozen ID problems. Thank you for your attention. 	2026-06-11 09:46:53	No I do not	All of the above	Centralised Cyber & Security Risk	In India, making the Aadhaar digital ID mandatory for welfare severely disrupted basic services. When biometric authentications, server outages, or mismatched data failed, millions of legitimate beneficiaries were abruptly locked out of vital support. Criminals and hikers where able to infiltrate the supposedly extremely and infallible secure system. Widespread systemic failures resulted in several severe consequences: • Ration and Food Denial: Millions of vulnerable families were removed from the Public Distribution System (PDS). In rural areas, network failures or mismatched fingerprints meant beneficiaries could not access heavily subsidized food, resulting in tragic starvation incidents. • Medical and Hospital Access: Hospitals and clinics required Aadhaar verification for treatments and birth/death certificates. For example, individuals with chronic illnesses, such as people living with HIV/AIDS, were reportedly denied medical treatment and life-saving medication when they lacked the digital ID or failed authentication. • Disabled and Elderly Exclusions: Elderly individuals and laborers saw their fingerprints fade over time, leading to constant "authentication failures" at ration shops and digital portals. Without local human discretion to override the computer-generated rejections, many were left without pensions or food.	Dewald	Western Cape		retired
	2026-06-11 09:14:46	No I do not	All of the above	Centralised Cyber & Security Risk	Privacy is a constitutional right. Identity theft is real. This could open a portal for digital crime on an unbelievably high and dangerous level. While a centralised online Database including criminal and financial history could be a good thing, the gap for even more crime and chaos will become too big to contain.	Liesl	Western Cape		employed individual
	2026-06-11 09:04:57	No I do not	All of the above	Centralised Cyber & Security Risk	I do NOT believe this framework represents a secure digital future, nor does it have the right safeguards in place to protect citizens against corporate overreach and state surveillance. 	2026-06-10 11:48:09	No I do not	All of the above	Centralised Cyber & Security Risk	I do not agree with any of the points below why cant was have a digital id that is just a digital id? Not traps qnd hidden stakes issuer you want to sneak in. Like civil rights. It governs your ability to access your money, secure a phone line, work, travel, and vote, i do not agree with any of this as my money has nothing to do with my digital id car. Nor where I travel or my movements or tracking g my phone e or phone calls real-time, bi-directional data pipelines with accredited "trusted entities". This already started illegally with out propper information give from banks linking us to home affairs. No proper information why my photo was taken hiding g it as a bank thing meanwhile its a government things. Identity Assurance' Scoring Loop: If you fail to formally report routine life updates (like moving to a new house or changing your email) within a strict 30-day window, I do not agree. I have multiple email addresses so that my privacy is protected and my dad not shared. And now you want to just share it with anyone and penalise me if I dont update my address. So every trip I take I must update my address. If I go stay with my parents I must updated my adresss and then when I return home after a month or 3 I must update my address. Im not the one you after you after the CRIMINALS THE ONES HIDING US HONEST PEOPLE SHOULD NOT HAVE FREEDOM IF MOVEMENT TAKEN AWAY The Stolen Phone, so my phone is stole and ot I have no ID. As you have not figured out a way to work around this. And what if I have a work phone and a personal phone why can my id not be on all my devices all the better for you to stalk me and be a creeper socialist government. Your digital ID will expire every 5 years, why? So you can still milk the cash cow I do not know many if any 1st world countries that ask their citizens to spand so much money on its and driver licenses ect. Some dont even have an id card or book they use just passport. Centralising a dynamic repository of dynamic biometric signatures and tracking variables provides the perfect infrastructure for future state surveillance or a compliance-driven "social credit-style" exclusion system. No no no no, the criminals are the ones you after and they not signing up for this, why dont you penalised criminals this way and track them. No you are not China and you will not be able to how the security of our informations safely and then you plan to use it against us. What other reason do you have to want this informations. 	2026-06-06 23:47:14	No I do not	All of the above	Centralised Cyber & Security Risk	I refuse to install communist terrorist spyware on my protected telephonic private property. So the hypocritical parasites are proposing another plan, that supposedly solves another problem they specifically created, to forward another insidious agenda that only truly serves to feed their personal greed—always at the expense of the unfortunate 'citizen' people forced under their tyrannical rule. This 'regulation', like practically all others, is simply about population subjugation through control and surveillance. The Digital ID is the marker for authoritarian governments who seek to end all digital privacy and freedom. Soon you vile devils will demand civilians submit their government slave IDs to use the Internet in any capacity with the tired, nonsensical and patronising excuses of their own 'safety' or 'the safety of children'. No, you 'robber barons' and 'moral busybodies' only seek to reduce people, who fund your extravagant decadent mafia lives, to the statuses of abused infants, imbeciles and domestic animals. If any of you truly cared about adults and children, you would not try to impose any such mandatory measures that directly undermine personal privacy and security. No, I expect this centralised database would be used to facilitate and not fight human and child trafficking syndicates. You only seek to extend the reach of your harm and evil. You are hateful people deserving of all and more anger and hatred. The majority of people, outside your politically connected elite, do not despise and defy you 'authorities' nearly enough. So keep pushing us 'little people' more and see what eventually happens to all of you. You think we 'will be happy' when we 'own nothing'? Then we will be especially dangerous like cornered animals that have nothing to lose. You think people will keep respecting 'the law' and every other corrupt institution that always tries to humiliate us? Do everyone a favour: leave well enough alone and mind your own business. Sooner or later everyone will learn that no one is truly untouchable.	Murray	Western Cape

	2026-06-06 22:52:37	No I do not	All of the above	Centralised Cyber & Security Risk	The Interoperable Private Corporate Network: The state will establish real-time, bi-directional data pipelines with accredited "trusted entities" (like private banking giants and telecom networks). If you change your address at your bank, it will synchronise across the state register automatically in near real-time—blurring the line between public civic data and private corporate databases. The 'Identity Assurance' Scoring Loop: If you fail to formally report routine life updates (like moving to a new house or changing your email) within a strict 30-day window, the state will automatically drop your internal "Identity Assurance Level" (social credit score). This algorithmic tiering could cause sudden, frustrating transaction rejections when you try to open accounts or authenticate services. The Stolen Phone Lockdown: Your digital ID will be cryptographically locked to one specific smartphone device. Given South Africa’s high rates of muggings and mobile theft, losing your device means your digital identity token is instantly frozen or revoked. The regulations are completely silent on a secure, remote path to restore your access, raising the threat of immediate administrative paralysis. The 10-Year Physical Queue Trap: Your digital ID will expire every 5 years. While app-based biometric renewal is permitted, the law dictates that if you do not have a physical, in-person touchpoint with a Home Affairs office or partner bank for 10 consecutive years, your credential completely lapses, and you must line up in person from scratch to re-prove who you are. The Blueprint for Function Creep: Centralising a dynamic repository of dynamic biometric signatures and tracking variables provides the perfect infrastructure for future state surveillance or a compliance-driven "social credit-style" exclusion system	Celia	Gauteng

	2026-06-06 21:31:05	No I do not	All of the above	Centralised Cyber & Security Risk	We have noticed how vulnerable the IT systems are that serve South Africa. The integraty has been undermined, especially during the Zuma period and by the then head of the NPA. When Mrs Batohi took over she practically had to rebuild the NPA and has not been able to follow up the high profile cases that were presented in the Zondo reports. We spent as a South African tax payer 2.1 billion on the Zondo investigation. Without an absolute sound guarantee on the basis of the constitution and the bill of rights that our rights are protected and that the judicial and home affairs systems are aligned to these purposes, I will never support this implementation. The next step would be digital implants as realised in Sweden and recommended by dubious organisation as the World Economic Forum. The digital ID is part of a World Wide drive with little or no respect for human rights. Wi the rise of AI applications, we all get an artificial identity that has little till nothing to do what we are as human beings. It is a totalitarian model, aiming to create a new controller empire. To cope with these new developments one has to acquire for thousands of rands of equipment and subscriptions with often very unclear manuals written in computer slang. The myth is that the we have now services available 24/7. But how much time is wasted to find your way through this new service network, especially for the elderly (I am one of them, 80 years old). The whole implementation makes all of us more vulnerable, especially those who have been excluded from digital networks in remote areas or because they can not afford the necessary equipment to communicate. Then, finally, there is the language of the legislation. Is it available in all constitutionally recognised languages? This is why an unconditionally implementation of this legislation is unacceptable to me as long as those who implement it on a 24/7 are not hold fully accountable. With respect Joseph Koetsier	Joseph	Western Cape		retired

	2026-06-06 21:02:18	No I do not	All of the above	Centralised Cyber & Security Risk	The voluntary option will change into compulsory when government departments, businesses and other institutions are pressurized into only accepting digital ID. Similar to Covid jabs, that memory is still very fresh. That takes away freedom of choice and morphs into coercion. Digital ID infrastructure must be limited to the bare essentials, no racial tags, health passports, political markers, social-credit tools or digital leashes. That must be guaranteed up front. Digital ID must serve the people, the people must not become servants of the digital ID system.	Charl	Eastern Cape		retired

	2026-06-06 19:59:49	No I do not	All of the above	Centralised Cyber & Security Risk	I don't think it is acceptable to allow access to personal information to government or any other organisation. Looking at how Palantir is currently taking control over people's personal information in the UK, USA and Germany, I think there's a very dangerous line here that we should not cross. We would have no control over who government gives the contract to and what they will do with the information.	Martine	Western Cape		self-employed
	2026-06-06 19:56:26	No I do not	All of the above	Centralised Cyber & Security Risk	This should not pass. 1. Optional will become Forced - Covid proved that 2. This is a "Wedge" that will open the doorway to the bigger threat which is: 3. The Global ID System that wants to Eliminate Online Anonymity via linking you to everything like your Email Account, Netflix, you name it 4. It being linked to your phone means you are immediately traceable - see point 3 + the UK's method of showing up at your door because of based tweets the current government dislikes = 1984 George Orwell / Totalitarianism The Current Card System is good enough as technically we "already have Digital ID" which is they have our Data Stored on Digital Media & Servers linking via Banks, Home Affairs etc - the direct linking to a GPS Track-able Device in your pocket is NOT required NOR advised as it gives one of the few remaining Anonymity Gaps being your current Location I acknowledge where the opposite could assist where Illegal Foreigners could be swept up with this System yet has the same old classic pit fall as it's primary reply "think of the x" The online gaming chat room & video streaming Service "Discord" were teasing going this route for "think of the children" which was to combat against online Child Predators also found lurking in those chat rooms waiting for the unsupervised children that parents just "let play on their tablet" which ended up making the Victim (children) lopped in with EVERYONE else to submit ID - Instead Parent's should be in control of what their Children are exposed to online, not allow for the rest of us all to be caught in the net of Digital Surveillance - In this case, crack down the cause of the Problem instead of creating a new backdoor for Control applied to all To come off the long winded Discord explanation & tie it into the current proposal: I agree our Systems need an upgrade - that's both Machine & Workforce I disagree that Optional stays Optional here I predict bigger institutions like Banks will start to use this as the only method of verification making the Book and Card ID Null and Void	Sean	Gauteng		employed individual

	2026-06-06 19:30:09	No I do not	All of the above	Centralised Cyber & Security Risk	Too much control on all areas of your life being controlled by ID number. If this system is hacked all my private details can be exploited and ID theft can be done so much easier. Let's take time and make double sure if all fail safes are in place before just implementing the idea.	Denise	Western Cape		employed individual
	2026-06-06 19:21:47	No I do not	All of the above	Centralised Cyber & Security Risk	What a disgraceful power hungry GNU this is. South Africa is not for sale! If you signed the deal with your global masters, you have sold yourself to them. South Africans are not for sale! This is not China or the UK where you can imprison citizens and control them like little puppets. South Africa does not belong to Iran or satanists Bill Gates or Epstein or George Soros or any other global or local criminals. "Let My people go!" I do not consent to the digital totaliterian prison, no matter how nicely you spin your sales pitch! You created the crime and murder rates in South Africa just so you can come with the "solution". Proper honest policing did the job just fine for many many years! We do not need your digital satanic prison! I do not trust and do not consent to this corrupt government having free access to my house or my life. Get your hands off our personal information and our paychecks! You have subjected the working taxpaying South Africans to high taxes to build your unlawful expensive digital prison! What is most disgraceful is that you started erecting your poisonous towers while you locked us in our homes! How was that essential services?! This electromagetic surge increase was and is the cause of much sickness and death - all under the guise of "covid"! You are all criminals and murderers and should be trialled and prosecuted for you crimes against humanity. I reject the digital ID!	Rykie	Western Cape		employed individual
	2026-06-06 19:19:46	No I do not	All of the above	Centralised Cyber & Security Risk	Hierdie beleid het die potensiaal om groot privaatheids probleme tussen die staat en die burger te skep. Die idee dat 'n app afgelaai moet word wat deur die staat beheer word wat die potensiaal het om jou te volg en dop te hou is erg drakonies. Burgers hoort die reg te hê dat hulle privaatheid respekteer word. Dit sal beter wees dat daar opsies is om of steeds aansoek te doen vir dokumentasie by die nodige sentrum en om aansoek te doen op 'n tipe portaal waarop mens kan in en uitteken. 'n Digitale ID is slegs veilig genoeg as jy nie die app die heeltyd op jou foon hoef te hê en dit allerhande regte hoef weg te gee nie.	Xander	Northern Cape		employed individual

	2026-06-06 19:05:45	No I do not	All of the above	Centralised Cyber & Security Risk	Concerns Regarding Fraud and Cybercrime South Africa has experienced several major government and private-sector data breaches over the past decade. A digital identity system effectively becomes critical national infrastructure. Many citizens will want assurance that the system is resilient not only against ordinary criminals, but also against organised crime syndicates, insider threats, and state-sponsored cyberattacks. Furthermore, South Africa experiences significant levels of financial fraud, identity theft, cybercrime, SIM-swap fraud, online banking fraud, and other forms of digital crime. As an ordinary citizen, I have personally been the victim of online fraud. A payment was made from my account without my knowledge or permission, and I was only able to prevent further losses because I noticed the transaction immediately and contacted my bank's fraud department. This experience has reinforced my concern that digital systems, regardless of their intended security measures, can and do fail. The consequences of compromise in a digital identity system could be far greater than the compromise of a bank card. If criminals gain access to a person's digital identity credential, the potential exists for widespread financial loss, identity theft, fraudulent account creation, and unauthorised access to services. I therefore request that the Department provide greater detail regarding: • How citizens will be protected if their digital identity credential is compromised. • Whether citizens will have access to real-time notifications whenever their digital identity is used. • Whether citizens will be able to immediately suspend or deactivate a digital identity credential in the event of suspected fraud. • What compensation, assistance, or remediation mechanisms will be available to victims of digital identity fraud. • Whether independent cybersecurity audits will be conducted and published. Excessive Reliance on Future Instructions Many critical technical standards appear to be deferred to future instructions issued by the Director-General. These include standards relating to biometric verification, device requirements, cryptographic controls, identity assurance levels, and system security. I am concerned that the public is being asked to comment on a system without having visibility of many of the technical details that will determine whether the system is secure. I respectfully recommend that all major technical standards and future amendments be published for public consultation before implementation. Protection of Vulnerable and Marginalised Citizens I am concerned about the impact of the proposed system on vulnerable groups, including: • Elderly persons. • Rural communities. • Persons with disabilities. • Citizens who do not own smartphones. • Citizens who cannot afford newer devices. • Citizens with limited internet access. While the regulations state that the system is voluntary and that physical identity documents will remain available, I believe stronger guarantees are required to ensure that no citizen is disadvantaged because of their inability or unwillingness to participate in digital identity systems. Long-Term Risks to Civil Liberties The regulations state that participation in the Digital Identity system is voluntary. However, many citizens are concerned that systems introduced as voluntary may become effectively mandatory over time. I therefore request that the Department provide assurances regarding: • Whether future access to government services, grants, licences, permits, healthcare, voting, banking, or employment opportunities could become dependent upon possession of a digital identity credential. • Whether legislation will be introduced in future to compel participation. • What legal protections will exist to ensure that citizens who choose not to participate continue to enjoy equal access to services. I believe these protections should be expressly included in the regulations and not left to future policy decisions. Transparency and Citizen Control I believe citizens should have the right to: • View a complete history of organisations that have accessed or verified their identity information. • Receive notifications when identity information is accessed. • Know which entities have active "verified relationships" with them. • Revoke or challenge certain relationships where legally appropriate. • Access annual reports detailing data breaches, system compromises, and cybersecurity incidents. Greater transparency would improve public trust and accountability.	Elandrie	North West		self-employed
	2026-06-06 19:04:11	No I do not	All of the above	Centralised Cyber & Security Risk	"I cannot support a law that undermines our basic rights. This regulation is flawed because it compromises Security by making citizens vulnerable to total identity loss if their phone is stolen; violates Privacy through forced, real-time synchronization of personal data with banks and telcos; and threatens Freedom by replacing due process with an unfair digital scoring system that punishes routine life changes with instant service blocks. My identity should protect my freedom, not become a tool to restrict it."	Stephen	Western Cape		retired

	2026-06-06 10:42:49	No I do not	All of the above	Centralised Cyber & Security Risk	Software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralized live network creates an incredibly high-risk target for global hacking syndicates.Centrelizing every single person on one data base opens up a double door acses to hackers and human traffickers profiling people and children. open-ended intelligence gathering, this exchange of live citizen data across corporate API channels raises red flags. Automating data synchronization loops between state databases and private financial/telecom corporate giants chips away at the wall separating public civic records from private commercial infrastructure. SA is already a human traffickers playground .Its a loud No From Me .!	Juanita	Western Cape

	2026-06-06 10:23:33	No I do not	All of the above	Centralised Cyber & Security Risk	I do not consent to this overlord, totalitarian digital ID system, because we stay in a broken down country, and i cannot have these same people who lead this nation, have this power over our future.	Ivannah	KwaZulu-Natal		
	2026-06-06 10:19:40	No I do not	All of the above	Centralised Cyber & Security Risk	It is not safe or secure, you have no control over your own property, ie ID document, any electricity or web issue will cause chaos for all. You have no control over your documents or life ,when a computer decides for you ,and there aren't any people to assist you ,only a computer, as is the case already. Definitely doesn't make life smoother or more efficient ,in fact the opposite. Many will be ignorant as how to access what they need ,eg old people. Really a very bad concept. You are basically giving up your life rights as a person to the government or whoever has control over the digital system ,you become their slave or pawn to use as they like	Sandra	Western Cape		
	2026-06-06 10:19:14	No I do not	All of the above	Centralised Cyber & Security Risk	This is just the state aiming to control our every move. This would just be the beginning. The dangers are : mass surveillance, suppression of different views, discrimination, identity theft, how we spent our money, whether we can travel. The list is endless. 	2026-06-06 08:54:14	No I do not	All of the above	Centralised Cyber & Security Risk	I strongly oppose the proposed amendments to the Identification Regulations published under Government Gazette No. 54610 due to profound concerns regarding administrative overreach, data privacy, and the potential exclusion of vulnerable citizens. Given the Department of Home Affairs' ongoing challenges with systemic inefficiencies and service delivery, introducing more stringent or expanded identification requirements places an undue bureaucratic burden on the public. Furthermore, these amendments risk disproportionately disenfranchising marginalized groups who already face significant barriers to accessing civic services, all while failing to provide adequate guarantees that citizens' sensitive personal and biometric data will be securely protected against misuse or breaches.	Janefer	Western Cape		
	2026-06-06 08:51:34	No I do not	All of the above	Centralised Cyber & Security Risk	South Africa under the ANC rule is moving into becoming a state controlled country. Not good! Most concerning! We are slowly and systematically loosing our individual freedom.	Elsjé	Gauteng		retired

	2026-06-06 01:44:00	No I do not	All of the above	Centralised Cyber & Security Risk	How will there be a guarantee that Digital ID will remain optional? SA is plagued by undependable power and government services. Litterally daily, many cellphones are stolen, compromised and broken... A very large number of people simply cannot afford and do not have a personal cellphone. A biometric is the top no1 risk-factor in any system: once it is compromised, you can never be un-compromised again... it cannot be changed or reset like a proper Username-CounterPhrase-Password method can... biometrics is forever. Requiring a 10-year Physical contact is the same as expiring licences and qualification certificates... defeats the purpose, denies the truth, denies ownership and property and disempower your people. Are those people now suddenly also not citizens any more? 30-day Penalties... this is again like so many laws, punishing the people that try to be law-abiding while the real criminal does not even care. Digital ID is an unappropriate method for the majority of citizens, given the reality of the current South-African situation. It will only serve the interests of the state, corporations and wealthy people.	Michiel	Gauteng		retired

	2026-06-05 22:11:34	No I do not	All of the above	Centralised Cyber & Security Risk	I support the modernization of South Africa's identity system but the draft regulations pose significant risks to security, privacy, and accessibility. These are key concerns for me: Cybersecurity Risks: Linking the national population register directly to corporate systems through live networks could make sensitive citizen data a prime target for hackers and cybercriminals. Identity Lapse Rule: Citizens who do not interact physically with Home Affairs or accredited banks for 10 years could have their identity credentials automatically lapse, forcing them to re-establish their identity. Dependence on Smartphones: Tying digital identity to a single mobile device could leave citizens unable to access banking and government services if their phone is lost, stolen, or damaged. Privacy Concerns: Real-time data sharing with banks and telecommunications companies may increase the risk of data leaks, surveillance, and misuse of personal information. Digital Exclusion: Elderly, poor, and rural citizens who rely on physical documents may face growing disadvantages, including slower services and reduced access to support as digital systems become the norm. Overall stronger constitutional, privacy, and consumer protections are needed before implementing the proposed regulations.	Manulani	Free State		self-employed

	2026-06-05 21:03:22	No I do not	All of the above	Centralised Cyber & Security Risk	Our government agencies cannot even run the normal day to day systems that need to be used for example SASSA, Dept Home Affairs websites as these are always off line the telephone numbers don't even work how would they want to run a centralized data base with everyone's details on. If your digital ID lapses how do they plan to handle the queues if you currently have to go and stand in for example a SASSA queue from 4am to 4pm and still not be assisted on that day because there are 13 desks but only 3 people working. Would they employ more staff, have separate offices, actually have people that know what to do and not give you the run around. At the rate of theft and crime in South Africa there is no way that they can expect it to be linked to one device as people are murdered for a cheap cellphone - They should rather first find solutions to try and sort out basic every day issues like having clean running water, having electricity, getting rid of crime and corruption, using abandoned or City / Government buildings that are empty to house the homeless, create jobs for the unemployed before trying to implement new complicated high risk programs to control the people. They would also not be able to guarantee that your personal information is being kept safe - they cant even do it now with "simpler" systems in place. If they implement this who would then be held accountable if identity theft or fraud takes place?? How would they protect you so that the information that all these institutions would have access to won't be used against you to prejudice you when they make decisions on if they would give you a loan for example. They should rather spend their time and our money to find solutions to uplift the people and to teach them skills so that they can better themselves. The list can go on and on and on... 	2026-06-05 20:00:28	No I do not	All of the above	Centralised Cyber & Security Risk	Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates.	Fran	Western Cape		
	2026-06-05 19:59:10	No I do not	All of the above	Centralised Cyber & Security Risk	Uitgebreide Nasionale Kuberverdedigingskwetsbaarheid: Alhoewel dit ambisieus klink om ouer tegnologie te verbysteek, wys kritici daarop dat spitstegnologie-sagteware net so veilig is soos die menslike relings wat dit bestuur. Gegewe die Suid-Afrikaanse openbare sektor se geskiedenis van sistemiese data-oortredings, ontwrigtings van ransomware en swak IT-beheer, brei die koppeling van die gesaghebbende bevolkingsregister direk aan korporatiewe bedieners via lewendige API's die land se "aanvalsoppervlak" aansienlik uit. Die konsolidering van toegang tot die burgerlike register in 'n gesentraliseerde lewendige netwerk skep 'n ongelooflik hoërisiko-teiken vir globale hackersindikate.	Dorothy	Gauteng		
	2026-06-05 19:58:53	No I do not	All of the above	Centralised Cyber & Security Risk	Why a digital ID? the Smart card ID and even the old green ID book works perfectly to be identified. To be honest, even the 'Smart card ID' was a needless and stupid implementation, the green ID book from back in the GOOD OLD DAYS worked perfectly fine with no issues whatsoever!!! Not all South Africans have or WANT smartphones. South Africa's high rate of mobile device theft will cause massive problems for individuals when one's smart phone is used for identity purposes. Loss of your smart phone could mean immediate economic and administrative disaster. It will lock you out of civic and banking lives. HUGE risk of data leaks and corporate surveillance. Draft Regulations introduce expansive risks and administrative penalties. Can not rely on internet, never could. Way to many traps you can fall into that will set you out of doing normal banking business or identify yourself if necessary. This is smart phone dependency. Why must the Digital ID expire every 5 years? If you have your I, it is for life, just yet ANOTHER Government money making scheme, what's new?! Absolutely pathetic! This is expanded surveillance, just another way of controlling the South African citizens and destroying what's left of their miserable lives, caused 100% by the Government. Also, the digital ID can be used as an authoritarian behavioral tracking system or act as a centralized economic kill-switch over your accounts. South African citizens DO NOT WANT THIS and should not allow this, it is pure EVIL orchestrated by the ELITES (Government & Above.....) These Identification Regulations 2026 must be scrapped indefinitely!!!!!!!	Riaan	Western Cape

					https://vt.tiktok.com/ZSxyWuHoG/ Problems you can experience with DIGITAL ID : 1. Identity theft if accounts are hacked 2. Large-scale data breaches exposing millions of users 3. Government overreach into personal life 4. Constant tracking of movements and activities 5. Loss of anonymity online 6. Cyberattacks targeting national databases 7. False accusations from incorrect data matches 8. Difficulty correcting errors in records 9. Account lockouts preventing access to services 10. Dependence on internet connectivity 11. Exclusion of people without smartphones 12. Exclusion of elderly or digitally illiterate users 13. Power outages disabling verification systems 14. Centralized databases becoming single points of failure 15. Abuse of facial recognition technology 16. Mass surveillance concerns 17. Profiling of citizens based on behavior 18. Data sharing without proper consent 19. Private companies monetizing identity data 20. Biometric data theft (fingerprints, iris scans, face scans) 21. No way to change stolen biometric information 22. Social scoring systems tied to IDs 23. Banking access blocked during system failures 24. Travel restrictions caused by technical errors 25. Government censorship linked to identity verification 26. Political discrimination through digital systems 27. Frozen accounts during investigations 28. Risk of authoritarian misuse 29. Reduced personal privacy 30. Increased phishing scams pretending to be ID providers 31. SIM-swap fraud targeting linked accounts 32. AI-generated deepfake identity fraud 33. Children’s data being collected long term 34. Permanent digital records of mistakes 35. Difficulty living “off-grid” 36. Dependence on centralized authentication apps 37. Password fatigue and security weaknesses 38. Loss of access after phone theft 39. Mandatory updates causing compatibility problems 40. Technology failures during emergencies 41. Exclusion during network outages 42. Identity spoofing attacks 43. Inaccurate facial recognition for some ethnic groups 44. Discrimination caused by algorithm bias 45. Employers accessing excessive personal information 46. Insurance companies profiling users 47. Reduced cash and anonymous payment use 48. Pressure toward cashless societies 49. Data leaks exposing home addresses 50. Increased blackmail risks from leaked records 51. Fraudulent loans opened using stolen identities 52. Difficulty proving identity if systems fail 53. Vendor lock-in to certain technology providers 54. High implementation costs for governments 55. Increased taxes to fund infrastructure 56. Corruption in procurement of digital ID systems 57. Cross-border incompatibility issues 58. Confusing verification procedures 59. Overreliance on automation 60. Lack of transparency in algorithms 61. Misidentification by AI systems 62. Unauthorized police access to databases 63. Abuse by insiders with database access 64. Tracking of purchases and spending habits 65. Difficulty escaping abusive relationships if constantly traceable 66. Identity suspension affecting daily life 67. Denial of services due to scoring systems 68. Reduced civil liberties concerns 69. Hackers targeting biometric checkpoints 70. Weak cybersecurity standards in some countries 71. Fraud through fake digital ID apps 72. Identity cloning using leaked information 73. Mandatory linking between services and IDs 74. Reduced freedom of speech due to traceability 75. Fear of expressing unpopular opinions 76. Increased dependence on big tech companies 77. Data retention for decades 78. Risk of political targeting 79. Internet censorship linked to verified identities 80. Difficulty remaining pseudonymous online 81. Privacy loss in healthcare systems 82. Tracking of medical history across institutions 83. Centralized citizen scoring possibilities 84. Unauthorized access by foreign actors 85. System downtime affecting entire populations 86. Fraudulent biometric enrollment 87. Poor regulation of third-party contractors 88. Exploitation of vulnerable populations 89. Lack of informed consent by users 90. Data collected beyond original purpose (“function creep”) 91. Problems caused by outdated information 92. Language barriers in digital systems 93. Rural communities being disadvantaged 94. Exclusion of undocumented individuals 95. Emotional stress from constant verification requirements 96. Increased dependency on electricity and devices 97. Digital exclusion during disasters 98. Risk of monopolies controlling identity infrastructure 99. Difficulty opting out once systems are mandatory 100. Loss of personal control over one’s own data 101. Phone battery dying during identity verification 102. Delays in emergency medical treatment due to ID checks 103. System errors denying boarding at airports 104. Inability to vote if systems malfunction 105. Increased risk of ransomware attacks on governments 106. Data corruption inside national databases 107. Confusion caused by multiple linked accounts 108. Digital IDs being used to monitor protests 109. Restrictions on access to public services 110. Financial exclusion from banking systems 111. Increased dependence on QR codes and scanners 112. Device incompatibility with older phones 113. Fake customer support scams stealing credentials 114. Loss of privacy in transportation systems 115. Data mining by advertisers 116. Forced identity verification for social media use 117. Children inheriting permanent digital profiles 118. Higher risk of cyberwarfare targeting citizens 119. Delays in welfare payments from system issues 120. Risk of identity misuse after death 121. Stalking risks through leaked location-linked data 122. Exposure of family relationships through linked records 123. Conflicts between privacy laws and enforcement practices 124. Mandatory compliance with changing regulations 125. Cross-platform tracking of user behavior 126. AI predicting personal behavior patterns 127. Difficulty accessing services abroad 128. Fraudulent biometric replicas 129. Voice-cloning attacks used for verification fraud 130. Identity blacklisting errors 131. Increased costs for small businesses to comply 132. Overcollection of unnecessary personal data 133. Government dependency on private contractors 134. Political instability affecting digital systems 135. Foreign surveillance through outsourced infrastructure 136. Unclear accountability after data leaks 137. Long recovery times after cyberattacks 138. Complications during software migrations 139. Human rights concerns over mandatory registration 140. Potential discrimination against minorities 141. Invasive monitoring in workplaces 142. Digital IDs being required for internet access 143. Difficulty accessing services in remote areas 144. Overdependence on cloud infrastructure 145. Server outages locking people out of accounts 146. Problems verifying identity after name changes 147. Barriers for refugees or migrants 148. Reduced ability to use anonymous forums 149. Data synchronization errors between agencies 150. Digital fraud rings targeting vulnerable users 151. Increased pressure to surrender privacy for convenience

	2026-06-05 17:29:33	No I do not	All of the above	Centralised Cyber & Security Risk	In a country where crime is rampant, this will simply not work. Should your mobile be stolen, your ID is compromised	Jennifer	KwaZulu-Natal		self-employed
	2026-06-05 17:22:40	No I do not	All of the above	Centralised Cyber & Security Risk	The problem I have is the people who created this technology are part and parcel of this new world order agenda of the WEF...a body of oligarchs who wants to control humankind ..via this digital ID...the government won't be in complete controll of the DI...any dissent against the WEF will be destroyed those who is in complete control of THE DI....GOD HELP HUMANKIND	Ismail	Western Cape		retired
	2026-06-05 17:22:16	No I do not	All of the above	Centralised Cyber & Security Risk	I still go with everything you mentioned..there is too much government overreach. Our government are just selling our country out to the WEF, UN and the WHO , and Bill Gates.. That man and these organisations should have no more say in our country and there powers stopped. Rhamphosa and the Anc should also be arrested . And all the unelected organisations and their policies halted.	Natasha	Gauteng		unemployed individual
	2026-06-05 17:21:58	No I do not	All of the above	Centralised Cyber & Security Risk	I'm not A criminal - This law should be for criminals not law-abiding South Africans . Laws were put into place for gun welders that are registered - again targeting law abiding citizens - It's those that don't have ID's and guns licences that are the majority of the problem ie CRIMINALS- Tsk Tsk	CHERYL	KwaZulu-Natal		employed individual
	2026-06-05 17:21:15	No I do not	All of the above	Centralised Cyber & Security Risk		Cicero	Gauteng		
	2026-06-05 17:19:21	No I do not	All of the above	Centralised Cyber & Security Risk	Eventual state control and losing the right and freedom to independant choices.	Lizette	Western Cape		retired
	2026-06-05 17:17:20	No I do not	All of the above	Centralised Cyber & Security Risk	I strongly oppose a Digital ID for the following reasons: Systems at many Department of Home Affairs offices are constantly offline. For example in Bredasdorp the system is offline almost 40 percent of the time. If our ID is linked to a centralized system, we could be unable to transact with an ID on a regular basis. Every single centralized system in SA has been captured, looted, plundered and exploited. When this is done with the identities of the entire population, the fraud, identity theft, extortion, ransom demands and totalitarian abuse will be on another level. Cyber criminals and hackers gain access to the most advanced systems in the world. It is just a matter of time before they gain access to this system and exploit it just like the corrupt officials and mafia networks. Having a digital ID on a mobile device and synchronizing it with private sector data creates a system of real-time 24-7 tracking and surveillance. This is a total abuse of power and our constitutional right to privacy and freedom to be tracked like that.	Hendrina	Western Cape		
	2026-06-05 17:17:14	No I do not	All of the above	Centralised Cyber & Security Risk		Eugene	Western Cape		
	2026-06-05 17:15:25	No I do not	All of the above	Centralised Cyber & Security Risk	The safely and risk to privacy hereof is extremely worrying. Phones are not safe or reliable and identity theft can take place, inter alia. Our electricity systems are not even reliable, therefore if there is a breakdown everything is at risk also internet. This is an extremely dangerous endeavour, especially in light of our country's unreliable systems, government departments , etc.	Irma	Western Cape		employed individual

	2026-06-05 15:17:21	No I do not	All of the above	Centralised Cyber & Security Risk	Dear Mr Malakate, I object to the proposed Digital ID/biometric system and unrestricted access to identity information. Biometric data is “special personal information” under POPIA 2013 and requires lawful, limited, secure processing with free, informed, and specific consent. This proposal risks identity theft, fraud, cybercrime, and unlawful surveillance if implemented without strict safeguards. It must comply with Section 14 of the Constitution, which guarantees the right to privacy, as well as the common law right to privacy, PAIA 2000, the Identification Act 1997, and the Electronic Communications and Transactions Act 2005. I request that no such system be implemented without independent oversight, clear limits on access, strong encryption, and the right to opt out of biometric collection. Please confirm receipt. Kind regards, Marius le Roux	Marius	Western Cape

	2026-06-05 14:57:10	No I do not	All of the above	Centralised Cyber & Security Risk	Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office. 	2026-06-05 14:39:08	No I do not	All of the above	Centralised Cyber & Security Risk	1. Centralised Cyber & Security Risk The proposed framework places all citizens' identity data into a single, centralised state-controlled mobile application. This creates a single point of failure that is highly vulnerable to hacking, insider abuse, and systemic outages. A breach would compromise millions of South Africans simultaneously, unlike the current distributed system where risks are more contained. 2. Smartphone Dependency & Digital Exclusion By binding identity credentials to smartphones, the regulations exclude citizens without access to modern devices or reliable internet. This disproportionately affects rural communities, the elderly, and low-income households, effectively discriminating against vulnerable groups and undermining constitutional rights to equality and access to services. 3. Corporate Interoperability & Privacy Concerns The amendments allow real-time synchronisation with private sector databases (banks, telecoms, healthcare providers). This risks exposing sensitive personal information to corporate misuse, profiling, and surveillance without adequate safeguards. Citizens lose control over how their data is shared and monetised. 4. Rolling Validation & Administrative Burden The requirement for continuous revalidation cycles and strict address-change notifications within 30 days introduces unnecessary penalties and bureaucratic traps. Instead of simplifying identity management, it risks locking citizens out of essential services due to minor administrative delays. 5. Soft Discrimination & Tiered Profiling Automated "profile-tiering" creates a hierarchy of identity validity, where some citizens may be downgraded or restricted based on opaque algorithms. This opens the door to digital discrimination, arbitrary exclusion, and erosion of equal rights under the law. 6. Constitutional & Civic Implications Because identity documents are the gateway to banking, employment, voting, healthcare, and travel, any flaws in this system directly threaten constitutional rights. The amendments fail to provide adequate guardrails to protect against abuse, exclusion, or systemic failure.	Andre	Gauteng		employed individual

	2026-06-05 13:45:35	No I do not	All of the above	Centralised Cyber & Security Risk	Skip to content Dear South Africa DEAR SOUTH AFRICA Democratically Engaged, Active and Responsible Menu DIGITAL ID Digital ID for South Africa DEAR-SOUTH-AfFRICA 0 comments individually delivered to the Minister, so far No I do not support the regulations 23765 Yes I do 193 Not fully 937 The Department of Home Affairs has published proposed amendments to the Identification Regulations under Government Gazette No. 54610. This framework introduces a smartphone-based “Digital Identity Credential” housed inside a centralised state mobile application called MyMzansi. While this system aims to eliminate physical administrative delays and phase out identity forgery, it introduces sweeping technological integration, real-time private sector data synchronisation, strict smartphone dependency, automated profile-tiering, and rolling validation cycles. Because your national identity document dictates your legal right to bank, work, travel, vote, and access healthcare, it is vital that the public shapes the regulatory guardrails of this digital infrastructure. You have until 6 June 2026 to submit your formal input. click the link for more info, or scroll down to have your say Have your say – shape the regulations. Do you support the Draft Amendment of Identification Regulations (Digital ID) as presented by the Dep of Home Affairs? No I do not What is your concern? (scroll down for an explanation of each) All of the above As you've chosen "all of the above", if you had to choose one concern, what would it be? Centralised Cyber & Security Risk Use this space to comment in any official South African language. If you are lost for words scroll down to view concerns and perspectives. Feel free to suggest alternatives, amendments or solutions. You can also copy and paste your comment. You will be redirected to a confirmation page. D-icon 9.9k Shares whatsapp sharing buttonfacebook sharing buttontwitter sharing button Top concerns Centralised Cyber & Security Risk Cybersecurity Readiness & “Leapfrogging” Vulnerabilities While the draft regulations introduce highly sophisticated cryptographic measures, including asymmetric elliptic-curve cryptography and encrypted database storage, they create an unprecedentedly dense web of database interfaces. This leapfrogges global legacy models by connecting the state’s population register directly to corporate networks via secure APIs. The Concern: South Africa’s public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic “attack surface.” If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. The 10-Year Physical Queue Trap Device Binding Vulnerability Corporate Interoperability & Privacy The 30-Day Address Notification Penalty Soft Discrimination & Digital Exclusion Perspectives: What is the debate? The proposed Amendment of the Identification Regulations, 2026, has ignited a vital conversation across South Africa regarding the digitization of civic infrastructure. To help you formulate your official submission, the core arguments surrounding the policy have been restructured below into two comprehensive perspectives. What Supporters Say Proponents of the draft regulations, including the Department of Home Affairs, state that the transition to a decentralised digital identity network is a necessary evolution that will fundamentally modernise South Africa. Their core arguments include: A Leapfrog Milestone for National Security: Moving to a decentralised digital framework represents an extraordinary technological milestone for South Africa. By introducing cryptographic device-binding, asymmetric encryption, and liveness-detecting facial recognition, the state is effectively “leapfrogging” older, outdated legacy systems used by global powers. This modern infrastructure will significantly curb routine identity fraud, phase out physical document forgery, and secure the digital economy. Unprecedented Bureaucratic Convenience: The MyMzansi application introduces massive administrative efficiency. Being able to securely renew an identity credential remotely via a basic facial scan on a smartphone eliminates the logistical burden of traveling to a state office. Furthermore, establishing automated “Verified Relationships” with trusted private partners (like banks and telecom networks) removes friction from the everyday FICA/KYC compliance process, enabling near real-time, bi-directional address and detail updates without tedious paperwork. Gold Standard Fraud Prevention: Strict cryptographic device-binding—anchoring your legal identity token to a single physical device—serves as the gold standard in modern cybersecurity. It guarantees that even if a criminal steals your personal data, usernames, or passwords, they cannot remotely impersonate you because they do not physically possess your unique bound mobile device. A Vital Systemic Reset: The rolling 5-year expiry and the 10-year in-person check-in requirements are necessary tools to keep the master population register dynamically accurate. The 10-year physical verification rule acts as a vital security reset to ensure that long-term inactive digital profiles belong to living, verified citizens, purging “ghost” records from the database. Enforced Privacy Guardrails: Proponents emphasise that the policy features robust, built-in statutory protections. The regulations explicitly align with POPIA, strictly banning private corporations from using identity pipelines for data commercialisation, consumer profiling, or open-ended intelligence gathering. Additionally, physical IDs remain entirely valid, meaning the system is completely voluntary.	Elmarie	North West		unemployed individual

	2026-06-05 12:17:49	No I do not	All of the above	Centralised Cyber & Security Risk	The problem here is South Africa is as far as technology is concerned not adequately equipped to handle this form of Identification. Thousands don't have access to Smartphones or any electronic devices. Criminal activity is off the scale here in that any Phone or Smartphone is always under the threat of being stolen. It is completely unfair to subject the people of this country to these First World standards. It will just bring more aggravation to the people.	Joey	Gauteng

	2026-06-05 12:05:34	No I do not	All of the above	Centralised Cyber & Security Risk	Privacy concerns A digital ID can centralize large amounts of personal information in one system. Citizens may worry about government or third-party access to their data. Risk of surveillance Digital identity systems can potentially make it easier to track people's activities across government services. Critics argue this could increase state monitoring of citizens. Cybersecurity threats Large databases are attractive targets for hackers. A breach could expose sensitive information of millions of people. Identity theft risks If digital credentials are compromised, criminals may be able to impersonate individuals across multiple services. Exclusion of vulnerable groups People without smartphones, internet access, digital skills, or reliable connectivity may struggle to use digital IDs. This could disproportionately affect rural communities, elderly people, and low-income households. System failures Technical outages could prevent people from accessing essential services, benefits, banking, or identification functions. Function creep A system introduced for one purpose may gradually be expanded to others without sufficient public debate or consent. Loss of anonymity Some transactions or interactions that can currently be conducted with limited identification may become fully traceable. High implementation costs Developing, maintaining, and securing a nationwide digital ID system can be expensive. Critics may argue that funds should be directed to other priorities. Potential for abuse by future governments Even if a system is well-intentioned today, future administrations could use it in ways not originally envisioned. Dependence on technology Citizens become reliant on digital infrastructure, electricity, internet connectivity, and functioning devices. Data-sharing concerns There may be worries about personal information being shared between government departments or private organizations without adequate transparency. Lack of public trust If people do not trust government institutions to protect their data, adoption and legitimacy may suffer. Civil liberties concerns Some critics argue that mandatory digital identification could make participation in society conditional on registration within a centralized system. Risk of wrongful exclusion Errors in databases, biometric mismatches, or administrative mistakes could prevent legitimate users from accessing services.	Merissa	Western Cape		self-employed

	2026-06-05 12:00:43	No I do not	All of the above	Centralised Cyber & Security Risk	I appreciate the stance the department is trying to use in curbing fraud and theft identity but as a South African, my personal information should not be subject to the state at any given time - there should be a strict balance. Department of Home Affairs should come up with other solutions to curb identity theft and that starts with all their employees as they are enablers of this criminal activities…the porous borders as well. In a country where cybersecurity is rife, this entire move prejudices South Africans - as a country we are not yet at that level where we can be 100% comfortable with digitisation - the department should do case studies of countries that manage citizens identity documents, tourism and immigration well, and learn what works and what does not work and build from there. 	2026-06-05 11:58:48	No I do not	All of the above	Centralised Cyber & Security Risk	Cybersecurity Readiness & “Leapfrogging” Vulnerabilities While the draft regulations introduce highly sophisticated cryptographic measures, including asymmetric elliptic-curve cryptography and encrypted database storage, they create an unprecedentedly dense web of database interfaces. This leapfrogges global legacy models by connecting the state’s population register directly to corporate networks via secure APIs. The Concern: South Africa’s public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic “attack surface.” If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. 	2026-06-05 11:03:47	No I do not	All of the above	Centralised Cyber & Security Risk	I'm concerned that centralised digital identity systems create a significant cybersecurity risk. A single breach or system compromise could expose the personal information of large numbers of citizens, making the consequences far more severe than those associated with separate, independent databases. I am also concerned that these regulations create a precedent for linking government and private-sector databases in ways that could erode personal privacy. I oppose any legal framework that allows citizens' personal information to be continuously shared and synchronized between government systems and private companies. This raises serious concerns about privacy, individual freedoms, and potential misuse of personal data.	Francois	Western Cape		self-employed

	2026-06-05 10:34:59	No I do not	All of the above	Centralised Cyber & Security Risk	I do not support the Draft Amendment of Identification Regulations for the following reasons:Severe Privacy Risks (Section 14): Centralising sensitive biometric data under a single state application ("MyMzansi") creates a massive, high-value target for cybercriminals. If permanent biometric data is hacked, it cannot be reset like a password. State Surveillance: Tracking "Verified Relationships" between citizens and private entities (like banks and telecom companies) loops real-time transaction data back to the state, paving the way for invasive, unconstitutional surveillance. Concentration of Power: The regulations hand over excessive administrative power to the Director-General of Home Affairs to alter validation cycles and parameters without robust judicial oversight. Unfair Digital Exclusion: Forcing essential civic infrastructure onto a smartphone-app ecosystem will inevitably marginalise millions of vulnerable South Africans who lack expensive smartphones or reliable data, stripping them of their right to dignity and state services.	Colleen	Eastern Cape		self-employed

	2026-06-05 10:13:29	No I do not	All of the above	Centralised Cyber & Security Risk	**Comments on the Draft Identification Regulations, 2026** I support the Department of Home Affairs' efforts to modernise identity management and improve service delivery. However, I would like to raise the following concerns for consideration: **1. Centralised Cyber and Security Risk** The proposed system appears to centralise significant amounts of personal and biometric information. While this may improve efficiency, it also increases the potential impact of a cyberattack or data breach. I request clarity on the security measures, independent oversight mechanisms, and liability provisions that will protect citizens should such an incident occur. **2. The 10-Year Physical Queue Requirement** I am concerned about any provision that may require citizens to physically re-establish their identity after a prolonged period of digital use. Such requirements could place unnecessary burdens on elderly persons, persons with disabilities, citizens living in remote areas, and South Africans residing abroad. I request that clear, accessible alternatives be provided. **3. Corporate Interoperability and Privacy** The proposed interoperability between government systems and private-sector institutions such as banks and telecommunications providers raises important privacy considerations. Citizens should be clearly informed about what information may be shared, under what circumstances, and what consent mechanisms will be available. Strong safeguards should be implemented to prevent excessive data sharing. **4. Address and Personal Information Update Requirements** If citizens are required to update personal information within a prescribed timeframe, the regulations should clearly define these obligations and provide reasonable flexibility. Administrative penalties or service limitations resulting from delayed updates could disproportionately affect vulnerable citizens. **5. Function Creep and Tracking Concerns** While the current objective is identity verification, I am concerned that future expansions of the system could result in broader monitoring or tracking capabilities that were not originally intended. I request that the regulations include strict limitations on the use of personal data and require public consultation before any significant expansion of the system's scope. **6. Centralised Economic Access Risks** As more services become digitally integrated, safeguards should be implemented to ensure that no citizen can be unfairly excluded from essential services due to technical failures, identity disputes, cyber incidents, or administrative errors. Citizens should have access to effective appeal and recovery mechanisms. **7. Digital Exclusion and Accessibility** Many South Africans do not have reliable access to smartphones, mobile data, stable internet connectivity, or digital literacy resources. It is essential that physical identity documents and in-person service channels remain available and fully functional so that no citizen is disadvantaged by the transition to digital services. I respectfully request that these concerns be considered during the finalisation of the regulations and that the Department provide clear safeguards to protect privacy, accessibility, security, and the constitutional rights of all citizens. 	2026-06-05 09:35:21	No I do not	All of the above	Centralised Cyber & Security Risk	I submit this objection as part of the public participation process on the proposed amendments to the Identification Act 68 of 1997 relating to Digital ID and the biometric database. 1. Objection I object to the proposed Digital ID/biometric system and any unrestricted access to identity information. 2. Legal & Constitutional grounds - POPIA 4/2013 Sec 26: Biometric data is “special personal information”. It requires lawful, limited, secure processing with free, informed, and specific consent Sec 11. - Section 14 Constitution: Guarantees the right to privacy. Any limitation must be reasonable and justifiable Sec 36. - Common law right to privacy + PAIA 2/2000: Access to and processing of personal information must be protected, not broadened without oversight. - Identification Act 68/1997 + Births & Deaths Registration Act 51/1992: The National Population Register NPR is the legal source of identity data. Any Digital ID/CIRP linkage must have a clear legal basis and purpose limitation. - Electronic Communications and Transactions Act 25/2005: Electronic data security standards apply. 3. Risks Without strict safeguards, the proposal risks: identity theft, fraud, cybercrime, and unlawful surveillance. 4. Request I request that no such system be implemented without: - Independent oversight and regular audits - Clear legal limits on who can access data and for what purpose - Strong encryption and POPIA Sec 19 security safeguards - The right to opt out of biometric collection, with alternative non-biometric verification available - Publication of DHA’s responses to public submissions as required by PAJA 3/2000	Ian	Western Cape		employed individual

An individual must have complete control of their own affairs and not controlled by a government department. With AI things are changing at a great rate. Government does not have the security in place nor the capabilities to do so. Also too much corruption. It is already a nightmare at Home Affairs. NO NO NO !!.!!	Rosemary	KwaZulu-Natal		retired

	2026-06-05 09:18:50	No I do not	All of the above	Centralised Cyber & Security Risk	While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector’s history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation’s “attack surface.” Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates.	HANNAH	Western Cape		retired
	2026-06-05 09:17:44	No I do not	All of the above	Centralised Cyber & Security Risk	South Africa’s public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic “attack surface.” If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly.	Anne-Marie	Western Cape		
	2026-06-05 09:17:01	No I do not	All of the above	Centralised Cyber & Security Risk	Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates and even within the South African context	Peter	Western Cape		employed individual

	2026-06-05 09:12:04	No I do not	All of the above	Centralised Cyber & Security Risk	Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual’s legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. 	2026-06-05 08:48:00	No I do not	All of the above	Centralised Cyber & Security Risk	Due to the sudden changes, compared to other countries no one has digital IDs. There's no reason for this to happen, especially here in South Africa. South Africa is not as advanced as they think we are, most of the citizens still use the book IDs, it's useful and easier to manage compared to the digital format. It won't help anyone it would just cause damages and more corruptions for citizens if you change everything to digital.	Sascha	Western Cape		student

	2026-06-04 21:34:35	No I do not	All of the above	Centralised Cyber & Security Risk	My biggest concern is cybersecurity. A Digital ID may be convenient, but it also creates a centralised repository of highly sensitive personal and biometric information. If such a system is breached, hacked, or abused, the consequences could affect millions of South Africans simultaneously. In a country already struggling with cybercrime, identity theft, and mobile phone theft, I do not believe sufficient safeguards have been demonstrated to justify the risks. Citizens should not be forced into a system where access to their legal identity depends on a smartphone, internet connectivity, or the security of a central database. Physical identification should remain available and fully functional, and participation in any Digital ID system should be voluntary rather than effectively mandatory.	Christelle	Western Cape		unemployed individual

	2026-06-04 20:41:27	No I do not	All of the above	Centralised Cyber & Security Risk	I have been the victim of my phone being cloned and the hackers managed to bypass all security measures. All my bank accounts were emptied and they even opened credit cards and a massive loan in my name. This was reported to the cyber crimes unit and SAPS. I was told that I could track the defrauded funds, but my monies bounced to so many accounts globally and the cost to retrieve the funds would cost me over 2 million rand. This with the help of Interpol. The banks take no responsibility, it is almost as if they are complicit. The next issue is that not everybody owns a smart phone, and for those who can't afford one, will they be issued a freebie at taxpayers expense? Once the phone is locked and loaded with all personal information and then, is lost or stolen, the process in re-applying is untenable. I just predict another massive government failure at great cost to an already stretched population struggling for basic survival. This reminds me of the billions spent on gantries to collect toll payments and rendering SanRail bankcrupt and another government bailout. When will we stop wasting taxpayers money? 	2026-06-04 19:16:30	No I do not	All of the above	Centralised Cyber & Security Risk	South Africa does not in my opinion have the know how nor expertise to handle digital ID's. We do not have the security for this and with the rate of cell phones and laptops being stolen on a daily basis due to the astronomical crime rate in our country, this is a totally outrageous thought.	Samantha	Gauteng		
	2026-06-04 19:15:29	No I do not	All of the above	Centralised Cyber & Security Risk	In terms of The Constitution of the Republic of South Africa,1996, the proposed draft digital identification regulations, 2026 (Government Gazette No. 54610), will unlawfully infringe upon my constitutional rights, privacy, property rights, bodily autonomy, freedom of movement and personal sovereingty. No Government, and even more so the corrupt South African Government, has any right to control or restrict me as an individual in any manner as suggested in the proposed draft digital identification regulations, 2026. It is unfortunately very obvious that the he proposed draft digital identification regulations, 2026, forms part of the United Nation's 'dark' 2030 Agenda for Sustainable Development, i.e. the move towards a one world government which shall not be tolerated. 	2026-06-04 18:34:29	No I do not	All of the above	Centralised Cyber & Security Risk	*RE:* Objection to proposed amendments to the Identification Act relating to the Digital ID/biometric database I object to the proposed Digital ID/biometric system and unrestricted access to identity information. Biometric data is “special personal information” under POPIA 2013 and requires lawful, limited, secure processing with free, informed, and specific consent. This proposal risks identity theft, fraud, cybercrime, and unlawful surveillance if implemented without strict safeguards. It must comply with Section 14 of the Constitution, which guarantees the right to privacy, as well as the common law right to privacy, PAIA 2000, the Identification Act 1997, and the Electronic Communications and Transactions Act 2005. I request that no such system be implemented without independent oversight, clear limits on access, strong encryption, and the right to opt out of biometric collection.	Martie	Free State		retired
	2026-06-04 18:33:11	No I do not	All of the above	Centralised Cyber & Security Risk	A stolen or lost phone will have dire consequences. Giving government this mich power will only lead to more control and less freedom including economic exclusion.	Christien	Mpumalanga

	2026-06-04 17:55:15	No I do not	All of the above	Centralised Cyber & Security Risk	the draft regulations introduce expansive risks and administrative penalties that demand much tighter constitutional safeguards. Their core arguments include: Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector’s history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation’s “attack surface.” Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically “lapse” triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual’s legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating “near real-time” data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic “soft discrimination” —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-06-04 17:50:58	No I do not	All of the above	Centralised Cyber & Security Risk	Have a look at how banks, especially Standard Bank, are struggling to keep their customers' info secure. Both national and local Governments have been hacked several times. If we go digital and allow banks/government to run everything digitally, we are in for much more problems than we already are. In China people lost their income, their jobs and were jailed, because of faulty digital systems. I struggled for two months with Standard Bank after their changes to their internet banking website. I had no access to my accounts and it took me 4,5 hours in the bank to resolve the matter. There is just too much cyber fraud going on for me to trust any digital system. 	2026-06-04 10:13:31	No I do not	All of the above	Centralised Cyber & Security Risk	This sounds like an idea promulgated by someone who stands to benefit financially, not by someone with any sense or concern for the welfare and safety of citizens or their data. Broad access to sensitive data due to it being connected and available across multiple platforms sounds like a terrible idea. Given that South African government agencies/departments are rife with corruption this should terrify anyone concerned with privacy, identity theft, identity fraud and so on. State surveillance leading to corporate tracking, discrimination and exploitation is an extremely likely outcome or scenario. Surveillance pricing and similar discriminatory and exploitative practices - being a very real concern in a legal environment where the state is unaware and glacially slow in responding to threats and protecting citizen's rights, economic welfare and data - would only be enabled by this policy. Being bound to a single device? Who proposed this ‘brilliant idea’? How would you resolve the loss of your ID? How would you apply for a new one? You’d have to stand in a queue. So much for convenience. How would you prove your identity if stopped by the police? ‘My phone was stolen so I can’t prove I am who I am’. Now what? Arrest? Because some criminal mugged you or you dropped your phone? What is the cost of a new phone vs an ID card? More brilliance or a financial agenda? Criminals would begin targeting devices specifically, which would lead to an increase in crime, risk to citizens, and greater unnecessary expense in an already fragile financial environment.	Brian	Gauteng		self-employed
	2026-06-04 10:12:00	No I do not	All of the above	Centralised Cyber & Security Risk	Giving a corrupt incompetent criminal government like the ANC access to any sensitive personal information opens everyone up to their racist authoritarian control.	Martin	Western Cape		retired

	2026-06-04 08:07:03	No I do not	All of the above	Centralised Cyber & Security Risk	The Digital ID system is flawed on nearly every level and creates the possibility for massive abuses and security risks. The system: Creates a single point of failure for cyber breaches and data leaks. Gives government extensive control over citizens' personal information, allowing them to track your activities and transactions and has the potential to expand into broader surveillance of citizens. Makes large-scale data collection and profiling easier, similar to China's digital ID system. It allows increased scrutiny of certain groups and restrictions on access to services, giving greater state control over citizens' daily lives. It will allow the use of identity verification as a mechanism to regulate participation in economic and civic activities. If your phone is stolen, which happens often in this country, citizens can be left unable to verify their identity, losing access to banking and government services. This removes the individual's rights to control how their information is managed and who accesses it, increasing dependence on government-controlled systems, whilst allowing the government to share private data with commercial institutions. This system can be used as an economic kill switch, restricting access to banking or financial services, using identity verification as a condition for economic participation and creating mechanisms through which citizens could effectively be excluded from normal economic activity. The government has proved over the past 30 years that it cannot be trusted with the level of control they already have, increasing this control gives them broader license to discriminate, control and steal.	Crena	Western Cape		
	2026-06-04 07:59:00	No I do not	All of the above	Centralised Cyber & Security Risk	This will be stolen identity and my freedom. I do not agree with this new way of taking away my freedom	Riana	Limpopo		unemployed individual

	2026-06-03 19:04:26	No I do not	All of the above	Centralised Cyber & Security Risk	I object the implementation of a digital ID system due to the substantial risks associated with its centralized nature. Key concerns include cybersecurity threats such as large-scale data breaches, identity theft, and insider misuse; privacy risks arising from increased surveillance, profiling, and potential expansion of the system beyond its original purpose; operational vulnerabilities including system outages, data inaccuracies, and single points of failure; and governance concerns relating to accountability, oversight, digital sovereignty, and dependence on third-party technology providers. Collectively, these risks have the potential to compromise individual privacy, security, and access to essential services, making them critical considerations before any digital ID system is adopted.	Mona	Western Cape		self-employed
	2026-06-03 18:57:50	No I do not	All of the above	Centralised Cyber & Security Risk	South Africa's public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic "attack surface." If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly.	Adele	KwaZulu-Natal		business owner
	2026-06-03 18:57:03	No I do not	All of the above	Centralised Cyber & Security Risk	First of all the reasons as mentioned above is not my concern. People are ignoring the word of God as a whole. We must be more obedient to God than to men. If this is a Christian country like people claim ,everyone will say no to the mark of the beast.	Reinholdt	Gauteng		employed individual

	2026-06-03 18:40:37	No I do not	All of the above	Centralised Cyber & Security Risk	Biometric information constitutes "special personal information" in terms of the Protection of Personal Information Act (POPIA) of 2013 and should only be processed lawfully, securely, and for a clearly defined purpose, with free, informed, and specific consent from individuals. The proposed system raises serious concerns regarding privacy, identity theft, fraud, cybercrime, data breaches, and the potential for unlawful surveillance if implemented without stringent safeguards and independent oversight. Any amendments must fully comply with Section 14 of the Constitution of South Africa, which guarantees the right to privacy, together with the common law right to privacy, the Promotion of Access to Information Act (PAIA) 2000, the Identification Act 1997, and the Electronic Communications and Transactions Act 2005. I respectfully request that no such system be implemented without: • Independent oversight and accountability mechanisms; • Strict limitations on access to personal and biometric data; • Robust cybersecurity and encryption protections; and • The explicit right for individuals to opt out of biometric data collection and storage. 	2026-06-03 18:04:45	No I do not	All of the above	Centralised Cyber & Security Risk	To: Moses.Malakate@dha.gov.za Subject: Objection to Draft Identification Regulations, 2026 – Government Gazette 54610 Dear Chief Director: Legal Services,. I am a South African citizen residing in [Your Town/City, Province]. I wish to submit my formal objection to the Draft Identification Regulations, 2026 published in Government Gazette No. 54610. I strongly object to the current Digital ID plans as proposed. The technology and infrastructure required for a safe Digital ID and digital authentication system are not realistically available to many people, particularly in rural and remote areas, townships, and informal settlements. Rolling out a system that will act as a gatekeeper for grants, healthcare, education, and employment will discriminate against the poor and rural population and undermine their constitutional rights to equality, dignity, and access to basic services. If Government insists on proceeding with Digital ID, it must be rural-first and rights-first in design and implementation. This means: 1. Pilot and prove the system in rural villages, townships, and informal settlements before urban rollout. 2. Guarantee permanent paper-based and offline access to all essential services so no one is excluded due to lack of devices, data, or network coverage. 3. Put strong legal protections and effective remedies in place so no person loses their livelihood, grant, or access to services because of network failures, device theft, or technical errors. If the system cannot meet these conditions, it should not proceed. Yours faithfully, Marieta Barnard 076 213 6776 [Uthando@telkomsa.net George, western Cape	Marieta	Western Cape

	2026-06-03 16:56:51	No I do not	All of the above	Centralised Cyber & Security Risk	It characterizes routine data integrations between the state and private entities as "Real-Time Corporate Data Loops," conveniently omitting South Africa's Protection of Personal Information Act (POPIA), which strictly governs such data sharing and legally requires user consent. Similarly, labeling the administrative requirement to keep personal details updated as "Algorithmic Profiling" fundamentally misrepresents basic identity verification logic; lowering an "Identity Assurance Level" when information is outdated is a standard cybersecurity practice to prevent fraud, not a sinister tool for state surveillance. Ultimately, the post weaponizes legitimate privacy concerns by twisting standard bureaucratic and security frameworks into exaggerated, unfounded threats to civil liberties. 	2026-06-02 18:48:42	No I do not	All of the above	Centralised Cyber & Security Risk	1. Real-time links between state registers and big corporations destroy data boundaries, it hands private firms direct influence over civic records and multiplies breach risk. 2. Penalising small, common delays with automatic score drops creates brittle, opaque gatekeeping that can arbitrarily block people from basic services. 3. Tying ID to a single phone turns everyday device theft into immediate identity lockdown with no clear recovery path, a major accessibility and security failure. 4. Forcing in-person re-verification after 10 years effectively disenfranchises people who can't travel or wait in long queues, creating a hidden barrier to civic participation. 5. Centralising biometric and behavioural data builds a ready-made platform for surveillance and discriminatory, automated exclusion down the line.	Chris	Western Cape		employed individual

	2026-06-02 16:05:48	No I do not	All of the above	Centralised Cyber & Security Risk	I oppose strongly for the following reasons: Use of my very sensitive personal information I do not support giving the state broader power over my very sensitive personal information, including medical information, without clear and ongoing consent. Real-time sharing between the state and private companies I oppose the automatic sharing of my personal information between government systems and private entities such as banks and telecom providers. This is a serious privacy risk. Loss of control over my identity I do not agree with my identity being tied to a smartphone-based digital credential that can be frozen, revoked, or disrupted if my phone is lost or stolen. No clear protection if access is lost I oppose a system that does not clearly guarantee a secure and immediate way for me to regain access to my identity if something goes wrong. Digital exclusion I do not support regulations that assume everyone has reliable access to smartphones, connectivity, and in-person service points. Algorithmic penalties I oppose a system where failing to update personal details within 30 days can lower my identity assurance level and interfere with my access to services. Surveillance and abuse of power I am deeply concerned that centralised biometric data, cross-system tracking, and identity scoring create the foundation for surveillance and future abuse. Too much power over ordinary people I do not support any system that gives the state or connected entities this much control over my identity, my data, and my access to essential services. POPIA / Privacy I oppose these regulations because they appear inconsistent with the principles of the Protection of Personal Information Act ("POPIA"), which exists to protect my personal information and my constitutional right to privacy. Under POPIA, sensitive personal information—especially health and biometric information—requires strict safeguards, lawful justification, and clear limits on how it is collected, shared, and used. I am concerned that these regulations enable excessive data sharing, function creep, and reduced control over my personal information in a way that may undermine those protections.	Andre	Gauteng

	2026-06-02 15:59:49	No I do not	All of the above	Centralised Cyber & Security Risk	Most of us have our Smart card ID's. That is enough for identification or even the old green ID book. Give smart card ID to those who have not. Why a digital ID? Not all South African's have smart phones. This is just another way of controlling the citizens of South Africa. Expanded surveillance. It can be use as an authoritarian behavioral tracking system or a centrelised economic kill-switch over your accounts. To much traps you can fall in that will set you out of doing normal banking business or identify yourself if necessary. The draft regulations introduce expansive risks and administrative penalties. Why must the digital ID expire every 5 years? If you have a ID it is for life. South Africa's high rate of mobile device theft will cause big problems for individuals when your smart phone is use for identification purpose. Lost of a device could mean immediate economic and administrative disaster. Smart phone dependency. Risk of data leaks and corporate surveillance. The Identification Regulations 2026 must be scrap in total. I don't want a digital ID.	Tinie	Western Cape

	2026-06-02 14:41:13	No I do not	All of the above	Centralised Cyber & Security Risk	Why a digital ID? The Smart card ID and even the old green ID book is good enough to be identified. Not all South Africans have Smart phones. This is just another way of controlling the SA citizens. Expanded surveillance and Smart phone dependency. It can be use as an authoritarian behavioral tracking system or act as a centralised economic kill-switch over your accounts. Draft Regulations introduce expansive risks and administrative penalties. Can't rely on internet. To much traps you can fall in that will set you out of doing normal banking business or identify yourself when necessary. Lost of your Smart phone could mean immediate economic and administrative disaster. Risk of data leaks and corporate surveillance. Why must your ID expire every 5 years? If you have your ID it is for life. The Identification Regulations 2026 must be scrap in total. We do not want a digital ID.	Hettie	Western Cape

	2026-06-02 12:50:33	No I do not	All of the above	Centralised Cyber & Security Risk	I am writing to formally object to the new draft Identification Regulations. While making Home Affairs digital sounds great, the way this app is being built is going to cause massive problems for everyday South Africans. I object to these new rules for a few very simple reasons. South Africa is currently facing a massive fiscal crisis, with a national debt burden so severe that Treasury has forced devastating budget cuts across our public sectors. Our education system is actively bleeding out; provincial education departments are so starved of cash that they are slashing school subsidies by up to 60%, forcing schools to cut teacher posts and pass the financial burden onto struggling parents. It is economically reckless and morally indefensible for the state to claim it has no money to fund a child's basic school desk, textbook, or stationery, yet suddenly find billions of Rands to build and maintain a massive, high-tier digital server network for a smartphone tracking app. If the government has a spare cent to invest in infrastructure, it belongs in our collapsing classrooms and offline Home Affairs offices—not in an elite digital identity experiment that ordinary citizens cannot afford or safely access. We cannot afford the massive server and IT costs: Building and running a giant, centralized digital ID system that is supposed to connect to banks and cellphone companies in real-time is going to cost billions of Rands. Home Affairs can barely keep its current computers online—we see "the system is down" almost every time we visit a branch. Spending a fortune on massive server networks that will probably crash anyway is a reckless waste of taxpayers' money, especially when that money is needed for basic services. The "30-Day Rule" is completely out of touch: The requirement to report a routine update like a new email address or home address within 30 days—or face an automated penalty from a computer algorithm—is ridiculous. Think of a grandmother managing a chaotic household, or someone moving between informal settlements looking for work. They are trying to survive, not worrying about logging into a state app to update an email address. Leaving an automated computer algorithm to quietly lower a citizen's "identity score" and lock them out of basic services because of a minor administrative delay violates the basic right to administrative justice. It punishes victims of violent crime: Crime and phone theft are an everyday terror in South Africa. If a gogo in a township gets her phone stolen, or a student gets mugged on their way to campus, they don't just lose a piece of plastic—they instantly lose their entire legal existence. Because these rules don't outline a clear, immediate, and safe way to restore a digital ID remotely, a robbery victim is automatically penalized with total financial and administrative paralysis. Expecting a traumatized crime victim to navigate a broken bureaucratic system just to prove they exist is cruel. It turns banks and cellphone networks into spies: I do not want my private bank or cellphone company constantly feeding my personal information directly to a government database in real-time. If there is a data leak at a cellphone shop or a bank, my official government record is compromised too. Civic data and private business data should stay completely separate. 	2026-06-02 11:18:43	No I do not	All of the above	Centralised Cyber & Security Risk	I simply disagree with this control and oversight for a country to know everything about its citizens. As a government you have more than enough information on all your citizens, you do not have the right to further insight or control. Living in a digital world that is constantly threatened by cyber security hacking attacks, are you as a government prepared to state that you will implement the best security systems to prevent these attacks from happening?? If you cannot answer this with 100% positivity, then you do not have the right to insist on implementing a digital service that cannot safeguard any citizens personal information. While we do live in a digital world, as a citizen of this country, I do believe that I have full sovereignty - supreme, absolute power and authority over my personal information and to whom I pass it onto. My vote is a distinct NO.	Heather	Gauteng		
	2026-06-02 11:08:50	No I do not	All of the above	Centralised Cyber & Security Risk	I do not support the introduction of a mandatory digital identification system because it concentrates too much personal information and control in a centralised platform that could threaten privacy, security, and individual freedoms. The proposed framework creates extensive data-sharing between government and private entities, introduces identity assurance scoring that may unfairly restrict access to essential services, and ties digital identity to personal devices that can be lost or stolen. It also places an administrative burden on citizens through strict update requirements and renewal processes, while creating infrastructure that could enable future surveillance, profiling, or exclusion from services. Access to civil rights, banking, employment, communication, travel, and voting should not depend on a digital system that may be vulnerable to technical failures, security breaches, or misuse. Citizens should retain the right to use secure physical identification documents without being compelled to participate in a digital identity programme.	Petronella	Western Cape		retired

	2026-06-02 09:56:46	No I do not	All of the above	Centralised Cyber & Security Risk	While the draft regulations introduce highly sophisticated cryptographic measures, including asymmetric elliptic-curve cryptography and encrypted database storage, they create an unprecedentedly dense web of database interfaces. This leapfrogges global legacy models by connecting the state's population register directly to corporate networks via secure APIs. The Concern: South Africa's public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic "attack surface." If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly.	Mark	Gauteng		self-employed

	2026-06-01 21:57:07	No I do not	All of the above	Centralised Cyber & Security Risk	Device Binding: The Stolen Phone Lockdown To secure your data, the system relies on device binding—the technical process of cryptographically locking your digital identity token to one single mobile device running the MyMzansi application. If a device is compromised, or its private cryptographic key is suspected of being leaked, the credential must be immediately suspended or revoked. The Concern: Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office. 	2026-06-01 20:56:16	No I do not	All of the above	Centralised Cyber & Security Risk	I strongly oppose the MyMzansi digital identity proposal due to the severe security vulnerabilities inherent in its centralized design. By directly wiring the national civic database into private corporate networks, the government is drastically expanding the nation's digital weak points. Considering the South African public sector's documented struggles with ransomware and protecting sensitive information, building an interconnected, live data hub is reckless. Consolidating our essential civil records into a single access point transforms citizens' private details into a highly lucrative target for international cybercriminals, paving the way for devastating, massive-scale identity theft if the primary system is ever breached.	Kelly	Eastern Cape		employed individual

	2026-06-01 11:17:19	No I do not	All of the above	Centralised Cyber & Security Risk	SA government, it's subsidiaries as well as the private sector CAN NOT be trusted with the centralisation of so much personal life data. Both public and private sectors have proven time and again that they are corrupt and careless insofar as SAn citizens issues and concerns go. Home Affairs is the worst department know for SELLING personal data to anyone willing to pay for it The private sector is also happy to collaborate with any one that's not SAn, as long as those non-SAns are willing to be the private sectors' slave for exponential profits. Therefore, private sector CAN'T be trusted with so much personal data. SA is FAR from being ready for such an enormous task of data centralisation. Rather focus SA on strengthening PHYSICAL borders FIRST...then you can move to DIGITAL "borders". For now, no; this government is too weak for such big moves.	Bongi	Gauteng		retired

	2026-05-31 05:38:55	No I do not	All of the above	Centralised Cyber & Security Risk	Given the rate of crime in this country, having a digital ID on your smartphone poses a safety risk and it will increase chances of fraud and stolen identity. Furthermore, creating a subscription model for an identity document makes no sense as the administration can be costly and time consuming. We already receive unsolicited marketing calls from companies that we do not know, which clearly shows that POPI is not being adhered to. Having private third parties have access to this digital ID will just be a privacy nightmare. The physical ID currently works, please do not "fix or innovate" what is not necessary. 	2026-05-30 06:36:55	No I do not	All of the above	Centralised Cyber & Security Risk	South Africa has become a crime hub because the government and its appointed protection agencies both underestimate the criminals inside and outside the government and overestimate their own capabilities in fighting any and all forms of crime. They do not have the ability or capability to protect their own systems and databases nor protect their citizens and tax payers from identity theft. They cannot be trusted with the current system of records, how can they be trusted with the immensity of a cloud based collection of minute details of law abiding citizens? The country is currently inundated by illegal non-citizens, the number which is also underestimated because the government currently do not even have the will to act to protect their own; now they want to enforce a digital ID on those they cannot protect. Is it possibly a case of once again going after the good guys because they're an easier target?	Ronel	Gauteng		retired

	2026-05-29 16:11:06	No I do not	All of the above	Centralised Cyber & Security Risk	While modernisation may have benefits, many South Africans are deeply concerned about the level of governmental control, surveillance, and data access this bill could create. Forcing citizens to rely on smartphones, apps, and live digital verification to maintain their legal identity raises serious privacy, cybersecurity, and constitutional concerns — especially in a country already struggling with corruption, cybercrime, data breaches, and weak administration. Critics warn that linking government identity systems directly to banks and telecom companies increases the risk of hacking, data leaks, corporate surveillance, and abuse of power. Many people, especially the elderly, already feel vulnerable to scams and do not want sensitive personal information constantly shared across digital systems. There are also fears that citizens could be unfairly locked out of services if a phone is lost, stolen, or if their identity credential lapses due to bureaucratic technicalities. Over time, digital-only systems may also disadvantage poorer, rural, or less technologically capable South Africans. Modernisation should improve services — not reduce freedom, privacy, autonomy, and basic civil rights.	Dr. Adele	Western Cape		self-employed
	2026-05-29 16:07:41	No I do not	All of the above	Centralised Cyber & Security Risk		Pierre	Western Cape		self-employed
	2026-05-29 15:53:21	No I do not	All of the above	Centralised Cyber & Security Risk	There will be too much control over data by the government. Unnecessary information/data is at risk. Takes away individual power.	Sandra	Western Cape		
	2026-05-29 15:49:48	No I do not	All of the above	Centralised Cyber & Security Risk	I think the response above covers all the possible problems. Furthermore, if one believes that fraudulent IDs would be eliminated. In my opinion, I think it simplifies the process.	Michael David	Gauteng		retired

	2026-05-29 14:59:14	No I do not	All of the above	Centralised Cyber & Security Risk	In a world of criminal activities like the Republic of South Africa at its state, this Digital ID system is too risky. Cyber crime will become more volatile to the public and people's private lives will be violated and endangered. You can't centralized a country's data into a non secured system which poses risks and threats. This a tyrant leadership that enforce people to be digitalised. I personally don't vouch for it. The risks are uncalculable and Unanalysed. No, to the system of Digitalization of our nation.	Jacob Papana	Gauteng		self-employed

	2026-05-29 13:31:12	No I do not	All of the above	Centralised Cyber & Security Risk	Religious reasons are first and foremost on my mind. That is very important to me as an individual. However, Government has a track record of major failures in all fields from electricity to railways and absolutely everything in between. I would never trust them with my private information and particularly not with handling it securely, appropriately and responsibly. (by best practices) eg. I have bought a solar system because of local and national governmental failure to supply electricity reliably. Now that it is fully operational, government want to force me to register it and intend charging me higher "availability charges" when by all rational standards, - should all solar users revert to Eskom, the grid would fail. No thought put into these calls at all. So - NO!	Wayne	Western Cape		business owner

	2026-05-29 05:48:53	No I do not	All of the above	Centralised Cyber & Security Risk	France is the perfect example of digital ID exposure and risk. Our entire government digital framework needs an overhaul before this is even considered, there is absolutely no way the existing infrastructure is secure enough to protect citizen's identities. In addition, linking to an individual device is absolutely incompatible considering crime statistics for the more comfortable, and the lack of access to smart phone technology in the aging population,but most especially those unemployed or unable to afford smart phone technology. Does that entire sector of the population then just get excluded? This entire proposal needs to be reconsidered for ALL South Africans at every corner of the country and every economic level.	Alex	Gauteng		employed individual
	2026-05-29 05:46:02	No I do not	All of the above	Centralised Cyber & Security Risk	I do not agree because of our crime rate in this country. If your phone gets stolen you risk everything to stop your life. This is also a way for the new world order to track you if you do not take the mark of the beast.	Kathy	Mpumalanga		retired

	2026-05-29 03:20:10	No I do not	All of the above	Centralised Cyber & Security Risk	This not right because if your phone is stolen then you in trouble with all private apps on your phone. Or your phone crashes this will not be a good. This is just to control your life which is devil's work. Why must you must renew your ID every five years when you are the same person which will never change. That mean you will never be able to upgrade your phone because of this which is not right. The government just wants to control the people of the world which is sickening. They will hack the system and can steal your identity which is not right and then we will have to prove who we are. This is the most stupid idea they ever came up with. The hacker can cause fraud against our identity.	Angela	Gauteng		unemployed individual
	2026-05-29 01:52:41	No I do not	All of the above	Centralised Cyber & Security Risk	This is again job creation which will cause time wastage, extra costs to the nation, extra taxes, more corruption, danger to the citizens, as crime is absolutely rife. in South Africa. At. the moment our ID cards is valid until you die, now the new Digital ID is going to cause more stress and cueing to renew, not everyone in South Africa can afford smart phones, and smartphones are usually renewed every 2 to 3 years, that will cause your ID to have to be transfered from phone to phone, again creating problems. This will be the biggest scam in history, I definitely categorically will NEVER agree to this Digital ID system. Cellphone batteries go flat at the most in-opportune times, that will cause chaos at times, more phones are lost, stolen, dropped in baths or damaged than Home Affairs can ever handle. Cyber crime will cause absolute chaos, identity theft etc. etc. NO NO NO NO NO!	DANIEL	KwaZulu-Natal		business owner

RSA is on the way like a similar state as North Korea and this is happening before everybody's eyes more rapidly as what people realise. All these laws that over criminalise businesses and citizens is designed by a bunch of high level satanic psychopaths.	Helen	Gauteng		business owner
	2026-05-28 22:14:40	No I do not	All of the above	Centralised Cyber & Security Risk	While I like the idea of creating a digital ID and digital government services, I don't believe South Africa is ready. Many of our government digital systems are outdated and prone to being down. Security is not sufficient to prevent cyber attacks. While banks tend to have better security systems, other service providers don't necessarily do. I would propose that this bill include clear instructions regarding security regulations. Another way in which we are not ready is in terms of the distribution of the type of secure smart phones required. This will mean only a rich minority will actually be able to use the system. If that is the case, is it even something we should spend money on pursuing? At this stage, you should rather focus on improving the government digital systems so that those systems work together and are able to share information. E.g. if SASSA can check an ID number with SARS whenever there is a grant application to ensure that the person is in fact not a registered tax payer. Note that such sharing is activates through an application during which the applicant gives permission for checks (POPIA).	Willemien	Gauteng		employed individual

	2026-05-28 19:34:23	No I do not	All of the above	Centralised Cyber & Security Risk	Smart phones are stolen and are a risk, having this as a direct link is absurd Centralized data is never secure	Leonora	Gauteng		retired
	2026-05-28 19:32:42	No I do not	All of the above	Centralised Cyber & Security Risk	I do not support the Draft Amendment of Identification Regulations as currently drafted. My main concern is the centralised cyber and security risk created by placing legally valid identity credentials, biometric authentication, population register updates, device binding, and private-sector identity verification into one connected digital identity ecosystem. I am not against digital modernisation in principle, but national identity infrastructure must be treated as critical infrastructure. Once a digital ID has the same legal effect as a physical ID, compromise of that system is not just an IT failure. It becomes a national identity, banking, fraud, and civil-rights failure. Modern AI models and cyber-reasoning systems now make vulnerability discovery much faster than before. Examples include Google DeepMind / Project Zero's Big Sleep and Naptime work, Anthropic's Claude Mythos Preview / Project Glasswing, OpenAI's GPT-5.5-Cyber / Codex Security / Daybreak, and Team Atlanta's ATLANTIS system from DARPA's AI Cyber Challenge. These systems show that AI can accelerate the discovery, validation, exploitation, triage, and patching of software vulnerabilities. The same type of capability that helps defenders can also help attackers find zero-day flaws faster. A centralised digital identity system therefore creates a high-value target for criminals, hostile actors, corrupt insiders, and organised fraud networks. Possible risks include identity theft, account takeover, SIM-swap fraud, phishing, banking fraud, fraudulent loans, fraudulent company registrations, SARS and grant fraud, deepfake or biometric spoofing attacks, stolen-phone lockouts, QR/NFC/Bluetooth replay attacks, credential cloning, private-key compromise, API abuse, ransomware, denial-of-service attacks, unauthorised data sharing, insider misuse, and mass surveillance or profiling. Biometrics are especially sensitive because they cannot be reset like a password. If a password leaks, it can be changed. If facial or fingerprint biometric data is compromised, the citizen carries that risk for life. Before these regulations are approved, I believe the Department must be required to publish a full independent cybersecurity risk assessment, POPIA privacy impact assessment, threat model, red-team assessment, penetration-test summary, incident response plan, citizen recovery process for stolen or compromised phones, breach notification rules, and clear liability provisions where citizens suffer loss due to system failure, data breach, fraud, or wrongful suspension. The regulations must also guarantee that no citizen is disadvantaged for continuing to use a physical ID, that no person is locked out of essential services due to device loss, lack of smartphone access, poor internet access, biometric failure, or system downtime, and that any sharing with banks, telcos, or other trusted entities is strictly limited, transparent, auditable, and subject to meaningful consent and oversight. In its current form, I believe the framework creates too much centralised risk before the required safeguards, accountability mechanisms, fallback processes, and independent technical assurances have been clearly defined. I therefore object to the regulations as drafted and request that they be withdrawn or substantially amended before implementation.	Ernest	Western Cape		employed individual
	2026-05-28 19:18:54	No I do not	All of the above	Centralised Cyber & Security Risk	South Africa's public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic "attack surface." If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly.	Panayiota	Gauteng

	2026-05-28 16:06:00	No I do not	All of the above	Centralised Cyber & Security Risk	Moving further into a fully digital and cyber-driven world, linking a person's identity, finances, services, and daily activities to a single online system creates huge concerns about personal freedom and government overreach. Many fear that if such systems are ever abused, authorities could potentially restrict or suspend access to essential services, banking, travel, or other rights for individuals who do not comply with certain policies or directives. That is why its important not to allow such a system to be implemented.	Righard	Mpumalanga		employed individual

	2026-05-28 15:16:43	No I do not	All of the above	Centralised Cyber & Security Risk	I do not support the proposed Digital ID regulations in their current form. My concern is that this creates too much potential for government overreach and centralized control over citizens' personal information, movement, access to services, and identity. While I understand the need to modernize identification systems and reduce fraud, any digital identity system must be voluntary, transparent, limited in scope, and protected by very strong safeguards. South Africa already has serious challenges with cybercrime, data leaks, corruption, poor administration, and unequal access to digital services. Many citizens, especially the elderly, poor, rural communities, and those without reliable internet or smartphones, could be unfairly excluded or disadvantaged if essential services become linked to a digital ID system. I am also concerned about privacy, surveillance, data security, and the possibility that a digital ID could later be expanded beyond its original purpose. Citizens should not be forced into a system that could potentially track, restrict, or control access to basic rights and services. I believe government should first prove that it can protect citizens' existing personal information, ensure proper oversight, and provide clear legal limits before introducing any form of digital ID. For these reasons, I do not support the regulations as currently proposed.	Mark	Gauteng		unemployed individual

	2026-05-28 14:13:40	No I do not	All of the above	Centralised Cyber & Security Risk	We do not need or want any digital identification. Also people should NEVER be forced into digital id's. People must always have a choice. Home affairs is already struggling with extra long qeues, why would they let id's expire - its ridiculous and it's a money making thing, we as citizens are already struggling to get by, the majority of people just cannot afford it. Please let it go and don't go with all the terrible plans, remember they may say you and your family are safe but only time will tell and in time you will see by accepting terrible digital id's that your own families will suffer due to a poor decision being made now. Do not get fooled with this digital id, you will hurt your own loved ones and remember money cannot buy safety or take away the pain that you will cause. Just say NO and do not allow this digital id. Thank you	M.	Western Cape		employed individual

	2026-05-28 09:45:09	No I do not	All of the above	Centralised Cyber & Security Risk	The Concern: 1 South Africa's public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic "attack surface." If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. 2 The Concern: If your digital ID lapses under the 10-year rule, you are legally stripped of your active digital credential and forced to undergo a physical, standard in-person enrolment process all over again. This creates an unnecessary, cyclical bureaucratic loop that forces digitally active citizens back into notorious, real-world Home Affairs queues simply because they did not have a reason to visit a physical office for a decade. 3 The Concern: Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office. 4 The Concern: Although the regulations explicitly ban profiling, commercialisation, and open-ended intelligence gathering, this fluid exchange of live citizen data across corporate API channels raises red flags. Automating data synchronization loops between state databases and private financial/telecom corporate giants chips away at the wall separating public civic records from private commercial infrastructure. 5 The Concern: Forcing citizens to log formal changes within a rigid 30-day window for routine life adjustments like swapping an email address or moving apartments is highly impractical. Lowering a citizen's "Identity Assurance Level" serves as a hidden penalty, which could lead to sudden, frustrating rejections or delays when trying to execute everyday high-security actions like opening an account or authenticating an online transaction. 6 The Concern: Despite these progressive legal promises, the practical reality of modern service delivery is that digital pathways are quickly prioritized because they save money. As government systems and corporate partners inevitably optimize their systems for the MyMzansi app, citizens relying exclusively on physical IDs could face longer delays, reduced support, and systemic "soft discrimination" when trying to access basic societal resources. Gives opportunity for state control. Just another path for our corrupt government NOT to help the citizens of our country.	Tanya	Gauteng		employed individual
	2026-05-28 08:41:57	No I do not	All of the above	Centralised Cyber & Security Risk	For me personally, my biggest concern about Digital IDs is not convenience or technology — it is freedom, privacy, and spiritual concerns. Many people may support Digital IDs because they believe it will improve security and make services easier. I respect that everyone has the right to their own opinion. But I also believe citizens have the right to question systems that could eventually give too much control over people's personal information, movement, finances, and daily lives. As a Christian, I cannot ignore the similarities many believers see between increasing digital control systems and the warnings found in the Book of Revelation about the "mark of the beast." I am not saying this system is the mark itself, but I do believe it could be part of a larger direction toward centralized control where access to services, banking, or participation in society could one day depend on digital compliance. History has shown that when governments and large systems gain too much control over personal data, freedoms can slowly disappear. That is why public participation, transparency, and protecting constitutional rights are so important. Whether people agree or disagree, let us at least have open discussions respectfully and allow citizens to have their say.	Leezahn	Gauteng		unemployed individual

	2026-05-28 08:32:39	No I do not	All of the above	Centralised Cyber & Security Risk	No way, the system can be hacked and data stolen cause of poor infrastructure and IT support. Then who is left with the problem? Us, the people whose data was stolen. We'll phone, email try sort it out but as always in the government dpmt's, no one will help, no one will care, no one will answer calls and respond to emails, no one will assist if attend in the physical. Furthermore, considering corruption in this country they'll use our information for their ulterior motives, steal our data, sell our data. Aside from the above and much more I haven't mentioned, this is part of a worldwide effort to control us, this one world order and knowing everything about everyone. It is demonic because if you don't do as you are told by those in authority you will be ostracized can't buy sell anymore. And as seen, the authorities can't be trusted. This represents an infringement on privacy and increases the potential for centralised control by the government, violating the right to privacy.	Ciaran	Gauteng		employed individual

Victoria	Western Cape		employed individual
	2026-05-27 19:51:27	No I do not	All of the above	Centralised Cyber & Security Risk	While the draft regulations introduce highly sophisticated cryptographic measures, including asymmetric elliptic-curve cryptography and encrypted database storage, they create an unprecedentedly dense web of database interfaces. This leapfrogges global legacy models by connecting the state’s population register directly to corporate networks via secure APIs. The Concern: South Africa’s public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic “attack surface.” If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly	Martin	Eastern Cape		self-employed
	2026-05-27 19:49:25	No I do not	All of the above	Centralised Cyber & Security Risk	Having everybody’s on a central place will put everything body at risk if an administrative error occurs if it is breached. 	2026-05-27 16:40:28	No I do not	All of the above	Centralised Cyber & Security Risk	While the draft regulations introduce highly sophisticated cryptographic measures, including asymmetric elliptic-curve cryptography and encrypted database storage, they create an unprecedentedly dense web of database interfaces. This leapfrogges global legacy models by connecting the state's population register directly to corporate networks via secure APIs. The Concern: South Africa's public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic "attack surface." If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly.	Heideli	Western Cape		employed individual

	2026-05-27 15:47:02	No I do not	All of the above	Centralised Cyber & Security Risk	- This proposal is confusing the convenience of digitalisation with the key purpose of registering an individual and uniquely recording his/her existence for life. It is the foundation on which all other documentation of the individual rests. - It should therefore be permanent and secure, on a stable medium under full control of an individual, and not subject to alterations and updates, let alone the risks of loss, misuse, theft, hacking or alterations by third parties. - Involving other 'trusted parties' is anathema, especially in a world rife with fraud and corruption. There is nothing preventing appropriate authorities from developing a data base with pertinent info on individuals linked to but separate from the ID. - The ID document should be secure in each individuals' possession and not subject to having a mobile phone in the first place, being digitally literate and being exposed to loss, theft, fraud and even the simple admin arising with each change. - Even if all the above could be ignored, I have no faith in the administrative ability to get the system working efficiently and fear that the onus and suffering of the outcome will be borne by individuals eternally scrambling, having to take off from work, sitting in queues ... to sort out issues, especially the poor and disadvantaged. - Finally, as it stands, the proposal has too many grey areas lacking in detail which opens it to serious misuse in finalisation. 	2026-05-27 11:04:06	No I do not	All of the above	Centralised Cyber & Security Risk	This is government overreach and absolutely terrifying! Considering all the mobile phone thefts this is clearly not a good idea! I presume AI is involved and it's not tried and tested. Our personal security is at risk and I'm not sure of the legality of such an implementation. The government could be sued.	Teresa	Western Cape		retired
	2026-05-27 11:03:19	No I do not	All of the above	Centralised Cyber & Security Risk	There is so much that can go wrong that has not been fully addressed eg if your cell phone is stolen (and lets face it this happens a lot). the fact that the state (who cannot be trusted not even the police) has access to everything you do. with corruption rife in our country, this is a bad option.	Jennifer	Western Cape		unemployed individual
	2026-05-27 10:58:15	No I do not	All of the above	Centralised Cyber & Security Risk	I am concerned about centralised control, cyber security and the collection of sensitive biometric data. Digital ID has the potential for future abuse of data and limitations of personal agency in the light of private information being shared across 3rd party platforms and cell phones used as the mechanism of identification. People may be at risk of being locked out of normal activities in society if a cell phone is lost or stolen. Having to reregister in person every 5 years is also a heavy time and financial burden for many. If security of the databank is breached, it can be an absolute catastrophe, since data will be shared across financial and government institutions. Much private information can be vulnerable to exploitation. There is no guarantee that such a risk can be averted successfully.	Ingrid	Gauteng		self-employed

	2026-05-27 07:59:58	No I do not	All of the above	Centralised Cyber & Security Risk	This concern sits at the center of many of the other issues. A single, highly interconnected digital identity system linked across government departments, banks, telecoms, and other “trusted entities” creates an extremely valuable target for cybercriminals, insider abuse, surveillance overreach, or system failures. If compromised, the impact could affect not only privacy, but also citizens’ ability to access banking, communication, government services, and daily economic participation. While digital transformation is necessary and beneficial, concentrating identity, biometric data, and verification systems into one ecosystem without extremely strong safeguards introduces long-term national security and civil liberty risks. I support the modernization of Home Affairs and the introduction of optional digital identity services, but stronger protections should be built into the regulations before implementation. The framework should guarantee that physical IDs remain fully functional and equally supported indefinitely, include independent cybersecurity oversight and annual public audits, prohibit unnecessary data sharing between government and private entities, require judicial oversight for sensitive access requests, provide secure offline recovery mechanisms for lost or stolen devices, and ensure citizens are never denied essential services due to digital access limitations or system failures. Digital convenience should enhance freedom and access, not create new forms of exclusion, dependency, or surveillance.	Bronwynn	Gauteng		employed individual

	2026-05-27 05:33:52	No I do not	All of the above	Centralised Cyber & Security Risk	Dear Sir/Madam, I wish to formally object to the proposed Draft Identification Regulations, 2026. While modernisation and improved service delivery are important objectives, the current draft grants excessive power through the centralisation of sensitive personal and biometric data, extensive interoperability with private institutions, and insufficient safeguards against misuse, surveillance, and administrative overreach. The proposed framework raises serious concerns regarding privacy, cybersecurity, digital exclusion, due process, and the long-term protection of constitutional freedoms. In particular, the risk of identity lockout, algorithmic profiling, and expanding state control over essential civic participation cannot be ignored. South Africans should not be required to surrender increasing levels of personal autonomy and privacy in exchange for administrative convenience. I urge that the draft regulations be substantially revised to include far stronger protections, strict limitations on data sharing, independent oversight mechanisms, and robust citizen rights safeguards before any implementation proceeds. Yours faithfully, Timothy Roberts	Timothy	Mpumalanga		retired

	2026-05-26 23:31:14	No I do not	All of the above	Centralised Cyber & Security Risk	This new plan is to ensure total control of the population by the authorities. In our country it is prone to be abused and mismanaged. I would not feel safe to have all my private information out there. I oppose this new plan.	Claudine	Western Cape		
	2026-05-26 23:26:58	No I do not	All of the above	Centralised Cyber & Security Risk		Palesa	Northern Cape		
	2026-05-26 23:02:44	No I do not	All of the above	Centralised Cyber & Security Risk	As it stands, the department is already a struggling and underperforming organ of state that already experiences significant challenges in implementing its existing functions or responsibilities, efficiently and effectively. Government institutions in this country remain inadequately equipped with adequate and appropriate cybersecurity measures to protect its data. We have witnessed numerous data breaches experienced by private institutions and government institutions or departments such as the NDPWI, which furthermore highlights the vulnerabilities in establishing reliable and fully functional cybersecurity systems. It is to be noted that sometimes centralisation is not as efficient as one would hope. It can create challenges relating to scalability, adaptability and transparency. Such would further exacerbate current inefficiencies within the department and paralyze its operations .	Kenny	Free State		
	2026-05-26 22:54:56	No I do not	All of the above	Centralised Cyber & Security Risk	Losing a phone will mean a trip back to a physical Home Affairs queue to reactivate their digital application. Why should ID's expire after 5 years? Just another time-consuming action for citizens, which will come at a cost. Stop wasting time and money and attend to the things that actually matter. Security risk - criminals will love the system and thank government for providing for them.	Marjorie	Gauteng		retired

	2026-05-26 21:31:13	No I do not	All of the above	Centralised Cyber & Security Risk	While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector’s history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation’s “attack surface.” Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates.	Lethabo	Gauteng		employed individual
	2026-05-26 21:28:45	No I do not	All of the above	Centralised Cyber & Security Risk	South Africa does not have a trustworthy cyber security. If you can not even report cyber theft because of lack of knowledge from SAPS, how on earth will there be cyber security to protect my details. Secondly, smart phones is not available for every one. There are areas in South Africa where there is no network. Thirdly- the population of South Africa has a large elderly sector that did not grow up with smart phones and computers. They let their children to their things for them. This will not work. SA have to wait another 10 to 15 years to close this knowledge gap.	Dinah	Gauteng		employed individual

	2026-05-26 21:01:31	No I do not	All of the above	Centralised Cyber & Security Risk	The risks are too big.. Gov must keep things as it is.. Crime wont stop..During Housebreakings..phones ,electronics get stolen..The owner of that items identify get compromised..cant get a new phone exectra..struggle to get identity back..pay bills or get money No this is outrages!!!!! Gov should get controle over crime and stop using the race cards.. People's ids are private.. If a person is registered with Sars ..they got the banks info .But there are people without phones,bankaccounts. What about them..Wil they get arrested because they dont qualify.? Wil they just disappear. and become gost people. Set aside from society. .because they are not contributing.. I say no I dont support this bill..Syber Crime comes from other countries And local..Home affairs will.now let smart criminals learn new things and advance on that..I say keep it stil simple as it is add fingerprint and foto of owner of property..not available for just anybody.. Crime and robberies wont stop because of digital ID...killings wont stop. Home affairs might see a better solution but its not ..it is feeding crime by advancing criminals..International criminals are on the rise..since more communication from gov with Eastern and communist countries where high profile criminal targets SA Criminals can change the rules any time..they do it all the time..Gov cannot fix anything unless they take firmer action against local crime..Severe punishments via the justice systems. Digital ids will be a great injustice to all our people..I think the majority of SA wants to have easy access ..freely and not struggle more because of convenience of gov.. Smartphones are dangerous anyway..if criminals can steal you money from you bank app..what is the use.. Get it simple and the route to recovery back immediately without queue traps and explanations and proof of who a person is..If there are a photo and fingerprints that is enough. Why do home affairs wants to punish people who lost a phone..and above that you must proof who you are..Just because things went out of controle at gov institutions. Home affairs must test their workers and keep watch on those workers phones..and interactions.. much smaller group to deal with than a whole country..Thats a start.	Charmaine	Western Cape		retired

	2026-05-26 17:58:26	No I do not	All of the above	Centralised Cyber & Security Risk	The lunacy continues #sufferafrica Just when we think these clowns can't come up with anything more ridiculous, they top the last ridiculous proposed amendment to the previous proposed amendment, none of which the circus understands anyway. Think about it. In March 2023 I applied and paid for my unabridged birth certificate. They said it would take 3 months. For a year I went every 3 months. I still don't have it. If they can't get that right... ?? My son's una:ridges birth certificate has the wrong paternal parent on it. My former late husband and I were divorced 5 years before my son was born.	Donnette	KwaZulu-Natal		retired
	2026-05-26 17:58:16	No I do not	All of the above	Centralised Cyber & Security Risk	I wish to formally express my concern regarding the proposed amendments to the Identification Regulations under Government Gazette No. 54610 and the introduction of the proposed “Digital Identity Credential” framework. While I understand the intention to modernise administrative systems, reduce identity fraud, and improve service efficiency, I believe the current proposal raises serious constitutional, technological, and civil liberty concerns that require far greater scrutiny before implementation. South Africa has an extensive and well-documented history of cyber vulnerabilities, internal fraud, corruption, and inadequate maintenance of public-sector IT infrastructure. Many municipalities and government departments continue to rely on outdated legacy systems that are vulnerable to cyberattacks, data breaches, and operational failures. Given these ongoing challenges, there is legitimate public concern regarding the State’s ability to securely manage and protect a highly centralised digital identity system containing sensitive personal and biometric information. Several provisions within the draft regulations raise concerns relating to privacy rights, data protection, digital freedom, administrative fairness, and the potential erosion of civil liberties. In particular, I am concerned about: • the proposed integration and synchronisation of state and private-sector data systems; • the introduction of “Identity Assurance” mechanisms that may result in automated or algorithmic exclusion; • the risks associated with linking identity credentials to a single mobile device or smartphone-dependent platform; • the possibility of administrative lockouts affecting access to essential services; • the vulnerability of citizens to cybercrime, identity theft, and data misuse; and • the broader risk of excessive state surveillance through centralised biometric and personal data infrastructure. I am also concerned that the draft regulations do not adequately address the realities of digital exclusion in South Africa, where many citizens may lack reliable access to smartphones, data connectivity, technological literacy, or secure digital environments. South Africa’s constitutional democracy is founded on the principles of dignity, freedom, privacy, equality, and accountable governance. Any national identity framework with such far-reaching implications should therefore include significantly stronger safeguards, independent oversight mechanisms, transparent accountability structures, and explicit constitutional protections prior to implementation. For these reasons, I do not support the draft regulations in their current form and respectfully request that the Department reconsider and strengthen the proposed framework through broader public consultation, independent cybersecurity assessment, and comprehensive constitutional review before proceeding further. 	2026-05-26 16:41:50	No I do not	All of the above	Centralised Cyber & Security Risk	I actually don't understand "Centralised Cyber & Security Risk". I am concerned about having my phone stolen or simply lost. I have slight concerns about the need to have physical contct perodically with a bank or ?? whoever .... although that should not be too difficult for most. I don't mind anyone knowing my business. If everything is on boatd and legal , I don't care who knows what. If it helps to catch crooks, then I am all for it. I have forgotten what all else was on the list ... just remember that did not favour most of it .... definitely do not want to lose proof of my identity. There should perhaps be more than one legal way to prove one's identity.	Jennifer	KwaZulu-Natal		retired

	2026-05-26 15:51:42	No I do not	All of the above	Centralised Cyber & Security Risk	While this may appear to be a convenient and modern solution, I believe making a mobile phone the only or primary means of identification carries significant risks and unintended consequences. Mobile phones have a limited lifespan, require regular replacement, and can become unusable due to hardware failure, theft, battery issues, software problems, or security vulnerabilities. Making access to identification dependent on such devices creates unnecessary exclusion and dependency. There are also serious concerns around digital sovereignty, privacy, and control. Most devices and software ecosystems are designed and governed by foreign companies and jurisdictions, raising legitimate questions about data access, security, and external influence. Identification systems should not become overly reliant on technologies that may be outside a country's direct control. On a practical level, not everyone is equally comfortable or capable of managing digital devices. Older individuals, vulnerable users, and those with limited technical ability may be forced to rely on others, increasing the risk of exclusion, dependency, and exploitation. Identification systems should remain accessible, resilient, and inclusive, with non-digital alternatives always available.	Andre	Gauteng		retired

	2026-05-26 15:24:24	No I do not	All of the above	Centralised Cyber & Security Risk	Centralized cyber and security risks refer to the dangers that arise when critical systems, data, controls, or services are managed from a single central point. While centralization can improve efficiency and control, it also creates a "single point of failure" that attackers may target. Common centralized cyber & security risks include: Single Point of Failure If the central server, database, or network goes down or is compromised, the entire organization can be affected. Data Breaches Centralized storage means sensitive information is kept in one place, making it an attractive target for hackers. Privilege Abuse Administrators with broad access rights may misuse privileges intentionally or accidentally. Ransomware Attacks A successful ransomware attack on a centralized system can lock down all connected users and operations. Network Dependency If connectivity to the central system fails, remote users or branches may lose access completely. Scalability & Performance Issues Heavy reliance on one system can create bottlenecks and reduce resilience under high demand or attack. Insider Threats Employees or contractors with centralized access can expose or steal large amounts of data. Distributed Denial of Service (DDoS) Attackers may overwhelm the centralized infrastructure, causing widespread downtime.	Marlon	Western Cape		employed individual

	2026-05-26 14:41:03	No I do not	All of the above	Centralised Cyber & Security Risk	While this idea sounds exciting the fact that we all live with is that cyber crime is getting more sophisticated by the minute and least of all the STATE cannot by any means guarantee the safety of the proposed system against onslaughts from cyber criminals. And banks are the worst! I have personally had a number of fraud attacks emanating from inside the bank's fraudline department. No-one is to be trusted. The state has too much control as it is, and too little when it comes to managing crime. For these reasons and more I don't feel comfortable with the proposed digital ID on our phones. I also agree with everything else that was said by those who oppose the idea. Therefore I cannot in clear conscience support the initiative. It's a great plan that won't work.	Dawid	Free State		
	2026-05-26 14:39:32	No I do not	All of the above	Centralised Cyber & Security Risk	I acknowledge the intended benefits of modernising South Africa's identity system through the proposed MyMzansi digital identity platform, particularly the promise of convenience, reduced queues, and improved accessibility of government services. However, I believe the draft regulations raise serious practical and security concerns that require careful reconsideration before implementation. In today's society, cybercrime, hacking, identity theft, fraud, and burglaries occur on a daily basis. Many South Africans are already vulnerable to cellphone theft, SIM-swap fraud, phishing scams, and unauthorised access to personal banking and digital accounts. Introducing a system where a person's legal identity becomes heavily dependent on a smartphone device creates significant risks, especially for ordinary citizens who may not have the resources or technical knowledge to recover quickly from such incidents. My concern is that if a cellphone is stolen, hacked, or damaged, individuals could potentially lose immediate access to critical services linked to their identity. This may affect banking, communication, employment verification, travel, and other essential activities. The regulations do not appear to provide sufficient detail regarding emergency recovery procedures, offline alternatives, or protections against cyberattacks and digital impersonation. Furthermore, the sharing and synchronisation of personal information between government departments and private institutions raises concerns regarding privacy, data protection, and possible misuse of information. Once personal data is centralised and interconnected, the consequences of a security breach become far more severe. While digital transformation is important, it should not compromise citizens' privacy, security, or constitutional rights. Any digital identity system must include: • strong cybersecurity safeguards, • independent oversight, • transparent accountability mechanisms, • practical recovery solutions for stolen or hacked devices, • and continued access to reliable physical identification alternatives. Technology should assist citizens, not place them at greater risk or disadvantage. I therefore urge the Department to carefully address these concerns before finalising the regulations. 	2026-05-26 13:37:05	No I do not	All of the above	Centralised Cyber & Security Risk	I do not believe that "going digital on a cell phone" is the correct solution because it assumes that everyone, including minor children, has a "smart phone" capable of storing the required information. What is so wrong with the card system currently used that it must be changed? The use of cell phone technology will also allow more uncontrolled intrusion into a person's private life, which cannot easily be controlled, and is also, in my opinion unconstitutional. I also do not believe that ID documents must be renewed at set intervals. If one takes the example of the debacle around the renewal of driver's licences: the department concerned cannot cope with the renewal requirements and relies on the fees generated by the renewal costs to subsidise other functions of the department. This is just another "money making" requirement with no practical reason for the change. The change of address requirements are also too stringent and need to be modified to be less onerous, and with far lower penalties.	Malcolm	Gauteng		retired

	2026-05-26 11:21:48	No I do not	All of the above	Centralised Cyber & Security Risk	Cell phones, sim cards, mobile services all are just too open for crime such as fraud, identity theft, unreliable and variable to build a state register of identities. Ask me: Just changing your sim card and email address permanently to a new phone number and email, due to too many fraud attempts, is a mission! Despite informing your contacts (official, commercial and private) it is ignored or missed and the various entities that collect and distribute your profile info to about anybody that is interested at all, despite the POPI act., find a way around this. Then mobile phone service providers ignore your request to cancel your old phone number immediately - it remains active for several months apparently in anticipation of cessations of activity before the number is deactivated. Besides this, the state or anybody else, in view of the freedom prescribed by the SA Constitution cannot enforce the possession of a cell/smart phone to be able to be identified. in my view the only legally enforceable contact information that can be added to people on the national register is his/her domicilium citandi et executandi. I case of criminals or criminally inclined people recorded contact details are unreliable anyway and the assistance of the SAPS and others has to be relied on. Technology is not the answer to everything. it remains the legal duty of the citizen to update his official contact details with the national register, SARS etc.	Hermann	Gauteng		retired

If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. I would put ALL of these as TOP Concerns if there was space to do so. 30 Day Notification!!!! Forcing citizens to log formal changes within a rigid 30-day window for routine life adjustments like swapping an email address or moving apartments is highly impractical. Lowering a citizen's "Identity Assurance Level" serves as a hidden penalty, which could lead to sudden, frustrating rejections or delays when trying to execute everyday high-security actions like opening an account or authenticating an online transaction. Device Binding Vulnerability IS HUGE IN SOUTH AFRICA!!! Cry the Beloved Country The Concern: Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office. 	2026-05-26 09:59:30	No I do not	All of the above	Centralised Cyber & Security Risk	II'm concerned about all the points mentioned above, but my main concern is not listed. My main concern is Dep of Home Affairs' inability to capture the data correctly. They make mistakes all the time, and then it takes so much time, effort, and money to get it fixed.	Jesica	Western Cape		retired
	2026-05-26 09:58:57	No I do not	All of the above	Centralised Cyber & Security Risk	I am writing to formally object to the proposed Draft Amendment of the Identification Regulations. While I support administrative modernisation, this framework threatens my privacy, security, and deeply held Christian faith. Because my national identity document dictates my legal right to bank, work, and access healthcare, I cannot support the regulations as they stand. 1. Technical and Civic Objections - Cybersecurity Vulnerability: Linking the state population register directly to corporate networks via live APIs creates an oversized "attack surface". Given our public sector's history of data breaches, this consolidation risks large-scale, automated identity theft. It also risks abuse and can be used for coercian by government. Government does not have the technical prowess or resources to manage cybersecurity safely if they cannot even provide proper basic education and toilets in schools across the country. - Device Binding Lockouts: Cryptographically locking my identity token to a single smartphone means a lost, broken, or stolen device results in instant exclusion from my identity and banking. The regulations fail to outline clear solutions to this realistic South African dilemma. - Corporate Privacy Creep: Automating near real-time data synchronisation loops with banking and telecom giants chips away at the boundary separating sovereign public civic records from private commercial infrastructure. - Impractical Notification Penalties: Regulation 37(1) mandates reporting address or contact changes within 30 days. Penalising citizens by lowering their "Identity Assurance Level" for routine life adjustments is heavy-handed and highly impractical. 2. Objections Founded on the Christian Faith - Human Dignity: I believe that every person is created in the image of God (Genesis 1:27). I feel uncomfortable with reducing unique human dignity into automated profile tiers and rolling validation cycles managed by state algorithms. - Coercive Control: I worry that giving the state a central digital "kill-switch" over an individual's identity risks creating total dependency and fear. I believe that an environment of absolute technological control conflicts with the Christian call to live in liberty (Galatians 5:1). - Care for the Vulnerable: I believe that Christ commands us to care for the poor and vulnerable (Matthew 25:40). I feel that as platforms inevitably optimize for the MyMzansi app to cut costs, citizens relying on physical IDs will face systemic "soft discrimination". I cannot support an infrastructure that leaves the poorest behind. In conclusion, I request that the Department of Home Affairs halt the implementation of these regulations with immediate effect until much tighter constitutional safeguards are put in place to protect our cybersecurity, civic freedoms, and religious liberties. 	2026-05-26 09:01:03	No I do not	All of the above	Centralised Cyber & Security Risk	I hereby submit this objection to the draft Identification Regulations, 2026 published in Government Gazette No. 54610. While I recognise the potential benefits of modernising identity systems and improving service delivery, I am concerned that the draft regulations do not yet provide sufficiently clear, enforceable, and independently supervised safeguards to protect personal information, especially sensitive biometric data, against misuse, unauthorised access, function creep, exclusion, and systemic cyber risk. The draft regulations are intended to support digital identity credentials alongside physical identity cards, regulate enrolment and biometric verification, and create a framework for data sharing and verification with accredited entities. Public reporting indicates that the proposed framework would rely on smartphone-based credentials, biometric enrolment, verification through a central application, and ongoing interaction between the Department and accredited institutions. Although these objectives may improve efficiency, they also create profound legal, technical, and constitutional risks if the governing rules are not far more specific and protective in design. 1. Insufficient protection for sensitive biometric and identity information. The draft regulations appear to permit the large-scale collection, storage, processing, and sharing of highly sensitive personal information, including facial biometrics and fingerprints. Biometric data is permanent in nature: unlike a password, it cannot be changed once compromised. For that reason, the regulations should contain explicit minimum security controls, mandatory encryption standards, strict access controls, separation of identifiers, limits on template retention, and mandatory independent security testing. General references to secure systems are not enough when the consequences of a breach could be lifelong. 2. Centralised cyber-security risk. Any system that consolidates identity records, biometric templates, verification logs, and trusted-entity access channels creates a high-value target for cyberattack, insider abuse, and state or criminal exploitation. The regulations do not appear to provide sufficiently detailed safeguards against bulk compromise, third-party vulnerabilities, credential theft, device compromise, or abuse of verification logs. A single vulnerability in such a system could expose millions of people to fraud, identity theft, unlawful surveillance, and exclusion from essential services. 3. Overbroad data-sharing and verification arrangements. The proposed framework for sharing information with accredited entities may create a pathway for excessive or routine disclosure of identity data beyond what is strictly necessary for a particular lawful purpose. The regulations should define with precision what categories of information may be shared, for what purposes, under what legal authority, with what auditing, and subject to what sanctions for misuse. The principle of data minimisation should be central, not implied. 4. Inadequate alignment with constitutional privacy protections and POPIA. Any digital identity regime must strictly comply with the constitutional right to privacy and the Protection of Personal Information Act, 2013. That requires a clear lawful basis for each form of processing, purpose limitation, retention limits, transparency, data subject participation, and robust safeguards. The current draft should state these duties expressly and not rely on broad references to existing law. If the regulations are to authorise extensive biometric and identity verification processes, then the protective obligations must be equally explicit. 5. Risk of function creep and surveillance. Once identity and biometric infrastructure is established, there is a real risk that it may gradually be used for purposes beyond the original scope, including profiling, expanded tracking, routine law-enforcement querying, or indirect social control through access systems. The regulations should contain strong prohibitions on secondary use, require judicial or statutory authorisation for exceptional access, and prohibit the use of identity verification logs for unrelated monitoring or profiling. 6. Digital exclusion and indirect discrimination. Although the system is described as optional, the practical reality may be different. If digital credentials become the preferred or expected form of verification, people without smartphones, reliable connectivity, digital literacy, stable addresses, or compatible devices may suffer exclusion or delays. Rural communities, older persons, low-income households, persons with disabilities, and undocumented or administratively vulnerable persons may be disproportionately affected. The regulations should guarantee that no person is denied a service, benefit, or legal recognition for declining or being unable to use the digital system. 7. Weak independent oversight and accountability mechanisms. The regulations should not rely solely on internal departmental controls or contractual conditions imposed on accredited entities. There should be mandatory independent audits, transparent reporting of breaches and system failures, public statistics on access and security incidents, and clear complaint and appeal mechanisms for affected individuals. Oversight by the Information Regulator and other competent bodies should be clearly integrated into the framework. 8. Unclear retention and deletion rules. The draft should clearly state how long biometric templates, device identifiers, verification records, address records, and audit logs will be retained, when they must be deleted, and how data subjects may request correction, access, objection, or deletion where legally applicable. Open-ended retention increases the risk of misuse and is inconsistent with necessity and proportionality. 9. Disproportionate burden placed on the public. If the system requires repeated in-person verification, strict device binding, frequent address updates, or procedural compliance that is difficult to meet, ordinary members of the public may carry the burden of a system designed for institutional convenience. The regulations should be designed around accessibility, fairness, and administrative justice. Requested Changes I respectfully request that the draft regulations be withdrawn and revised, or at minimum substantially amended, before adoption. In particular, the final regulations should: (1) include detailed minimum technical and organisational safeguards for biometric and identity data; (2) strictly limit data sharing to what is necessary and lawful for specific purposes; (3) prohibit secondary use, profiling, and unlawful surveillance; (4) provide strong independent oversight, breach notification, and public reporting duties; (5) establish short, clear, and justified retention periods; (6) guarantee accessible, fully equivalent non-digital alternatives; and (7) require prior privacy impact assessments, independent security testing, and regular review of the system's legality, necessity, and proportionality. In its current form, the draft Identification Regulations, 2026 do not adequately protect the public against the risks associated with centralised digital identity infrastructure and the processing of sensitive personal information. A lawful and trusted digital identity system can only succeed if privacy, security, accountability, and accessibility are treated as foundational requirements rather than future operational details. I therefore object to the draft as published and urge the Department to strengthen the regulations before any implementation proceeds.	Sue	Eastern Cape		self-employed

	2026-05-26 08:39:17	No I do not	All of the above	Centralised Cyber & Security Risk	I oppose the Draft Amendment of the Identification Regulations relating to the proposed Digital ID system due to serious concerns around privacy, cybersecurity, and digital exclusion. Centralising sensitive personal and biometric information within a smartphone-based platform increases the risk of data breaches, identity theft, and abuse of personal information. I am also concerned that many South Africans may be unfairly disadvantaged due to limited access to smartphones, unstable connectivity, device theft, or technical failures. The regulations, as currently drafted, do not provide sufficient clarity or safeguards regarding data sharing between government and private entities, recovery processes if devices are lost or stolen, and the long-term protection of citizens' constitutional rights to privacy and freedom. 	2026-05-26 07:41:21	No I do not	All of the above	Centralised Cyber & Security Risk	Civic groups, privacy advocates, and cybersecurity experts argue that while modernisation is welcome, the draft regulations introduce expansive risks and administrative penalties that demand much tighter constitutional safeguards. Their core arguments include: Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-25 22:42:23	No I do not	All of the above	Centralised Cyber & Security Risk	Smartphones are lost, broken, or stolen daily across South Africa, yet the draft regulations do not provide a transparent, secure, and user-friendly remote process for citizens to quickly unbind an old device and verify a new one. Without clear pathways for remote recovery, losing a phone could lead to immediate and severe exclusion from one’s legal identity and banking access until a physical visit to a state office is possible. Moreover, considering the South African public sector's history of systemic data breaches, ransomware attacks, and weak IT controls, linking the authoritative population register directly to corporate servers via live APIs significantly increases the nation’s vulnerability to cyber threats. Centralizing civil registry access within a live network creates a high-risk target for global hacking syndicates. Despite the offenses outlined in the Cybercrimes Act, the criminal justice system faces major systemic challenges in effectively implementing and prosecuting these cases, particularly under Section 11. Additionally, allowing a vital civil right, such as a national identity credential, to automatically “lapse” induces considerable administrative anxiety. According to Regulation 20(5), if a citizen is digitally active for a decade but does not have a physical interaction with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally engaged citizens by forcing them back into physical queues to re-verify their identity from scratch. Finally, South Africa is not prepared for this. This Bill effectively mandates that individuals without a smart device—possibly due to poverty or other reasons—must acquire one. This requirement contradicts fundamental Constitutional values. 	2026-05-25 19:22:36	No I do not	All of the above	Centralised Cyber & Security Risk	The biggest impact is loss of service on the "designated cellphone". Should the cellphone be inoperable because it is broken, frozen, lost, stolen, hacked, virus attack, cloned, or for any other reason - then this would impact the other factors or criteria for sustaining the security of a person's digital ID. So, instead of adding security to our ID, this plan is creating a major weakness in security!	David	Western Cape		retired
	2026-05-25 19:21:40	No I do not	All of the above	Centralised Cyber & Security Risk	This is one of the biggest dangers to our freedom. Having a state that controls citizens like this is unacceptable and dangerous. With our country's state departments already not able to efficiently function, this new amendment is like putting a loaded gun in an 8 year old's hands. This will not ensure better monitoring of offenders, this will rather give offenders access to obedient citizen's data, movement and be a danger to their freedom. Why do I say this? It's evident in our country today....the highest bidder gets what they want no matter if it's at the cost of us as ordinary South Africans.	Diederik	Limpopo		employed individual

	2026-05-25 18:04:29	No I do not	All of the above	Centralised Cyber & Security Risk	Although the regulations explicitly ban profiling, commercialisation, and open-ended intelligence gathering, this fluid exchange of live citizen data across corporate API channels raises red flags. Automating data synchronization loops between state databases and private financial/telecom corporate giants' chips away at the wall separating public civic records from private commercial infrastructure. It is a huge infringement on the privacy rights of citizens to allow Government to have access to all of the information which they have described. What has happened to the POPIA Act? There won't be the correct checks and balances to maintain the integrity of the systems which could lead to serious information leaks.	Cilla	KwaZulu-Natal		business owner
	2026-05-25 18:03:17	No I do not	All of the above	Centralised Cyber & Security Risk	This framework introduces a smartphone-based “Digital Identity Credential” housed inside a centralised state mobile application called MyMzansi. 	2026-05-25 17:44:56	No I do not	All of the above	Centralised Cyber & Security Risk	I dislike that we are going to be limited to one device even if it's stolen without proper assistance if it is no longer in our possession. I also worry because what if we upgrade our phones or change numbers and are unable to recover our identities. I also dislike the fact that our brand new id cards will expire causing people to have to go through the whole process over and over. Would it not be better to just have a mandatory check in, for example a bio fingerprint or facial recognition function at your bank or department online and a check in if you are unable to do so online to check if everyone is still alive. I honestly don't think I trust people enough not to try and hack or do whatever they want with whatever info they get from this. I also don't have the time or the money to have to redo my ID every time. Neither do I think many either people do.	Michelle	Gauteng		employed individual

	2026-05-25 17:33:13	No I do not	All of the above	Centralised Cyber & Security Risk	the fact that your id would be linked to a cell phone which is 1) very hackable 2) could be stolen at any time. Where is your security, if you are hacked and if your stolen cell phone is delinked and your acces to your ID with it . what do you do then?????!!!!	Alice	Northern Cape		retired
	2026-05-25 17:29:06	No I do not	All of the above	Centralised Cyber & Security Risk	STOP THIS ALREADY!!! All systems in SA is embarrassingly ineffective! WHY another one which most assuredly will go down the same path! Failure reporting ROUTINE life updates timeously will result in an automatic negative social credit score, causing transaction rejections and hugh frustration and unneccassary trauma. The populace of SA inhabits her widely and transport and communications are a huge factor, so personal visits to Home Affairs or partners for 10 consecutive years will be difficult with the obvious result that the every 5 year renewal will result in the complete lapse of credentials. So compliant digitally active citizens will be unfairly penalized and forced to personal line-ups to re-prove self will start again together with the too familiar frustrations we face in SA and ALSO the rural, poor and elderly will be discriminated against. With SA laws being corruptly enforced - if at all - and cellphone theft at a high, the loss of a phone where upon your digital ID, means that your DID is locked or frozen with no means to banking or an ordinary life. As to date there is no mention of secure means to restore access. With corruption SA's second name, what about data breaches, poor IT controls etc where this centralised live network creates a huge target for hacking and data leaks. All to say this too: it so blatantly points to future state surveillance and its social credit system .	Amanda	KwaZulu-Natal

	2026-05-25 16:19:47	No I do not	All of the above	Centralised Cyber & Security Risk	While the draft regulations introduce highly sophisticated cryptographic measures, including asymmetric elliptic-curve cryptography and encrypted database storage, they create an unprecedentedly dense web of database interfaces. This leapfrogges global legacy models by connecting the state's population register directly to corporate networks via secure APIs. The Concern: South Africa's public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic "attack surface." If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly.	Clinton	Western Cape		business owner
	2026-05-25 16:18:36	No I do not	All of the above	Centralised Cyber & Security Risk	Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis.	Lauren	Gauteng		
	2026-05-25 16:18:35	No I do not	All of the above	Centralised Cyber & Security Risk	I'm at a loss for words. This is the most egregious attack on individual privacy, security and freedom. 	2026-05-25 15:47:43	No I do not	All of the above	Centralised Cyber & Security Risk	I am copying in a comment someone else made but it encapsulates all my concerns: The Draft Identification Regulations, 2026 represent a dangerous constitutional overreach disguised as modernisation. By device-locking legal identity credentials, granting private corporations bidirectional write-access to the national population register, introducing an opaque algorithmic "Identity Assurance" scoring system that punishes citizens for routine life events, and providing no secure recovery pathway for the millions of South Africans who will inevitably lose their phones to theft, the regulations transform identity from a personal right into a state-managed compliance score — one that can be suspended, degraded, or permanently lapsed without meaningful human oversight or appeal. The infrastructure being built is constitutionally suspect today and a ready-made surveillance apparatus for any future government willing to use it.	Susanne	Western Cape		employed individual

	2026-05-25 15:44:21	No I do not	All of the above	Centralised Cyber & Security Risk	I write to formally object to key provisions contained in the Draft Identification Regulations, 2026. While I acknowledge and support efforts to modernise identity systems and improve service delivery, I am deeply concerned that several elements of the proposed framework pose serious risks to constitutional rights, personal security, and equitable access to essential services. ### 1. Privacy and Data Protection Concerns The proposed interoperable data-sharing framework between the State and private entities raises significant concerns. The automatic, real-time exchange of personal information between government systems and third-party institutions blurs the boundary between public governance and private sector data use. This creates a heightened risk of: * Unauthorised access or data breaches * Misuse or overreach by private entities * Loss of individual control over personal information I believe stronger safeguards, explicit consent mechanisms, and strict limitations on data sharing must be built into the regulations. ### 2. Unfair “Identity Assurance” Scoring System The introduction of an internal scoring or “Identity Assurance Level” is deeply troubling. Linking administrative compliance (such as updating personal details within 30 days) to an automated system that may restrict access to services is unreasonable and punitive. This approach: * Disproportionately affects vulnerable groups who may lack access to digital tools * Introduces the risk of automated exclusion without due process * Resembles social credit systems that undermine democratic freedoms There must be no system that limits a citizen’s ability to participate fully in society based on administrative scoring. ### 3. Digital Exclusion and Device Dependency The requirement that a digital ID be linked to a single smartphone is impractical and exclusionary in the South African context. Given the high rates of phone theft and unequal access to smartphones: * Citizens risk losing access to their identity entirely if their device is stolen * There is no clear recovery mechanism outlined * Individuals without smartphones are disadvantaged A secure, accessible, and immediate recovery process must be guaranteed, and physical alternatives must remain fully functional and equal. ### 4. Forced Physical Revalidation Requirements The requirement for in-person revalidation after 10 years undermines the convenience that the system claims to offer. This provision: * Reintroduces the very inefficiencies the digital system seeks to eliminate * Places an unnecessary burden on citizens, particularly those in rural areas * Contradicts the principle of continuous digital access A truly modern system should allow secure remote verification without arbitrary physical reset requirements. ### 5. Risk of Future Surveillance and Function Creep The centralisation of biometric and identity data in a dynamic, interconnected system creates a foundation for potential future misuse. Without clear legal boundaries, this system could: * Enable surveillance beyond its original intent * Be expanded into behavioural monitoring or compliance tracking * Be used to restrict access to services based on criteria unrelated to identity verification Strong constitutional safeguards and independent oversight mechanisms are essential to prevent any misuse. *** ### Conclusion While digital transformation is necessary, it must not come at the cost of citizens’ rights, security, and dignity. I urge the Department to reconsider these provisions and ensure that: * Privacy protections are strengthened * No scoring or exclusionary mechanisms are introduced * Access to identity systems remains inclusive and resilient * Clear limitations are placed on data usage and system expansion I respectfully request that these concerns be taken into account before the regulations are finalised. Thank you for the opportunity to submit comments.	a	KwaZulu-Natal		employed individual

	2026-05-25 15:35:34	No I do not	All of the above	Centralised Cyber & Security Risk		Dave	Western Cape		retired
	2026-05-25 15:33:41	No I do not	All of the above	Centralised Cyber & Security Risk	I strongly oppose the current proposal for a smartphone-based Digital ID system in South Africa for the following reasons: Severe Risk of Exclusion: Requiring smartphone apps and stable internet access will unfairly marginalize rural, low-income, and elderly citizens who lack affordable technology. Massive Cybersecurity Threats: Centralizing biometric and personal data on a single network creates an attractive target for cybercriminals and identity thieves. Systemic Failure and Lockouts: Administrative errors or automated system glitches could instantly freeze a citizen's access to banking, grants, healthcare, and employment without due process. Lack of Trust in Infrastructure: The Department of Home Affairs has a documented history of systemic inefficiencies and unlawful ID blocking. The state cannot currently guarantee the security or reliability of a massive digital identity spine. I urge the Department to suspend this rollout until comprehensive data privacy protections are legally binding, and to ensure that physical Smart IDs remain the primary, fully supported method of identification for all South Africans.	Mareli	Gauteng		business owner

	2026-05-25 15:22:05	No I do not	All of the above	Centralised Cyber & Security Risk	My primary concern is the centralised cybersecurity and governance risk created by this system. South Africa already struggles with corruption, infrastructure instability, data leaks, and weak institutional accountability. Concentrating citizens' identity, banking access, healthcare access, voting capability, and employment verification into a single state-controlled digital platform creates an extremely high-value target for cybercrime, abuse, and systemic failure. I do not believe the State has demonstrated the technical capability, operational discipline, or governance maturity required to manage such a critical centralised digital identity infrastructure securely and reliably. A single breach, outage, or abuse of power could have severe consequences for millions of citizens. South Africa should rather pursue a decentralised, privacy-first approach with strong constitutional protections, limited state control, independent oversight, and offline alternatives that do not force smartphone dependency on citizens. Less centralised control and less regulatory overreach would build greater public trust, resilience, innovation, and long-term prosperity.	Louis	Western Cape		employed individual
	2026-05-25 15:20:55	No I do not	All of the above	Centralised Cyber & Security Risk	The Concern: South Africa's public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic "attack surface." If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly.	Mareece	Gauteng		employed individual
	2026-05-25 15:19:17	No I do not	All of the above	Centralised Cyber & Security Risk	This Government is so corrupt always looking for ways to interfere with our privacy. No thanks I am too old to have all this Digital rubbish forced on me.	Shirley	Western Cape		retired
	2026-05-25 15:18:39	No I do not	All of the above	Centralised Cyber & Security Risk	SA already suffers from a high incidence of identity theft, often with collusion from DHA or bank staff. To put proof of identity on a phone, which is a prime target for theft, will exacerbate this by providing yet another avenue for criminals to fraudulently impersonate people. There is also the question of what will happen to those who do not own a phone capable of running the ID app.	Julyan	Western Cape		retired
	2026-05-25 15:15:06	No I do not	All of the above	Centralised Cyber & Security Risk	What's Next? They can't even get the simple things right. Is this another form of job creation?	Kerry	KwaZulu-Natal		employed individual

	2026-05-25 15:10:07	No I do not	All of the above	Centralised Cyber & Security Risk	I do not support this proposal because I believe it creates too much centralization of personal identity data and gives government systems deeper integration with private institutions. While digital convenience is valuable, I am concerned that the balance shifts too far away from privacy, personal control, and security. I do not support systems that could potentially reduce access to essential services because of technical failures, lost devices, administrative delays, or automated identity scoring mechanisms. I also believe that once large-scale digital identity infrastructure exists, there is a risk that its use could expand beyond its original purpose over time. Convenience should not come at the expense of individual freedom, data protection, and secure access to basic rights.	Jenny	Gauteng		employed individual

	2026-05-25 14:42:30	No I do not	All of the above	Centralised Cyber & Security Risk	Another example of an attempt by government to "streamline" a process which has unintended (or, worse, INTENDED) undesirable consequences. The current ID system has its faults but those faults CAN be fixed but IT TAKES EFFORT AND COMMITMENT, both attributes being in short supply in our government personnel sadly. With the advent of AI the more digitization the more opportunities for nefarious manipulation - we have seen it time and time again (Standard Bank's security breach being a recent example) - a bar-coded or current-technology-secured Identity document/Card is adequate - the government should spend our hard-earned taxes on infrastructure WE NEED not wasted on needless trivialities. 	2026-05-25 14:04:29	No I do not	All of the above	Centralised Cyber & Security Risk	The state has shown time and time again that it does not have the capabilities or will power to secure data, and with the fast pace forward movement of Ai this ability is going to be eroded even more over time and now they want us to allow all of our personal information to be collected in one centralized space. There is also the very real and imminent risk that the government will use this system along side social scoring to exclude citizens from the economy.	Martin	Western Cape		self-employed
	2026-05-25 14:03:59	No I do not	All of the above	Centralised Cyber & Security Risk	This will be a total breach of our Privacy and Security - While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector’s history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation’s “attack surface.” Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. And Automating “near real-time” data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance.	Sadia	Gauteng		
	2026-05-25 14:03:48	No I do not	All of the above	Centralised Cyber & Security Risk	I wish to express serious concern regarding aspects of the proposed Draft Identification Regulations, 2026. While I support the modernisation of government systems, I believe the current proposals risk undermines important constitutional freedoms and civil liberties if not carefully limited and independently supervised. My primary concerns are: “Privacy and Surveillance Risks”. The creation of a highly centralised biometric identity system raises legitimate fears regarding state overreach, excessive monitoring, and the long-term erosion of citizens’ privacy rights. “Cybersecurity Dangers” Biometric information such as fingerprints and facial recognition data cannot be replaced once compromised. Given the growing threat of cybercrime and previous data breaches in South Africa, the risks to citizens are significant. “Exclusion of Vulnerable Citizens”, Many elderly, rural, and lower-income South Africans may struggle with digital-only systems due to lack of smartphones, connectivity, or digital literacy. No citizen should be disadvantaged because they cannot fully participate in a digital identity framework. Technological progress is important, but it must never come at the cost of constitutional rights and public trust.	Pietro	Western Cape

	2026-05-25 13:52:51	No I do not	All of the above	Centralised Cyber & Security Risk	Impossible to choose one as they are ALL of equal major concern. Firstly cyber-security is a massive risk and govt has already had security breaches along with many businesses - so now they want to put us at further major risk. This move is unconstitutional as it takes away our rights and is jeopardising our right to freedom and privacy by default. It's like direct marketing when you don't want it - govt can just take away our right to our legal credentials, we will have to prove we are alive! This linking to one digital device is ludicrous - I've had my cellphone stolen before and now govt plans to lock us out of our own identity if that occurs. Sharing our ID digitally with who knows what organisations/corrupt officials/ gangsters even is extremely likely. Corruption in govt is rife! Elderly and poor people who are not digitally active are now at high risk of being shut out of their right to get their pensions and basically just exist. This is to my mind a means of CONTROLLING the population and it is TOTALLY UNCONSTITUTIONAL AND TO BE REJECTED FOR ALL THE ABOVE REASONS!	Gaye	Western Cape		business owner

	2026-05-25 13:42:03	No I do not	All of the above	Centralised Cyber & Security Risk	Dear Sir, the digital control measures you are proposing is a dictatorship. The state owns no one. Each person can obey rules set there, but each person is an individual with their own rights. I will decide what information I give out about myself. You want to control people digitally, what access they have, who gets their information, you want to know where everyone is at all time - that is spying on people, taking away their freedom and choice! You want to punish people who don't fit into your scheme by limiting their privileges, where they buy, where the live, what they buy, whether the even have a bank account or a business!!! Are u listening to yourself? That is the description of a prison. Dropping people's so called credit score just because they don't submit to your proposed digital surveillance and control! Your system is hackable, breakable, unreliable, selfish, flawed, can be stolen and outright evil. You are obviously just a puppet being controlled by a higher up who wants to control the whole world. My answer is NO.	Lisa	Gauteng		employed individual

	2026-05-25 13:25:12	No I do not	All of the above	Centralised Cyber & Security Risk	1. Objection to the "Trusted Entities" Data Pipeline **Draft Provision:** The establishment of real-time, bi-directional data synchronization pipelines between the National Population Register and accredited "trusted entities" (private banking giants, telecommunication networks, etc.). - **Rebuttal & Grounds for Objection:** This framework blurs the constitutional boundary between public civic data and private corporate repositories. Under the strict conditions of **POPIA (Act 4 of 2013)**, personal data collected by a specific private entity for a specific commercial purpose (e.g., opening a bank account) cannot be automatically cross-mapped into a state ledger without explicit, uncoerced, case-by-case consent. - **The Risk:** Real-time bi-directional synchronization converts private corporations into de facto state data-collection agents. This creates a massive, distributed attack surface for data breaches and identity theft. - **Proposed Amendment:** Strip out automatic, real-time bi-directional data pushing. Data verification must follow a strict, user-initiated *"Pull" model only*, where a private trusted entity can verify a specific detail *only* when explicitly authorized by the citizen via a one-time cryptographic token. ## 2. Objection to Algorithmic Tiering and "Identity Assurance Level" Penalties **Draft Provision:** The implementation of variable "Identity Assurance Levels" that drop or freeze automatically if routine demographic data (such as residential address or email) is not updated within a strict 30-day window. - **Rebuttal & Grounds for Objection:** This creates an algorithmic penalization loop that mirrors a corporate social credit score. Dropping an individual's assurance level automatically without human review or notice violates sections of the Constitution. - **The Risk:** A sudden, automated downgrade of an Identity Assurance Level will cause immediate, severe transaction rejections in everyday life (banking, mobile connectivity, employment checks). In South Africa's economic climate, where informal housing and fluid residential setups are common, this disproportionately punishes marginalized citizens. - **Proposed Amendment:** Delete any automated or algorithmic downgrading of identity assurance statuses. Any change to a citizen's identity validity or assurance tier must require prior written/digital notification, a reasonable right of reply, and a transparent, rapid appeal mechanism. ## 3. Objection to Device Binding and Lack of Remote Recovery **Draft Provision:** Cryptographic device binding that links the digital ID token uniquely to one specific smartphone device. - **Rebuttal & Grounds for Objection:** In a country experiencing exceptionally high rates of muggings, violent crime, and mobile phone theft, tying an individual's absolute legal identity to a single physical handset is a recipe for administrative paralysis. The draft regulations are critically silent on a secure, accessible, and fast remote recovery path. - Many of the population have no access to smartphones, how are these citizens going to be accommodated? - **The Risk:** If a citizen is mugged, they lose both their phone and their legal identity. Without a clear remote path to revoke and restore the credential, a victim of crime is instantly locked out of society, unable to perform basic functions precisely when they need their identity documents most to recover lost assets. - **Proposed Amendment:** The regulations must explicitly mandate a secure, multi-factor, browser-based or web-accessible remote revocation and emergency recovery protocol that does not require physical access to the stolen device or immediate travel to a Home Affairs office. ## 4. Objection to the 10-Year Physical Queue Trap **Draft Provision:** The 5-year credential expiration, paired with the mandate that a digital identity completely lapses if the holder has not had an in-person touchpoint with a Home Affairs office or partner bank for 10 consecutive years. - **Rebuttal & Grounds for Objection:** While app-based biometric facial verification is permitted for standard 5-year renewals, the 10-year hard cap forcing a return to a physical queue undermines the very purpose of digital transformation ("Home Affairs @ Home"). - **The Risk:** South Africans are well aware of the systemic inefficiencies, system offline times, and grueling queues characterizing Home Affairs branches and partner banks. Forcing millions of digitally verified citizens back into physical lines every decade solely to "re-prove" who they are—despite having continuous, biometrically verified digital usage—creates artificial bottlenecks and administrative regression. - **Proposed Amendment:** Amend the clause to state that if a citizen continuously and successfully authenticates via high-assurance, remote biometric liveness detection during the 5-year app renewals, the requirement for an in-person, physical touchpoint should be waived or extended indefinitely. ## 5. Objection to the Infrastructure for Broad Function Creep **Draft Provision:** The centralization of a dynamic repository of biometric signatures, device variables, and real-time transaction tracking metrics. - **Rebuttal & Grounds for Objection:** This architecture creates a technical blueprint for mass surveillance and a compliance-driven exclusion system. It violates the POPIA principle of purpose specification - personal data collected for identity verification must not be repurposed for tracking movement, behavioral profiling, or state compliance enforcement. - **The Risk:** Once a dynamic, centralized system tracks every time and place an ID is verified, it takes only minor policy shifts (function creep) to convert an "optional" service delivery tool into a weapon of state exclusion or political surveillance. - **Proposed Amendment:** Insert strict, unalterable statutory firewalls within the regulations. The system architecture must utilize *decentralized, privacy-preserving zero-knowledge proofs (ZKPs)*, ensuring the state only verifies that an identity is valid, without logging where, when, or with whom the verification took place. The regulations must explicitly criminalize the metadata logging of verification queries. ### Conclusion The Digital Identity system must serve the people, not track or penalize them. As currently drafted, these regulations create a high-risk, exclusionary web that compromises private data and punishes citizens for administrative delays or being victims of crime. I urge the Department to amend these regulations to protect the constitutional rights of all South Africans.	Michael	Gauteng		retired

	2026-05-25 13:22:50	No I do not	All of the above	Centralised Cyber & Security Risk	Besides all of the above, there are still people who do not use smart phones, as they are very expensive, and/or have no desire (or are just incapable) to use them. Smart phones are also highly dispensible, they get stolen, lost, damaged and, in general, need to be replaced every 2 or 3 years, at enormous cost, to keep up with the changes in technology. And who is going to go from door to door checking that the person does reside at the address given? With so many homeless people, how will this be possible? People live in rooms in the city while at work and use a family member's address in the country where they don't actually live but only visit from time to time. How is a tracable address going to help Home Affairs or anyone else? And why is this being pushed through now, just a few months ahead of elections?	Grace	Free State		retired

	2026-05-25 12:51:36	No I do not	All of the above	Centralised Cyber & Security Risk	Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector’s history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation’s “attack surface.” Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically “lapse” triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual’s legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating “near real-time” data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic “soft discrimination” —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-25 11:47:06	No I do not	All of the above	Centralised Cyber & Security Risk	Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector’s history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation’s “attack surface.” Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically “lapse” triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual’s legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating “near real-time” data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic “soft discrimination” —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-25 11:37:24	No I do not	All of the above	Centralised Cyber & Security Risk	All the above stated options are important, one option is definitely not more important than another. Absolutely NOT supported, in its entirety! The biometric and digital ID program should be scrapped all together. Total government overreach, need for control and reckless spending!!! How will South African government fund this? Taking yet another loan deducted via imposed, invalid taxes through every industry imposed on all citizen, especially from the small group of employed individuals, that still have deductions on salary? Last year alone over 1,500 businesses liquidated, approximately 33,000 jobs lost. But we have money to implement costly biometrics and digital id, infringing on personal space and privacy. >High implementation costs/exclusion of citizens/ limited accessibility: Exorbitant cost of software & maintenance to systems. SA government is forcing businesses shutdown, through created crisis daily, how do they expect unemployed/ employed citizens to keep up with new phones/ software/ data? For the individual user, it’s a new phone upgrade/ data contracts etc., how many people will be denied access to services/ finances/ healthcare etc. due to old phones, the phone upkeep being too expensive and/ or they have sadly become unemployed, due to government business and labour laws? >Permanent Irrevocability, privacy issues: face/ fingerprint & iris cannot be "reset", data compromised puts users at permanent risk of id theft across all accounts. Hackers using AI to retrieve biometric data from company data breaches/ media platform photos posted. How does the SA government propose keeping our data safe when it cannot keep their own departments safe from corrupt individuals using AI & tech? >Inclusivity & Accessibility: With facial recognition, fingerprint scanning, iris monitoring: physical injuries, lighting, smudges, unclear images alter biological features - access denied! In essence emotions could also be used to deny access, if deemed not to be within normal parameters, users being too emotional to make proper financial decisions in certain circumstances. See Fords new biometrics patent and the disadvantages of this system, a test driver of said vehicle was notified of personal family medical emergency, the vehicle biometric system effectively shut down the vehicle, deeming him too emotional to be a safe driver on the road - a medical emergency and the car shut down - see where this will end up? Access denied. >Technical Errors & Glitches/ single point of failure/ denial of service attacks: False positives, locking out legitimate users, if a biometric and digital ID system goes down or is breached, electricity failure, phone theft, battery depletion, account mistakenly or purposely flagged for fraud under suspicion only without proof, user’s blocked from multiple systems simultaneously. >Privacy, mass surveillance & profiling: intrusive digital footprints, growing threats off deep fakes & spoofing (presentation attacks) concerned, prevention of trade and access to personal finances and details. There is no good in implementing this system. Its an absolute NO vote, the South African government has so far not proved its capability to safe guard ANYTHING, our data and personal information being only of interest as it would give them unlimited access to who we are, controlling every aspect of our being, denying our right to freedom, personal space and privacy. 	2026-05-25 11:06:21	No I do not	All of the above	Centralised Cyber & Security Risk	I do not trust the government to prioritise the public’s interests and opinions. This proposal fails to adequately consider the serious security breaches that many public institutions continue to experience. It also overlooks the reality that not everyone owns a smartphone, phones can be stolen, lost, or become unusable, and many South Africans still face accessibility and affordability challenges regarding technology. Personally, this comes across as yet another opportunity for money-making schemes and tender kickbacks rather than a genuine attempt to improve public services. As stated above, I do not trust the government to place the interests of the public above their own interests, particularly given the ongoing concerns around corruption and looting. 	2026-05-25 11:02:01	No I do not	All of the above	Centralised Cyber & Security Risk	No one is safe on digital format. Even the most secure Electronical infrastructures around the world are being Hacked. My Identity will not be safe and this if pursued will lead to more fraud, money laundering and identity theft. Sorry but no this will not work. What about the 60% of people that is unemployed will the state pay for their phones, airtime, and electricity to charge their phones to proof that they are South African. This of course is if they have electricity that runs to their place where they sleep under a bush, bridge or park bench. (Shame on you for neglecting Your People ANC and the GNU). What about all the theft of phones all over South Africa, there will be chaos and this will just have massive problems associated to it. Going Digital can't work, as the majority of South Africa is poor and don't even have a roof over their heads. Even when Elon Musk was prepared to provide free internet services for these communities this communist ANC and (GNU) included, will just fail in this endeavour. Thanks, again but no. Pay JHB bills to the full then we will talk again	Petri	Mpumalanga		employed individual

	2026-05-25 10:14:09	No I do not	All of the above	Centralised Cyber & Security Risk	Our identity is already stolen by illegal and undocumented foreigners, Government must first solve the above problem, because bribes and fraud is always a concern. My take is that government must first deal with the illegal undocumented foreigners.	Jan	Western Cape		retired

	2026-05-25 10:13:31	No I do not	All of the above	Centralised Cyber & Security Risk	Millions of South Africans do not have access to smart phones and in many cases are unemployed. They cannot pay for smart phones and regular connectivity - this excludes them from having a recognised state ID. On that point alone, this proposal is exclusionary and unacceptable. The rate of ID theft in South Africa should be a clear indication of the flaws with such a system. This proposal makes it almost impossible for someone to regain their ID once stolen. GOVERNMENT OVERREACH! Our constitutional pact with the state does not include giving the state full access to our daily lives, where we shop, who we see, where we go, etc. This is a violation of privacy and appears to be a mechanism for control of the population which is against the constitution. It is shocking indeed that the Dept of Home Affairs is even considering this. This proposal must fail in its entirety.	Izak	Gauteng		retired

	2026-05-25 10:13:24	No I do not	All of the above	Centralised Cyber & Security Risk	South Africa's public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic "attack surface." If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office. 	2026-05-25 10:06:04	No I do not	All of the above	Centralised Cyber & Security Risk	what do I do if I lose, break or my phone gets stolen, or if I get a new device - how will data be transferred? Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. this would break POPI security and my individual right to my personal information. 	2026-05-25 09:38:01	No I do not	All of the above	Centralised Cyber & Security Risk	Though the intentions might be honorable and genuinely want to address existing "Home Affairs" headaches, I am concerned about the following: (1) South African public sector's history of systemic data breaches. (2) This 10-Year automatic "lapse" wiping out a citizen's legal credential is unfair, especially to those not close to a Home Affairs Office or a branch of their Bank (especially now that so many branches have been closed) (3) Device Dependency - With our crime stats, this is what concerns me most. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. (4) Corporate Privacy Creep - Distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. (5) The digital divide - Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination". My dad (84) can barely send a text message, now you want to force him to deal with this too?!?!	Jana	Gauteng		employed individual

	2026-05-25 09:36:28	No I do not	All of the above	Centralised Cyber & Security Risk	South Africas high corruption rates will leave all individuals exposed directly to this. and The Interoperable Private Corporate Network: The state will establish real-time, bi-directional data pipelines with accredited "trusted entities" (like private banking giants and telecom networks). If you change your address at your bank, it will synchronise across the state register automatically in near real-time—blurring the line between public civic data and private corporate databases. The 'Identity Assurance' Scoring Loop: If you fail to formally report routine life updates (like moving to a new house or changing your email) within a strict 30-day window, the state will automatically drop your internal "Identity Assurance Level" (social credit score). This algorithmic tiering could cause sudden, frustrating transaction rejections when you try to open accounts or authenticate services. The Stolen Phone Lockdown: Your digital ID will be cryptographically locked to one specific smartphone device. Given South Africa's high rates of muggings and mobile theft, losing your device means your digital identity token is instantly frozen or revoked. The regulations are completely silent on a secure, remote path to restore your access, raising the threat of immediate administrative paralysis.	Joanna	Western Cape		self-employed

	2026-05-25 09:18:56	No I do not	All of the above	Centralised Cyber & Security Risk	I hereby submit this objection to the proposed amendments to the Identification Regulations, published in Government Gazette No. 54610, concerning the introduction of digital identity credentials and associated data-sharing, accreditation, and security frameworks. While I acknowledge the importance of modernising identity systems and improving service delivery, I respectfully submit that the proposed amendments raise serious constitutional, administrative, privacy, and governance concerns that require reconsideration before implementation. Insufficient Safeguards for Privacy and Personal Information The proposed regulations significantly expand the collection, processing, sharing, and verification of citizens' identity data in digital form. However, the amendments do not adequately specify: the limits on data sharing; the categories of entities that may access such information; retention periods for biometric and identity data; independent oversight mechanisms; or remedies available to citizens in the event of misuse or breach. Given the sensitivity of biometric and population register data, the regulations should explicitly align with the Protection of Personal Information Act, 2013 (POPIA), including strict purpose limitation, minimality, informed consent, and accountability requirements. Risk of Unlawful Surveillance and Function Creep The proposed framework creates the potential for identity verification systems to be used beyond their original purpose, including mass surveillance, profiling, and unauthorised interdepartmental or private-sector access. Without express statutory limitations and judicial safeguards, the amendments may infringe constitutional rights to privacy, dignity, and freedom of association protected under the Constitution of the Republic of South Africa, 1996. Lack of Clarity Regarding Accreditation and Third-Party Access The regulations appear to permit external entities to participate in identity verification and digital credential systems, yet provide insufficient detail regarding: accreditation standards; cybersecurity obligations; liability for breaches; auditing requirements; and consequences for non-compliance. This creates legal uncertainty and exposes citizens to increased risk of identity theft, fraud, and unlawful data exploitation. Digital Exclusion and Inequality The introduction of digital identity credentials may disadvantage vulnerable groups, including: elderly persons; rural communities; low-income individuals; persons without reliable internet access; and undocumented or marginalised persons. The Department has not sufficiently demonstrated how digital systems will operate alongside accessible non-digital alternatives. Any transition to digital identity systems must remain voluntary, inclusive, and accompanied by comprehensive public consultation and infrastructure support. Inadequate Public Participation The proposed amendments introduce substantial policy and technological changes with far-reaching implications for every resident of South Africa. It is respectfully submitted that the public participation process has been insufficient given the complexity and constitutional significance of the amendments. A longer consultation period, public hearings, and publication of impact assessments should be undertaken before finalisation. Need for Independent Oversight The regulations should establish independent oversight mechanisms involving the Information Regulator, cybersecurity experts, civil society organisations, and Parliament to ensure transparency, accountability, and constitutional compliance. CONCLUSION In light of the concerns outlined above, I respectfully request that the proposed amendments be withdrawn, reconsidered, or substantially revised before implementation. At minimum, the Department should: conduct broader public consultation; publish detailed privacy and cybersecurity impact assessments; strengthen protections against misuse of personal information; ensure compliance with POPIA and constitutional rights; and provide guarantees against exclusion of vulnerable populations. South Africa's identity system is foundational to constitutional democracy and public trust. Any transformation of that system must be approached cautiously, transparently, and with full regard to the rights and interests of all residents.	Dimitrios	Gauteng		employed individual
	2026-05-25 09:18:52	No I do not	All of the above	Centralised Cyber & Security Risk	The government should stop trying to own the public. We have the right to self determenation and make our own decisions as to our lives.	Neil	Gauteng		retired
	2026-05-25 09:18:39	No I do not	All of the above	Centralised Cyber & Security Risk	I do not agree with the principle of data synchronization between the banking industry, telecommunications giants and government as it overreaches the boundary that should separate sovereign public civic registries and private, profit-driven corporate infrastructure. In spite of elegant statutory philosophies and promises, interactive data updates across different third-party commercial servers inherently increases the risk of data leaks and corporate surveillance posing a threat to me personally as well as to my sovereignty. 	2026-05-25 09:03:13	No I do not	All of the above	Centralised Cyber & Security Risk	⚡ The Real Stakes: Why This Matters to You An identity document isn't just a piece of plastic or an app icon; it is your gateway to exercising your civil rights. It governs your ability to access your money, secure a phone line, work, travel, and vote. Privacy advocates, tech experts, and civic organisations have raised alarm bells over several structural features built into the draft rules: 1. The Interoperable Private Corporate Network: The state will establish real-time, bi-directional data pipelines with accredited "trusted entities" (like private banking giants and telecom networks). If you change your address at your bank, it will synchronise across the state register automatically in near real-time—blurring the line between public civic data and private corporate databases. 2. The 'Identity Assurance' Scoring Loop: If you fail to formally report routine life updates (like moving to a new house or changing your email) within a strict 30-day window, the state will automatically drop your internal "Identity Assurance Level" (social credit score). This algorithmic tiering could cause sudden, frustrating transaction rejections when you try to open accounts or authenticate services. 3. The Stolen Phone Lockdown: Your digital ID will be cryptographically locked to one specific smartphone device. Given South Africa's high rates of muggings and mobile theft, losing your device means your digital identity token is instantly frozen or revoked. The regulations are completely silent on a secure, remote path to restore your access, raising the threat of immediate administrative paralysis. 4. The 10-Year Physical Queue Trap: Your digital ID will expire every 5 years. While app-based biometric renewal is permitted, the law dictates that if you do not have a physical, in-person touchpoint with a Home Affairs office or partner bank for 10 consecutive years, your credential completely lapses, and you must line up in person from scratch to re-prove who you are. 5. The Blueprint for Function Creep: Centralising a dynamic repository of dynamic biometric signatures and tracking variables provides the perfect infrastructure for future state surveillance or a compliance-driven "social credit-style" exclusion system. 	2026-05-25 08:45:33	No I do not	All of the above	Centralised Cyber & Security Risk	This proposed bill is introducing a single point of failure with incredibly far-reaching implications for citizens. With the rising rate of cyber attacks, this will be a prime target, and the government hasn't demonstrated that it can securely and effectively manage any system. On top of that, in a country with crime rates like ours, it's impractical to tie it to a device. One mistake or theft will leave the individual cut off from participating in basic activities. And then tying this to 'selected' corporate entities has significant privacy concerns too. I get that efficiency is the aim, but in this current proposed format, the price of privacy and civil freedom rights are too high.	Liz	Western Cape		self-employed

	2026-05-25 08:37:23	No I do not	All of the above	Centralised Cyber & Security Risk	Please don't assume that I have a phone and that it always works. They are expensive and are a luxury item. With our regular power failures and internet service dependent on the weather, it seems like a ridiculous idea to make your ID dependant on your phone. This looks to me like yet more Chinese communist style government overreach and control.	Graham	Western Cape		unemployed individual
	2026-05-25 08:37:10	No I do not	All of the above	Centralised Cyber & Security Risk	From a business and policy perspective, the draft regulations may expose both public institutions and private-sector partners to elevated legal, operational, and reputational risks. Real-time integration between government identity systems and corporate infrastructure could improve efficiency, but it also increases dependency on secure data exchange, robust governance, and incident-response readiness. Without stronger controls, implementation may erode public trust, increase compliance burdens, and create avoidable service disruptions for citizens and participating institutions. Primary Risks Identified • Heightened cybersecurity exposure through centralised live system integration • Administrative disruption caused by identity lapse requirements • Citizen lockout risk due to single-device dependency • Expanded privacy exposure through corporate data synchronisation • Exclusion and service inequality for digitally vulnerable populations Conclusion In conclusion, the draft regulations present a modernisation opportunity, but the current design raises substantial concerns that could undermine implementation success. The evidence reviewed suggests that cybersecurity resilience, constitutional safeguards, citizen recovery options, and equitable service access should be strengthened before rollout. A revised framework that balances innovation with risk mitigation will be better positioned to deliver sustainable public value. While the regulations aim to modernise identity systems and improve digital integration, the current proposal introduces significant operational, cybersecurity, privacy, and inclusion risks. The findings indicate that stronger constitutional safeguards, clearer implementation controls, and practical citizen recovery mechanisms will be essential before such a framework can be implemented responsibly. 	2026-05-25 07:51:26	No I do not	All of the above	Centralised Cyber & Security Risk	I do not agree with this at all as no one will be safe anymore. This will cause criminals to find out where you live, how old you are, are you living alone & all of my private details on my phone is at risk of being hacked, stolen, etc. With this no one will be safe or be private.	Marlie	Eastern Cape		employed individual
	2026-05-25 07:51:01	No I do not	All of the above	Centralised Cyber & Security Risk	Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-25 06:33:49	No I do not	All of the above	Centralised Cyber & Security Risk	Mobile phones are unsafe at best. It is evident that more banking fraud is committed via mobile facilities than otherwise. The key to this and other types of abuse is not the nature of the ID media but rather the ID number of the individual. Already much if not all personal information about anyone is accessed via this unique identifier, legal and illegal. The POPI Act has the intention to protect the rights to anonymity but is also abused for this very reason. To institute more methods that will facilitate faceless access to sensitive information is, at best, totally inacceptable. Why not rather fire all incompetent staff at Home Affairs public offices and replace them with people dedicated to their function. That will cost less and achieve more.	Nico	Western Cape

	2026-05-25 06:22:23	No I do not	All of the above	Centralised Cyber & Security Risk	The Interoperable Private Corporate Network: The state will establish real-time, bi-directional data pipelines with accredited "trusted entities" (like private banking giants and telecom networks). If you change your address at your bank, it will synchronise across the state register automatically in near real-time—blurring the line between public civic data and private corporate databases. The 'Identity Assurance' Scoring Loop: If you fail to formally report routine life updates (like moving to a new house or changing your email) within a strict 30-day window, the state will automatically drop your internal "Identity Assurance Level" (social credit score). This algorithmic tiering could cause sudden, frustrating transaction rejections when you try to open accounts or authenticate services. The Stolen Phone Lockdown: Your digital ID will be cryptographically locked to one specific smartphone device. Given South Africa's high rates of muggings and mobile theft, losing your device means your digital identity token is instantly frozen or revoked. The regulations are completely silent on a secure, remote path to restore your access, raising the threat of immediate administrative paralysis. The 10-Year Physical Queue Trap: Your digital ID will expire every 5 years. While app-based biometric renewal is permitted, the law dictates that if you do not have a physical, in-person touchpoint with a Home Affairs office or partner bank for 10 consecutive years, your credential completely lapses, and you must line up in person from scratch to re-prove who you are. The Blueprint for Function Creep: Centralising a dynamic repository of dynamic biometric signatures and tracking variables provides the perfect infrastructure for future state surveillance or a compliance-driven "social credit-style" exclusion system. 	2026-05-25 05:42:34	No I do not	All of the above	Centralised Cyber & Security Risk	Identity theft is a growing crime industry. Currently if someone steals your identity, it is one document, such as a passport, driver's license, etc. Most forms have data in common, but also unique data. This allows the individual to recover said identity using both the common and unique data of an alternative form of ID. Centralizing all identity data creates a massive risk to individuals, it resembles "putting all your eggs in one basket." When the identity of an individual is stolen, ALL data identifiers are compromised and recovery of identity becomes near impossible. It has happened in several countries already, Australia, Canada to name a few. Now contemplate a scenario where a criminal traps a junior data worker into providing their system credentials. When this happens, 100% of ALL the identity data of the ENTIRE COUNTRY is compromised. 100% of the GDP is exposed. This is an exceptionally bad idea to have a central "digital ID."	Rudolph	Outside SA	Australia	business owner

	2026-05-25 05:16:50	No I do not	All of the above	Centralised Cyber & Security Risk	Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual’s legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating “near real-time” data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic “soft discrimination” —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-25 03:23:42	No I do not	All of the above	Centralised Cyber & Security Risk	I will not comply to the New World Order 2030 agenda. These politicians in our country have forgotten that they work for us and we not for them and they must stop copy and past what other countries are doing and stop trying to enforced other countries laws and systems on us South Africans. We are sick and tired of all these politicians and government and municipalities who thinks they own us and this country and that they can create laws and systems to control,dictate, enslaved, divide and keep us the majority in this country poor. Because the majority of us struggles everyday day to make ends meet because of all these systems and laws they have created to make our lives difficult, while they and their families lives in luxury. These politicians and municipalities and government must be very careful because they will push and push us till we rich a point where we gatvol as a nation than hell is going to break loose in this country. 	2026-05-25 01:49:07	No I do not	All of the above	Centralised Cyber & Security Risk	Centralised cyber and security risk...my suggestion would be why not the government build more home affairs since we Wil be at risk together with these unreasonable amendments.. Even banks are now assisting with ID documents application fir sure there is that kind of change and more and more banks should assist surely home affairs will function . And with so much of fraud going on don't hey see our lives safe it will worse should ones smart phone be hacked or be mugged already we are forced by smuggles to give them our pins and they withdraw all cash you have just because of Banks apps we have now having one identity in a smart phone wouldn't all this impact more on online fraud? I would hope they review all the amendments before appointing them.. Worse other people don't have smart phones how will they be able to function with all this change worse with sinior citizens. 	2026-05-24 23:12:59	No I do not	All of the above	Centralised Cyber & Security Risk	Civic groups, privacy advocates, and cybersecurity experts argue that while modernisation is welcome, the draft regulations introduce expansive risks and administrative penalties that demand much tighter constitutional safeguards. Their core arguments include: Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-24 21:57:03	No I do not	All of the above	Centralised Cyber & Security Risk	South Africa's public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic "attack surface." If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. If your digital ID lapses under the 10-year rule, you are legally stripped of your active digital credential and forced to undergo a physical, standard in-person enrollment process all over again. This creates an unnecessary, cyclical bureaucratic loop that forces digitally active citizens back into notorious, real-world Home Affairs queues simply because they did not have a reason to visit a physical office for a decade.	E	KwaZulu-Natal		retired
	2026-05-24 21:56:41	No I do not	All of the above	Centralised Cyber & Security Risk	It's a ridiculous concept which will simply end up as a total waste of money as citizen will not comply due to the risks and inconvenience associated with it .	Michael	Western Cape

	2026-05-24 21:20:56	No I do not	All of the above	Centralised Cyber & Security Risk	Cybersecurity Readiness & "Leapfrogging" Vulnerabilities While the draft regulations introduce highly sophisticated cryptographic measures, including asymmetric elliptic-curve cryptography and encrypted database storage, they create an unprecedentedly dense web of database interfaces. This leapfrogges global legacy models by connecting the state's population register directly to corporate networks via secure APIs. The Concern: South Africa's public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic "attack surface." If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly.	Frans Hendrik	Western Cape		employed individual

	2026-05-24 20:50:39	No I do not	All of the above	Centralised Cyber & Security Risk	While digital technology has undoubtedly streamlined many aspects of modern life, the proposed rollout of a compulsory digital ID system—especially one tied to a personal device—raises serious concerns about privacy, civil liberties, and long-term societal resilience. Centralizing identity in a single, always-connected device creates a high-value target for cyberattacks, surveillance, and systemic failure. Linking ID to real-time data tracking, usage patterns, and potentially even algorithmic social credit scores risks normalizing constant monitoring, eroding personal autonomy, and enabling discriminatory profiling under the guise of efficiency. While digital technology has undoubtedly streamlined many aspects of modern life, the proposed rollout of a compulsory digital ID system—especially one tied to a personal device—raises serious concerns about privacy, civil liberties, and long-term societal resilience. Centralizing identity in a single, always-connected device creates a high-value target for cyberattacks, surveillance, and systemic failure. Linking ID to real-time data tracking, usage patterns, and potentially even algorithmic social credit scores risks normalizing constant monitoring, eroding personal autonomy, and enabling discriminatory profiling under the guise of efficiency. Moreover, the practical vulnerabilities are significant. A lost or stolen phone could instantly sever an individual's access to essential services, financial accounts, healthcare, and even basic identification—turning a common mishap into a full-blown personal crisis. This level of dependency on a single digital point of failure also exposes people to heightened risks of identity theft, hacking, and coercion. Unlike physical IDs, which can be replaced or used independently of connectivity, a device-based system assumes constant access to power, networks, and functioning hardware—conditions that aren't always guaranteed, especially in emergencies or underserved communities. While the promise of increased efficiency is compelling, it must be weighed against the potential for exclusion, abuse, and the creation of a brittle, surveillance-prone infrastructure. A society that mandates total reliance on digital identity risks sacrificing fundamental rights and resilience at the altar of convenience. Robust safeguards, voluntary opt-in frameworks, and strong data protection laws must be in place before any such system is considered—otherwise, we risk building a future where privacy is obsolete and control is centralized. Jan	Limpopo		retired

	2026-05-24 19:51:52	No I do not	All of the above	Centralised Cyber & Security Risk	While I acknowledge the Department of Home Affairs’ objective to modernise identity verification systems, reduce fraud, and improve administrative efficiency, I believe the proposed framework presents serious constitutional, practical, and civil liberty concerns that require substantial reconsideration before implementation.
					
					My objections are as follows:
					
					1. Excessive Centralisation of Personal Information
					  The proposal appears to consolidate highly sensitive personal identity data into a centralised digital platform linked to multiple state and private-sector systems. Such concentration of information significantly increases the risk of cyberattacks, data breaches, unauthorised surveillance, and identity theft. A single compromised platform could expose millions of citizens to severe harm.
					2. Risk of Mass Surveillance and Function Creep
					  The proposed integration of real-time data synchronisation between government and private entities creates the potential for continuous monitoring of citizens’ activities. There is insufficient clarity regarding limits on data sharing, retention periods, oversight mechanisms, or protections against future expansion of the system beyond its original purpose.
					3. Smartphone Dependency and Digital Exclusion
					  A smartphone-based identity system risks excluding vulnerable citizens who cannot afford smartphones, stable internet access, electricity, or digital literacy training. Many South Africans — especially elderly persons, rural communities, low-income households, and persons with disabilities — may struggle to access essential services if digital identity becomes the primary or preferred form of identification.
					4. Potential Restriction of Fundamental Rights
					  Because identity verification directly affects access to banking, employment, healthcare, travel, voting, and public services, any technical malfunction, account suspension, connectivity failure, or administrative error could effectively deny a citizen access to constitutional rights and daily necessities.
					5. Automated Profiling and Tiering Concerns
					  The proposed framework references profile-tiering and rolling validation systems. Automated classification systems can lead to discrimination, administrative bias, and unequal treatment without sufficient human oversight or accessible appeal mechanisms. Citizens should never be subjected to opaque algorithmic decisions affecting their legal status or service access.
					6. Insufficient Safeguards and Independent Oversight
					  The regulations do not appear to provide sufficiently detailed guarantees regarding:
					
					* independent cybersecurity audits,
					* judicial oversight,
					* limitations on private-sector access,
					* protections against unauthorised data sharing,
					* mandatory breach notifications,
					* offline alternatives,
					* or citizen remedies in the event of wrongful denial of services.
					
					7. Need for Voluntary Participation and Physical Alternatives
					  Physical identity documents must remain permanently available and fully functional as equal alternatives. No citizen should be compelled — directly or indirectly — to adopt a smartphone-based digital identity system in order to fully participate in society.
					8. Constitutional and Privacy Implications
					  The proposed system raises concerns relating to the constitutional rights to privacy, dignity, equality, freedom of movement, and access to essential services. Any digital identity framework should undergo rigorous constitutional review, public consultation, and independent technical assessment before implementation.
					
					I respectfully request that:
					
					* the proposed amendments be reconsidered and substantially revised;
					* broader public consultation be conducted;
					* independent cybersecurity and constitutional experts be involved;
					* and explicit legal protections be inserted to prevent abuse, exclusion, or coercive implementation.
					
					Modernisation should not come at the expense of civil liberties, accessibility, privacy, and democratic accountability.

	2026-05-24 19:41:02	No I do not	All of the above	Centralised Cyber & Security Risk	Privacy is a critical concern, and the idea that an update on one platform can result in every entity linked to the system gaining access to my information is unacceptable. Furthermore, this links directly to severe cybersecurity risks. Any breach on any front leads to exposure of ALL of acitizen's data, giving bad actors unprecedented access to identify fraud. One weak link and millions of lives could be negatively impacted in an instant. And any promise of improved security is insufficient - it doesn't matter what protective measures can be implemented - bad actors will work tirelessly to find ways to break through. Convenience is not sufficient reason to put every South African's private data at risk.	Suzanne	Gauteng		employed individual

	2026-05-24 18:21:00	No I do not	All of the above	Centralised Cyber & Security Risk	My first concern is the centralised cyber and security risk. The government has already failed to protect my private information at least once, as far as I am aware. Everything in the country is falling apart. How do the government propose to protect my personal information when they haven't been able to do so before? The best predictor of future behaviour is past behaviour. Furthermore, applying for a driver's license every five years is already a mess. Now we will be required to queue every ten years for something else? Really? We're a third-world country and regressing economically every year. Yet we want to give over control to a government that cannot ensure economic growth. Not to mention the total control we'll be giving the government and corporations over our private affairs. It reeks of World Economic Forum control. The entire endeavour is insidious.	Jacqueline	Western Cape		retired

	2026-05-24 18:14:54	No I do not	All of the above	Centralised Cyber & Security Risk	Government is supposed to protect citizens from private business over reach and not be enablers of private data breaches. Government is not meant to launder our information to private businesses but protect it on its own. The many times that BANKS(that use open servers also used and accessible to criminals) including STD BANK has been hacked by foreign hackers, the many times that SA government was even unable to protect current SA president cell phone number hacking. Multiple times even national departments were hacked. SA is a developing country and has multiple issues that require its attention. Instead of acting like a fully developed country. It's best government(cabinet) and parliamentarians focus on growing the economy and reduce unemployment instead of wanting to launder SA citizens data to banks. While allowing same and said banks to fail at basic data security like not using open servers that are also used by criminals to defraud and terrorise SA citizens.	Mmapula	Gauteng

	2026-05-24 18:05:39	No I do not	All of the above	Centralised Cyber & Security Risk	While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector’s history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation’s “attack surface.” Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically “lapse” triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch.	Jeanetta	KwaZulu-Natal

	2026-05-24 18:05:01	No I do not	All of the above	Centralised Cyber & Security Risk	My first concern is the centralised database - it will create a broader base for criminals to access personal information for the wrong reasons. As we see at present that employees of DOHA are not the most trustworthy people when it gets to opportunities to make money. The government now want to force everybody to have a smart phone, what about the citizens living in places where you can't even use a cell phone. The new idea comes at a price for every citizen and in a country where you can be killed for a smart phone, the criminals get away with your phone and your ID. This idea was not properly researched and seen in the context of the current Soth Africa.	Eric	Western Cape		retired

	2026-05-24 17:47:08	No I do not	All of the above	Centralised Cyber & Security Risk	South Africa's public sector has a fraught history with systemic data breaches and ransomware attacks. If your digital ID lapses under the 10-year rule, you are legally stripped of your active digital credential and forced to undergo a physical, standard in-person enrollment process all over again. This creates an unnecessary, cyclical bureaucratic loop that forces digitally active citizens back into notorious, real-world Home Affairs queues simply because they did not have a reason to visit a physical office for a decade. Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office. Forcing citizens to log formal changes within a rigid 30-day window for routine life adjustments like swapping an email address or moving apartments is highly impractical. Lowering a citizen's "Identity Assurance Level" serves as a hidden penalty, which could lead to sudden, frustrating rejections or delays when trying to execute everyday high-security actions like opening an account or authenticating an online transaction	Brian	KwaZulu-Natal

	2026-05-24 17:20:28	No I do not	All of the above	Centralised Cyber & Security Risk	First off most people do not have the luxury of a smartphone. Cyber crime is the easiest thing these days with tapping or using your phone card to process a purchase. The more we rely on IT and AI the easier it is to cut people off by being removed without your knowledge. You have to be with a banking institution for more than 10 years for the ID to hold. U have to inform central of your moving house within 30 days. This smacks of too much control and ability to remove a person for personal reasons. Crime and theft cannot even be stopped in SASSA so how will this be police. I again raise the issue that most of our population do not have smartphones with this capability and if stolen what then? U have to rely on an unknown person to stop ur ID and u end up at home affairs again. Renewing ID every 5 years creates queues of people and costs a fortune and time. We already do that with our drivers license which is also a valid form of ID. I do not agree with any of the proposed legislation.	Carol	KwaZulu-Natal		retired

	2026-05-24 16:39:23	No I do not	All of the above	Centralised Cyber & Security Risk	I vote NO against the draft Identification Regulations, 2026. I do NOT support the introduction of the dual-track digital identity system, including the MyMzansi smartphone application and the Digital Identity Credential. I am concerned about the risks this poses to privacy, personal security, and constitutional rights. Key reasons for my opposition include: • The proposed real-time data sharing with private entities and the creation of an interoperable network between state and corporate databases. • The introduction of an "Identity Assurance" scoring system that could penalise citizens for everyday life changes. • The device-locking of digital identity and the lack of clear, secure recovery processes in a country with high rates of phone theft. • The risk of function creep and potential for increased surveillance or exclusion. • The requirement for periodic physical verification, which may create new barriers instead of removing them. I believe these changes represent an unnecessary and risky overhaul of our national identity system that could compromise citizens' freedoms and security rather than genuinely improve service delivery. I request that my NO vote and these concerns be formally recorded as part of the public participation process.	Elize	Western Cape		
	2026-05-24 16:39:15	No I do not	All of the above	Centralised Cyber & Security Risk	I don't feel safe with this new regulation as all my bank accounts and transactions are open for the state to control. 					Submission Opposing the Draft Identification Regulations, 2026 I respectfully submit the following comments in opposition to the Draft Identification Regulations, 2026. While the stated objectives of improving identity verification, reducing fraud, and modernising public administration are understandable, the Draft Regulations raise profound constitutional, legal, administrative, and privacy concerns. In their current form, the Regulations appear to create an expansive national biometric identity and verification framework through subordinate legislation, without sufficient constitutional safeguards, Parliamentary scrutiny, or clear limitations on executive power. The Regulations therefore risk infringing multiple provisions of the Constitution of the Republic of South Africa, 1996, including sections 1(c), 9, 14, 33 and 36. 1. Infringement of the Right to Privacy (Section 14) Section 14 of the Constitution guarantees every person the right to privacy, including protection against unlawful intrusions into personal information and bodily integrity. The Draft Regulations contemplate extensive collection, storage, processing and sharing of highly sensitive personal information, including: facial biometrics, fingerprints, liveness detection, device-linked identity verification, mobile number verification, biometric deduplication, identity assurance scoring, and ongoing authentication processes. The Regulations further allow sharing of identity-related information with broadly defined “trusted entities”, including entities exercising “comparable public-law functions”, a phrase which is vague, open-ended, and susceptible to future expansion. Biometric information lies at the core of personal privacy and human dignity. Unlike passwords or account credentials, biometric identifiers are permanent and irreplaceable. The creation of a centralized biometric identity architecture therefore represents one of the most intrusive forms of state data processing possible. The Draft Regulations do not sufficiently justify why such sweeping collection and interoperability are necessary, nor do they establish sufficiently narrow safeguards against future expansion, misuse, profiling, or surveillance. 2. Failure to Satisfy Section 36 (Limitation of Rights) Under section 36 of the Constitution, constitutional rights may only be limited where the limitation is reasonable, justifiable, and proportionate in an open and democratic society. The Draft Regulations appear constitutionally vulnerable because they: centralize extensive biometric and identity information, permit broad data-sharing, grant wide discretionary powers to the executive, allow future expansion by directive or instruction, and establish potentially exclusionary digital identity mechanisms. The Regulations do not adequately demonstrate: why less restrictive alternatives would be insufficient, why centralized biometric verification is necessary, or why such extensive delegated powers are constitutionally proportionate. The breadth of the powers created substantially exceeds what would ordinarily be expected from subordinate legislation. 3. Excessive Delegation of Legislative Power The Regulations repeatedly empower the Minister or Director-General to determine substantive matters later through: directives, technical standards, Gazette notices, instructions, verification criteria, and accreditation frameworks. This raises serious constitutional concerns regarding excessive delegation of legislative authority. Major policy decisions concerning biometric governance, digital identity infrastructure, identity assurance systems, and population-register interoperability should properly be determined by Parliament through primary legislation, not by administrative instruction under regulations. The principle of legality and the constitutional doctrine of separation of powers require that significant intrusions into constitutional rights receive full Parliamentary scrutiny and democratic oversight. 4. Vagueness and Rule of Law Concerns (Section 1(c)) Section 1(c) of the Constitution establishes the supremacy of the Constitution and the rule of law. Several provisions of the Draft Regulations are impermissibly vague and overly broad, including references to: “comparable public-law functions”, “mandatory particulars”, “identity assurance levels”, and “other particulars as the Director-General may determine”. Citizens must be able to understand: what information may be collected, who may access it, how it may be used, and how long it may be retained. The current wording creates substantial uncertainty and risks arbitrary implementation. 5. Administrative Justice Concerns (Section 33) Section 33 guarantees lawful, reasonable and procedurally fair administrative action. The Draft Regulations appear to permit: suspension of credentials, revocation of identity verification status, fraud determinations, and identity assurance alterations, without sufficiently detailed procedural safeguards concerning: notice, hearings, appeals, independent review, or meaningful oversight mechanisms. Where digital identity systems increasingly determine access to banking, telecommunications, licensing, and public services, adverse administrative decisions may have severe consequences for affected individuals. The Regulations should therefore contain explicit procedural fairness protections. 6. Equality and Digital Exclusion (Section 9) The proposed framework appears heavily dependent upon: smartphones, stable mobile connectivity, biometric compatibility, digital literacy, and reliable internet access. This risks indirectly excluding or disadvantaging: rural communities, elderly persons, economically vulnerable individuals, persons with disabilities, and citizens with limited access to digital infrastructure. In a country with significant inequality and digital exclusion, any identity framework must be carefully designed to avoid indirect discrimination and unequal access to services. 7. POPIA and Data Protection Concerns Although the Draft Regulations reference compliance with the Protection of Personal Information Act (“POPIA”), such references alone do not resolve the constitutional concerns. The Regulations enable extensive biometric processing and inter-system data exchange which create significant risks of: function creep, mass profiling, centralized surveillance,

	2026-05-24 15:59:03	No I do not	All of the above	Centralised Cyber & Security Risk	What about the many people in the country who do not even have money to own a smart phone? Not to mention the issue of people losing their phones, phones breaking, and having phones stolen all the time!? Plus, if you upgrade your phone every two years, what happens then? But overall, this will make it much too easy as well for identity theft as phones can be hacked and the electronic system that controls these IDs can be hacked as well. Who would we trust to manage this system online and not take bribes to make changes to people’s information or shut them down in revenge so they cannot do anything or even prove who they are!? Combine this with the power of AI to hack and mess things up and it is all a disaster waiting to happen. Keep things as crucial as birth certificates, IDs, visas, passports, etc. analog!! At the very least there should still be the requirement for a physical card as well that confirms the digital one. That will at least make it harder to steal identities and shut someone’s whole life down with the click of a button - if you have to show the physical card proof in addition to the online one when making certain types of big transactions, voting, changing information, applying for passport and visas, etc.	Maritsa	Eastern Cape

	2026-05-24 15:53:13	No I do not	All of the above	Centralised Cyber & Security Risk	I disagree with the draft amendment of identification regulations (Digital ID). As the world around us gets more and more digital, having a digital ID seems like the next logical conclusion. But I disagree. No matter how secure it seems there is the increased risk of digital ID fraud. It also contravenes autonomy and control of the individual and moves that control closer to a centralised state control… of everything. It seems like the next logical step in making the world a better place. But we need to hold on and not push a narrative that is dangerously close to exploitation of individual rights. Don’t argue convenience over autonomy. Keep digital ID’s away	Lyall	Western Cape		business owner
	2026-05-24 15:51:42	No I do not	All of the above	Centralised Cyber & Security Risk	Many countries have ID cards etc . In South Africa your id card was one sure way of proving who you are the new system is going to be open to abuse should you mislay your phone or lose it . Its ridiculous changing something that's been working for years with no problem . I see many challenges. if this route is followed. The government should use its time sorting out other problems like electricity and water and the terrible state of some roads.	Tyran	Mpumalanga		retired

	2026-05-24 15:34:57	No I do not	All of the above	Centralised Cyber & Security Risk	To secure your data, the system relies on device binding—the technical process of cryptographically locking your digital identity token to one single mobile device running the MyMzansi application. If a device is compromised, or its private cryptographic key is suspected of being leaked, the credential must be immediately suspended or revoked. The Concern: Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office. 	2026-05-24 15:33:26	No I do not	All of the above	Centralised Cyber & Security Risk	While the bill concerns me as a whole, as an IT professional there are three which stand out: - Centralised security risk, especially as information security enters an extended period of vulnerability exposure and increased breach risk. - Interoperability doesn't just threaten the consumer's rights to privacy but also places a significant compliance load on SMEs when they are already struggling to stay afloat. - The difficulties in replacing such an ID when I have personally been mugged and pickpocketed several times and gone through a fair bit of administrative trouble because of it.	Zigmund	Western Cape		employed individual
	2026-05-24 15:33:15	No I do not	All of the above	Centralised Cyber & Security Risk	Digital ID systems pose serious threats to civil liberties and individual privacy that warrant careful resistance. Centralizing personal identity data into a single digital system creates a honeypot for hackers and malicious actors — a single breach could expose the financial, medical, and personal records of millions of citizens simultaneously. Beyond cybersecurity, these systems enable unprecedented government surveillance, allowing authorities to track citizens' movements, transactions, and behaviors in real time, effectively dismantling the reasonable expectation of privacy that underpins a free society. The risk of mission creep is significant: data collected for one stated purpose invariably gets repurposed for others, often without public consent or awareness. Digital ID also deepens social exclusion, as elderly, low-income, and rural populations who lack reliable internet access or digital literacy would be systematically marginalized from essential services. There is also the ever-present danger of function creep toward authoritarianism — tools built by democratic governments can be inherited and weaponized by less scrupulous successors. Finally, these systems are vulnerable to identity fraud at scale; if a physical ID is stolen, it can be replaced, but a compromised digital identity tied to biometric data is virtually impossible to reset. For all these reasons, the implementation of a mandatory digital ID system represents a disproportionate and dangerous trade-off between convenience and fundamental freedom. 	2026-05-24 15:05:19	No I do not	All of the above	Centralised Cyber & Security Risk	Hoe verveeld en uit voeling met die werklikheid moet staatsamptenare wees wat veronderstel is om die bevolking te dien? Nou wil hulle weet wanneer mense "wind laat", toilet toe gaan, of privaat tyd saam met hul lewensmaats deurbring. Terwyl misdaad, korrupsie, werkloosheid, swak dienslewering en infrastruktuur verval, word die publiek se privaatheid al hoe meer ingeperk. Daar is baie ernstiger sake wat dringend aandag verg as die implementering van digitale ID-stelsels wat reeds vol loopholes en veiligheidsrisiko's is. 'n Regering behoort sy burgers te beskerm en te dien — nie hulle elke beweging te monitor en beheer nie. How disconnected and bored must state officials be who are supposed to serve the people? Now they want to know every time a person passes wind, goes to the toilet, or shares private moments with their spouse. While crime, corruption, unemployment, failing service delivery, and collapsing infrastructure continue to grow, the public's privacy is being pushed aside. There are far more serious matters demanding urgent attention than introducing digital ID systems filled with loopholes and security risks. A government should protect and serve its citizens — not monitor and control every aspect of their private lives.	Catherina	Western Cape		retired

	2026-05-24 15:02:08	No I do not	All of the above	Centralised Cyber & Security Risk	Why does this need to be put on a phone? The poorer communities, the ones that have to schlep miles to a home affairs office, either don't have phones, change their phones often or somebody "democratically" removes it from them to become the new owner (aka it gets stolen). If you REALLY want to do this, rather put it online so that it can be accessed from a phone, tablet or computer from anywhere. That said, the expiry and lapsing of one's identity within one's country of birth is ludicrous. I can't even think of a single reason (good or bad) why this is even a talking point. If a person moves to a different country, fair but then the ID does not expire or lapse, it changes to the other country by the individual's choice. We have so many serious issues in our fantastic country that can benefit from the keen minds fussing over rubbish like this. Forget renaming streets, towns, dog licences, and half of the other petty nonsense and concentrate on issues, real issues: 1. Quality of living (because our country is dilapidated and starting to look like a squalor) 2. Education (for the future of our country) 3. Restoring the image of the Police (for respect, order and tourism) 4. Salaries of — (i) Police (to remove corruption) (ii) Teachers (the future of our country is in their hands) (iii) Nurses and Fire personnel (because it's the right thing to do) 5. Proper punishment directly related and equal to the crime that was committed, e.g.: (i) rape (the killing of a person's soul and mental state) — life without parole or, better yet, death by lethal injection) (ii) murder (the taking of another's life) — life without parole or, better yet, death by lethal injection (iii) discrimination (the belittling of another's social standing, self-belief, etc whether this is related to race, gender, faith, size, living conditions, etc) — 120 days of public service wearing luminescent overalls that declare they are discriminators doing public service as their punishment (iv) abusers (those who hurt others, bullies, forcers of authority) — prison for 30 years if hurting children, physically, emotionally or mentally, for hurting the elderly and animals, 20 years for harm to adults, verbal abusers should get 120 days public service wearing luminescent overalls that declare they are verbal abusers doing public service as their punishment) (v) thieves (those who take what does not belong to them without explicit permission) — dependent on the veracity of the theft: (a) of food, actual food to prevent starvation of self or family — public service (b) of goods such as from a person or a café — jail (c) of high-value items for the purposes of selling or redistributing (this includes b&e or hijacking) — prison (d) of money from other's accounts or through spamming, identity theft, cyber crimes — prison (vi) traffic violations — fines or, for repeat offenders, removal of the item they commit the offences with, for a period of time dependent on the offence 6. Removal of all traffic lights (robots) and replacing them with traffic circles. This will reduce the cost of electricity (savings which can be used for upgrading roads and streets) and reduce accidents. The savings can also be used to add a ton of traffic-calming items such as speed bumps and rumble strips. I could carry on and on but these are my thoughts. Why can't the powers that be work on making South Africa the force she used to be? The South Africa President Mandela envisaged? The one where our citizens were revered by the world? If they put all their energy into doing that, tourism will skyrocket and then they deserve the astronomical salaries instead of stealing it from their people by creating nonsense like this amendment? 	2026-05-24 14:10:58	No I do not	All of the above	Centralised Cyber & Security Risk	1. The South African government has no track record of keeping any data safe. In fact, most governments in the world don't. 2. With the proliferation of mobile phone theft, it's difficult enough to just do a SIM swap, let alone re-activate your digital ID on a new device. In fact, SIM swap processes are so weak (in spite of the RICA disaster) that that is exactly one of the exploitation opportunities for fraudsters. The same is likely to happen with digital ID transfer from a stolen device to a new one. 3. The every 5 year thing sounds unnecessary. Our current ID cards are valid for life. 4. Many countries in the world have encroached on peoples' right to freedom of speech, think the UK, Australia, Canada, not to mention lesser democratic countries. A digital ID will allow this government to do that too, and way too easily. Sorry, NO. 5. API access to all of this will require vault-like highest grade cyber security. South Africans are already constantly under attack from cyber fraudsters and fishing, etc etc. This would potentially put an even bigger bull's eye on our personal financial security. Not even the SA banks can keep their data away from fraudsters. (nor the ANC membership list) 6. Another huge obstacle every time one buys a new mobile device. Some people do that very regularly. 7. Next the IEC with their online voting proposal would get a leg up. Online voting is NOT a great idea. Online voting systems (Venezuela , USA and others) have been manipulated in previous elections. Free and fair elections mean paper ballots while showing ID, not online. 8. Grave additional risk to lives. The mobile device is already one's highest cyber risk item. If that device now holds a digital ID as well, thieves will be more and more inclined to not only steal your device, but kidnap you with it, torture possible, in order to access you bank accounts.	Leon	Western Cape		retired
	2026-05-24 14:09:32	No I do not	All of the above	Centralised Cyber & Security Risk	There's a reason why I don't do cellphone banking because it is more of a high risk with sensitive information. This is definitely the wrong approach to identity. Also, why should we continue to prove our identity, which will probably be at our own cost like a driver's licence? It's not like we can metamorphosize.	Greg	Western Cape

	2026-05-24 13:16:49	No I do not	All of the above	Centralised Cyber & Security Risk	South Africa's public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic "attack surface." If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. Although the regulations explicitly ban profiling, commercialisation, and open-ended intelligence gathering, this fluid exchange of live citizen data across corporate API channels raises red flags. Automating data synchronization loops between state databases and private financial/telecom corporate giants chips away at the wall separating public civic records from private commercial infrastructure.	Desmond	Western Cape		business owner
	2026-05-24 13:15:07	No I do not	All of the above	Centralised Cyber & Security Risk	The government is not equipped to carry out this task successfully.	Richard	Western Cape		self-employed
	2026-05-24 13:14:53	No I do not	All of the above	Centralised Cyber & Security Risk	I am not against using new technology where it is more efficient than existing systems. However, in the current age where the successful hacking of financial and other systems is increasing, I believe it would be sensible NOT to put all eggs in a single basket, but to allow a split between paper and electronic so that the one provides a check and a backup for the other. I would also like to see a pilot trial run of say 1000 people over 5 years to identify problem issues or glitches before it is rolled out to the masses, and we stand the risk of a total collapse. Having everything in a single big database is a great idea - not least for all the many crooks that seem to be lurking these days. One also wonders about whether this could be challenged through POPIA or even the Constitution? What guarantees are we being given that our personal information will be protected fully? And what compensation will we get if it isn't protected?	RONA	Eastern Cape		retired
	2026-05-24 13:14:44	No I do not	All of the above	Centralised Cyber & Security Risk	This is the first step to controlling every citizen and invasion of privacy of all. Also stealing mobile phones is rife in South Africa	Karen	Western Cape		self-employed

	2026-05-24 13:03:06	No I do not	All of the above	Centralised Cyber & Security Risk	Government systems have been hacked more often than I e had hot breakfasts. Services are rendered not by the most proficient, but by whoever has the most connections. On top of which, government still hasn't even made the new id card ubiquitous yet - and it won't until everyone can get one from a local establishment, like the banks program, except everywhere - I'd have to travel quite some distance to even get to a participating bank outlet in kzn. Typical of our government to try to do the next step when they can't even get the basics right.	Davyd	KwaZulu-Natal		employed individual

	2026-05-24 12:29:04	No I do not	All of the above	Centralised Cyber & Security Risk	I am writing as a concerned South African citizen to lodge a formal objection to the draft Amendment of Identification Regulations, 1998 published in Government Gazette No. 54610 on 4 May 2026. While I support the Department's stated goals of reducing identity fraud, improving service delivery, and modernising civic infrastructure under the "Home Affairs @ Home" and MyMzansi initiatives, the draft regulations contain multiple provisions that are deeply problematic from the perspectives of privacy, security, accessibility, practicality, and constitutional compliance. The digital identity credential is presented as "optional," yet the regulatory architecture creates strong coercive incentives, practical lock-ins, and long-term function creep that risk turning it into a de facto mandatory system. I respectfully request that the Department withdraw the draft in its current form or subject it to fundamental revision following broad public consultation, including public hearings. 1. Device Dependency and Cryptographic Binding Create Unacceptable Lockout Risks (Regulations 22(e), 42, and related definitions) The regulations require device binding – "the process of linking a digital identity credential to a specific mobile device through secure cryptographic means" – as a mandatory enrolment prerequisite (Reg 22(e)). The Director-General may refuse to issue or deliver a credential to any device that fails security standards determined by the DG (Reg 42). South Africa has one of the world's highest rates of smartphone theft and violent crime. There is no clear, user-friendly remote unbinding/re-binding process detailed in the draft for lost, stolen, or damaged phones. In practice, this could leave millions suddenly unable to access banking, social grants, healthcare verification, or government services even though their physical Smart ID card remains legally valid. This is not a minor inconvenience; it is a single point of catastrophic failure in a high-risk environment. 2. The 10-Year "Physical Queue Trap" Undermines the Digital Promise (Regulation 20(5)–(6)) A digital identity credential is valid for only five years and may be renewed remotely via facial biometric scan (Reg 20(1)–(4)). However, the credential completely lapses if the holder has not undergone "standard in-person enrolment" or in-person verification at an accredited trusted entity within the preceding 10 years (Reg 20(5)). The holder must then restart the entire process in person. This directly contradicts the "digital-first" rhetoric. It forces periodic physical re-enrolment for anyone who wishes to maintain a functional digital credential, creating exactly the queues and administrative burdens the Department claims to be eliminating. For elderly, disabled, rural, or low-income citizens who rely on the digital version for convenience, this is punitive. 3. New Mandatory 30-Day Notification Duty with Identity Assurance Level Penalties (Regulation 37) Every person must notify the Director-General of any permanent change to ordinary residence, postal address, mobile number, or email "within 30 days" (Reg 37(1)). Failure to do so "may affect the identity assurance level assigned to that credential" (Reg 37(8)). Lower assurance levels can trigger friction or outright blocks when dealing with banks, telcos, or other trusted entities. This imposes a new ongoing legal burden on ordinary citizens for routine life events. It also creates a chilling effect: the population register becomes a real-time surveillance database, and non-compliance (even inadvertent) can be weaponised through algorithmic downgrading of one's civic identity. 4. Real-Time Corporate Data Loops and "Verified Relationships" Enable Function Creep and Mass Surveillance (Regulation 38A) The regulations establish "Trusted Entities" (banks, telcos, social grant administrators, licensing bodies, etc.) that can enter data-sharing agreements. When a person interacts with such an entity, a "verified relationship" is recorded, and the Director-General may notify those entities in near real time of any updates to mandatory particulars (Reg 38A). While Regulation 44 prohibits commercialisation, profiling, or generalised searching, these safeguards are regulatory promises rather than hard technical or legislative barriers. Once the population register is wired directly into private-sector systems via APIs, the architecture for future mission creep is baked in. South Africa's history of state-corporate data partnerships and past major breaches at government departments makes this pipeline exceptionally dangerous. 5. Digital Exclusion, Cybersecurity Vulnerabilities, and Constitutional Violations • Exclusion: Despite Regulation 50's aspirational language, large numbers of South Africans (rural residents, the elderly, the very poor, and those without reliable data or smartphones) will be effectively disadvantaged or excluded from seamless service access. Physical cards remain valid, but the draft tilts the entire ecosystem toward the app. • Cybersecurity: A centralised biometric database + device-bound credentials + real-time API access multiplies attack surfaces. A single breach could compromise the foundational identity of millions. • Constitutional Rights: The scheme engages sections 10 (human dignity), 14 (privacy), 9 (equality), and 27/33 (access to social security and just administrative action) of the Constitution. The burden of proof lies on the Department to show that less invasive alternatives were considered and that the limitations are reasonable and justifiable under section 36. No such detailed socio-economic impact assessment or privacy impact assessment appears to have been published. 6. Lack of Adequate Safeguards and Public Participation The prohibitions in Regulation 44 are welcome on paper but lack independent oversight, mandatory breach-notification timelines to affected individuals (beyond the 24-hour report to the Department), or meaningful remedies for citizens harmed by system errors or overreach. The 30-day comment period is inadequate for a reform of this magnitude. Recommendations 1. Withdraw the draft and restart with a full Privacy Impact Assessment, Socio-Economic Impact Assessment, and independent cybersecurity audit. 2. Make digital credentials truly optional with no penalties to identity assurance levels or service access for non-users. 3. Remove or extend the 10-year in-person rule and provide clear, user-friendly device-recovery protocols. 4. Eliminate the mandatory 30-day notification duty or make it voluntary. 5. Limit data sharing to explicit, purpose-limited, user-consented transactions rather than automated "verified relationship" loops. 6. Conduct nationwide public hearings and extend the comment period to at least 90 days. 7. Prioritise hardening the existing physical Smart ID system and addressing current backlogs before layering on an unproven digital superstructure. The Department has an opportunity to build a world-class, rights-respecting identity system. The current draft does not achieve that balance. I urge you to heed these concerns and those of thousands of other citizens who have voiced similar objections via platforms such as Dear South Africa. I consent to this submission being published as part of the public record and am available for further engagement.	Sandra	KwaZulu-Natal		unemployed individual

	2026-05-24 11:23:40	No I do not	All of the above	Centralised Cyber & Security Risk	Digital services are simply not secure. Even if the overseeing entity supremely competent, the probability of a security breach must approach 100%, and the potential gains for an attacker of breaching security on a national digital identity system are so high as to make it an extremely high value target ... and since the overseeing entity will be a government that has proven to be a) almost entirely corrupt, and b) almost entirely devoid of competence, it WILL be breached, guaranteed, one way or another. I do not agree to this plan, and object in the strongest possible terms to its implementation.	Matthew	Gauteng

	2026-05-24 11:00:20	No I do not	All of the above	Centralised Cyber & Security Risk	Dear Sir/Madam The arrogance of Government just is astounding! 1.The top tier should walk around at ground level and witness the poverty and experience living at" bread level" and walk a bit in their shoes. The poverty stricken cannot afford SMART phones. Barely even middle class citizens can afford a SMART phone. 2.Citizens CARRY ALL THE RISK of electronic devices and pay all the fees and rates etc. not the banks, institutions and government who think that they are being SMART about managing administration etc. The majority of citizens are not tech savvy especially the illiterate, impaired and older citizens. 3.THIS IS DOWNRIGHT IRRESPONSIBLE of the government to expect that citizens should navigate this when they barely can survive/ afford and are not tech savvy. 4.Home Affairs should pull up their sleeves and do the monotonous work that so many clerks before them did and serve their citizens instead of passing the buck onto a technological entity. South Africa is a THIRD WORLD country not a FIRST WORLD country. 5.Technology is expensive and just like humans, is also unpredictable and can also be corrupted. 6.Government should put their efforts into fixing the basics first . Citizens have some basic rights too which, we see, is also being addressed by the Human Rights Commission, presently(municipalities who are failing citizens in a catastrophic manner): quality H20, support local agriculture in order to put food on the table for South Africans, healthcare, education, the list is endless. 7.Leave the fanciful thinking and get back to the root cause and get rid of the rot! Yours faithfully N Giesecke - McClughan	Nadja	Gauteng		unemployed individual

	2026-05-24 10:56:44	No I do not	All of the above	Centralised Cyber & Security Risk	These are my concerns and the reasons for them: The Interoperable Private Corporate Network: The state will establish real-time, bi-directional data pipelines with accredited "trusted entities" (like private banking giants and telecom networks). If you change your address at your bank, it will synchronise across the state register automatically in near real-time—blurring the line between public civic data and private corporate databases. The 'Identity Assurance' Scoring Loop: If you fail to formally report routine life updates (like moving to a new house or changing your email) within a strict 30-day window, the state will automatically drop your internal "Identity Assurance Level" (social credit score). This algorithmic tiering could cause sudden, frustrating transaction rejections when you try to open accounts or authenticate services. The Stolen Phone Lockdown: Your digital ID will be cryptographically locked to one specific smartphone device. Given South Africa's high rates of muggings and mobile theft, losing your device means your digital identity token is instantly frozen or revoked. The regulations are completely silent on a secure, remote path to restore your access, raising the threat of immediate administrative paralysis. The 10-Year Physical Queue Trap: Your digital ID will expire every 5 years. While app-based biometric renewal is permitted, the law dictates that if you do not have a physical, in-person touchpoint with a Home Affairs office or partner bank for 10 consecutive years, your credential completely lapses, and you must line up in person from scratch to re-prove who you are. The Blueprint for Function Creep: Centralising a dynamic repository of dynamic biometric signatures and tracking variables provides the perfect infrastructure for future state surveillance or a compliance-driven "social credit-style" exclusion system. 	2026-05-24 10:55:14	No I do not	All of the above	Centralised Cyber & Security Risk	South Africa is currently concerned with a high number of identity theft and home affairs and the government as a whole has failed to come up with a plan of how they are going to handle and crack down on this syndicate that has the potential to bring complete collapse of our beautiful country. The home affairs system as a whole is questionable, often being told that the system is “down”. What happens when someone hacks your phone? I mean the identity is tied to your entire life and assets. This is a complete disaster waiting to happen. Most South Africans cannot even read, how do you expect a nation with a 30% pass mark to navigate this whole system? Don’t get me started on our dysfunctional government. Time and time again the government has proved to South Africans that they are on their own. So, I am totally against this. 	2026-05-24 09:28:59	No I do not	All of the above	Centralised Cyber & Security Risk	Corporate Interoperability & Privacy Creep The regulations empower the Department to record a “Verified Relationship” between a citizen and an accredited private company, such as a bank or mobile network provider. If any core details are changed or verified in person by that business or Home Affairs, the system can automatically broadcast these updated particulars to every other private entity linked via that relationship in near real-time. The Concern: Although the regulations explicitly ban profiling, commercialisation, and open-ended intelligence gathering, this fluid exchange of live citizen data across corporate API channels raises red flags. Automating data synchronization loops between state databases and private financial/telecom corporate giants chips away at the wall separating public civic records from private commercial infrastructure. 2. Killswitch on device:The Concern: Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office. Lack of trust: latest bank reports show huge internal fraud issues and manipulation of what should be completely secure systems. How can anyone trust a cyber system that holds one’s core proof of identity under a government that has proved that corruption is their preferred modus operandi?	Judy	Gauteng		retired

	2026-05-24 09:15:38	No I do not	All of the above	Centralised Cyber & Security Risk	I do not support the proposed Digital Identity Credential system in its current form. While reducing fraud and improving efficiency are important goals, this framework raises serious concerns about privacy, personal freedom, exclusion, and state overreach. A system that centralises identity, banking access, healthcare, voting, travel, and employment into one digital platform creates enormous risk if abused, hacked, or mismanaged. Many South Africans also do not have reliable smartphones, stable internet access, or the financial means to stay digitally connected at all times. No citizen should lose access to essential rights and services because of technology failures, connectivity issues, or automated systems. I am also deeply concerned about real-time data synchronisation, profile-tiering, and rolling validation mechanisms, which could open the door to surveillance, discrimination, and loss of personal autonomy. Strong constitutional safeguards, transparency, independent oversight, and fully functional non-digital alternatives must exist before any system of this scale is implemented. Technology should serve the people — not place citizens in a position where their daily freedoms depend entirely on a centralised digital system controlled by the state.	MJ	Gauteng		retired

	2026-05-24 09:10:09	No I do not	All of the above	Centralised Cyber & Security Risk	Expanded National Cyber-Defences Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services.	marisa	Gauteng		self-employed

	2026-05-24 08:04:17	No I do not	All of the above	Centralised Cyber & Security Risk	Modernisation must not come at the expense of freedom! I vote NO to the draft Identification Regulations, 2026. Improving Home Affairs is necessary, but creating an overly centralised digital identity system is not the solution. These regulations increase the risks of surveillance, data breaches, exclusion, and technological dependency in a country already facing high levels of cybercrime, inequality, and phone theft. No citizen should risk exclusion from essential services because of a stolen phone, an algorithmic downgrade, or failure to update personal details within an arbitrary timeframe. The regulations also create infrastructure that could easily expand beyond identity verification into broader monitoring and control of citizens' lives. South Africa's history should make us extremely cautious about systems that consolidate this much power over identity and access. The Minister should focus instead on fixing the actual inefficiencies within Home Affairs such as reducing corruption, employing and training more staff, improving system reliability, strengthening cybersecurity, expanding physical service centres, and improving service delivery in rural and under-served communities. Efficiency is important, but constitutional rights, privacy, autonomy, and human dignity matter more.	Nezeka	KwaZulu-Natal		employed individual

	2026-05-24 06:56:12	No I do not	All of the above	Centralised Cyber & Security Risk	While I support the principle of modernising identity management to improve service delivery and reduce fraud, I express cautious opposition to the current draft regulations in their present form. South Africa faces significant challenges with identity fraud, grant fraud, and inefficient service delivery. A well-designed digital identity solution could offer greater convenience for citizens, especially through remote verification for banking, SASSA grants, healthcare, and other services. However, given the track record of state institutions, the risks of the proposed centralised digital ID system currently outweigh the potential benefits. My key concerns are as follows: Privacy and Data Protection Risks The proposal links a digital credential to the central population register and allows sharing with “trusted entities.” In a country with repeated data breaches and weak enforcement of POPIA, this creates a high risk of misuse, surveillance, or unauthorised access. Biometric data, once compromised, cannot be replaced. Cybersecurity Vulnerabilities A national digital ID becomes a single high-value target for hackers, both local and foreign. Past government IT failures and breaches raise serious doubts about the system’s ability to protect citizens’ sensitive information. Risk of Exclusion Mandatory in-person biometric enrolment and reliance on smartphones may exclude elderly citizens, rural communities, low-income households, and those with limited digital literacy or access to reliable internet/data. This could worsen inequality rather than promote inclusion. Governance and Mission Creep In light of South Africa’s governance challenges, including corruption concerns and cadre deployment, there is a real danger that the system could evolve from a voluntary convenience tool into a de facto requirement for essential services. Stronger safeguards are needed to prevent function creep and political misuse. Implementation Capacity The Department of Home Affairs has struggled with basic service delivery for years. A complex national digital rollout risks costly failures, delays, and further erosion of public trust. Recommendations: Make the Digital ID truly voluntary, with the physical Smart ID card remaining fully equivalent for all services indefinitely. Adopt privacy-by-design principles, including user-controlled data sharing and decentralised verification where possible. Introduce independent oversight, regular third-party security audits, and mandatory public reporting on data breaches. Conduct and publish a detailed socio-economic impact assessment, with particular focus on exclusion risks. Extend the public comment period and commit to meaningful revisions based on civil society and public input. I urge the Department not to rush implementation. South Africa deserves an identity system that empowers citizens without compromising their rights or safety. I cannot support the proposal as currently drafted and recommend that it be substantially revised or withdrawn until the above concerns are adequately addressed. I respectfully request acknowledgment of receipt of these comments.	Jan	Limpopo		retired

	2026-05-24 06:32:14	No I do not	All of the above	Centralised Cyber & Security Risk	Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic “soft discrimination” —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services.	Andries JJ	Gauteng		retired

	2026-05-24 06:27:57	No I do not	All of the above	Centralised Cyber & Security Risk	The history of governmental electronic systems has proven to be insufficient and poorly developed time and time again. Corrupt tenders to inexperienced software developers; poorly planned or executed fro t or back ends; terrible bugs or insufficient cradle-grave planning; early obsolescence or incompatible. There is no way that we promote smartphone first reliance for proof of identity as a nation. Apart from these concerns - this is highly discriminatory as there is unequal access to power and quality of devices - this imposes further complex requirements of OS and compatibility. In short I wholly oppose the proposal to move to a digital system of identification and abandon card based systems. The risks are high, the chance of making individuals vulnerable to predation or exclusion are increased, the possibility of additional costs, inconvenience and disruption all are hugely inflated. Please don’t pursue this foolish and short term plan which increased the power of corporations and private institutions over the the lives of ordinary South African citizens even further.	Tyson	Gauteng		employed individual
	2026-05-24 06:27:21	No I do not	All of the above	Centralised Cyber & Security Risk	I am I concerned that one’s rights as an individual will be compromised particularly in this digital age where everything including one’s assets but also one’s ability to operate freely and meaningfully in society.	Gavin	Gauteng		self-employed
	2026-05-24 06:26:59	No I do not	All of the above	Centralised Cyber & Security Risk	I'm appalled that they have the cheek to even suggest this. I don't want my info out there for anyone to check on. My business is my business!	Jennifer	KwaZulu-Natal		retired

	2026-05-24 06:26:47	No I do not	All of the above	Centralised Cyber & Security Risk	The current ID card is adequate provided the Home Affairs department isn't corrupt, with officials handing out ID cards to non-citizens. We do mot need to follow totalitarian states like China, where they operate a social credit system unfer which, through surveillance and digital systems such as this one proposed for South Africa, democracy cannot be possible. When the state has this much control, which will be exacerbated should they impose a central bank digital currency, there can no longer be freedom of expression, association, movement and of the press. Everyone is monitored and fearful of being cancelled by an all-powerful state. This is Orwell's dystopian Big Brother state. Finally, these controls are intended to be imposed via your smartphone. There can be no legal requirement for even wealthy people to own a smartphone, let alone the poor and unemployed. It is disgraceful that a DA minister is overseeing a law which probably has its origins in the corridors of the anti-human globalist World Economic Forum.	Clifford	Eastern Cape		retired

	2026-05-24 06:21:43	No I do not	All of the above	Centralised Cyber & Security Risk	I understand the need for modernisation, but relying only on a digital ID in South Africa raises serious concerns. Crime and phone theft are extremely common, and if your phone is stolen, broken, upgraded, or the battery dies during loadshedding, you could suddenly be left without access to your identification. Not everyone can afford smartphones, constant data, or replacement devices either. A physical ID should still remain available as a secure and accessible backup option for all citizens.	Louise	Western Cape		employed individual
	2026-05-24 06:21:12	No I do not	All of the above	Centralised Cyber & Security Risk	Every South African has the right to freedom, especially from oppression. The South African government is elected by the citizens. This does not give them a dictatorship over those who elected them. Neither were they elected by every citizen of South Africa. This digital ID is wrong on so many levels. Let me give you a example, this in my opinion is probably the most important one of all. I don't have to identify myself online to everyone in the world all at once while I'm in a certain location in South Africa. I think that the digital ID will be a live location even if your live location on your phone is switched off. This is my opinion and I believe it whole heartedly. No person on earth is ever totally honest, have pure motives or have you or your interest at heart ever. The South African government is corrupt period. It's a fact and we all know it. Nobody has the right to take away your freedom or rights by forcing you to do anything especially when the entire country know that they are corrupt. Not everyone voted for them. 	2026-05-24 00:44:40	No I do not	All of the above	Centralised Cyber & Security Risk	Above all, the security risk is most concerning. Phones can be hacked without being stolen. The speed at which AI is developing and the ease with which programmes can be coded makes having your entire identity, and thus access to finances, accessible via a smart device very problematic. There are too many users who will be vulnerable to digital/cyber risks to enforce this as a "fool-proof" plan.	Rene	Eastern Cape		self-employed
	2026-05-24 00:37:52	No I do not	All of the above	Centralised Cyber & Security Risk	A digitalized ID system is susceptible to being accessed (legally or not) by parties either than the ones the owners of information intend for their information to be accessed by. 2. And the dynamics involving the updating of ones information under a digitalized system are just too plenty and will most certainly work to the disadvantage of the citizens. 3. The real intention for wanting to digitalise the ID system is not the betterment of the citizen's access and use of amenities, but the real intention can never be disclosed to the public until people realises it themselves and by then it would be too late, it is sold to the people as a mechanism for ease of use but in reality it is intended to have people living in prison while in their homes, so its bringing prison to you wither than having you being taken to prison and the minister of the home affairs and others know exactly that, even thought they are selling it as something that is to help	Mlungisi	Gauteng		unemployed individual

	2026-05-23 22:13:22	No I do not	All of the above	Centralised Cyber & Security Risk	1. Software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates. 2. Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. 3.Severe Device Dependency and Paralysing Lockouts will become the order of the day 4. The distribution of live data updates across multiple third-party commercial servers inherently increases the risk of data leaks, government and corporate surveillance. 5. South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination"—including longer processing delays, reduced human customer support, and slower access to essential public utilities and services.	Amanda	Western Cape		self-employed
	2026-05-23 22:12:10	No I do not	All of the above	Centralised Cyber & Security Risk	I have little to no faith in the government of South Africa's ability to guarantee cyber security in this regard, since technology based crime is currently flourishing in the country - that is not even taking into account all the corruption in government service which exists and seemingly goes unchecked . This is an area which i will not readily entrust to anyone to effectively safeguard, since all of this 'tracking' information is in essence one's very life blood. I am confident that government institutions who cannot even get a handle on current cyber crime challenges faced by South Africans on a daily basis, will present grave, if not insurmountable challenges. Although this may not necessarily stem from a lack of knowledge and know-how to combat the scourge of cyber crime, it certainly leaves the door wide open for mis-use and crime due to a major lack of accountability and a huge lack of motivation by government officials to follow proper protocols in many aspects. In short, I do not trust the government to do what is required at the laid down standards and maintain safety protocols.	Jo-Ann	Western Cape		self-employed

	2026-05-23 21:42:12	No I do not	All of the above	Centralised Cyber & Security Risk	We are not so naive as to think that government will get this right when there is no accountability for breaches, inefficiency and incompetence by government officials, let alone criminals hacking into systems and stealing smart phones. What about the elderly and those in rural areas who do not have access to the internet? Is it now government policy to discriminate against those who are not tech savvy or who cannot afford a smart phone? One is registered at birth, then applies for an Identity Document when you turn 16. Every 16 year old will think that it is their right to have a smart phone so that they can be identified, whether their parents/ guardians can afford this or not. Identity documents are required to write matric examinations. Having a smart phone in an examination room is an open invitation for both theft of these devices and cheating. 	2026-05-23 21:28:41	No I do not	All of the above	Centralised Cyber & Security Risk	The government should rather concentrate on fixing the basics that they failed all of us in. Start by registration of all births - how many unregistered babies and humans are there in our country? Then, the inability to issues a correct ID/identification document or card - how many South Africans are battling for years to obtain an ID without success? How many scholars are prevented to write their matric exams because they could not obtain an ID? Same goes to say about employment - no ID, no job! Grants the same: No ID - no grant! No ID - no SASSA, no child support! Not even the R370 'Covid' grant is available to give hope or support to a person without an ID! The ID documents that are full of mistakes, are even used just the way it is in fear of having to be without it! It is such a shame and a disgrace and now this ludicrous idea about ID on a device!! Ridiculous! YOU CANNOT BE TRUSTED! YOU ARE FAILING YOUR COUNTRY AS A GOVERNMENT in every thinkable way. Focus on the basics first.	Margaret(snr)	KwaZulu-Natal		self-employed

	2026-05-23 19:17:07	No I do not	All of the above	Centralised Cyber & Security Risk	Various departments of the government have proven that they are incapable of securing data - especially given the broad scope of this law and the fact that data will be synchronised with large businesses, the number of touch points and integrations almost certainly means things will go wrong. Social scoring mechanisms are against basic privacy rights (eg automated decision making) particularly where an individual will have absolutely no choice in the matter. While I am broadly in favour of digital ids, in the current format, this law is not ethical, and I'm pretty sure it is unconstitutional too.	Russell	Gauteng		employed individual

	2026-05-23 19:12:37	No I do not	All of the above	Centralised Cyber & Security Risk	Vulnerability: While leapfrogging older tech sounds ambitious, critics point out that cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands the nation's "attack surface." Consolidating civil registry access into a centralised live network creates an incredibly high-risk target for global hacking syndicates.	Ena	Western Cape		retired
	2026-05-23 19:11:21	No I do not	All of the above	Centralised Cyber & Security Risk	I prefer the physical ID documents due to the ever-increasing hacking of digital information and forms of ID world-wide. My current ID can well be hacked by accessing the Population Register but it contains no useful biometric information. The new proposed system will contain everything about me. There is also no way the government can guarantee that my ID and full biometric information won't have the potential to be hacked or shared by bad actors.	Andre	Gauteng		self-employed

	2026-05-23 18:17:22	No I do not	All of the above	Centralised Cyber & Security Risk	The issue of theft and cyber crime in SA is well known - as a first point. Secondly - the centralised system could very easily stop working for any number of reasons. So once again we will suffer through no fault of our own. Thirdly - this is “big brother “ tightening the noose around our neck. Soon we will be told that the best alternative will be to accept the digital identity as a mark on our hand or forehead. I DO NOT AGREE AT ALL. And the Minister is evil to be allowing such a system to be accepted - when we know it will cause pain and chaos to the long suffering man on the street. It’s EVIL. 	2026-05-23 18:05:33	No I do not	All of the above	Centralised Cyber & Security Risk	The choices above don't cover the issues with Digital ID. While the DHA is promoting the convenience and security it supposedly brings, it's a smoke screen designed to hide the actual agenda. Worldwide society has become dependant on technology and smart devices and so on. Water, electricity is prepaid. Your phone is prepaid. Your digital TV service and your internet. It's all supposed to make life easier and convenient, but it's meant to control our lives, keep us contained and under watch. If any or all of those networks go down or blocked, what then? You're screwed. If you fall behind on bills, they cut your water down to a trickle or they deduct money every time you recharge. And there's nothing you can do about it. You accept it, because your lives are dependant on it. This digital ID now, they say it's safer, more secure, less prone to hacks and fraud, etc. To a degree it is yes but the cons will outweigh any of the pros, until such time they can weaponise it against us. They say that the ID is linked to a specific phone. Why is that? So that they can track your movements, see where you go and what you spend money on. Yes, they'll be able to see that because all the tills at shops are also networked and I won't be surprised if soon the government decides to "regulate" the systems "to prevent fraud or money laundering". then when you use your bank card or phone to pay for your stuff, then they know exactly where you went, what you did, when you went home, what time you bath and cook, and what time you go to sleep. All that make possible through these digital devices. Soon enough there'll be other things put in place to monitor you. "To prevent crime and road dangers" you'll need to punch in a code or swipe your digital ID card before you can start your car. All in the name of safety and convenience. Right? Before long, the concept of "15 minute cities" will be pushed. The thinking and desing about that? for convenience and safety, it'll be touted as being so convenient because you won't need to travel more than 15 km from home. One day you're driving down a highway or main road when your car suddenly stops dead and you can't get it started no matter what. That's when you find out that you crossed a digital border zone. You can only move around your so-called 15 min digital neighbourhood. How is that even possible? All thanks to all the digital conveniences that you and so many other ignorant fools signed up for. 	2026-05-23 17:18:26	No I do not	All of the above	Centralised Cyber & Security Risk	I do not support the draft Digital ID framework in its current form. While modernisation and improved service delivery are important, the proposed regulations create serious concerns regarding cybersecurity, privacy, state overreach, and digital exclusion. A centralised identity system linked across government and private institutions creates a high-risk target for cybercrime and data breaches. Citizens should not be exposed to loss of access to essential services due to device theft, technical failures, or automated identity assurance scoring. The framework also requires far stronger safeguards regarding biometric data protection, independent oversight, transparency, appeal mechanisms, and limitations on data sharing between the state and private entities. No South African should be disadvantaged because they lack smartphone access, stable connectivity, or the ability to comply with complex digital requirements. Constitutional rights, privacy, and human dignity must remain the priority before implementation.	Naomi	Gauteng		self-employed
	2026-05-23 17:18:17	No I do not	All of the above	Centralised Cyber & Security Risk	is the government going to issue a smartphone to every citizen? and lessons on how to use them? and electricity to charge them? get a grip man. is the government going to stop crime to prevent theft of all these suddenly DEMANDED smartphones? is the government going to ask their mates in the chinese government to provide this spyware? is the government going to track what elese people do on their cellhones - from banking to wanking to mapping to crapping to period apps? is the government going to track dissenting voices who criticise their graft ad corruption and overreach and utter incompetence???? STOP STICKING YOUR INCOMPETENT BEAKS IN MY BUSINESS!!! THE GOVERNMENT CAN'T EVEN DO GOVERNING - GO GET THAT RIGHT FIRST.	Leona	Gauteng

	2026-05-23 16:57:29	No I do not	All of the above	Centralised Cyber & Security Risk	Cybersecurity Readiness & “Leapfrogging” Vulnerabilities While the draft regulations introduce highly sophisticated cryptographic measures, including asymmetric elliptic-curve cryptography and encrypted database storage, they create an unprecedentedly dense web of database interfaces. This leapfrogges global legacy models by connecting the state’s population register directly to corporate networks via secure APIs. The Concern: South Africa’s public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic “attack surface.” If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. 	2026-05-23 16:46:56	No I do not	All of the above	Centralised Cyber & Security Risk	1. It Creates a Dangerous Financial and Identity "Kill-Switch" - The regulations give the Director-General the power to suspend a person’s digital ID for up to a year for routine administrative issues, like waiting to verify a new phone number. In a world where digital IDs are required to access banks, cellular networks, and government services, locking someone out of their app creates an instant "economic kill-switch." A free citizen should never have their entire legal existence turned off by an official at the click of a button. 2. It Blurs the Line Between Government and Private Corporations - The law sets up "Verified Relationships" where private companies (like banks and telcos) will link directly to the government's population register. If you change your details at a private company, it updates with the state in near real-time. This permanently blurs the line between public civic data and corporate networks. Civic identity is a fundamental right, not something that should be managed via automated data loops with corporate entities. 3. Immediate Paralysis from Phone Theft (Device Binding) - The law uses "device binding" to lock your legal identity to one specific smartphone or tablet. South Africa has incredibly high rates of mobile phone theft. If a citizen loses their phone, their legal token is instantly compromised or frozen. The draft text does not provide a secure, instant, remote way to fix this, meaning a crime victim could face immediate financial and social paralysis because they cannot prove who they are. 4. Punishing Citizens with Algorithmic Profiling (The 30-Day Rule) - The text demands that citizens report everyday life updates—like moving houses or changing an email address—within 30 days. If someone fails to do this, the law states it can lower their "Identity Assurance Level". This opens the door for algorithmic profiling, where a computer score decides how trustworthy a human being is. A lower score could mean sudden transaction rejections when trying to access secure services online, punishing people for simply forgetting to report a change of address. 5. Unfair In-Person Rules (The 10-Year Queue Trap) - The digital ID expires every 5 years. While you can renew it on the app using a facial scan , the rules state that if you go 10 years without a physical, in-person touchpoint at a Home Affairs office or a partner bank, your ID completely lapses. You are then forced to go stand in a physical queue from scratch just to prove you exist. This defeats the purpose of digital convenience and punishes law-abiding citizens who haven't needed to visit a government building in a decade. 6. The Danger of "Function Creep" and State Surveillance - Centralizing biometric registries (like live facial templates and tracking pipelines) creates an infrastructure that can easily be weaponized. Over time, governments change, and systems built for "convenience" are historically repurposed for authoritarian behavioral tracking, surveillance, and controlling where citizens can go or what they can buy. 7. Deepening Digital Exclusion - Millions of South Africans do not own expensive smartphones, do not have reliable internet, or live in rural areas with poor connectivity. While the draft notes that it shouldn't "unreasonably exclude" people , the reality of building a society around a smartphone app (MyMzansi) naturally creates two tiers of citizens: those with digital power, and those left behind in crumbling offline systems. ConclusionA free society requires that the state serves the people, not that the state monitors, scores, and cryptographically binds the people to digital leashes. Because these regulations threaten basic privacy, risk total administrative paralysis for crime victims, and build the tools for ultimate state control, I stand in total opposition to this draft legislation. 	2026-05-23 16:35:43	No I do not	All of the above	Centralised Cyber & Security Risk	Regarding: Public Comment on the Draft Digital Identity Regulations 1. The Smartphone Mandate: A Violation of Freedom of Choice By forcing a digital identity framework that relies on smartphone architecture, biometric "liveness" tracking, and device binding, this bill creates an unconstitutional barrier to civic life. • Every citizen has the fundamental right to choose how they navigate society, including the right to remain completely analog. • Coercing the adoption of private, corporate smart technology as a prerequisite for full civic participation creates an economic gatekeeper. It reduces anyone who chooses not to own a smartphone to second-class citizenship. 2. Destruction of Freedom of Movement and Domicile Section 21 of the Bill of Rights guarantees every citizen the right to freedom of movement and choice of residence without state interference. • Binding an individual's identity to a live, network-connected tracking device creates an omnipresent surveillance state. • Free citizens have the right to move across this republic and establish a domicile without reporting their precise whereabouts, coordinates, or digital breadcrumbs to a centralized population register. The explicit aim of this legislation is to monitor, track, and trace people like cattle. It is degrading, invasive, and inherently inhumane. 3. A Return to "Apartheid-Like" State Sovereignty This legislation operates on a dangerous premise: that the Government or Parliament has absolute sovereignty over constitutional rights. This is a direct reversion to "apartheid-like" tactics, mimicking the tyrannical pass laws of the past where the state positions itself as the supreme controller of human movement and utility. In a constitutional democracy, human rights are inherent and inviolable. The state exists to protect them, not to conditionalize them through digital apps and biometric gates. Conclusion Identity is a human right, not a digital utility to be bound, tracked, and revoked at the whim of an algorithm. Because this bill violates technological choice, destroys the right to anonymous movement, and introduces degrading methods of human tracking, I demand that these regulations be entirely withdrawn. 	2026-05-23 16:18:59	No I do not	All of the above	Centralised Cyber & Security Risk	While modernisation is welcome, the draft regulations introduce expansive risks and administrative penalties that demand much tighter constitutional safeguards, including the following core arguments: Expanded National Cyber-Defences Vulnerability: ~ Cutting-edge software is only as secure as the human guardrails managing it. Given the South African public sector's history of systemic data breaches, ransomware disruptions, and weak IT controls, connecting the authoritative population register directly to corporate servers via live APIs vastly expands vulnerability through the nation's "attack surface." Consolidating a civil registry access into a centralised live network creates an incredibly high-risk target for local and global hacking syndicates. The 10-Year Bureaucratic Queue Trap: Forcing an essential civil right like a national identity credential to automatically "lapse" triggers deep administrative anxiety. Under Regulation 20(5), if a citizen remains entirely active digitally for a decade but does not happen to have a physical, in-person touchpoint with a Home Affairs branch or an accredited bank, their legal credential is wiped out. This rule unfairly penalizes compliant, digitally active citizens by forcing them back into physical queues to re-prove their identity from scratch. Severe Device Dependency and Paralysing Lockouts: South Africa suffers from exceptionally high rates of mobile device theft, muggings, and phone damage. By legally tying an individual's legal identity token exclusively to a single smartphone, a lost or stolen device instantly locks that citizen out of their civic and banking lives. Because the draft regulations fail to detail a transparent, secure, and automated remote path to unbind an old phone and verify a new one, losing a device could mean immediate economic and administrative paralysis. Corporate Privacy Creep: Automating "near real-time" data synchronisation loops with banking and telecommunications giants chips away at the vital boundary that should separate sovereign public civic registries from private, profit-driven corporate infrastructure. Despite statutory promises, distributing live data updates across multiple third-party commercial servers inherently increases the risk of data leaks and corporate surveillance. The Deepening Digital Divide: Despite textual promises that implementation will not unreasonably exclude anyone, the real-world trajectory of modern infrastructure is that state and corporate platforms rapidly optimise for digital pathways to cut operational costs. Over time, poor, elderly, or rural South Africans who rely exclusively on physical documents run a severe risk of facing systemic "soft discrimination" —including longer processing delays, reduced human customer support, and slower access to essential public utilities and services. 	2026-05-23 16:17:18	No I do not	All of the above	Centralised Cyber & Security Risk	South Africa's public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic "attack surface." If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. If your digital ID lapses under the 10-year rule, you are legally stripped of your active digital credential and forced to undergo a physical, standard in-person enrollment process all over again. This creates an unnecessary, cyclical bureaucratic loop that forces digitally active citizens back into notorious, real-world Home Affairs queues simply because they did not have a reason to visit a physical office for a decade. Smartphones are lost, broken, or stolen daily across South Africa. The draft regulations fail to outline a transparent, secure, and user-friendly remote protocol for citizens to quickly unbind an old device and re-verify a new one. Without clear remote recovery pathways, losing a phone could mean instant, crippling exclusion from your legal identity and banking access until you can get to a physical state office. Although the regulations explicitly ban profiling, commercialisation, and open-ended intelligence gathering, this fluid exchange of live citizen data across corporate API channels raises red flags. Automating data synchronization loops between state databases and private financial/telecom corporate giants chips away at the wall separating public civic records from private commercial infrastructure. Forcing citizens to log formal changes within a rigid 30-day window for routine life adjustments like swapping an email address or moving apartments is highly impractical. Lowering a citizen's "Identity Assurance Level" serves as a hidden penalty, which could lead to sudden, frustrating rejections or delays when trying to execute everyday high-security actions like opening an account or authenticating an online transaction. 	2026-05-23 13:23:31	No I do not	All of the above	Centralised Cyber & Security Risk	Every government electronic system I have had to deal with has been buggy and frequently non-functional. The security risks related to that are enormous. The potential for identity theft escalate, especially with the system being based on smart phones which the elderly with and which are frequently stolen. The potential for political parties, especially an oppressive government, to use the system to control and manipulate the population is extremely alarming. It is opening the door to social credit ratings and that is the road to terrible oppression. Some things are better done in an analogue manner. This proposal is altogether a bad idea. 	2026-05-23 13:13:42	No I do not	All of the above	Centralised Cyber & Security Risk	What has happened to the POPI Act then? And if one loses one's smart phone how is one able to link back onto the app - this seems not to have been thought out properly. This is basically trying to keep tabs on all it's citizens in a truly frightening way. The same as they want to control all religions in South Africa. We were supposed to have one of the best constitutions in the world but what has become of it. If the public don't wake up, we will become either a totalitarian or a communist state. I know we are allies with China and Russia but to copy their politics is reprehensible. And also, how about the thousand - no - millions of people living in inaccessible towns or rural villages - how will this affect them or will they become non persons. The Minister of Homeland Affairs should concentrate of getting one thing done at a time and the best way is to start of with getting SASSA up and running PROPERLY which it is not doing now even with all this modernity. People stand in long queues all day to be aided by a consultant, elderly, sick people and if they don't get to see a consultant that day, have to come back again. Get that right firstly and then take another step forward.	Dianne	Western Cape		retired

	2026-05-23 13:08:07	No I do not	All of the above	Centralised Cyber & Security Risk	South Africa’s public sector has a fraught history with systemic data breaches and ransomware attacks. Creating an all-inclusive digital identity register that links civil data directly to private entities dramatically expands the systemic “attack surface.” If hackers compromise a central repository, the potential for automated, large-scale identity theft escalates significantly. Forcing citizens to log formal changes within a rigid 30-day window for routine life adjustments like swapping an email address or moving apartments is highly impractical. Lowering a citizen’s “Identity Assurance Level” serves as a hidden penalty, which could lead to sudden, frustrating rejections or delays when trying to execute everyday high-security actions like opening an account or authenticating an online transaction.	Amanda	Western Cape		
	2026-05-23 13:08:06	No I do not	All of the above	Centralised Cyber & Security Risk	If I wanted to live in a Police State I would have gone to live in Russia or similar country. This is just another way that the ANC Government wants to control our lives and the sooner they can be voted out of government the better for all South Africans. Wake up South Africa and do your thing at the local and national Elections!	Richard	KwaZulu-Natal		retired

	2026-05-23 13:05:42	No I do not	All of the above	Centralised Cyber & Security Risk	I strongly object to the proposed Identification Regulations. Mandating a digital identity system via the MyMzansi app risks violating Sections 14 (Privacy) and 36 (Limitation of Rights) of the Constitution. Centralizing biometric data like facial scans and fingerprints in a single population register creates a high-value target for cyberattacks and mass surveillance. Furthermore, the broad definition of 'trusted entities' allowing data sharing with private banks and telecoms, coupled with mandatory device binding, erodes the right to anonymity and creates significant risks of function creep. Without ironclad, independent judicial oversight, this system prioritizes state efficiency over the fundamental right to personal security and privacy.	Eugene	Western Cape		self-employed

					I support efforts to modernise Home Affairs and improve service delivery, but I am deeply concerned about several aspects of the draft Identification Regulations, 2026. A digital identity system may offer convenience, but convenience cannot come at the expense of constitutional rights, privacy, accessibility, accountability, and due process. My concerns include: • The creation of real-time data-sharing pipelines between government and private corporations such as banks and telecom providers. South Africans deserve clear legal safeguards around consent, data minimisation, and protection against misuse or breaches. • The regulations must explicitly comply with POPIA and constitutional privacy protections, including clear limitations on how personal and biometric information may be collected, stored, shared, and retained. • The proposed “Identity Assurance Level” system appears to introduce an algorithmic scoring mechanism that could negatively affect a person’s ability to access services if routine updates are not completed within strict deadlines. Administrative oversights should not result in exclusion from essential services. • Any algorithms or automated decision-making systems used by the state must be subject to transparent independent auditing. Citizens must have the right to understand, challenge, and appeal decisions that affect their legal identity or access to services. • South Africa has already experienced major data leaks, cyberattacks, and ransomware incidents affecting both public and private institutions. Before implementing a highly centralised identity system, government must demonstrate that it has the cybersecurity capacity, infrastructure, and oversight necessary to protect citizens’ most sensitive information. • Centralising biometric information creates irreversible risks. If a password is stolen it can be changed, but if biometric data is compromised, citizens cannot simply replace their fingerprints or facial identity. The regulations do not adequately address this concern. • The regulations do not adequately address the realities of South Africa’s high levels of phone theft, SIM-swap fraud, and digital inequality. A person should never lose practical access to their identity, banking, employment, or public services because a device is stolen, hacked, broken, or unaffordable to replace. • There must be guaranteed rapid recovery procedures for victims of phone theft, SIM-swap fraud, identity fraud, or technical lockouts, including secure offline alternatives and immediate access to emergency support. • Citizens should retain the right to fully opt out of digital identity systems and continue using physical identity documentation without penalty, discrimination, or reduced access to services. • The requirement for periodic in-person verification undermines the promise of digital convenience while potentially creating future administrative bottlenecks and exclusion for vulnerable communities, rural residents, elderly citizens, and people with disabilities. • There must be clear liability rules if citizens suffer financial loss, exclusion, reputational harm, or administrative harm due to data breaches, technical failures, inaccurate information, or system malfunctions. Accountability cannot simply be transferred onto ordinary citizens. • Strong penalties must exist for abuse, negligent handling, unlawful sharing, or commercial exploitation of personal data by both state institutions and private-sector partners. • Government must provide explicit guarantees that no citizen will lose access to voting rights, healthcare, social grants, banking services, employment opportunities, or other essential services because of technical failures, scoring systems, device loss, connectivity problems, or administrative delays. • Given the scale and long-term implications of these regulations, implementation should not proceed without extensive independent parliamentary review, public consultation, and meaningful oversight from civil society organisations, constitutional experts, cybersecurity specialists, and digital rights advocates.			
	2026-05-23 12:54:56	No I do not	All of the above	Centralised Cyber & Security Risk	Modernisation should strengthen citizens’ rights and trust in public institutions, not weaken them.	Zoe	Western Cape		self-employed

	2026-05-23 12:48:32	No I do not	All of the above	Centralised Cyber & Security Risk	There need to be clarity on the Identity Assurance loop. How does this account for the informal housing population? The linkage to a single device is problematic. How will individuals without smartphone access (the elderly and others who are incapable or unable to) be registered? Why would this be necessary, given the current smart ID and the requirements for renewal and action for loss of the ID? This phone-linked ID should not be mandatory.	GAYE	Eastern Cape		retired
	2026-05-23 12:48:20	No I do not	All of the above	Centralised Cyber & Security Risk	While digital systems may improve efficiency, many South Africans are understandably concerned about privacy, cybercrime, corruption and the practical realities of relying on centralised digital identity systems in a country already struggling with fraud and data breaches. My concern is that law-abiding citizens may once again carry the burden of compliance, while criminals, syndicates, corrupt officials and undocumented foreigners continue to exploit loopholes in the system. A centralised digital ID linked to banks, telecoms and state databases creates enormous risks if the system is compromised or abused. Important questions still need clear answers: * How will citizens be protected from identity theft and cyberattacks? * What safeguards will prevent abuse of personal data by the state or private entities? * What happens to vulnerable people without reliable access to smartphones or the internet? * How will stolen phones, SIM swaps and digital fraud be dealt with? * Why should citizens trust centralised data systems when corruption and information leaks remain widespread? Modernisation should never come at the expense of constitutional rights, privacy, freedom and equal treatment under the law. Before implementing systems with such far-reaching powers, government must first demonstrate accountability, strong cybersecurity and the ability to enforce existing laws fairly. Public participation is important because once systems like these are in place, reversing abuse or overreach becomes extremely difficult.	Lynette	Western Cape		retired

	2026-05-23 11:37:45	No I do not	All of the above	Centralised Cyber & Security Risk	Our country has failed to instill confidence in any area where they have tried to manage. I forsee massive problems with this system. My husband's phone was stolen yesterday. What problems would we be encountering today. Our country cannot be trusted with our personal identity at this proposed level.	Meryl	Gauteng		
	2026-05-23 11:36:58	No I do not	All of the above	Centralised Cyber & Security Risk	As much as we are transitioning into a Technology Revolution.It is new and there is much to still consider and so much room for growth. Due to this gap in growth is where the Grey areas lie and which opens us up to high risk.South Africa has a far greater growth margin compared to other countries who have been digitally ready.I understand that this is what this bill is intended for ,to put South Africa on par woth other countries but we have to be realistic about where our country stands and grow at a steady pace that aligns with Growth Readiness. It is easy to want to do the same things our peers are doing because it is what is next but it's important to highlight our short coming and our ability to be able to grow that the manner we wish to.	Charné	Western Cape		
	2026-05-23 11:36:32	No I do not	All of the above	Centralised Cyber & Security Risk		Johanna	Gauteng		retired
	2026-05-23 11:35:26	No I do not	All of the above	Centralised Cyber & Security Risk	I find this the most nonsensical proposal for many reasons: 1. Theft of Cell Phones is Rampant... why? For people's online banking and emails and personal information and communication... and now we're going to add our IDENTIFICATION DOCUMENT to our Cell phones??? 2. Poverty affects a staggering majority of our population... people who can't afford to eat, let alone own a Cell phone.. furthermore, for the Homeless, trying to keep a Cell phone is near impossible. If we have a problem with Undocumented people now, how is Cell Phone IDENTIFICATION DOCUMENTS going to help that? 3. HACKING & DIGITAL FRAUD: People can hack into your banking account, your Whatsapp account, they're Already Hacking peoples Cell phones! ... Cell Phone ID?? Really? 4. What about the elderly folks whose proficiency with a Cell phone can be limited at best, or they simply won't own one... And they're the Most susceptible to online/digital fraud and hacking. 5. Cell phones require a consistent supply of electricity for charging them and data/airtime for usage.. Both of which can be somewhat inconsistent thanks to lack of funds, loadshedding and dodgy Cell phone coverage. Again... Cell Phone IDs?.. Really? 6. Global Powers and Monopolisation, The Dark Web, the InterConnectability and InterAccessabilty, Cyber Warfare, Cyber Crime, Cyber Violence... No, this not "Conspiracy Theory" "stuff"... it's very real and it's already happening... Going Digital puts you In That Space - an extremely vulnerable place- whether you like it or not. I really and truly pray this does Not Go Through. Thank You for giving us, the Proud and Loving Citizens of South Africa, a place to air our concerns. Thank You.	Miriam	Gauteng		retired

	2026-05-23 11:26:53	No I do not	All of the above	Centralised Cyber & Security Risk	It all sounds good, but it will be too easy for hackers and Cyber thieves to crack it, steal identities, and make IDs for illegal immigrants. Rather, open government offices all over the country where you can get your ID, passport, licence, marriage certificate, birth and death certificates, and citizenship in one place. It will work with the ticket system, and you cannot make an appointment with your friend, while everything is computerized and controlled. Big cities should have 3/4 offices, while offices in the rest of the country should be available as well. It works well in other countries.	Tjaart	Western Cape		retired

	2026-05-23 10:50:58	No I do not	All of the above	Centralised Cyber & Security Risk	I write in my personal capacity as a living man/woman and conscious human being, born with inherent dignity and endowed with fundamental rights that do not originate from the State, but are recognised and protected by the Constitution of the Republic of South Africa, 1996, international human rights law, and enduring principles of natural justice. This letter serves as a formal declaration that I do not consent to any compulsory implementation of digital identification systems, biometric surveillance, centralised personal data control, or any legislative or administrative measure that would unlawfully infringe upon my constitutional rights, privacy, bodily autonomy, property rights, freedom of movement, and personal sovereignty. Constitutional Protections: The Constitution of the Republic of South Africa is the supreme law of the Republic. Section 1 establishes the foundational values of: • Human dignity; • The achievement of equality; • The advancement of human rights and freedoms; • Non-racialism and non-sexism; • Supremacy of the Constitution and the rule of law; and • A democratic government based on the will of the people. In terms of the Bill of Rights, I expressly invoke and reserve, among others, the following protections: • Section 10: The right to inherent human dignity. • Section 12: Freedom and security of the person, including bodily and psychological integrity. • Section 14: The right to privacy, including protection against unlawful collection and retention of personal information. • Section 18: Freedom of association. • Section 21: Freedom of movement and residence. • Section 22: Freedom to choose one's trade, occupation, or profession. • Section 25: Protection against arbitrary deprivation of property. • Section 27: Access to social security and essential services. • Section 32: Access to information. • Section 33: Just administrative action. • Section 34: Access to courts. • Section 36: Rights may only be limited where reasonable and justifiable in an open and democratic society. No administrative system or legislative framework may lawfully extinguish or unreasonably limit these rights without meeting the strict constitutional requirements applicable to any limitation of rights. International Human Rights Protections: I further rely upon universal human rights principles recognised in instruments such as the United Nations Universal Declaration of Human Rights, including: • Article 1: All human beings are born free and equal in dignity and rights. • Article 3: The right to life, liberty, and security of person. • Article 12: Protection against arbitrary interference with privacy. • Article 13: Freedom of movement. • Article 17: The right to own property and not be arbitrarily deprived of it. • Article 18: Freedom of thought, conscience, and belief. Natural Law and Common Law Principles: I affirm the enduring principles of natural law, which recognize that certain rights are inherent to every human being and are not granted by governments. These include the rights to life, liberty, privacy, bodily integrity, peaceful enjoyment of property, and self-determination. I also reserve all lawful rights available under common law principles, including: • The right to informed and voluntary consent; • The right to security of one's person and estate; • The right to peaceful possession of property; • The right to be free from unlawful coercion or undue intrusion; • The right to lawful due process. Spiritual and Moral Convictions: My body, mind, conscience, and spirit are inviolable. My personal beliefs affirm that human life is sacred and that each person bears a profound responsibility to safeguard their own dignity, conscience, and freedom. No administrative or technological system should diminish these values or compel surrender of autonomy over one's physical person or deeply held beliefs. Objection to Compulsory Digital Identification: Accordingly, I formally object to and decline any attempt to compel: • Mandatory digital identification or digital-only credentials; • Expanded biometric surveillance beyond lawful and proportionate purposes; • Centralized control over my personal data and identity; • Unlawful restrictions on banking, property ownership, travel, employment, education, or access to public services based solely on digital compliance; • Any measure that compromises privacy, security, or autonomy without proper constitutional safeguards. I expect that any digital systems introduced by the Department will remain subject to the Constitution, the Information Regulator and the Protection of Personal Information Act, and that no person will be deprived of lawful rights or essential services without due process and constitutional justification. Reservation of Rights: All my rights are expressly reserved. Nothing in this correspondence should be interpreted as a waiver of any constitutional, statutory, common law, or human rights protections available to me. Should any governmental action unlawfully infringe upon these rights, I reserve the right to pursue all lawful remedies, including applications to the courts and complaints to appropriate oversight institutions. Lastly: I respectfully call upon the Department of Home Affairs to ensure that all modernisation initiatives fully respect constitutional supremacy, human dignity, privacy, informed consent, and the fundamental freedoms of every person in the Republic. The State exists to serve the people and to protect their rights, not to erode them. Any technological advancement must enhance liberty, security, and accountability rather than diminish them. 	2026-05-23 10:22:13	No I do not	All of the above	Centralised Cyber & Security Risk	This does not take into account the considerable theft of cellphones, the scams used to gain access to cellphones, such as SIM swaps, etc. That all my personal data is on a cellphone which can be stollen and misused by someone else is unacceptable. The new ID Card or older ID Book are sufficient . In addition that it expires after 5 years or one moves house , etc, then one has 30 days to reinstate is nonsense. Many people change their phones after 2 to 3 years, particularly when it is on a contract., this means that data has t be removed from that phone, (by whom?), and reinstated onto the new one. Schrieber is doing a good job at Home Affairs, but this is not required and unnecessary.	David	Western Cape		retired
	2026-05-23 10:21:38	No I do not	All of the above	Centralised Cyber & Security Risk	The criminals wants to control us.	Henning	Gauteng		unemployed individual
